Government.—Heading the administration is a governor general (Viscount Cobham, appointed Jan. 2, 1957) representing the crown, assisted by a 16-member Executive Council. The legislature is unicameral, consisting of an 80-member House of Representatives (including 4 Maoris), popularly elected every 3 years. The Labour Party was voted into office by a narrow margin in November 1957, winning 41 seats against 38 for the National Party, which gained one additional seat at a by-election held in the Clutha constituency in 1958. The National Party candidate was returned at a by-election in the Hamilton constituency on May 2, 1959, leaving the relative strength of parties unchanged. Local elections held throughout New Zealand on November 21 showed a pronounced swing away from the Labour Party. Walter Nash, sworn in as prime minister on Dec. 12, 1957, is also minister of external affairs and of Maori affairs.

Finance.—In the budget presented July 9, 1959, for the year ended March 31, consolidated fund revenue amounted to £NZ241,310,000, including £NZ205,574,000 from taxation. For 1959–60, revenue was estimated at £NZ317,370,000 (£NZ280,400,000 from taxation). Expenditures in 1958–59, along with the 1959–60 estimates, were: social services, £NZ95,067,000 (£NZ181,780,000); development of primary and secondary industries, £NZ22,864,000 (£NZ18,545,000); defense, £NZ17,793,000 (£NZ19,377,000); and debt services, £NZ37,421,000 (£NZ39,763,000). In sterling, net overseas assets totaled £NZ100.7 million in June 1959.

Defense.—New Zealand's armed forces comprise 19 different corps, with combined strength of 58,982, including an active territorial force of 30,554 on Sept. 30, 1957. (Compulsory military training was abolished on March 31, 1959 as part of a program of defense reorganization). In 1959, with total personnel of 5,082, the regular army exceeded 5,000 for the first time in its peacetime history. The Royal New Zealand Navy (2,998 officers and ratings on March 31, 1958) has in active commission 2 cruisers, 6 frigates (some of which serve on the Commonwealth Far East station), and numerous research and other fleet auxiliaries. On March 31, 1958, the Royal New Zealand Air Force comprised 3,269 regular personnel.

Education.—New Zealand's educational system imposes no selective restriction with respect to candidates for secondary education; within the state system every child is free to enter the postprimary school of his parents' choice. In 1957, the total of public primary schools was 1,964, with 10,154 teachers and 308,739 pupils; private primary schools numbered 323 (1,338 teachers, 49,644 pupils). Public secondary schools totaled 88 (teachers, 1,993; pupils, 44,268) in 1957; private secondary schools, 102 (16,260 pupils), including 11 Maori schools (834 pupils). Coeducational postprimary schools were opened in 1959 in Napier and Auckland. Technical education is provided at 36 institutions, including Hutt Valley Technical School, which in 1958 was made a central institution to provide national courses. In 1959 there were six teacher-training colleges. University and college enrollments totaling 12,881 at the end of 1958 comprised: the University of Auckland, 3,768; Victoria University of Wellington, 3,079; the University of Canterbury, 2,761; the University of Otago, 2,477; Massey Agricultural College, 450; and Lincoln Agricultural College, 346. An additional 714 students were enrolled for programs of less than one year at the two agricultural colleges.

Transportation and Communications.—In the year ended March 31, 1959, rail passengers on the government system numbered 25,437,000; motor passengers, 20,032,000; and some 10,367,000 tons of freight were carried. Railway revenue totaled £NZ34,373,000; expenditure, £NZ35,137,000. The total road mileage was 56,187 in 1957, when there were 13,088 miles of main highways, including 5,300 miles classed as state highways. Licensed motor vehicles totaled 808,199 (motor cars, 488,462) on March 31, 1959. Domestic services of New Zealand National Airways flew 146,500,000 passenger miles in 1958–59 (year ended March 31); cargo ton-miles totaled 5,517,000; mail ton-miles, 278,600. On overseas flights, 70,500 passengers, 791 tons of freight, and 472 tons of mail were carried. In 1957–58, radio licenses in force numbered 525,049 (amateur and research, 2,756).

Social Services.—An early pioneer in legislation for public welfare, New Zealand provides monetary benefits covering the aged, widows and orphans, invalids, and unemployed, together with medical, dental, and hospital services. All are paid for by a Social Security Fund (a charge on salaries, wages, and other income) which had revenue in 1957 of £NZ75,856,519.

Economy.—A short but intense recession seemed virtually over in 1959 after lasting some 18 months. New Zealand had felt severely the effects of falling overseas prices for primary products and a lack of adequate funds to cover needed imports. Early in 1959, however, the domestic economy, reflecting a reduction of imports and increased taxation imposed in the previous year, became more stable. By June, Lord Cobham was able to forecast an easing of import controls, and an additional £NZ20 million in overseas funds was allocated for import licenses. In 1957–58, the gross national product was provisionally estimated at £NZ1,081 million. Deposits in national savings accounts totaled £NZ61,102,000 in 1958–59; in post office savings accounts, £NZ263,913,000.

Labor Force.—In October 1958, 843,100 persons were engaged in industry, including 145,000 in primary production (farming, 130,500) and 80,300 in building and construction, compared with a total of 832,200 twelve months earlier. Unemployed numbered 1,541 in May 1959—an increase of 953 over May 1958.

Agriculture.—Chief crops in 1958–59 (in thousands of bushels) were: wheat, 6,750; oats, 1,250; and barley, 2,700. Prospective planting in the 1959–60 wheat season was 140,000 acres—the largest since 1950. On Jan. 31, 1958, cattle numbered 5,886,000 (dairy cows, 1,967,000), and breeding ewes, 30,876,000 (an increase of 1,977,000 over the previous year). The number of sheep (42,382,000 in 1957) rose to 46,026,000 in the 1958 season; and 49,643,000 sheep and lambs were shorn, compared with 46,891,000 in 1957. Pigs totaled 628,000 in 1958. Meat production (1958 revised) was 687,700 tons, and totaled 264,200 in the March 1959 quarter. Wool sales in the 1958–59 season totaled 406,261,000 pounds and realized £NZ61,064,000—an increase of 35,854,000 pounds in volume, but a decrease of £NZ2,456,000 in value, as compared with the previous season.

Industry.—The output value of industry (other than farms) totaled £NZ645,100,000 in 1957–58. Factory production, valued at £NZ188,300,000 included automobile assembly, domestic appliances, clothing, tobacco, paints, paper, plywood, building materials, and chemical fertilizers. Electricity distributed by local authorities totaled 5,625 million kw.-hr.; gas, 5,478 cubic feet. In 1958–59, the value of new buildings, including 20,568 new houses and flats, was £NZ101,466,155. In 1958–59 the output of sawed timber was reported at 636.8 million board feet.

Minerals.—Mineral production, valued in 1957–58 at £NZ18,600,000, included gold, pumice, and coal (2,820,000 tons). Cement production rose by 21,000 tons to a total of 552,000 tons.

External Trade.—In the calendar year 1958 the total value of imports was £NZ284,372,000 (machinery and transport equipment, £NZ71,405,000; textiles, clothing, and footwear, £NZ36,836,000). Exports, including re-exports, amounted to £NZ250,022,000 (dairy produce, £NZ58,498,000; meat, £NZ79,424,000; wool, £NZ79,947,000). Of total 1958 exports, £NZ157,294,000 went to British Commonwealth countries (United Kingdom, £NZ139,068,000), and £NZ91,914,000 to countries in the nonsterling area (United States, £NZ36,360,000). Imports in 1958 from the Commonwealth totaled £NZ195,453,000 (United Kingdom, £NZ132,963,000), while those from the nonsterling area were £NZ57,218,000 (United States, £NZ17,200,000).

Principal Events, 1959.—Tax reductions of £NZ17 million in a full year were a striking feature of the 1959–60 budget. Most of the remission is in income tax, reflecting the government's confidence that its policy of import controls would continue to arrest any trend toward inflationary spending by consumers. Regulations governing time payments were abolished.

The naval frigate *Pukaki* joined ships of 5 other Commonwealth countries in exercises of a carrier task force held in August in the Indian Ocean. On November 6 the 2d Battalion, New Zealand Regiment, including a large quota of Maoris, sailed for Malaya for service with other Commonwealth forces.

New Zealand was host to the fifth meeting of the Council of Ministers of the Southeast Asia Treaty Organization (SEATO), held in Wellington on April 8–10. Prime Minister Walter Nash was elected chairman of the meeting.

Declared open by the governor general on May 30, the new Auckland Harbor Bridge attracted the greatest concentration of traffic in the city's history; 51,000 vehicles had crossed the bridge by the following evening.

Notes exchanged between the governments of New Zealand and the United States authorized the increase in 1959 of scientific and logistical operations at stations maintained in the Ross Sea area of Antarctica during the International Geophysical Year (July 1, 1957 to Dec. 31, 1958), including the jointly operated Hallett Station, the U.S. Naval Air Facility in McMurdo Sound, and New Zealand's Scott Station. (See also ANTARCTICA.)

DONOVAN ROWSE,
Author and Publicist.

NEWFOUNDLAND. This most easterly of the Canadian provinces is bounded on the east and south by the Atlantic Ocean and on the west by the Gulf of St. Lawrence and the Province of Quebec. Newfoundland has an area of 156,185 square miles (including Labrador) and a population (1956 census) of 415,074 (est. Sept. 1, 1959, 452,000). Chief urban centers with their 1956 populations are: St. John's, the capital, 77,991; Corner Brook, 23,225; Wabana, 7,873; Grand Falls, 6,064; Gander, 4,929; Windsor, 4,520; Bonavista, 4,078; and Goose Bay, 4,007.

Government.—Newfoundland entered the Canadian confederation on March 31, 1949, and is represented by 6 senators and 7 members of the House of Commons at Ottawa. The province is administered by a lieutenant-governor and a Legislative Assembly of 36 members. Following the elections of Aug. 20, 1959, party alignment in the assembly was as follows: Liberal, 31; Progressive Conservative, 3; and United Newfoundland, 2. The lieutenant-governor in 1959 was the Hon. Campbell Macpherson (appointed in 1957); the premier was the Hon. Joseph R. Smallwood.

Education.—In 1957–58 there were 1,224 schools with an enrollment of 113,250 pupils. The Memorial University at St. John's had 1,160 students in 1959–60.

Finance.—Revenue on current account in 1958–59 was $55,245,000, and expenditure was $50,579,000. Estimated revenue for 1959–60 was $71,587,000, and expenditure, $67,545,000.

Industry.—In addition to agriculture, the three basic industries in 1958 yielded the following estimated gross values: forest products, $75,000,000; mining, $68,750,000; and fishery products, $20,000,000.

Transportation and Communications.—In 1959 there were 934 miles of railway, of which 705 miles were operated by the Canadian National Railway; its main line extends 547 miles from St. John's on the east coast to Port aux Basques on the west coast, with branches to the ports of Argentia, Carbonear, Bonavista, and Lewisporte. Commercial air services include Trans-Canada Air Lines, British Overseas Airways Corporation, and Trans World Airlines; they link Newfoundland with the North American continent and with Europe. There are worldwide cable connections, and the Canadian government provides telegraphic services throughout the province. Telephones numbered about 60,000 at the end of 1959.

Principal Events, 1959.—Following a strike called in December 1958 by the International Woodworkers of America (IWA) against the Anglo-Newfoundland Development Company of Grand Falls, the Legislative Assembly unanimously passed, in March 1959, an act revoking the certification of the IWA as a bargaining agent. A newly formed union, the Brotherhood of Newfoundland Woods Workers, signed a contract in March with the development company, which then resumed logging operations. Meanwhile, Premier Smallwood's request for Royal Canadian Mounted Police reinforcements to maintain order was refused by the federal government.

The Royal Commission on the Financial Terms of Union with Canada recommended additional financial assistance under Term No. 29 to Newfoundland of $8 million for the fiscal years up to April 1, 1961, and $8 million per annum thereafter. However, the federal government announced that the rights under Term No. 29 shall become null and void after 1962.

The Iron Ore Company of Canada and the Wabush Iron Company are to expend $400 million on the development of the mining areas at Carol Lake and Wabush, which reportedly contain large reserves (some thousand million tons) of iron ore.

Newfoundland's government closed the 31st Legislative Assembly on June 28, 1959. As a result of the provincial elections held August 20, the Liberal Party was returned to office with a clear majority of 26 members.

J. W. McNeily,
Public Relations Officer,
Provincial Government of Newfoundland.

NEWSPAPERS. The trend toward amalgamation continued in the newspaper business in 1959, pointed up by five antitrust suits and the business partnership negotiated by the giant Hearst and Scripps-Howard chains.

As of Sept. 30, 1958, according to the 1959 *Editor & Publisher International Year Book,* 1,763 daily newspapers were being published in the United States, with a total paid circulation of 57,418,311. The average daily (papers published four or more days a week) consisted of 35 pages. There were also 556 Sunday editions, selling a total of 46,954,666 copies. On the same date, there were 9,396 nondailies (of which 9,025 were published once weekly; 332, twice weekly; and 33, three days a week), with a total paid circulation of 22,708,982.

An industry census of the newspaper industry, reported in 1959, showed that about 250,000 persons were employed full-time in the United States and Canada. Some 700,000 boys were engaged part-time in distribution, earning a total of more than $200 million.

Mergers and Sales.—The diminution of competitive situations in 1959 brought legal action on several fronts. A federal court ruled that the Harte-Hanks Newspapers had effected a "public advantage" in consolidating rival papers in Greenville, Texas. The Wichita (Kans.) *Eagle* was subjected to an antimonopoly decree and was sued for damages by the Wichita *Beacon.* Publishers in Sarasota, Fla., Haverhill, Mass., and Pasco, Wash., defended monopoly suits growing out of newly established newspapers.

The unique consolidation of the San Francisco *News* (Scripps-Howard) and the San Francisco *Call-Bulletin* (Hearst) immediately converted two "sick" evening competitors into a profitable *News-Call Bulletin,* which started publication on Aug. 10, 1959. Scripps-Howard retained editorial control, while Hearst took over the business operations. In a similar arrangement, the Columbus (Ohio) *Citizen,* owned by Scripps-Howard, was consolidated with the *Ohio State Journal,* a Wolfe family property, on Nov. 9, 1959.

A score of dailies changed hands in 1959. Major transactions included the following: Field Enterprises, Inc., paid $24 million for 97% of the common stock of The Chicago Daily News, Inc., a property of the John S. Knight newspaper group for 15 years; Knight Publishing Co. bought the Charlotte (N.C.) *News,* to be published as a companion to the Charlotte *Observer,* acquired a year earlier; the Lee group of Iowa was the successful bidder for the seven Montana newspapers owned for many years by the Anaconda Co.; Gannett Co., Inc., of Rochester, N.Y., paid $5 million for the Camden (N.J.) *Courier-Post;* Roy Thomson of Canada and Scotland extended his newspaper interests in the United States by acquiring the Petersburg (Va.) *Progress-Index,* and the Laurel (Miss.) *Leader Call.*

With the merger of the Montpelier *Argus* into the Barre *Times* on Sept. 1, 1959, Vermont became the only state in the United States without a daily newspaper in its capital city.

Circulation and Prices.—The United States (as of Sept. 30, 1958), had 307 morning dailies with 23,160,617 circulation; 1,456 evening newspapers with 34,257,694; and 556 Sunday papers with 46,954,666, according to the 1959 *Editor & Publisher International Year Book.* The list

of dailies priced at 10 cents a copy grew to nearly 200, and there were about 1,000 at 5 cents a copy. The majority of Sunday papers sold at 20 cents a copy; others ranged from 25 to 50 cents, depending on part on shipping distances. Other than the converted weeklies, only one daily was newly established: the Pasadena (Texas) *Citizen,* which began publishing five days a week on Oct. 1, 1959.

Prices of weekly newspapers generally ranged around 10 cents a copy. Symptomatic of the growth in suburbia, a number of weeklies developed into dailies, giving numerical counterbalance to those dailies which were dying or merging in large cities. Some examples of weeklies expanding to daily status (several adding Sunday editions as well) were: Burley (Idaho) *Bulletin Herald;* Grants (N. Mex.) *Beacon;* Red Bank (N. J.) *Register;* Hollywood (Fla.) *Sun Tattler;* Indio (Calif.) *News;* Le Mars (Iowa) *Sentinel;* Santa Clara (Calif.) *Journal;* and the Barstow (Calif.) *Desert Dispatch.*

The ten circulation leaders (Audit Bureau of Circulations, March 31, 1959) were: New York *News,* 2,025,229; Chicago *Tribune,* 882,837; New York *Mirror,* 836,810; Philadelphia *Bulletin,* 704,756; New York *Times,* 673,974; Philadelphia *Inquirer,* 605,007; New York *Journal-American,* 599,536; Chicago *News,* 552,426; Chicago *Sun-Times,* 527,675; Los Angeles *Times,* 497,873. Sunday newspapers with circulation of over 1 million were New York *News,* 3,460,528; New York *Times,* 1,347,036; New York *Mirror,* 1,345,573; Chicago *Tribune,* 1,253,617; and Philadelphia *Inquirer,* 1,075,084.

Income and Operations.—Considered as a whole, the newspaper business prospered in 1959, with an aggregate income from readers and advertisers of more than $5 billion. The public was spending $1.459 million annually for daily and Sunday newspapers alone, a sum equal to the combined expenditure for books and magazines.

In advertising volume, the Los Angeles *Times* amassed 77,608,917 agate lines in 1959. The Miami *Herald,* which ran 60,300,000 lines, held second place. The New York *Times* moved up to third ranking with 60,056,995 lines, representing $90 million gross revenue from advertising. Twenty-three dailies each printed 1 million or more individual classified ads, an index of the United States economic health. A total of 1,514 national and regional companies, other than retailers, each spent $25,000 or more for newspaper advertising, and the total national advertising expenditure was $721 million. For one schedule of announcements of a new car, the Chevrolet Division of General Motors ran copy in 7,100 newspapers.

Other financial developments included the following: The New York Times Co. reported 1958 net earnings of $166,052 on gross income of $85.5 million. Studies of a typical small-town daily (less than 25,000 circulation) showed that it realized 7 % profit on operating income in 1958. A typical daily of 50,000 circulation kept only 3 % of its income as profit after taxes. The Boston Herald-Traveler Corp. reported a net of $1,173,755 on $28,877,012 revenue, but attributed the profit mostly to an affiliated television station. Weekly newspapers yielded a return of 8 % on operating revenue after deducting the publisher's salary (average $7,000).

To curtail losses, the Gannett Co. scrapped its Saratoga Springs (N.Y.) *Saratogian* and made it a section of the Albany (N.Y.) *Knickerbocker News.* To give the five-year-old Jackson (Miss.) *State Times* new financial strength for competition against the Jackson *News,* the *State Times'* owner turned the stock control over to one of his companies that manufactures household products.

Ambassador (to Great Britain) John Hay Whitney began his rejuvenation of the New York *Herald Tribune* in 1959 as Ogden Reid, last of the Reid editorial dynasty, bowed out. Robert M. White, 2d, of Mexico, Mo., a Democrat, became president and editor, and Dwight E. Sargent, of Portland, Me., a Republican, was appointed editor of the editorial page.

Censorship.—The *Herald Tribune* also made news in January 1959 when its television columnist, Marie Torre, spent 10 days in jail for contempt of federal court. She had refused to reveal the source of a news item. (Neither Congress nor any state legislature was moved to write a confidential privilege code for reporters.)

Labor Disputes.—Strikes caused suspension of publishing in a dozen cities in 1959. The longest shutdowns were at the St. Louis (Mo.) *Globe-Democrat,* 99 days (February 21–June 1), during which period it sold its plant and became a contract printing operation at the Pulitzer Publishing Co. plant; and at the San Jose (Calif.) *Mercury* and *News,* 123 days (February 14–June 17).

New Industry Leaders.—James Russell Wiggins, executive editor of the Washington (D.C.) *Post and Times Herald,* was elected president of the American Society of Newspaper Editors. Arthur Rosenstock, supervisory librarian of the New York *Post,* was named president of the American Newspaper Guild.

Canada.—A total of 98 daily newspapers were published in Canada in 1959. The 17 morning papers had an aggregate circulation of 845,965, and 81 evening papers, 2,911,864. Roy Thomson (Thomson Co., Ltd.), who purchased the Kemsley Newspapers chain in England in a $32 million transaction, also added the Cornwall (Ont.) *Standard-Freeholder* and the weekly Orangeville (Ont.) *Banner* to his Canadian group. G. Max Bell of Calgary and Victor Sifton joined in purchasing control of the Ottawa *Journal* in a $3 million transaction.

JEROME H. WALKER,
Executive Editor, "Editor & Publisher."

NICARAGUA. The largest in size of the Central American republics, Nicaragua is bounded on the north by Honduras and on the south by Costa Rica. Estimated area, 57,140 square miles; population (est. July 1, 1958), 1,378,000. About 68% of the population is of mixed Spanish and Indian descent; 15% is Caucasian; 9%, Negro; and 5%, Indian. Spanish is the official language. Principal cities and 1954 estimated populations are: Managua (the capital), 176,569; León, 59,107; and Matagalpa, 58,093.

Government.—The president of the republic is Luis Somoza Debayle, who was elected in 1957 to a 6-year term after he succeeded his father, Anastasio Somoza, the virtual dictator of the country from 1937 until his assassination in 1956. According to a law promulgated on Aug. 14, 1959, a president may not be re-elected to office. Congress consists of a Chamber of Deputies of 42 members who are popularly elected to 6-year terms, and a Senate of 16 (plus former presidents, who are appointed for life, and the defeated presidential candidate in the previous election), also elected to a 6-year term. Following the 1957 elections, party alignment in the Chamber of Deputies was: National Liberals, 28 seats; Conservatives, 14; and in the Senate: National Liberals, 12; Conservatives, 7.

Education and Religion.—Illiteracy is high (about 62% of the population aged 15 and over in 1950). Pupils enrolled in primary and preprimary schools numbered 118,679 in 1955. Secondary education is carried on privately, with some state aid. In 1953 there were 39 secondary schools (with 3,781 students); 34 technical schools (3,383); 6 teacher-training schools (397); and 1 higher institution, the national university at León (1,078). The population is predominantly Roman Catholic.

Finance.—Estimated budget figures for the 1959 fiscal year ending June 30 were: revenue, 265,546,000 cordobas; expenditure, 288,956,143. In March 1959, Congress revised the income tax rates, established subsidies for cotton growers, increased import duties on 458 commodities, and abolished the special export exchange rates for certain minor products. The official buying (export) rate is 7 cordobas to the U.S. dollar.

Transportation and Communications.—In 1957, paved roads aggregated about 250 miles, and other all-weather roads, 1,000 miles. Nicaragua's section of the Inter-American Highway is 240 miles in length. The government-owned Pacific Railroad of Nicaragua operates 270 miles of track. There are several international airlines and a domestic airline. Passenger cars in 1957 numbered 7,800; commercial vehicles, 5,700; telephones, 6,332; television sets, 500; radio receivers, 50,000 (1955).

Production.—Agriculture employs about two thirds of the labor force. The economy is dependent largely on the production of coffee and cotton for export. The exportable output of green coffee in the 1958–59 marketing year was 320,000 bags of 132.3 pounds each (down 16% from 1957–58). The 1958 cotton crop was estimated at 220,000 bales of 480 pounds each, about the same as in 1957. Production of rice in 1957–58 totaled about 70.4 million pounds (up 10% over 1956–57); sugar (in 1958–59), 75,000 short tons (up 19% over 1957–58); corn (1957), 4,330,000 bushels (down 24% from 1956); and sesame seed (1957), 7,600 short tons (up 95% over 1956). Other crops include beans and yucca.

Manufactures consist chiefly of food products and light consumer goods. Gold, the principal mineral, increased in value exported by 5% in 1958, to $7.29 million. Nicaragua's forests yield hardwoods and gums. In 1957, cement production totaled 43,000 metric tons, and output of electricity was 124.5 million kw.-hr. (118.8 million in 1956).

Foreign Trade.—Nicaragua's trade in 1958 was slightly lower in value than in 1957. Total exports were valued at $63.77 million in 1958, and imports, at $77.94 million. Cotton regained its position as the country's chief export, accounting for $24.89 million in exported value; coffee exports were valued at $24.23 million. The United States

took 37% of Nicaragua's 1958 exports, and provided 45% of total imports.

Principal Events, 1959.—An abortive invasion of Nicaragua by exiled rebels who were attempting to overthrow the Somoza regime was crushed in early June by the Nicaraguan National Guard. Guardsmen captured or killed most of the 110 invaders flown into southwestern Nicaragua from Costa Rica on May 31 and June 1, and 61 of the captured rebels were paraded under guard in Managua on June 14 to celebrate the virtual end of the rebellion. The invasion, which was directed by Dr. Enrique Lacayo Farfan, the leader of Nicaraguan exiles in Costa Rica, failed chiefly because of the lack of public support. Other small invasions from Costa Rica and Honduras were reportedly quelled in August, October, and December.

As a result of increasing opposition to his rule, President Somoza decreed martial law and suspended certain civil guarantees on May 30. He later approved a constitutional amendment prohibiting a president from succeeding himself and a president's blood relatives from seeking the office, but this measure failed to mollify his political opposition. The tense situation within the country was aggravated by a general strike of shopkeepers at Managua on June 1–8, and by riots at León in late July.

Following Nicaragua's request on June 2 that the Organization of American States investigate the invasion of its territory, the Council of the Organization appointed a fact-finding commission which reported that the invasion was an internal matter.

(See also Inter-American Affairs; Organization of American States).

W. R. F.

NICKEL. The United States, the world's largest consumer of nickel, has an insignificant domestic output of the ore. In 1958, however, it improved its situation slightly with an output of 5% of the world output, compared with 3% in 1957. Output of nickel in countries outside the Soviet bloc dropped 22% to the lowest annual production recorded since 1952. In the United States, domestic mine output of nickel contained in ore increased to 13,490 short tons in 1958, compared with 12,900 tons in 1957. According to the U.S. Bureau of Mines, the supply of nickel in the United States in 1958 exceeded industrial demand for the first full year since 1949. The improved supply-demand position resulted from the combination of increased production, cessation of government stockpiling, and decreased industrial requirements for nickel.

United States imports of new nickel products for consumption, principally from Canada and Norway, totaled 97,731 short tons in 1958, compared with 150,665 tons in 1957. Exports of nickel from the United States, mainly contained in nickel and nickel alloys in ingots, bars, rods, and other crude forms and scrap, increased to 14,032 tons gross weight in 1958 from 13,415 tons in 1957. The chief foreign markets were the United Kingdom, Canada, and West Germany.

Total consumption of nickel in the United States in 1958 was 79,000 tons, compared with 122,466 tons in 1957. In the first nine months of 1959, consumption of nickel (exclusive of scrap) totaled 79,470 short tons (reported by companies which consumed 94.5% of the total nickel in 1958).

(See Mineral Production for output of major producing countries.)

NIGER. The Republic of Niger is an autonomous republic of the French Community (q.v.), situated in western Africa. Estimated area, 458,993 square miles; pop. (est. 1958), 2,450,000, including (in 1956) 3,040 nonindigenous persons, mainly French. The official language is French. Chief cities are Niamey, the capital (est. pop., 20,000), and Zinder (13,300).

Government.—A former French overseas territory included within the federation of French West Africa (q.v.), Niger chose the status of a member state of the French Community on Dec. 19, 1959. As an autonomous republic, Niger has self-rule in domestic affairs, with the Community exercising control of foreign relations, defense, currency, strategic minerals, and certain other matters. Niger adopted its constitution on Feb. 25, 1959. The Legislative Assembly consists of 60 members elected for a five-year term by universal suffrage. The premier (president of the council) is invested by a majority of the assembly. In the elections of Dec. 14, 1958, to the former Territorial Assembly, the Union for the Franco-African Community, headed by Hamani Diori, obtained 54 seats, as against 6 for the left-wing Sawaba, led by former Premier Djibo Bakary. Following the elections, Hamani Diori was chosen premier of a new conservative government.

Education and Religion.—In 1958 there were 137 schools with a total of 14,078 pupils (only 4% of the school-age population). Expenditure on education amounted to 447.9 million francs CFA, or about 12.3% of the budget.

Finance.—The ordinary budget for 1958 totaled 3,232 million francs CFA; the extraordinary budget, 381 million (the franc CFA equals 2 metropolitan francs). French financial aid under the Economic and Social Investment Development Fund (FIDES) was equivalent to $25.2 million in the period 1947–57.

Transportation.—Roads and trails aggregate 3,565 miles (1956), including 1,786 miles of highways. Niamey and Zinder are the southern termini of two trans-Saharan highways. There are no railways. Niamey has an international airport.

Production.—The republic is largely desert in the north. Water is scarce in most areas except the Niger River section of the southwest. The main occupation is stock raising, and there are large numbers of cattle, sheep and goats, and camels. The chief commercial crop is peanuts (output of shelled peanuts in the 1957–58 season: 98,495 metric tons). Subsistence crops include millet, rice, manioc, barley, wheat, maize, and dates. The principal minerals are sodium phosphate, salt, and tin ore. Industrialization has hardly begun, and French economic aid has consisted mainly of the construction of waterworks and other aids to livestock breeding, and the improvement of the cultivation of rice and other cereals.

Foreign Trade.—Exports in 1958 totaled 3,818 million francs CFA; imports, 2,198 million. Chief exports were shelled peanuts, 87,005 metric tons (worth 3,213 million francs CFA), and live animals (worth 263 million). France provided about 53% of imports and purchased about 71% of exports.

Principal Events, 1959.—On May 8, 1959, Niger signed an agreement with the Joint Organization for the Sahara (a French agency for the development of the Saharan regions), whereby Niger obtained over 500 million francs in credits in 1959 for economic development. It was reported on October 18 that the left-wing Sawaba had been dissolved by the government of Premier Hamani Diori.

NIGERIA. See British West Africa.

NITROGEN COMPOUNDS. In the United States a large part of the fixed nitrogen supply is obtained from plants making nitrogen compounds from the nitrogen of the atmosphere. Second in importance is the recovery of ammonia compounds as a by-product of coking coal. Natural sodium nitrate furnishes only a relatively small proportion of the supply. Synthetic plants produced 3,831,425 short tons of anhydrous ammonia (NH_3), and coking plants produced 190,930 tons, compared with 3,734,213 tons and 261,527 tons respectively in

1957. Anhydrous ammonia production continued its upward trend and reached a new high in 1958. Annual capacity for producing atmospheric nitrogen in the United States totaled nearly 5 million short tons of equivalent nitrogen, compared with 4.75 million for 1957. World production of nitrogen equivalent, for the year ending June 30, 1958, was 10,569,000 short tons.

NIVEN, (James) David (Graham), British-American actor: b. Kirriemuir, Scotland, March 1, 1910. After 20 years as a motion picture star and featured player, David Niven was chosen best film actor of 1958 by both the Academy of Motion Picture Arts and Sciences (announced April 6, 1959) and the New York Film Critics Circle (announced Dec. 30, 1958) for his sensitive portrayal of the talkative bogus army major in the screen version of Terence Rattigan's *Separate Tables.*

David Niven was graduated in 1929 from the Royal Military College at Sandhurst, England. In

David Niven, who received an Academy Award in 1959 for best actor, as he appeared in his prize-winning role in *Separate Tables.*

UNITED ARTISTS

1934, following a three-year military career and varied employment in Canada, the West Indies, and the United States, he went to Hollywood, where he was given a screen test and played in minor parts before being assigned to his first major role, opposite Ginger Rogers, in *Bachelor Mother* (released in 1939). He was then cast as Edgar Linton in *Wuthering Heights* (1939). Well on his way to stardom when World War II broke out, he returned to England to re-enlist. During the war, Niven served in Normandy, Belgium, the Netherlands, and Germany, and was a major in the famed Phantom Reconnaissance Regiment. He was discharged in 1945 as a colonel.

His first postwar appearance was in the British film *Stairway to Heaven,* which was released in the United States in 1947. Returning to Hollywood, he was soon seen in *The Bishop's Wife* (1948), giving a performance which critics called one of his finest. Among his later motion pictures were *The Moon Is Blue* (1953), *The Little Hut* (1957), *Oh, Men! Oh, Women!* (1957), *My Man Godfrey* (1957), *Bonjour Tristesse* (1958), and *Ask Any Girl* (1959). In his role as Phileas Fogg in *Around the World in 80 Days* (1956), he was described by one critic as "serenely imperturbable . . . the epitome of a Frenchman's conception of a Britisher."

Niven's credits in other branches of the arts include a novel, *Once Over Lightly* (1951), believed to be largely autobiographical; a role on Broadway in André Roussin's *Nina* (1952); and frequent appearances in television plays.

NIXON, Richard Milhous, vice president of the United States: b. Yorba Linda, Calif., Jan. 9, 1913. Although he had already enjoyed the solid support of party leaders, and for some time had been considered the probable Republican nominee in the 1960 presidential election, two events of 1959 served virtually to assure his candidacy. The first of these was his visit to the Soviet Union on July 23–August 2 and his extraordinary public debate with Premier Khrushchev. From this tour, which also included Poland, the vice president emerged with enhanced stature and respect, particularly for the manner in which he acquitted himself in the rough-and-tumble verbal clash with Khrushchev. The second development which bolstered Nixon's prospects for 1960 was the surprise withdrawal (December 26) of New York Gov. Nelson A. Rockefeller (q.v.) from the Republican presidential picture. The move by Rockefeller, who might have provided the only serious opposition to Nixon, left the vice president unchallenged from within his party.

(Nixon also was credited with helping to bring about a settlement of the steel strike, announced on Jan. 4, 1960, and thus gained another significant political asset as the election year began.)

After four years as a naval officer in World War II (1942–46), Nixon was elected to the U.S. House of Representatives in 1946 and again in 1948, and to the U.S. Senate in 1950. He was the successful Republican vice presidential candidate in both 1952 and 1956. As vice president he served as President Eisenhower's goodwill ambassador, touring the Middle and Far East in 1953, the Caribbean area in 1955, southern Asia in 1956, and South America and England in 1958. His Latin American tour was a stormy one, and he won acclaim for his courage in the face of hostile mobs in Peru and Venezuela. Nixon has also undertaken many activities rarely performed by previous vice presidents—particularly the assumption of some presidential duties during President Eisenhower's convalescence following a heart attack in 1955.

Vice President Nixon returned to the public spotlight in the spring of 1959 after a relative political lull during the early months. In an address in New York City, April 13, he proposed that the International Court of Justice undertake to arbitrate disputes growing out of future East-West agreements. On June 27 he and Queen Elizabeth II, in ceremonies at Massena, N.Y., formally dedicated the St. Lawrence hydroelectric power project.

Nixon's eventful visit to the Soviet Union was viewed by observers as a political master stroke. Although the formal purpose of the journey was the opening of the American National Exhibition in Moscow's Sokolniki Park on July 24, his travels about Moscow and formerly closed industrial cities in Siberia and the Urals afforded him close contacts with the Soviet leaders and people, and focused world attention upon him.

Apart from any personal advantages which ac-

Vice President Richard M. Nixon (in dark suit) discusses a kitchen display with Soviet Premier Khrushchev at opening of the American National Exhibition in Moscow, July 24.

WIDE WORLD

crued to him, Nixon's visit was unique in a number of respects. It marked the first time that an American official of Nixon's standing was able to penetrate Iron Curtain secrecy and to appeal directly to the Soviet people, as he did on August 1 in an outspoken address over the Moscow television network and which was broadcast nationwide by radio. (His speech was published in full by the government newspaper *Izvestia* the next day.) He was allowed to mingle with ordinary Russians on his tours of Moscow (July 25) and Leningrad (July 26), and on a swing through the hinterlands (July 28–31) to such growing industrial cities as Novosibirsk in Siberia and Sverdlovsk in the Urals. Surprisingly friendly crowds cheered Nixon's arrival in many places, although there were instances of heckling and hostile questioning. In short, the occasion of his visit came to resemble more an old-fashioned political campaign tour than a sensitive diplomatic maneuver, and the vice president, a veteran of the political stump, adroitly seized the opportunity to explain his nation's ideals, policies, and way of life.

Accompanying the vice president on his trip were his wife, Pat; Dr. Milton S. Eisenhower; Vice Admiral Hyman G. Rickover; and a party of 56 American newsmen.

In his personal contacts with Khrushchev, Nixon was able to review at length a wide range of East-West issues, notably during a 5½-hour discussion (July 26) at the premier's *dacha* outside Moscow. But their famous running debate on the opening day of the American exhibition was the incident which astonished diplomats and made headlines throughout the world. In a blunt, sometimes acrimonious but generally good-natured exchange, as they made their way through the throngs inspecting the exhibits, both men expressed forcefully their countries' respective positions. The day-long debate flowed over a wide variety of topics, including the relative merits of their two systems with respect to color television, housing, kitchen gadgetry, workers' salaries, and missile power. The high point came in the kitchen of a model American home, where the two leaders, in full view of television tape recorders, argued with fervor and animation.

From Moscow, Nixon flew on to Warsaw, Poland, on August 2. There he was given a rousing welcome by a crowd of 100,000 Poles. He conferred with Polish Communist leader Władysław Gomułka and other officials before returning home on August 5.

Nixon had been meeting privately for some time with both sides in the steel dispute, and in December, with the president's approval, he intensified his efforts in a series of behind-the-scenes conferences. As the January 26 deadline neared for expiration of the Taft-Hartley injunction and a likely resumption of the strike, Nixon met secretly (December 31) with labor and management representatives in Washington and New York City, and reportedly impressed upon the steel companies the prospects that Congress might adopt legislation inimical to industry. These talks led directly to a marathon negotiating session and final agreement on a compromise plan which the vice president had proposed. All parties in the dispute paid tribute to Nixon's role in effecting an end to the stalemate, and Labor Secretary James P. Mitchell, who joined him in the final round of talks, said, "Without the vice president we would not have had a settlement." (See also LABOR.)

On Jan. 9, 1960—his 47th birthday—Nixon agreed to permit the entry of his name in the New Hampshire, Ohio, and Oregon primaries, and, in effect, announced his candidacy for the presidency. Popular polls (see PUBLIC OPINION SURVEYS) in 1959 had shown him to be leading all prospective Democratic candidates. (See also REPUBLICAN PARTY.)

NOBEL PRIZES. See PRIZES AND AWARDS.

NOEL-BAKER, Philip John, British government official: b. London, England, 1889. On Nov. 5, 1959, the Nobel Peace Prize was awarded to Noel-Baker, a Quaker pacifist who had spent his life working for world peace through disarmament as a delegate to the League of Nations and the United Nations, and as a writer, teacher, and Labour member of Parliament.

His father, Joseph Baker, emigrated from Canada, established an engineering firm, and entered the British Parliament as a Liberal. The son was sent for a year to Haverford College in Pennsylvania and then to the Sorbonne in Paris before going on to Cambridge University. He represented Great Britain in the Olympic Games in 1912 as a middle-distance runner and captained the British Olympic teams of 1920 and 1924. He served with the Religious Society of Friends ambulance unit in France and Belgium during World War I. "Noel" was added to his name when he married Irene Noel in 1915.

His lifelong involvement in peace conferences began in 1919 with the Paris Peace Conference. He helped to draft the Covenant of the League of Nations and was a member of the League Secretariat until 1923, when he became personal assistant to Viscount Cecil, winner of the Nobel Peace Prize in 1937. As a professor of international relations at the University of London (1924–29), he wrote several books on disarmament and the League of Nations. He assisted at the Disarmament Conference at Geneva in 1932, and held a Labour seat in Parliament in 1929–31 and from 1936. He served the Labour government as minister of state (1945–46), secretary of state for air (1946–47), secretary of state for commonwealth relations (1947–50), and minister of fuel and power (1950–51). Thereafter he was a member of the "shadow cabinet" of the Labour Party until he was defeated in the party's elections held on the same day that he was announced as winner of the Nobel Prize.

At the close of World War II, Noel-Baker helped draft the United Nations Charter, was a delegate to the General Assembly, and participated in the formation of the U.N. Food and Agricultural Organization. In his most recent book on disarmament, *The Arms Race: A Program for World Disarmament* (1958), he advocated a world disarmament treaty embodying strict international controls at all stages. He said he would use the Nobel Prize money ($42,600) to promote disarmament through the United Nations Association and the World Federation of United Nations Associations.

NORFOLK ISLAND. Discovered by Captain Cook in 1774, this island (area, 13.3 square miles; pop., 1,045, June 30, 1959) lies 930 miles east of Sydney, Australia, and was accepted as a Commonwealth government territory on July 1, 1914. An administrator (R. S. Leydin) is assisted by an elected 8-member Advisory Council. Many inhabitants are descendants of *Bounty* mutineers, the whole population of Pitcairn Island (q.v.) having been transferred to Norfolk Island in 1856. There is one free primary school (139 pupils in 1959). Whaling (for which the quota was increased to

150 whales in 1959) and seed production are the chief occupations. Imports in 1957–58 were valued at £A225,037; exports at £A176,231.

NORTH AMERICA. A continent in the Western Hemisphere. Estimated area (including Central America, q.v.), 9,360,000 square miles; pop. (est. 1958), 256 million. (See the Index entry, *North America.*)

NORTH ATLANTIC TREATY ORGANIZATION. The North Atlantic Treaty was signed in Washington on April 4, 1949, by the United States, United Kingdom, France, Italy, Canada, Norway, Denmark, Portugal, Belgium, the Netherlands, Luxembourg, and Iceland. Greece and Turkey joined the organization in 1952, and the Federal Republic of Germany in 1955. At the beginning of 1960, NATO's organizational structure was as follows:

ORGANIZATIONAL STRUCTURE OF NATO

I. North Atlantic Council (15 states); headquarters, Paris
II. Military Committee (14)*
  A. Standing Group (3); headquarters, Washington
    1. NATO supreme commands (see separate outline below)
    2. Canada–United States Regional Planning Group (CUSRPG); headquarters, Washington
    3. NATO Defense College, Paris
    4. Military Agency for Standardization (MAS)
    5. European Military Communications Coordination Committee (EMCC), the European Long Lines Agency (ELLA), the European Radio Frequencies Agency (ERFA), the European Communications Security Agency (ECSA), and the European Naval Communications Agency (ENCA)
    6. Advisory Group on Aeronautical Research and Development (AGARD)
III. International Staff/Secretariat, Paris: Secretary General, Paul-Henri Spaak

Under the authority of the Military Committee, and receiving guidance and direction from the Standing Group, are the following NATO supreme commands:

I. European Command:
  A. Supreme Headquarters, Allied Powers, Europe (SHAPE); Supreme Allied Commander, Europe (SACEUR), Gen. Lauris Norstad (U.S.); headquarters, Rocquencourt, near Paris
    Deputy SACEUR, Gen. Sir Richard Gale (U.K.)
    Deputy (Naval), Vice Admiral Pierre Barjot (France)
    Deputy (Air), Gen. Leon W. Johnson (U.S.)
  1. Commander in Chief, Allied Forces, Central Europe (CINCENT), Gen. Jean-Étienne Valluy (France); headquarters, Fontainebleau
  2. Commander in Chief, Allied Forces, Northern Europe (CINCNORTH), Lt. Gen. Sir Horatius Murray (U.K.); headquarters, Oslo
  3. Commander in Chief, Allied Forces, Southern Europe (CINCSOUTH), Admiral Charles R. Brown; headquarters, Bagnoli, near Naples
  4. Commander in Chief, Allied Forces, Mediterranean (CINCAFMED), Admiral Sir Alexander Bingley (U.K.); headquarters, Malta
II. Atlantic Ocean Command:
  A. Supreme Allied Commander, Atlantic (SACLANT), Admiral Robert Lee Dennison (U.S.); headquarters, Norfolk, Va.
    Deputy SACLANT, Vice Admiral W. J. W. Woods (U.K.)
  1. Commander in Chief, Eastern Atlantic Area
  2. Air Commander in Chief, Eastern Atlantic Area
  3. Commander in Chief, Western Atlantic Area
  4. Commander, Striking Fleet, Atlantic
III. Channel Committee and Allied Command Channel:
  A. Allied Commander in Chief Channel (CINCCHAN), Admiral Sir Manley Power (U.K.); headquarters, Portsmouth, England
  B. Allied Maritime Air Commander in Chief, Channel (CINCMAIRCHAN), Air Marshal Sir Edward Chilton (U.K.); headquarters, Northwood, England

NATO IN 1959

The 15-member Western defense organization —the largest, most highly developed, and most important of the many alliance systems of which the United States is a member—completed its 10th year of existence in 1959, the original North Atlantic Treaty having been signed in Washington on April 4, 1949. The 12-nation treaty of 1949 has evolved into a 15-nation organization, with the accession of Greece and Turkey (1952) and West Germany (1955), and has become not only a defensive alliance but an international body of considerable complexity with a large military and civilian staff.

Apart from the celebrations and the self-assessments that went with the completion of the first decade, 1959 was in many ways a routine year for NATO. Noteworthy, though in a negative way, was the almost complete absence of projects and proposals, based on Article 2 of the treaty, for some reconstruction of NATO, or expansion of its functions, which would make it something more than just a military alliance. The comparative absence of such suggestions was undoubtedly due to the existence of such bodies as the European Coal and Steel Community and the European Economic Community (qq.v.), which increasingly are seen as the proper mediums for economic integration—though it is to be noted that they are confined to Europe and do not include either Canada or the United States.

Almost the only voice which speculated about a broadening of NATO's functions was that of Dean Acheson, who developed the subject in an important speech at Bonn, Germany, on October 4. Acheson, who was United States secretary of state when NATO was created, suggested that the member nations of the Atlantic alliance "and other European nations who might want to join" should negotiate a second treaty, giving western Europe and the United States a united front on all political and economic, as well as military, issues. He suggested a wider arrangement, with more limited functions, than the present European bodies, to extend the political and economic powers of NATO. He proposed the creation of a high council, with the powers of foreign ministers, to make policy decisions. It would have three main tasks in the first instance: to improve the welfare of member nations; to help underdeveloped countries create their own means of production; and—pending global disarmament—to coordinate Western industrial capacity in order better to support the military effort and scientific research.

The fact remained, however, that the necessity for defense against Soviet aggression had brought NATO into being, and that, after all, the same necessity was the justification for maintaining it. Such was the theme of the short volume, *Why NATO?* (London 1959), which the secretary general, Paul-Henri Spaak, wrote to mark the 10th anniversary.

Unhappily, the general turning away from any expansion of NATO's functions did not carry the corollary that the member nations were prepared seriously and in a spirit of cooperation to face the problems of defense, and if necessary to make sacrifices for them. The year saw a continuation of earlier tendencies to reduce the actual number of troops in Europe, as well as of fighters and intermediate-range bombers. In theory the cutback in troops was compensated for by long-distance bombers and by the increasing installation of missiles of various kinds, with nuclear warheads, on European sites. What this theory left out of account was a hypothetical (but by no means entirely improbable) situation in which an enemy committed an aggression by conventional means, carefully eschewing nuclear weapons. The Western allies would then seemingly be confronted with the alternatives of speedy defeat, or of being the first to use the frightful weapon of nuclear bomb-

* Iceland, which has no military establishment, may be represented on the committee by a civilian.

Randolph Burgess, U.S. representative, is at the president's left.

ing, in which there was no longer any reason to assume a definite Western superiority.

A fairly sharp dichotomy of opinion was emerging between informed critics of NATO who put forward such points in criticism of current policies, and the leading statesmen of the Western alliance, who continuously applied and intensified such policies throughout 1959. Among the notable critics might be mentioned Henry Kissinger, the American military expert, who spoke at a large-scale discussion conference, the Atlantic Congress, held in Westminster Hall, London, June 5–10; and George F. Kennan, former member of the U.S. State Department who, in a BBC broadcast in October, reconsidered the themes of his famous Reith Lectures of 1957 in the light of changing circumstances.

NATO ground forces in Europe in 1959 amounted to no more than 21⅓ divisions, understood to consist of 5 United States divisions of the Seventh Army, 7 West German divisions, 4 small British divisions, 2 French, 2 Belgian, and 1 Netherlands, plus a Canadian brigade. Soviet forces, which in all were estimated at perhaps 175 divisions, included 22 in East Germany (plus 9 anti-aircraft divisions), 2 in Poland, 2 in Rumania, and 5 to 7 in Hungary. Satellite armies were thought to comprise another 65 divisions.

The current goal in modernization of NATO ground forces is 100 missile battalions of all types —a goal to be achieved by 1963. The missiles furnished by late 1959 went to a base in Britain, but the NATO military command during the year was also moving to arm NATO's flanks. A missile base was well under construction in Italy, negotiations were being conducted for bases in the Scandinavian countries, and on October 10 it was announced in Washington that agreement had been reached for the construction in Turkey of an intermediate-range missile base. On the negative side, France continued its refusal to permit a missile base on her soil, and it was reported in October that negotiations for a missile base in Greece had apparently broken down.

The most serious internal difficulties within NATO in 1959—as distinguished from general questions of Western military policy—concerned French cooperation in the alliance. These difficulties stemmed basically from President de Gaulle's determination that France should be considered an equal partner with the United States and Britain, and, as a consequence, that France should have as much access as Britain to United States atomic secrets. From these premises a number of French policy steps, all exceedingly awkward for her allies, followed. France announced plans for exploding an atom bomb of her own at a test site in the Sahara. This announcement exacerbated relations between the European powers and newly independent African states, including some of France's own former colonies (See AFRICA; ATOMIC ENERGY).

Secondly, it was announced on March 11 that French naval forces in the Mediterranean would remain under French national command, and would not be transferred to NATO, even in wartime. On March 19, Gen. Lauris Norstad, supreme allied commander in Europe, commenting on this decision at a press conference in Paris, expressed concern, but said that it would be inaccurate to suggest that the withdrawal of such a relatively small force could have any decisive influence on the success or failure of the Atlantic alliance.

Thirdly, President de Gaulle refused to permit the stockpiling by the United States of atomic weapons on French soil unless France were given control of them. As a consequence of this stand, there had to be a large-scale redeployment of NATO's air strength, and on July 8 it was announced that nine squadrons of fighters and fighter-bombers (about 200 planes) based on French airfields would be moved to bases in Britain and West Germany.

Among other notable NATO developments in 1959 was the signing (August 3) of an agreement between West Germany and the six allied powers with troops stationed there (United States, United Kingdom, France, Belgium, Netherlands, and Canada) regarding the status of NATO forces. The new regulations, which replaced those of 1952, had as their general effect the cutting back of concessions, immunities, and financial advantages of the allied forces in West Germany.

A further redeployment of United States air strength in Europe was foreshadowed by the conclusion in October of an agreement whereby the United States would withdraw from bases in Morocco.

At the end of 1959 the new NATO headquarters building in Paris, at the Port Dauphine, was nearing completion, for occupation early in 1960. The new building, which cost $10 million and has a ground plan in the shape of an enormous A (for Atlantic), replaces the temporary quarters in the Palais de Chaillot, occupied since 1951.

On his trip to Europe in the late summer, President Eisenhower visited NATO headquarters, scene of his former command, on September 3, and

addressed a session of permanent representatives to the North Atlantic Council.

The spring ministerial meeting of the North Atlantic Council, which included formal celebrations of the 10th anniversary, took place in Washington, April 2–4. The conference was concerned largely with forging a united policy on the questions of Berlin and of Germany.

The winter ministerial meeting of the council took place in Paris on December 15–17 and 22. The rather bland communiqué of December 17 said little beyond the fact that the ministers had instructed the permanent council to undertake long-term planning covering the next ten years. It gave no hint either of the storm which had been caused by a supposedly secret speech by Gen. Nathan Twining in the Military Committee on December 10 criticizing France's lack of cooperation in military matters, or of current United States hopes that a greater share of NATO costs would be met by the European allies.

NORTH CAROLINA. South Atlantic state, United States; one of the original 13 states. The "Tarheel State" ranks 28th in area and 12th in population among the 50 states.

Area and Population.—Area: 52,712 square miles (land, 49,097; inland water, 3,615), divided into 100 counties. Population: (1950) 4,061,929; (est., July 1, 1958) 4,469,000. Urban places with populations above 10,000 (as estimated by the State Board of Health for July 1, 1959) are:

Albemarle	18,958	Kinston	21,065
Asheville	54,563	Lexington	16,365
Burlington	35,993	Lumberton	14,448[3]
Charlotte	164,697	Monroe	13,535
Concord	17,328	New Bern	19,512
Durham	81,597	Raleigh (*capital*)	83,051
Elizabeth City	13,721	Reidsville	12,929
Fayetteville	50,708	Rocky Mount	29,667
Gastonia	24,697	Salisbury	21,092
Goldsboro	25,321	Sanford	14,684
Greensboro	88,329	Shelby	16,868
Greenville	20,470	Statesville	21,952
Henderson	14,095	Thomasville	11,256
Hickory	15,930	Wilmington	55,810
High Point	41,342	Wilson	26,507
Kannapolis[1]	28,448[2]	Winston-Salem	95,211

[1] Unincorporated place. [2] 1950 federal census figure. [3] Special census, 1955.

Executive.—Chief state officers in 1959:
Governor: Luther H. Hodges (Democrat)
Lieutenant Governor: Luther E. Barnhardt
Secretary of State: Thad Eure
Treasurer: Edwin S. Gill
Attorney General: Malcolm B. Seawell
Auditor: Henry L. Bridges
Supt. of Public Instruction: Charles F. Carroll

Constitution and Judiciary.—The present constitution, which went into effect in 1877, is based on that of 1868. The Supreme Court comprises seven justices; chief justice in 1959 was J. Wallace Winborne.

Legislature.—The North Carolina General Assembly comprises a 50-member Senate (in 1959, 49 Democrats and 1 Republican) and a 120-member House of Representatives (116 Democrats and 4 Republicans), which meet in odd-numbered years commencing the first Wednesday after the first Monday in February. (See below, *Principal Events, 1959.*)

Finance.—State revenue in the 1957–58 fiscal year totaled $518,643,135, comprising $355,084,393 from state tax sources, $153,350,628 from the federal government, and $10,208,114 from other sources. Tax revenue consisted of $73,296,420 from a 3% general sales tax, $55,108,422 from individual income taxes, $43,472,197 from corporate income taxes, $91,693,313 from motor fuel taxes, $35,130,973 from licensing, and $56,383,068 from other sources. Expenditures of $427,048,896 comprised $175,165,058 for education, $35,762,667 for health, welfare, and safety, $152,165,388 for highways, and $63,955,783 for other purposes. Long-term indebtedness on Aug. 31, 1958, amounted to $270,971,000.

Banking.—As of June 10, 1959, the state's 43 national banks had $710,820,000 in assets, $467,837,000 in demand deposits, and $164,287,000 in time deposits. The 156 commercial banks had assets of $2,095,426,000, demand deposits of $1,293,804,000, and time deposits of $519,798,000.

Education.—School attendance is compulsory between the ages of 7 and 16, inclusive. Operating expenditures for public elementary and secondary education in the 1957–58 school year were an estimated $193 million ($203.09 per pupil), comprising $31.66 million from local school districts, $154.4 million from the state, and $6.94 million from the federal government. Construction and improvement outlays approximated $48.54 million, and teachers' salaries averaged $3,745.

NORTH CAROLINA SCHOOL STATISTICS, 1957–58

Type of school	No.	Teachers	Students
Public elementary (1–8)	2,029	25,679	815,177
Public secondary (9–12)	910	9,416	245,010
Private and parochial elementary and secondary	26	228	2,642
Vocational and trade schools	7	121	2,765
Junior colleges	24	553	7,211
Teachers colleges	6	517	8,269
Colleges and universities	29	3,791	47,794
Other higher institutions	4	32	900

Social Welfare.—In the 1958–59 fiscal year, public assistance expenditures from state and federal funds (excluding institutional costs) totaled $59,345,276, including $23,672,756 for the aged, $22,759,177 for dependent children, and $9,279,582 for the permanently and totally disabled. A monthly average of 175,894 persons received public assistance. The state spent $18,287,361.71 for mental health activities and $12,258,482 for penal programs.

Labor Force.—On July 1, 1959, nonagricultural employment totaled 1,094,400, compared with 1,061,700 for the previous July 1 and a 1,090,600 average for the 12 intervening months. Of nonfarm employees in 1959, 43.43% were engaged in manufacturing, 18.75% in trade, and 13.67% in government. Unemployment was down sharply to 25,465 on Sept. 1, 1959, from 38,800 a year earlier. The state paid $48,745,049 in unemployment compensation in 1958.

Manufacturing.—There were 480,000 persons employed in the state's 7,000 manufacturing plants in 1958. Wages of production workers in 1957 amounted to $1,476,263,000, and value added by manufacture totaled $2,929,291,000. Production workers averaged $62.82 for an average workweek of 41.6 hours in August 1959.

MAJOR NORTH CAROLINA MANUFACTURES, 1957

Product or industry	Average no. of employees	Salaries and wages (thousands of dollars)	Value added by mfr.* (thousands of dollars)
Textile mill products	224,751	$662,158	$1,086,280
Tobacco manufactures	26,124	94,876	527,203
Furniture and fixtures	40,385	128,487	222,913
Food and kindred products	27,442	86,249	199,800
Chemicals and products	11,560	51,696	141,454
Electrical machinery	14,403	59,069	126,731
Lumber and wood products	33,720	77,091	112,198
Apparel and related products	29,431	68,064	108,834
Pulp, paper, and products	10,664	49,896	96,913

* For definition see footnote 1 in the article *Industrial Production.* (Source: *Annual Survey of Manufactures: 1957.*)

Mining.—In 1958 North Carolina ranked 40th among the states in the value of its mineral output, with 0.24% of the national total. It was first in the output of feldspar, sheet mica (79% of domestic total), scrap and flake mica, olivine, pyrophyllite, and spodumene; third in talc and soapstone; and fifth in kaolin. The state stopped producing tungsten in 1958.

NORTH CAROLINA MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Clays[1]	2,046,000	$ 1,187,000
Feldspar (long tons)	...[2]	...[2]
Mica, scrap	50,897	1,041,000
Mica, sheet	261	1,722,000
Sand and gravel	7,044,000	5,880,000
Stone	12,385,000	19,132,000
Talc and pyrophyllite	126,158	614,000
Tungsten concentrates (60% WO_3)	...[2]	...[2]
Other minerals	...	10,315,000
Total	...	$39,891,000

[1] Excludes certain clays, value for which is included in "Other minerals." [2] Figures withheld to protect individual company's confidential data. (Source: U.S. Bureau of Mines.)

Fisheries.—The commercial fish and shellfish catch in 1958 was valued at $7,694,808, including principally menhaden (235,493,700 pounds valued at $3,485,306).

Agriculture.—Cash farm income for the first nine months of 1959 dropped to $562,542,000 from $629,844,000 for the corresponding period of 1958. For the full year 1958, income comprised $313,567,000 from livestock and livestock products, $697,093,000 from crops, and $37,538,000 from government payments. Principal income sources in 1958 were tobacco, $439,080,000; broilers, $78,176,000; dairy products, $63,798,000; and eggs, $61,386,000. Forest products yielded $49,915,000.

NORTH CAROLINA CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	1,303	1,800	1,400
Corn (1,000 bu.)	65,521	81,400	85,914
Cotton lint (1,000 bales)	419	256	325
Cottonseed (1,000 tons)	175	106	136
Hay (1,000 tons)	1,221	1,258	1,225
Oats (1,000 bu.)	12,379	10,416	13,650
Peanuts (1,000 lb.)	284,998	331,080	284,800

Sweet potatoes (1,000 cwt.)	2,660*	2,325	2,560
Tobacco (1,000 lb.)	871,045	755,455	725,455
Wheat (1,000 bu.)	7,326	7,191	9,353

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

There were 274,000 farms in the state in 1958. Total acreage (1954) of 18,260,000 included 5,504,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 1,014,000 cattle, 1,490,000 hogs, and 14,146,000 chickens (excluding commercial broilers). There were 333,000 family and hired workers engaged in farming during the week of Nov. 22–29, 1959.

Transportation and Communications.—State and federal funds disbursed for highways in the 1958–59 fiscal year totaled $160,318,000. During the calendar year 1958, contracts involving 1,136 miles of construction were completed in addition to work on local roads and highways.

Highways, roads, and streets on Jan. 1, 1959, totaled 78,158 miles (42,112 hard-surfaced). *Registered motor vehicles* numbered 1,722,230 on Aug. 31, 1959, including 1,232,905 passenger cars. There were (1958) 30 *railroads* operating 4,470.6 line miles and (1959) 6 regularly scheduled *airlines* and 111 *airports and airfields* (55 commercial and municipal, 5 military, and 51 private).

Communications media (1959) included 136 AM and 42 FM *radio stations;* 11 VHF and 1 UHF *television stations;* 47 daily *newspapers* (circulation, 1,806,598) and 158 other newspapers (373,448); and (January 1) 268,500 business and 751,300 residential *telephones.*

Principal Events, 1959.—In its biennial session, held from February 4 to June 20, the General Assembly adopted a budget of $1.2 billion, the largest in state history, for the 1959–61 biennium. The legislature also proposed several bond issues for capital improvements, which were approved by the voters on October 27. These will provide state higher educational institutions with $18,891,000; state mental institutions, $12,053,000; community colleges, $1.5 million; state hospitals, $500,000; state ports, $500,000; state training schools, $466,000; and a state blind rehabilitation center, $140,000. The assembly also took steps to provide for the erection in Raleigh of a long-needed legislative building. The budget was adopted without the addition of new taxes, although the legislature enacted a law which provides that beginning in January 1960, state personal income taxes are to be withheld by the employer.

The 1959 General Assembly enacted a minimum hourly wage law of 75 cents for employees in companies hiring more than five people, thus becoming the first legislature in the South to enact such a measure. It increased appropriations for the Parole Board, which for the first time will be able to give proper supervision to parolees. One of the assembly's outstanding acts was the establishment of a Department of Water Resources, with a director as administrative head and a seven-member board to formulate policies to coordinate the conservation and use of water in the state. The legislature further enacted laws providing for a penalty point system for violations of motor vehicle laws; giving the Milk Commission authority to regulate the retail price of milk when the commission finds that an emergency exists; and granting pensions to firemen, which are to be financed through increases in tax rates on fire insurance premiums. After lengthy debate the assembly rejected recommendations for court reform submitted by a court study committee; it also turned down proposals submitted by the Constitutional Study Commission, created by the 1957 General Assembly. Attempts to reapportion representation in the legislature on the basis of the 1950 census again failed, as they had in every legislature since 1951.

Through legislative action, North Carolina became the first state to require a compulsory polio vaccination. A new law denies admission of unvaccinated six-year-olds to any public school.

The campaign of Gov. Luther Hodges for industrial expansion, research, and diversification in the state continued to be notably successful. Industrial investment in North Carolina in the fiscal year 1958–59 totaled $247,371,000, exceeding the record established the preceding year. Chemstrand and several other corporations were making plans to locate plants in the Research Park area of the Research Triangle (Durham-Raleigh–Chapel Hill). In the fall, Governor Luther Hodges and some 60 state business and professional leaders visited countries of western Europe in an effort to promote the industry and trade of North Carolina.

The year witnessed, at the textile mills in Henderson, the state's most prolonged strike. The strike was finally settled, although not until after intermittent outbursts of violence caused the National Guard to be ordered to the scene in May. On July 23, eight textile union members were sentenced to prison terms following convictions for conspiring to blow up mill installations.

Slow and peaceful adjustment to racial integration in the public schools continued under the Pupil Assignment Law of 1956. Local school boards in Craven and Wayne counties admitted Negroes to formerly all-white schools. In October, 54 Negro pupils were attending integrated schools in seven of the state's cities and towns.

Principal Events by: HUGH T. LEFLER,
Kenan Professor of History,
University of North Carolina.

NORTH DAKOTA. North Central state, United States; admitted to the Union, Nov. 2, 1889. The "Flickertail State" ranks 17th in area and 43d in population among the 50 states.

Area and Population.—Area: 70,665 square miles (land, 70,057; inland water, 608), divided into 53 counties. Population: (1950) 619,636; (est., July 1, 1958) 638,000. Urban places with populations above 7,500 in 1950 (unless another date is given) are: Bismarck, *the capital*, 18,640; Fargo, 38,256; Grand Forks, 26,836; Jamestown, 10,697; Mandan (1955), 9,374; Minot, 22,032; and Williston (1956), 10,886.

Executive.—Chief state officers in 1959:
Governor: John E. Davis (Republican)
Lieutenant Governor: C. P. Dahl
Secretary of State: Ben Meier
Treasurer: John R. Erickson
Attorney General: Leslie R. Burgum
Auditor: Curtis Olson
Supt. of Public Instruction: M. F. Peterson

Constitution and Judiciary.—The present constitution went into effect in 1889. The Supreme Court comprises five justices; chief justice in 1959 was P. O. Sathre.

Legislature.—The North Dakota Legislative Assembly comprises a 49-member Senate (in 1959, 31 Republicans and 18 Democrats) and a 113-member House of Representatives (64 Republicans and 49 Democrats), which meet in odd-numbered years commencing the first Tuesday after the first Monday in January.

During the 1959 session, fiscal activities were reorganized under a new Department of Accounts and Purchases. The lawmakers provided for a state administrator of courts; the replacement of justices of the peace by county justice courts; and increases in the salaries of Supreme Court justices to $14,000 and those of District Court judges to $12,000. In education, the compulsory school attendance age was raised to 16 years; the Board of Higher Education was authorized to issue revenue bonds for the construction of revenue-producing buildings; state and county aid to school districts was increased to 60% of pupil costs; and state aid was initiated for junior colleges and for public school transportation.

Welfare legislation increased unemployment compensation benefits to $38 weekly; extended the maximum benefit period to 26 weeks; and raised disability benefits.

Other legislation revised regulation of installment and charge accounts and the issuance of securities; strengthened truck and motor vehicle laws; authorized the Highway Department to regulate advertising and businesses on the state highway system; and appropriated $1 million for loans to nonprofit organizations for the building of nursing homes and homes for the aged.

Constitutional amendments to be presented to the voters in 1960 would change the method of reapportioning the Legislative Assembly; establish a state Department of Labor; provide for the sale of state coal lands; and exempt license receipts and aviation gasoline and motor fuel tax revenues from being used for highway purposes.

Finance.—In the 1958–59 fiscal year, state revenue of $124,235,126.98 included $106,237,993 from state tax sources and $1,480,878.79 from the federal government. Tax revenue comprised $14,850,881.71 from a 2% general sales tax, $4,494,508.07 from individual income taxes, $1,514,756.51 from corporate income taxes, $18,927,340.26 from motor fuel taxes, $9,446,617.27 from licensing, and $57,003,889.18 from other sources. Expenditures of $126,965,334.45 consisted of $9,051,577.31 for education, $6,923,898.84 for health, welfare, and safety, $49,598,945.78 for highways, and $61,390,912.52 for other purposes. Long-term indebtedness on June 30, 1959, amounted to $8,251,250.

Banking.—As of June 10, 1959, the state's 38 national banks had $371,724,000 in assets, $215,502,000 in demand deposits, and $125,422,000 in time deposits. The state's 117 other banks had assets of $321,047,742, demand deposits of $192,369,368, and time deposits of $99,978,986.

Education.—School attendance is compulsory between the ages of 7 and 16, inclusive. Operating expenditures for public elementary and secondary education in the 1957–58 school year totaled $38,837,419.62 ($312.10 per pupil), and revenue comprised $33,132,325.26 from local school districts, $10,091,791.89 from the state, and $514,771.34 from the federal government. Outlays for construction and improvements amounted to $8,250,839.67, and teachers' salaries (1958–59) averaged $3,460.05.

NORTH DAKOTA SCHOOL STATISTICS, 1957–58

Type of school	No.	Teachers	Students
Public elementary (1–8)	2,358	4,805	95,731
Public secondary (9–12)	375	1,990	33,219
Private and parochial elementary and secondary	86	661	17,461
Junior colleges	4	126	1,839[1]
Teachers colleges	5	248	3,573[1]
Colleges and universities	2	554	6,853[1]
Other higher institutions	1	30	482[2]

[1] 1959–60 figures. [2] 1958–59 figures.

UPI

North Dakota's Sen. William Langer (l.), who died November 8, was succeeded by ex-Gov. C. Norman Brunsdale (r.).

Social Welfare.—In the 1958–59 fiscal year, county, state, and federal funds for public assistance expenditures (excluding institutional costs) totaled $12,279,091, including $7,443,345 for the aged, $2,924,289 for dependent children, and $1,161,344 for the permanently and totally disabled. A monthly average of 17,634 persons received public assistance. The state spent $3,551,078.38 for mental health activities and $779,209.62 for correctional and penal programs.

Labor Force.—The state's labor force totaled 300,520 in July 1959, including 142,000 agricultural workers. Nonagricultural employment of 153,400 compared with 152,900 in the previous July and an average of 150,530 for the 12 intervening months. Of total nonfarm employees in July 1959, 30.4% were engaged in trade, 14.2% in service industries, and 22.4% in government. Unemployment of 3,570 on July 15, 1959, was below the 5,250 reported a year earlier. The state paid $3,517,009 in unemployment compensation during the year ending June 30, 1959.

Manufacturing.—The 5,931 persons employed in the state's manufacturing plants in 1957 earned $23,246,000 in wages. Value added by manufacture totaled $51,389,000, and outlays for new plant and equipment amounted to $3,646,000. Production workers' salaries averaged $80.82 for an average workweek of 42.7 hours in August 1959.

The state's major industry is food processing, which in 1957 employed 3,160 persons who received $12,430,000 in wages, and which added $28,734,000 in value by manufacture.

Mining.—In 1958 North Dakota ranked 35th among the states in the value of its mineral output, with 0.36% of the national total. Output value, up 4% from that of 1957, was at a record high. Chiefly accountable for the gain were increased outputs of petroleum, natural gas, and sand and gravel.

NORTH DAKOTA MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Clays[1]	54,000	$ 66,000
Coal (lignite)	2,314,000	5,409,000
Natural gas (million cu. ft.)[2]	17,325	1,672,000
Petroleum (1,000 bbl.)[2]	14,141	42,282,000
Sand and gravel	11,464,000	6,605,000
Stone	23,000	35,000
Other minerals	...	3,024,000
Total	...	$59,093,000

[1] Excludes certain clays; value for which is included in "Other minerals." [2] Preliminary. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first

nine months of 1959 dropped sharply to $373,807,000 from $429,285,000 in the corresponding period of 1958. For the full year 1958, income comprised $219,354,000 from livestock and livestock products, $438,944,000 from crops, and $27,260,000 from government payments. Principal income sources were wheat, $267,423,000; cattle, $131,114,000; and barley, $64,395,000.

NORTH DAKOTA CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Barley (1,000 bu.)	56,793	109,704	77,580
Corn (1,000 bu.)	26,862	25,479	22,572
Flaxseed (1,000 bu.)	18,799	20,576	11,356
Hay (1,000 tons)	3,717	3,919	3,180
Oats (1,000 bu.)	51,432	75,738	38,538
Potatoes (1,000 cwt.)	10,572*	14,700	12,000
Rye (1,000 bu.)	3,930	6,549	2,862
Soybeans (1,000 bu.)	953	3,710	3,029

Wheat (1,000 bu.)	113,651	147,372	97,152

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

The state had 58,000 farms in 1959. Total acreage (1958) of 42,800,000 included 20,515,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 1,870,000 cattle, 410,000 hogs, 581,000 sheep, and 3,568,000 chickens (excluding commercial broilers). There were 67,000 family and hired workers engaged in farming during the week of Nov. 22–29, 1959.

Transportation and Communications.—State and federal funds spent for the state highway system during the 1958 calendar year totaled $42,993,797, and 978.1 miles of highway were surfaced or graded during the year.

Highways and roads on Dec. 31, 1958, totaled 96,410.5 miles (49,809.8 surfaced). Registered *motor vehicles* numbered 470,485 in 1958, including 220,017 passenger cars. There were (1959) 6 *railroads* operating 5,258.84 line miles; 3 regularly scheduled *airlines;* and 217 *airports and airfields* (98 commercial and municipal, 2 military, and 117 private).

Communications media (1959) included 18 AM *radio stations;* 8 UHF *television stations;* 10 daily *newspapers* (circulation, 159,153) and 110 other newspapers (185,256); and (January 1) 44,600 business and 132,100 residential *telephones.*

Principal Events, 1959.—North Dakota's agricultural income declined approximately 18% in 1959, due primarily to drought, hail, and heat conditions over a large part of the state. Total cash income from all crops was $353,789,000 in 1959, compared with $438,944,000 in 1958. Livestock and livestock products yielded $217 million, a drop from $219 million the preceding year. These figures do not include government payments. (See also above, *Agriculture.*)

Other major sources of income—mineral production, tourism, and manufacturing—remained at approximately the 1958 level or improved. A total of 1,234 oil wells in 76 fields were producing in 1959, and the value of the oil and gas they yielded was expected to have increased. Of 404 new wells drilled during the year, 226 were brought into production. The value of lignite coal and other mineral output was up slightly. Reflecting the general economic improvement in nonfarm areas, employment in nonagricultural jobs reached an all-time high by mid-1959. (See above, *Labor Force.*)

On November 8, U.S. Sen. William Langer (q.v.) died at the age of 72 in Washington, D.C. Former Gov. C. Norman Brunsdale, a Republican, was appointed to serve until June 1960, when a special election will be held.

Otherwise, politically, the actions of the 1959 legislature were perhaps of most interest. Among these were its moves to improve public education. The legislature established minimum curriculums for high schools and minimum terms for grade schools. It appropriated $108,255,089 for public schools during the 1959–61 biennium, more money for that purpose than in any preceding session. Although no new major taxes were levied, the budget was expected to remain balanced, largely because income from various taxes was up about 9% over that of 1958, reflecting a similar increase in retail sales during the year.

Highway construction expenditures totaled $40 million. Some 570 miles of roadways were blacktopped or paved, and 240 miles were graded. The superhighway system, with 71 additional miles opened to traffic in 1959, reached a total length of 110 miles.

Principal Events by: C. W. Leifur, *Principal, Bismarck (N.Dak.) High School.*

NORTHERN IRELAND. Northern Ireland's six counties (land area, 5,238 square miles; est. 1958 pop., 1,402,300) form under the Government of Ireland Act (1920) an integral part of the United Kingdom of Great Britain and Northern Ireland. The counties, with 1958 estimated populations, are: Antrim (698,800, including Belfast county borough, 436,200); Armagh (117,400); Down (251,300); Fermanagh (50,900); Londonderry (161,200, including Londonderry county borough, 51,500); and Tyrone (131,700). Belfast is the capital city and chief port. The latest census figures (1951) show that Protestants numbered 899,461; Roman Catholics, 471,460.

Government.—Executive power is vested in a governor (Lord Wakehurst, who assumed office on Dec. 3, 1952, and was reappointed for a second 6-year term in 1958). He is advised by ministers responsible to Parliament, which consists of a 52-member House of Commons and a 26-member Senate. Northern Ireland also elects 12 members to the United Kingdom House of Commons, and the Unionist government in power is pledged to continue constitutional links with Great Britain.

Finance.—In the 1959–60 budget, total revenue was estimated at £100,540,000 (some £3 million less than in 1958–59), including £83,416,000 from taxes, which are levied at virtually the same rates as in Great Britain. Supply services accounted for £83,461,670 out of total estimated expenditure of £97,489,670. After allowing for an imperial contribution (a sum retained annually by the British Exchequer) of £3 million, a surplus of £50,330 was anticipated.

Education.—For 1959–60, expenditure on education was estimated at £14,358,200. Educational facilities on Dec. 31, 1958, included 1,558 primary schools (201,101 pupils, 6,314 teachers); 73 secondary intermediate schools (35,968 pupils, 1,451 full-time teachers); 33 technical intermediate schools (5,459 pupils; teachers in these schools are also employed in institutions of higher education); 81 grammar schools (35,577 pupils, 1,792 full-time teachers); and 19 special, including hospital, schools (1,434 pupils, 104 teachers). On July 31, 1958, there were 179 institutions of higher education (32,980 students, 654 full-time teachers). Students enrolled at Queen's University, Belfast, and Magee University College, Londonderry, numbered 3,202 and 208, respectively, in 1958–59.

Production and Trade.—About 60,000 persons are employed in the textile industry, and 52,000 work in shipbuilding, aircraft construction, and engineering. The aggregate tonnage of ships launched in 1958 was 100,253. The value of agricultural gross output for 1957–58 was estimated at £122 million. Principal acreages in 1958 together with their yield (in tons) were: oats, 218,420 (182,000); hay, 434,260 (702,000); potatoes, 98,980 (574,000); and barley, 16,010 (17,800).

Great Britain has close economic links with the six counties and absorbed £276 million (about 92.5%) of total Northern Ireland exports during 1957, when exports amounted to £297,904,000 and imports to £318,392,000.

Transportation and Communications.—Road mileage totals 13,736 (trunk roads, 348). Rail traffic is conducted by the Ulster Transport Authority. British European Airways maintains air services with Great Britain.

Principal Events, 1959.—The complete defeat of the Sinn Fein Party in the general elections of October 8 dealt a severe blow to that extreme nationalist movement. All 12 of the seats in the United Kingdom House of Commons were taken by the Ulster Unionists, including two formerly held by the Sinn Fein. The latter party polled only 63,415 votes, less than half of the 152,310 it re-

ceived in 1955. Viscount Brookeborough, the prime minister, hailed the results as bolstering the Eire government's efforts to suppress the Irish Republican Army (IRA), to which the Sinn Fein has been linked.

The campaign of terrorism begun by the outlawed IRA in 1956 continued in the early part of 1959 on a limited scale. Concern was caused in Northern Ireland by the Republic of Ireland's releasing of IRA internees. The British ambassador in Dublin delivered a protest on March 6, but by March 11 the last of the internees had been freed. In August, two policemen were injured in a bombing attack on a vehicle just inside the Northern Ireland frontier.

In postwar years, Northern Ireland has laid great stress on the development and expansion of its industry. In 1959, one of the biggest of its new industries, a plant built at Coleraine by Chemstrand, Ltd., to produce artificial fibers for the manufacture of clothing, was opened. Officiating at the ceremonies was Prince Philip, who also visited Belfast in May to open a £2 million science and engineering center at Queen's University, which celebrated the 50th anniversary of the granting of its charter. Later in the year Princess Margaret visited Northern Ireland to launch the Royal Mail Line's ship *Amazon* (20,000 tons).

Author and Publicist.

NORTHERN RHODESIA. See RHODESIA AND NYASALAND.

NORTHWEST TERRITORIES. Comprising slightly less than 34% of the land and water area of Canada, the Northwest Territories' 1,304,903 square miles include most of the Canadian mainland north of the 60th parallel, together with a number of islands in Hudson, James, and Ungava bays, and the islands of the Arctic Archipelago. The 1956 census placed the population at 19,313; est., June 1, 1959, 21,000. Racial distribution, based on the 1951 census, was: Eskimos, 43%; whites, 33%; and Indians, 24%.

Government.—The Northwest Territories is divided for administrative purposes into the districts of Mackenzie (527,490 sq. mi.), Franklin (549,253 sq. mi.), and Keewatin (228,160 sq. mi.). It is governed by a commissioner, who acts on instructions given from time to time by the governor general in council or the minister of northern affairs and national resources. Legislative powers are held by the Council of the Northwest Territories. Of its nine members, five are appointed, mainly from the ranks of the senior federal civil service, and four are elected for three-year terms from constituencies in the Mackenzie District. The commissioner in 1959 was R. G. Robertson, deputy minister of northern affairs and national resources.

Education.—In 1959 there were 46 federal-territorial schools in operation, 19 of which were primarily for the education of Eskimos. In addition, a number of part-time mission schools are maintained with government assistance, and federal-territorial residential schools are operated at Fort Smith, Fort McPherson, Yellowknife, and Inuvik. The Inuvik School, comprising a 30-classroom school and two 250-pupil residences, was opened in the autumn of 1959. Free correspondence courses were also available to children and adults.

Public Health and Welfare Services.—Federal welfare workers, assisted by teachers, missionaries, and the Royal Canadian Mounted Police, carried on their work in 1959 among the native population from posts distributed over thousands of miles of the northern frontier. In addition to the payment of family allowances, which contribute greatly to the welfare of the Eskimos and Indians, old-age assistance, blind persons' allowances, and disabled persons' allowances are paid to those eligible for these benefits. A hospital insurance plan has been set up, to go into effect in the spring of 1960. Fourteen hospitals were operated in the territories in 1959; missions conducted 10 of them, one was operated by the federal Department of National Health and Welfare, the locally elected hospital board at Yellowknife operated one, and the other two were company hospitals. Of 12 nursing stations in operation, one was a mission station. The territorial and federal governments conducted X-ray and medical surveys during the summer months and provided free treatment for crippled children and cancer and tuberculosis patients, as well as free dental service for children in Yellowknife, Fort Smith, and Hay River. The 38th annual Eastern Arctic Patrol, including physicians, a dentist, nurses, and an X-ray technician examined and treated Eskimos at some 30 settlements on the 12,000-mile voyage.

Transportation and Communications.—The main water transportation route from Alberta into the Northwest Territories is provided by the Athabasca, Slave, and Mackenzie rivers for a distance of 1,700 miles to the Arctic coast. The 433-mile Mackenzie Highway, linking Grimshaw, Alberta, with Hay River and Fort Providence, on Great Slave Lake, is being extended to Yellowknife. Scheduled air routes carry passengers, mail, and freight to settlements in the Mackenzie District and to Frobisher Bay, Baffin Island. Chartered air services and steamships supply eastern Arctic points. The Eastern Arctic Patrol was carried out in 1959 by the Canadian Government Ship *C. D. Howe*. In the area of communications, the Canadian Broadcasting System added five stations to its northern network in 1959, including a 1,000-watt transmitter at the new townsite of Inuvik, and increased the number of shortwave broadcasts to the territories.

Production and Industry.—Despite a slight decline in the rate of economic expansion during 1958, mineral production increased and there was a very large expansion of oil and natural gas exploration. Mineral production in 1958 had a value of $24,791,516 (up about 12% from 1957), of which gold (335,720 fine ounces) accounted for $11,392,475; uranium ore, $9,628,000; and silver, $63,723. Crude oil produced and refined at Norman Wells was valued at $475,000, and natural gas at $7,075.

There were some 6,000 reindeer maintained by the federal government in the Mackenzie River delta region for the benefit of the native population. Wood Buffalo National Park contains about 14,000 buffalo. A controlled slaughter of reindeer and buffalo for meat is made annually. Timber cutting is also carried on in Wood Buffalo National Park, where 1958–59 production totaled 12,449,323 board feet of lumber, 328,535 linear feet of round timber, and 7,814 cords of fuelwood.

Commercial fishing in Great Slave Lake and surrounding lakes during 1958–59 had a market value of $705,000 from a catch of 5,763,000 pounds, principally whitefish and trout. Fur production in the 1958 season totaled 257,183 pelts valued at $735,000.

Principal Events, 1959.—Great interest was shown in oil and natural gas exploration in the Northwest Territories during the year. In the 12 months ended March 31, 1959, oil and gas exploratory permits were issued for 43.4 million acres in the Northwest Territories; and in the Arctic islands north of 70° latitude, priorities for exploratory permits for over 95.4 million acres had been allotted by the end of July, 1959.

In July 1959, the 17th session of the Council of the Northwest Territories, meeting for the first time in Chesterfield Inlet, passed a resolution calling upon the federal cabinet to give Indians equal liquor rights with white residents and Eskimos. The session's major legislation was an ordinance establishing a hospital insurance plan for territorial residents which is expected to be in operation by April 1960.

Eskimos were given a voice in their own affairs for the first time in 1959 when three of their elected representatives took their places in May on the Eskimo Affairs Committee in Ottawa. The first Eskimo cooperatives were formed during the year in the Ungava Bay area under legislation passed by the Northwest Territories Council. A limited amount of sports hunting for buffalo was permitted, and the first sportsmen to hunt buffalo in the Northwest Territories went into the field in the autumn of 1959.

An extensive market research program was carried out to establish the market potential for Eskimo handicrafts and other products. An organized handicrafts industry will be established to supply Eskimo-made products to retail outlets in southern Canada.

R. G. ROBERTSON,
Commissioner, Northwest Territories.

NORWAY. A constitutional monarchy in northwestern Europe, Norway's area is 125,064 square miles. Its population as of Jan. 1, 1959, was 3,541,000, or about 28 inhabitants per square mile.

EUROPEAN

Stephen Rockefeller, son of New York's Gov. Nelson Rockefeller, was married to the former Anne-Marie Rasmussen, in Sögne, Norway, August 22. Behind the bridal couple are (l. to r.): Mrs. Nelson Rockefeller, Mr. and Mrs. Kristian Rasmussen, the bride's parents, and Governor Rockefeller.

Twenty-two cities of more than 10,000 population include Oslo, the capital (454,000); Bergen (114,300); Trondheim (60,000); and Stavanger (52,300).

Government.—The Norwegian Constitution of 1814, with amendments, provides for three separate branches of government. Legislative power is vested in the 150-member Storting, a modified unicameral Parliament, elected every fourth year. Three fourths of its members constitute the Odelsting, and one fourth, the Lagting. All citizens 21 years of age have the right to vote. Executive authority is vested in the King (since Sept. 21, 1957, Olav V), who exercises his power through a cabinet, headed by a premier. Other cabinet members head 14 government departments. Except for World War II and a short period thereafter, Norway has had all-Labor governments since 1935. The present Storting, elected Oct. 7, 1957, is composed of 78 Laborites, 29 Conservatives, 15 Liberals, 15 Centerists, 12 Christian Democrats, and 1 Communist. Judiciary power is centered in the Supreme Court, the ultimate court of appeal, which comprises a chief justice and 18 justices.

Religion and Education.—About 96% of the population belongs to the Evangelical Lutheran State Church, but other creeds enjoy full freedom of worship. The 1950 census showed 123,314 did not belong to the state church, including 30,036 Pentecostals, 11,570 Methodists, 8,964 Baptists, and 4,753 Catholics.

Elementary education is free and compulsory for all children aged 7 to 14. A new law approved in 1959 permitted municipalities to start 9-year obligatory schooling, with 2-year elective courses. In the fall of 1959 about 450,000 were enrolled in elementary schools, 68,000 in secondary schools, and 8,600 in institutes of higher learning. Another 3,140 studied abroad, including over 400 in the United States. Most schools, including universities, are free. The 5-year gymnasium qualifies students for admission to universities and colleges. Higher institutes include the Oslo and Bergen universities; the Agricultural College, Aas; the Institute of Technology, Trondheim; and the School of Economics and Business Administration, Bergen.

Social Welfare.—All Norwegians belong to the obligatory Health Insurance Plan, which provides medical examinations, hospitalization, special services, and cash benefits. Children aged 7–18 receive free dental care. The social security program includes mother and child care, family subsidies, unemployment insurance, old-age pensions for persons 70 and over, and care of the poor, blind, and disabled.

Finance.—The monetary unit, the krone, is divided into 100 öre. The official exchange rate is Kr.7.14286 to the U.S. dollar. The 1959–60 state budget approved a record high of Kr.6,394 million for expenditure, allocating Kr.1,073 million for defense. The national accounts for 1958–59 were balanced with an operating surplus of Kr.842.7 million. The net foreign debt rose Kr.746 million during 1958 to reach a total of Kr.2,647 million at the end of the year.

The current balance of foreign payments on goods and services in the first half of 1959 showed a deficit of Kr.470 million, as against Kr.630 million in the 1958 period. Total foreign exchange holdings as of June 30, 1959, amounted to over Kr.2,590 million.

Defense.—Norway is a charter member of the North Atlantic Treaty Organization. The defense program calls for establishment of (1) short-range rocket units; (2) one Nike antiair battalion; (3) 11 air squadrons; and (4) a 125,000-man national guard. Norway has received nearly $700 million in aid under the U.S. Mutual Defense Assistance Program. Military service is compulsory for men 19 years of age, who serve either 18 months in the navy or air force, or 16 months in the army.

Transportation.—The Norwegian State Railways operate 2,719 miles of track, of which 881 miles are electrified. The North Norway railway was extended from Salten to Fauske, a distance of 24 miles, in 1959. Over 526 miles of public roads were built during 1958–59, making a total length of over 32,000 miles, including some 2,360 miles of permanently surfaced state highways. Most of the domestic air routes are operated by the Scandinavian Airlines System.

Labor.—On Jan. 1, 1959, a total of 542,557 workers, over 50% of all wage earners, belonged to unions affiliated with the Federation of Labor. Most large companies are members of the Employers Association. Wage contracts are negotiated through collective bargaining. On Aug. 31, 1959, Norway had 1,037,250 employed wage earners, and 10,900 unemployed.

Agriculture and Forestry.—Only 4% of the total area is arable. Total farm production in 1959 was estimated at 1,950 million feed units (one unit equals 1 kilogram of barley), as against 2,081 million in 1958. Major crops are hay, grains (mainly barley), legumes, and potatoes. About 245 million cubic feet of timber was felled during 1958–59.

Industry.—The index of general industrial production (1953 = 100) declined from 128 in 1957 to 124 in 1958; in the first 6 months of 1959 the index averaged 3% above the 1958 level. The nation's chief industries are based on domestic raw materials, principally ores, fish, and timber. Production of chemical wood pulp totaled over 700,000 tons in 1958. During 1959, hydroelectric power stations with more than 1,000 kilowatts capacity produced 29 billion kw.-hr. averaging over 6,500 kw.-hr. per capita, the highest in the world. Installed plant capacity was due to reach a total of 6,012,000 kw. by the end of 1959. Coal output in 1958 was estimated at 291,600 metric tons.

Fisheries and Whaling.—The total fish catch in January–June 1959 was 844,791 metric tons, or 82,257 tons more than in the same period of 1958; the landed value was about Kr.378 million, an increase of over Kr.65 million, compared with the first half of 1958. Norway's nine Antarctic whaling expeditions in 1958–59 produced 135,000 tons of whale and sperm oil, as against 145,000 tons in 1957–58.

Shipping.—By June 30, 1959, Norway had 2,783 merchant ships of over 100 gross tons, totaling 10,394,000 gross tons—a net increase of 491,600 tons since July 1, 1958. A total of about 1.1 million gross tons was laid up for lack of business. Net freight earnings in foreign exchange were estimated at Kr.1,360 million for January–June 1959, about Kr.35 million more than in the 1958 period. Ships on order or under construction totaled some 3,900,000 gross tons, including 1,300,000 tons at domestic shipyards.

Foreign Trade.—Exports of goods and ships in the first half of 1959 totaled Kr.2,806 million, as against Kr.2,620 million in the same period of 1958 (total for 1958, Kr.5,311 million; for 1957, Kr.5,867 million). Imports rose from Kr.4,670 to

Kr.4,677 million (total for 1958, Kr.9,352 million; for 1957, Kr.9,108 million). The import surplus, including net ship imports valued at Kr.1,030 million, amounted to Kr.1,872 million in the first half of 1959, as against Kr.2,051 million in the 1958 period. Commodity imports from the United States decreased from Kr.359 million in the first half of 1958 to Kr.344 million in the first half of 1959, while exports to that country increased from Kr.231 million to Kr.300 million over the same period. Leading exports were ores and metals, pulp and paper, furs, fish and fish products, chemicals and fertilizers, oils, and fats. Major imports were ores and metals, fuels, machinery and transport equipment, textiles, and grains.

Principal Events, 1959.—King Olav toured northern Norway in July and August. Accompanied by Princess Astrid, he called at 39 towns and rural communities.

The Norwegian economy showed a moderate but distinct improvement during the first half of 1959, with indications that production and construction would continue to expand through the rest of the year. The deficit on the balance of payments was substantially less than in the same period of 1958. Winter unemployment rose to a postwar peak of 47,500, but by midsummer only 8,500 were unemployed. Parliament received proposals for stimulating industry in districts suffering from recurring winter unemployment. In October 1959, four private banks set up a financing institute which, with state backing, will extend second mortgage loans on ships built at Norwegian shipyards. Convertibility of the krone was extended to most countries as of Dec. 29, 1958.

The 104th session of Parliament, which convened October 2, was scheduled to approve Norway's admission to the newly formed European Free Trade Association (q.v.). Trygve Lie, former secretary general of the United Nations, was temporarily assigned as a special ambassador at large to solicit foreign capital for investment in Norwegian industry. On July 8, the World Bank granted Norway a $20 million (Kr.143 million) loan for hydroelectric power development projects (totaling Kr.428 million). Strict rationing of electricity, caused by prolonged drought, forced many plants in southern Norway to curtail production in the fall.

Municipal elections held on September 28 effected no major changes in the political situation. Under a management-labor agreement, directly affecting some 270,000 workers, the workweek was reduced from 48 to 45 hours as of March 1.

Prominent nuclear scientists from the United States and 12 European countries attended the official opening of the world's only boiling-heavy-water reactor at Halden on October 10.

The United States transferred two minelayer-escort vessels to the Norwegian Navy during the year. The Norwegian Parliament approved the admission of two West German officers to NATO's northern headquarters at Oslo. West Germany pledged DM60 million for distribution among Norwegian civilians who had been imprisoned by the Nazis during the war.

Norway resigned from the International Whaling Convention as of July 1 because of the failure of the members to reach agreement on the distribution of the Antarctic whaling quota.

The wedding of Steven Clark Rockefeller, son of New York Governor Nelson A. Rockefeller, and Anne-Marie Rasmussen at Sögne, Norway, on August 22 received worldwide press coverage.

ANDREW MOURSUND,
Editor, "News of Norway," Norwegian Embassy, Washington, D.C.

NOVA SCOTIA. This Maritime province of southeastern Canada has an area of 21,068 square miles, of which 14,439 are forest land, 1,034 are improved agricultural land, and 325 are fresh water. In view of its relatively short length of 374 miles, Nova Scotia has an astonishing length of coastline—some 4,624 miles. The population of the province is 718,000 (est. Sept. 1, 1959), an increase of about 3½% since the last official census (694,717) in June 1956. Much of this increase has been in the metropolitan area of Halifax, which, including the town of Dartmouth, had a population in 1958 of about 178,000. Other centers, with estimated 1958 populations, are: Sydney, 32,300; Glace Bay, 24,300; Truro, 12,850; New Glasgow, 10,000, and Yarmouth, 8,100.

Government.—The province is represented in the federal Parliament by 10 life-appointed senators and 12 elected members of the House of Commons. As a result of the federal elections of March 1958, Nova Scotia is represented entirely by Progressive Conservative members, the Liberals having lost the 10 seats they had in 1956.

The province is nominally administered by a lieutenant-governor, appointed for a 5-year term by the governor-general of Canada in council. The present lieutenant-governor is Maj. Gen. E. C. Plow, appointed in January 1958. He is advised by a cabinet, headed in 1959 by Premier Robert L. Stanfield. The cabinet is responsible to the 43-member House of Assembly in which the Progressive Conservatives hold 24 seats, the Liberals 18, and the Co-operative Commonwealth Federation (CCF), 1.

Education.—In September 1959 the estimated total enrollment in Nova Scotian schools was 169,892 students (about 24% of the population). Almost all primary education is handled by nondenominational, compulsory, free public schools. There are some private schools and business colleges, and several universities, of which the largest are Dalhousie (in Halifax), St. Francis Xavier (in Antigonish), and Acadia (in Wolfville).

Finance.—Provincial revenues totaled $78,092,787, and expenditures (before sinking fund payments), $68,899,684, for the year ending March 31, 1959. For debt retirement the expenditure was $8,844,470. The net direct debt of Nova Scotia, as of March 31, 1959, was $153,538,122. Estimated revenue for the fiscal year 1959–60 is $82,891,597; estimated expenditure, $76,209,169, plus sinking fund payments of $6,651,970.

Agriculture.—Farm cash income for 1958 was $42,288,000 (an increase of $333,000 over 1957), and the gross income from agricultural production was $51,784,000. The estimated 1959 apple crop was 15,363,000 bushels (a 9% drop from 1958).

Mining.—Total mineral production for 1958 was estimated at $64,002,597. The 1958 gypsum output was valued at over $5 million and totaled over 3 million tons. Salt production in 1958 was valued at $2 million. Coal production for 1958 was about 5,297,248 tons, valued at $49,480,680; output of coal has declined 20% since 1936. The barite output in 1958 was 183,843 tons.

Manufacturing.—The gross value of manufacturing in Nova Scotia in 1958 was $399,691,000. Foods and beverages, iron and steel products, and wood and paper products form the chief manufactures. In 1957 there were 1,402 manufacturing establishments, with 31,764 employees. Iron and steel products in 1957 were valued at $76,881,000, a slight increase over 1956. The total electric power capacity in the province, as of mid-1958, amounted to about 429,230 kilowatts, of which about 73% was generated by thermal plants and the rest by hydroelectric plants.

Fishing.—The 1958 salt water fish catch was 464,721,000 pounds, with a landed value of $24,841,000. From January through July 1959, the catch was 240,105,000 pounds.

Lumbering.—Nova Scotia ranks fifth among the Canadian provinces as a producer of forest products. In 1957, lumber production was valued at $15,759,031.

Tourism.—The growing tourist industry is important to the economy. In 1958 some 599,843 tourists and 150,539 cars came to Nova Scotia, mostly from the United States.

Communications.—The province has 1,420 miles of railway. As of March 1958 there were 15,197 miles of highway, of which 2,218 miles are paved and 10,142 miles are good secondary roads. Cape Breton Island is connected to the mainland of Nova Scotia by a causeway across the Strait of Canso, built at a cost of $23 million. Nova Scotia has a dozen commodious harbors, of which Halifax is the most important. The new international airport at Kelly Lake, near Halifax, is to be completed in 1960.

Principal Events, 1959.—On July 31–August 1, Queen Elizabeth II and Prince Philip visited Nova Scotia at the end of their Canadian tour. A meeting of the federal cabinet held in Halifax during the royal visit was attended by the queen.

Much concern has been shown over the plight of Nova Scotia's coal mining industry in view of the loss of much of its market in Quebec, where natural gas from western Canada is being used widely. A royal commission will investigate the situation in the near future.

At Baddeck, in February, the 50th anniversary of the first successful flight in the British Empire was observed, with J. A. McCurdy, who piloted the *Silver Dart* on that occasion, in attendance. During the year, the 20th anniversary of the founding of the Gaelic College at St. Ann's (the only such college in North America) was marked. At Chester and at Liverpool, bicentennial ceremonies were also held.

NUCLEAR PHYSICS. See Atomic Energy; Physics.

NURSING. Research.—Research into nursing practice and nurses' personalities and motivations continued to be carried on during 1959 by the profession itself and, through the American Nurses' Foundation, by other organizations and agencies. In September 1958 the foundation, under a grant from the U.S. Public Health Service, sponsored a conference at which progress in nursing research and future research goals were discussed.

Between 1955 and 1959 the Public Health Service awarded 83 full-time nursing research fellowships, totaling $333,368, and 63 nursing research projects, totaling $2,750,000. The projects include such subjects as the selection of persons for leadership in nursing, the professional nurse in public health, and nursing in maternity and newborn care.

Scholarship Aid to Nurses.—During the first session of the 86th Congress, bills to aid collegiate nursing education were introduced into both houses; however, final action was carried over to the second session. Each bill has three major parts: (1) grants to collegiate schools of nursing to help in constructing and equipping classrooms, offices, libraries and laboratories; (2) grants to help meet the cost of instruction; and (3) scholarship aid to candidates for baccalaureate degrees in nursing.

Congress extended for five years the traineeship program for nurses studying supervision, teaching and administration, and public health, and appropriated funds toward the program amounting to $8,115,000 for the 1959–60 fiscal year. For the first time, funds were allocated for short-term intensive training courses in supervision and administration for nurses not able to enroll for longer periods.

State legislatures are slowly increasing scholarship aid for basic professional nursing education and for graduate nurse education. In 1958, 14 states appropriated amounts varying from $12,500 in North Dakota to $100,000 in Connecticut.

Admissions to Schools of Nursing.—Students admitted to nursing educational programs between Aug. 31, 1957, and Sept. 1, 1958, totaled 44,221, with 36,402 admitted to diploma programs, and 7,819 admitted to baccalaureate and associated degree programs. In addition, 20,531 were admitted to practical nurse programs.

Nursing Statistics.—Preliminary figures issued by the various state boards of nursing show that about 50% of the registered nurses in the United States, an estimated 460,000, are working in general duty or staff level positions; about 10% are employed in head nurse or assistant head nurse positions; and about 12% are in supervisory or administrative positions. While about 60% of the nurses working in hospitals, on private duty, or in offices are married, only about 33% of the registered nurses employed in schools of nursing are married.

Also, these figures indicate that the average age of the nurse population in the United States is increasing. In 1959 only about 65% of the nurses were less than 45 years old, whereas in 1943 about 75% were under that age. Furthermore, older professional nurses tend to be employed in private duty positions, while younger nurses tend to fill positions on hospital staffs.

Miscellaneous.—Professional nurses associations in Alaska and Hawaii, the newest states in the Union, have been constituent units of the American Nurses' Association (ANA) since 1951 and 1918, respectively. In December 1958, ANA membership in Alaska totaled 273; in Hawaii, 986. Alaska has no school of professional nursing; Hawaii has three. Each has one school of practical nursing.

In 1959, American nurses were represented at a conference on nursing employment conditions, held by the International Labor Organization in Geneva. Representatives from 14 countries were present. The problems discussed included the nearly worldwide shortage of nurses; the 40-hour workweek, which is not observed by all countries; the social status of nurses, which varies among countries; the need for legal control in all countries of the practice of nursing; and the need for recruiting more nursing students.

Also during the year, the Canadian Nurses' Association began to publish in June a French-language edition of its official publication, *Canadian Nurse,* with the title *L'Infirmière Canadienne.*

NUTRITION. Recommended Dietary Allowances.—The Food and Nutrition Board of the National Research Council periodically revises and re-evaluates the Recommended Dietary Allowances. The most recent revision (1958) is contained in Publication 589 of the National Academy of Sciences—National Research Council, Washington, D.C. The Food and Nutrition Board, like other groups within the National Research Council, is purely advisory, but its recommendations provide the most reliable guide for diet evaluation and for the appropriateness of the claims made for numerous pharmaceutical or food products that are widely advertised as being of nutritional value.

Evaluating Diet.—Two principles concerning dietary evaluation should be recognized. First, diets can only be evaluated in terms of specific nutrients. In this regard, one food is neither better nor worse than another except in terms of the amount of nutrients each contains. Second, an excessively high intake of any particular nutrient is of no benefit and may be detrimental. Thus, it is not true that if more than the recommended amount of a particular nutrient is consumed or present in a food, the more beneficial that nutrient or food will be. Whether to include or exclude, in relation to diet, a particular food or food supplement as being beneficial, detrimental, or innocuous depends on the overall nutritional content of the diet with which it is to be consumed and on the nutrients contained in the individual food or food supplement. The Recommended Dietary Allowances provide baseline values by which such decisions should be made.

Minimal Nutritional Requirements.—Minimal nutritional requirements—the smallest quantities of various nutrients that must be consumed for good health—depend on a number of factors, including

variations in individual needs and in the availability of nutrients in different foods and under different conditions. These variables are further complicated by a large diversity in the nutritional content of food samples and by the fact that varying amounts of nutrients may be lost through different methods of food preparation. In addition, neither the absolute nutrient intake of an individual nor his specific nutritional requirements are often, if ever, known.

In view of these inevitable uncertainties, the Recommended Dietary Allowances are considerably above the values estimated to be the actual minimal average requirements. Consumption of somewhat smaller amounts than those recommended does not indicate, therefore, the presence of a nutritional deficiency or an inadequate diet. In fact, there is considerable debate as to whether the allowances might not be unnecessarily generous in several respects. For all practical purposes, one may assume that if his diet includes as much of each of the various nutrients as recommended there is no reason for consuming unusual or expensive dietary supplements.

Recommended Consumption of Nutrients.—The required amounts of various nutrients differ with the age and activity of the individual. Daily recommended consumption for the average, moderately active adult man of 25 years of age is as follows: calories, 3,200; protein, 70 grams; calcium, 0.8 grams; iron, 10 mg.; vitamin A, 5,000 international units; thiamin, 1.6 mg.; riboflavin, 1.8 mg.; niacin equivalents, 21 mg.; ascorbic acid, 75 mg.; vitamin D, none.[1] In general, the recommended allowances for women and for children under 12 years of age (except in the case of vitamin D for children, who require more of this nutrient) are equal to or less than these amounts. The amounts recommended for adolescents and for pregnant and lactating women are somewhat larger, including additional amounts of vitamin D.

Food Supplements.—It should be noted that even relatively poor diets supply about half of the recommended amounts of nutrients, and that, under ordinary circumstances, there is no reason for consuming dietary supplements to supply more than these amounts. In the face of competition, many manufacturers tend to add large amounts of some vitamins to their products, claiming that greater benefits may be derived from their use. Such claims are not in accord with good nutritional practice.

Other Essential Nutrients.—The Recommended Dietary Allowances also consider the following essential nutrients: sodium, potassium, phosphorus, magnesium, copper, iodine, fluorine, zinc, cobalt, manganese, molybdenum, vitamin B_6, vitamin B_{12}, folic acid, pantothenic acid, biotin, vitamin E, and vitamin K. However, the Food and Nutrition Board concluded that, with the exception of iodine and fluorine, the ordinary diet in the United States provides adequate amounts of all of these, and that it is not necessary to establish allowances for them. Only in rare situations requiring medical attention need one consider these nutritional elements. Since there is no evidence that these elements benefit the consumer when eaten in amounts greater than those supplied by an ordinary diet, a misleading impression is created when they are listed on the labels of commercial products.

"Natural" Vitamins.—Special benefits are often claimed for "natural" vitamins occurring in particular foods or in commercial preparations of natural materials. In this regard it should be noted that there are no chemical or physiological differences between the vitamins which occur in foods and those manufactured. Although the possibility exists that in the future new essential nutrients may be discovered in food materials, there is no evidence now that certain exotic materials, such as seaweed, alfalfa leaf meal, honey, and wheat germ oil, which are commonly included in some nutritional preparations or special diets, have any particular benefical properties not explained by the known nutrients they contain.

Iodine.—Many diets do not contain sufficient iodine, and enlarged thyroid glands or goiter may result. Since the iodine content of foods varies widely and depends to a great extent on the locality in which those foods are grown, it is not possible to estimate iodine intake from a knowledge of the foods eaten. Hence, there is no Recommended Dietary Allowance for iodine.

To assure an adequate iodine intake, the Food and Nutrition Board recommends including iodized salt, readily available in all stores, in the diet. The use of iodized salt has been largely responsible for the great diminution of the incidence of goiter in many areas of the United States and in other parts of the world. It is known, however, that less iodized salt is marketed if its importance is not continually brought to the attention of the public. A practical solution to this problem in some parts of the world has been the passage of legislation requiring the iodization of all salt for human consumption.

Fluorine.—A somewhat similar situation is presented by the need for fluorine. Extensive investigations demonstrate a close inverse relationship between the fluorine content of the water supply and the incidence of caries. In many areas of the United States where the fluorine content of the water supply is less than one in one million parts there are higher rates of dental decay than in communities with this amount of fluorine in the water. Furthermore, numerous long-term studies have shown that appropriate fluoridation of water supplies reduces the dental decay rate by approximately 50% without producing harmful effects. Approximately 35 million people in the United States now have a fluoridated water supply. (See also DENTISTRY.)

Although other methods of adding fluorine to the diet could undoubtedly be developed, it must be emphasized that self-medication programs should not be recommended, since the consumption of fluorine at levels somewhat higher than the prescribed ratio is definitely toxic. Furthermore, few public health programs are successful if they depend entirely on voluntary activities. In view of the practicality and ease of water fluoridation, no advantage can be envisioned for other methods of supplying fluorine in adequate amounts. In 1953 the Food and Nutrition Board published an extensive favorable evaluation of water fluoridation (National Research Council, Publication 294, Washington, D.C.), and many health organizations, such as the American Medical Association, the American Dental Association, and the American Public Health Association, have urged fluoridation of public water supplies wherever the level is below the desired amount.

[1] Provitamin D in the skin, which is converted into vitamin D by sunlight, supplies sufficient vitamin D for adults under ordinary circumstances.

NUTS. The 1959 peanut crop in the United States, as estimated by the Department of Agri-

culture in December, was 1,602 million pounds, 13% less than the 1958 production of 1,836 million pounds. Average yield per acre in 1959 was 1,097 pounds. Major peanut-growing states, with estimated 1959 crops in millions of pounds, were: Georgia, 552.4; North Carolina, 284.8; Texas, 202.3; Virginia, 194.3; and Alabama, 160.8.

Pecan production in 1959 was estimated at 127.5 million pounds, 27% down from 1958's 174.8 million pounds. Chief producing states, with estimated 1959 output in millions of pounds, were: Georgia, 39; Texas, 23; Louisiana, 21; and Alabama, 12.

California's 1959 almond yield was a record-breaking 82,000 tons, compared with 19,800 in 1958. The state's English walnut crop, however, dropped to 57,000 tons from 82,200 in 1958. Oregon produced 4,200 tons of English walnuts in 1959 and 9,000 tons of filberts.

OCEANIA. A term commonly denoting the Polynesian, Melanesian, and Micronesian island groups of the South and Southwest Pacific, and sometimes taken to include Australasia and the Malay Archipelago. (See PACIFIC ISLANDS.)

OCEANOGRAPHY. From Aug. 30 to Sept. 11, 1959, the General Assembly Building of the United Nations in New York City was the scene of the largest and most important event in the history of oceanography. More than a thousand delegates from over 38 countries assembled there for the International Oceanographic Congress and for an exchange of ideas which took place through several formal addresses, over 500 presentations of scientific papers, and countless informal conferences.

A noteworthy feature of the congress was the presence in New York Harbor of the oceanographic research vessels *Atlantis* and *Chain* (Woods Hole Oceanographic Institution), *Maury* (Chesapeake Bay Oceanographic Institute), *Pathfinder* (Virginia Fisheries Laboratory), *Gibbs* (Lamont Laboratories), *Calypso* (Français de Recherches Sous-Marines), and *Mikhail Lomonosov* (Soviet Academy of Science). The *Calypso,* under the command of Capt. Jacques-Ives Cousteau, had aboard it an interesting two man jet-propelled underwater "flying saucer" still in the experimental stage. It gives promise of being a useful means of underwater exploration. The most impressive sight was the giant (6,000-ton) *Mikhail Lomonosov,* one of the few ships specifically designed and constructed for oceanographic purposes.

Only a few of the hundreds of papers presented at the congress can be mentioned here, and these can do no more than indicate the broad scope of the congress. A 1,022-page book containing abstracts of these papers was published by the American Association for the Advancement of Science, one of the sponsors of the congress.

O. S. Arrhenius showed that the equator is more than an imaginary line, that a particular type of sediment is found at the equator, and that it has been there a long time. Therefore, it is unlikely that the poles have shifted much in the past.

The Cromwell Current, which was first described in 1954, was the subject of a report by Harold P. Knauss. Direct current measurements in the Pacific showed that the maximum velocity was at the equator. The current is eastward below the surface (at the surface the flow is westward) with a maximum up to 3 knots at depths of from 40 to 100 meters. It is about 200 miles wide, and direct measurements have shown that it is at least 3,500 miles long. (Indirect evidence suggests it may be 5,000 to 6,000 miles long.) It does not flow beyond the Galapagos Islands.

Oceanic trenches are long, narrow depressions with steep slopes, forming the deepest parts of the ocean bottom. The Soviet research vessel *Vitiaz,* a sister ship of the *Lomonosov,* was especially equipped to study these trenches. G. D. Udintzev described some of the findings. The shape, depths, and positions of the Aleutian, Kurile-Kamchatka, Japanese, Bonin, Marianas, Yap, Palau, New Britain, and Bougainville trenches were determined with greater precision. Some of these were found to be twice as long as had been thought. The maximum depth of the Marianas Trench was revised to 10,863 meters (35,630 feet) from the previously established figure of 11,034 meters (36,192 feet).[1]

The "apparent age" of deep water in the Pacific Ocean was determined by Hans E. Suess, Norris Rakestraw, and Hans Oeschger using the carbon-14 dating method. They found that these waters had been at the bottom of the sea from 1,300 to 1,900 years; and from this finding they deduced that bottom waters moved about 8 miles per year.

Meng-Chierego and Picotti studied the distribution of copper in the Adriatic Sea. One interesting finding is that the deep water in the center of the sea is absolutely stagnant.

A re-evaluation by Francis Shepard of the data on cable breaks of 1929 in the Grand Banks region, which had caused other geologists to infer turbidity currents with velocities up to 85 knots, led to the conclusion that the speed of the currents was a more moderate 15 knots. He concluded that there was little evidence to suggest the action of violent currents.

A remarkable report by Sokolova on some peculiarities of the deep-sea bottom fauna should give notice to the rest of the world of how seriously the Russians are taking deep-sea oceanography. Bottom organisms can be divided into three

[1] On Nov. 14, 1959, the U.S. Navy's bathyscaphe *Trieste* descended to a depth of 18,600 feet in the Marianas Trench off Guam and obtained photographs of the ocean floor. Descents to 24,000 and 35,800 feet in the same area were made by the *Trieste* on Jan. 7 and 23, 1960.

classes: (1) suspension feeders (such as oysters or barnacles); (2) predators; and (3) detritus feeders. A study of 1,923 specimens belonging to 83 species showed that in the Kurile-Kamchatka Trench, at depths of from 1,000 to 10,000 meters, there were three different zones: (1) a zone with numerous suspension feeders; (2) a zone with all three types; and (3) a zone with a dominance of detritus feeders. This sequence of zones was repeated in consecutive order at 3,000, 5,000 and 8,500 meters, and these zones were correlated with sedimentation processes. Collections from other trenches in temperate latitudes confirmed these findings.

The suspended matter in the ocean has been studied for years by many workers. Lisitzin reported on Soviet work in which 5 to 7 tons of water are pumped per hour from depths down to 200 meters. Below this level, water samples of 50 gallons are taken. A total of 18,000 samples have been obtained from the Indian and Pacific oceans. Under each square meter of the ocean surface, from 4 to 20 pounds of matter are in suspension.

The causes of the long-term changes in the fauna and biological productivity in the Barents Sea were studied by Kamshilov. Young codfish are dependent on the copepod *Calanus* for food, but two species of ctenophores (sea gooseberries), *Bolinopsis* and *Pleurobrachia,* also feed on *Calanus.* When these ctenophores become abundant, they deplete the copepod population to the point where the young cod cannot survive. However, the Barents Sea also harbors another ctenophore, *Beroë,* which feeds on the other two ctenophores. When *Beroë* is abundant, young cod thrive. Nature provides the final check and assures its balance by causing all ctenophores to sink to the bottom in the cold winter months. There the older cod quickly find and eat *Beroë* but refuse *Bolinopsis.*

A theoretical study by Labeysh on the influence of the earth's rotation on the near-shore circulation showed that in the Northern Hemisphere, when the shore is to the right of the main stream, the stream will be very close to the shore. If the shore is to the left, the stream will lie a sufficient distance offshore to allow a compensating countercurrent to flow close to the coast.

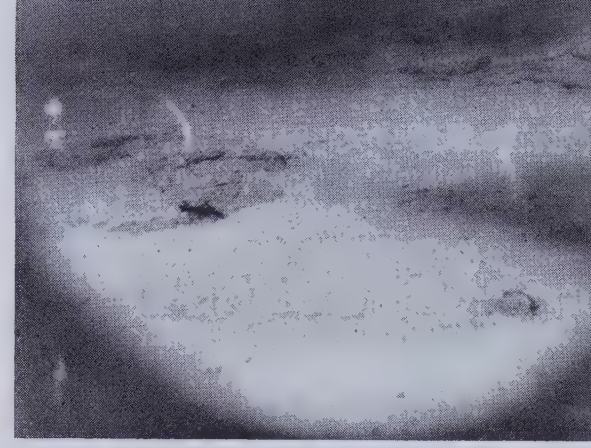
F. C. W. Olson,
Head, Environmental Studies Branch, U.S. Navy Mine Defense Laboratory.

OCHOA, Severo, Spanish-American biochemist: b. Luarca, Spain, Sept. 24, 1905. Dr. Ochoa shared the 1959 Nobel Prize in medicine and physiology ($42,600) with his former student, Dr. Arthur Kornberg (q.v.). The prize was awarded for "discoveries of the mechanism in the biological synthesis of ribonucleic acids and deoxyribonucleic acids." These are substances which are believed to play a major role in the synthesis of protein molecules in cells of living organisms, and in the transmission of genetic patterns from generation to generation.

Dr. Ochoa received his medical degree from the University of Madrid in 1929. He was successively associated as a teacher and researcher with the University of Madrid (1931–36), Kaiser Wilhelm Institute for Medicine (Heidelberg, 1936–37), and the University of Oxford Medical School (1938–40). In 1940 he went to the United States, where he accepted an appointment in 1941 as research associate and instructor at the Washington University School of Medicine in St. Louis. From 1942 he was associated with the New York University College of Medicine, becoming chairman of the Department of Pharmacology in 1946 and chairman of the Department of Biochemistry in 1954. Dr. Ochoa became a U.S. citizen in 1956.



WIDE WORLD

The ocean floor, 18,600 feet down, in the Marianas Trench off Guam, photographed from the U.S. Navy bathyscaphe *Trieste,* during its record-breaking descent on November 14. Later, the *Trieste* descended in the same area to 24,000 feet on Jan. 7, 1960, and to 35,800 feet on Jan. 23, 1960.

OFFICE OF CIVIL AND DEFENSE MOBILIZATION. The Office of Civil and Defense Mobilization (OCDM), an agency within the Executive Office of the President, is responsible for nonmilitary planning to assure United States survival and recovery in the event of enemy attack or natural disaster. It maintains its national headquarters in the Executive Office Building, Washington, D.C., and its operational headquarters in Battle Creek, Mich. During 1959, an eighth regional office, at Everett, Wash., was established to serve the Pacific Northwest and Alaska. Other regional offices are located at Harvard, Mass.; Olney, Md.; Thomasville, Ga.; Battle Creek, Mich.; Denton, Texas; Denver, Colo.; and Santa Rosa, Calif.

OCDM directs and delegates far-reaching programs under its National Plan for Civil and Defense Mobilization (promulgated in October 1958). This includes advice and guidance to state and local governments in the development of their survival plans, development of a national radiological defense plan, maintenance of a national attack-warning system (NAWAS), and development of protective measures to save lives and minimize damage in the event of enemy attack. Nationwide warning is now possible in 90 seconds via the NAWAS-leased telephone system, interconnecting OCDM personnel at the North Atlantic Air Defense Command (NORAD) with more than 300 strategically located warning points and OCDM's national and regional offices.

The detailed National Plan for Civil Defense and Defense Mobilization was published in 1959. The year also saw major application of the national policy on shelter, which stresses these points: (1) education of all Americans on the facts of nuclear attack effects, and education on what can be done to minimize these effects; (2) a survey of existing structures on a sampling basis to determine capabilities for fallout shelter, particularly in large cities; (3) accelerated research on the incorporation of fall-out shelters in existing and proposed buildings, including homes, private buildings, and government structures; (4) construction of a limited number of prototype shelters of various kinds for testing; (5) leadership and example through incorporating fall-out shelters in appropriate new federal buildings.

A booklet, *The Family Fallout Shelter,* was issued for general free distribution and proved a major factor in increasing public knowledge of the shelter concept. By Jan. 1, 1960, demand far ex-

ceeded the 12,500,000 copies already distributed.

A nationwide radiological defense education program for high school students was launched, and by autumn 1959 radiological courses were available in more than 7,000 schools and colleges. OCDM has purchased and is distributing 900,000 radiological instruments.

A federal radiological network had available 900 fixed monitoring points operating around the clock in 1959; there will be 3,000 of these points by 1962. The information obtained from this network, combined with state and local monitoring at more than 14,000 stations, will be used to assist in making decisions for protective, remedial, and recovery action at all levels of government. It is planned to have an additional 3,000 federally operated monitoring points and 130,000 state and local points in the fiscal year 1962.

In May 1959, the Eastern Instructor Training Center at Manhattan Beach, N.Y., was activated. It is designed to train thousands of radiological defense and civil defense instructors. A similar Western Center was opened in October in Alameda, Calif.

A civil defense program aimed specifically at rural areas was inaugurated. Its major objectives are to encourage rural family shelters, educate rural families in the protection of livestock and salvage of crops, and coordinate family efforts with community civil defense programs. Leaders of nationwide rural activities, particularly the farm organizations, have joined in this effort.

The nation's survival plan program, with civil defense operational plans for 240 areas in all the 50 states, the District of Columbia, and the Commonwealth of Puerto Rico, continued with emphasis on government readiness for emergencies. Local-level planning involved 2,315 areas, with several hundred additional plans being inaugurated.

Of prime importance early in 1959 was enactment of Public Law 85–606, which amended the Federal Civil Defense Act of 1950 by establishing civil defense as the joint responsibility of the federal government, the several states, and their political subdivisions. The earlier act, known as Public Law 920, had placed primary responsibility for civil defense with the several states and their political subdivisions. PL 85–606 also authorized the federal government to extend financial assistance to the several states to support administrative costs of their civil defense programs. However, Congress failed to provide the funds.

The national civil defense exercise, Operation Alert 1959, was conducted in three phases beginning in April and ending in August. Most state and city governments, many with entire staffs, participated in the tests. CONELRAD, the emergency broadcasting system, was tested in conjunction with the Federal Communications Commission (q.v.) and the entire radio-television industry. All normal broadcasting and telecasting in the United States was suspended for a 30-minute period.

Continuity of government, an important theme of OCDM's program, received major attention from state legislators. By midsummer, legislatures which met in 43 of 46 states had taken some action on OCDM-suggested legislation to provide for emergency lines of succession, preservation of essential records, government emergency relocation sites, and the use of government facilities, equipment, and personnel in emergencies. By autumn 1959 all or part of this program had been signed into law by governors of 34 states.

In another program, OCDM had, by the end of 1959, positioned more than 1,400 civil defense emergency hospitals throughout the nation, each portable hospital having a 200-bed capacity.

President Eisenhower reported to Congress that net allocations for federal disaster relief since inception of the program in 1951, administered by OCDM under Public Law 875, totaled $97.5 million as of the end of calendar 1958.

The original acquisition cost to the government of surplus property made available to states and cities for civil defense aggregated $83,573,127 from the beginning of the program in 1956 through June 30, 1959. This represented an increase of $48,057,819 during the fiscal year 1959.

LEO A. HOEGH,
Director, OCDM.

OFFICE OF EDUCATION, U.S. A unit of the U.S. Department of Health, Education, and Welfare since the latter's creation in 1953, the Office of Education was originally established in 1867. It has been engaged in three major areas of activity. The first, the preparation and dissemination of statistics and other information, had its beginnings in 1867. The second major area, materializing particularly after the turn of the century, involved extensive services exemplified by educational surveys and consultative services to the education profession, to state education agencies, to institutions of higher education, and to other groups regarding the condition and progress of education. The third area is distinguished by a more active participation with local and state education agencies and institutions of higher education in financing educational facilities and programs.

An illustration of the role of the office in the third area is the National Defense Education Act of 1958, which signified congressional recognition that the defense and the security of the nation are inseparably bound with education.

A major activity in 1959 was the launching of the several programs under this act (see EDUCATION). The purposes include: the identification and education of more of the nation's talented young people; the provision of loans to students who are not financially able to enter college or to continue their higher education; the correction of existing imbalances resulting in an insufficient portion of the population's being educated in science, mathematics, foreign languages, and technology; provisions for attacking the problem of the shortage of teachers; efforts toward the improvement of instruction at all levels through more and better use of communications media; and the provision for the training, through mastery of foreign language, of more competent representatives in the fields of business and government.

Increased exchange of information and publications between the United States and other countries provided substantial resources for the study of new developments in worldwide education and cultural programs. The publication, *Soviet Commitment to Education*, reports on the first official United States education mission to the Soviet Union, under the Cultural Exchange Agreement of 1958. The U.S. commissioner of education headed the mission. A similar group of educational specialists from the USSR visited schools in the United States in 1958. Office of Education studies in comparative education dealt with Haiti, Brazil, Japan, East Germany, the Netherlands, Belgium, and Luxembourg.

Expansion of teaching in the education of mentally retarded children through fellowship grants to institutions of higher education and to state educational agencies was made possible by passage in 1958 of Public Law 85–926.

Effective July 1, 1958, Congress made permanent the provisions of the program of federal assistance for the construction and maintenance of schools in areas affected by federal activity. Such facilities are designed for children whose parents reside on and are employed on federal property.

One of the primary needs in education is adequacy in the quantity and quality of educational research to substantiate present policies and practices and to provide guidelines for redirecting educational processes. During 1959 important gains were made in the research program. As of June 30, 1959, 192 cooperative research projects

were receiving support from the Office of Education.

An expansion of the research and statistical services begun three years earlier resulted in 1959 in a number of major new statistical studies such as those dealing with the status and career plans of the beginning teacher, teacher turnover, suburban school systems, junior-year college students enrolled in major fields of science and mathematics, and rural country school systems.

Two monthly publications, *School Life* and *Higher Education,* continued to be issued by the office.

LAWRENCE G. DERTHICK,
U.S. Commissioner of Education.

OHIO. North Central state, United States; admitted to the Union, March 1, 1803. The "Buckeye State" ranks 35th in area and fifth in population among the 50 states.

Area and Population.—Area: 41,222 square miles (land, 41,000; inland water, 222), divided into 88 counties. Population: (1950) 7,946,627; (est., July 1, 1958) 9,533,000. Urban places with populations above 20,000 (as estimated by the State Department of Health for Jan. 1, 1959) are:

Akron	308,014	Lorain	61,068
Alliance	31,207	Mansfield	52,515
Ashtabula	27,079	Maple Heights	29,005
Barberton	36,047	Marion	39,148
Canton	124,116	Massillon	38,694
Chillicothe	27,562	Middletown	44,252
Cincinnati	575,523	Newark	40,211
Cleveland	926,808	Norwood	39,090
Cleveland Heights	61,800	Parma	73,410
Columbus (*capital*)	479,431	Portsmouth	39,959
Cuyahoga Falls	50,550	Sandusky	34,998
Dayton	300,704	Shaker Heights	33,707
East Cleveland	40,571	South Euclid	27,862
East Liverpool	27,260	Springfield	88,282

Lima	57,813		

Executive.—Chief state officers in 1959:
Governor: Michael V. DiSalle (Democrat)
Lieutenant Governor: John W. Donahey
Secretary of State: Ted W. Brown
Treasurer: Joseph T. Ferguson
Attorney General: Mark McElroy
Auditor: James A. Rhodes
Supt. of Public Instruction: Edward E. Holt

Constitution and Judiciary.—The present constitution went into effect in 1851. The Supreme Court comprises seven justices; chief justice in 1959 was Carl V. Weygandt.

Legislature.—The Ohio General Assembly comprises a 33-member Senate (in 1959, 20 Democrats and 13 Republicans) and a 139-member House of Representatives (78 Democrats and 61 Republicans), which meet in odd-numbered years commencing the first Monday in January. (See below, *Principal Events, 1959.*)

Finance.—In the 1958–59 fiscal year, state revenue of $1,445,088,454 comprised $728,344,311 from state tax sources, $290,972,216 from the federal government, and $425,771,927 from other sources. Tax revenue consisted of $231,063,200 from a 3% general sales tax, $156,488,380 from motor fuel taxes, $100,671,603 from licensing, and $240,121,128 from other sources. Expenditures totaling $1,516,346,063 comprised $287,747,752 for education, $240,506,797 for health, welfare, and safety, $373,821,262 for highways, and $614,270,252 for other purposes. State long-term indebtedness on June 30, 1959, amounted to $408,455,000.

Banking.—As of June 10, 1959, the state's 225 national banks had $5,980,838,000 in assets, $3,454,885,000 in demand deposits, and $1,926,500,000 in time deposits. The 375 state banks had assets of $5,665,870,386, demand deposits of $2,847,473,373, and time deposits of $2,105,266,813.

Education.—School attendance is compulsory between the ages of 5 and 17, inclusive. Operating expenditures for public elementary and secondary schools in the 1957–58 school year totaled $515,400,609 ($325.08 per pupil), and revenues comprised $357,469,322 from local school districts, $184,433,598 from the state, and $10,285,707 from the federal government. Outlays for construction and improvements amounted to $157,530,476, and teachers' salaries (1958–59) averaged $4,862 (high school, $5,183; elementary, $4,661).

UPI

Floods in Ohio in late January were among the worst in the state's history. Here, part of Columbus, the state capital, is inundated by rising waters from the Scioto River.

OHIO SCHOOL STATISTICS, 1958–59

Type of school	No.	Teachers	Students
Public elementary (1–6; 1–8)	2,995	39,954	1,205,437
Public junior high (7–9)	171	5,229	124,458
Public senior high (6–12; 9–12; 10–12)	958	21,130	463,877
Private and parochial elementary and secondary	890	10,220	351,800
Colleges and universities	...	...	156,385

Public Assistance.—In the 1958–59 fiscal year, public assistance expenditures from federal and state funds (excluding institutional costs) totaled $161,881,004, including $71,444,162 for the aged, $29,208,791 for dependent children, and $7,976,651 for the permanently and totally disabled. A monthly average of 334,015 persons received public assistance.

Labor Force.—Nonagricultural employment in July 1959 totaled 3,083,700 persons, up from 2,922,700 reported in July 1958, and including 1,278,300 factory workers and 1,805,400 nonmanufacturing workers. Leading sources of nonmanufacturing employment were wholesale and retail trade (588,200) and government services (362,400).

Manufacturing.—The state's manufacturing plants in 1957 employed 1,358,293 persons who earned $7,066,726,000 in wages. Value added by manufacture totaled $12,757,187,000, and outlays for new plant and equipment amounted to $1,208,554,000. In August 1959, production workers averaged $101.21 for an average workweek of 40.7 hours.

MAJOR OHIO MANUFACTURES, 1957

Product or industry	Average no. of employees	Salaries and wages (thousands of dollars)	Value added by mfr.* (thousands of dollars)
Nonelectrical machinery	230,763	$1,265,739	$2,246,193

Printing and publishing	58,465	310,726	545,802

* For definition see footnote 1 in the article *Industrial Production.*
(Source: *Annual Survey of Manufactures: 1957.*)

Mining—In 1958 Ohio ranked 14th among the states in the value of its mineral output, with 2.09% of the national total. It was first in output of fire clay and lime; second in beryllium metal and alloys and pig iron; third in coke; and fifth in cement, salt (11% of the national total), and stone.

Aluminum production facilities which went into operation near Clarington in 1958 were expanded in 1959. Also in 1959, a new rock salt (halite) mine was opened at Fairport Harbor.

OHIO MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Cement (bbl.)	15,700,000	$ 53,043,000
Clay	5,220,000	13,082,000
Coal	32,028,000	126,241,000
Coke	6,474,405	110,275,760[1]
Ferroalloys	406,723	92,698,000[1]
Iron, pig	9,609,594	556,662,000[1]
Lime	2,411,000	32,471,000
Natural gas (1,000 cu. ft.)[2]	31,786,000	6,802,000
Petroleum (bbl.)[2]	6,260,000	18,091,000
Salt, common	2,443,000	17,443,000
Sand and gravel	29,624,000	36,619,000
Stone	29,122,000	49,782,000
Other minerals	...	2,092,000
Total	...	$344,856,000[3]

[1] Value for processed materials is not included in the total. [2] Preliminary. [3] Total adjusted to avoid duplication of value of clays and stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1959 dropped to $684,470,000 from $713,390,000 for the corresponding period of 1958. For the full year 1958, income comprised $641,728,000 from livestock and livestock products, $341,907,000 from crops, and $33,992,000 from government payments. Principal income sources were dairy products, $204,923,000; hogs, $170,733,000; and cattle, $145,887,000.

OHIO CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	2,972	3,100	2,750
Buckwheat (1,000 bu.)	167	54	72
Cherries (tons)	2,138	2,400	1,720
Corn (1,000 bu.)	198,233	202,560	250,992
Grapes (tons)	14,240	20,000	16,000
Hay (1,000 tons)	3,791	3,862	3,622
Maple sirup (1,000 gal.)	131	124	118
Oats (1,000 bu.)	47,436	56,680	52,256
Peaches (1,000 bu.)	944	1,100	780
Pears (1,000 bu.)	127	60	60
Popcorn (1,000 lb.)	32,554	54,000	39,060

Sugar beets (1,000 short tons)	214	309	352
Tobacco (1,000 lb.)	25,361	14,913	22,170
Wheat (1,000 bu.)	48,335	46,345	32,977

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

There were 174 000 farms in the state in 1958. Total acreage (1954) of 19,992,000 included 10,340,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 2,367,000 cattle, 2,628,000 hogs, 1,055,000 sheep, and 14,064,000 chickens (excluding commercial broilers). There were 248,000 family and hired workers engaged in farming during the week of Nov. 22–29, 1959.

Transportation and Communications.—State and federal spending for highways in the 1958–59 fiscal year totaled $339,376,701. New construction of 277.38 miles included the $65 million, 52-mile Detroit-Toledo Expressway, which was officially opened on May 17, 1959.

Highways and roads on Jan. 1, 1959, totaled 100,342 miles (63,597 surfaced). Registered *motor vehicles* numbered 3,811,209 in 1958. There were (1958) 29 *railroads* operating 10,000 miles of track; 13 regularly scheduled *airlines;* and 400 *airports and airfields* (201 certificated and 199 private).

Communications media (1958) included 86 AM and 45 FM *radio stations;* 22 *television stations;* 98 daily *newspapers* (circulation, 3,455,073) and 265 other newspapers (779,000); and (Jan. 1, 1959) 937,200 business and 2,843,800 residential *telephones.*

Principal Events, 1959.—In late January, heavy rains and ice jams in rivers flowing into Lake Erie and the Ohio River contributed to one of the worst floods in the history of the state. In Chillicothe alone about 9,000 persons were driven from their homes. Governor DiSalle and President Eisenhower declared the entire state a disaster area, and the Red Cross opened disaster centers.

Michael V. DiSalle, Democrat, was inaugurated on January 12 as Ohio's first four-year-term governor, following a constitutional change in 1954. Against vigorous Republican opposition, he secured legislative sanction for almost half a billion dollars in increased expenditures for the 1959–61 biennium. Tax boosts totaling over $300 million included: a 2-cent-a-pack increase in the cigarette tax and rises in taxes on corporate franchises, beer, horse-race wagers, inheritances, and on sales (the minimum sale subject to tax being lowered from 41 to 31 cents). A 2-cent-a-gallon hike in gasoline and diesel fuel taxes was expected to produce almost $120 million for highway construction.

Additional estimated increases in assessments, fees, premiums, and benefits were expected to amount to about $200 million. An administrative order increased liquor prices at state stores by $40 million. Increased jobless benefits (due to a temporary extension of the regular 21-week period to 39 weeks), higher workmen's compensation payments by both employers and employees, legislation permitting simultaneous payment of supplemental unemployment benefits and jobless compensation, higher fees for county officials, and increased state fees for examinations of banks, doctors, dentists, pharmacists, and embalmers were sanctioned. Tolls were eliminated on the Steubenville-Weirton Ohio River bridge.

A new Department of Economic and Industrial Development and a new Personnel Department (with a Board of Review to replace the Civil Service Commission) were established. Other legislation removed the $65 monthly ceilings on aid to the needy aged and blind, modified old state "blue laws" to permit full Sunday operation of fairs and parks, banned motor scooters for 14- and 15-year-olds, allowed quail hunting on state-controlled lands, regulated billboards along interstate highways, exempted radio and television broadcasters from revealing news sources, required the licensing of nursing and rest homes, and permitted re-registration of voters by mail. Columbus Day was made a legal holiday, and a state motto was adopted: "With God all things are possible."

The legislature overrode DiSalle's veto of a so-called fair trade bill, and the governor failed in energetic efforts to abolish capital punishment, to change Ohio's utility rate formula, to secure labor reform and criminal conspiracy laws, and to end the use of sales tax stamps.

Three proposed constitutional changes were referred to voters in November. One had been declared invalid by the courts due to technicalities, but the others, authorizing additional appellate court judges and the removal of limitations on the sale of water by municipalities to outside areas, were popularly approved.

Ohio gave some encouragement to Republicans in November, as a Democratic mayor was defeated in Columbus, and as Republican mayoralty candidates won in Elyria, Niles, and Massillon.

El Reno	10,991	Sapulpa	13,031
Enid	36,017	Seminole	11,863
Guthrie	10,113	Shawnee	22,948
Lawton	34,757	Stillwater	20,238
McAlester	17,878	Tulsa	182,740
Miami	11,801		

* 1957 estimate.

Executive.—Chief state officers in 1959:
Governor: J. Howard Edmondson (Democrat)
Lieutenant Governor: George Nigh
Secretary of State: William N. Christian (succeeded John D. Conner, who died on August 26)
Treasurer: William A. Burkhart
Attorney General: Mac Q. Williamson
Auditor: Andy Anderson
Supt. of Public Instruction: Oliver Hodge

Constitution and Judiciary.—The present constitution went into effect in 1907. The Supreme Court comprises nine justices; chief justice in 1959 was Denver N. Davison.

Legislature.—The Oklahoma Legislature comprises a 44-member Senate (in 1959, 41 Democrats and 3 Republicans) and a 119-member House of Representatives (109 Democrats and 10 Republicans), which meet in odd-numbered years commencing the first Tuesday after the first Monday in January. (See below, *Principal Events, 1959.*)

Finance.—In the 1958–59 fiscal year, state revenue of $457,179,019.63 comprised $254,569,313.55 from state tax sources, $170,995,986.42 from the federal government, and $31,613,719.66 from other sources. Tax revenue consisted of $51,970,531.14 from a 2% general sales tax, $26,107,203.07 from individual income taxes, $56,670,661.16 from motor fuel taxes, $39,107,698.28 from licensing, and $80,713,219.90 from other state tax sources. Expenditures of $446,491,393.68 comprised $115,358,265.92 for education, $168,061,289.18 for health, welfare, and safety, $140,224,609.30 for highways, and $22,847,229.28 for other purposes. Long-term indebtedness on June 30, 1959, amounted to $36,810,000.

Banking.—As of June 10, 1959, the state's 197 national banks had $2,102,054,000 in assets, $1,521,614,000 in demand deposits, and $328,332,000 in time deposits. The 189 state banks on June 30, 1959, had assets of $549,935,284.36, demand deposits of $307,392,553.85, and time deposits of $126,103,527.71.

Education.—School attendance is compulsory between the ages of 7 and 17, inclusive. Operating expenditures for public elementary and secondary education in the 1957–58 school year totaled $124,274,093 ($270.09 per pupil), comprising $67,729,380 from local school districts, $48,963,992 from the state, and $7,580,721 from the federal government. Outlays for construction and improvements amounted to $21,360,400, and teachers' salaries averaged $4,272.21.

OKLAHOMA SCHOOL STATISTICS, 1957–58

Type of school	No.	Teachers	Students
Public elementary (k-6)	1,953	11,548	305,090
Public junior high (7–9)	278	3,060	86,461
Public senior high (10–12)	657	5,481	107,733
Private and parochial elementary and secondary	45	230	6,467
Junior colleges	16	277	6,522*
Teachers colleges	6	426	11,154
Colleges and universities	11	1,992	36,040

* 1958–59 school year.

Public Assistance.—In the 1958–59 fiscal year, public assistance expenditures from federal and state funds (excluding institutional costs) totaled $119,375,363.54, including $71,075,776 for the aged, $20,067,717 for dependent children, and $7,610,920 for the permanently and totally disabled. A monthly average of 4,136 persons received assistance.

Labor Force.—The state's labor force totaled 896,000 persons in July 1959, including 182,000 agricultural workers. Nonagricultural employment was up slightly to 554,100 from 549,600 in the previous July. Of nonfarm employees, averaging 549,400 in 1958, 23.2% were engaged in trade, 23% in government, and 15.4% in manufacturing. Unemployment was down to 40,300 in July 1959 from 53,200 a year earlier.

Manufacturing.—The 1,625 manufacturing plants in the state in 1958 employed an average of 83,650 persons who received $387,605,000 in wages. Value added by manufacture (1957) totaled $744,165,000, and outlays for new plant and improvement amounted to $59,292,000. Production workers averaged $86.10 for an average workweek of 41 hours during August 1959.

MAJOR OKLAHOMA MANUFACTURES, 1957

Product or industry	Average no. of employees	Salaries and wages (thousands of dollars)	Value added by mfr.* (thousands of dollars)
Petroleum and coal products	7,022	$39,017	$147,195
Food and kindred products	15,456	57,517	123,030

Electrical machinery	1,924	7,301	24,378

* For definition see footnote 1 in the article *Industrial Production.* (Source: *Annual Survey of Manufactures: 1957.*)

Mining.—Oklahoma ranked fifth among the states in the value of its mineral output in 1958, with 4.65% of the national total. The 1958 value of $767,856,000 represented a drop from the $809,004,000 (revised) total for 1957, with most of the loss accounted for by reduced petroleum output. The state was fourth in its 1958 output of asphalt and marketed natural gas.

OKLAHOMA MINERAL PRODUCTION, 1958
(In short tons except as noted)

Mineral	Quantity	Value
Clays[1]	576,000	$ 579,000
Coal	1,629,000	10,858,000
Lead	3,692	864,000
Natural gas (1,000 cu. ft.)[2]	696,504,000	70,347,000
Natural gasoline (bbl.)	10,495,190	26,029,000
Petroleum (bbl.)[2]	202,699,000	599,989,000
Petroleum gases (bbl.)	15,645,571	25,822,000
Sand and gravel	7,232,000	5,859,000
Stone	10,794,000	12,232,000
Zinc	5,267	1,074,000
Other minerals	...	16,063,000
Total	...	$767,856,000[3]

[1] Excludes certain clays, value of which is included in "Other minerals." [2] Preliminary. [3] Total adjusted to avoid duplication in the value of clays and stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1959 dropped slightly to $402,925,000 from $438,489,000 for the corresponding period of 1958. For the full year 1958, income comprised $321,597,000 from livestock and livestock products, $312,180,000 from crops, and $38,605,000 from government payments. Principal income sources in 1958 were cattle, $215,523,000; wheat, $181,835,000; cotton lint, $53,063,000; and dairy products, $52,894,000.

The state's 116,000 farms in 1958 had an acreage of 35,630,000 (10,249,000 acres in harvested cropland). Livestock on farms (Jan. 1, 1959) included 3,313,000 cattle, 458,000 hogs, and 5,428,000 chickens (excluding commercial broilers).

OKLAHOMA CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Broomcorn (tons)	11,400	12,000	9,500
Corn (1,000 bu.)	12,966	9,000	9,306
Cotton lint (1,000 bales)	367	313	385
Cottonseed (1,000 tons)	150	129	161
Hay (1,000 tons)	1,766	2,038	1,919
Mung beans (1,000 lb.)	6,829	14,850	3,900
Oats (1,000 bu.)	11,259	22,296	12,425
Peanuts (1,000 lb.)	97,751	133,300	133,100
Pecans (1,000 lb.)	18,620	15,500	10,000
Rye (1,000 bu.)	580	1,243	914
Sorghum grain (1,000 bu.)	10,778	18,460	18,792
Soybeans (1,000 bu.)	455	1,012	1,428
Wheat (1,000 bu.)	64,925	115,440	89,174

(Source: U.S. Department of Agriculture.)

There were 133,000 family and hired workers engaged in farming during the week of Nov. 22–29, 1959.

Transportation and Communications.—State and federal spending for highways in 1958 totaled $94,449,673.87, and 513 miles of new construction were completed.

Highways and roads on Jan. 1, 1959, totaled 11,555.6 miles (10,111.2 surfaced). Registered *motor vehicles* numbered 1,124,175 in 1958, including 812,070 passenger cars. There were (1959) 20 *railroads* operating 5,794.68 miles of main line tracks; 6 regularly scheduled *airlines;* and 152 *airports and airfields* (79 commercial and municipal, 6 military, 3 joint civilian-military, and 64 private).

Communications media (1959) included 59 AM and 7 FM *radio stations;* 9 VHF and 1 UHF *television stations;* 54 daily *newspapers* (circulation, 1,623,152) and 219 other newspapers (312,459); and (January 1) 242,300 business and 571,100 residential *telephones.*

Principal Events, 1959.—Gov. J. Howard Edmondson (Democrat) presented to the 27th Oklahoma Legislature in January a program of revolutionary change in state government. Before the longest legislative session in the history of the state adjourned in July, principal features of the controversial program were enacted into law. These included acts which provided for a merit system for state employees, central purchasing for state agencies, and a liquor control bill. Provision was also made for collecting state income taxes through a withholding system.

The event of paramount importance to Oklahoma was the repeal of prohibition, which had been in effect since statehood (1907). On five occasions Oklahomans had rejected similar proposals. Shortly after the governor was inaugurated, he exerted the full strength of his office and personality toward enforcement of the prohibition law; and on April 7, Oklahomans, overawed by his campaign to enforce the law, repealed the constitutional provision for prohibition by a vote of 396,845 to 314,380. Legislation provided for the opening in September of retail package stores under the supervision of a newly created Alcoholic Beverage Control Board.

Three controversial measures offered by the governor in his reform program were turned down by the legislature. He advocated a constitutional amendment to make the state Highway Commission a constitutional body; urged reapportionment of membership in the legislature to reflect shifts in the state population; and backed a law to permit the transfer of county road funds from boards of county commissioners to the Highway Commission. In November the governor began an all-out campaign to obtain sufficient signatures to petition for a special election on these proposals.

The Frontiers of Science Foundation of Oklahoma held its annual meeting in Oklahoma City in April. A dozen of the great scientists of the country reported on scientific achievements of the International Geophysical Year (q.v.), and some 5,000 high school students from all parts of the state attended a one-day conference.

During the March–June tornado season there were fewer weather alerts than usual. On March 31, however, a funnel dipped down near Lake Texoma, and another struck near Silver City and Terlton in north-central Oklahoma. These caused injuries to 10 people and destroyed 14 homes and other property. Two funnels formed over Fittstown early in the evening of May 9 and in a few moments struck the nearby communities of Frisco and Stonewall in Pontotoc County. Five persons were killed and 12 injured. Hailstones which weighed as much as a quarter of a pound accompanied the deadly storm and caused considerable damage in these rural communities.

More damaging to crops, property, highways, and communities were floodwaters early in October, the result of unseasonal and torrential rains which blanketed the Southwest for a 10-day period. All principal rivers of the state reached flood stage, and by October 4 it was estimated that 6,000 people had been evacuated from flooded sections of Stillwater and Guthrie, the environs of Tulsa, and nearby communities of Avant, Bixby, and Skiatook.

In the minds of many Oklahomans, however, October will long be remembered as the month of greatest disaster: The University of Nebraska football team defeated the pride and joy of Oklahoma —the University of Oklahoma team—by a score of 25–21, at Lincoln, Nebr., on October 31. This was Oklahoma's first loss to a Big Eight Conference team in 13 years.

Principal Events by: J. Stanley Clark,
Author, "The Oil Century from the Drake Well to the Conservation Era" (1958).

OLD AGE. The aging population of the United States continues to arouse widespread interest. By the end of 1959, a White House Conference on Aging was in the planning stages; considerable publicity had been directed toward retirement policies of industry, government, and nonprofit institutions; private as well as public pension systems had been examined more critically from the point of view of benefits paid and their financial arrangements; and numerous state laws against discrimination in employment because of age had experienced their first years of operation.

By July 1959 the United States population over 65 numbered about 15,300,000 persons. This group increases at a rate of over 300,000 per year. In July 1959 only 34.9% of the men over 65 and 10.4% of the women in this age group were in the labor force. About 4% of those men and women over 65 counted in the labor force were unemployed. The rest of this older age group—about 75%—were dependent on income other than earnings for a living.

Income.—The level of income for those 65 and over remains pathetically low. New compilations by Lenore Epstein of the U.S. Department of Health, Education, and Welfare show that in 1958, about 40% of all couples with the head of the household over age 65 had annual incomes of less than $2,000. Government agencies now estimate that $2,300 per year is the minimum income needed by an elderly couple living in the city to enable them to live at a minimum standard of health and decency. Even more revealing of the low level of income is the fact that 60% of all individuals in this older age group receive less than $1,000 per year.

Information published by the Census Bureau from its annual 1% sample survey, and from the Beneficiaries Survey of the Bureau of Old-Age and Survivors Insurance, and data from numerous public and private agencies administering cash pay-

ment programs to older people permits the construction of a crude table of income sources and approximate amounts paid out. In addition to median annual earnings (employment income) of $3,475 by 3,219,000 workers plus one million dependents, average monthly income from various sources was as follows:

Source of income	Recipients	Average monthly payment
Old-Age and Survivors Insurance benefits	10,389,000 beneficiaries over 62	$ 71.62
Old-age assistance	2,437,000 recipients	$ 64.22
Private pensions	1,125,000 pensioners	$ 80.00
Veterans pensions	1,200,000 pensioners	$ 78.00
Railroad retirement and government retirement systems (federal and state)	790,000 recipients	$114.00

Over 3 million of those listed in the table above receive retirement income from more than one source. No single source, except employment, provides an average income high enough to support a comfortable living for older people.

White House Conference on Aging.—The persistence of the problems of older people has resulted in numerous programs to activate public interest in aging. During the 1958 session, Congress enacted legislation (H.R. 9822) authorizing a White House Conference on Aging to be held in January 1961. Money was appropriated to finance planning committees and to assist states in running statewide conferences and collecting data on the aging in each of the states. In the spring of 1959 there was appointed a National Advisory Committee for the White House Conference on Aging, of 146 persons representing each of the states. Under the general chairmanship of former Representative Robert W. Kean, 20 subcommittees have been formed, consisting of technical consultants and persons holding membership on the National Advisory Committee. Each subcommittee has been charged with the responsibility for planning the conference program in a particular subject related to aging.

Retirement.—Interest in retirement policies and practices, in retirement preparation programs, and in pension planning has resulted in extensive research programs in these subjects. The Ford Foundation made a grant of $190,000 to the School of Industrial and Labor Relations at Cornell University for a study of retirement. A grant of $100,000 was made by the Ford Foundation to the social science departments of Duke University for studies of employment and retirement, using the intensive case study approach. The National Bureau of Economic Research received other foundation funds to conduct a study of the economic effects of pensions. Under the sponsorship of the Fund for the Republic, Robert Tilove prepared a report published in 1959 under the title *Pension Funds and Economic Freedom.*

Congressional Hearings.—In addition to these research efforts, two congressional committees devoted substantial time in 1959 to hearings on numerous aspects of the problems of the aging. The Subcommittee on Problems of the Aged and Aging, of the Senate Committee on Labor and Public Welfare, under the chairmanship of Senator Pat McNamara of Michigan, began hearings on this subject in October. The Committee on Ways and Means of the House of Representatives, under the chairmanship of Congressman Wilbur Mills of Arkansas, held hearings in the fall on the impact of taxation on older people.

Miscellaneous.—A second summer seminar in social gerontology was held in Berkeley, Calif., Aug. 1–21, 1959. The 20 or more persons who attended the seminar were members of faculties of American colleges and universities. The purpose of the seminar was to present social gerontology as an academic subject with the expectation that these faculty members might be encouraged to include the subject in college curricula. The seminar was financed by the National Institutes of Health, but was organized by the Division of Gerontology of the University of Michigan, acting for the Inter-University Committee on Social Gerontology (Wilma Donahue, chairman).

New York State's law against discrimination in employment because of age has been in effect since July 1, 1958. The 1959 annual report of the State Commission Against Discrimination (SCAD), which has the responsibility for enforcing this law, reports that it received 148 complaints of age discrimination from persons whose ages ranged from 22 to 86. Discrimination was charged against employers in 73% of the cases, employment agencies in 17%, and labor unions in 10%. The overwhelming majority of complaints came from the New York City area. The committee has been successful in reducing the age discriminatory want ads appearing in New York State newspapers. Additional experience is necessary, however, before any sound evaluation of the law's effectiveness can be made.

The Federal Council on Aging, which coordinates various government efforts in this field, reported on Nov. 16, 1959, that the federal government will pay out benefits amounting to $14.6 billion to older people in fiscal 1959–60.

ONTARIO. Stretching from Lake Erie to Hudson Bay, and 1,000 miles from east to west, Ontario is Canada's second largest province; its total area of 412,582 square miles comprises 10.7% of the total area of Canada. It is the most heavily populated province, with an estimated population on Sept. 1, 1959, of 5,990,000 (1956 census, 5,404,933)—an increase of 50% since 1945. About 75% of the population is urban, and 90% is English-speaking. The province has 30 cities with more than 17,000 residents: the principal centers, with their 1959 estimated populations, are Toronto, the capital of Ontario, 658,420 (metropolitan area, 1,429,207); Ottawa, the capital of Canada, 233,-

Queen Elizabeth, with Prince Philip (r.), visiting Ottawa, July 1, is greeted by Prime Minister and Mrs. Diefenbaker.

NATIONAL FILM BOARD

946; Hamilton, 284,946; Windsor, 119,319; and London, 99,115.

Government.—The premier of Ontario in 1959 was the Hon. Leslie M. Frost, leader of the provincial Progressive Conservative Party. The formal executive is the lieutenant-governor (Hon. John Keiller MacKay in 1959), appointed by the federal government. The elected Legislative Assembly of 98 members comprises 71 Progressive Conservatives, 22 Liberals, and 5 Co-operative Commonwealth Federation (CCF) representatives. In the Canadian Parliament, the province is represented by 85 members in the House of Commons and 24 in the Senate.

Education.—Thirteen years of free education are provided by the province and the municipalities. In the 1958–59 school year nearly 1,900,000 pupils were in attendance, and over 40,000 classroom teachers were employed. The 7 major universities served about 27,800 students, with nearly 14,000 enrolled in the University of Toronto.

Finance.—Net ordinary revenue for the fiscal year ended March 31, 1958, was $591,849,092; and the net ordinary expenditure was $590,983,062. As of that date, the net capital debt stood at $818,606,441. Major sources of revenue were: corporation taxes, $148 million; gasoline tax, $139 million; tax rental agreements with the federal government, $74 million; liquor control taxes, $67 million; and motor vehicle licenses, $52 million. Major governmental expenditures were: education, $142 million; highways, $122 million; and health and public welfare, $102 million. Total income of taxpayers in 1958 was about $9.8 billion, including disposable personal income of about $8.9 billion.

The Provincial Economy.—The total labor force in 1958 was 2,253,000. Salaries averaged $73.20 per week, the highest in the country. Capital investment in the province reached more than $4 billion, with more than $3 billion in new investment, the largest proportion of which went into manufacturing (24.6%).

Transportation.—Motor vehicle registrations in 1958 numbered 1,868,922 (39.6% of the national total). Road and street mileage was 85,092, of which nearly 18,800 miles were hard-surfaced. The volume of freight carried through Ontario canals totaled 1,748,700 tons of cargo in 1957. Railway freight in 1958, though down from 1957, still amounted to 58 million tons. Natural gas pipeline mileage in 1958 totaled 5,900. On May 1, 1959, construction was begun on a $20 million international bridge linking Sault Ste. Marie, Ont., with Sault Ste. Marie, Mich.

Electric Power.—The year 1958 saw the largest increase in generating capacity in Ontario's history. The total increase over 1957 for the publicly owned Hydro-Electric Power Commission of Ontario was 917,000 kilowatts—61% greater than any previous annual increase. Dependable peak hydroelectric capacity in December 1958 was 5,761,000 kilowatts. Two large thermal energy projects are under way in southern Ontario; and plans are being worked out in cooperation with Atomic Energy of Canada, Ltd., for the country's first large-scale nuclear power station. Scheduled for completion in 1964, the nuclear plant will be erected at a site 9 miles north of Kincardine.

Agriculture and Forestry.—The gross farm income increased from $910 million in 1957 to $996 million in 1958. The largest sources of income were livestock and poultry, followed by dairy products, vegetable and field crops, grain, and fruit. Revised estimates for 1957 show that the 220,219,000 acres of land given to forest production yielded 565,010,000 cubic feet of timber, valued at $155,365,873. Ontario ranks third among the provinces in both volume and value of forest production.

Minerals.—The gross value of mineral production in 1958 was estimated at $799,168,474 (37.7% of the national total). Metallic minerals accounted for more than 80% of the total, with the nickel-copper industry of Sudbury leading the field (nickel, $179,177,630; copper, $71,795,860). Uranium production underwent the greatest increase in value, from $82,940,763 in 1957 to $221,895,356 in 1958. Gold production rose slightly, to over $90 million.

Manufacturing.—Ontario is the leading manufacturing province in Canada. Latest revised figures show that there were 13,580 firms (35.9% of the Canadian total) employing 644,200 workers (47.4% of the national manufacturing force), paying $2,430,676,000 in wages and salaries, and producing goods with a gross value of $13,215 million in 1957. Leaders among the 18 major industrial groups included iron and steel (factory value of output, over $515 million), transportation (over $315 million), and food and beverages (over $257 million). Motor vehicles and parts constituted the largest industry, with a gross value of $2,556,604,000.

Principal Events, 1959.—On June 11, 1959, a provincial election was called by Premier Leslie Frost's Progressive Conservative administration. The government stood on its record, promising to continue the province's economic expansion and to assist in maintaining the high level of prosperity. The official opposition (Liberal), led by John Wintermeyer, criticized the government on the grounds that its program was inadequate and that three of its cabinet ministers had profited in the construction of the Northern Ontario Natural Gas Company pipeline. In their own program, the Liberals promised increased aid to education and social security. The CCF (Socialist) party, led by Donald McDonald, attacked the government for its record on labor legislation and social security, as well as for the alleged pipeline scandal. Premier Frost was returned to office with a slightly decreased majority. At dissolution of the assembly, his party held 84 seats, while after the election it held 71. The Liberals increased their membership from 10 to 22, and the CCF added two seats, bringing its total to 5.

Other events included the initiation of construction of a $20 million international bridge linking Sault Ste. Marie, Ont., with Sault Ste. Marie, Mich.; a disastrous fire in Lanark on June 15, which destroyed the homes of more than 150 persons, and caused damage estimated at $2,000,000; and the visit of Queen Elizabeth II and the Duke of Edinburgh in July.

OPERA. See MUSIC.

OPHTHALMOLOGY. Many advances in the specialty of ophthalmology and its related sciences were reported in 1959. Among the areas that were investigated were new drugs for keratoplasty (corneal transplantation); the use of ophthalmodynamometry (measurement of pressure of the central retinal artery) as a useful diagnostic aid; the retinal changes associated with ocular proptosis (protrusion of the eyeball); the surgical and medical treatment of intractable bullous keratitis (inflammation and blisters on the inner surface of the cornea); the use of polyethylene tubing for retinal detachment; the study of further diagnostic methods for oculomotor palsies (paralysis of the muscles that move the eye); the effects of prematurity on mental and ocular changes; and diagnostic aids in glaucoma, and treatment of glaucoma (hardening of the eyeball). Some of these developments are discussed briefly below. The year also saw some remarkable new developments in the rehabilitation of the blind and the vocational training of those with marked visual impairment.

Keratoplasty.—A great amount of investigative work was completed in the use of frozen and fresh corneal tissue and of stored corneal grafts. It is believed that the stored type of graft is useful mainly in the lamellar type of transplantation, whereas the fresh graft may be used for either the lamellar type or a through-and-through transplantation. Various antibiotics were tested to see which were best in the course of a corneal transplant operation. Some physicians have tested various types of radioactive isotopes and have used beta-radiation to aid in the healing of corneal grafts so as to give a clearer cornea.

Ophthalmodynamometry.—This technique has been found very useful for diagnosis in patients

UPI; BATTELLE MEMORIAL INSTITUTE

(*Left*) Emotionally disturbed blind children are given special therapy at the Institute of Physical Medicine and Rehabilitation of the New York University–Bellevue Medical Center, New York City. Here, a small patient "sees" plants in the Institute's greenhouse. (*Right*) By using this "aural reading machine," developed at the Battelle Memorial Institute, Columbus, Ohio, blind persons may "read" by interpreting tones transmitted from the electronic probe passing over the printed page.

with an occlusion of the carotid artery. The extent of its use is being explored, and motion pictures (photography and television) showing the appearance of changes taking place within retinal arteries have been investigated in conjunction with the ophthalmodynamometer. Due to the relationship between the intracranial (cerebrospinal fluid) pressure and the pressure in the central artery of the retina, physicians have found this instrument of value in recording the systolic and diastolic pressure of this artery. By means of this technique, increased intracranial pressure can often be detected before choked disc appears and before performance of lumbar puncture when brain tumor is suspected.

Dynamometry.—Dynamometry has proved especially useful in diagnosis of various forms of headache of vasomotor origin. It allows differentiation of a type which is accompanied by dilatation of intracranial vessels and of a type with narrowing or tendency to vascular spasm. In this condition, dynamometry would be the only clinical routine method to show the intracranial vascular disturbance. With functional dynamometry, it is possible to follow objectively the result of treatment on cerebral vessels through a therapeutic test or by prolonged observation.

Other Developments.—A new tool has been developed and improved in the study of oculomotor palsies (paralysis of the muscles that move the eye). This is known as electromyography, and it gives us additional information about the supranuclear mechanisms; it may be likened to the electroencephalogram test for various neurologic diagnoses.

A new testing device for measuring intraocular tension has been developed. This is the Goldmann applanation tonometer, which is mounted on a corneal microscope and slit lamp for direct tension readings.

New drugs have been developed in the treatment of glaucoma. For several years Diamox (acetazoleamide), a carbonic anhydrase inhibitor, has been used. In 1959 two new products became available for use either in place of Diamox or in conjunction with it. These are Daramide (dichlorphenamide) and Neptazane (methazolamide), and should prove to be of great value.

Rehabilitation and Education of the Blind.—In the field of rehabilitation of the blind, or of those with a major visual defect, some important new aids are being developed. A revolutionary device which will permit blind people and others visually handicapped to read books not printed in braille is being developed by the Veterans Administration, the Department of Defense, and private research groups. It consists of an electronic probe which, when passed over the printed page of any book, emits sounds that spell out the lower case or upper case Roman characters. At first the blind person will be able to read only 5 to 10 words per minute, but as he gains speed and proficiency he probably will increase his reading to 15 to 20 words per minute. In the instrument's present stage of development, the sounds which it produces do not resemble those of speech but are patterns of musical tones similar to chords played on an organ. By interpreting these tones, trained persons ultimately should attain a reading speed up to 30 words per minute. Only a few prototype models of the "reader" have been made, and further development of both the device and training methods will be required before quantity production is advisable.

Textbooks are being improved to aid teachers of the partially seeing. Research has modified the type size and spacing, as well as the illustrations, of books for the partially seeing. New low-vision aids with microscopic and telescopic spectacles have undergone further improvement, enabling more visually limited persons to read print.

Schools for the Blind.—Education of the blind, as with the seeing, begins in the preschool age group. There are a few nurseries for blind babies, but it is now generally acknowledged that a blind child of preschool age is better off in the normal atmosphere of his own home. This special situation demands more attention to his needs than can be given by parents, and so the guidance and advice of specially trained teachers or social workers are also required. Blind children are sometimes educated in residential schools for the blind or in special classes for the blind in the public schools. Many states educate their blind children in schools of this type in a neighboring state. In 1959 more than 13,000 blind children were receiving education in the United States, about half of them in residential schools distributed over 41 states and Puerto Rico, and the remainder in public day schools.

The Deaf-Blind.—The problem of the education, training, and rehabilitation of blind persons is much more difficult when other physical handicaps are present. It is estimated that more than 3,000 persons in the United States suffer from serious loss of hearing in addition to defective sight. The blind child who is deaf is usually sent either to a school for the blind or a school for the deaf where he is taught by a special teacher. There were eight such schools in the United States in 1959.

A new system for communication with the deaf-blind was announced on May 18, 1959, by Arthur S. Flemming, secretary of health, education, and welfare. Consisting merely of tracing block letters, one on top of another, on the palm of a deaf-blind person, the new method employs

a standard universal alphabet, and may be learned readily by anyone.

OREGON. Northwestern coastal state, United States; admitted to the Union, Feb. 14, 1859. The "Beaver State" ranks 10th in area and 32d in population among the 50 states.

Area and Population.—Area: 96,981 square miles (land, 96,315; inland water, 666), divided into 36 counties. Population: (1950) 1,521,341; (est., July 1, 1958) 1,746,000. Incorporated cities with populations above 10,000 (as estimated by the State Board of Census for July 1, 1958) are:

Albany	13,000	Pendleton	15,300
Astoria	12,000	Portland	402,300
Bend	12,450	Roseburg	12,200
Corvallis	19,100	Salem (*capital*)	47,100
Eugene	47,600	Springfield	13,800
Klamath Falls	19,500	The Dalles	11,560
Medford	24,300		

Executive.—Chief state officers in 1959:
Governor: Mark O. Hatfield (Republican)
Secretary of State: Howell Appling, Jr.
Treasurer: Sigfrid B. Unander
Attorney General: Robert Y. Thornton
Supt. of Public Instruction: Rex Putnam

Constitution and Judiciary.—The present constitution went into effect in 1859. The Supreme Court comprises 7 justices; chief justice in 1959: William McAllister.

Legislature.—The Oregon Legislative Assembly comprises a 30-member Senate (in 1959, 19 Democrats and 11 Republicans) and a 60-member House of Representatives (33 Democrats and 27 Republicans), which meet in odd-numbered years commencing the second Monday in January.

The 1959 session enacted measures modifying state income tax rates and provisions. A citizens' petition forced delay of these measures until they could be voted on as a constitutional amendment in the 1960 elections. Other tax measures placed a 1% monthly interest levy on income taxes paid on a quarterly basis, revised the inheritance tax to yield additional income, and raised the cost of liquor at government stores.

Judiciary measures set the chief justice's term at 6 years; authorized the Supreme Court to engage temporary judges to ease court backlogs, added 3 new Circuit Court judges and 1 District Court judge to the judiciary system; and authorized a new appellate code. In education, a state Scholarship Commission was set up; 2-year community colleges were authorized; and school districts with 12 or more mentally retarded children were required to set up schools for their care by 1964.

Other measures established a uniform traffic code; outlawed racial discrimination in real estate transactions and age discrimination in employment; and established sanitary standards for farm labor camps, provided for the education of children of migrant laborers, and licensed migrant labor contractors. A small-boat law was enacted, and the Western Interstate Corrections Compact and the Interstate Compact on Juveniles were ratified (as was, belatedly, the 15th Amendment to the federal Constitution).

Constitutional amendments proposed would permit: a legislative revision of the state constitution (subject to final voter approval after revision); increase legislative salaries; provide a shortcut for grand jury indictments; and set up procedures for state and local government continuity in event of disaster.

Finance.—In the 1958–59 fiscal year, state revenue of $659,067,778 comprised $178,310,610 from state tax sources, $75,675,386 from the federal government, and $405,081,782 from other sources. Tax revenue consisted of $93,500,000 from individual income taxes, $38,215,130 from motor fuel taxes, $41,177,943 from licensing, and $5,417,537 from other sources. Expenditures of $670,804,725 included $63,840,383 for education and $102,594,442 for highways. Long-term indebtedness on July 1, 1959, amounted to $292,150,000.

Banking.—As of June 10, 1959, the state's 11 national banks had assets of $1,858,224,000, demand deposits of $984,939,000, and time deposits of $678,413,000. The 45 state banks (Dec. 31, 1958) had $297,289,648 in assets, $108,858,559 in demand deposits, and $124,718,030 in time deposits.

Education.—School attendance is compulsory between the ages of 7 and 17, inclusive. National Education Association estimates for the 1959–60 school year indicated operating expenditures for public elementary and secondary schools to total $147,500,000 ($441 per pupil). Revenue comprised $119,800,000 from local school districts, $53,232,000 from the state, and $5,200,000 from the federal government. Capital outlays amounted to $33 million, and teachers' salaries averaged $5,300 (high school, $5,583; elementary, $5,180).

For the 1959–60 school year the NEA estimated that there were 284,700 public elementary school pupils served by 10,750 teachers, and 98,600 public secondary pupils and 4,425 teachers. Publicly supported higher educational institutions (1958–59) comprised 3 teachers colleges with 167 instructors and 3,380 students; 3 colleges and universities (977; 19,790); and 2 other higher institutions (129; 1,098). Public and private college and university enrollment totaled 38,530.

Public Assistance.—In the 1958–59 fiscal year, public assistance expenditures from federal and state funds (excluding institutional costs) totaled $38,394,279.38, including $17,229,652.33 for the aged, $9,586,147.58 for dependent children, and $5,084,349.05 for the permanently and totally disabled. A monthly average of 58,400 persons received public assistance.

Labor Force.—Nonagricultural employment in August 1959 was up to 515,300 from 492,400 a year earlier; agricultural workers numbered 114,000. The three major sources of nonfarm employment were manufacturing (159,900 workers), wholesale and retail trade (110,200), and government (88,300). State-insured unemployment dropped to 9,900 in October 1959 from 15,500 in the previous October.

Manufacturing.—The state's 5,500 manufacturing plants in 1958 employed an average of 136,000 persons who received $678,540,000 in wages. Value added by manufacture (1957) totaled $1,061,734,000, and outlays for new plant and equipment amounted to $104,553,000. Production workers averaged $97.74 for an average workweek of 39.7 hours in August 1959.

MAJOR OREGON MANUFACTURES, 1957

Product or industry	Average no. of employees	Salary and wages (thousands of dollars)	Value added by mfr.* (thousands of dollars)
Lumber and wood products	71,053	$331,419	$506,494
Food and kindred products	19,404	77,869	170,853
Pulp, paper, and products	6,448	33,610	86,065
Fabricated metal products	6,270	32,271	50,825
Printing and publishing	5,128	24,300	41,822
Nonelectrical machinery	3,667	20,012	31,005
Electrical machinery	2,025	10,490	22,439
Textile mill products	2,361	9,133	21,813

* For definition see footnote 1 in the article *Industrial Production.* (Source: *Annual Survey of Manufactures: 1957.*)

Mining.—In 1958 Oregon ranked 37th among the states in the value of its mineral output, with 0.27% of the national total. The $45,053,000 value marked a record total for the state, with much of the increase accounted for by a greater output of

OREGON MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Chromite	4,133	...[1]
Clays	252,000	$ 293,000
Gold (fine ounces)	1,423	50,000
Mercury (76-pound flasks)	2,276	521,000
Sand and gravel	10,464,000	10,265,000
Stone	15,004,000	15,483,000
Other minerals	...	19,649,000
Total	...	$45,053,000[2]

[1] Figures withheld to protect individual company's confidential data. [2] Total has been adjusted to eliminate duplication in the value of clays and stone. (Source: U.S. Bureau of Mines.)

crushed stone and cement for highways and dams. Oregon led in the production of columbium metal and nickel ore and was third in chromite and diatomite, fourth in pumice, and fifth in mercury. A new aluminum plant began production at The Dalles in 1958, and a uranium mill was completed at Lakeview.

Fisheries.—The commercial fish and shellfish catch in 1959 amounted to 59,467,000 pounds valued at $7,345,000. Principal species were chinook salmon (6,008,000 pounds valued at $2,022,000) and albacore (9,754,000; $2,013,000).

Agriculture.—Cash farm income for the first nine months of 1959 was up to $310,349,000 from $300,197,000 for the corresponding period of 1958. For the full year 1958, income comprised $190,295,000 from livestock and livestock products, $210,272,000 from crops (chiefly wheat, $46,956,000) and $6,441,000 from government payments. Principal livestock income sources were cattle, $80,473,000, and dairy products, $45,329,000.

OREGON CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	2,534	2,250	2,200
Barley (1,000 bu.)	14,466	19,890	19,368
Cherries (tons)	24,930	28,600	28,600
Cranberries (bbl.)	25,470	32,300	44,000
Filberts (tons)	7,270	7,150	9,000
Hay (1,000 tons)	1,813	1,886	1,827
Hops (1,000 lb.)	11,110	5,400	6,968
Oats (1,000 bu.)	9,635	10,574	7,718
Peaches (1,000 bu.)	439	450	550
Pears (1,000 bu.)	5,608	5,500	5,640
Potatoes (1,000 cwt.)	7,793*	9,750	8,510
Prunes (tons)	52,020	19,700	42,000
Strawberries (1,000 lb.)	59,794*	69,300	89,320
Sugar beets (1,000 short tons)	383	521	513
Walnuts (tons)	6,690	6,500	4,200
Wheat (1,000 bu.)	27,312	28,000	28,464

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

The state had 54,000 farms in 1958. Total acreage (1954) of 21,047,000 included 3,265,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 1,497,000 cattle, 881,000 sheep, and 3,630,000 chickens (excluding commercial broilers). Some 74,000 family and hired workers were engaged in farming in the week of Nov. 22–29, 1959.

Transportation and Communications.—State and federal spending for highways in 1958 totaled $75,675,000, and 217 miles of new construction were completed.

Highways and roads in December 1958 totaled 67,687 miles (40,887 surfaced). Registered *motor vehicles* numbered 873,856 on Dec. 31, 1958, including 762,030 passenger cars. There were (1958) 23 *railroads* operating 3,479.43 line miles; and (1959) 8 regularly scheduled *airlines*, 174 *airports and airfields* (46 commercial and municipal and 128 private), and a heliport.

Communications media (1958) included 68 AM and 10 FM *radio stations;* 7 VHF and 1 UHF *television stations;* 20 daily *newspapers* (circulation, including Sunday, 1,351,684) and 119 other newspapers (220,722); and (Jan. 1, 1959) 189,400 business and 466,100 residential *telephones.*

Principal Events, 1959.—The highlight of the year was the statewide celebration of the 100th anniversary of Oregon statehood, with the focal point being the Centennial Exposition near Portland, which lasted 100 days and attracted some 1,300,000 visitors. An International Trade Fair, held in conjunction with it, drew more participating nations than any fair ever held in the United States. Nationwide television, press, and magazine features made more people than ever before aware of the state's heritage, culture, and resources. For the entire year, a record number (5,973,000) of visitors to the state stayed longer and spent more money ($176 million) than in any previous year.

The Dalles Dam, a $250 million multipurpose structure on the Columbia River, was dedicated on October 10 by Vice President Richard M. Nixon. Its eventual electric output of 1,743,000 kilowatts will make the dam second in capacity in the Northwest to Grand Coulee. When a deeper channel, now being dredged, is completed, the 675-foot lock will enable ocean-going vessels to reach the city of The Dalles.

In 1959 almost every major index of economic growth—timber products, agriculture, tourists, employment, retail trade, bank clearings, and port tonnage—showed marked improvement over 1958 and complete recovery from the 1957 slump. The cranberry industry, however, was hard hit during its seasonal peak shortly before Thanksgiving, when Secretary of Health, Education, and Welfare Arthur S. Flemming announced that a chemical weed killer, known to cause cancer in rats, might have contaminated much of the nation's 1958 and 1959 cranberry crops.

As far as state government and politics were concerned, 1959 was pretty much Republican Gov. Mark O. Hatfield's year. On January 12 he became the state's new chief executive. Following his inaugural address, a running battle developed with the Democratic-controlled legislature. During the year he traveled widely and won recognition as an outstanding young officeholder and as a prospective vice presidential candidate.

The legislature, which met for 115 days, balanced a $313 million biennial General Fund budget through tax revisions (see above, *Legislature*). Passage of a unique primary law, which provides that all nationally prominent candidates for president shall be on the primary ballot, promised to make the state a center of campaign activities for both Democratic and Republican candidates. In December, Oregon's Sen. Wayne Morse, reversing an earlier decision, further complicated the political situation by announcing his own candidacy for the presidential nomination. Earlier in the year Morse stated that he would use his influence to defeat his Senate colleague, Richard Neuberger, for re-election in 1960. On his own part, Neuberger stirred up a lively controversy with his proposal to make a 35,000-acre national park of the picturesque coastal sand dunes and nearby lakes which lie south of Florence. The State Natural Resources Committee issued a report opposing the proposal.

The worst disaster of the year occurred on August 7, when a dynamite truck blew up in the heart of downtown Roseburg, resulting in 13 deaths, many injuries, and property damage exceeding $10 million. At year's end, Roseburg was making ambitious plans to rebuild.

University of Oregon.

ORGANIZATION FOR EUROPEAN ECONOMIC CO-OPERATION (OEEC). See Index entry.

ORGANIZATION OF AMERICAN STATES. The Organization of American States is an intergovernmental institution of the 21 American Republics which functions under a charter signed at Bogotá, Colombia, in 1948. It carries on its activities through six agencies: (1) the Inter-American Conference; (2) the Meeting of Consultation of Ministers of Foreign Affairs; (3) the Council of the Organization; (4) the Pan American Union; (5) the specialized conferences; and (6) the specialized organizations.

In 1959 political tensions in the Caribbean resulted in three requests for the application of the Inter-American Treaty of Reciprocal Assistance

to preserve peace and order. On April 27, 1959, the government of Panama informed the Council of the Organization that its territory had been invaded and the peace of the continent thereby threatened. A committee of investigation appointed by the Council found that the invasion had been organized abroad, that the vessel carrying the invaders had sailed from a Cuban port, and that of the 92 persons comprising the force, 89 were Cubans and 3 were Panamanians. After the surrender of the invaders on May 1, the Council, on June 18, declared the incident terminated.

On June 2, 1959, the government of Nicaragua informed the Council of an invasion of its territory and requested the application of the same treaty. A fact-finding commission found that of the 110 members comprising the invading force, 107 were Nicaraguans and 3 were Costa Ricans. The committee's report revealed that the Nicaraguan case was essentially an internal matter and confirmed the impression held in many quarters that it was not one that came within the scope of the treaty.

On July 2, 1959, the government of the Dominican Republic likewise sought to invoke the treaty, alleging that its peace and security were threatened by forces proceeding from and supported by the governments of Cuba and Venezuela. Instead of acceding to that request, the Council, on July 17, convoked the Fifth Meeting of Consultation of Ministers of Foreign Affairs, which met in Santiago, Chile, on August 12–18. The conference adopted the Declaration of Santiago, which reaffirmed certain long-established basic principles—among them those on nonintervention, representative democracy, and respect for human rights—and delegated additional authority to the Inter-American Peace Committee, which would then report to the Eleventh Inter-American Conference at Quito, Ecuador. Originally scheduled for February 1960, the conference was indefinitely postponed in December by the Council of the Organization.

In the economic field, an agreement establishing the Inter-American Development Bank was opened for signature at the Pan American Union on April 8, 1959. By the end of the year, ratification totaling more than 85% of the capital stock was deposited, and the bank is expected to begin operations in 1960. It is capitalized at $1 billion, of which $850 million represents authorized capital stock that will be available for ordinary banking operations. A special fund of $150 million was set up for projects that would not be able to meet the usual banking requirements for a loan.

The Committee of 21, the special committee of the Council of the Organization which was created to study the formulation of new measures for economic cooperation, met in Washington, D.C., on Nov. 17–Dec. 12, 1958, and again in Buenos Aires on April 27–May 8, 1959. The committee approved a country-by-country study of the problems and possibilities for economic development, and also agreed that the procedure of consultation which heretofore has been limited to political issues should likewise be extended to economic questions whenever a government considers that its national welfare is seriously affected.

On Sept. 24, 1959, an International Coffee Agreement was signed in Washington by the 15 Latin American coffee-producing countries, as well as by France and Portugal; it was accompanied by declarations of Belgium and Great Britain of their intention to cooperate in the spirit of the agreement. The agreement fixed export quotas for signatory countries at 90% of exports during the best calendar year in the decade 1949–58.

Among other organs of the organization, the Inter-American Council of Jurists held its fourth meeting in Santiago, Chile, on Aug. 24–Sept. 9, 1959. The third meeting of the Inter-American Cultural Council was held in San Juan, Puerto Rico, on Nov. 22–Dec. 2, 1959. On November 18, Vicente Sánchez Gavito of Mexico and Celeo Davila of Honduras were elected chairman and vice chairman, respectively, of the Council of the Organization for the coming year.

ORKNEY ISLANDS. Separated from the northern mainland of Scotland by the Pentland Firth, the group forms a Scottish county and has an area of 375.5 square miles. The population in December 1957 was estimated at 19,900, as compared with 21,255 at the 1951 census. Some 34 of the 90 islands are inhabited, the most populous being Pomona, South Ronaldshay, Westray, Hoy, Sanday, Stronsay, Shapinshay, Burray, Rousay, Eday, North Ronaldshay, and Flotta. Kirkwall (pop., 4,348) on Pomona (Mainland) is the county seat. Fishing and stock raising are leading industries. Sandstone is quarried on several islands, and dairy farming and egg production are important.

ORNITHOLOGY. See the Index entry, *Birds.*

OSTEOPATHY. Osteopathic medicine is a system of medicine and major operative surgery that emerged in the United States in the late 19th century. Since then, the profession has grown in that country to include more than 13,000 osteopathic physicians. Doctors of osteopathy are now eligible for commissions as medical officers in the U.S. Army, Navy, and Air Force.

To become an osteopathic physician and surgeon, a student must successfully complete four years of high school, three years of preprofessional training in an accredited college or university, and four years of professional education in one of the six approved osteopathic colleges. Ninety-seven per cent of graduates serve internships in approved osteopathic hospitals. Certification in specialties in osteopathic medicine requires distinct 5-year postinternship programs that must be approved and accredited by The American Osteopathic Association.

Osteopathy emphasizes the fundamental importance of the musculoskeletal system as it interacts with the cardiovascular system, the nervous system, the respiratory system, etc. According to osteopathic theory, disturbances in the musculoskeletal system are factors in establishing and maintaining the disease process which lessens the human body's natural ability to withstand stress. Detection of these disturbances is basic to the distinctive approach of osteopathic physicians, and the treatment of these disturbances is widely known as an "osteopathic manipulative treatment."

Osteopathy, as a part of the continuum of medicine, claims and administers all the medical, surgical, immunological, pharmacological, psychological, and hygienic procedures that are of proven value in preventing the establishment of the disease process, or in treating the various syndromes or diseases that may arise therefrom.

The American Osteopathic Association has its headquarters at 212 East Ohio Street, Chicago 11, Ill. In 1959–60, Dr. Galen S. Young of Chester, Pa., was president; Dr. True B. Eveleth, executive secretary. The association publishes *The Journal of the American Osteopathic Association, Forum of Osteopathy,* and *Health.*

RAYMOND P. KEESECKER,
Editor, The American Osteopathic Association.

OTTAWA. The national capital of Canada, Ottawa lies on the Ottawa River, about 285 highway miles northeast of Toronto and 125 highway miles west of Montreal, in the Province of Ontario. With an area of 30,481 acres (about 28 square miles), the city had a population of 236,837 in 1959.

Greater Ottawa, including Hull, Quebec, across the river, has a population of 375,000. Ottawa is a bilingual city—French and English—with 60% of its residents speaking the latter.

The city government consists of a Board of Control and a City Council. The board comprises an elected mayor (George Nelms, re-elected in December 1958) and four elected controllers. The Council is composed of two aldermen from each of the city's ten wards. Administrative functions are vested in the Board of Control, which is fully responsible to the Council. Decisions taken by the board may be rejected by a two-thirds vote of the Council. The city falls within four federal constituencies and is represented by three members in the Ontario legislature.

The city budget for 1959 called for expenditures of $20,350,184, with $10,705,239 allocated for education and $9,644,945 for general purposes. Capital expenditures in 1959 amounted to $17,364,000. The taxable assessed property valuation was $442,973,000. Of this figure, business and commercial assessment amounted to $173,610,000, and residential assessment to $269,363,000.

The school system, which consists of public and separate (Roman Catholic) schools for primary education and public high schools for secondary instruction, is managed by elected boards operating under the jurisdiction of the provincial government. Pupil enrollment figures for 1959 were as follows: public primary schools, 23,569; separate primary schools, 22,276; and collegiate high schools, 10,876. Institutions of higher learning include the University of Ottawa (Roman Catholic) founded in 1848, and Carleton University, founded in 1942. In 1959 the former had an enrollment of 2,628 full-time students; the latter, 851.

The chief industries of Ottawa are printing and bookbinding; sash, door, and planing mills; scientific equipment manufactories; and metal-fabricating plants. In 1959 there were 307 industrial plants employing 10,681 persons; the value of manufacturing amounted to $121,845,000.

Ottawa's commercial life is overshadowed by the city's role as the federal capital of Canada. In 1959 there were almost 35,000 civil servants employed in the city. New buildings occupied in 1959 by the federal government included a new structure for the Department of Mines and Technical Surveys and a new center for the Recreational Association. The value of government construction in Ottawa in 1959 was $34,816,162.

The City Council was concerned during the year with the drafting of a bylaw restricting the commercial use of property in the Glebe residential area, but consideration of the measure was deferred until 1960.

The most important development to affect the city in some years was the federal government's announcement that the city's Union Station, serving Canada's two major railways, would be relocated within five years on the southeastern outskirts of the city. The move will allow a redevelopment of the central Confederation Square and eliminate many miles of railway tracks within Ottawa. The National Capital Commission opened a new parkway in the Gatineau Hills toward the end of 1959.

Queen Elizabeth II spent July 1 (Dominion Day) in Ottawa during her 1959 tour of Canada.

DAVID M. L. FARR,
Associate Professor of History,
Carleton University.

OUTER MONGOLIA. See MONGOLIAN PEOPLE'S REPUBLIC.

OUTER SEVEN. See EUROPEAN FREE TRADE ASSOCIATION.

PACIFIC ISLANDS. The term Pacific Islands commonly signifies the innumerable islands and island groups, chiefly of volcanic or coral origin, generally referred to as Oceania. Oceania is divided into three main classifications (although authorities sometimes differ in which of these classifications they place certain fringe island groups):

(1) *Polynesia,* in the central and southeastern Pacific, includes principally Hawaii, Samoa, Tonga, and Pitcairn Island (qq.v.); the Tuamotu Archipelago and the Society and Marquesas groups (see FRENCH POLYNESIA); and the Ellice and Phoenix groups (see WESTERN PACIFIC ISLANDS, BRITISH).

(2) *Melanesia,* in the western Pacific, includes mainly Fiji and New Caledonia (qq.v.); the Bismarck Archipelago, and the New Hebrides, Louisiade, Admiralty, Solomon, Loyalty, and Santa Cruz groups (see PAPUA AND NEW GUINEA, TERRITORY OF and WESTERN PACIFIC ISLANDS, BRITISH); sometimes Australia, New Zealand, and the Malay Archipelago are also included.

(3) *Micronesia,* in the central Pacific, includes chiefly Nauru and Guam (qq.v.); and the Caroline, Marshall, Mariana, Gilbert, and Bonin groups.

U.S. PACIFIC ISLANDS

The Pacific islands of the United States are important mainly as strategic bases and landing points for sea and air traffic.

Trust Territory of the Pacific Islands.—A United Nations trust territory comprising the Mariana (except Guam), Marshall, and Caroline island groups, scattered over some 3 million square miles in the western Pacific north of the equator. It includes over 2,100 islands grouped into 96 distinct units or atoll formations (only 64 regularly inhabited), with a total land area of 687 square miles. About three fifths of the population of 70,594 (June 30, 1958) live on the main islands of Truk, Yap, Ponape, Palau, and Majuro. The island peoples are broadly classified as Micronesian, and include 9 main linguistic groups.

PACIFIC ISLANDS OF THE UNITED STATES

(Not including islands belonging to Hawaii and Alaska, and the Trust Territory of the Pacific Islands. Asterisk indicates reference to separate article.)

Island or group	Area (sq. mi.)	Population
Baker[1]	1	...
Canton and Enderbury[1,2]	27	272[3]
*Guam	209	65,000[4]
Howland[1]	1	...
*Jarvis[1]	2	...
Johnston[5]	[6]	46[3]
Kingman Reef[5]	[7]	...
*Midway	2	416[3]

*Samoa, American	76	22,000[8]
Swains	1	...
*Wake	3	349[3]

[1] Under the administration of the Office of Territories, Department of the Interior. [2] An Anglo-American condominium in the Phoenix group of the Gilbert and Ellice Islands, used as air and communications bases; Enderbury Island was uninhabited in 1950. [3] 1950 census. [4] Estimate, July 1, 1957, including armed forces stationed on the island. [5] Under U.S. Navy control. [6] Including nearby Sand Island; total area, less than 0.5 sq. mi. [7] About 150 feet long and 120 wide at high tide; area about 40 sq. mi., including submerged shoals. [8] Estimate, Dec. 31, 1958.

Bikini and Eniwetok atolls in the Marshalls have served as sites for United States nuclear weapons tests. In 1954, radioactive fallout required the temporary removal of the populations of nearby Rongelap and Utirik atolls. A United Nations visiting mission reported on May 21, 1959, that the Rongelap people (who had been returned to their

home atoll in June 1957) had recovered physically from the effects of the fall-out, but were under emotional strain through fear that their food and water had become contaminated. The mission also commended the United States for the emergency aid granted to islands devastated by typhoons in 1957, but urged that greater assistance be provided for economic development.

Government.—The trust territory is administered by the U.S. Department of the Interior, with the exception of Saipan, Tinian, and other islands of the Northern Mariana group (not including Rota), whose civil administration is responsible to the secretary of the navy. Delmas H. Nucker is high commissioner of the territory, with headquarters on Guam. Native self-government consists of elected congresses and councils on the district and regional levels. A conference of Micronesian leaders meets annually on Guam as the Inter-District Advisory Committee to the High Commissioner. The budget for the fiscal year ending June 30, 1958, totaled $7,548,855, of which $1,867,140 came from local sources and $5,681,715 from United States appropriations.

Education and Religion.—As of June 30, 1958, there were 186 elementary schools (11,501 pupils), 18 intermediate (1,548), and 7 secondary (273). About 91% of children aged 8 to 14 attended school. The population is predominantly Christian, although some native beliefs persist. Mission schools play an important role in education, particularly on the intermediate and secondary levels.

Economy.—Chief economic activities are subsistence agriculture, livestock raising, and fishing. Copra production, a major source of cash income, totaled 13,259 short tons in the fiscal year 1958; trochus shell, 392,402 pounds. Boats and handicraft items are also produced for sale. In the 1958 fiscal year, imports (chiefly foodstuffs, clothing, and building materials) totaled $4,338,394; exports (mainly copra, trochus shell, vegetables, and handicraft items), $1,652,975. Economic development efforts include the improvement of fishing techniques, encouragement of food-crops diversification, rehabilitation and improvement of coconut groves, and promotion of cocoa as a supplementary cash crop.

Islands Under United States Control.—Under the terms of the Japanese Peace Treaty of 1951, the United States exercises full power and jurisdiction (with Japan retaining residual sovereignty) over the Ryukyu Islands and the Daito Islands; the Bonin Islands, Marcus Island, Daito Island, and the Volcano Islands; and the island of Parece Vela. (The Tokara islands and the Amami Oshima group, both of the Ryukyus, reverted to Japan in 1951 and 1953, respectively.)

Ryukyu Islands.—The Ryukyu Archipelago extends some 500 miles southwest of Japan. The islands under United States control have a total area of 848 square miles and a population (est. Dec. 31, 1958) of 849,000 (excluding United States military and civilian personnel and their dependents). The largest island, Okinawa (579 sq. mi.; pop. 665,315) contains important United States airbases and has been the site for recent test firings of the Nike-Hercules missile. The U.S. high commissioner for the Ryukyus is Lt. Gen. Donald P. Booth. The native Ryukyu government includes a 29-member legislature elected by the people for a 2-year term, and a chief executive appointed by the high commissioner after consultation with the legislature. Seisaku Ota was named chief executive by General Booth on Oct. 21, 1959. The elections of March 16, 1958, resulted in the following party seating in the legislature: Democrats, 7; Social Masses, 9; Minren, 5; and independents, 8. The election results represented a gain for anti-American leftist elements, although the parties favoring cooperation with United States authorities retained a majority. Popular discontent has existed over United States land requisitions for military purposes and the manner of compensation. On July 30, 1958, General Booth announced a change to the rental system form of compensation, which did much to allay dissatisfaction.

An estimated 25% of the population 15 years of age and over was illiterate in 1950. In 1955 there were 231 primary schools (115,020 pupils); 195 secondary (65,739); 9 technical (5,870); and in 1954, 1 higher institution (1,258).

The economy is heavily dependent on the spending of United States military forces and personnel, and a considerable part of the native population is employed by United States forces. Agriculture engages about a fourth of the population. Chief crops are sugarcane, sweet potatoes, rice, and soybeans. Major industries are fishing and food processing; smaller industries include textiles, hats, candy, shell buttons, ceramics, woodworking, and tobacco products. Imports in 1956 totaled $77.9 million; exports, $19.6 million. In 1958, dollars replaced military B yen as the official currency.

The *Daito Islands* (area, 18 sq. mi.; pop. 1950, 2,691) form the easternmost group of the Ryukyus, about 200 miles east of Okinawa. Sugar and phosphate are produced.

Bonin Islands and Volcano Islands.—These groups lie about 800 miles east of the Ryukyus. The Bonins comprise 27 islands; total area, 40 square miles; pop. (1958) 190. The United States maintains a naval station on the main island of Chichi, which is a port of call for United States submarines. *Marcus Island* (1 sq. mi.), east of the main group, is usually classified as one of the Bonins. The Volcano group, south of the Bonins, comprises 3 islands (11 sq. mi.), including Iwo Jima, which has an excellent airstrip and is used as a refueling point for U.S. Air Force planes.

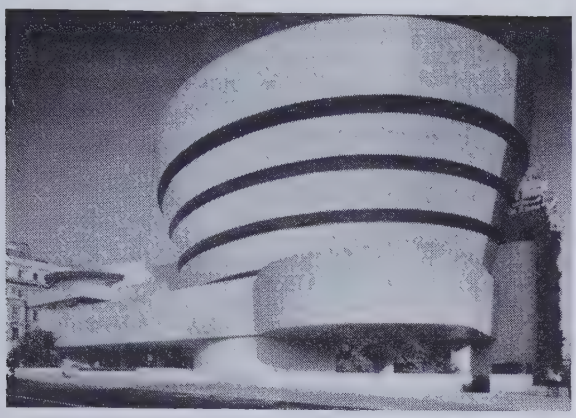
Rosario Island lies to the west of the Beechey group of the Bonins. *Parece Vela* lies some 400 miles southwest of Iwo Jima.

M. J. G.

PAINTING AND SCULPTURE. In the American art world, 1959 had all the ingredients of a typical year. At the American National Exhibition in Moscow during the summer (see FAIRS AND EXHIBITIONS), the public face of American art was presented in an exhibit that would have gone smoothly but for the previous opposition of some of the more conservative members of the art world, possibly on the grounds that their works were not represented among paintings chosen for showing at the fair. Politics became mixed with painting when Representative Francis E. Walter (D., Pa.), chairman of the House Committee on Un-American Activities, charged that many of the 67 artists represented had "records of affiliations with Communist fronts and causes." President Eisenhower stood by the selection of works, though he took a purely personal exception to a mordant painting by Jack Levine, which he called "more like a lampoon than art." Mrs. Edith Gregor Halpert, curator of the paintings and sculptures exhibited, stanchly defended the entire selection, including the Levine canvas. Despite a certain amount of feeling about the issues involved, the largely nonobjective paintings were eventually augmented by the works of 30 older painters, among them Gilbert Stuart, Frederic Remington, Albert Pinkham Ryder, Mary Cassatt, and John Singer Sargent. The entire exhibit was a revelation to the Russians who saw it, but the squabbling that preceded it was an unfortunate example of art versus officialdom.

As if to balance the scales, Congress passed into law bills liberalizing the import tariffs on works of modern art, a problem that has been vexing since the 1920's, when a customs inspector refused to accept Constantin Brancuşi's *Bird in Flight* as a work of art and taxed it as a metal object instead. Since then, any work of art put together out of unusual materials or simply outside the Bureau of Customs' legal definition of art has been at their mercy. Representative Frank Thompson, Jr. (D., N.J.) and Senators Paul Douglas (D., Ill.) and Jacob K. Javits (R., N.Y.) sponsored the bills in their respective houses.

During any typical year in the American art world, one big retrospective show is given of the works of an established American painter. In 1959, Winslow Homer was honored by a show in late winter that traveled from the National Gallery in Washington, D.C., to New York's Metropolitan Museum of Art. Paul Gauguin was the popular European master singled out for an exhibit which went to the Metropolitan Museum in April from the Chicago Art Institute. No single field of art replaced 1958's interest in German expressionism. Besides the Homer show, important exhibits were given of the works of Hans Hofmann, Louis Eilshemius, Raphaelle Peale, Arthur B. Carles, Attilio Salemme, Mark Tobey, and Max Weber. These showings pointed out the clearest trend in 1959: American art has grown up and is casting a rather complacent eye on its recent and, in the case of



STOLLER, FOR IVY LEE AND T. J. ROSS

Exterior and interior views of New York City's Solomon R. Guggenheim Museum for nonobjective art, designed by the late Frank Lloyd Wright and opened on October 21. (*Above*) The controversial museum's exterior, with the administration area at the left and the gallery at the right. (*Right*) The gallery is a continuous spiral ramp from which the paintings may be viewed as the visitor makes his ascent.

Peale, more distant past. Modern American painting, proudly exported to Europe, is as good as anything Europe now has to offer the United States. Current abstractions, however, indicate the growth of a cult of meaninglessness that has raised doubts even among people long sympathetic with abstract art. The abstractions of Mark Tobey, Barnett Newman, Josef Albers, Ad Reinhardt, and others seem to have reached a point where the canvas or paper is a sort of *objet trouvé,* colored or worked overall simply to generate an aura of influence—if anything at all. It is to be hoped that these paintings will clear the air for further progress rather than become an end to themselves.

The museum event of the year was the opening in October of Frank Lloyd Wright's Solomon R. Guggenheim Museum in New York, whose theatrical architecture and hordes of noisy sightseers almost overpowered a representative selection of nonobjective painting and sculpture. A remarkable discovery of classical statues in Piraeus, Greece, and considerable publicity over "discoveries" of Ming Dynasty imperial tombs in China (actually found in 1956) and of various treasures of the monastery of St. Catherine on Mount Sinai in Egypt were other notable events in 1959.

Major Exhibitions.—The Homer and other American retrospective shows, as noted above, typify any year in American painting, but interest was not confined to native American artists. A number of important public and private collections were seen.

Exhibits early in the year included the Larry Aldrich collection of 19th and 20th century works at the Virginia Museum of Fine Arts in Richmond and a traveling show of modern Dutch and other paintings from the Stedelijk Museum of Amsterdam. On view in New York City were masterpieces of Washington's Corcoran Gallery at the Wildenstein Gallery; a loan exhibition of the works of Odilon Redon at the Paul Rosenberg Galleries; the Pearlman collection of 19th and 20th century French art at Knoedler's; and the W. S. Glazier collection of illuminated manuscripts at the Morgan Library. "The Impressionist Mood in American Painting" was the theme of an early show at New York's Academy of Arts and Letters, and "A Family Exhibit" in April at Knoedler's displayed works from the various collections of the Rockefeller family. Spring and summer brought showings of the Lehman collection at the Cincinnati Art Museum and of *The Dial* collection of modern art (*The Dial* was an art magazine) at the Worcester (Mass.) Museum.

"Masterpieces of Impressionist and Post-Impressionist Painting," loaned by Washington's National Gallery, celebrated the 50th anniversary of the American Federation of Arts in New York.

Also notable in 1959 were three exhibits of drawings in New York: "French Master Drawings" at the Metropolitan Museum in February; "Master Drawings of Seven Centuries" at Knoedler's in October, including works from the Windsor Castle collection; and a parallel collection of "Five Centuries of Drawing" featuring the decorative arts at the Cooper Union in New York.

Large contemporary group shows included the Carnegie International at Pittsburgh; the 1959 Festival of Contemporary Arts, ninth in a series of biennial shows at the University of Illinois; "The American Muse," a centennial exhibition of the Corcoran Gallery in Washington, D.C.; and, at the Museum of Modern Art, "Recent Sculpture U.S.A.," "New American Painting," and, in the fall, the "New Images of Man" show of both painting and sculpture. "Art U.S.A.: 59," a more selective continuation of the 1958 "mile of art" show was arrayed at the Coliseum in New York. "Decorative Arts of the Italian Renaissance," early in the year at the Detroit Institute of Arts; "The Age of Elegance: The Rococo and its Effect," at the Baltimore Museum of Art in the spring; and a traveling show of Norwegian tapestries in the fall stressed the applied arts.

Abroad, the most interesting exhibits were the Jan Steen show at the Mauritshuis Museum in The Hague, Netherlands, especially interesting in view of the Metropolitan Museum's acquisition of a work by Steen; a traveling show of "New American Painting"; the Goldsmith's Guild treasures at the Fitzwilliam Museum, Cambridge, England, "The Romantic Movement," an immense survey sponsored by the Council of Europe, at the Tate Gallery, London; and a Hans Baldung Grien exhibition at Karlsruhe, Germany.

Exceptional one-man shows not fitting into the categories mentioned above were of the works of Jules Pascin at the Perls Gallery, Kurt Schwitters at the Janis Gallery, and Renoir at the Hammer Gallery, all in New York in the beginning of the year. Gustav Klimt was shown at the Galerie St.

Etienne, Joan Miró at the Museum of Modern Art, and Marcel Duchamp at the Janis Gallery in New York, and Pierre Bonnard at the Phillips Gallery in Washington, D.C., in the spring. A portion of the American paintings shown at Moscow were on view in the fall at the Whitney Museum in New York, along with a retrospective show of the sculpture of William Zorach.

Prizes, Awards, and Commissions.—The ten Ford Foundation grants of $10,000, announced early in the year, went to Josef Albers, Elmer Bischoff, Hyman Bloom, Edwin Dickinson, Philip Guston, Corrado Marca-Relli, and Adja Yunkers, and to the sculptors Raoul Hague, Reuben Nakian, and Theodore Roszak. Ford Foundation grants to the American Federation of Arts sponsored a series of traveling retrospectives on Milton Avery, Andrew Dasburg, José de Creeft, Lee Gatch, Mauricio Lasansky, Carl Morris, William Pachner, Walter Quirt, Abraham Rattner, Hugo Robus, Karl Schrag, and Everett Spruce.

The A. W. Mellon Educational and Charitable Trust gave the College of Fine Arts of Pittsburgh's Carnegie Institute of Technology $5 million, part of which will finance a chair of painting, design, and sculpture.

The Rockefeller Foundation gave $500,000 for a Conservation Center at the Institute of Fine Arts of New York University and a grant of $10,000 to the Boston sculptor Alfred Duca for research on casting.

The American Academy of Arts and Letters elected Charles Burchfield and Marc Chagall as members, and the affiliated National Institute of Arts and Letters made painter Edwin Dickinson a vice president and elected to membership Loren MacIver, Julian Levi, Philip Evergood, Walter Stuemfig, and sculptor Jean de Marco. Elizabeth Ames was given the institute's 1959 Award for Distinguished Service to the Arts for her management of Yaddo, the artists' colony, at Saratoga Springs, N.Y.; Leon Hartl, the Marjorie Peabody Waite Award of $1,000; and George Grosz, the 1959 Gold Medal for Graphic Art.

At the fifth São Paulo Biennial Exhibition of Modern Art, sculptor David Smith and painter Philip Guston had one-man shows, and Sam Francis, Helen Frankenthaler, Michael Goldberg, Reuben Kadish, Gabriel Kohn, Alfred Leslie, Marca-Relli, James Metcalf, Joan Mitchell, and Robert Rauschenberg were represented in a group exhibition. The Grand Prize went to England's Barbara Hepworth, the first prize in painting to Modesto Cuixart of Spain, and the first prize in sculpture to Somaini of Italy.

Twelve Americans shown at the first International Biennial Art Show of Paris, for artists under 35 years of age, were Carmen Cicero, Helen Frankenthaler (who won a six-month scholarship), Sonia Gechtoff, Nathan Oliveira, Billé Pritchard, Robert Rauschenberg, Richards Ruben, Harold Altman, Fred Berger, John Paul Jones, Carol Summers, and sculptor Peter Voulkos, who won the Rodin Museum Prize of 100,000 francs.

At the Carnegie International exhibition of contemporary painting and sculpture (December 1958) 1st and 2d prizes in sculpture went to Alexander Calder and Henry Moore. In painting the prizes went, in order, to Antoni Tàpies, Afro, Alberto Burri, Vieira da Silva, and Pablo Pazuelo. Top award winners in the Second Biennial of American Painting and Sculpture at the Detroit Institute of Arts were painter Lee Gatch and sculptor Lee Bontecou.

Other awards during the year included the Benjamin Altman prizes of $2,000 each to Edward Betts and Joseph Hirsch and of $1,000 each to Paul Wescott and John Koch, and a $3,000 Rome Prize fellowship from the American Academy in Rome to painter Wayne Begley.

Prizewinners in the summer arts festivals were Richard Talaber at the Chicago Art Institute and sculptor Gilbert Franklin at the Boston Arts Festival, where Gardner Cox' *Robert Frost* was the public favorite. Murals were completed by Thomas Hart Benton at the Truman Library in Independence, Mo., and by Nivola at Harvard University.

In December 1959, at the 63d American Exhibition of Painting and Sculpture in the Art Institute of Chicago, first and second prizes in sculpture went to Isamu Noguchi and Louise Nevelson, respectively, and prizes for painting were awarded to Joseph Cornell, Hans Hofmann, Franz Kline, and Philip Guston.

Museum News.—The most spectacular new museum of the year, as noted, was the Solomon R. Guggenheim Museum in New York City. The domed, spiral-ramped structure was opened to the public on Oct. 21, 1959. The controversy that had surrounded the museum from its beginnings continued unabated, some of it centering on the director's deviations from Frank Lloyd Wright's plans. The paintings were intended to hang on the slanted walls as on an easel, but James Johnson Sweeney, the director, hung them vertically from steel bars projecting from the canted walls. The natural lighting provided by Wright from a spiral strip of skylights above the wall was thus obviated and artificial light substituted. The building requires ingenuity on the part of the museum staff to overcome the limitations of an unadaptable structure. A reverential hush is the last thing that should surround the Guggenheim collection's lively abstractions, but some feel that the architect has reproduced the acoustics of a slum courtyard in a museum which structurally overwhelms the paintings and sculpture destined to be shown in it.

Other museum openings of 1959 included, early in the year, a new wing for the decorative arts at the Philadelphia (Pa.) Museum and the new Cullinan Hall of the Houston (Texas) Museum of Fine Arts. In May the Gertrude Vanderbilt Whitney Gallery of Western Art opened in Cody, Wyo.; and in September the Beaverbrook Art Gallery opened in Fredericton, New Brunswick. The new building of the Phoenix (Ariz.) Art Museum and the Dallas (Texas) Museum for Contemporary Arts were both opened in November. Also in the fall, New York City's Metropolitan Museum and Museum of Modern Art both announced plans for extensive expansion programs.

In Europe the art world gained a new gallery at the Acropolis Museum in Athens, Greece, and Rome's Palazzo Doria-Pamphili was reopened to the public. In Tokyo, Japan, the National Museum of Western Art housed its Matsukata collection in a new building designed by Le Corbusier.

At the Art Gallery of Toronto on Sept. 14, 1959, Rembrandt's *Portrait of a Lady with a Lap Dog* and *Portrait of a Lady with a Handkerchief*, Frans Hals' *Portrait of Isaak Abrahamsz Massa* and *Portrait of Vincent Laurensz van der Vinne*, Rubens' *Elevation of the Cross*, and Renoir's *Portrait of Claude* were cut from their frames and stolen. Works by Gainsborough and Van Dyck were slashed but not taken. On October 3 the paintings were recovered, only slightly damaged. Missing objects at the Egyptian Museum in Cairo resulted in a change of staff, a new inventory, and political accusations. Rubens' *Fall of the Damned*, valued at $1 million, was damaged with acid by a vandal at the Alte Pinakothek Gallery in Munich, Germany, and, to complete a roll call of misfortune, the Metropolitan Museum of Art, in New York,

was forced to close its doors on Mondays owing to a shortage of guards and an increase in attendance coincident with a pinch on operating funds from the city budget.

A 44-year-old dispute between Great Britain and Ireland was ended on Nov. 12, 1959, with the announcement by Prime Minister Harold Macmillan that the valuable art collection of the late Sir Hugh Lane will be shared by London's National Gallery with the Dublin Municipal Gallery. The noted Irish art collector and dealer, who died in the sinking of the *Lusitania* on May 7, 1915, had left an incomplete will which gave both governments grounds for claiming the collection. The collection will be divided and the halves alternately lent to Dublin for successive five-year periods over a total of 20 years.

Acquisitions.—Rubens' *Meeting of Abraham and Melchizedek* was given to the National Gallery in Washington by Mrs. Syma Busiel. The Worcester (Mass.) Art Museum acquired Rembrandt's *St. Bartholomew,* and the Metropolitan Museum in New York, Jan Steen's *The Merry Company.* (The Metropolitan also put on display for the first time El Greco's *St. John's Vision of the Mysteries of the Apocalypse,* which it acquired in 1956.) Goya's *Children with a Cart* went to the Toledo (Ohio) Museum; John Singleton Copley's *Col. Epes Sargent,* to the National Gallery in Washington; Philippe de Champaigne's *Charles II of England,* to the Cleveland (Ohio) Museum; and Mary Cassatt's *Alexander Cassatt and his Son Kelso,* to the Philadelphia Museum. The Philadelphia Museum was also given the valuable 17th century Barberini tapestries. Poussin's *Moses Sweetening the Waters of Marah* at the Baltimore Museum and a Gauguin bas relief, *Soyez Amoureuses, Vous Serez Heureuses,* at the Boston Museum of Fine Arts were other notable acquisitions of the year.

In Greece, eight classic sculptures were found during the summer by workmen excavating the streets of Piraeus, the port-suburb of Athens, in what is considered one of the greatest chance finds of the century. The group includes a magnificent bronze *kouros,* or statue of a young man, from the late 6th century B.C., and an eight-foot bronze statue of the goddess Athena from the 4th century B.C. (See also ARCHAEOLOGY.)

Appointments.—Evan H. Turner became director of the Montreal Museum of Fine Arts; Otto Wittmann, director of the Toledo Museum of Art; John Maxon, director of fine arts at the Art Institute of Chicago; and Samuel Hunter, acting director of the Minneapolis (Minn.) Institute. John Gordon became curator at the Whitney Museum in New York and Ralph T. Coe, curator of paintings and sculpture at the Nelson Gallery in Kansas City (Mo.).

Auctions and Sales.—Many records of previous years were broken at auctions during 1959. An all-time high of $10,208,879 in sales was set at New York's Parke-Bernet auction galleries for the season from September 1958 to June 1959, exceeding the previous season's total by $3 million. In a sale there in January, the Ralph M. Coe and other collections, including works by Van Gogh, Pissarro, Renoir, Morisot, and Redon were auctioned for a total of $447,575, and a record was set for a painting by the American Childe Hassam. The Woodner sale in April totaled $519,295 for works by Renoir, Braque, Modigliani, Pissarro, Sisley, and Picasso, and brought a record price for the work of Mary Cassatt. The sale in May of Mrs. Thelma Chrysler Foy's 17 famous paintings brought $1,166,400, including auction records for works by Renoir ($255,000) and Degas ($180,000), and a record-equaling $180,000 for a Toulouse-Lautrec.

Records were also broken at auctions during the year in England. In March, at Christie's in London, the auction record for a Turner watercolor was broken with a $32,340 sale price. On May 6 at Sotheby's, Picasso's *La belle hollandaise* brought a record $154,000. On June 24, also at Sotheby's, a new high was reached in an auction of old masters that brought a total of $2,074,184. At this sale Rubens' *Adoration of the Magi* sold for $770,000, a new world record for any painting sold at public auction. This was one of 18 paintings in the sale from the collection of the Duke of Westminster. Other sales of such art treasures during the year from similar estates demonstrated the competing auction activity in London as well as the severity of British taxes. Late in the year another auction record was set in a sale at Sotheby's on November 25, when a Gauguin work entitled *I Await the Letter* was sold for $364,000, the highest price ever paid for a painting by this artist.

WIDE WORLD

Leonard Koetzer, London art dealer, stands before Rubens' *Adoration of the Magi,* for which, on June 24, he paid a record-breaking $770,000 as agent of an undisclosed buyer.

Also in November, a sale of modern art in Stuttgart, West Germany, brought $738,000 in what was believed to be that country's biggest art auction since World War II.

Necrology, 1959.—Tarku Trajan (72), American sculptor and painter; in New York, March 17.

Albert Urban (50), German-born American abstractionist; in New York, April 4.

Paul Rosenberg (78), international art dealer who handled Braque, Matisse, and Picasso; in Paris, June 29.

George Grosz (q.v.; 65), German-American satirical artist; in Berlin, July 6 (three weeks after his return to Germany).

Sir Alfred J. Munnings (80), English painter; former president of the Royal Academy; in Dedham, Essex, England, July 17.

Germaine Richier (55), French sculptor; in Montpelier, France, July 30.

Sir Jacob Epstein (q.v.; 79), American-born English sculptor; in London, August 20.

Alfred Kubin (83), Austrian member of the "Blue Rider" group; in Zwickledt, Austria, August 20.

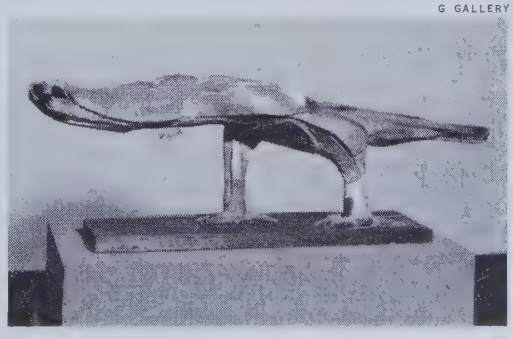
Theodore Brenson (67), Latvian-born abstractionist; in Peterborough, N.H., September 21.

Bernard Berenson (q.v.; 94), American expatriate critic; expert on Italian Renaissance painting; in Settignano, near Florence, Italy, October 6.

HERBERT D. HALE,
Art Critic.

***Bird,* by Lee Bontecou, which won the George D. Widener Memorial Gold Medal in the Detroit Institute of Arts' Second Biennial of American Painting and Sculpture, in 1959.**

G GALLERY



PAINTS, VARNISHES, AND LACQUERS. The year 1959 proved to be the brightest in the history of the paint, varnish, and lacquer industry. Month after month each segment of the industry produced record sales, and were it not for the prolonged steel strike a record $2 billion in annual sales might have been achieved.

Total sales of the paint, varnish, and lacquer industry for the first 11 months of 1959 were $1,642,000,000, or 8% above the total sales for 11 months in 1958, and greater than the total for all of 1958—a new all-time record. It was estimated that sales for the entire year 1959 would exceed $1,750,000,000. Total sales for 1958 were $1,629,300,000. Production of paints, varnishes, and lacquers in 1958 totaled 611.8 million gallons, including 333.1 million gallons of trade sales products and 278.7 million gallons of chemical coatings. The industry produced 612.2 million gallons in the first 11 months of 1959, an increase of 8.3% over the same period in 1958.

Chemical coatings manufacturers staged a remarkable comeback in 1959 from the recession in 1958, and their recovery was checked only by lack of steel for the manufacture of those products that are finished with chemical coatings. Biggest gains were in the trade sales division of the industry, which sells paint for conventional uses and application in homes, institutions, and other buildings. Here the industry made outstanding strides, primarily because of the development of new types of paints and coatings that are easier to apply, longer lasting, easier to clean, odor free, fume resistant, and fire retardant.

In 1959 the industry developed accepted methods for coating difficult surfaces. In cooperation with other interested industries, methods were developed for coating insulated siding, Southern yellow pine, swimming pools, asbestos cement products, new plaster, galvanized steel, hardboard, hardwood floors, aluminum siding, and other "difficult" surfaces. The National Paint, Varnish and Lacquer Association cooperated with the interested industries in publishing free booklets on each of these subjects.

JOSEPH F. BATTLEY,
President, National Paint, Varnish and Lacquer Association, Inc.

PAKISTAN. Formed in 1947 when British India was partitioned, Pakistan is the most populous Moslem country in the world. It is unique in its two halves: West Pakistan, mountainous and dry, with vast deserts and plains; and East Pakistan, situated 920 miles across India in the shortest direct line, with its heavy rainfall, dense vegetation, and huge population. Homogeneous with respect to religion, these two provinces differ fundamentally in languages, resources, and culture.

Area and Population.—Including Gwadar (ceded by Muscat and Oman in 1958), but excluding the disputed state of Jammu and Kashmir and the minor areas of Gilgit, Baltistan, Junagadh, and Manavadar, Pakistan has an area of 365,037 square miles. Of the total, 310,536 square miles (85%) are in West Pakistan, although its share of the population is about 44%. As of July 1, 1959, the total population was officially estimated at 86,823,000. Nearly 90% of the population is rural, but there has been a heavy influx to certain cities, notably Karachi. Until recently the capital and West Pakistan's leading port, Karachi has an estimated population of 2,000,000. The temporary new capital is Rawalpindi, which had a population of 237,219 at the 1951 census. Other large cities with their census populations are Lahore (849,476), Dacca (411,279), Chittagong (294,046), and Hyderabad (241,801). About 86% of the people are Moslems.

Government.—The governmental structure of Pakistan has undergone a number of changes since its inception in 1947. Since October 1958, it has been simply a military government under the leadership of President Mohammed Ayub Khan, who is assisted by an 11-man cabinet. Field Marshal Ayub has repeatedly emphasized his attachment to democratic principles and has promised the restoration of representative government. Only on the village level has this taken place, but plans have been announced for village councils to elect a second tier, called tehsil councils in West Pakistan and thana councils in East Pakistan. Ultimately there will be a succession of elected tiers, with increasing responsibilities. A new constitution is to be drawn up in 1960.

Education.—At the 1951 census about 81% of the population was illiterate. Despite such obvious handicaps as a diversity of languages and the lack of a suitable educational tradition, real strides have been made. In 1959 there were 43,497 primary schools, 5,840 secondary schools, 172 liberal arts colleges, 100 teacher training institutions, and 6 universities. The great bulk of these facilities were for males. Enrollment was as follows: primary students, 4,232,729; secondary students, 1,325,633; teacher training students, 9,361; and college and university students, 112,453. In 1958 there were 228,667 primary teachers and 105,857 secondary teachers, of whom slightly more than half were untrained.

Finance.—Perennial financial crises had been a causative factor in the 1958 revolution, and the revolutionary government has been pledged from the outset to restore financial stability. Some progress has been made. There are two budgets: the revenue budget, which is financed in the normal way and covers normal administrative expenditures, including defense; and the capital budget, which is designed to cover the economic development program and is financed largely, although not entirely, by foreign aid and loans. The 1957–58 revenue budget had a deficit of Rs.10 million (1 rupee = U.S.$0.21), the 1958–59 budget had a surplus of Rs.103 million, and the 1959–60 budget anticipated a surplus of Rs.70 million from revenue of Rs.1,584.5 million and expenditure of Rs. 1,514.5 million. The 1959–60 capital budget was Rs.1,797.4 million.

The revolutionary government was successful in getting many persons to file amended income tax returns, covering income unreported in the previous five years, and in obtaining the surrender of privately (and illegally) held foreign exchange abroad. Official gold and foreign exchange reserves rose from $258 million on Dec. 31, 1958, to $291 million on Sept. 30, 1959.

Pakistan has continued to fight inflation. While money in circulation rose from Rs.5,255 million at the end of 1957 to Rs.5,514 million at the end of 1958, it had risen by only an additional Rs.21 million by Sept. 30, 1959. The revolutionary government has experimented in several ways to reduce the cost of living, including arbitrary price cuts and the establishing of fair profit margins for manufacturers and retailers. As a result of these and other activities, the cost-of-living index for Karachi (1953 = 100) fell from 114 in September 1958 to 100 in December. By August 1959, however, it had risen to 108.

Transportation and Communications.—Pakistan has 7,044 miles of railways (5,335 miles in West Pakistan and 1,709 miles in East Pakistan), which carried nearly 170 million passengers and 17.7 million tons of freight in 1958. There are 68,391 miles of roads, of which about 10,000 miles are usable in all weathers. East Pakistan also has 2,670 miles of navigable waterways. There are three important seaports: Karachi, clearing 1,164 vessels and handling 3,853,000 tons in 1958; Chittagong, with 585 vessels and 2,210,000 tons; and Chalna, with 319 vessels and 803,000 tons. The domestic and international airline system is well developed. In 1958 there were 59,600 telephones.

Agriculture.—Maintaining self-sufficiency in food grains has become an almost insoluble problem for Pakistan. Its agriculture is unusually sensitive to climatic hazards, and in 1958 insufficient water (and floods in other places) affected the entire crop. The index of agricultural production (1949–50 to 1952–53 = 100) for food grains oscillated from 93 for 1955–56 to 112 for 1956–57, 106 for 1957–58, and 100 for 1958–59. The result has been dependence on cereal imports: in 1958, 1,093,000 long tons of rice and wheat were imported.

For the 1959 crop year foodstuff production was as follows (in thousands of long tons): rice, 7,485; wheat, 3,784; millet, 303; jowar, 215; gram, 662; corn, 446; barley, 144; and sugarcane, 13,127. In the same period there were produced (in thousands of long tons): jute, 1,071; cotton, 286; tea, 24; and rape and mustard seed, 310. Wool (35 million pounds in 1959) and hides and skins also are produced and exported.

Mining.—Great efforts have been made to increase mineral production. Since 1953 nearly Rs.376 million have been spent in the development of petroleum and gas wells. A new oilfield at Karsal and much natural gas were discovered in 1959. In 1958–59 nearly 2 million barrels of crude oil and 20 billion cubic feet of natural gas were produced.

Coal production in 1958 amounted to 597,000 tons; production of other minerals (in tons) was as follows: chromite, 23,767; limestone, 1,119,169; gypsum, 66,095; and iron ore, 8,097.

Industry.—The revised index of industrial production (1954 = 100) rose from 142 in 1956 to 152 in 1957 and to 167 in 1958. By March 31, 1959, it stood at an all-time high of 185. Much of this success has been due to the Pakistan Industrial Development Corporation (PIDC), founded in 1952. By 1959, in cooperation with private enterprise, the PIDC had completed 48 projects in the industrialization of Pakistan. The projects completed in 1958 included two jute mills, a fertilizer plant, two sugar mills, a gas line and a rosin and turpentine plant. By March 1959, the PIDC had invested Rs.898.8 million in these completed projects (Rs.258.3 million from private enterprise).

Production of cotton yarn in 1958 amounted to 345 million pounds (an increase of 8.8% over 1957), and that of cotton cloth to 576 million yards (an increase of 9.3%). The output of jute manufactures rose 15.6%, to 172,100 long tons, in 1958. The fertilizer ammonium sulphate was being produced in 1959 at a rate of 3,500 long tons per month. Cement production for 1958, at 1,069,000 long tons, was slightly off the 1957 figure.

Development Planning.—Pakistan has completed a Six-Year Plan (1951–57) and is about to complete a Five-Year Plan (1955–60). The latter called for an expenditure of Rs.10,800 million and was scheduled to result in a 15% increase in national income and a 7% increase in per capita income. In 1959, however, the rise in national income by the end of the plan was estimated at 10%, and because of a higher birth rate than had been anticipated the per capita income was expected to remain unchanged. Nonetheless, great efforts have been made to develop the country's resources, with emphasis on irrigation and power projects. One example is the Taunsa Barrage on the Indus River, which was inaugurated on March 3, 1959. It will irrigate 1.6 million acres of agricultural lands. A third development plan, to go into effect in 1960, calls for an increase of national income of 20%, a per capita income increase of 10%, and a 50% increase in industrial production.

Foreign Trade.—Pakistan's trade balance was generally favorable until 1956, but since then each year has witnessed an unfavorable balance. In 1958 exports were valued at Rs.1,417 million, and imports at Rs.1,888 million. The principal exports were raw jute (Rs.839.5 million), raw cotton (Rs.240.5 million), jute manufactures (Rs.108 million), raw wool (Rs.48.5 million), and raw hides and skins (Rs.40.9 million). The main imports were foodstuffs, including sugar (Rs.28 million), wheat (Rs.267.8 million), and rice (Rs.170.7 million), the bulk of which were financed through aid from the United States. Other important imports were machinery, metal ingots, coal, and chemicals. In the first half of 1959 exports were valued at Rs.672 million, and imports at Rs.719 million. Pakistan's chief customers in this period (in order of importance) were the United Kingdom, the United States, the Union of South Africa, Hong Kong, West Germany, and France; its main suppliers were the United States, the United Kingdom, West Germany, Canada, India, and Belgium.

Principal Events, 1959.—The first anniversary of Pakistan's revolutionary government was celebrated on October 27; it had been a year of quiet but major accomplishment. Inflation and other perennial financial ills were attacked by an austerity program, rigid price controls, and a largely successful drive on corruption. A land reform program designed to break up large estates and to increase the smallest holdings to economically feasible sizes was announced on January 24, and on September 27 the first holdings were distributed to former tenants. By August the new city of Korangi had been built near Karachi with 15,000 homes for the poorest of the refugees from India. As the apparent result of such efforts, President Ayub enjoyed substantial popularity.

For a decade, relations between India and Pakistan had been unsatisfactory and often tense. As late as April 10, 1959, Pakistan shot down an Indian Air Force plane, which it accused of photographic reconnaissance over Rawalpindi. The incident produced the usual recriminations, but only a week later, on April 17, India and Pakistan reached an interim settlement of a long-standing dispute on the distribution of Indus River waters for irrigation purposes. This preliminary settlement was largely the result of efforts by Eugene R. Black and the International Bank for Reconstruction and Development. Negotiations continued, and in July Black was able to obtain from both countries acceptance of lines of agreement on the distribution and use of these waters. The plan, scheduled to be embodied in a treaty in 1960, called for joint investment in power, irrigation, and flood control projects covering the entire Indus River system.

By late summer an even warmer atmosphere prevailed. Halting in New Delhi for a fuel stop on a flight between West and East Pakistan on September 1, President Ayub had a friendly meeting with Prime Minister Jawaharlal Nehru. Ayub was quoted as having said, "I am a military man, and I can see the danger if we continue with our squabbles and do not resolve our problems." On

(*Left*) Mrs. John Eisenhower, who accompanied her father-in-law, President Eisenhower, on his world tour in December, samples a local delicacy at a reception in Karachi, Pakistan, December 9. (*Center*) Some 750,000 Pakistanis welcomed President Eisenhower when he arrived in Karachi on December 7. (*Right*) With a turbaned bodyguard keeping a sharp watch, President Eisenhower (l.) and Pakistan's President Mohammed Ayub Khan stand outside the latter's residence on December 8.

UPI

May 10, he had suggested joint defense arrangements by India and Pakistan. By September, with Chinese activity increasing in the Himalaya, an Indo-Pakistani rapprochement had become more likely. This atmosphere of cordiality produced on October 23 the settlement of a long-standing frontier dispute in East Pakistan. Specifically, both India and Pakistan made concessions (involving about 50 square miles) relating to rich and strategic territories. On December 3, however, concern over the Sino-Indian dispute regarding the Ladakh section of Kashmir, which Pakistan claims, produced a request to the U.N. Security Council that it prevent any agreement between India and China to change the frontiers of Kashmir.

Pakistan continued in 1959 its close contacts with Great Britain and with the United States, with which a defense agreement was signed on March 5 and a treaty of friendship and commerce on November 12. President Dwight D. Eisenhower received an enthusiastic welcome when he visited Karachi on December 7–9 during his 11-nation tour, but he did not agree to President Ayub's request that he use his good offices in the settlement of issues dividing Pakistan from India and Afghanistan.

Relations with neighboring Iran, Burma, and Afghanistan during the year were uneventful. On November 18, President Ayub arrived in Ankara, Turkey, for a two-day visit.

On June 12, Pakistan announced the pending removal of its capital from Karachi to Rawalpindi. Eventually a new city was to be built near Rawalpindi. Meanwhile, several government departments made the move to the northern city in October. It was announced on October 26 that President Ayub had been promoted to the rank of field marshal.

PALEONTOLOGY. See Index entry.

PALESTINE. A former League of Nations mandate, relinquished by Great Britain in 1948. The greater part of Palestine is now divided between Israel and Jordan (qq.v.). A narrow southern coastal strip, which has become known as the Gaza Strip, is administered by the United Arab Republic (UAR). The Gaza Strip has an area of about 125 square miles and a population of 345,000 Arabs (est. 1958), most of whom are refugees aided by the U.N. Relief and Works Agency for Palestine (see REFUGEES AND DISPLACED PERSONS). The strip is largely wasteland, although there is some citrus cultivation. Since 1957 a U.N. Emergency Force has been stationed along the Gaza Strip frontier with Israel to prevent border incidents. In 1958 a Legislative Council for the Gaza Strip was inaugurated to advise the UAR governor.

PALMYRA. An atoll of some 55 islets, included within the Line Islands of the central Pacific, situated about 1,000 miles south of Honolulu. Its area is about 488 acres. Palmyra was formerly within the Territory of Hawaii. Since it is owned by a single family, however, it was not included within the State of Hawaii when Hawaii became a member of the Union in 1959. Palmyra was administered by the Civil Aeronautics Administration which was absorbed by the Federal Aviation Agency in 1958.

PAN AMERICAN UNION. See ORGANIZATION OF AMERICAN STATES.

PANAMA. A republic occupying the isthmus between North and South America, Panama is divided by the 10-mile-wide Canal Zone (see PANAMA CANAL), which was granted to the United States in 1903. With a population of 1,024,000 (est. July 1, 1959), the 28,576 square miles of Panama are thinly populated. About a third of the population is clustered in two cities: the capital, Panama City, at the Pacific end of the Canal (1958 est. 221,900), and Colón, at the Atlantic end (58,000). The bulk of the population is mestizo, but there is also a large Negro population. Spanish is the official language.

Government.—The constitution of 1946 provides for a president and a unicameral National Assembly of 53 deputies, elected for 4-year terms by direct popular vote. The president (Ernesto de la Guardia, Jr., took office on Oct. 1, 1956) serves for four years and is not eligible for immediate re-election. The 9 provinces have governors appointed by the president.

Religion and Education.—Roman Catholicism is the predominant religious affiliation. Educational facilities have been expanded in recent years, but probably at least 35% of the population (age 10 and over) remains illiterate. Some 186,729 students registered for the 1958–59 school year, out of an estimated school age population of 215,060. Higher education is provided chiefly by the National University (1955–56 enrollment, 2,226).

Finance.—The balboa, the monetary unit, is at parity with the United States dollar. The government's fiscal position continued to worsen in 1958–59. Government expenditures on the ordinary budget items exceeded income in 1958 by at least $5 million. Continuation of this practice apparently was approved when the 1959 budget was set at $61.11 million, some $5 million above 1958. The 1959 supplemental budget, devoted to public works and financed outside ordinary revenues, was set at $54.79 million (an increase of $18.1 million over the previous year). The public debt rose from $54.58 million as of Dec. 31, 1958, to something more than $60 million in mid-1959. Debt service now is consuming a significant portion of government revenues.

Transportation and Communications.—Work continued in 1958–59 on the Inter-American Highway from the Costa Rica border to central Panama. This paved road, with its feeders, is expected to be of major aid in development of the national economy, but it will not be completed for several years. There is no highway connection in the other direction, between central Panama and Colombia. Work continued in 1959 on the high-level bridge over the Pacific end of the Canal. In 1958 Panama's merchant fleet, wholly foreign-owned, consisted of 563 vessels totaling 4,397,000 gross tons. Panama City is an important hub for inter-American air traffic. An average of 14,500 passengers arrive monthly on 16 scheduled international airlines.

Production.—Per capita income is very low, and government efforts to improve the economy have done little more than keep up with the rapidly increasing population. The bulk of the population is engaged in agriculture, much of it at the subsistence level. There is chronic unemployment in the towns. The government subsidizes local agriculture and industry by means of price supports and tariff protection. The United Nations' Economic Commission for Latin America, after a two-year study, in 1959 reported pessimistically on the immediate prospects of the Panamanian economy.

The 1958–59 crops were good, with the production of food adequate for domestic needs, and export surpluses available of some commodities. Banana production for export in 1958 was 6,686,000 stems, some 541,000 fewer than in 1957. The 1958–59 coffee crop was officially estimated at 80,000 quintals (1 quintal = 100 pounds), some 20% over 1957–58. This would give an exportable surplus of about 20,000 quintals. The 1958–59 corn crop was expected to be about the same as the 1,689,000 quintals of 1957–58. The 1958–59 rice crop was estimated at 2.5 million quintals, more than 500,000 over 1957–58. Production of refined sugar in 1958–59 amounted to 550,000 quintals.

The cattle and dairy industries have been growing in recent years. Herds now total about 1 million head, and about 20,000 pounds of deboned beef was being shipped weekly to the United States in 1959. In 1957, 4.1 million kilograms of condensed and evaporated milk was produced. A small steel plant, completed in 1958, is

the only heavy industry in the country. There is little mineral production. The shrimp industry, Panama's second leading industry, encountered difficulties again in 1958, and the catch was less than in 1957 (total catch for the year ending June 30, 1958, was estimated at nearly 10 million pounds). The building industry again operated at a high level in 1958.

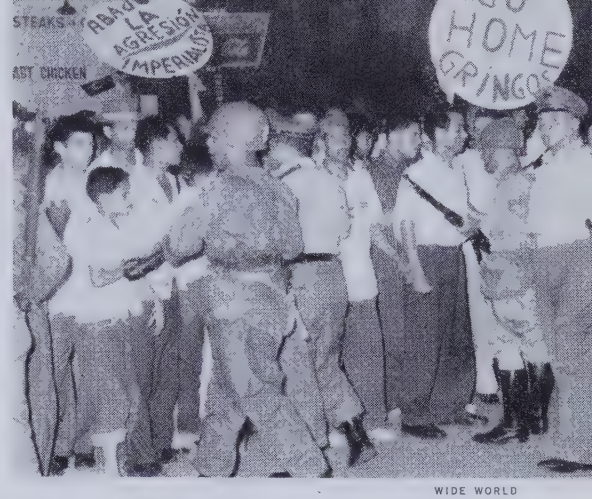
Foreign Trade.—Panama's commodity exports always are much less than her imports. Imports in 1958 totaled $92.85 million ($98.91 million in 1957), and 1958 exports were $33.61 million ($35.66 million in 1957). Bananas accounted for 67% of the value of 1958 exports. Smaller amounts are realized from exports of sugar, cattle, cacao, coffee, and corn, often at losses subsidized by the government. The United States is the country's most important trading partner, taking $24 million of Panama's exports and providing $84 million of her imports in 1958.

The customary large visible trade deficit was, as usual, closed by the income of Panamanians working in the Canal Zone, income from ship registrations (possibly $2 million a year), Colón Free Zone operations, and from expenditures in Panama by tourists and by residents and agencies in the Canal Zone. Income to Panama from Canal Zone operations in 1958 was about $61 million. In addition the United States pays Panama an annual annuity of $1.93 million. Over 16,000 Panamanians were employees of the Canal Zone agencies in 1958, and additional Panamanians worked in the Canal Zone in other capacities. The Colón Free Zone in 1958 handled some 41 million kilograms of merchandise, valued at $76.3 million. More than 120 firms are using Free Zone facilities.

Principal Events, 1959.—Most of the public events of the year, including the anti-United States rioting of November, had some connection with the presidential election scheduled for May 1960. Controversy over the number of registered members required in a party for it to offer a candidate led to a substantial reduction of the figure, thus increasing the hopes of various aspirants and the complexity of political maneuvering. By July the opposition parties were consolidating into a Frente Unico ("united front") against the government Coalición Patriótica Nacional (CPN).

One of the dramatic events of the year was the invasion of Panama on April 25 by a force of about 90 Cubans. The government of Cuba (q.v.) disavowed any connection with the invasion. Panama appealed to the Organization of American States (q.v.) for aid, and the latter sent an investigating team, which secured the surrender of most of the invaders on May 1. Some other invaders were captured by Panamanian forces, and some Panamanians were arrested. The United States supplied Panama with arms from stocks in the Canal Zone, and provided air and naval craft for observation purposes. In June most of the invaders were released by Panama. At the same time, Roberto Arias, member of a prominent Panama family, and supposed leader of this adventure to oust the government, was released from the embassy in which he had taken refuge in April, and was permitted to leave the country. His wife, Dame Margot Fonteyn, a British dancer, had been held briefly in April.

Several other events had important political implications. A scandal connected with the municipal council of the capital broke in January and agitated public opinion for months. It led to public protests, a general strike in February, arrests, and dismissals from the council. In March a plot by National Guard Officers to oust the government was frustrated by arrests of guardsmen and civilians. In April the government had to put down outbreaks against the regime in Veraguas and in Chiriqui provinces.



WIDE WORLD

Panama National Guardsmen hold back anti-United States mob which tried to force entry into Canal Zone, November 28. Several were injured in this outbreak and in another on Nov. 3, caused by sovereignty issue in the zone.

The campaign for the presidency did nothing to reduce Panamanian criticism of the United States. There were the usual Panamanian assertions that the 1903 treaty granted the United States the use, occupation, and control of the Canal Zone for canal purposes, but not sovereignty or ownership. Throughout the year official and unofficial voices asserted that the 1955 treaty was being violated, especially with regard to the wages of Panamanians working in the Canal Zone, and to United States purchases in Panama. In January the United States sent a protest (several other nations did likewise) over the December 1958 Panamanian declaration extending the limit of its territorial waters from 3 to 12 miles (the 1903 treaty gave the United States jurisdiction over 3 miles of sea at the canal approaches). Panama rejected the protests. Various Panamanian elements during the year developed enthusiasm for a proposition that Panama receive half the receipts (gross in some demands, net in others) of the Panama Canal. There was less enthusiasm for sharing the cost of maintaining and defending the waterway.

On November 3, Panama's Independence Day, in a move long promoted by former Foreign Minister Aquilino Boyd, one of the aspirants to the presidency of Panama, demonstrators tried to move into the Canal Zone to assert Panama's "sovereignty" there. This led to clashes with Canal Zone police and with United States armed forces (about 80 persons were injured), to mob attacks on the United States embassy in Panama City and on United States business establishments, to a formal United States protest, and to Panama's rejection of the protest and submission of countercharges. Livingston T. Merchant, United States deputy under secretary of state, arrived in Panama on November 20 for a series of conferences with President de la Guardia on the strained relations between the two countries. In another outburst on November 28, about 30 persons, including Panamanians and United States troops, were injured when a mob again tried to enter the Canal Zone. Rioting and pillaging ensued in Panama City, and property damage was high.

Professor of History, Syracuse University.

PANAMA CANAL and **CANAL ZONE.** The Panama Canal, extending across the Isthmus of Pan-

ama, connects the Atlantic and Pacific oceans. The waterway was built by the United States and was opened to traffic in 1914. It extends 51.6 miles from deep water to deep water, or 40.27 miles from shoreline to shoreline. The Canal Zone is the area under United States jurisdiction that extends generally five miles on either side of the center line of the Panama Canal and three marine miles below low-water mark in the Atlantic and Pacific oceans, for a total of 648.01 square miles, including tidal waters. It is, in effect, a United States government reservation, with nearly all residents being United States government personnel, and with private business activities being restricted to categories directly related to canal operations.

In 1959 a $90 million construction improvement program was either under way or at the approved stage in the Canal Zone. Major projects included $20 million for a high-level bridge across the canal's Pacific entrance, $19 million for a canal improvements program, $6 million for new towing locomotives, $8 million for housing, and $6 million for new hospital facilities. Rebuilding was begun in 1959 of La Boca, the Zone's oldest townsite, which had been demolished the previous year. (See also CANALS.)

Population.—The federal census of 1950 showed a total population of 52,822. A local census of November 1954 placed the civilian population at 38,953. The civilian count in the larger towns was as follows: Rainbow City, 4,845; Paraiso, 3,008; Balboa, 2,709; Santa Cruz, 2,059; Margarita, 1,446; Ancon, 1,290; New Cristobal, 1,130; Diablo Heights, 1,124; and Gamboa, 1,018. (New Cristobal has since reverted to the Republic of Panama under terms of that nation's 1955 treaty with the United States, and most Cristobal residents have moved into the new Canal Zone civilian community of Coco Solo.)

Administration and Government.—The congressionally created Panama Canal Company operates the Panama Canal and its adjuncts in the Canal Zone. The company, which is a wholly owned United States government corporation, is self-supporting and operates on its current revenues (net income, 1957–58, $2,656,382).

The Canal Zone government, also established by Congress, maintains such functions as police and fire protection, schools, postal service, customs, immigration, magistrates' courts, hospitals, and public health and sanitation facilities. Its net operating expenses are reimbursed to the U.S. Treasury by the Panama Canal Company.

The joint functions of governor of the Canal Zone and president of the Panama Canal Company are held by Maj. Gen. W. E. Potter, USA, appointed by the president of the United States in 1956. Other officials in 1959 included George H. Roderick, chairman of the Board of Directors; Col. John D. McElheny, lieutenant governor and vice president; W. M. Whitman, secretary; Philip L. Steers, Jr., comptroller; P. M. Runnestrand, executive secretary; and Capt. W. C. Hughes, Jr., USN, marine director. Sigurd E. Esser is superintendent of schools; Guthrie F. Crowe, federal district judge; and William G. Arey, Jr., Panama Canal information officer.

Education.—School attendance is not compulsory for children living in the Canal Zone. Expenditures for public education in the fiscal year ending June 30, 1959, totaled $3,792,900. Teachers' average salaries ranged from $2,590 to $7,166 for the 1958–59 school year.

The Canal Zone maintains both United States schools and Latin American schools. The former, attended primarily by United States citizens, afford a program of education in the English language comparable with that of schools in the United States, and provide for the teaching of Spanish in every grade. The Latin American schools, attended by non-United States citizens, are conducted in Spanish, and the curriculum follows that of the schools of the Republic of Panama.

The accompanying table shows revised statistics for the 1958–59 school year. (Columns headed by "US" refer to United States schools; by "LA," Latin American schools.)

	Number		Teachers[1]		Students[2]	
Public schools	US	LA	US	LA	US	LA
Elementary (K–6)	10	4	134.25[3]	63.0[4]	4,438	2,054
Junior high	2	3	33.9	34.2	972	1,064
Senior high	2	2	52.5	26.3	1,474	775
Totals	14	9	220.65	123.5	6,884	3,893
Junior colleges[5]	1	...	7.4	...	178	...

[1] Include part-time expressed as equivalent of full-time. [2] As of Oct. 15, 1958. [3] Do not include 9 special teachers of Spanish. [4] Do not include 2 special teachers of Spanish. [5] Excluding extension division classes for adults.

Public Health and Safety.—The government operates several health and correctional institutions. These include Gorgas and Coco Solo general hospitals, the Corozal Hospital for the insane and indigent, the Palo Seco Leprosarium, and the Canal Zone Penitentiary.

Industry.—A few private business enterprises related directly to canal operations are permitted, and a few small vegetable gardens are operated by Chinese gardeners. An experimental garden of 320 acres, devoted chiefly to the development and propagation of tropical plants, is operated by the canal organization.

Canal Traffic.—In the fiscal year ended June 30, 1959, transits included 9,718 ocean-going vessels of more than 300 tons net, a new record for the 8th consecutive year. Cargo shipments for the year aggregated 51,153,906 long tons. Tolls of $45,529,000 were collected on merchant vessels, the highest figure for tolls in the canal's history.

Transportation and Communications.—Exclusive of thoroughfares in armed forces reservations there are approximately 130 miles of improved streets and highways serving some 13,300 registered motor vehicles. Railway transportation is furnished across the isthmus by the 48-mile Panama Railroad. Public transportation to various areas within the Canal Zone is provided by a consolidated bus company, and numerous small bus companies furnish service to various Zone areas from the cities of Panama and Colón in the Republic of Panama.

There are approximately 7,700 telephones in service in the Canal Zone, and an armed forces radio-television station functions at Fort Clayton.

WILLIAM G. AREY, JR.,
Panama Canal Information Officer.

PAPER INDUSTRY. Paper and paperboard production in the United States in 1959 moved to a new high of 34 million tons, an 8% increase above the previous record in 1956. Apparent consumption of paper and paperboard in 1959 was 435 pounds per person, the same as in 1956. The larger gain in production can be explained by (1) the 5% gain in population, (2) the trend toward greater use of domestically produced newsprint, and (3) the rising trend in exports of paper and paperboard.

Among the various paper grades, the fastest rates of growth in demand since 1956 were in machine-coated, fine, and sanitary papers. Coated papers find their major markets in magazines, pamphlets, and commercial printing; sanitary papers are used for such common household products as paper towels, napkins, facial tissues, and toilet tissues. Major growth in the paperboard grades was in container board and bending board. Growth in bending board stemmed from the increased use of board made from bleached kraft wood pulp. This board is used in such products as cartons for milk, frozen food, ice cream, margarine, and cigarettes, as well as in many nonpackaging products.

Domestic production of wood pulp in 1959 was 24 million tons, also a new high. About 90% of United States pulp consumption in 1959 came from domestic sources, as compared with 84% in 1947. This gain reflected the growing importance of integrated firms that produce wood pulp for their paper and paperboard mills. Much of this integration paralleled the successful development of pulpwood from Southern pine and the use of sawmill leftovers in the West and South.

New products that came into prominence in 1959 include stretchable paper and nonwoven fabrics. The new stretchable paper has greater strength with less weight than ordinary paper; it is presently used mainly as shipping sack paper, but many other uses are envisaged. Low-priced, disposable nonwoven fabrics have a wide range of potential uses, while many of the more expensive nonwoven fabrics have qualities that justify a premium price.

Sales of paper and allied products in 1959 totaled a record $12.2 billion, as compared with $10.7 billion in 1956 and $11.0 billion in 1958. The average level of prices in the industry showed virtually no change from 1958 to 1959. Wage rates

[1] Estimates. [2] Columns do not always add to total shown because of rounding of figures.

in the industry rose by 4.3% from 1958 to 1959. Employment in 1959 totaled 565,000, an increase of 3.3% above the 1958 level but slightly below the 1956 level of 568,000. Stability in employment reflected the gains in productivity of the industry, which, in turn, reflected the investment of $500 million per year in new plants and equipment in the 1948–58 period. Such investment totaled about $625 million in 1959.

BENJAMIN SLATIN,
Economist, American Paper and Pulp Association.

PAPUA AND NEW GUINEA, Territory of. Occupying the eastern half of the island of New Guinea, these two territories are administered as a unit by the Commonwealth of Australia in accordance with the Papua and New Guinea Act of 1949, and a trusteeship agreement for New Guinea approved by the United Nations in 1946. The combined area is 183,540 square miles. The aggregate population (mid-1958 est.) is 1,828,000, comprising a diversity of tribal groups, among which more than 500 languages and dialects are spoken. Administrative headquarters for the territory is at Port Moresby, Papua's chief seaport (1957 est., 16,000).

The administrator (Brig. Donald M. Cleland since 1953) is assisted by an Executive Council composed of at least nine officials, and a 29-member Legislative Council. Exports from the territory in 1957–58 totaled £A14,228,064; imports, £A18,414,806. All import licensing in the territory was abolished by Australia in September 1959 in order to encourage the territory's general development and to increase its trade.

Coconuts are the principal crop; production of copra for export in 1957–58 totaled 71,831 tons. New Guinea produced 14,802 tons of coconut oil, 8,705 tons of coconut meal and oilcakes, and 2,544 tons of cocoa beans. The chief mineral is gold, valued at £A851,506 in 1957–58. Papua's output of rubber in that year was 4,259 tons. Lumber production in the territory amounted to 43,861,637 superficial feet in 1957–58.

There is coastal and interisland steamship service, and shipping lines connect the territory with Australia and the Far East. Airline companies operate internal and external services from 154 airfields and seadromes.

Papua, Territory of.—The administrative area (90,540 square miles) comprises the southeastern portion of the island of New Guinea (87,540 square miles) and the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade island groups (3,000 square miles). The mid-1958 population was estimated at 487,000. Revenue for 1957–58 was £A5,648,104; expenditure, £A5,858,841. Schools in 1957 numbered 941 (administration, 77; mission, 864), with 49,572 pupils. Total exports in 1957–58 were valued at £A2,776,052, including rubber (£A1,114,716) and copra (£A847,472); imports, £A8,786,758. There are 1,445 miles of vehicular roads.

New Guinea, Territory of.—This trust territory has a total area of 93,000 square miles, comprising North Eastern New Guinea (69,700 square miles), the Bismarck Archipelago (New Britain, New Ireland, Lavongai, and the Admiralty Islands, aggregating 19,200 square miles), and the northernmost Solomon Islands (Bougainville and Buka, 4,100 square miles), the rest of the Solomons constituting the Solomon Islands Protectorate (see WESTERN PACIFIC ISLANDS, BRITISH). The estimated population in 1958 totaled 1,341,000. Revenue and expenditure for 1956–57 each totaled £A8,150,696 (direct grant by the Commonwealth government, £A5,498,179). There were 3,301 schools (administration, 152; mission, 3,149) with 124,944 pupils in 1957. Exports in 1957–58 were valued at £A11,452,012, including copra (£A3,673,687), coconut oil (£A1,472,997), cocoa beans (£A814,633), coffee beans (£A222,794), and coconut meal and oilcake (£176,506); imports totaled £A9,628,048. There are 3,986 miles of vehicular roads.

PARAGUAY. Situated mainly in the temperate zone, and bounded by Argentina, Brazil, and Bolivia, the landlocked South American republic of Paraguay occupies an area of 157,047 square miles. Its only access to the sea is the Paraguay River, which divides the country into two distinct regions: the almost uninhabited Chaco grassland of western Paraguay (95,338 square miles); and fertile, well-watered eastern Paraguay, where 95% of the country's inhabitants reside. Its bilingual (Spanish and Guaraní) population of 1,677,000 (est. 1958) is largely mestizo. The capital city of Asunción has an estimated metropolitan population of 300,000. Other leading cities (with 1950 populations) are Encarnación (40,906), Coronel Oviedo (34,442), Concepción (32,556), and Villarica (27,795).

Government.—Paraguay is a unitary republic with a highly centralized form of government. The 1940 constitution vests executive power in a president (the incumbent is Alfredo Stroessner, re-elected to his second five-year term in 1958) and in a 10-man cabinet appointed by him. The Council of State, also appointive, acts as an advisory body to the executive. The 60-member Chamber of Representatives is chosen by proportional representation. Judicial power is exercised by a three-judge Supreme Court of Justice, a Tribunal of Accounts, and various inferior courts.

Finance.—The financial situation in Paraguay in 1959 was reported to be one of the soundest in Latin America as a result of the successful application of the stabilization program of the International Monetary Fund initiated in 1957. Free reserves have accumulated in the Central Bank, and the guaraní free market exchange rate of 122 per U.S. $1 held steady during 1959. Economic conditions will improve even more with the conclusion of a new treaty with Argentina, which will pay back a $3 million debt during 1960. The 1959 calendar year budget called for an expenditure of 2.6 billion guaraníes, the largest item of which is the defense allocation of 697 million guaraníes, followed by 414 million for education and 303 million for public debt retirement.

Education and Religion.—Although conditions are gradually improving in education, the shortage of schools is so great that many children in the 7–14-year age group (for which education is theoretically compulsory) are still unable to attend school. Latest available figures (1958) indicate that there were 2,092 educational institutions, as compared with 1,694 in 1953 and 2,219 in 1955. There were 10,186 teachers and 290,471 students in 1958, an increase of 3,472 students and 307 teachers over 1957. The rate of illiteracy for persons over 10 years of age is estimated at 31.4%. Government concern over education is reflected in the fact that 15.8% of the national budget is earmarked for education. The official state religion is Roman Catholicism, which is adhered to by the majority of the citizens. There are approximately 25,000 Protestants, including colonies of Mennonites and Hutterites.

Transportation and Communications.—With the completion of the Brazil Road, jointly undertaken by Brazil and Paraguay, the latter will have for the first time in its history a commercial land route to compete with the traditional river route through the Argentine capital, Buenos Aires. Plans are being studied for further joint road enterprises between the two countries. Apart from the Brazil Road, Paraguay has about 700 miles of improved highways (only 60 of which are hard-surfaced). The country is serviced by seven airlines; an eighth has been formed,

but has not as yet begun operations. The British-owned railway system, which controls 296 of the country's 713 miles of track, was in financial straits in 1959, and there were reports that the company would like to dispose of its holdings to the government. Spain contracted during the year to furnish Paraguay with river ships; negotiations were under way with Japan for additional vessels; and Scandinavian Shipping Enterprises inaugurated direct 30-day shipping service between New York and Asunción. In 1959, Paraguay had 6,000 registered motor vehicles, 8,000 telephones and 3 daily newspapers.

Agriculture and Industry.—Although endowed with fertile soil and good climate, Paraguay is one of the least developed countries in the Western Hemisphere, with only 1% of its land under cultivation. Agriculture supplies 51% of the national income; minerals, manufacturing, and construction account for another 14%. A record sugar crop was produced in 1959, increasing the surplus carried over from the preceding year's bumper crop. The Central Bank agreed to purchase surplus sugar from mill producers, allowing them a 0.5 guaraní profit per kilo. Cotton farmers suffered their second straight year of disaster; the crop, afflicted by bollworms and rains, was one of the poorest on record. The expected 1959 wheat yield of 10,000 metric tons will be under that of 1958. In a move that has been interpreted as indicating official recognition of the increasingly important role of the cattle industry in the Paraguayan economy, the government substantially increased the export quotas for cattle in 1959. The country's three packing plants were in full operation during the year despite a temporary setback caused by the prohibition in the United States of imports of cured and chilled meat.

Foreign Trade.—Imports in 1958 amounted to $32.6 million, while exports were $34.1 million. With imports of only $15 million in the first three quarters of 1959, the country enjoyed a favorable balance of trade of about $5 million—in sharp contrast to the negative balance of $1.6 million for the corresponding period of 1958, when imports were $18.6 million. Meat exports of 10,340 metric tons in the first half of 1959 were 59% greater than for the same period of 1958. The outlook for other important Paraguayan exports was not so bright: Argentina decreased its imports of lumber; cotton exports suffered from falling world prices and poor crops; and world prices for quebracho tannin continued to decline, causing pessimism about the future of the product. Although there was a large surplus of sugar on hand, only 5,000 metric tons were exported during the first half of 1959. The United States replaced Argentina as Paraguay's chief customer in 1959. Exports to the United States for the first six months of the year were 50% greater than for the corresponding period of 1958.

Principal Events, 1959.—The political atmosphere was characterized by tension throughout 1959. The Colorado Party (in power since 1947) showed signs of internal conflict. The minority wing of the party, in favor of continued dictatorship, was in eclipse briefly when President Stroessner in April acceded to the wishes of the majority wing by lifting the state of siege (in effect off and on since 1957) and promising a gradual restoration of constitutional government. A student clash with police in May brought a renewal of the state of siege, the dissolution of the Chamber of Representatives, and the arrest of 14 of its members after that body had condemned the police action in the affair. In June, President Stroessner arrested more than 100 members of his own party and many others fled into exile.

The party's internal troubles stemmed partly from disagreement over methods used by the police in their treatment of political opponents. Roman Catholic priests submitted a collective letter to their bishop urging him to take a stand on police brutality. Party dissension leaves President Stroessner with only half the support he had when he began his second five-year term in 1958, but the army apparently remains loyal. All political leaders of the Liberal Party were arrested in July, and the state of siege was extended.

President Stroessner announced in October that elections for a new legislature would take place in February 1960. A coalition opposition force of Liberals, *Febreristas,* and Federalists announced that they would not participate in the elections unless the government repealed all repressive laws and lifted the state of siege. The coalition also called for new elections for a constituent assembly which would write a new constitution.

Any possibility that the president would accede to these demands was shattered on December 11, when opponents of the Stroessner regime launched a large-scale but unsuccessful attempt from Argentina to overthrow the government. The opposition parties of Paraguay denied that the rebel movement had their support, and President Stroessner accused the Cuban government of Fidel Castro of providing financial and moral support to the rebels. Mopping-up operations were all but completed by the end of the year.

PARAPSYCHOLOGY (PSYCHICAL RESEARCH). The study of parapsychical (psi) abilities such as extrasensory perception, or ESP (telepathy, clairvoyance, and precognition) and psychokinesis, or PK (the direct action of mind on matter) has in recent years advanced in many ways as a branch of science. The *Journal of Parapsychology* (Duke University Press, Durham, N.C.) has entered its 24th year, and the Parapsychological Association (with which the *Journal* is affiliated) now comprises about 100 members and associates from many countries.

The Ph.D. degree was granted for research theses in parapsychology by the University of Bonn (Germany) in 1957 and by Rhodes University (South Africa) in 1959. In the United States two new research centers in parapsychology have been opened; courses in the subject are being offered in at least three colleges; a textbook has been published; a plan for research fellowships has been initiated; and an annual award, the William McDougall Award for Distinguished Research in Parapsychology, has been established.[1]

Research.—Some noteworthy advances in parapsychology research have occurred in recent years. Experiments in the public schools, initiated by J. G. van Busschbach, to test the ESP ability of pupils, have led to similar investigations in other countries. Workers at Duke University found that students at the high school level scored above or below the chance average in ESP tests conducted by the teacher, according to whether they liked or disliked the teacher. In card-calling tests of precognition, a girl in Paris to a significant degree predicted symbol order to be selected a year later at Duke by the experimenter, Margaret Anderson.

[1] The first award (for 1956) was made to J. G. van Busschbach of the Netherlands for his tests of extrasensory perception in the public schools in North Carolina. The second award (for 1957) went jointly to G. W. Fisk and Dr. D. J. West of London for their combined ESP and PK tests, based on dice throwing in an attempt to match distant targets selected at random. The third award (for 1958) was made to H. Forwald, a Swedish engineer, for his work at Duke University in psychokinesis.

Studies of apparitional experiences by Dr. Louisa E. Rhine of Duke have led her to the conclusion that the apparition is hallucinated by the individual who experiences it, even when it does bring a reliable message. Roughly speaking, a person *projects* the ghost he sees.

A high degree of control over ESP in card-calling experiments was reported in 1958 by two British workers, Samuel G. Soal and Henry T. Bowden. Two Welsh boys were encouraged to produce exceptionally high scoring (up to 100%) in the test by the lavish use of monetary rewards.

Recent years have been marked by the return of emphasis to the use of hypnosis in ESP tests (see the *Journal of Parapsychology*, 1958 and 1959), and a reconsideration of the question of post-mortem personal survival. A symposium held at Duke (June 9–12, 1959) to review the evidence indicated that the latter problem is thus far unsolved, but that the matter does warrant further research.

PATENTS AND TRADEMARKS. During the fiscal year ending June 30, 1959, the United States Patent Office granted 54,990 patents, including 2,508 for designs, 128 for plants, and 170 reissues. This number, except for the year 1932, was the largest in history. The office received 83,357 new patent applications (including designs), in fiscal 1959, or 1,563 more than in 1958. Patent applications pending on June 30, 1959, totaled 198,248 (excluding designs), of which about 87,146 were before office examiners for consideration. The office had 2,232 employees on June 30, 1959.

The Patent Office registered 17,685 and renewed 3,249 trademarks in the fiscal year 1959; applications for registration (22,243) and renewal (3,321) totaled 25,564. On June 30, 1959, approximately 28,870 applications for registration and renewal were pending, of which 11,150 were awaiting action by the examiners.

By June 30, 1959, the Patent Office had granted more than 2,890,000 patents since the consecutive numbering system began in 1836.[1] During the 1959 fiscal year the Patent Office distributed over 10,200,000 copies of United States patents and trademarks, including over 7,000,000 sold, 1,153,486 deposited in libraries, and 2,127,458 shipped under exchange agreements to other countries.

Research and Development.—In the third year of operation, the Office of Research and Development acquired an electronic computer to aid in the development of usable search files in selected areas of technology. Use of the computer in searching will begin in the near future.

Lisbon Conference.—A United States delegation attended the Conference of Lisbon for the Revision of the International Convention for the Protection of Industrial Property at Lisbon, Portugal, Oct. 6–31, 1958. An English translation of the text of the convention as revised at Lisbon, so arranged that the changes over the London 1934 revision can be determined, was published in the *Journal of the Patent Office Society* (vol. 41, pp. 86–111, February 1959).

Information Services.—A separate unit was established by a commissioner's order dated Aug. 11, 1958, whose function is to plan, promote, conduct, and coordinate information programs fostering public knowledge and understanding of the American patent system.

Finances.—Net receipts for the fiscal year ended June 30, 1959, were $7,347,194. Obligations incurred under all Patent Office appropriations amounted to $20,779,186, compared with $19,525,854 for the preceding year.

Rules of Practice.—A rule to prohibit advertising for the solicitation of patent business by persons registered to practice before the Patent Office, initially promulgated to take effect Jan. 1, 1959, was put into force July 1, 1959.

Publications.—The pamphlets *Trademark Rules of Practice of the Patent Office* and *Trademark Laws* were issued Jan. 1, 1959, to replace the October 1956 printing of the *Trademark Rules of Practice of the United States Patent Office with Forms and Statutes*. A new 25-page booklet directed primarily to the independent inventor has been published under the title *Patents and Inventions, An Information Aid to Inventors*. Another booklet, *The Story of the United States Patent Office, 1790–1956*, highlights significant historical events, including various patent and trademark laws, noted patents, and famous inventors and inventions. Detailed statistical and other information concerning current activities and the operation of the Patent Office is available in the *Annual Report of the Commissioner of Patents*.

Robert C. Watson,
Commissioner of Patents.

[1] Information concerning the patents issued each week is contained in the *Official Gazette of the United States Patent Office*. Copies of patents may be purchased for 25 cents each; designs and trademarks cost 10 cents each.

PEAT. Although used as a fuel in some countries, in the United States peat is put to various agricultural uses, chiefly as a soil conditioner. World production figures, compiled by the U.S. Bureau of Mines, are shown in the accompanying table.

WORLD PRODUCTION OF PEAT
(In thousands of short tons)

	1955	1956	1957	1958
Canada	118	128	138[1]	147
Denmark	785	778	809	424
Finland	185	177	227	158
Germany, East[2]	550	550	550	550
Germany, West	1,645	1,664	1,588	1,467
Ireland	3,947	4,015	3,956	2,501
Korea, Republic of	448	450[2]	269	275[2]
Netherlands[2]	500	500	500	500
Norway	294	292	288[2]	97[2]
Sweden	358	357	355[2]	355[2]
USSR	56,000	48,800	59,600[2]	58,200[2]
United States	274	292	316	328
World Total	66,090	59,010	69,260[1]	65,670

[1] Revised. [2] Estimated.

Peat production in the United States increased in 1958 for the tenth successive year, with an output totaling 327,813 short tons, compared with 316,217 tons in 1957. Peat production of domestic origin included 282,872 tons used for soil improvement, or 90% of the total. Imports of peat for consumption totaled 269,096 tons in 1958.

PECANS. See Nuts.

PEDIATRICS. Progress in pediatrics and the present function of pediatricians are sometimes best visualized by comparisons with the past. Whereas several decades ago the most common causes of death among children after the newborn period were infections such as pneumonia, diarrhea, and contagious disease, the chief causes today are accidents, rheumatic disease, and malignancies such as leukemia and cancer. The principal causes of hospital admissions today are congenital defects.[1]

[1] The term is used here to include structural anomalies of limbs, heart, nervous system, etc., and also hereditary disorders in function such as diabetes, galactosemia, and the failure to make certain proteins (agammaglobulin and fibrinogen).

Serious illness and death are no longer encountered daily by most pediatricians. Prevention of death lies primarily in the fields of accident prevention and cancer research; and treatment of serious illness lies in an attack on the causes of anomalies—heredity, prenatal influences, and others. The principal function of the pediatrician lies in obtaining more precise information concerning common infectious disease and in better understanding the relationship of a growing child to a varying and complex environment.

Accidents, Leukemia, and Congenital Defects.—Although the field of accident prevention generally goes beyond the bounds of pediatrics, accidental poisoning (particularly by drugs such as aspirin) and household accidents are predominantly within the field of pediatrics. A bizarre but tragic new cause of death in 1959 was suffocation from plastic bags. Over 150 deaths were reported in the United States. Measures to alert parents to this danger have been taken.

The use of drugs in leukemia has extended survival in this disease appreciably, but there is no clue as to how the disease can be eradicated. Research in congenital defects, especially in functional disturbances, has been vigorous, and progress in this field has been cited repeatedly, notably surgical correction of congenital heart disease, galactose-free diet in galactosemia, and replacement treatment in agammaglobulinemia.

Antibiotics.—Increasing evidence accumulates that many prophylactic uses of antibiotics are undesirable. This includes their use in "clean" surgical procedures, in treating all common respiratory diseases, and in attempting to prevent infection in serious noninfectious disease. The principal harm resulting from these uses of antibiotics is the development of infections resistant to antibiotic treatment.

Observers have proposed that the organisms killed by the antibiotic normally serve a useful function in competing with the organisms resistant to the antibiotic. Destruction of sensitive organisms permits resistant ones to grow more vigorously. The use of antibiotics for children who have had rheumatic fever, on the other hand, is universally accepted. This acceptance stems from the close relationship between streptococcal infections and rheumatic fever and the apparent capacity of such prophylaxis to prevent streptococcal infections.

Common Infections.—Specific causes of some of the common infections that comprise most of the illnesses in our society, such as the common cold and three-day fever, have been identified. Among the viruses causing these infections are the adenoviruses, Coxsackie viruses A and B, and ECHO virus. Infections caused by these agents generally are short-lived and require no specific treatment, but epidemic infections frequently occur, and occasionally serious disease results. The possibility of developing effective vaccines exists. However, influenza vaccine has been available for ten years and its regular use remains restricted rather than general because of the limited period of immunity (one year) that is conferred by such immunization. It may develop with these infections, as it has with influenza, that incipient virulent epidemics can be identified in time to undertake immunization of most of the population against the identified infection to limit the epidemic. For example, if infection with ECHO (enteric cytopathogenic human orphan) virus were found to be assuming epidemic proportions, prompt immunization against the virus that year would be recommended.

Poliomyelitis.—Incidence of poliomyelitis in the United States increased in 1959 to almost twice the rate in 1958.[2] The figures indicate that the Salk vaccine affords a high degree of protection, but not complete protection.

The live virus vaccine for poliomyelitis developed by Dr. Albert Sabin had been administered orally in field trials to 6 million persons in the Soviet Union by mid-July 1959. Evidence as to the full effectiveness and safety of the Sabin vaccine could not be assembled until the trials were complete, but preliminary results were reportedly highly satisfactory. (See also MEDICINE.)

Diarrhea.—The reduction in mortality from diarrhea in infants is due in large measure to prevention—improvement in nutrition, sanitation, etc. However, a major factor in reducing mortality has been the development of parenteral or intravenous administration of salt, sugar, and water in amounts appropriate to the individual case. Mortality rates have decreased from 80% to less than 10% in most hospitals. A leading contributor to this development was Dr. James Lawder Gamble, professor emeritus of pediatrics at Harvard Medical School, who died on May 28, 1959. His work led to our understanding of the need for salt, sugar, and water as given intravenously. This information has been essential in the development of modern surgery and in treating any disease interfering with the intake of food and fluid by mouth.

International Congress.—The ninth International Congress of Pediatrics, held at Montreal during the week ending July 24, 1959, was attended by 1,600 delegates from 65 countries. Papers delivered at the conference stressed the significance of recent biochemical and biological research on the reproductive and other basic life processes.

Greensburg	16,923	Pottstown	25,360[1]

[2] The U.S. Public Health Service reported that during the calendar year 1959 there were 8,577 cases of poliomyelitis reported in the United States, as compared with 6,029 in 1958. Of the 1959 total, 66% (5,694 cases) were of paralytic poliomyelitis (52%, or 3,122 cases, in 1959). Only two states—Idaho and South Dakota—reported no paralytic polio cases in 1959. Preliminary estimates indicated that about 150 deaths from polio occurred in the first 7 months of 1959, as compared to only 10 deaths in the comparable period of 1958, but much of this difference in numbers is probably due to the fact that polio epidemics occurred earlier in 1959 (in June), whereas substantial numbers of polio cases did not occur until July in 1958.

[1] Special census, 1957. [2] Special census, 1958.

Executive.—Chief state officers in 1959:
Governor: David L. Lawrence (Democrat)
Lieutenant Governor: John M. Davis
Secretary of State: John S Rice
Treasurer: Robert F. Kent
Attorney General: Anne X. Alpern
Auditor: Charles C. Smith
Supt. of Public Instruction: Charles H. Boehm

Constitution and Judiciary.—The present constitution went into effect in 1874. The Supreme Court comprises seven justices; chief justice in 1959 was Charles Alvin Jones.

Legislature.—The Pennsylvania General Assembly comprises a 50-member Senate (in 1959, 28 Republicans and 22 Democrats) and a 210-member House of Representatives (108 Democrats and 102 Republicans), which meet in odd-numbered years commencing the first Tuesday in January. (See below, *Principal Events, 1959.*)

Finance.—In the fiscal year 1958–59, state revenue of $2,145,178,355.79 comprised $1,488,098,245.66 from state tax sources, $232,583,363.55 from the federal government, and $424,496,746.58 from other sources. Tax revenue included $220,777,892.81 from a general sales tax, $582,459,939.48 from corporate income taxes, $171,192,792.99 from motor fuel taxes, and $109,518,293.69 from licensing. Expenditures of $2,210,037,156.64 consisted of $353,671,515.10 for education, $116,404,260.34 for health, welfare, and safety, $394,228,456.36 for highways, and $1,345,732,924.84 for other purposes. Net long-term indebtedness on May 31, 1959, amounted to $252,236,598.49.

Banking.—As of June 10, 1959, the state's 478 national banks had $8,768,987,000 in assets, $4,789,489,000 in demand deposits, and $2,911,540,000 in time deposits. The 262 state banks had assets of $8,496,853,380, demand deposits of $3,768,846,684, and time deposits of $3,721,371,506.

Education.—School attendance is compulsory between the ages of 6 and 17, inclusive. Operating expenditures for public elementary and secondary education in the 1957–58 fiscal year totaled $546,854,995 ($330.82 per pupil), comprising $296,789,176 from local school districts, $243,232,717 from the state, and $6,833,102 from the federal government. Outlays for construction and improvements amounted to $80,523,935, and teachers' salaries averaged $4,756 (high school, $4,943; elementary, $4,600).

PENNSYLVANIA SCHOOL STATISTICS, 1957–58

Type of school	No.	Teachers	Students
Public elementary (1–6; 1–8)	4,424	41,837[1]	1,148,439
Public secondary (7–12; 9–12)	1,156	34,276[1]	714,115
Private and parochial elementary and secondary	1,549	15,473[2]	544,827
Junior colleges	14	250[2]	2,282[3]
Teachers colleges	14	1,000[2]	19,483[3]
Colleges and universities	96	15,250[2]	153,770[3]
Other higher institutions	...	...	4,054[3]

[1] Includes administrative personnel. [2] Estimated. [3] 1958–59

Public Assistance.—In the 1958–59 fiscal year public assistance expenditures from state and federal funds (excluding institutional costs) totaled $148,124,289, including $35,119,548 for the aged, $59,993,421 for dependent children, and $13,263,186 for the needy blind. A monthly average of 328,192 persons received public assistance.

Labor Force.—Pennsylvania's labor force in June 1959 numbered 4,697,500, including 178,000 farm workers. Nonagricultural employment stood at 4,158,000, compared with 4,068,000 a year earlier and with an average of 4,067,000 for the intervening 12 months. Some 34.9% of nonfarm employees were engaged in manufacturing, 16.6% in trade, and 10.6% in service industries. June unemployment totaled 361,000, well below the 520,000 figure of June 1958, which was believed to account for the highest jobless rate in the nation. The steel strike which began on July 15 idled approximately 167,000 Pennsylvania steelworkers and some 45,000 employees in related industries by September. But with a growth in jobs in other sectors of the economy, the number of jobless dropped to 337,000 in the following month. As the year ended, with the steel mills reopened, only 17,000 of those thrown out of work by the strike remained jobless.

Manufacturing.—The state's 16,994 manufacturing plants in 1958 employed an average of 1,345,179 persons who received $6,174,428,800 in wages. Value added by manufacture amounted to $11,265,352,200, and outlays for new plant and equipment totaled $803,264,000. Production workers averaged $84.56 for an average workweek of 39.7 hours in August 1959.

MAJOR PENNSYLVANIA MANUFACTURES, 1958

Product or industry	Average no. of employees	Salaries and wages	Value added by mfr.*
Primary metal industries	223,298	$1,293,209,200	$2,194,773,800
Electrical machinery	119,824	616,414,100	1,171,220,300
Food & kindred products	119,981	488,792,300	1,077,869,100
Fabricated metal products	111,195	557,280,000	944,088,500
Nonelectrical machinery	103,861	550,146,100	937,078,500
Chemicals & allied products	45,635	240,303,900	723,028,300
Apparel & related products	157,479	398,966,500	587,891,300
Transportation equipment	56,887	320,373,600	549,476,900
Stone, clay, glass products	60,707	278,300,700	530,126,000

* Value of product less cost of materials, supplies, fuel, electrical energy, and contract work. (Source: Bureau of Statistics, Pennsylvania Department of Internal Affairs.)

Mining.—In 1958 Pennsylvania ranked fourth among the states in the value of its mineral output, with 5.33% of the national total. The state mined all the nation's anthracite and was first in output of beryllium metal and alloys, cement, coke, pig iron, stone, and dimension slate; second in fire clay, bituminous coal, cobalt, and pyrophyllite; and third in lime and crushed and broken slate. In 1958 Pennsylvania produced soapstone for the first time and resumed zinc mining after many years. Pennsylvania's steel mills consumed 25% of the nation's pig iron. Employment in the state's mineral industries during the year totaled 92,141 persons.

PENNSYLVANIA MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Cement (bbl.)	42,115,000	$142,399,000
Clays	3,318,000	17,051,000[1]
Coal, anthracite	21,171,000	187,898,000
Coal, bituminous	67,771,000	373,812,000
Cobalt (pounds)	564,000	...[2]
Coke	13,968,893	236,364,683[3]
Ferroalloys	377,601	95,089,000[3]
Iron, pig	14,348,322	869,097,000[3]
Lime	1,003,000	12,457,000
Natural gas (1,000 cu. ft.)	95,869,000[4]	27,131,000[4]
Petroleum (bbl.)	6,678,000[4]	27,380,000[4]
Sand and gravel	11,825,000	19,180,000

Zinc	10,812	2,229,000
Other minerals	...	16,395,000
Total	...	$881,181,000[5]

[1] Excludes certain clays, value of which is included in "Other minerals." [2] Figure withheld to protect individual company's confidential data. [3] Values for processed materials are not included in the total. [4] Preliminary. [5] Total adjusted to eliminate duplication in the value of clays and stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1959 totaled $583,732,000, compared with $587,680,000 for the corresponding period of 1958. For the full year 1958, income comprised $606,828,000 from livestock and livestock products, $177,995,000 from crops, and $10,854,000 from government payments. Principal income sources in 1958 were dairy products, $303,969,000; eggs, $125,538,000; and cattle, $94,590,000.

There were 122,000 farms in the state in 1958. Total acreage (1954) of 13,162,000 included

PENNSYLVANIA CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	6,118	6,400	7,500
Barley (1,000 bu.)	6,884	9,600	4,564
Buckwheat (1,000 bu.)	989	460	400
Cherries (tons)	10,200	12,300	11,300
Corn (1,000 bu.)	62,904	82,202	78,873
Grapes (tons)	21,280	29,000	29,000
Hay (1,000 tons)	3,364	3,828	3,816
Maple sirup (1,000 gal.)	99	93	90
Oats (1,000 bu.)	28,462	31,712	32,384
Peaches (1,000 bu.)	2,489	3,000	2,900
Pears (1,000 bu.)	159	115	100
Potatoes (1,000 cwt.)	9,223*	8,596	8,160
Soybeans (1,000 bu.)	381	330	414
Tobacco (1,000 lb.)	48,551	51,000	53,475
Wheat (1,000 bu.)	18,187	16,920	14,045

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

5,433,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 1,877,000 cattle, 508,000 hogs, and 21,735,000 chickens (excluding commercial broilers). There were 168,000 family and hired workers engaged in farming during the week of Nov. 22–29, 1959.

Transportation and Communications.—State and federal spending for Pennsylvania highway construction in the 1957–59 biennium totaled $356,563,855, and 862 miles of new highways were built in the 1957 and 1958 calendar years.

Highways and roads on May 31, 1959, totaled 108,139 miles (62,385 surfaced). Registered *motor vehicles* numbered 4,355,813 on May 29, 1959, including 3,506,224 passenger cars. There were (1958) 61 *railroads* operating 10,654 line miles; (1959) 13 regularly scheduled *airlines;* 478 *airports and airfields* (212 commercial and municipal, 5 military, and 271 private); and 1 commercial and 8 private heliports.

Communications media (1959) included 142 *radio stations;* 20 *television stations;* 125 daily *newspapers* (circulation, 4,166,670) and 285 other newspapers (999,160); and (January 1) 1,163,900 business and 3,551,800 residential *telephones.*

Principal Events, 1959.—David L. Lawrence, a long-time Democratic leader of Pennsylvania, was inaugurated as governor on January 20. He thus became the commonwealth's second successive Democratic governor and only the third Democrat to serve in that office during the 20th century. He proposed to pursue a compromise policy in dealing with legislation, since the state Senate was controlled by the Republican Party and the House of Representatives was Democratic.

The governor submitted to the General Assembly a record $1.9 billion General Fund budget for the 1959–61 biennium. Including the highway and other special fund budgets, total annual appropriations for all commonwealth purposes would exceed $1.25 billion. To meet the increased appropriations, the General Assembly raised the state sales tax to 4%. Another revenue-yielding measure of special interest, signed by Governor Lawrence in late December, authorized parimutuel betting on harness racing in counties where such betting is approved in a countywide referendum.

In November 1959 the voters elected a Democrat as Supreme Court justice and another as Superior Court judge in the only statewide contests. They also approved two constitutional amendments. One provides for annual sessions of the General Assembly in lieu of biennial sessions, and the other permits persons who have moved within 60 days prior to a given election to vote in their former voting district.

One of the most dramatic events of the year was the celebration (August 23–29) of the oil centennial at Titusville, where on Aug. 27, 1859, the Drake well, first oil-yielding well in the United States, went into production. A special commemorative stamp (see PHILATELY) was issued.

Prolongation of the nationwide steel strike (see IRON AND STEEL) had a depressing effect on Pennsylvania's employment picture. Mid-September employment was estimated at 4,136,700, or approximately 116,800 below that of September 1958. More than 200,000 Pennsylvanians were without jobs as a direct or indirect result of the steel work stoppage. (See also above, *Labor Force.*)

Despite serious unemployment, the state's economy showed strength in some areas. Weekly earnings for employed production workers or nonsupervisory employees in manufacturing, as of September 1, averaged $86.15, compared with $84.63 for the same date in 1958. In October the index of general business activity reached a record high for the month, although it was offset by the index of industrial activity which, reflecting the impact of the steel strike, had dropped to its lowest point since 1954. Indexes of specific industrial or business activity in August 1959, compared with a year earlier, showed anthracite and bituminous coal production down 15.4% and 31.5%, respectively; postal receipts and department sales off slightly; and bank debits up 13%.

In other industrial developments of 1959 the Philadelphia Electric Company announced it had signed a contract with the U.S. Atomic Energy Commission for construction of a $24.5 million nuclear power plant, the first to be built in eastern Pennsylvania. In the conventional power field the West Penn Power Company in September dedicated a new 350,000-kilowatt plant ten miles north of Kittanning on the Allegheny River.

Among the year's educational developments, Dr. Millard Gladfelter was officially installed as president of Temple University on December 14; Pennsylvania State University inaugurated a new graduate program of business administration; and the university announced that the Atomic Energy Commission had approved its new far-reaching program in nuclear physics research, following acquisition of a 5.5 million electron volt Van de Graaf positive accelerator.

PERU. This Andean republic, the third largest country in South America, is bounded by Ecuador and Colombia on the north, by Brazil and Bolivia on the east, by Chile on the south, and by the Pacific Ocean on the west. Peru has an area of 514,059 square miles and a population (est. 1959) of 10,524,000. Lima, the capital, has a population (est. 1959) of 1,666,494. Other leading cities and their populations (est. 1959) are Arequipa (123,068), Callao (131,877), Chiclayo (54,390), Cuzco (71,907), Iquitos (54,316), and Trujillo (61,008). Official estimates of ethnic distribution are: white and mestizo, approximately 53%; Indian, about 46%; Asian (mainly Japanese) and Negro, about 1%. Although the official language is Spanish, it is estimated that about 51% of the people speak the Indian languages, Quechua and Aymara.

Government.—Under a semiparliamentary system, the president (Manuel Prado y Ugarteche, elected in 1956) has a cabinet of 12 ministers, headed by a prime minister (Pedro G. Beltrán), which is held accountable to the Congress. The Congress (a Chamber of Deputies, with 182 members, and a Senate, with 53 members, all elected by

direct suffrage for 6 years and renewed completely at the end of each term) is subservient to the executive, and strong presidential government exists. Peru has two vice presidents and a judiciary headed by a Supreme Court of 16 members, all elected by Congress. Suffrage has been extended to literate males 21 years of age (18, if married). Peruvian women first voted in the national elections of 1956.

Education and Religion.—In order to integrate the large Indian population into national life, the government has seen clearly in recent years the need to improve and expand educational facilities. In 1959, 16.84% of the budget (1,153,143,076.55 soles) was allotted for public education, while the armed forces were allotted 20.75%. (In the 1960 budget, however the proportions are reversed, with education slated to receive 1,329 million soles, the armed forces 1,147 million.) A new educational project was inaugurated in 1958 to teach adult Peruvians to read and write, but by 1959 only 168,000 had been aided. A large percentage of pupils in rural areas do not have access to educational facilities, and in the cities many boys and girls from poor families do not attend school. In addition to the University of San Marcos (founded at Lima in 1551), there are small public universities at Arequipa, Cuzco, and Trujillo, and a Catholic university at Lima. About 58% of the population over the age of 10 is illiterate, although the law provides for free, compulsory education between the ages of 7 and 16.

The constitution declares that ". . . the state protects the Apostolic Roman Catholic Religion," but freedom of worship is legally guaranteed. Peru is one of the Latin American countries in which the Catholic Church enjoys maximum influence in social, economic, and political affairs.

Finance.—The budget for 1959 was 6,846,347,312.37 soles, as compared with 5,359,082,000 soles for 1958 (about 28 soles = U.S.$1). The government admitted in October that there would be a deficit of at least 907,000,000 soles in 1959. From February 1958 to February 1959 the government printed 823,000,000 additional soles in paper money. In the budget for 1960, presented to the legislature on Aug. 27, 1959, government expenditures are estimated at 7,691 million soles, an increase of 12.3% over the 1959 figure, and are expected to exceed income by 550 million soles.

Transportation and Communication.—Motor vehicle registrations in Peru totaled 142,900 in January 1957. Railroads (est. 1955) had 1,752 miles of track. The government decided to abandon Limatambo airport near downtown Lima and to begin (on June 1) a $6,667,000 airport on 614 acres of land north of the port of Callao (8 miles from central Lima) which would accommodate jets by January 1960. A television station (6,000-watt transmitter) began operations in Lima in December 1958. Two new stations were inaugurated in August 1959, a second station in Lima and one in Arequipa. By April 1959 about 10,000 TV sets had been sold in Lima. The number of radio receivers in use in the country is estimated at 750,000. There were 93.811 telephones in 1958, as compared with 81,438 in 1957.

Agriculture and Forestry.—Peru's principal economic activities are agriculture and forestry, employing nearly two thirds of the working population and accounting for about 34% of the total national income. However, only 4,500,000 acres are under cultivation—about 0.45 cultivated acre per person, as compared with 2.5 acres per person in the United States. The country must import foodstuffs each year. Drought reduced prospects for a large grain crop in 1959, and freeze damage in Cajamarca and Ancash departments meant that the cotton, rice, and sugar crops for 1959 will be substantially lower than in 1958. Another step was taken toward completion of the Quiroz River Project in 1959, and about 125,000 acres in the Piura area (on the coast) were irrigated with water from the new San Lorenzo Dam on the Chipillico River.

Manufacturing and Mining.—Manufacturing industries are devoted principally to the production of consumer goods for domestic consumption and include food, tobacco, rubber, metals, leather, paper, construction, shipbuilding, textiles, and chemicals. Exports of iron ore from the newly developed Acari mine, 350 miles north of Lima, began in August 1959. The development of the Toquepala copper deposit by the United States-owned Southern Peru Copper Corporation (total investment about $230 million) continued in 1959. The first shipments of copper from the port of Ilo were expected in late 1959 or early 1960.

Foreign Trade.—The United States usually supplies from 45% to 50% of Peru's imports and buys about 35% of the country's exports. Low prices in 1959 for major exports, such as cotton, sugar, lead, copper, and zinc resulted in a decrease in the value of foreign trade. Peru had a trade imbalance of only $4,800,000 in the first 8 months of 1959, compared with $50,200,000 for the same period in 1958, but the cumulative effect of recent years' imbalances has been a loss of gold and foreign exchange reserves. Total imports in the first six months of 1959 were 4 per cent below those of January–June 1958, while the value of exports for this period increased by 21 per cent. The rapid development of the country's fishing resources has been a major factor in this improvement. Exports of fish and fish products nearly doubled in the first half of 1959. Among the chief imports are machinery, vehicles, and transportation equipment, wheat, and meat.

Principal Events, 1959. *Economic Developments.*—In the first part of 1959 the then premier and minister of finance, Luis Gallo Porras, attempted to achieve prosperity for the country through price controls, government regulations and subsidies, deficit financing, and printing more paper money. One of the consequences of these policies was continued inflation. By August 1959 the cost-of-living index in the Lima-Callao area was 16.2% above that of 1958. The cost of living rose 9% in the urban areas in 1958, as compared with 7% in 1957 and 6.5% in 1956.

On February 18, some 13,000 workers of the Cerro de Pasco Company struck, shutting down metallurgical and copper mining operations in La Oruya and Morochocha in central Peru. The labor leaders demanded a 48% wage increase plus additional welfare benefits. Early in March they accepted a settlement based on a 22% wage increase. However, the first half of 1959 was characterized by a continuing wave of strikes. When 12,000 bank employees went on strike demanding 10%–30% wage increases and greatly increased welfare benefits, the government suspended constitutional guarantees (April 16) for 30 days and arrested some of the union leaders. The strike was settled on June 3 under an agreement which permitted the bank counters to be open to the public only in the morning hours.

The inflationary policy of the government was in violation of Peru's agreement with the International Monetary Fund, which finally suspended Peru's $13,000,000 in standby credit. This action had the additional effect of blocking a $17,500,000 credit agreement between the U.S. Treasury's stabilization fund and the government. The Export-Import Bank of Washington announced on June 30 that no more applications for loans in Peruvian currency would be accepted by the bank. The sol was further weakened by these developments.

As a result of the heavy attacks on his fiscal policies, Premier Gallo Porras resigned on July 4 and was succeeded in mid-July by Pedro G. Beltrán, editor of Lima's liberal newspaper *La Prensa* and former ambassador to Washington. Premier Beltrán announced his cabinet on July 18. Beltrán immediately endeavored to free the economy from some of the controls imposed upon it by the previous premier. He removed controls on meat prices, increased bus fares 20%–30%, and raised the price of gasoline, which had been 8¢ a gallon, to 24¢ a gallon. Prices for most petroleum derivatives were increased about 100%. The introduction of a measure of competitive capitalism, combined with governmental austerity, was designed to produce price stability, greater production, a sound currency, and new domestic and foreign

investments. Although there were serious strikes in July and August, Beltrán received a vote of confidence (26–12) in the Senate on August 28. By the fall there were signs of some progress toward financial and economic stability.

Political Developments.—The government arrested Fernando Belaúnde Terry, head of the left-wing Partido Acción Popular (PAP), the principal opposition party, and about 40 of his supporters on May 28 for allegedly attempting to hold a political meeting in violation of the law. Belaúnde was released from El Frontón prison early in June.

Other groups which opposed President Prado's government—which is a coalition of his conservative party, Movimiento Peruano Democrático, and the leftist Aprista movement—included the Catholic ,party, Partido Demócrata Cristiano, the Communists, and certain extreme right-wing organizations. Although several attempts were made to oust the government by force, none attracted wide popular support.

PETROLEUM. The petroleum industry celebrated its 100th birthday in 1959 and began its second century with ample reserves to meet the world's rapidly rising energy requirements for many years to come. Because of recent major discoveries in North Africa, it was thought that no oil-producing nation could create a dangerous shortage by withholding its petroleum from world markets, and that there could not be another oil crisis such as that created by the closing of the Suez Canal in 1956.

In its first century the industry had produced 62,870 million barrels of oil, of which over 7 billion barrels were lifted in the final year of the period. Known reserves in the non-Communist world exceeded 250 billion barrels, and competent authorities suggested that supplies readily available in the next 20 years would reach 450 billion barrels.

Demand for petroleum increased by 6.9% in 1959, and despite keen competition most oil companies enjoyed a more profitable year than in 1958. Some of the companies reported record earnings.

Production.—World production of crude petroleum increased by 6.3% in 1959, to 19,300,800 barrels daily. The rise of 1,150,200 barrels was almost three times as great at that of the recession year 1958, when output increased by only 2.8%, with most of the rise attributable to the USSR. Production of natural gas liquids rose by 10% in 1959, to 1,100,000 barrels daily.

Government restrictions on imports of foreign oil by the United States were tightened with the imposition of mandatory controls effective March, 11, 1959. As a result, domestic production rose from 6,709,200 barrels daily in 1958 to 7,050,000 barrels in 1959, or 5.1%. The USSR enlarged its output by 11.6%, to 2,550,000 barrels daily, but other countries in the Soviet bloc registered only small changes in production. While Venezuela maintained its place as the second largest producing nation by increasing its output by 6.3%, the USSR was gaining at a rate which suggested that it might take second place in 1960. Development work in Venezuela was slow because of a lack of new markets. Drilling in Argentina brought good results following the invitation extended in 1958 to foreign companies to participate in development work. Output rose by 19.7% in 1959, and eventual self-sufficiency was predicted.

North Africa was the focal point in 1959 for the world's latest oil rush, and Libya was established as a leading petroleum reserve. Of the 62 wells drilled thus far in Libya, 14 are oil producers and 2 are gas wells. The best strike, at Zelten, was estimated to have about 10 billion barrels of reserve, with a high recovery factor. Reserves in Libya as a whole may reach 50 billion barrels, particularly since the second largest strike in the kingdom, at Beda, appears to be nearly as good as that at Zelten. Because depths are only about 5,700 feet, the crude oil is cheap to produce.

Development of fields in the Saharan departments of Algeria continued in 1959, and a 24-inch, 415-mile pipeline from Hassi Messaoud to the port of Bougie was completed on December 5. Its

initial capacity of 100,000 barrels daily could be trebled with additional pumping stations. Development work was also being forwarded at Edjelé. Reserves there total about 1.5 billion barrels, as compared with 3 billion barrels at Hassi Messaoud, but none of the producing wells is deeper than 4,750 feet, while the depth at Hassi Messaoud is 11,500 feet. Another 24-inch pipeline was under construction to carry the Edjelé crude to the Tunisian coast, together with that from Tigentourine–La Reculée and Zarzaitine fields. It was to have a capacity of 160,000 barrels daily, which could be raised to about 340,000 barrels by means of additional units. Several gas fields with remarkable reserves have also been found, and the French government estimates that there are recoverable reserves of 700 million metric tons of oil and 750 billion cubic meters of natural gas in the Sahara.

Consumption.—World demand for petroleum, including crude oil and other liquid hydrocarbons, rose by 6.9% in 1959, to 20,490,000 barrels daily. With the general business improvement, demand in the United States increased by 4.8%, and that of Canada by 8.5%. While the rate of growth in European markets slowed down, it was still about 10% over that of 1958. United Kingdom demand rose by 12%, and West German consumption by 20%. Consumption in the Soviet bloc increased by about 11.6%. Total demand in the Far East and Oceania was 8% higher than in 1958. The resurgence of industrial activity in Japan raised its domestic consumption by 19%. The demand for bunker oil, however, was low in all areas.

U.S. PETROLEUM SUPPLY AND DEMAND
(Daily averages in thousands of barrels)

	1957[1]	1958[1]	1959[2]
Supply:			
Crude petroleum	7,170	6,710	7,050

of 876,000 barrels occurred in the Eastern Hemisphere. At the end of the year two new refineries, which would add 40,000 barrels daily to crude capacity, were nearing completion in Canada. No new refineries were built in the United States in 1959, and the enlargement of existing plants added only 100,000 barrels daily. Most construction consisted of specialized processing units.

Two new catalytic hydrocracking processes, with yields in excess of 100% of liquid charge, were announced by California refiners in 1959. They are designed for use in areas where competition with natural gas creates a surplus of middle distillates and in refineries where hydrogen is available from re-forming operations. A continuous method of superfractionation with molecular sieves was offered to refiners who need to eliminate certain hydrocarbons from their pool gasoline in order to improve knock ratings. While a new process for the isomerization of pentanes and heavier hydrocarbons also was announced, refiners still prefer to obtain any necessary improvements through alkylation.

Petrochemicals constitute the fastest-growing segment of the manufacturing branch of the industry. More than 80% of the organic chemicals produced in the United States are derived from

petroleum. Expansion is at the rate of 12% annually, or twice that of the chemical industry as a whole. Although less than 4% of the hydrocarbons produced in the United States are employed as chemical raw materials, the value of petrochemicals in 1958 totaled $5.2 billion, or 56.6% of that of the national chemical output.

In Europe petrochemical plants are being built to operate on olefins produced by the steam cracking of paraffinic naphthas, whereas in the United States most plants are based on natural gas or uncondensed effluent gases from oil refineries. Because of its great gas reserves at Lacq, however, France is an exception to the European pattern.

Natural Gas.—Marketed production of natural gas in the United States increased from 11,030 billion cubic feet in 1958 to 11,472 billion cubic feet in 1959, or 4%. The number of gas customers rose at a faster rate than consumption, and at the end of 1959 there were 32,220,000 customers of natural, mixed, and manufactured gas utility companies, as compared with 31,242,100 on Dec. 31, 1958. The homes served included 11,800,000 with central gas heating, as compared with 10,798,100 at the end of 1958.

As had been the case in recent years, the use of oil for home heating expanded at a slower rate than that of gas. It is estimated that 9,600,000 homes were equipped with oil-fired central heating plants at the end of 1959; the total at the end of 1958 was 9,281,349. (See also GAS.)

J. C. CHATFIELD,
Editor, "World Petroleum."

PHILADELPHIA. Pennsylvania's largest city and, in 1950—with a population of 2,071,605—the nation's third-largest city, Philadelphia had an estimated 2,250,000 residents in 1959 and a land area of approximately 127 square miles.

Philadelphia's home-rule charter, effective since January 1952, provides for a "strong mayor" type of government with an elective mayor, a managing director appointed by and responsible to the mayor for direction of ten major departments of city government, and a City Council of 17 members. The mayor, managing director, and councilmen all have four-year terms.

For 1960, the mayor's operating budget called for a total of $266,077,891 and his capital budget, for $140,686,692. The city's six-year (1960–65) capital improvements program totaled $867,926,959. Philadelphia's funded debt, as of July 1, 1959, was $640,752,800, of which $257,608,997 was self-supporting. No new city taxes or tax increases were recommended.

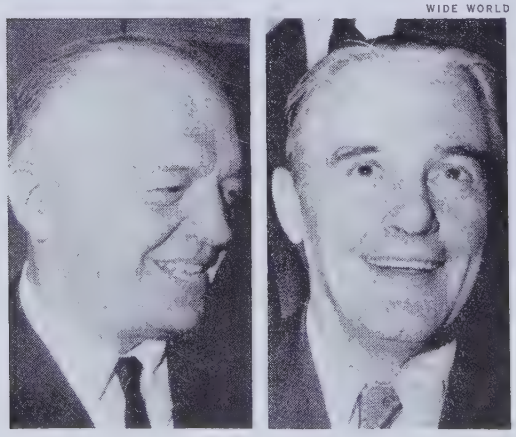
Public school enrollment (September 1959) was 243,500, and parochial school enrollment was 144,660. The tentative public school budget approximated $95 million, but increases were anticipated if the Pennsylvania General Assembly approved a two mill increase in the school district's realty tax rate.

Principal sources of city revenue are the real estate tax of $2.06 per $100 of assessed valuation, the 1½% income tax, the four mill personal property tax, and the three mill mercantile license tax, in addition to water and sewer rental income. Public school revenues are derived principally from a $1.40 realty tax on each $100 of assessed valuation, a four mill personal property tax, a one mill gross receipts tax on businesses other than financial institutions, and state grants-in-aid.

As of July 1959 there were 1,687,000 persons employed in the Philadelphia eight-county area and about 110,000 unemployed. The total value of manufactured products in 1957 was in excess of $5.5 billion, and the most important classes of products were metals, petroleum, textiles, chemicals, paper and printing, and food. Bank clearings in 1958 approximated $66 million, and retail sales in the city exceeded $2.7 billion. In the same year the Port of Philadelphia handled approximately 104 million tons, of which imports accounted for 42.4 million.

Harold E. Stassen (*left*), former Minnesota governor, was defeated in the Philadelphia mayoralty election, November 3, by Richardson Dilworth (*right*), the Democratic incumbent.

WIDE WORLD



Redevelopment activities began in 1959 on the 2,500-acre Eastwick project, the largest of its kind in the nation. More than $400 million of private and public funds are expected to be invested in the project's 10,000 to 12,000 planned new dwellings. Demolition began in the Washington Square East area early in 1959, and food markets from the area were relocated in the new $100 million Food Distribution Center, the first section of which was opened for occupancy in June. With the completion of the $25 million Torresdale Filter Plant in August, Philadelphia is said to have the first completely "push-button" type of filtration plant in the nation. Library Hall, the new $2 million home of the library of the American Philosophical Society situated in Independence National Historical Park, was dedicated on November 11.

Significant steps have been taken to solve the city's number-one traffic and transportation problem through the extension of the $65 million Schuylkill Expressway into the heart of the city and the establishment of routes for the Delaware and Crosstown expressways. The final major Schuylkill Expressway link was opened on Nov. 18, 1959, and on June 1 the new Pennsylvania Boulevard Bridge, connecting with the expressway, was opened to traffic over the Schuylkill River.

Extraordinary results have been achieved through cooperation of the city, the railroads, and the local transit company by reducing fares and improving services to northwestern portions of the metropolitan area. At the end of the first year (1958–59) of Operation Northwest, use of public transportation facilities had increased 40%—380,000 more riders. An even larger project has been launched for the northeastern sections.

In the municipal election of Nov. 3, 1959, incumbent Mayor Richardson Dilworth defeated his nationally known Republican opponent, Harold E. Stassen, by a 2-to-1 majority. The mayor's plurality of 205,000 votes was the largest ever accorded a Democratic candidate for mayor of Philadelphia. Democratic candidates from all 10 councilmanic districts were elected by comfortable margins, and five of the seven at-large councilmen were elected on the Democratic ticket by substantial margins. The only Republicans to be elected were two at-large councilmen, one city commissioner, and four magistrates, made possible by the city's system of limited voting. Two public improvement loan proposals for the city, involving outlays of $40 million, were approved by the voters. Election results were quite generally interpreted as a popular endorsement of good city government under two successive Democratic administrations.

JEWELL CASS PHILLIPS,
Professor of Political Science,
University of Pennsylvania.

PHILANTHROPY. Total philanthropy in the United States in 1959 was estimated at $7.3 billion, $200 million more than the 1958 estimate. Of the total, the highest in history, individuals contributed about $5.8 billion, or 79.2%; corporations, $540 million; foundations, $518 million; and bequests, $460 million. Distribution was as follows: religion, $3.7 billion; health and welfare causes, $2.4 billion; education, $875 million; foundation endowments, $220 million; and other causes, $146 million.

Records of publicly announced giving in ten major cities in the United States show that for the year 1959 there were 739 benefactions of $100,000 or more, totaling $469.4 million. Of the amount, 121 gifts totaled $77.4 million; 120 bequests, $143.6 million; 43 corporate gifts, $20.3 million; and 455 foundation grants, $228.1 million. Educational institutions received $259.6 million; health and welfare causes, $125.3 million; religion, $22.6 million; fine arts, $23.4 million; and foreign organizations, $29.5 million. In addition, $9 million was given to promote better international relations, including $6.2 million from the Ford Foundation to the United Nations for construction of a new library.

The largest sum recorded was a $20 million grant by the Leonard C. Hanna, Jr., Fund of Cleveland to Western Reserve University and allied university hospitals for endowment and buildings. Also in 1959, the wills of the late Vincent Astor and Edward J. Noble, both of New York, and Michael L. Benedum, of Pittsburgh, left most of the deceaseds' vast estates to foundations bearing their names.

CHARLES A. ANGER,
Chairman, Board of Directors,
John Price Jones Company, Inc.

PHILATELY. United States Stamps.—In 1959, 28 new stamps were issued in the United States, many of which directed attention to the nation's history and heritage and to current happenings.

Postmaster General Arthur E. Summerfield continued his "Champion of Liberty" series, paying tribute to the South American soldier and statesman, José de San Martín (1778–1850), and to Ernst Reuter (1889–1953), the post-World War II mayor of West Berlin.

There follows a list of United States issues in 1959, with places of first-day sales in parentheses:

January 3—7-cent blue airmail, in honor of Alaska's admission to the Union (Juneau, Alaska).

February 12—1-cent green, commemorating the sesquicentennial of Lincoln's birth (Hodgenville, Ky.).

February 14—4-cent green, commemorating the centenary of Oregon's statehood (Astoria, Oreg.).

February 25—4-cent blue and 8-cent red, blue, and ocher, honoring José de San Martín; for the "Champion of Liberty" series (Washington, D.C.).

February 27—3-cent purple, commemorating the sesquicentennial of Lincoln's birth (New York, N.Y.).

March 16—4½-cent green, with Andrew Jackson's home, The Hermitage; for the regular series (Hermitage, Tenn.).

April 1—4-cent blue, commemorating the 10th anniversary of NATO (Washington, D.C.).

April 6—4-cent light blue, honoring Arctic exploration, particularly Admiral Peary's discovery of the North Pole in 1909 (Cresson, Pa.).

April 20—8-cent maroon, with the inscription "World Peace Through World Trade" (Washington, D.C.).

May 1—4½-cent green in coil form, with Andrew Jackson's home, The Hermitage; for the regular series (Denver, Colo.).

May 30—4-cent blue, commemorating the sesquicentennial of Lincoln's birth (Washington, D.C.).

June 6—12-cent red, with a portrait of President Benjamin Harrison; for the regular series (Oxford, Ohio).

June 8—4-cent silver, commemorating the centenary of the discovery of silver in Nevada (Virginia City, Nev.).

June 17—2½-cent blue, with an illustration of the Bunker Hill Monument; for the regular series (Boston, Mass.).

UPI; WIDE WORLD

New stamps of 1959: (*Left, top and bottom*) commemorative issues mark statehood for Alaska (January 3) and Hawaii (August 21); (*right, top and bottom*) Canada and United States observe opening of St. Lawrence Seaway, June 26.

June 26—4-cent red, white, and blue, in honor of the opening of the St. Lawrence Seaway (Massena, N.Y.).

July 4—4-cent, illustrating the 49-star American flag in natural colors on a white background (Auburn, N.Y.).

August 17—7-cent red, white, and blue airmail, commemorating the centennial of the ascent of the balloon *Jupiter*, which carried U.S. mail (Lafayette, Ind.).

August 21—7-cent red airmail, in honor of Hawaii's admission to the Union (Honolulu, Hawaii).

August 26—4-cent yellow, green, and blue, publicizing the national soil conservation program (Rapid City, N. Dak.).

August 27—10-cent red, white, and blue airmail, commemorating the 1959 Pan American Games (Chicago, Ill.).

August 27—4-cent brown, commemorating the centennial of the discovery of petroleum in Pennsylvania (Titusville, Pa.).

September 9—2½-cent blue in coil form, with an illustration of the Bunker Hill Monument; for the regular series (Los Angeles, Calif.).

September 14—4-cent green, commemorating the centennial of the American Dental Association (New York, N.Y.).

September 29—4-cent bronze-green and 8-cent red, blue, and ocher, honoring Ernst Reuter; for the "Champion of Liberty" series (Washington, D.C.).

November 20—15-cent black and orange on white airmail, with the Statue of Liberty and the inscription "Liberty for All"; for a new regular airmail series (New York, N.Y.).

December 3—4-cent maroon, commemorating the world's first successful ovarian operation, performed by Dr. Ephraim McDowell in 1809 (Danville, Ky.).

In line with the postmaster general's "history and heritage" theme for stamps, an announcement was made that a new series, to be entitled "American Credo," will be released. These items are not pictorials; rather, each stamp will be inscribed with a quotation by a famous American of the past. For example, the first of the series, scheduled for issue in January 1960, will carry words from Washington's Farewell Address: "Observe good faith and justice toward all nations."

Mr. Summerfield predicted that American stamps in 1960 will be more colorful than ever. Fulfillment of this prediction will be facilitated by the second multicolor press which the government imported from Switzerland.

Foreign Stamps.—In Africa, each of the former French possessions that are now autonomous republics within the French Community (q.v.), plus French Togoland, which is scheduled for self-rule in 1960, and newly independent Guinea, has issued or will issue stamps as a republic (*république*).

Several popular stamps with religious themes were issued during 1959. West Germany released a 20-pfennig stamp commemorating the display in Trier Cathedral of a garment that is reputedly Christ's robe for which the Roman soldiers cast lots at the Crucifixion. Nicaragua issued a series in honor of an earlier visit by Francis Cardinal Spellman of New York. In Australia a 5-pence

purple Christmas stamp was distributed; this item illustrates the Magi on their way to Bethlehem.

Miscellaneous.—The renowned United States 1918 airmail invert—a sheet of 100 24-cent stamps on which the center design, an airplane, was printed upside down—continued to make philatelic news in 1959. A copy of the stamp was sold at auction in December for $6,400. According to Henry M. Goodkind, the stamp's recognized authority, the whereabouts of 88 of these items has now been traced.

Canada produced a similar error in 1959. A number of its Seaway commemoration stamps, released on June 26, were printed with an inverted center design. No definite value has been determined for copies of this stamp, reportedly limited to two sheets of 200 each.

Another invert was discovered by a New Jersey schoolboy. In this case, one copy of a design-inverted 1954–55 stamp from Kenya-Uganda-Tanganyika was brought to light. Again, no definite value was placed on the find.

Stamp Editor, "The New York Times."

PHILIPPINES. The Republic of the Philippines, comprising about 7,100 islands and islets in the western Pacific, lies north of Indonesia. It covers a total area of 115,600 square miles. The largest islands are Luzon (40,420 square miles), Mindanao (36,537), Samar (5,050), Negros (4,905), Palawan (4,550), and Panay (4,446).

Population.—As of July 1, 1959, the estimated population of the Philippines was 23,563,000. The most densely populated provinces and their 1958 estimated populations are Cebu (1,350,130), Negros Occidental (1,248,730), Leyte (1,210,240), Pangasinan (1,106,560), Iloilo (981,410), and Samar (910,280). The principal cities and their 1958 estimated populations are Manila, the former capital, (1,182,790), Cebu (201,362), Davao (133,754), Iloilo (132,362), Quezon City, the new capital (129,304), and Zamboanga (124,202).

Government.—The chief executive of the republic is Carlos P. Garcia (Nacionalista), who was elected to a 4-year term on Nov. 12, 1957. The vice president is Diosdado Macapagal (Liberal). There is a bicameral Congress, consisting of a Senate of 24 members elected at large for overlapping 6-year terms, and a 102-member House of Representatives chosen by congressional districts for a 4-year term. A Council of State, composed of members of the cabinet, the Senate president, the speaker of the House, and some distinguished Filipinos like former Commonwealth President Sergio Osmeña, acts as an advisory and consultative body to the government.

Education.—In the 1957–58 school year there were 29,096 public schools, with an enrollment of 3,805,562; and 3,538 private schools, with an enrollment of 801,262. The state-supported University of the Philippines enrolled 16,301 students at the opening of the 1957–58 academic year. English is the medium of instruction, but Tagalog, the national language, is taught in all schools. A new secretary of education, José E. Romero, assumed office in June 1959, succeeding Manuel Lim.

Religion.—The constitution guarantees freedom of worship and permits religious instruction in the public schools. About 83% of the people (1948 census) are members of the Roman Catholic Church. 8% are Aglipayans (Philippine Independent Church), 4% are Moslems, 2% are Protestants, and 3% belong to other denominations.

Finance.—In the 1957–58 fiscal year the national government expended 1,176.7 million pesos,[1] including 461.9 million for economic development, 354.8 million for social development, 176.9 million for national defense, and 114.8 million for general government. The national income in the calendar year 1958 was 9,232 million pesos, and the estimated per capita income 399 pesos. The cost-of-living index in Manila (1953 = 100) rose from 102 in 1957 to 105 in 1958. (See also below, *Principal Events, 1959.*)

Transportation and Communications.—The 711-mile railway network carried 10,035,236 passengers and 1,362,609 tons of freight in 1958, and domestic airways carried 477,600 passengers and 17,285 pounds of freight. There were 6,990 coastwise vessels with a gross tonnage of 2,871,357. Registered motor vehicles included 77,983 passenger cars and 77,962 trucks, and there were 21,875 miles of highways. Of the 2,903 radio stations in operation, 1,286 were owned and operated by the government. Publications numbered 769, with a combined circulation of 4,917,583. As of 1957, there were 63,400 telephones.

Production.—In 1958 the gross national product was valued at 10,464 million pesos. The index of manufacturing (1953 = 100) averaged 170, and there were 3,120 manufacturing establishments, which produced goods worth 2,004 million pesos. Leading manufactured products and their value in millions of pesos were as follows: chemicals, 315.07; foodstuffs, 290.19; tobacco, 215.82; textiles, 178,33; electricity, gas, and fuel, 116.6; metal products, 114.6; and wood and cork, 110.07. Mineral production included gold (422,833 fine ounces), silver (497,987 fine ounces), mercury (3,321 flasks), and, in metric tons, copper (47,030), chromite ore (416,310), lead (1,284), manganese ore (22,308), and iron ore (1,098,732). Electric power production totaled 1,280.4 million kw.-hr. In 1958, 37,750,000 bushels of corn and 195.9 million pounds of abacá were produced; in the crop year 1958–59, 1,436,240 short tons of centrifugal sugar and 7,709.9 million pounds of palay (rough rice). Output of root crops amounted to 1,330,000 metric tons in 1957–58; that of fruits and nuts, to 678,400 metric tons.

Foreign Trade.—The foreign trade of the republic in 1958 totaled 2,026.1 million pesos, of which 1,106.5 million represented imports and 919.6 million exports. Leading countries trading with the Philippines and the percentage of the share of each in the country's foreign trade were: United States (53.76), Japan 15.76), Netherlands (4.87), Indonesia (4.25), West Germany (3.97), and Great Britain (2.35). In the first 6 months of 1959, Philippine imports amounted to 465 million pesos; exports, to 540 million.

TEN LEADING PHILIPPINE EXPORTS AND IMPORTS, 1958

Export items	Value (million pesos)	Import items	Value (million pesos)
Coconut products	340.71	Machinery	147.52
Sugar	240.29	Mineral fuels	120.00
Logs and lumber	117.69	Textiles	114.90
Minerals	78.12	Cereals	104.11
Fibers (abacá)	62.63	Base metals	88.00
Cotton textiles	19.08	Dairy products	54.78
Wood manufactures	18.48	Transport equipment	53.91
Tobacco	16.41	Machinery appliances	42.20
Fruits	10.36	Paper	33.99
Chemicals	2.61	Metal manufactures	32.53

Principal Events, 1959. *Domestic Affairs.*—The biggest budget in Philippine history went into effect on July 1, 1959. It called for an outlay of 1.1 billion pesos, of which 980 million pesos were for ordinary public services and 241 million for development projects. Of the latter, 87 million, to be raised from a special margin tax on foreign exchange (see above, *Finance*), was for public works. President Garcia explained that the huge budget was needed to provide the people in rural communities with essential public services. Other notable measures enacted in the 1959 session of Congress were a civil service reform bill, designed to promote honesty and efficiency in the public service; a barrio charter bill, granting inhabitants of rural communities a large measure of self-government; a local autonomy bill, relieving provincial and municipal governments of unnecessary supervision and control on the part of the central government; and a bill giving residents in all but a few specified cities the right to vote for mayor and city councilors in their respective cities.

On November 10, 1959, regular elections were held for provincial and municipal officials and for eight new members of the Senate. Besides the two leading political parties, the Nacionalista and the

[1] At the official selling rate, U.S.$1 = 2.015 pesos. On July 17, 1959, however, a 25% margin over this rate went into effect for sales of exchange for most payments, resulting in an effective rate of $1 = 2.519 pesos.

Liberal, a third group, the Grand Alliance, organized by prominent personalities from the leading political parties, vied for elective posts. Main issues brought up in the campaign were nationalism, the status of the country's economy, and corruption in the government. Of the eight contested Senate posts, the Nacionalistas won five and the Liberals three. One of the Nacionalista winners was Congressman Genaro Magsaysay, younger brother of the late President Ramón Magsaysay.

Foreign Affairs.—In January 1959, Prime Minister Abdul Rahman of the Federation of Malaya paid a five-day visit to the Philippines. In private conferences he and President Garcia discussed the need for mutual cooperation in the endeavor to "meet the challenge of Communism in this region." In April, President Garcia in turn made a five-day state visit to South Vietnam. Reporting on the result of his visit, the president stated that his trip convinced him "of the wisdom of our policy of forging closer ties with our Asian neighbors." On September 7, the Philippines and Japan signed a $47.8 million agreement for the undertaking, within the framework of the Philippine-Japanese reparations treaty, of two important projects: construction of a multipurpose dam near Manila, and expansion of the Philippines telecommunications network.

On October 12, after extended talks between Felixberto M. Serrano, the Philippine secretary of foreign affairs, and United States Ambassador Charles E. Bohlen, a memorandum of agreement was signed in Manila on the revision of the 1947 military bases agreement between the two countries. Under the terms of the new agreement, the United States would retain only four major bases in the Philippines: Sangley Point and Subic Bay naval stations, Clark-Stotsenberg Air Force Base, and Camp John Hay. The areas of these bases were delimited. In addition, the United States agreed to consult the Philippine government before establishing long-range missile sites at the bases. While Ambassador Bohlen and Secretary Serrano were in general agreement on jurisdiction over American military personnel who commit offenses in the Philippines, further negotiations were to be undertaken by Bohlen's successor, John D. Hickerson. Meanwhile, the question of Philippine financial claims against the United States remained unsettled. The United States position was set forth in a note of August 4, at which time payment of $23,862,751 was made in settlement of a Philippine claim arising from the revaluation of the dollar in 1934.

The Philippines played host to approximately 12,000 boy scouts from 51 nations who participated in the Tenth World Scout Jamboree, held at Mount Makiling National Park in July 1959. This was the first international scout jamboree held in Asia.

Professor of History (Retired),
University of the Philippines.

PHILOLOGY. See LINGUISTICS.

PHILOSOPHY. Throughout 1959, many meetings, books, and articles commemorated the 100th anniversaries of the births of the noted philosophers John Dewey, Edmund Husserl, and Henri Bergson, and observed the centenary of the publication of the *Origin of Species* by Darwin (see also GENETICS). The death in late 1958 of G. E. Moore (b. Nov. 4, 1873; d. Oct. 24, 1958), an English philosopher who had many followers in the United States, was also noted in 1959.

Dewey's birthday was especially celebrated in the United States. Most notable in this connection were several meetings of the American Philosophical Association. The APA's Eastern Division met at the University of Vermont in Burlington, Dewey's birthplace (December 1958), and papers were read on "The Background of Dewey's Philosophy." The Western Division convened at the University of Wisconsin (April 1959), where the topics discussed were "Dewey's Philosophy of Morals, Religion, Metaphysics, and Value Theory." The Eastern Division again held meetings in honor of the philosopher at Columbia University (December 1959), where Dewey taught for many years. Dewey's achievements represented the high-water mark of a philosopher's influence on practical affairs in many fields—education, morals, and politics. His educational philosophy and liberalism, however, have been recently undergoing considerable attack.

The year 1959 reflected the renewed interest of philosophers in both practical and international issues. The Third East-West Philosophers' Conference was convened at the University of Hawaii (June 22—July 31), where some 80 scholars from all over the world sought to develop the "implications of philosophy East-West for practical affairs and world understanding." The conference significantly tried to build a bridge between the East (primarily Asia) and West, and it afforded a wide basis for contacts among many leading thinkers from India, the Islamic countries, Japan, Taiwan, Europe, and the United States. Asians are rapidly becoming modernized and Westernized in 20th century philosophy, but more recently many Western philosophers have become interested in Asian philosophy, comparative philosophy East-West, and Zen Buddhism. The journal *Philosophy East-West,* in the last decade, has devoted itself to this theme, and a great number of reprints of Oriental philosophical documents are being published in the United States. One result of the conference was the agreement that to form a basis for world cooperation people of one civilization need to understand the philosophical traditions of other civilizations.

Philosophical interest in contemporary problems was also shown in other meetings. The Sixth Inter-American Congress of Philosophy, held at Buenos Aires (August), had on its agenda the theme, "The Mission of Philosophy in the Present World; Philosophy and Contemporary Crises." The Western Division of the APA discussed the special study brought out under its auspices, *The Public Interest,* by W. Leys and C. Perry, in which the role of philosophy in society is examined. The general theme of the American Catholic Philosophical Association at its meetings in New York (March 31–April 1) was "Contemporary American Philosophy." Another meeting of importance was that of The International Congress for Logic, Methodology, and Philosophy of Science, held at Stanford University (August).

The year 1959 saw the publication in English translations of a number of books by contemporary European philosophers who have had great influence in the United States. These included *Introduction to Metaphysics* by Martin Heidegger, *Distinguish to Unite; or, The Degrees of Knowledge* by Jacques Maritain, *The Philosophy of Space and Time* (late 1958) and *Modern Philosophy of Science: Selected Essays* by Hans Reichenbach. *The Logic of Scientific Discovery,* written a generation ago, was newly translated and revised by its author, Karl Popper. Also appearing were the preliminary studies for the important work, *The Blue and Brown Books* (late 1958), by the

British analyst, Ludwig Wittgenstein; *Logical Positivism,* a book of readings edited by A. J. Ayer; and Bertrand Russell's *Wisdom of the West,* a history of philosophy. Two volumes of papers in tribute to two European philosophers also appeared: *An Etienne Gilson Tribute* and *Theology of Culture,* for Paul Tillich.

Many books on ethical and social philosophy were published during the year under review. *Anthropology and Ethics* by M. and A. Edel traced the implications of cultural anthropology for ethics. *Psychoanalysis, Scientific Method and Philosophy* (edited by Sidney Hook) brought together psychoanalysts and philosophers to explore the bearings of psychoanalysis on science and human life. *Education in the Age of Science* (edited by Brand Blanshard), a symposium of findings of philosophers and educators, dealt with contemporary educational philosophy. And *Nomos II: Community* (edited by Carl J. Friedrich) was a symposium prepared by the American Society for Political and Legal Philosophy. *The Human Condition* (late 1958) by Hannah Arendt was widely reviewed. Paul Weiss presented his social philosophy in *Our Public Life,* Patrick Gardiner a book of readings in *Theories of History,* and Richard Brandt a textbook called *Ethical Theory.*

Other noteworthy publications were the long-awaited Carus Lectures of Jacob Loewenberg, *Reason and the Nature of Things,* reflections on the cognitive role of philosophy, and George Boas' *The Inquiring Mind,* a study of the ways in which ideas are formed. Also appearing were John H. Randall's *The Role of Knowledge in Western Religion* (late 1958), a naturalistic and functional account, and Percy W. Bridgman's *The Way Things Are.*

Associate Professor of Philosophy, Trinity College; Director of U.S. Editorial Center, Bibliography of Philosophy.

PHOSPHATES. See Index entry.

PHOSPHORUS. See Index entry.

PHOTOGRAPHY. The optimism expressed early in 1959 by the photographic industry has been justified. There was a healthy increase during the year in the sales of nearly all photographic materials and equipment in the United States; production and sales also increased in other countries; and imports and exports increased generally. Of interest is the growth of the Japanese photographic industry, which in 1958 produced about 1.5 million cameras, of which 40% were exported. Japan is one of the world's major exporters of cameras, lenses, and optical equipment, and the United States is one of her largest customers. Russian-made cameras appeared in the European market.

Automation was more evident than ever, not only in miniature cameras, but also in roll-film and larger cameras, in enlarging and printing equipment, and in processing systems. New high-speed films with improved sharpness and grain characteristics became available for both black-and-white and color photography.

The amateur market continued to show strong growth, primarily because of the increased use of color negative materials which provide either slides or color prints, and because of the availability of both still and motion-picture cameras having essentially automatic operation. Increased interest in 8-mm. color movies and in available light photography was evident.

Strong growth was also evident in 1959 in the broad field of scientific and applied photography. Many new uses for photographic processes were described, ranging from the identification of subatomic particles to pictures of the far side of the moon. Special sensitized materials, new exposing devices, and more efficient processing systems were introduced.

Still Photography.—New cameras and lenses have set mechanical and optical standards exceeding the highest previously considered possible, particularly precision miniature cameras. Generally the design improvements have made it possible to make exposures at higher shutter speeds and smaller lens apertures, resulting in new action-stopping power, optical quality, and depth of field. Other developments included high-speed emulsions and super-fine-grain 35-mm. films which, when developed with new high-energy fine-grain developers, provide image quality approaching that of larger negatives. These improvements have brought about an increase in the use of roll-film, 70-mm. and miniature cameras in press, industrial, commercial, and professional photography.

During recent years, simplification and automation in the operation of camera equipment have been predominant in design. Probably the most widely adopted design was automatic or semiautomatic exposure control, obtained by mounting on the front of the camera a photoelectric cell which measures the illumination of the scene. In fully automatic exposure control systems the aperture or the shutter speed is set without attention from the camera operator, while in semiautomatic systems the meter reading indicates the shutter speed required for a given film, and the setting is made manually.

A new trend involves automatic setting of the shutter rather than the diaphragm. The Polaroid Photoelectric Shutter No. 400, the Gauthier Pronton SLK, and the Deckel Synchro-Compur shutter are coupled with the exposure meter. The Minolta V-2 35-mm. camera contains the first leaf shutter to provide a shutter speed of 1/2,000 second.

The interchangeability of complete lenses necessitated the use of focal plane shutters until recently, when some cameras were equipped with "behind-the-lens" shutters. Spring-loaded automatic diaphragms are being replaced by the new instant reopening ones, which open immediately after the exposure, regardless of how long the shutter button is depressed.

The instant-return reflex-mirror principle, said to have been originated by the Asahi Optical Company, has been incorporated in several cameras, including the Nikon Automatic Reflex. The automatic diaphragm of this camera has a preview control device which enables the photographer to precheck the depth of field at any given f-stop.

A new design which may initiate a trend was introduced in 1959 in the Iloca Electric 35-mm. Camera. A battery-powered motor located in the film spool automatically winds the film and cocks the shutter after each exposure. The power from two small pen-light batteries is said to be sufficient for 1,000 exposures. The Graphic 35 Electric, based on the same principle and manufactured in Germany was also announced.

The Konica III-M 35-mm. camera is designed to provide a choice between single-frame (24 x 18-mm.) and standard double-frame (24 x 35-mm.) negative sizes; it is also equipped with a fully self-correcting viewfinder system.

Several small twin-lens reflex cameras were marketed, including the 4 x 4-cm. Sawyer Mark IV with f/2.8 lens, the Mamiya C2 (said to be the first twin-lens reflex camera with interchangeable sets of lenses), and the new, fully automatic Zenza Bronica 2¼ x 2¼ reflex camera, with a Nikkor 75-mm. f/2.8 lens.

The simplicity of the box-camera with automatic exposure control was evidenced in the Bell & Howell Infallible and the Kodak Brownie Starmatic cameras. Electric-eye exposure control was also built into the Super Ikonta IV.

Canadian Applied Research Limited's new 70-mm. Studio Camera–Type 320 provides the portrait photographer with a potential increase in the production of high-quality 1⅞ x 1⅞-inch negatives.

Amateur Motion Picture Cameras.—Camera automation has had a marked effect on the quality of 8-mm. amateur movies. Two systems of photoelectric exposure control are used: direct control of lens aperture by a photoelectric cell, and indirect control by means of a battery whose current output is controlled by a light-sensitive cell. It is said that the indirect system can handle a wider range of film speeds ("follow pointer exposure control"). This system is used in the Konica Zoom 8 camera, combined with variable-focal-length lens, prism-reflex viewing, and electric drive.

Photoelectric-cell exposure meters coupled directly to the diaphragm have been incorporated in the Elgeet Synchronex-8, the Sekonic 8-mm., the Wollensak Electric Eye-Matic, in Revere and Bell & Howell cameras, and in three 8-mm. Kodak motion picture cameras: the Brownie Automatic Movie Camera (f/2.3 lens); the Kodak Cine Automatic Camera (f/1.9 lens); and the Kodak Cine Automatic Camera, Turret (f/1.9 lens). The directly coupled exposure controls are operated by one-billionth horsepower motors powered by the energy of light. A variable-focal-length or "zoom" lens is featured on the Automatic f/1.9 Kodak Zoom 8 Camera, a feature introduced earlier by Revere.

The 8-mm. Bolex B-8L represents a radical departure in automatic exposure control with its light meter behind the lens, thereby permitting computation of the exposure only on the actual scene being photographed. The Yashica Turret 8 with its f/1.4 lenses and variable speeds provides filming under virtually any lighting conditions.

A trend seems to be in progress with respect to electric-drive motion-picture cameras. The new models of the Eumig Electric camera provide full lens interchangeability by accepting any standard D-mount movie lens. Four makes of battery-powered 8-mm. motion-picture cameras were imported for the United States market from Austria and Japan.

New accessories were announced for the Camex Reflex 8 (a single-lens reflex movie camera), including a Pan-Cinor 10-to-30-mm. f/2.8 Varifocal Zoom lens, electronic flash synchronization, an anamorphic wide-screen attachment, and a new Angenieux Retrofocus 6.5-mm. f/1.8 wide-angle lens.

More efficient projection became available in 1959 because of new projector lamps of low wattage and high efficiency, projection bulbs with built-in mirrors which direct maximum light through the aperture, and automatic threading of the film. The Photo-Tronic Model 800 unit combines a projector and a high-fidelity tape recorder.

Lenses.—Variable-focus or zoom lenses became more prominent in 1959, particularly for use on motion picture cameras. Once regarded as a special-purpose tool, the zoom lens is now being featured as standard equipment on several 16-mm. and 8-mm. cameras. The focal length varies over a 3-to-1 or 4-to-1 range on most zoom lenses, while through-the-lens focusing and viewing permits an exact view of the scene without parallax. The Som Berthiot Pan Cinor-30 DV lens is said to be the first zoom lens to add reflex viewing to 8-mm. cameras. Perhaps this trend will apply to the miniature camera field in the future, especially in view of the announcement of the Voigtlander Zoomar f/2.8 lens designed for 35-mm. single-lens reflex cameras.

Many new wide-angle and telephoto lenses were introduced in 1959, a considerable number of them having automatic diaphragms. Significant design improvements, especially in "retrofocus" lenses, were made by Japanese, German, and French manufacturers. The Brooks-Plaubel Veriwide 100 camera is equipped with a Schneider Super-Angulon lens that covers an angle of 100°. The Steinheil Auto-Quinaron 35-mm. f/2.8 lens is both a 7-element wide-angle lens of 62° and a close-up lens.

Enna Werk of Munich introduced its automatic-mount Magic Mount for single-lens reflex cameras in 1959. This mount contains a single mechanism which actuates the diaphragm in each of a series of lenses.

Flash.—Electronic flash units with transistorized power-generating circuits were introduced in 1958. In some 1959 designs a transistorized voltage-monitor circuit is employed to turn on the power only when needed, and thereby reduce the continuous high battery drain. The light output varies very little from the first flash to the last. This design is featured in the Braun Hobby Speedlight, the Multiblitz Color SL, and in the Mecablitz Models 101 and 200. The Heiland 72A Strobonar offers a rapid cycling of 2 to 5 seconds.

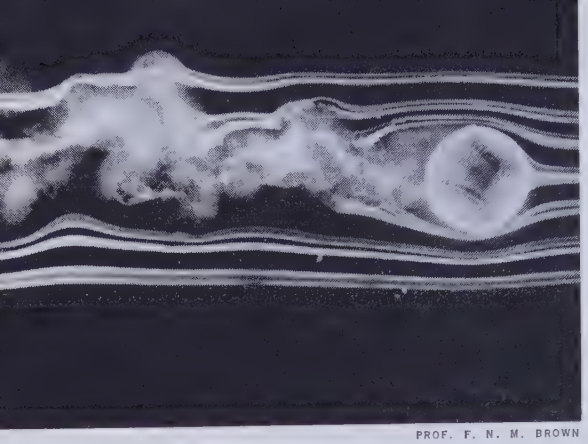
The use of zirconium has allowed manufacturers to make flash lamps smaller and smaller. In 1958, Sylvania introduced the M-5 and M-25 lamps with a lumen-second output of 16,000, which is about four times that of a No. 5 lamp. The tiniest flash lamp available is the new General Electric AG-1, which is about 1¼ x ⅜ inch in size, is made completely of glass, and has an output of 7,000 lumen-seconds for the clear type and 4,000 for the AG-1B lamp. It is equivalent to the M-2 in light output, but is only one fourth as large.

The Sylvania Floodflash FF-33 lamp has a flash duration of 1.75 seconds, which is more than 100 times longer than the duration of amateur flash bulbs. With this lamp it is possible to expose 37 feet of motion picture film at 1,000 frames per second or 75 feet at 2,000 frames per second.

Enlargers and Projectors.—Slide projectors marketed in 1959 incorporated various automatic features, including predetermined cycling at specified time intervals, and controls which enable the operator to repeat, skip, or hold slides at will during automatic projection, as well as to reverse the sequence. E. Leitz, Inc. introduced its Ultrasonic Remote Control Unit. The remote unit controls the projector by means of a high-frequency note (not audible to humans) which is detected by a receiving unit attached to the projector control. The Magnematic Sound Slide Projector is the Keystone 510 projector with a 500-watt lamp and an automatic tape cartridge.

The Minox Slide Projector was designed especially for ultraminiature slides in Minox mounts, and is equipped with a 35-mm. f/1.6 lens and a special condenser system.

The Simmon Brothers' new Chromega D-4 Enlarger features a novel incandescent illumination system which furnishes high light output at moderate wattage and has the correct continuous spectrum for color. The system consists of two lamps set in hollow jackets from which the light is reflected through small apertures into an "integrating sphere" where the light is thoroughly mixed and evenly illuminates the entire negative,



PROF. F. N. M. BROWN

Photograph of wind tunnel experiment showing that baseball curve is no optical illusion. Smoke streamers show path of wind coming from right at 60 feet a second against a ball spinning at 1,000 rpm. Air is speeded up at the surface of the ball which moves in the direction of the wind, resulting in lowering of pressure (in accordance with the Magnus effect); similarly, pressure is increased at opposite side of ball, where ball's surface moves against wind. The difference in pressure makes the ball curve.

which may range from 35-mm. to 4 x 5 inches.

Professional Motion Pictures and Television.—Motion picture exhibitors in the United States have shown a definite interest in ultrawide screen processes such as Cinerama, Cinemiracle, and Todd-AO, but there is a need for a single-camera, single-projector, 35-mm. system adaptable to all theaters. The Carney-Smith system is a promising process of this kind. It places three scene segments within each standard 35-mm. frame. A standard 35-mm. camera is fitted with an auxiliary lens attachment which encompasses a 180-degree field. The optical attachment breaks the scene into three parts. The two side areas of the scene (each 45 degrees wide) are recorded side-by-side in the upper half of the frame, while the third area (encompassing the central 90 degrees of the scene) is recorded across the lower half of the frame. In projection the 45-degree segments are "criss-crossed" so that the projected scene is normal. The aspect ratio is 4½-1. There is said to be no appearance on the screen of overlap, separation, or jumping between segments. (See also MOTION PICTURES; RADIO AND TELEVISION.)

Photographic Sensitized Materials.—The advent of high-speed films such as Ansco Super Hypan and Kodak Royal-X Pan has made the ASA exposure index unrealistic, and the trend has been to remove the safety factor of 2½ times and to state practical exposure indexes. Ansco has published a list of films in which the exposure indexes were roughly doubled. Kodak has recommended more practical exposure indexes since 1958, but it will not publish revised indexes until changes are made in its rating system by the American Standards Association.

A new panchromatic sheet film, Versapan, introduced by Ansco in 1959, is said to combine ultrafine grain, medium speed, and complete contrast control by regulation of development. The professional 35-mm. Kodak Plus-X Pan Film announced in 1958 became available in 1959 in 120 and 160 roll film sizes with ASA exposure indexes of 80 daylight and 64 tungsten and with practical indexes twice these values.

The Polaroid Corp. introduced a "high-speed program" based on a new black-and-white film called 3000 Speed Polaroid Land Picture Roll with exposure indexes of 3,200 daylight and 2,400 tungsten (about 15 times faster than Polaroid Pola-Pan 200 Film). To provide an "available light system," Polaroid has also marketed a "wink" light for the illumination of shadows, an especially sensitive exposure meter (Model 625), a plug-in repeating-flash unit taking the new AG-1 flash lamps, the Photoelectric Shutter No. 440 mentioned above, and a special filter to reduce the film speed to approximately ASA 200 for outdoor photography.

Two high-speed color films were introduced by Eastman Kodak, namely Kodak Color Reversal Film SO-260 and Kodak Color Reversal Film Type B SO-270, having exposure index ranges of 160 to 500 and 125 to 375, respectively. The exceptional speeds, combined with more than adequate sharpness, grain pattern, and color reproduction, make them suitable for all kinds of scientific and industrial recording, under a wide variety of natural and artificial lighting conditions unsuitable for conventional films.

A new enlarging and contact printing material, Polylure Paper, which combines warm image tones with a contrast range controllable by suitable filters, was announced in 1959 by Eastman Kodak Co. The new Kodak PolyToner provides a variety of image tones with this paper.

Color Photography.—The use of color film continues to grow rapidly, not only in amateur photography and the motion picture business, but in highly specialized industrial, scientific, and engineering applications. Because of its versatility, the color negative has played an important role in this growth. It is available in sizes for roll-film and miniature cameras, and provides a negative for making contact prints and enlargements in color or black-and-white, and also for making positive color transparencies. Automation and simplified operation in camera equipment, as well as an improvement in color processing and printing services, also have been significant factors in the growth of color photography.

Probably the outstanding technical developments in color photography in 1959 were represented by the introduction of higher-speed color products. Ansco announced its 8-mm. Ansco Moviechrome 8 Film with exposure indexes of 20 daylight and 10 tungsten, and Kodak High Speed Ektachrome Films, Daylight and Type B, with exposure indexes of 160 and 125, respectively, were introduced. An improved, faster Kodak Ektachrome Film for professional use was made available in sheet and roll film sizes for Process E-3 processing; the 120 and 620 Daylight Type has an exposure index of 50, and the Type B an index of 32. The new 35-mm. Eastman Color Negative Film, Type 5250, for professional motion pictures, has exposure indexes of 50 tungsten and 32 daylight (when used with a conventional conversion filter)—about twice as fast as previous films.

Manufacturers are supplying improved processing and printing equipment for amateurs as well as for color-processing studios and photofinishers. The Simmon Omega Tri-color Computer, using a guide test, automatically provides correct exposures, compensating for color balance, negative density, color temperature of the source, and other factors. The LogEtronic K-5 Enlarger offers automatic dodging, exposure control, and automatic color correction. Technicolor Products, Inc. has described a high-speed color printer with a capacity of about 5,000 prints per hour. The Kodak Roll Paper Color Printer, Model 5S, produces about 1,000 prints per hour for all negative and print sizes up to 5 x 7 inches.

Photographic Processing.—More convenient processing in compact automatic equipment is a prominent requirement in photographic processing generally. Immediate production of images is almost mandatory in many scientific and engineering

applications of photography, and often increased production rates are desirable.

Simplification of processing may be achieved by combining the developer and fixer functions in a single "monobath" formula. During 1959 the Cormac Chemical Co. introduced the Unibath series for processing films and papers; Itek Corp. has reported on a mathematical approach to monobath kinetics; and the Avco-Everett Research Laboratory has reported on formulas that give improved photographic characteristics.

Processing industrial radiographs automatically within 13 minutes was made possible in 1959 by the introduction of a six-tank version of the Kodak X-Omat Processor. Kodak also announced a new, smaller medical X-ray film processor, the Model M-3 X-Omat Processor, which delivers dry radiographs in 7 minutes; and the Oscar Fisher Co. introduced a small automatic processor for X-ray films, called the Fisher FaX-Ray Processor, which is said to deliver dry radiographs in 7 minutes.

Fisher marketed in 1959 a spray-immersion processor, Processall, which automatically processes film or paper up to 12 inches in width at machine speeds up to 40 feet per minute; and the Mark 16/35 semiportable, automatic, continuous film processor, capable of processing speeds up to 3,000 feet per hour. Kodak announced its first continuous paper processor specially designed for professional black-and-white papers—the Kodak Continuous Paper Processor, Model 40P. The 40P can be converted for processing Kodak Ektacolor or Ektachrome Roll Papers.

The Cine Speed Instant Film Processor for 16-mm. film, developed by J. A. Maurer Co., has commanded some interest. Designed to be attached to a camera, the processor operates at 36 feet per minute to provide dry-to-dry processing in 9 seconds. Chas. A. Hulcher Co. announced a small processor (Gilco) for processing 100-foot rolls of 70-mm. film either manually or electrically. A phototransmission system dependent on rapid processing was described in *Electronics* (June 5, 1959, p. 47) as capable of delivering a high-quality aerial photograph from a manned aircraft or a surveillance drone to the ground within 2 minutes after taking the picture.

Among new developers announced in 1959 were the Edwal FG7 concentrate, which produces different developers with entirely different characteristics when diluted and used as recommended; two new Ilford, Ltd. X-ray developers, Phenisol and Phen-X, based on the use of Phenidone and hydroquinone; and the Kodak Durafin Developer Replenisher for the photofinisher, replacing the Durol 7 system.

Documentary and Industrial Photography.—Film Library Instantaneous Presentation (FLIP), an information-recall system manufactured by Benson-Lehner Corp., is designed to locate and display any desired frame on a reel of processed 16-mm. film. To find a frame, the machine scans binary code elements occurring as density bars adjacent to each frame. Magnavox Research Laboratories has reported that its Digital and Pictorial Electronic Recorder, a film data-recording system, combines the advantages of pictorial and digital recording; it has high readout rates and high data storage per cubic foot (6,000 bits per inch of film). Some experimental work has indicated systems approaching 1 million bits per square inch and readout rates as high as 2-megacycles.

A new Collins-Peerless Neoflow Enlarging Camera, of interest in photocopy work and particularly in engineering drawing reproduction, will enlarge opaque or translucent originals on a continuous-flow basis. Kodagraph Autopositive Projection Papers, announced by Eastman Kodak Co., represent an important new tool in direct positive copying of documents and drawings, providing positive intermediates of drawings and enlargements from microfilm positives. Kodagraph Autopositive Translucent Paper has 60% greater speed, higher effective contrast, and increased tolerance to room light, as compared with regular Autopositive paper.

A new photographic system for reproducing documents

WIDE WORLD

What appears to be a missile approaching the moon is actually the telescopic effect produced by a 96-inch focal length lens in this Army photograph of a Lacrosse missile flying over New Mexico, with the moon in the background.

rapidly in quantities from 10 to 1,000 is the Ektalith Method, announced by Eastman Kodak Co. It can make inexpensive paper masters for offset printing, or a limited number of direct copies without using the offset process.

Haloid XeroX, Inc. demonstrated an automatic printer which makes a finished print every 2¼ seconds from aerial negatives in roll form. The first print requires 22 seconds. The machine was built for the U.S. Air Force to print 9 x 9-inch negatives, but the design principle is applicable to document reproduction, especially where high-speed, high-volume printing is required.

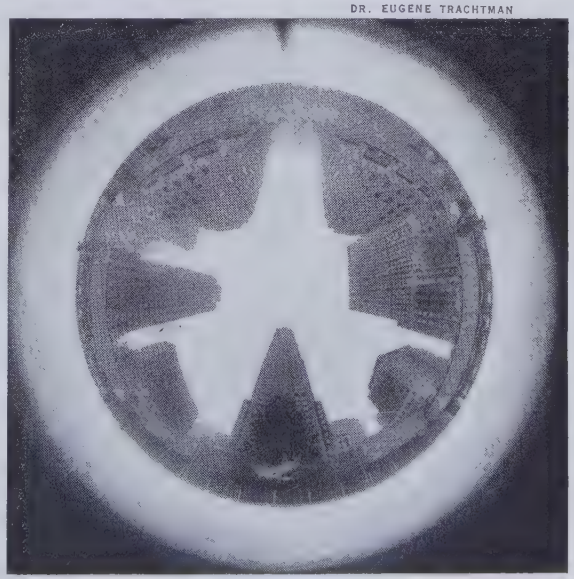
Kodak Metal-Etch Resist is a light-sensitive etch-resistant material of particular interest in chemical milling where many metals are treated. The product has at least three major applications: in small-parts manufacture; in making special name plates that require deep etching; and in weight-reduction work in aircraft, missile, and rocket fabrication.

The detection of perforations, weld defects, ground formation, and many other factors in the maintenance of water wells is being accomplished by the Laval Underground Surveys Co. in Fresno, Calif., through stereophotography. A stroboscopic light source provides $\frac{1}{1,000}$-second exposures on 35-mm. Kodak Plus-X Film used in two devices designed to photograph the sidewalls or the bottom of wells. High-speed cameras are being used as analytical instruments to develop a new explosive foxhole digger for Army combat troops.

Scientific and Applied Photography.—Scientists at the University of Michigan have described a luminescent chamber used to photograph the light from the path of a single electron or other atomic particle. The tiny flash, lasting only a millionth of a second, is given off as the particle speeds through a scintillating crystal. Kodak Research Laboratories described a new three-dimensional technique for studying air turbulence. The new technique can pinpoint the moving pockets of air which deviate light rays and

Circular photograph of Rockefeller Center, New York City, was taken with the Circlescan Hemisphere Camera invented by a Red Bank, N.J., optometrist. Camera covers a view of 225° and provides good clarity. Film and five special lenses rotate while shutter is open for total of $\frac{1}{25}$ second.

DR. EUGENE TRACHTMAN



thus impair the quality of aerial and other long-distance photographs.

The application of a strong electric field (about 4 million volts per centimeter) simultaneously with a light pulse was claimed by Edgerton, Germeshausen, and Grier, Inc., to enhance dramatically the sensitivity of a photographic emulsion when it is exposed to light.

On May 12, 1959, a tiny 16-mm. movie camera placed in the nose cone of a U.S. Air Force Thor missile provided the first photographic record of the separation of a nose cone from a rocket. One sixth of the earth was photographed from an altitude of 700 miles on August 24, 1959, using a 16-mm. camera in the nose cone of an Air Force Atlas intercontinental missile during a 5,100 mile flight over the Atlantic missile range. (See METEOROLOGY AND CLIMATOLOGY; SPACE FLIGHT.) On Dec. 5, 1958, at an altitude of about 86 miles, two cameras in the tail of a special U.S. Navy rocket took movies of an extensive weather system. A composite print made from the movies, covering an area of 1.5 million square miles, may hold the key to better hurricane detection and weather forecasts. The sharpest pictures of sunspots ever made were taken at 80,000 feet in a high-altitude balloon on Aug. 17, 1959, as part of the Stratoscope project sponsored by the National Science Foundation and the Office of Naval Research. (See ASTRONOMY.)

A new type of camera was described by the U.S. Naval Observatory as potentially important for spotting proposed "winking" satellites equipped with powerful flashing lights. The camera simultaneously tracks a satellite and its surrounding stars at their respective rates of motion, thus obtaining sharp images of both.

The U.S. Air Force has developed an infrared camera said to be capable of measuring in thousandths of a degree the heat contrasts of objects. When used as a reconnaissance device, the new camera may render the usual camouflage measures relatively ineffective.

Benson-Lehner Corp. has developed a new aerial strike camera which fits into the thin leading edge of a Convair F-106 wing to take 20 pictures per second during a target strike. A Zoomar-Trulex device for automatic exposure determination, used with phototheodolites and tracking cameras, depends on signals fed from measuring and reference photocells to a built-in computer. Amplified electrical impulses drive two counter-rotating optical-wedge discs to regulate the amount of light.

Life magazine for Nov. 9, 1959, reproduced in color a remarkable picture of the coastal waters off Marblehead, Mass. Taken by the Circlescan Hemisphere Camera, which takes in a view of 225° and gives a clear image to the edge of the photograph, the picture was shot from a jet flying upside down at 30,000 feet. The camera shutter opens to expose a pie-shaped sliver of film, and remains open while the film and 5 special lenses turn for a total of $\frac{1}{25}$ second to expose the rest of the film.

The Traid Corporation announced a 70-mm. rotary prism camera with a reported speed up to 360 frames per second. Known as the Photo-Sonics 70mm-10B, it is useful in long-range industrial photography, missile photography, and high-resolution streak photography.

Electro-Optical Instruments, Inc. developed an ultra-high-speed Kerr-cell camera that has an effective exposure time of 5 billionths of a second. The equipment consists of a Crown Graphic "45" camera, an electronically gated Kerr-cell shutter unit, a power supply, and a millimicrosecond electronic modulator. Luminous phenomena such as combustion detonation, fuse and explosive setups, arc formation, and cathode-spot phenomena may be studied with this equipment.

Assistant Division Head,
Kodak Research Laboratories.

PHYSICS. Physicists may come to remember 1959 as the year in which information theory emerged as a full-fledged discipline comparable to electromagnetic theory and physical optics in status and importance. Two major achievements announced in 1959—radar contact with the planet Venus and a new theory of color perception—came about as applications of information theory.

Radar Contact With Venus.—In 1929, Dr. Ellis A. Johnson, then a graduate student at the Massachusetts Institute of Technology (MIT), showed that no communication equipment, however carefully constructed, could transmit information exactly—that any information which came through was inevitably mixed with spurious information originating within the apparatus itself. He derived a formula which related the volume of the spurious information to the friction (or electrical resistance) of the apparatus, the width of the band of frequencies it would pass, and the absolute temperature of the apparatus. The unwanted, spurious signal has come to be known as Johnson noise and is an essential concept in present-day information theory.

During the following 30 years it came gradually to be realized that the central problem of communications was the distinction of signal from noise, and that the possibility of making this distinction depended on the ratio of true signal output to noise generated within the apparatus used. Since signal strength can be increased by stepping up power, with little increase in noise, it was possible for many years to ignore the problem, overriding noise by high power. It came to be thought impossible to transmit accurate information except at signal-to-noise ratios substantially exceeding unity. The range of power available made it possible to accomplish this at distances as great as that of the moon, from which faithful radar echoes have been received.

The nearest planets, Venus and Mars, never come closer to the earth than 100 times the distance to the moon. Since the signal strength of a radar return from an object diminishes as the fourth power of its distance from the radar station, the radar return from these planets is only one one-hundred-millionth of what it would be from the moon. To override this factor by brute force and obtain even a one-to-one signal-to-noise ratio would require a radar transmitter consuming more than the total power generated in the world. Thus the problem of radar contact with these planets appeared hopeless.

Paralleling the development of new radar techniques, however, the efforts of many physicists in the field of information theory had developed a method, known as autocorrelation, which offered hope of detecting a radar signal deeply buried in Johnson noise. The method involves the correlation of each element of the signal beamed out by the transmitter with an element of the incoming signal picked up by the receiver at the end of an interval of time on the order of the expected return time for the signal. The process is repeated for various time intervals, all on the order of the expected return time. If a significant correlation between outgoing and incoming signals is discovered for one of the time intervals, it may be inferred that the interval in question represents the time required for the signal to make the round trip from the radar station to the object aimed at. The process of determining whether a significant correlation exists for any of the intervals selected is simple in principle, but involves an extremely large number of separate computations; it became feasible only with the development of modern electronic computers.

The development of the new method encouraged a group of physicists (led by Robert Price and Paul E. Green, Jr.) to try for radar contact with Venus, using apparatus having a high signal-to-noise ratio but modest power. Initial calculations indicated that the project was nearly—but not quite—feasible. The balance was turned by the development of a new type of amplifier, the maser, which is limited only by Johnson noise and has a very narrow band pass. The few decibels of signal-to-noise ratio by which this amplifier was superior to those previously available promised to provide the difference between success and failure. The maser used was a crystal of potassium cobalticyanide cooled in liquid helium.

The dish-shaped, 84-foot-wide radar antenna, adjustable in declination and continuously rotated to cancel the effect of the earth's rotation, was located at Millstone Hill near Westford, Mass. The

gain of this antenna is 37.5 decibels at 440 megacycles per second, the frequency used in the experiments. Transmitter power (300 kilowatts peak) was supplied by a klystron. The radar experiments were performed in February 1958, but a year was needed to analyze the tape-recorded signals to discover whether contact had been made with Venus.

Significant cross-correlations were found twice in four tries. In each of these two cases, the signal's round-trip time was approximately 300 seconds, differing by only 0.002 second from the round-trip time calculated from the relative positions of the earth and Venus given in the *American Ephemeris and Nautical Almanac*. This time difference corresponds to a discrepancy of approximately 200 miles (out of about 28,000,000 miles) between the distance of Venus as measured by the radar and the distance as computed from astronomical tables based on optical observations. It is believed that the radar determination of Venus' distance is the more accurate of the two, and that the presently accepted value of the unit of interplanetary distance used by astronomers (based on optical surveys using the diameter of the earth as base line) is too small by 0.0013 per cent. Should this belief prove to be correct, values for distances in the solar system will have to be decreased by 0.0013 per cent. (See also ASTRONOMY; ELECTRICAL DEVELOPMENTS.)

Color Perception.—The other major 1959 event bearing on information theory was the discovery by Dr. Edwin H. Land, the inventor of the Polaroid photographic process, that normal color perception can be stimulated under experimental conditions by means of light of only two colors. Before this discovery, no scientific theory seemed more firmly established than the three-color theory of vision, first propounded by Hermann von Helmholtz (1821–1894) and thoroughly explored by Lord Rayleigh (1842–1919). According to the three-color theory, any color distinguishable from others by the eye could be simulated perfectly by a mixture of three primary colors. Artists' paints and printers' inks are made up on this principle, which has served for more than 50 years to solve the practical problems of industry. Dr. Land's discovery does not diminish the utility of the three-color theory, but it does show that it is a special case of a more general and potentially far more useful theory of color vision.

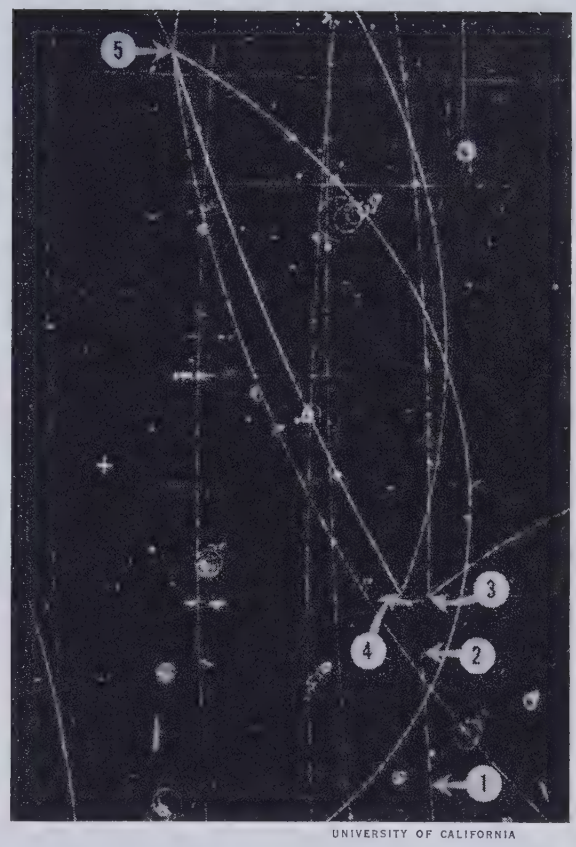
Students of information theory had long realized that colors readily distinguishable by spectroscopy were indistinguishable by eye, and had explained this by postulating that the eye takes an arbitrary average of the physical information contained in a real color—an average which throws away most of the information actually reaching the eye and retains only a small fraction for use by the brain. The effect of Dr. Land's discovery is to show that this theory oversimplifies the combined action of the eye and nervous system.

The phenomenon was demonstrated by taking two photographs of an assembly of colored objects, one with a red filter over the lens and one with a green filter. The negatives so obtained were then printed to form black-and-white positive transparencies. When the two transparencies were projected together on the same screen, one illuminated with red light and one with white, all the colors of the objects appeared to the eye.[1]

Perhaps the most surprising result of Land's experiments was the discovery that within very broad limits any pair of differently colored filters could be used to make the black-and-white transparencies, and any pair of differently colored lights could be used in the projectors, so long as the transparency made with the filter of longer wave length was projected with the light of longer wave length. In one experiment, a wide range of color perception was obtained when the two transparencies were projected with two different shades of yellow light (with wave lengths of 579 and 599 millimicrons).

There is much about the phenomenon which is not yet clearly understood. Dr. Land's present conclusion is that "the rays are not in themselves color-making. Rather, they are bearers of information that the eye uses to assign appropriate colors to various objects in an image." It is clear, however, that under certain conditions the eye can see as well with two packages of information (corresponding to the two colors used in the experiment) as it can with three such packages under normal conditions.

[1] Full details of the demonstration of the new effect, together with color photographs illustrating it, will be found in an article by Dr. Land in the May 1959 issue of *Scientific American*.



UNIVERSITY OF CALIFORNIA

This University of California photograph provides the first complete record of the creation and decay of a rare antilambda particle. An antiproton enters the picture on a straight track (1) and decays (2) into a lambda particle and an antilambda particle, which, since they have no electrical charge, leave no tracks. The ordinary lambda decays (3) into a proton and a negative pi meson, forming a characteristic V; while the antilambda decays (4) into a positive pi meson and an antiproton. The antiproton product of the antilambda decays (5) into a four-pronged pi meson star.

Nuclear Physics.—Early in 1959 it was announced that the so-called neutral Xi (or Xi zero) particle, whose existence had been predicted two years previously, had been observed by a team of scientists led by Dr. Luis W. Alvarez of the Lawrence Radiation Laboratory at the University of California. With the observation of the neutral Xi particle, the existence of every particle of ordinary matter predicted by nuclear theory has now been confirmed. A few particles of so-called antimatter remain to be detected by experimenters.

The search for the neutral Xi had been stimulated by a scheme of classification for nuclear particles derived independently by Dr. Murray Gell-Mann of the California Institute of Technology and by a Japanese physicist, Dr. Kazuhiko Nishijima. It was inferred from this scheme that the already-discovered negatively charged Xi particle should have a companion particle without an electrical charge: the neutral Xi particle. The particle interactions which demonstrated the existence of the new particle were produced by the Lawrence Radiation Laboratory's 6.2-billion-electron-volt bevatron, the most powerful particle accelerator in the United States. Some 70,000 photographs were examined before the scientists discovered a pattern of particle tracks indicative of the creation of a neutral Xi particle.

The bevatron was also used in the series of experiments which led to the detection in 1959 of an antilambda particle. A photograph recording for the first time a complete reaction involving an antilambda particle was shown by United States physicists at the International Conference on High Energy Physics at Kiev, in the Ukraine. The antilambda is one of the particles which make up antimatter. The antiparticles have similar properties to their corresponding particles of ordinary matter, but when an antiparticle comes in contact with its companion particle of ordinary matter, both particles are annihilated and a tremendous quantity of energy is released. The photograph demonstrating the presence of an antilambda recorded such a collision between lambda and antilambda particles.

At the annual meeting of the American Physical Society, held in New York City in January 1959, Dr. Robert E. Marshak of the University of Rochester and Dr. E. C. G. Sudarshan of the Tata Institute of Fundamental Research in Bombay, India, proposed a universal rule governing the behavior of the so-called weak forces involved in the spontaneous decay of some of the 30 particles and antiparticles known to physicists. In addition to the weak forces associated with the Fermi (beta-decay) process, the rule covers the much stronger forces associated with the Dirac (electromagnetic) interaction and the much weaker gravitational forces. The new theory does not explain the strongest of the four forces known to be involved in particle reactions: the Yukawa or nuclear interaction which holds nucleons (protons and neutrons) together in atomic nuclei.

Gravity.—Ever since Albert Einstein showed that gravitational forces stem from the structure of the four-dimensional space-time manifold, physicists have looked toward a more comprehensive theory showing that gravitational forces, like the much stronger electromagnetic forces, consist of waves traveling at a finite speed, and that gravitational fields are made up of indivisible quanta of energy. At the 1959 meeting of the American Physical Society, Prof. Paul A. M. Dirac of Cambridge University described a new mathematical approach to the problem. Professor Dirac has demonstrated that for very weak forces Einstein's field equations will yield both waves and quanta. Thus, a moving mass should generate gravitational waves, just as a moving charged particle generates electromagnetic waves. According to Professor Dirac's theory, the earth in its motion about the sun should produce waves at a frequency of one per year with a wave length of one light year. Although present techniques are inadequate to detect the extremely weak gravitational waves, other experimental testing techniques are under study.

EDWARD S. GILFILLAN, JR.,
Professor and Head of the Nuclear Engineering Department, Lowell Technological Institute.

PINEAPPLES. See FRUITS.

PIONEER SPACE PROBES. See SPACE FLIGHT.

PITCAIRN ISLAND. A British colony situated in the Pacific Ocean between Easter Island and French Polynesia. Pitcairn (area, about 2 square miles) was discovered in 1767 but remained uninhabited until *Bounty* mutineers and Tahitian natives landed in 1790. The mid-1958 population was 143 inhabitants, chiefly descendants of the first settlers. The group includes other small volcanic islands (uninhabited Henderson, Ducie, and Oeno). The colony is administered by the governor of Fiji (q.v.), assisted by a 5-member Island Council (chief magistrate, Warren Christian). Principal sources of revenue are the sale of Pitcairn Island postage stamps, curios, and vegetables and fruits, and the export, chiefly to New Zealand, of oranges and pineapples.

PITTSBURGH. Fifteenth most populous city in the United States, Pittsburgh, Pa. (area 55.5 square miles) is the center of a 3,053-square-mile area (Allegheny, Beaver, Washington, and Westmoreland counties) which stands eighth in population and economy among such areas in the nation. Latest population estimates (1959) are 674,726 for the city and 2,442,811 for the metropolitan area. Since the 1950 census, when Pittsburgh ranked 12th among the nation's cities, it is estimated that its population has decreased by 2,080, and that of the metropolitan area has increased by 229,575.

City government: a mayor and a nine-member council, all Democrats in 1959. On Nov. 3, 1959 State Sen. Joseph M. Barr was elected mayor to replace Mayor David L. Lawrence, who became governor of Pennsylvania in January 1959.

Budget (1959): $54,499,398. Real estate tax: 3.7% of assessed land valuation ($403,312,483, an increase of $1,712,827 from 1958) and 1.85% of assessed building valuation ($744,563,684, up $7,631,650 from 1958). Other taxes: a $5 "head tax" on city residents of voting age; income tax of 0.5% on city residents and nonresidents whose incomes originate in the city and are not subject to a similar tax in their own municipalities; 10% amusement tax; and 0.2% personal property tax. School tax: 1.4% on both land and buildings; 0.4% personal property tax; and 0.1% retail and 0.05% wholesale mercantile tax. Value of bonds retired in 1959, $4,877,900; new bonds issued, $4,100,000.

Total public school enrollment (1959–60): 78,885; teachers and other professional staff: 2,682.

Transportation data (1958): freight by river, 42.48 million tons, a decrease of 11.82 from 1957; by rail through the city, 65.63 million tons, a loss of 32.88 million. Air cargo (mail, express, freight), 34,877,424 pounds, down 3,284,845. Air travel: flights, 263,498; passengers, 2,037,832. Greater Pittsburgh Airport added a $3 million wing to its terminal in 1959 and neared completion of a new $10 million runway, 9,000 feet long. Greyhound opened a new $4 million bus station.

Steel output in Pittsburgh district (1958): 24,422,030 tons. Coal production: in metropolitan area, 19,333,292 tons; in Western Pennsylvania Coal District, 37,043,864 tons.

Employment (metropolitan area, September 1959): 767,700, of whom 214,900 were in manufacturing, mining, and primary metals; 109,300 in retail trade; and 174,600 in services, government, and miscellaneous employment. Unemployment stood at 8.9% of the total civilian labor force.

Other metropolitan area economic data: estimated per-family income (1959), $6,882; home construction (1958), 6,800 dwelling units ($128,000,400); industrial capital expenditures (1958), $180,177,000 by 37 representative firms.

Among distinctive city events of 1959 were the visit to Pittsburgh on September 24 of Soviet Premier Nikita Khrushchev and the celebration of Pittsburgh's Bicentennial Year, which ended in November.

Pittsburgh's "renaissance," begun in 1946, continued to make progress on many fronts in 1959. State legislation was passed permitting the Port Authority to set up a unified transit system, and it began a two-year preliminary study. City and

county smoke-control programs were unified. ACTION (American Council to Improve Our Neighborhoods) completed a 210-unit apartment program and launched another.

The highways program progressed, with work begun on the new Crosstown Boulevard and the 62nd Street Bridge; the opening of the new Fort Pitt Bridge and Boulevard (see BRIDGES); studies made for the Ohio River Boulevard inner-city link; the break-through on Fort Pitt Tunnel (see TUNNELS); and with the $30 million Etna Bypass and new Fort Duquesne Bridge entering the second phase of construction.

In Gateway Center the new Conrad Hilton Hotel, Gateway Park, and an underground parking garage were opened; work pushed forward on the new Gateway Center Four office building; and a 23-story executive apartment building was announced.

Despite the long steel strike (see IRON AND STEEL), progress was continued on the new stadium and the Civic Auditorium, but the start of a 20-story fraternal insurance building was delayed. Work continued on two urban renewal programs totaling $73 million. The Mellon Institute (q.v.) opened its new Bushy Run Laboratories, and several massive educational programs of physical expansion continued to progress.

GEORGE SWETNAM,
Staff, "The Pittsburgh Press," and Author of "Pittsylvania Country" and other books.

PLANTS. See BOTANY; HORTICULTURE; and the Index entry, *Plant Research.*

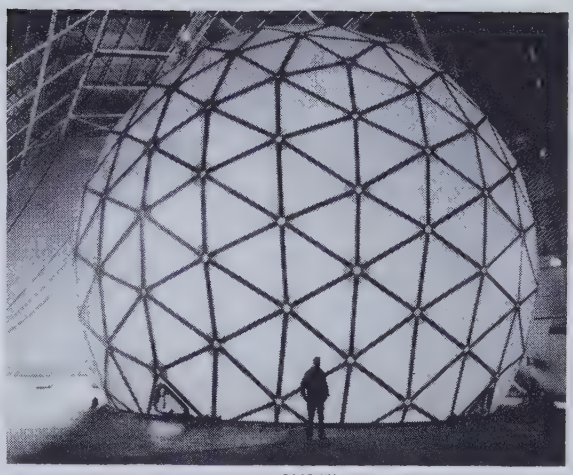
PLASTICS. In 1959, with major chemical companies making substantial investments in plastics production facilities, the amount of plastics produced continued to rise. Polyethylene and polypropylane plastics, closely paralleling the production rates of the longer-established vinyl series of resins, are bidding fair to become the first plastics to register an annual production volume of one billion pounds. Production figures for 1958, released by the U.S. Tariff Commission, are shown in the accompanying table.

U.S. PRODUCTION OF PLASTICS, 1958

Material	Pounds
Cellulose ester plastics	141,360,000
Phenolic and other tar acid resins	487,862,000
Urea and melamine resins	349,214,000
Styrene resins	763,057,000
Vinyl resins	869,419,000
Polyethylene resins	864,728,000
Polyesters	117,246,000
Cumarone-indenes	267,940,000
Alkyds (phthalics)	416,837,000
Total	4,277,663,000

Uses for plastics are becoming increasingly diversified. In 1958, for example, 29.6 million pounds of reinforced plastics were used in the construction of transportation facilities; 18.5 million pounds went into aircraft and missiles; the construction industry accounted for 31.5 million pounds; 37 million pounds were used in boat building. According to an official of Monsanto Chemical Company, structural plastics in 1958 accounted for 21% of total plastics volume. Well over 110 million pounds of plastics, mostly thermoplastics, are used in the manufacture of toys.

Research in the industry resulted in important developments in 1959. Du Pont brought out superior weather-resistant films of polyvinyl fluoride. An improvement in the stability of cellulosic fibers, wet or dry, was obtained by using longer, more compact cellulose chains. Shell Chemical Company commercially produced a synthetic "natural" isoprene rubber, and General Electric developed a nitrile-silicone rubber for high-temperature stability. A new polyester fiber, Teron, will soon join Dacron in the synthetic materials market. Dycril, a photopolymer plate introduced by Du Pont, is being offered on a commercial basis for use in the printing industry (see GRAPHIC ARTS). B. F. Goodrich Company has developed a magnetic plastic by impregnating its Koroseal vinyl plastics with a "powder sensitive to magnetism."



GOODYEAR AIRCRAFT CORPORATION

World's largest fiberglass radome, 68 feet in diameter and more than seven stories high utilizes hundreds of plastic panels bolted together. The radome may be transported by air, and can be erected by a six-man crew in 80 hours.

The use of plastic film bags, especially by the dry cleaning and laundry industries, made available to the public a number of plastic films. Their use as a protective covering for clothes, as playthings, or as mattress covers was discouraged due to a few tragic cases of suffocation that were associated with the plastic bags. In cooperation with other organizations, the plastics industry waged an intensive publicity campaign to acquaint the public with the proper use and possible danger of polyethylene film. JOHN DELMONTE,
President and General Manager, Furane Plastics, Inc.

PLATINUM GROUP METALS. According to the U.S. Bureau of Mines, recovery of new platinum group metals by refiners increased from 47,228 troy ounces in 1957 to 48,195 ounces in 1958, of which 16,062 ounces were from domestic sources and 32,133 ounces were from imported crude metals. Total recovery in 1958 included 35,409 ounces of platinum, 5,913 ounces of palladium, 3,146 ounces of iridium, 1,014 ounces of osmium, 1,229 ounces of rhodium, and 1,484 ounces of ruthenium. Secondary recovery decreased from 87,521 ounces in 1957, to 81,514 ounces in 1958. The latter included 36,426 ounces of platinum, 38,883 ounces of palladium, 1,223 ounces of iridium, 335 ounces of osmium, 2,639 ounces of rhodium, and 2,008 ounces of ruthenium. Imports decreased from 686,983 ounces in 1957 to 670,431 ounces (a preliminary figure) in 1958. The principal sources of the 1958 total were Switzerland (184,784 ounces), United Kingdom (144,396), Canada (121,140), USSR (93,583), France (52,857), Netherlands (27,726), and Colombia (22,638). The metals imported from Switzerland, France, and the Netherlands were reported to be largely of Soviet origin.

Total sales decreased from 744,025 ounces in 1957 to 690,373 ounces in 1958. Sales of platinum to domestic consumers were 264,361 ounces in

1958 (347,983 ounces in 1957), amounting to 38.3% of the total sales of platinum group metals. Sales to domestic consumers were 24% less in 1958 than in 1957, chiefly due to the drop in demand from the chemical industries, including petroleum refining.

In the first nine months of 1959, sales of the platinum group metals declined. New and secondary platinum metals recovered by refiners in the United States during this period included: platinum, 70,594 ounces; palladium, 51,296 ounces; iridium, 2,309 ounces; osmium, 750 ounces; rhodium, 2,471 ounces; and ruthenium, 2,020 ounces.

POLAND. The Polish People's Republic, so called since the end of World War II when the Soviet Union forced on the Poles a Communist-controlled regime, has an area of 120,359 square miles and a rapidly growing population which was estimated in 1959 at nearly 30 million, of whom 7.5 million live in the former German territories in western Poland and well over 1 million in the capital, Warsaw. The limited liberties which Poland gained after the October crisis of 1956 have been gradually reduced, and in the fall of 1959 the tightening controls of the Communist Party, not only in foreign and internal politics but also in economic and cultural affairs, reached an alarming climax, obviously under pressure from Moscow.

Government in Exile.—Under the circumstances it was important to assure the continuity of Free Poland's legitimate authorities who reside in London. Accordingly, the president of the republic, August Zaleski, on Sept. 3, 1959, designated as his successor in case of death the foreign minister, Alexander Zawisza, and on September 12, five new ministers were named to the legitimate government, which has been headed since 1955 by Premier Antoni Pająk. Contrary to rumors spread at the beginning of 1959, the Vatican continues to recognize the embassy of Free Poland.

Warsaw Government.—The Parliament or Sejm consists of 458 members who are popularly elected to 4-year terms. It selects a Council of State and a Council of Ministers or cabinet, which are the chief governmental organs. The power of Władysław Gomułka, first secretary to the Central Committee of the United Polish Workers' (Communist) Party since 1956, is now practically dictatorial, although Alexander Zawadzki continues to act as nominal head of state in his position as president of the Council of State, and Józef Cyrankiewicz remains premier. The foreign minister is Adam Rapacki. A far-reaching reorganization of the cabinet, announced on Oct. 27, 1959, involved the appointment as vice premiers (supplementing the three existing ones) of Eugeneiusz Szyr and Julian Tokarski, both Stalinists who had been dismissed from the government after the Poznań riots in 1956. In addition, Tadeusz Gede, ambassador to the USSR and, before October 1956, a vice premier, became deputy chief of planning; the minister of education, Władysław Bienkowski, who was considered too "liberal," was replaced by his deputy, Wacław Tyłodziecki; and the minister of agriculture, Edward Ochab, was succeeded by his deputy, Mieczysław Jagielski. The dismissal of Ochab, who had played a decisive part in the October revolution of 1956, is particularly significant, although he received a new position in the party's Central Committee.

Religion and Education.—The Roman Catholic Church was the first to suffer in 1959 from the consequences of stricter Communist controls. The Rev. Marian Pirożyński, editor of a Roman Catholic publication, and 14 associates were accused of using bribery and blackmarket dealings to obtain newsprint, and he was sentenced on Feb. 9, 1959, to two years in jail. The bishop of Kielce, Czesław Kaczmarek, who had been liberated from prison and fully rehabilitated in 1956, was informed on June 2, 1959, that the government had decided not to allow him to continue his functions and had renewed the old charges made against him. Although only the Holy See can remove a bishop, the state refused to recognize the bishop as head of his diocese. The repeated protests of Stefan Cardinal Wyszyński to the government's repressive measures against the church were completely disregarded.

The number of schools without religious instruction was tripled during 1959. The government has not yet returned to a policy of open interference with the universities and colleges. In 1959 more than 96,000 students were enrolled in universities and colleges, and the total number of pupils in all schools was over 5 million. About 140 scholars were permitted to accept fellowships from the Ford and Rockefeller foundations in 1959.

Finance.—On Feb. 12, 1959, the Sejm, whose role is otherwise insignificant, approved a well-balanced budget showing an income of 186.5 billion zlotys and an expenditure of 182.5 billion. The official rate of exchange is 24 zlotys to U.S.$1.

Economy.—At the beginning of 1959 the economic output was still rising, and it was announced later that in the first half of 1959 the economic plan for industry had been fulfilled by 103%. Industrial production increased 9.5% in 1958 over 1957, and it was up 9.1% in the first half of 1959 over the same period in 1958. Production in the basic industries for 1958 was as follows: electric power, 23.9 billion kw.-hr. (up 13% over 1957); bituminous coal, 94.9 million tons (up 1%); crude steel, 5.6 million tons (up 6%); rolled steel, 3.7 million tons (up 3%); petroleum, 175,000 tons (down 3%); zinc, 163,000 tons (up 2%); and cotton fabrics, 598 million meters (up 5%). Output of grains in 1958 was about 10% higher than the annual average in 1954–57 of 13.9 quintals per hectare. Unlike those of other Communist countries, about 90% of Polish farms are privately owned.

Although the congress of the Communist Party held in March 1959 was still optimistic about economic matters, the Central Committee, as early as February 22, called for action against the economic crisis which had been created, according to Gomułka, because the people did not work hard enough and were not obeying orders. The growing trend toward strict government control had drastically reduced the opportunities for private enterprise and favored a return to the collectivization of agriculture, as was evidenced by the deliberations at the second plenum of the Central Committee on June 22–23, when a special fund for the development of agriculture was created.

The economic crisis became initially apparent in the scarce supply of meat; its sale was limited on Sept. 22, 1959, and its price was increased by 25% on October 17, when about 1,000 persons were arrested in connection with the shortage of deliveries. The difference of opinion as to the responsibilities for that situation accounted principally for the aforementioned dismissal of Edward Ochab as minister of agriculture. The government, which, during Ochab's absence on a visit in October to the United States, had considered drastic changes in agricultural policies, decided to reduce by 2 billion zlotys the investments for 1960 (particularly for construction), and on November 18 the Sejm met in order to approve an economic plan reducing employment in the ministries and public enterprises, and coordinating industries.

Foreign Trade.—Poland's exports in 1958 were estimated at 4.2 billion zlotys (up 8% over 1957); imports, 4.8 billion (down 4%). About 60% of Poland's trade is with the Communist countries and 40% is with other nations. In 1958, Poland's major trading partner, the Soviet Union, supplied 74% of Poland's imported iron ore, 90% of imported crude oil, and 44% of grain imports.

On May 13–16, 1959, Poland participated in the meeting of the Soviet bloc's Council for Mutual Economic Assistance at Tiranë, Albania. Poland's integration with the bloc was evidenced by the fact that most of its trade agreements were signed in 1959, as in the preceding years, with

Communist governments, although some trade agreements were reached also with African and Asian nations, such as Ghana, Guinea, Iraq, and Israel. Among the protocols extending earlier agreements was one signed on February 14 with West Germany.

There was a special desire for economic aid from the United States similar to the nearly $100 million received annually in 1957 and 1958. Negotiations started at the end of February 1959, and on March 6 the American ambassador, Jacob D. Beam, began negotiations in Warsaw regarding the claims of American citizens and companies for compensations resulting from the nationalization of their property in Poland. The slow progress of these negotiations, coupled with Gomułka's earlier anti-American statements, helped account for the fact that a first agreement signed in Washington on June 10 granted to Poland only $44 million in sales of surplus goods and $6 million in credits. After further talks, however, the total amount was raised to over $61 million. Furthermore, after the USSR was reported to be sending meat to Poland (originally, only 3,000 tons, but later, 40,000–60,000 tons), the United States decided, on November 3, to sell to Poland 200,000 tons of fodder grains, with the price to be paid in Polish currency.

Principal Events, 1959. *Domestic Affairs.*—Although there was no return to police terror in Poland during the year, stricter control of the people was enforced. The year began with official statements that all cultural policies must follow strictly "socialist principles," which the intellectuals are required to support actively. In March, Gomułka declared that literature and art had to be "realistic in form and socialist in content," and that there would be no retreat from these objectives. In connection with cabinet changes, Julian Hochfeld, who had been close to the liberal wing, lost the directorship of the Institute of Foreign Affairs. Also, a poet who had written too critically about the situation was sentenced to three years in prison.

After careful preparation the Communist Party's third national congress—the first to be held since Stalin's death and under the Gomułka regime—met in Warsaw from March 10 to 19. Over 1,400 delegates elected the 12 members of the Politburo, all of whom were supporters of Gomułka. At the opening session on March 10, Gomułka made a 7-hour speech, mostly on foreign affairs, in which he threatened to sign a separate peace treaty with Germany and stressed the determination to retain Poland's western lands. He barred any return to Stalinism, but declared that the party would repress antisocialist activities. He also outlined the plan of economic development for 1960–65. The Stalinists remained silent, and the "revisionists" were obviously suppressed. The party's biggest problem seemed to be how to overcome the public's growing apathy.

It was not until the economic troubles in October 1959 that there appeared a crisis in the Polish Communist Party, although in the summer there were indications that the influence of Ochab, hitherto Gomułka's close associate, and of the "liberal" wing was declining. After the drastic changes in the composition of the government, Jerzy Morawski, one of the top leaders in the Politburo, reportedly decided on October 28 to resign from that leading body. Without being really a liberal, he was, however, opposed to the extreme tightening of economic and intellectual control. His resignation was accepted by the plenum of the party's Central Committee, and on November 20 it was announced that he had received a minor position as deputy chairman of the Supreme Board of Controls. Even more significant was the fact that Gen. Kazimierz Witaszewski, one of the leaders of the so-called "Natolin" group of Stalinists who had been dismissed after the events in October 1956, was recalled on November 11 from the Polish embassy in Prague and named deputy chief of staff in charge of army intelligence.

WIDE WORLD

Vice President Nixon waves from auto to enthusiastic crowd which greeted his arrival in Warsaw, Poland, on August 2.

There seems to be some evidence that the changes in Poland's internal affairs are not exclusively motivated by the economic crisis but are much more the result of direct interference by Soviet Premier Khrushchev, whom Gomułka is said to have met secretly in Rumania on October 19–25. Apparently, Khrushchev requested from Gomułka not only Poland's return to economic centralization but also the final liquidation of "revisionism" in intellectual life and full political support of East Germany.

Foreign Affairs.—Poland's foreign policy continued in 1959 to be dominated by the fear of West Germany's remilitarization and the desire to have her new western frontiers definitely recognized. This continues to be the main reason why the Polish government is anxious to have Moscow's

Soviet Premier Khrushchev (r.), on a visit to Poland in July, inspects corn on a state farm with Władysław Gomułka, Polish Communist Party leader. (For interesting comparison with premier's reaction to United States corn, see *Iowa.*)

WIDE WORLD

support. On January 25 a delegation was sent to the 21st congress of the Soviet Communist Party at Moscow, and on January 28, Gomułka delivered to the congress a speech in which he stressed the sovereignty and equality of all countries in the Soviet bloc.

On April 27–28, a conference was held at Warsaw of the foreign ministers of the Warsaw Pact countries, and China sent a special military delegation. The delegates discussed the forthcoming East-West conference of foreign ministers at Geneva on the Berlin crisis, and the Soviet Union later proposed (May 12) that Poland and Czechoslovakia be admitted to the Geneva deliberations. On July 14 there arrived in Warsaw a Soviet delegation headed by Khrushchev, who received a warm welcome from Gomułka but was rather coolly watched by the people mobilized in the streets. He toured the frontier regions of Poland, beginning with Szczecin, where he made a speech guaranteeing the new western boundaries, and he visited also the Silesian coal mines and the city of Rzeszów near the new eastern frontier. On July 22, on the eve of the anniversary of the establishment of the Communist regime in Poland, a joint communiqué was issued by Khrushchev, Gomułka, and Premier Cyrankiewicz which emphasized the close alliance between the two countries and Poland's support of the Soviet stand on West Berlin.

The outstanding event of the year for the Polish people was probably the three-day visit by U.S. Vice President Richard M. Nixon, who at the invitation of President Zawadzki stopped in Warsaw on his return trip from Moscow. Although no details of his timetable had been announced, he was most enthusiastically greeted and acclaimed by a crowd of at least 100,000 which spontaneously filled the streets on his arrival (August 2) and tried to approach him on every possible occasion in order to manifest the friendly feelings of the Poles for America. The government felt rather embarrassed by the outburst, which was impossible to control and contrasted unfavorably with official policies. On the other hand, Gomułka and Zawadzki, in their long talks with Nixon, tried to convince him of the urgent necessity of recognizing Poland's western frontier, and welcomed his visit as recognition by the United States that their government occupied a special position among the Soviet satellite regimes. Another recognition of that situation by the West was the return to Cracow on February 16 of part of the historic Polish art treasures which had been deposited in Canada during the war.

On the eve of the 20th anniversary of the outbreak of World War II, an important statement by Chancellor Adenauer was expected, since in the spring West Germany had seemed ready to recognize the Warsaw regime and even to sign a nonaggression treaty. However, Adenauer's speech of August 31 did not satisfy the Poles and was at once rebuffed by Cyrankiewicz, thus ending for the time being the plan to establish diplomatic relations. There was also a dispute regarding the composition of the German delegation which attended the meeting of the Inter-Parliamentary Union at Warsaw on August 27–September 4.

Relations with China became closer during the year, and on September 26 a Polish delegation headed by President Zawadzki participated in the celebration of the 10th anniversary of the Communist regime in that country.

Poland's solidarity with the Soviet bloc on matters of foreign policy was exemplified in the fall when that bloc supported Poland's attempt to be elected to the vacant seat in the U.N. Security Council. The Western powers supported the candidacy of Turkey to the vacant seat. After 43 ballots in October and November remained inconclusive, and Poland, which led in most of the ballots, rejected a compromise arrangement, the voting was postponed until December 13, when Poland received 71 of 76 votes, it being understood, however, that Turkey would serve the second year of the two-year term.

The able and objective correspondent of the New York *Times*, A. M. Rosenthal, was ordered, on November 12, to leave Poland for "probing too deeply" into internal matters. The United States government announced two days later that it was "very deeply concerned" about that action and considered it "very harmful" for American-Polish relations, which had begun to improve recently in accordance with the desires of the Polish people.

Professor of History, Columbia and Fordham Universities; President, Polish Institute of Arts and Sciences in America.

POLAR EXPLORATION. See Antarctica; Arctic Exploration; Geography and Exploration; International Geophysical Year.

POLICE. Safety Training.—The Northwestern University Traffic Safety Institute has received from Kemper Foundation 32 grants-in-aid for enrolled students who are responsible for planning and command. The institute's complete program involves instruction of 2,000 policemen at its headquarters and in cooperating schools and universities in the United States. There are 51 announced courses of study for policemen, judges, prosecutors, engineers, driver-licensing officials, and Army and Navy traffic officers. Most courses extend over two to four weeks; others, for administrators, cover nine weeks.

Firefighting.—Gov. William G. Stratton's veto of Illinois legislation which was intended to kill cooperation between police and fire departments left Evanston and several other cities free to perfect police participation in firefighting during 1959. The plan relieves fully trained firemen from unskilled work at a fire scene. About 100 policemen in Evanston volunteered for this service, with 50 being equipped and assigned to cooperative duty in a given period, and no fewer than 12 placed on duty during each shift. While on regular police patrol they are often so close to a fresh fire that they are first at the scene. The city manager reports improved protection from this cooperation, as well as a saving of $70,000 a year. Similar advantages are the rule in several other Chicago suburbs and downstate Illinois cities.

Wiretapping.—Wiretapping is legal in New York State. Police and district attorneys declare they would be "handcuffed" were it illegal. It has sometimes been called "oppressive," but this has been stoutly denied. Kings County District Attorney Edward S. Silver reported in *The Police Chief* (February 1959) that only 459 wiretap orders per year had been obtained in all counties of the state.

Fingerprinting.—The intense battle against criminals is bringing about other measures to "unshackle the police." Ordinarily police are permitted to fingerprint only persons charged with felony and with repeated less serious offenses, including certain misdemeanors. But in 1959, New York Attorney General Louis J. Lefkowitz asked the State Legislature to authorize enforcement agencies to fingerprint any convicted person.

Use of Radar.—Radar evidence of speeding is sometimes questioned. No expert testimony concerning the general principles and reliability of

radar is needed, according to the Ohio Supreme Court in *City of East Cleveland* v. *Ferell* (Ohio 154 N.E. 2d 630, 1958). But the court held that police officers and departments must be able to show that the particular device involved in a given case was in good condition when the evidence in question was recorded.

In this connection, the court questioned the police technique of signaling a waiting and concealed officer to stop a driver whose alleged speeding a few minutes earlier could not have been seen by the hidden officer. Usually, arrest without a warrant requires that the arrestor have first-hand evidence of the offense.

Illegal Possession and Transport.—Two drivers were arrested on suspicion of carrying marijuana. Only marijuana sweepings were found in the car, but a bag of it was found by the roadside where it appeared to have been tossed by the fleeing suspects, who were unseen by the pursuing police. The defendants' attorney urged that since the bag was not "connected up with the defendants" it was inadmissible as evidence. The court held that this affected the weight but not the admissibility of evidence, thus implying that the police were on solid ground in making the arrests.

Roadblocks.—Florida state police established roadblocks in a wholesale search for laggards who had not renewed their automobile licenses within the required time limit. The courts held indiscriminate blocking a violation of both the United States and Florida constitutions in *Aronowitz* v. *City of Miami* (Fla. 27 U.S.L. Week, 2448, Feb. 20, 1959.)

POLITICAL PARTIES. For United States political parties, see DEMOCRATIC PARTY; ELECTIONS, U.S.; REPUBLICAN PARTY; and UNITED STATES. For parties of other countries, see articles on those countries.

POLITICAL SCIENCE. Again in 1959, political science in the United States was characterized by increased emphasis on basic research and the development of empirically grounded theoretical constructs that summarize the results of past research and serve as a guide for future work. Both these emphases result from an extension of the goals, methods, and techniques of what is normally termed the "political behavior" approach to the study of politics and government. The extent to which all fields of political science—public law, American government, comparative government, political theory, public administration, and state and local government—were being influenced by this approach was increasingly apparent in professional journals and at professional meetings.

Characteristically, the political behavior approach rejects institutions as the basic unit of research, focuses attention on the behavior of individuals in political situations, defines political science as a behavioral science, and emphasizes its unity with the other social sciences, especially psychology, sociology, and anthropology. It emphasizes the importance of research design and of utilizing and developing more precise techniques for observing, measuring, and classifying data, and defines the construction of systematic empirical theory as the goal of political science. While still separated by disagreement on a number of fundamental questions, the division between "behavioralists" and "traditionalists" is becoming less sharp as more leading "behavioralist" spokesmen are broadening their approach and granting more recognition to the importance of the study of political institutions, and as leading "traditionalist" proponents utilize more of the techniques, methods, and research findings of the behavioralists.

The American Political Science Association, with permanent headquarters at 1726 Massachusetts Avenue, NW, Washington 6, D.C., is the official professional organization in the field of political science. Its 55th annual meeting was held in Washington, D.C., Sept. 10–12, 1959. At this meeting, papers were presented and discussions held on all major fields of political science. The presidential address, delivered by the retiring president, R. Taylor Cole of Duke University, was devoted to a comparative examination of the constitutional courts of West Germany, Italy, and Austria. President Cole asserted that the comparative study of judicial systems has "received too little attention" and described it as an area "deserving more attention in the future."

Carl Swisher of Johns Hopkins University succeeded to the presidency of the national association and Emmette Redford of the University of Texas was named president-elect. Three major awards for significant research were made by the association at the annual meeting. The Woodrow Wilson Foundation Award for the best book of 1958 in the field of government, politics, and international affairs was divided between Christian Bay for *The Structure of Freedom* and James S. Coleman for *Nigeria: Background to Nationalism.* The Leonard D. White Memorial Award was presented to Dean E. Mann for his doctoral dissertation on *The Administration of Water Resources in the State of Arizona.* The James Kimbrough Owen Award went to Fred G. Burke for his dissertation on *The Development of Local Governments in Uganda: A Comparative Approach.*

The association also inaugurated at the 1959 annual meeting a series of awards for distinguished congressional service. Under a grant from the William Benton Foundation, awards in 1959 were made to Senators Hubert H. Humphrey (Minn.), Kenneth Keating (N.Y.), and John Williams (Del.), and to Representative Carl Vinson (Ga.).

In 1959 the association continued to publish the *American Political Science Review* and again conducted the Congressional Fellowship Program, which enables 18 young political scientists to spend a year as participant observers of the U.S. Congress, and the Public Affairs Reporting Awards Program, which rewards young journalists in 12 Midwestern states for excellence in reporting state and local government and politics.

The International Political Science Association, with headquarters in Geneva, Switzerland, held its Seventh Round Table in Opatija, Yugoslavia, Sept. 1–5, 1959. The central theme was "Civil-Military Relations," and other subjects discussed were "Political Science in Western Europe" and "Recent Developments in the Field of Political Science Teaching and Research in Yugoslavia." In all, 48 participants from 13 countries took part. Professor Jacques Chapsal of France was the president of the international association in 1959.

POPULATION STUDIES. See CENSUS DATA, U.S.; POPULATION TRENDS; and the Index entry, *Population Studies.*

POPULATION TRENDS, World. The population of the world in 1958 was estimated at about 2.85 billion, and increasing at a rate of approximately 1.6% per year.[1] If the present rate of increase is maintained, the world population will be more than double the 1958 total by the year 2000.

Table 1—WORLD POPULATION ESTIMATES
(Estimates are as of midyear of dates shown.)

Region	1920	1940	1958	% increase, 1920–58
	(in millions)			
World	1,810	2,246	2,852	58
Africa	140	172	230	64
North America	147	187	256	74
South America	61	90	134	120
Asia[1]	967	1,213	1,592	65
Europe[2]	328	380	418	27
Oceania	8.8	11.3	15.8	80
USSR	158	192	205.8	30

[1] Exclusive of USSR but inclusive of Asiatic Turkey. [2] Exclusive of USSR but inclusive of European Turkey. (Table based mainly on sources from the Statistical Office of the United Nations.)

The chief reason for the relatively high rate of increase is the decline in the overall death rate due to advances in medical care and sanitation. As shown in Table 2 (page 609), the countries with the highest rates of population growth are the underdeveloped or semideveloped countries which have begun to benefit from public health measures. In the highly industrialized countries, such as those of western Europe, the low death rates are accompanied by low birth rates, making for a relatively low rate of natural increase.

PORTS AND HARBORS. See Index entry.

PORTUGAL. A corporative republic on the west coast of the Iberian Peninsula of southwestern Europe. Area (including the Azores and Madeira, qq.v.), 35,598 square miles; pop. (est. July 1, 1959), 9,052,000. Principal cities (with estimated 1957 populations) are Lisbon, the capital (843,300), and Oporto (299,500).

Government.—According to the Portuguese Constitution of 1933, Portugal is a corporate state. The president, who has chiefly titular functions, is Rear Admiral Américo Deus Rodrigues Tomáz; he was elected to the office on June 8, 1958, and assumed his duties on August 9. Parliament consists of a National Assembly of 120 members elected for 4 years, and an appointed Corporative Chamber. The State Council or cabinet is not responsible to Parliament. Premier António de Oliveira Salazar has exercised personal control of the government since 1933. He heads the ruling National Union, whose candidates were elected in 1957 to fill all the seats in the National Assembly. The electorate plays a minor role (see below, *Principal Events*).

Education and Religion.—Illiteracy is widespread; according to the 1950 census, 44% of the population aged 15 years and over were unable to read. In 1956 there were 16,687 primary schools (with 841,422 pupils); 380 secondary schools (76,637 students); 251 technical schools (64,977); 23 teacher-training schools (2,777); and 13 schools for higher education (19,161). In 1956–57 the universities at Lisbon, Coimbra, and Oporto enrolled an aggregate of 12,762 students, and the Technical University at Lisbon had 2,760 students. Roman Catholicism is the predominant religion, but church and state are separate.

Finance.—Government revenue for 1958 was 8,744 million escudos, and expenditure totaled 8,687 million; the resultant surplus of 57 million escudos was the largest in 5 years. The escudo equals 3.48 cents in United States currency. The government established external convertibility of the escudo in December 1958.

Transportation and Communications.—The state-owned Portuguese Railway Company operated 2,217 miles of track at the end of 1957. Roads aggregated 17,768 miles in the same year. The merchant marine comprised 547,000 gross registered tons. Domestic and international air service is provided by the government-sponsored Transportes Aereos Portugueses, and several foreign airlines serve Lisbon. In 1958 there were 133,400 passenger cars and 58,400 commercial vehicles. Telephones in 1957 numbered 304,937; radio receiver licenses, 596,000; and television sets, 8,000.

Production.—The economy is based on agriculture, light industry, and a few export specialties. Estimated national income in 1957 was 50.4 billion escudos, an increase of about 2% over 1956; however, the cost-of-living index also rose by 2% from 1956 to 1957. Manufacturing and construction provided about 35% of gross domestic product in 1957; agriculture, forestry, and fishing, 28%. Industrial production (excepting minerals) increased nearly 6% in 1958 over that in 1957, with notable gains registered by the foodstuffs, chemical, nonmetallic minerals, and textile industries. In 1956 there were 3,596 manufacturing establishments which employed 298,000 workers. Industrial projects scheduled for completion under the Second Six-Year Development Plan (1959–64) include two new dams on the Cavado and Rabagao rivers. In 1959, construction was completed on the Picote hydroelectric plant, which is to generate about 1 billion kw.-hr. annually. Electricity output in 1958 averaged 222 million kw.-hr. monthly. Due to a decline in foreign demand, mineral production in 1958 declined about 20% below 1957. Coal output in 1958 was about 576,000 metric tons; iron ore, 217,200; pyrites, 667,000 (1957; sulfur content: 307,000); tin concentrates (Sn content), 1,145 (1957); and tungsten ore (nickel-cobalt content), 2,589 (1957).

Agricultural output declined somewhat in 1958 from the good crop year of 1957. Chief grain crops and 1958 yields were: wheat, 749,000 metric tons; rye, 211,000; barley, 110,000; and oats, 140,000. Output of potatoes in 1958 totaled 1,196,000 metric tons; olive oil, 82,782 (1958–59); grapes for wine, 838,000; and port wine for export, 5.6 million gallons (down 10% from 1957). The 1958 fish catch, consisting principally of sardines, was a record 275,220 metric tons. Portugal annually provides over half the world's output of cork.

Foreign Trade.—Total exports in 1958 were valued at 8,299 million escudos (about the same as in 1957); imports, at 13,791 million (down 4%). Chief exports and values were: cork, 1,319 million escudos; fish, 1,035 million; and wine, 943 million. Principal imports are raw materials, machinery, vehicles, iron and steel, and petroleum products. In 1958 the Portuguese overseas provinces took 27.4% of Portugal's exports; the United Kingdom, 11.3%; the United States, 8.3%; and West Germany, 7.6%. West Germany supplied 17.6% of Portugal's 1958 imports; the Portuguese overseas provinces, 14.7%; the United Kingdom, 12.9%; and the United States, 7.1%.

Principal Events, 1959.—Gen. Humberto Delgado, the defeated opposition candidate who received nearly a fourth of the electorate's votes in the presidential election of June 8, 1958, was allowed to leave Portugal on April 20, after he had been given political asylum for three months at the Brazilian embassy in Madrid. The government had retired General Delgado from the Portuguese Air Force on January 7 because of his alleged subversive activities, and he had then declared that he was in danger of being arrested. Following his arrival in Brazil on April 21, the general said that he would continue to oppose Premier Salazar and that he expected the Portuguese regime to collapse "at any time."

As a result of the widespread dissatisfaction indicated by the voters in the 1958 presidential election, the National Assembly approved on June 18, 1959, a bill amending the constitution and

[1] World and continental population totals, compiled by the United Nations Statistical Office, are in the nature of estimates, since accurate enumerations have never been taken in some areas of the world.

Table 2—VITAL STATISTICS FOR SELECTED COUNTRIES

(Data are for 1958, unless otherwise indicated. For countries marked with an asterisk (*), data for birth, death, and infant mortality rates are provisional. *Estimated Population*—figures are for mid-1958, as reported by the United Nations. *Birth Rate*—crude rate (number of births per 1,000 persons). *Death Rate*—crude rate (number of deaths, exclusive of stillbirths, per 1,000 persons). *Infant Mortality Rate*—deaths of infants under one year of age per 1,000 live births, excluding stillbirths. *Annual Increase*—average percentage increase of total population. *Life Expectancy*—average expectation of length of life (in years) at birth, based on mortality conditions of period indicated. *Population Per Sq. Km.*—total area, including inland water (1 sq. km. = 0.3861 sq. mi.). Sources: *Demographic Yearbook 1958; Population and Vital Statistics Reports, October 1959,* Statistical Office of the United Nations.)

Country	Estimated population ('000)	Birth rate	Death rate	Infant mortality rate	Annual increase (%) 1953–57	Life expectancy male	Life expectancy female	Life expectancy period	Population per sq. km. 1957

[19] England and Wales.

providing for the election of a president by an electoral college in place of popular suffrage. The electors, comprising parliamentary members and district representatives, are to choose a president on the 15th day before the expiration of the current president's seven-year term, with a two-thirds majority mandatory for election on the first ballot, a majority required on the second ballot, or a

plurality necessary on the third ballot.

Conflicts between the government and various opposition groups continued during the year. The government arrested 31 persons in March and accused them of participating in a Communist-inspired conspiracy. A letter sent in April to Premier Salazar by 45 prominent citizens reportedly protested against the regime's repressive methods, particularly the use of torture by the secret police. Later, the premier received a petition signed by university students which allegedly urged his retirement and condemned political repression and inadequate school facilities. A statement on December 1 by Paulo Benard Guedes, a retired general, that praised the institution of the monarchy as assuring "a true union of the Portuguese" was published in three Lisbon newspapers, and it aroused speculation that the monarchy might be restored. However, Premier Salazar, who was seriously ill early in the year and had hinted then that he might resign his position, gave no real indication that he would do so in the immediate future.

The National Development Bank, which was established to coordinate economic activities and to help finance new enterprises, began operations on August 4. The bank has a capital of 1 billion escudos, of which 70% was supplied by the government, and it will function in both Portugal and the Portuguese overseas territories.

On November 20, Portugal initialed the treaty which would make her a member, along with the other so-called Outer Seven countries, of the European Free Trade Association (q.v.).

W. R. F.

PORTUGUESE TERRITORIES. Portugal's overseas territories exceed 800,000 square miles in area and have a population of some 12.8 million. Each territory forms an overseas province of Portugal and is under the Ministry for Overseas Territories. The territories theoretically exercise administrative and financial autonomy, but are actually under the strict control of Lisbon. A governor, or governor general (in the larger territories), heads the territorial government. In some of the territories there are partly elective legislative councils, but in no instance is there any considerable degree of popular government. The African territories are among the least advanced areas of the continent in economic development and native education and self-rule, and have thus far remained virtually untouched by the nationalist movements under way in Africa.

PORTUGAL'S OVERSEAS PROVINCES

Province	Area (sq. mi.)	Pop. (est. 1958 '000)	Trade ('000,000 escudos[1]) Imports	Exports	Year
Africa					
Mozambique (Port. East Africa)	302,328	6,234	2,996	1,872	1957
Angola (Port. West Africa)	481,350	4,392	3,738	3,689	1958

São Tomé and Principe	372	62	133	173	1956
Asia					
Portuguese India	1,619	649	445	310	1954
Portuguese Timor	5,763	490	61	39	1957
Macao	6	210	117[2]	58[2]	1957

[1] The Portuguese escudo is equal to about 3.5 cents in U.S. currency.
[2] Patacas (1 pataca = 5.5 escudos); trade is largely transit.

Territories in Africa. *Mozambique.*—A territory extending some 1,500 miles along Africa's east coast. Europeans numbered 65,798 in 1955; mixed Africans, 29,873; Indians, 15,235; and Africans with *assimilado* status, 4,554. Lourenço Marques (est. 1955, 105,000) is the capital and chief port; Beira (50,000) is also a major port. The governor general is assisted by an advisory Government Council and a Legislative Council of 24 members (16 elected, 8 appointed). The 1957 budget was balanced at 2,527 million escudos. Under the 6-year development plan (1953–58), about $81.2 million was spent for social improvement and economic development. In 1956 there were 2,475 primary schools (293,953 pupils); 6 secondary (1,207); 69 vocational (7,496); and 5 normal (360). An estimated 98% of the population was illiterate in 1950.

The economy is chiefly one of subsistence agriculture. Native labor is recruited for mining in Transvaal or forced to labor for public projects or private firms or to grow cotton under restrictive conditions. Mozambique's six principal cash crops—sugar, cotton, cashew nuts, tea, copra, and sisal—accounted for 79% of the value of exports in 1958. Sugar exports in 1958 totaled 148,000 short tons; cotton, 35,974 metric tons (valued at $19.2 million); and cashew nuts, 105,791 short tons ($8.9 million). Manufactures (employing 38,800 workers in 1955) include cement, leather, textiles, footwear, beer, wood products, cottonseed oil, peanut oil, and soap. Chief minerals are coal (270,000 metric tons in 1957), bauxite (4,700), and beryl. Railways total 1,833 miles (1956); classified roads, 16,231 miles (about 342 miles of hard surface). Motor vehicles number 24,100 (1956); telephones, 9,136 (1957). International airlines operate out of Lourenço Marques.

Angola.—A territory on Africa's west coast, south of the Belgian Congo. Europeans number 109,568 (est. 1955). Luanda (est. 1955, 189,500) is the capital, and Lobito (31,630) is an important port. The governor general is aided by a Government Council and a Legislative Council of elected and appointed members. Revenue in 1956 totaled 3,124.6 million escudos; expenditure, 2,579.8 million. In 1956 there were 1,580 primary schools (75,215 pupils); 40 secondary (4,461); 183 vocational (7,024); and 1 normal (208). About 97% of the population was illiterate in 1950.

The majority of the native population is engaged in subsistence agriculture. Cash crops providing an important share of exports include coffee (1958 exports, 77,300 metric tons); sisal (prelim. 1958 output, 106 million pounds); palm oil (1958 exports, 9,966 short tons) and palm kernels (15,141); sugar; and cotton. Chief minerals are diamonds (1957 production, 864,400 metric carats); manganese ore (10,200 metric tons Mn content); and copper ore (5,200 metric tons Cu content). Petroleum wells at Luanda provide oil for a topping plant which began operations in 1958. The fish catch in 1957 totaled 395,500 metric tons. Manufactures includes fish products, palm oil, footwear, paper and wood products, cement, and vegetable fiber. Angola has 1,822 miles of railways, about 23,000 miles of roads (including 2,550 of main roads), 30,400 motor vehicles (1957), and 5,337 telephones (1957). The chief airport is at Luanda.

Portuguese Guinea.—A tropical territory on Africa's west coast about 175 miles south of Dakar. Europeans number 2,263 (1950). About 40% of the natives are Moslems. Bissau (pop. 1950, 18,309) is the capital and chief port. Revenue in 1956 totaled 131.0 million escudos; expenditure, 135.1 million. In 1956 there were 136 primary schools (10,178 pupils); 1 secondary (192); and 5 vocational (117). Illiteracy is almost universal among the natives. Chief exports are palm kernels (18,300 tons in 1958), peanuts, hides, wax, rice, and timber. Roads total about 1,800 miles.

Cape Verde Islands.—Nine inhabited and several barren islands in the Atlantic, about 370 miles west of Dakar. Europeans numbered 2,909 in 1950. The majority of the population is of mixed European-Negro descent. Praia (9,980) on São Thiago, is the capital. The estimated 1957 budget totaled 83.8 million escudos. In 1956 there were 182 primary schools (11,290 pupils); 2 secondary (892); and 5 technical (470). About 79% of the population was illiterate in 1950. Sal Island Airport handles transatlantic traffic. São Vicente is a fueling station for ships. Chief products are canned fish, coffee, mustard, salt, oranges, and brandy.

São Tomé and Principe.—Two islands 125 miles off the African coast in the Gulf of Guinea. Europeans numbered 1,152 in 1950. São Tomé (7,817) is the capital. Revenue in 1957 totaled 71.9 million escudos; expenditure, 66.9 million. In 1956 there were 22 primary schools (2,572 pupils); 1 secondary (103), and 2 vocational (200). Chief exports are cacao (10,600 metric tons in 1957), palm kernels (5,512 short tons in 1957), copra, coffee, and cinchona.

Territories in Asia. *Portuguese India.*—Three settlements along India's west coast: Goa, the largest (1,301 sq. mi.), near the southern end of the state of Bombay; Damão (Daman), an island 100 miles north of the city of Bombay; and Diu, an island across the Gulf of Cambay opposite Damão. The capital is the city of Goa (pop. 1950, 31,950). Europeans number about 1,500. The majority of the population are Indians, of whom about 60% are Hindus and the remainder Roman Catholics. A 23-member Legislative Council, partly elective and partly appointive, votes on bills submitted by the governor general and advises on budgetary matters. The 1957 budget was estimated at 194.5 million escudos. In 1956 there were 381 primary schools (31,662 pupils); 66 secondary (13,287); 15 technical (1,467); 1 normal (29); and 1 higher (117). About 78% of the population was illiterate

in 1950. Iron ore (1957 production, 1,739,000 metric tons iron content) and manganese ore (60,000, Mn content) are important exports; others include coconuts, fish, spices, cashew nuts, and copra.

Macao.—An island (with 3 smaller offshore islands) off the coast of China near Hong Kong. Europeans number 2,719 (1950). The majority of the population is Chinese. In recent years, several thousand Chinese fleeing from the mainland have taken refuge in Macao. Revenue in 1957 was estimated at 113.3 million escudos; expenditure, 95.3 million. Macao is an entrepôt port for trade with China, and is noted as a pleasure resort and smuggling center. The chief industry is fishing, supplemented with some local manufactures, such as textiles and firecrackers. The territory is served by Portuguese, British, and Dutch steamship lines.

Portuguese Timor.—This province lies between the Celebes and Australia, and comprises the eastern part of the island of Timor, the territory of Oe-Cusse (Ambeno), and 2 small islands in the Lesser Sundas. Dili (pop. 1950, 43,589) is the capital and chief port. Revenue in 1957 was estimated at 71.5 million escudos; expenditure, 70.5 million. In 1956 there were 86 primary schools (5,595 pupils); 2 secondary (167); and 2 vocational (59). Chief exports are coffee, rice, sugar, sandalwood, wax, and copra.

M. J. G.

POST OFFICE DEPARTMENT. Postal operations during the fiscal year 1959 continued to set new records in mail volume and revenue. Substantial further progress was made, too, in rehabilitating obsolete postal buildings, and in the development and use of mechanized and automated equipment for handling of the mails. Parcel post rate increases were approved by the Interstate Commerce Commission on Nov. 20, 1959, and became effective Feb. 1, 1960, to offset annual losses of about $88 million.

Net revenue of the Post Office Department for the 1959 fiscal year totaled $3,035,250,808. Operating expenses for fiscal 1959 totaled $3,640,368,053. The total postal deficit for the year was approximately $605,117,245. The volume of mail handled during fiscal 1959 increased (in terms of originating mail) to approximately 61,247,220,000 pieces.

With 549,951 employees at the end of the 1959 fiscal year, the Post Office Department, including the field service, had more employees than any other nonmilitary department of the federal government. Included were 35,595 postmasters, 106,285 city carriers, 31,296 rural carriers, 171,018 postal clerks and mail handlers.

On June 30, 1959, the close of the fiscal year, there were 35,750 post offices, and 8,865 classified and contract stations and branches, and rural stations. Post offices included 218 in Alaska, 85 in Hawaii, 105 in Puerto Rico, 5 in the Virgin Islands, and 10 in Pacific islands other than Hawaii.

Rural delivery routes at the end of fiscal 1959 numbered 31,377 and covered a daily average of 1,752,601 miles, serving 9,189,211 families (comprising 34,090,208 individuals). These figures represented a reduction of 88 routes from the preceding year, but an increase of 1,752,601 in route mileage. At the end of the year there were 249,558 miles of domestic airmail routes in the United States, and during the year mails were flown over these routes a total of 114,336,482 ton-miles, as compared with 103,322,381 in the preceding fiscal year. United States-flag air carriers transported 11,676,320 pounds of foreign mails during the year.

Sales of postage stamps and stamped paper in the fiscal year 1959 yielded $1,245,230,803. Revenue from money orders totaled $67,089,236.

The Postal Savings System had 1,740,000 depositors at the close of the 1959 fiscal year, to whom was credited $1,043,452,661 on outstanding principal in active accounts, plus accrued interest obligations of $85,285,056, making a total liability to depositors of $1,128,737,717. Depositories at the end of fiscal 1959 numbered 6,335, or 536 fewer than one year earlier.

PRESBYTERIAN CHURCHES.[1] The 171st General Assembly of The United Presbyterian Church in the United States of America met on May 20, 1959, at Indianapolis, Ind., and elected the Rev. Dr. Arthur L. Miller, pastor of the Montview Boulevard Presbyterian Church of Denver, Colo., as moderator. Dr. Miller appointed the Rev. Dr. Walter A. Dodds of the First Presbyterian Church, Ithaca, N.Y., as vice moderator.

The merger of all the synods, presbyteries, and major program agencies of the former United Presbyterian Church of North America with those of the former Presbyterian Church in the United States of America, to form The United Presbyterian Church in the United States of America, was completed as of Jan. 1, 1959, by action of a Special Administrative Commission of the united General Assembly. The Special Committee on Consolidations, which had been at work for two full years, presented a final report and was discharged with the grateful thanks of the General Assembly.

The General Assembly approved a far-reaching program of educational assistance for college-age young people in the families of ministers and other full-time workers. The program is administered by the Board of Christian Education. Sixteen overtures proposing amendments to the Form of Government and Book of Discipline were sent to the presbyteries for their action.

The General Assembly approved a current operating program for its General Mission in the sum of $28,684,157 to be received from the churches, with $5,400,000 anticipated from women's organi-

[1] In 1959, distinctively Presbyterian churches in the United States included The United Presbyterian Church in the United States of America; Presbyterian Church in the United States (commonly called the Southern Presbyterian Church); Reformed Presbyterian Church General Synod; Reformed Presbyterian Church Synod; Associate Presbyterian Church Synod; Associate Reformed Presbyterian Church General Synod; Cumberland Presbyterian Church; Cumberland Presbyterian Church (Colored); Orthodox Presbyterian Church; and Bible Presbyterian Church.

zations, $422,500 from individuals, and $3,388,000 from nonliving sources, making a grand total of $37,894,657.

The church in 1959 reported a total communicant membership of 3,159,562.

The 99th General Assembly of the Presbyterian Church in the United States (commonly called the Southern Presbyterian Church) was held in Atlanta, Ga., on April 23, 1959, and elected the Rev. Prof. Ernest Trice Thompson, of Union Theological Seminary, Richmond, Va., as its moderator. The Rev. Dr. E. C. Scott, stated clerk and treasurer, was honored in view of his retirement in July 1959; and the Rev. James A. Millard, Jr., was elected stated clerk and treasurer to succeed him. The General Assembly adopted a benevolence budget of $9,186,054 for its boards and agencies. The church in 1959 reported a total communicant membership of 869,501, a net gain of 20,766 over the preceding year.

HENRY BARRACLOUGH,
Associate Stated Clerk, General Assembly, The United Presbyterian Church in the U.S.A.

PRINCE EDWARD ISLAND. Canada's smallest province, Prince Edward Island is situated in the Gulf of St. Lawrence, north of Nova Scotia and New Brunswick. Its area is 2,184 square miles, and its population (1956 census), 99,285. The capital is Charlottetown (1956 pop., 16,446); other communities include Summerside (7,115), Souris (1,183), Parkdale (1,442), and Montague (1,068).

Government.—The island is governed by a lieutenant-governor (Hon. F. Walter Hyndman), a Legislative Assembly of 30 members (15 councilors elected by property franchise, and 15 assemblymen elected by popular franchise), and an Executive Council of 9 members (headed by Premier Walter R. Shaw). There are a Supreme Court of 3 members (Hon. Thane A. Campbell, chief justice), and county courts for each of the three counties. The province has 4 members in the federal House of Commons and 4 members in the Senate.

Finance.—On March 1, 1959, there were 23 branches of chartered banks in the province. The gross funded debt of the province was $22,046,000, less sinking funds of $5,239,000, leaving a net funded debt of $16,807,000. The unfunded debt was $8,719,000; total liabilities, $25,526,000.

Public Welfare.—For the fiscal year ending March 31, 1959, the federal government paid out $2,995,319 in family allowances on behalf of 39,386 children, and $4,813,341 in old-age pensions to 7,927 persons. The provincial government in fiscal 1959 paid out $387,810 in old-age assistance payments to 756 recipients, $58,428 in pensions to 87 blind persons, and $339,607 in assistance for 729 children under 16 years of age. Total benefits for the year amounted to $8,719,487.

Transportation and Communications.—As of Sept. 30, 1959, there were 3,300 miles of provincial roads, of which 600 miles were paved, 1,600 miles were improved, 1,100 miles were unimproved, and 20 miles were national park roads. The Canadian National Railway serves the island with 286 miles of track. Two ferry systems connect the province with the mainland. There are two airports, one at Charlottetown and one at Summerside, and the Maritime Central Airways provides regular passenger and freight service. As of Sept. 30, 1959, there were 17,036 telephones; 16,687 passenger cars; and 6,733 trucks.

Agriculture.—In 1958, farm cash income was $27,891,000. The chief crop, potatoes, was valued at $8,421,600; hay, $5,642,000; oats, $3,647,300; wheat, $147,200; and barley, $34,500. There were 114,000 cattle, 51,000 swine, 33,000 sheep and lambs, and 745,000 domestic fowl. The value of mixed grains was $2,180,500; dairy products, $4,911,000.

Fisheries.—The fish catch in 1958 totaled 39,007,000 pounds, with a landed value of $3,550,000 and a market value of $4,650,000. In addition, 14,950,000 pounds of Irish moss were gathered, with a market value of $183,000.

Principal Events, 1959.—In provincial elections of September 1, the Liberal government of Alexander W. Matheson was defeated, thereby ending 24 years of Liberal rule. The electorate returned 23 Progressive Conservatives and 7 Liberals to the Legislative Assembly, as compared with 26 Liberals and 4 Progressive Conservatives in the former assembly. The new government under Premier Walter R. Shaw took office on September 16.

During her Canadian tour, Queen Elizabeth II visited Prince Edward Island on July 30 and spent the day attending functions and touring points of interest.

Island industry maintained its usual steady development during the year. A new boat service was commenced between Charlottetown and Goose Bay to open up trade with the North. A federal paved highway was constructed through Prince Edward Island National Park. A new Royal Canadian Navy training establishment, the H.M.C.S. *Queen Charlotte,* was opened in Charlottetown.

An inquiry into educational finance in the province was ordered by the provincial government. A new compulsory health insurance plan was put into effect by the province on October 1. This plan is linked with that of the federal government through federal-provincial agreements.

PRISONERS OF WAR. See Index entry.

PRISONS. Prison Population Trends.—State and federal prisons and reformatories held a total of 205,643 prisoners at the close of 1958. This was the highest year-end population on record and represented an increase of 10,229 prisoners, or 5.2%, over the previous year. On Dec. 31, 1958, there were 120 state or federal prisoners serving sentences for every 100,000 civilians in the country. The rates, higher than for any year since 1941, range from 25 per 100,000 in New Hampshire to 248 in the District of Columbia. Also registering high rates of prisoners per 100,000 population were Georgia with 182, Alabama and Maryland with 174 each, Virginia with 151, and Nevada and Florida with 147 each.

The federal institutions experienced a slightly larger increase in prisoners confined than those in the states. At the close of 1958, federal institutions held 21,549 prisoners, or 5.5% more than a year earlier. State institutions had 184,094 prisoners, or 5.2% more than in 1957. Of the four chief geographical regions, the West had the highest percentage increase in prisoners confined, 11.2. While all states except Colorado showed an increase, the three states which accounted for the large overall increase were New Mexico (19.4%),

California (13.5%), and Arizona (12.4%). The South was next with an increase of 6.3% in the number confined, and in this region Kentucky, with 13.0%, had the greatest percentage increase, followed by Florida, 12.5%; South Carolina, 12.1%; and Virginia, 11.4%. The number of prisoners confined in the North Central states increased by 2.5% over 1957, with substantial increases of 21.6% and 14.7% in North Dakota and Wisconsin, respectively. Among the Northeastern states the increase was only 2.1%, Vermont and Connecticut having the largest increases, 19.0% and 17.8%, respectively.

SENTENCED PRISONERS IN U.S. PRISONS AND REFORMATORIES
(December 31 of each year)

Year	Federal institutions	State institutions	Total	Rate per 100,000 population
1958	21,549	184,094	205,643	120.0
1957	20,420	174,994	195,414	116.0
1956	20,134	169,431	189,565	114.7
1955	20,088	165,827	185,915	114.5
1954	20,003	162,898	182,901	115.0
1953	19,363	154,216	173,579	111.2
1952	18,014	150,219	168,233	109.7
1951	17,395	148,285	165,680	109.7
1950	17,134	149,031	166,165	110.6
1949	16,868	146,881	163,749	111.0
1948	16,328	139,649	155,977	107.4
1947	17,146	134,158	151,304	106.1

Court Commitments.—A rise in the number of prisoners committed from court accounted for much of the increased total of prisoners confined at the close of 1958. During the year state and federal institutions combined received 88,780 court commitments—8,371, or 10.4%, more than in 1957. Proportionately the state institutions had the larger increase, receiving from court a total of 74,977 prisoners, or 11.7%, more than the previous year. Except for New Hampshire, Nevada, Montana, and Minnesota, all of the states had more commitments in 1958 than in 1957. Increases ranging from 25% to 62% were experienced in Kentucky, Vermont, Connecticut, North Dakota, Delaware, and Rhode Island. Court commitments to federal institutions numbered 13,803, or 3.7%, above 1957.

Releases.—Prisoners released from state institutions numbered 74,709 in 1958, an increase of 4.7% over the 1957 total of 71,327. Of these releases, 42,321, or 56.6%, were by parole, as compared with 55.4% in 1957. Across the country the use of parole varied from 5.9% of all releases in South Carolina to 98.6% in the State of Washington. In the four major geographical regions, the Northeastern states paroled 76.4% of prisoners released; the West, 75.2%; the North Central states, 69.0%; and the South, 32.3%. Federal institutions released 13,970 prisoners during 1958, of whom only 3,587 were by parole.

Prison Improvements.—Federal and state penal systems continued their construction activities in an effort to accommodate prison populations which had already expanded beyond the capacities of existing institutions. California was building a massive, 2,400-man medium-custody institution for adult prisoners at Los Padres and a youth institution at Ontario. Connecticut was engaged in the construction of minimum- and medium-security institutions at Enfield. The District of Columbia was creating a youth center at Lorton, Virginia. Missouri began building a new medium-security institution at Moberly. New Mexico was studying plans for a new institution which would permit the removal of youthful prisoners from the state penitentiary. Ohio was working on the final stages of a correctional institution at Lebanon; and Pennsylvania, on the final stages of a new institution for

defective delinquents at Dallas. Wisconsin broke ground at Fox Lake for a minimum-custody institution of advanced design. The Federal Prison System opened two new camps at Safford, Ariz., and Greenville, S.C.; reopened the long-closed correctional institution at Sandstone, Minn., and took over from the Army a well-equipped institution at Lompoc, Calif. It also received from Congress a down-payment on the construction of a new 700-prisoner maximum-custody institution at Marion, Ill.

Federal Sentencing.—In July 1959 the Judicial Conference of the United States sponsored a pilot sentencing seminar at Boulder, Colo., to discuss the problem of excessive disparities in the sentences imposed by federal courts on defendants with substantially similar backgrounds and offenses. This initial meeting was intended to develop the form and content of a regular sentencing institute program under a 1958 statute in which Congress suggested that the judiciary undertake to work out more consistency in sentencing philosophy and practice. The pilot seminar disclosed broad areas of disagreement between federal judges in their approach to sentencing duties. In mid-September the seminar proceedings were studied by the Judicial Conference in order to determine the need for further experimentation at the national level before conducting the circuit-level institutes envisaged by the framers of the authorizing legislation.

Prison Disorders.—By September the year 1959 promised to rival in intensity the early 1950's when a destructive rash of uprisings raged through American prisons. Following a typical pattern of taking civilian captives and holding them as hostages in an effort to bargain for concessions or release, groups of prisoners staged rebellions in the Walpole (Mass.) state prison (March 7), the Concord (Mass.) state reformatory (April 22), the Deer Lodge (Mont.) state prison (April 16, 17, and 18), Tennessee's Ft. Pillow prison farm (May 11), the Monroe (Wash.) state reformatory (July 6), Tennessee's Brushy Mountain state prison (July 13 and 14), and the Federal Prison System's Springfield (Mo.) medical center (June 22 and 23).

Prisoners engaged in sit-down strikes at the New Jersey state prison at Trenton (January 30), the Utah state prison at Salt Lake City (August 13), the Mississippi state prison at Parchman (August 20), and the London, Ohio, prison farm (August 24). A revolt at Pennsylvania's Eastern Penitentiary was forestalled only minutes before the

"zero hour" set by its 15 ringleaders (September 6). A mass break occurred (April 5) at Maryland's Patuxent institution for defective delinquents when 34 prisoners overpowered two guards and escaped. In Iowa the governor slated an investigation of the Fort Madison state penitentiary after six prisoners escaped from inside the walled enclosure (August 23). In the worst break of the year, half the 40-prisoner population of Ivy Bluff prison in North Carolina captured the entire guard force on duty, locked them in cells and rooms, stole the prison's arsenal of weapons, and escaped (December 8).

Federal Prison Finances.—The sum of $38,520,542 was required to operate 31 Bureau of Prisons institutions for the fiscal year 1959. The confinement, treatment, and care of one prisoner for one day, including cost of maintaining institutional facilities, during the year averaged $4.82, or 46 cents more than in the previous year. Partially offsetting these costs, Federal Prison Industries, Inc., a government corporation operated in conjunction with the Bureau of Prisons, in May 1959 paid into the U.S. Treasury a dividend of $4 million. The fiscal year ending on June 30, 1959, was the most successful in the corporation's history, with sales (to other government agencies only) exceeding $31 million and net industrial profits of $5.5 million. The corporation maintained 32 industrial shops employing on a full-time basis a daily average of 4,356 prisoners.

J. V. Bennett,
Director, Bureau of Prisons.

PRIZES AND AWARDS. The principal prizes and awards announced in 1959 include those in the following list, classified by subject. For other awards not listed here, see the Index entry, *Prizes and Awards.*

Nobel Prizes

Chemistry.—Prof. Jaroslav Heyrovský (q.v.) of the Institute of Polarography of the Czechoslovak Academy of Sciences, for his development of an electrochemical method of analysis.

Literature.—Salvatore Quasimodo (q.v.), Italian poet, for "his lyrical poetry, which with classical fire expresses the tragic experience of life in our time."

Peace.—Philip J. Noel-Baker (q.v.), British public official.

Physics.—Drs. Emilio Segrè and Owen Chamberlain (qq.v.) of the University of California, for their demonstration of the existence of the antiproton.

Physiology and Medicine.—Dr. Severo Ochoa (q.v.) of New York University and Dr. Arthur Kornberg (q.v.) of Stanford University, for "discoveries of the mechanism in the biological synthesis in ribonucleic acids and deoxyribonucleic acids."

The 1959 awards were equivalent to $42,600 in each category.

Pulitzer Prizes

Announced by the trustees of Columbia University on May 4, 1959, the Pulitzer Prize awards for 1958 were as follows:

Journalism.—Most disinterested and meritorious public service rendered by a United States newspaper: Utica *Observer-Dispatch* and Utica *Daily Press,* for a successful campaign against gambling, corruption, and vice in Utica. Distinguished local reporting (under pressure of edition time): Mary Lou Werner of the Washington *Evening Star,* for her coverage of school desegregation in Virginia. Distinguished local reporting (showing initiative and resourcefulness, not under pressure): John Harold Brislin of the Scranton *Tribune* and the *Scrantonian,* for his campaign against labor violence in Scranton. Distinguished reporting on national affairs: Howard Van Smith of the Miami *News,* for articles on the plight of migrant farm workers in Immokalee, Fla. Distinguished reporting on international affairs: Joseph Martin and Philip Santora of the New York *Daily News,* for articles on brutality in Cuba during the regime of President Fulgencio Batista. Distinguished editorial writing: Ralph McGill of the Atlanta *Constitution,* for his effective and courageous editorials, especially one on the bombing of schools and synagogues. Distinguished editorial cartoon: William H. (Bill) Mauldin of the St. Louis *Post-Dispatch,* for a cartoon inspired by Boris Pasternak's rejection of the 1958 Nobel Prize in literature. Outstanding news photography: William Seaman of the Minneapolis *Star,* for a photograph of a fatal traffic accident.

Letters.—Fiction in book form: Robert Lewis Taylor (q.v.), for *The Travels of Jaimie McPheeters.* American play: Archibald MacLeish (q.v.), for *J.B.* Book on United States history: the late Dr. Leonard D. White and Miss Jean Schneider, for *The Republican Era: 1869–1901.* American biography: Arthur C. Walworth, for *Woodrow Wilson.* Volume of verse: Stanley Kunitz (q.v.), for *Selected Poems, 1928–1958.*

Music.—John La Montaine, for Concerto for Piano and Orchestra.

Following notification on November 5 that he had won the 1959 Nobel Peace Prize, Philip J. Noel-Baker (l.), British public official, is congratulated by his son, Francis.

UPI

Art, Music, and Dance

Benjamin Altman Prize ($2,000) for figure painting: Joseph Hirsch.

Benjamin Altman Prize ($2,000) for landscape painting: Edward H. Betts.

American Institute of Architects Gold Medal: Walter Gropius.

American Institute of Graphic Arts Medal: May Massee.

American Water-Color Society Grand Prize ($1,000) and Gold Medal of Honor: Morton Roberts, for *By the Sea.*

Art Institute of Chicago American Exhibition of Painting and Sculpture prizes: Isamu Noguchi, Mr. and Mrs. Frank G. Logan Art Institute Medal and $2,000, for his sculpture *The Self;* Louise Nevelson, Mr. and Mrs. Frank G. Logan Art Institute Medal and $1,000, for her sculpture *Construction in Three Sections;* Joseph Cornell, Ada S. Garrett Prize ($1,500) in painting, for *Orion;* Hans Hofmann, Flora Mayer Witkowsky Prize ($1,500) in painting, for *The Pond.*

Boston Arts Festival Grand Prize in Art ($1,000): Gilbert Franklin, for his sculpture *Beach Figure.*

Arnold W. Brunner Memorial Prize ($1,000) in architecture of the National Institute of Arts and Letters: Edward Larrabee Barnes.

Capezio Dance Award ($1,000): Martha Graham.

Detroit Institute of Arts Second Biennial of American Painting and Sculpture awards: Lee Gatch, Joseph E. Temple Gold Medal and $3,200, for his painting *Fish Market;* Lee Bontecou, George D. Widener Memorial Gold Medal, for her sculpture *Bird;* James Brewton, J. Henry Schiedt Memorial Prize ($1,000), for his painting *Suicide of Judas.*

Alice M. Ditson Award ($1,000) for "distinguished service to American music": Julius Rudel, general director, New York City Opera Company.

National Institute of Arts and Letters Award for Distinguished Service to the Arts: Mrs. Elizabeth Ames.

National Institute of Arts and Letters Gold Medal for Graphic Art: the late George Grosz (q.v.).

National Sculpture Society Medal of Honor: Rudulph Evans.

New York Music Critics Circle awards for 1958: Best choral work—no award made; best dance work—no award made; best opera—Douglas Moore, for *The Ballad of Baby Doe;* best orchestral work—Walter Piston, for Viola Concerto; special citation—the late Ralph Vaughan Williams, for Symphony No. 9.

Royal Gold Medal for Architecture for 1959: Ludwig Miës van der Rohe.

São Paulo Museum of Modern Art Fifth Biennial prizes: Grand Prize (600,000 cruzeiros)—Barbara Hepworth of Great Britain; prizes (200,000 cruzeiros) for the best foreign artists—Modesto Cuixart of Spain, for painting; Somaini of Italy, for sculpture; prizes (200,000 cruzeiros) for the best Brazilian artists—Manabu Mabe, for painting; no award made for sculpture.

Marjorie Peabody Waite Award ($1,000) of the National Institute of Arts and Letters: Leon Hartl.

Journalism

F. Wayland Ayer Cup for mechanical excellence in journalism: Goshen (Ind.) *News.*

Heywood Broun Award ($500) for 1958: George N. Allen, New York *World-Telegram and Sun.*

Maria Moors Cabot awards for "advancement of international friendship in the Americas": Dr. Ricardo Castro Béeche, managing director, *La Nación,* San José, Costa Rica; Clement David Hellyer, Latin American editor, San Diego *Union;* Tad Szulc, South American correspondent, New York *Times;* Dr. Hernane Tavares de Sá, editor in chief, *Visão,* Rio de Janeiro; special citation—Juan Andrés Ramírez, editor, *El Plata,* Montevideo.

Columbia Journalism Award for "singular journalistic

performance in the public interest": Arthur Hays Sulzberger, New York *Times*.

Albert Lasker Medical Journalism awards ($2,500) for 1958: Joseph Kahn, New York *Post*, for articles on contraceptive counseling; Francis Bello, *Fortune*, for an article on coronary disease; Al Wasserman, Columbia Broadcasting System, for two television programs on narcotics addiction; *Today*, for coverage on public health and medical research.

Overseas Press Club awards: George Polk Memorial Award—Joseph Taylor, United Press International; Robert Capa Award—Paul Bruck, Columbia Broadcasting System; reporting from abroad—Bob Considine, Hearst Headline Service; American press interpretation of foreign affairs—Graham Hovey, Minneapolis *Star* and *Tribune;* radio or television reporting from abroad—Winston Burdett, Columbia Broadcasting System; American radio or television interpretation of foreign affairs—Chet Huntley, National Broadcasting Company; magazine reporting of foreign affairs—Joseph Kraft, *Saturday Evening Post;* book on foreign affairs—John Gunther, for *Inside Russia Today;* still photographic reporting from abroad—Andrew St. George; motion picture reporting from abroad—Joseph Oexle, National Broadcasting Company.

George Polk Memorial awards for 1958: Foreign reporting—Chet Huntley and Reuven Frank, National Broadcasting Company; national reporting—Richard L. Strout, *Christian Science Monitor;* local reporting—William Haddad, New York *Post;* community service—Brooklyn Heights *Press;* radio reporting—Jay McMullen, Columbia Broadcasting System; television reporting—Gabriel Pressman, National Broadcasting Company; magazine reporting—Marya Mannes, *Reporter;* news photography—Paul Schutzer, *Life;* special awards—Justice William O. Douglas, for *The Right of the People;* Samuel G. Blackman, Associated Press; Walter Sullivan, New York *Times*.

Literature

Academy of American Poets Prize ($5,000) for distinguished poetic achievement: Louise Bogan.

American Academy of Arts and Letters Award of Merit (gold medal and $1,000): Aldous Huxley.

Bancroft prizes ($3,000) of Columbia University "for distinguished writings in American history" for 1958: Daniel J. Boorstin, for *The Americans: The Colonial Experience;* Ernest Samuels, for *Henry Adams: The Middle Years.*

Bollingen Prize in Poetry ($1,000) for 1958: Theodore Roethke.

Caldecott Medal of the American Library Association: Barbara Cooney, for *Chanticleer and the Fox.*

Alexander Droutskoy Memorial Award (gold medal and $100) for service to poetry of the Poetry Society of America: W. H. Auden.

Fellowship Award ($5,000) of the Academy of American Poets: Léonie Adams.

Christian Gauss Award ($1,000) of Phi Beta Kappa: Margaret Gilman, for *The Idea of Poetry in France.*

Governor General's awards to Canadians for the best books of 1958: Fiction—Colin McDougall, for *Execution;* academic nonfiction—Joyce Hemlow, for *The History of Fanny Burney;* creative nonfiction—Pierre Berton, for *Klondike Fever;* poetry—James Reaney, for *A Suit of Nettles;* juvenile—Edith Lambert Sharp, for *Nkwala.*

Lamont Poetry Selection of the Academy of American Poets for 1959: Donald B. Justice, for *The Summer Anniversaries.*

National Book awards ($1,000): Fiction—Bernard Malamud, for *The Magic Barrel;* nonfiction—J. Christopher Herold, for *Mistress to an Age;* poetry—Theodore Roethke, for *Words for the Wind.*

National Institute of Arts and Letters Gold Medal for Drama: Arthur Miller.

National Institute of Arts and Letters Gold Medal for "good speech on the stage": Katharine Cornell.

Newbery Medal of the American Library Association: Mrs. Elizabeth George Speare, for *The Witch of Blackbird Pond.*

Edgar Allan Poe awards of the Mystery Writers of America for 1958: Best mystery novel—Stanley Ellin, for *The Eighth Circle;* best first mystery novel—Richard Martin Stern, for *The Bright Road to Fear;* best short story—William O'Farrell, for *Over There—Darkness;* best fact crime writing—Wenzell Brown, for *They Died in the Chair;* special award—Olive Woolley Burt, for *American Murder Ballads; and Their Stories.*

Prix Femina: Bernard Privat, for *Au pied du mur.*

Prix Goncourt: André Schwarz-Bart, for *Le dernier des justes.*

Prix Interallié: Antoine Blondin, for *Un singe en hiver.*

Prix Médicis: Claude Mauriac, for *Le diner en ville.*

Prix Théophraste Renaudot: Albert Palle, for *L'expérience.*

Richard and Hinda Rosenthal Award ($1,000) of the National Institute of Arts and Letters: Frederick Buechner, for *The Return of Ansel Gibbs.*

Ryerson Fiction Award: Arthur G. Storey, for *Prairie Harvest.*

Shelley Memorial Award ($1,065) of the Poetry Society of America for 1958: José Garcia Villa, for *Selected Poems and New.*

Woodrow Wilson Foundation Award ($1,000) of the American Political Science Association: Christian Bay, for *The Structure of Freedom,* and James S. Coleman, for *Nigeria: Background to Nationalism.*

Radio and Television

Academy of Television Arts and Sciences awards for 1958: Most outstanding single program of the year—*An Evening with Fred Astaire;* best special dramatic program—*Little Moon of Alban;* best special musical or variety program—*An Evening with Fred Astaire;* best special news program—*Face of Red China;* best comedy series—*The Jack Benny Show;* best dramatic series—*Playhouse 90; Alcoa-Goodyear Theatre;* best musical or variety series—*Dinah Shore Chevy Show;* best news commentary or analysis—Edward R. Murrow, Columbia Broadcasting System; best news reporting series—*Huntley-Brinkley Report;* best on-the-spot news coverage—Columbia Broadcasting System, for coverage of the Cuban Revolution; best panel, quiz, or audience participation series—*What's My Line?;* best public service program or series—*Omnibus;* best Western series—*Maverick;* best single performances—Julie Harris, in *Little Moon of Alban;* Fred Astaire, in *An Evening with Fred Astaire;* best performances in a comedy series—Jane Wyatt, in *Father Knows Best;* Jack Benny, in *The Jack Benny Show;* Ann B. Davis, in *The Bob Cummings Show;* Tom Poston, in *The Steve Allen Show;* best performances in a dramatic series—Loretta Young, in *The Loretta Young Show;* Raymond Burr, in *Perry Mason;* Barbara Hale, in *Perry Mason;* Dennis Weaver, in *Gunsmoke;* best performances in a musical or variety series—Dinah Shore, in *Dinah Shore Chevy Show;* Perry Como, in *The Perry Como Show;* best comedy writing—Sam Perrin, George Balzer, Hal Goldman, and Al Gordon, for *The Jack*

Meeting in Stockholm, Sweden, for presentation of the 1959 Nobel Prizes on December 10 were (l. to r.): Emilio Segrè (U.S.), physics; Severo Ochoa (U.S.), medicine; Jaroslav Heyrovský (Czechoslovakia), chemistry; Owen Chamberlain (U.S.), physics; Birger Ekberg, chairman of the Nobel Foundation; Arthur Kornberg (U.S.), medicine; and Salvatore Quasimodo (Italy), literature.

EUROPEAN

Benny Show; best dramatic writing—James Costigan, for *Little Moon of Alban;* Alfred Brenner and Ken Hughes, for *Eddie;* best musical or variety writing—Bud Yorkin and Herbert Baker, for *An Evening with Fred Astaire;* best direction of a single program of a comedy series—Peter Tewksbury, for *Medal for Margaret;* best direction of a single program of a dramatic series—George Schaefer, for *Little Moon of Alban;* Jack Smight, for *Eddie;* best direction of a single musical or variety program—Bud Yorkin, for *An Evening with Fred Astaire;* best art direction—Edward Stephenson, for *An Evening with Fred Astaire;* Claudio Guzman, for *Bernadette;* best live camera work—*An Evening with Fred Astaire;* best cinematography—Ellis Carter, for *Alphabet Conspiracy;* best choreography—Hermes Pan, for *An Evening with Fred Astaire;* best editing of a film for television—Silvio d'Alisera, for *Meet Mr. Lincoln;* best engineering or technical achievement—improvement of video tapes by the three networks; best musical contribution—David Rose, for *An Evening with Fred Astaire.*

George Foster Peabody awards for 1958: Radio.—*Easy as ABC,* cited for contribution to international understanding; *Standard School Broadcast,* best educational program; Station WNEW, New York, best news analysis; *The Hidden Revolution,* cited for public service. Television.—*The Blue Fairy,* best children's program; *M.D. International,* cited for contribution to international understanding; *Continental Classroom,* best educational program; *Playhouse 90,* best dramatic entertainment; *The Steve Allen Show,* best entertainment with humor; Leonard Bernstein and the New York Philharmonic, best musical entertainment; *Huntley-Brinkley Report,* best news analysis; Columbia Broadcasting System, cited for public service; James Costigan's *Little Moon of Alban,* best writing; *College News Conference,* best youth program; *An Evening with Fred Astaire* and Orson Welles' *Fountain of Youth,* special awards.

Robert E. Sherwood Television awards of the Fund for the Republic: *Made in Japan,* $5,000 award; *Twenty Cent Tip,* $2,500 award; *Report from Alabama* and *The American Stranger,* $2,000 awards; *Small World* and *Bishop Pike,* $1,000 awards; *Meet Mr. Lincoln,* $500 award.

Sylvania Television awards for 1958: Most outstanding program—*Little Moon of Alban;* best original television play—James Costigan, for *Little Moon of Alban;* best television adaptation—*The Bridge of San Luis Rey;* best performance by a starring actress—Julie Harris, in *Little Moon of Alban;* best performance by a starring actor—Neville Brand, in *All the King's Men;* best children's program—*Art Carney Meets Peter and the Wolf;* best comedy program—*The Chevy Show,* starring Sid Caesar; best documentary program—*Face of Red China;* best documentary series—*The 20th Century;* best dramatic program—*Little Moon of Alban;* best light musical program—*An Evening with Fred Astaire;* best contribution to serious music—Leonard Bernstein; best news and special events program—National Broadcasting Company's coverage of Explorer rocket launching; best public service series—*Continental Classroom;* best religious series—*Frontiers of Faith, Catholic Hour,* and *Eternal Light;* best variety program—*The Bob Hope Moscow Show.*

Science

Roger Adams Award (gold medal and $5,000) in organic chemistry of the American Chemical Society: Dr. Derek H. R. Barton, University of London.

Alexander Agassiz Medal of the National Academy of Sciences: Dr. Martin W. Johnson, Scripps Institution of Oceanography.

American Cancer Society National Award: Dr. George Wells Beadle, California Institute of Technology.

American Chemical Society Award (gold medal and $1,000) in the chemistry of milk: Dr. E. L. Jack, University of California.

American Chemical Society Award ($1,000) for creative work in synthetic organic chemistry: Dr. Herbert C. Brown, Purdue University.

American Chemical Society Award (gold medal and $1,000) in industrial and engineering chemistry: Dr. Neal R. Amundson, University of Minnesota.

American Chemical Society Award ($1,000) for nuclear chemistry: Dr. Charles D. Coryell, Massachusetts Institute of Technology.

American Chemical Society Award ($1,000) in petroleum chemistry: Dr. Robert W. Taft, Jr., Pennsylvania State University.

American Chemical Society Award ($1,000) in pure chemistry: Dr. E. J. Corey, Harvard University.

American Heart Association Gold Heart awards for 1959: Dr. Edgar V. Allen, Mayo Clinic; Drs. Samuel A. Levine and David Davis Rutstein, Harvard Medical School.

American Institute of Chemists Gold Medal for 1959: Crawford H. Greenewalt, E. I. du Pont de Nemours & Co.

Bôcher Memorial Prize of the American Mathematical Society: Dr. Louis Nirenberg, New York University.

Borden Award (gold medal and $1,000) of the Association of American Medical Colleges: Dr. Theodore T. Puck, University of Colorado Medical Center.

Octave Chanute Award of the Institute of the Aeronautical Sciences: John T. Reeder, Langley Research Center, National Aeronautics and Space Administration.

Comstock Prize of the National Academy of Sciences: Dr. Charles Hard Townes, Columbia University.

Dr. C. C. Criss Award (gold medal and $10,000) of Mutual of Omaha: Dr. Thomas Dooley.

Davy Medal of the Royal Society: Dr. R. B. Woodward, Harvard University.

Arthur L. Day Medal of the Geological Society of America: Sir Edward Bullard, Cambridge University.

Edison Medal of the American Institute of Electrical Engineers for 1959: James F. Fairman, Consolidated Edison Company of New York.

Albert Einstein Award (gold medal and $5,000) of the Lewis and Rosa Strauss Memorial Fund: Dr. Willard F. Libby, University of California.

Daniel Giraud Elliot Medal of the National Academy of Sciences: Dr. Herbert Friedmann, Smithsonian Institution.

Enrico Fermi Award (gold medal and $50,000): Dr. Glenn T. Seaborg, University of California.

Fisher Award ($1,000) in analytical chemistry: Dr. Philip J. Elving, University of Michigan.

Franklin Medal of the Franklin Institute: Dr. Hans A. Bethe, Cornell University.

Fritzsche Award (gold medal and $1,000) for work in essential oils: Dr. Carl Djerassi, Stanford University.

Garvan Medal of the American Chemical Society: Dr. Mary L. Caldwell, Columbia University.

Willard Gibbs Medal of the American Chemical Society for 1960: Dr. George B. Kistiakowsky, special assistant to the president for science and technology.

Daniel Guggenheim Medal of the American Society of Mechanical Engineers: Sir George Robert Edwards, Vickers-Armstrongs (Aircraft), Ltd.

Hayden Geological Award of the Academy of Natural Sciences: Dr. Carl O. Dunbar, Yale University.

Dannie Heineman Prize ($2,500) for mathematical physics: Dr. Murray Gell-Mann, California Institute of Technology.

Lewis H. Hill Space Transportation Award of the Institute of the Aeronautical Sciences: the late Dr. Robert H. Goddard.

Holley Medal of the American Society of Mechanical Engineers: Col. Maurice J. Fletcher, Army Prosthetics Research Laboratory, Walter Reed Medical Center.

Hoover Medal for distinguished public service by an engineer: Dr. Henry T. Heald, Ford Foundation.

Hubbard Medal of the National Geographic Society: Rear Adm. George J. Dufek.

Industrial Research Institute Medal for 1960: Dr. Augustus B. Kinzel, Union Carbide Corporation.

Institute of Radio Engineers Medal of Honor for 1960: Dr. Harry Nyquist, Bell Telephone Laboratories.

John Jeffries Award of the Institute of the Aeronautical Sciences: Dr. Hubertus Strughold, U.S. Air Force School of Aviation Medicine.

Kendall Company Award ($1,000) in colloid chemistry: Dr. John D. Ferry, University of Wisconsin.

Kimber Genetics Award of the National Academy of Sciences: Dr. Tracy Morton Sonneborn, Indiana University.

Jessie Stevenson Kovalenko Medal of the National Academy of Sciences: Dr. Eugene L. Opie, Rockefeller Institute for Medical Research.

Frank H. Lahey Memorial Award "for outstanding leadership in medical education": Devereux C. Josephs.

Benjamin G. Lamme Gold Medal of the American Institute of Electrical Engineers for 1958: Dr. Sterling Beckwith, consultant; Philip L. Alger, General Electric Company.

Albert Lasker Award ($2,500) of the American Heart Association for 1959: Dr. Robert E. Gross, Harvard Medical School.

Albert Lasker awards in medical research and public health administration: Special awards ($5,000)—Sen. Lister Hill; Rep. John E. Fogarty; regular awards ($2,500)—Maurice Pate, U.N. Children's Fund; Dr. John H. Dingle, Western Reserve University School of Medicine; Dr. Albert H. Coons, Harvard Medical School; Dr. Jules Freund, National Institutes of Health; Dr. Gilbert Dalldorf, National Foundation.

Eli Lilly and Company Award (gold medal and $1,000) in biological chemistry: Dr. James D. Watson, Harvard University.

Robert M. Losey Award of the Institute of the Aeronautical Sciences: Patrick D. McTaggart-Cowan, Meteorological Division, Canadian Department of Transport.

Mineralogical Society of America Award: Dr. Harry F. W. Taylor, University of Aberdeen.

Paul-Lewis Laboratories Award (gold medal and $1,000) in enzyme chemistry: Dr. Arthur B. Pardee, University of California.

Penrose Medal of the Geological Society of America: Dr. Adolph Knopf, Stanford University.

Phi Beta Kappa Science Prize ($1,000): Dr. Loren C. Eiseley, for *Darwin's Century.*

Priestley Medal of the American Chemical Society: Dr. Hermann I. Schlesinger, University of Chicago, medal for 1959; Dr. Wallace R. Brode, science adviser to the secretary of state, medal for 1960.

Sylvanus Albert Reed Award of the Institute of the Aeronautical Sciences: Victor E. Carbonara, Kollsman Instrument Corporation.

Research Corporation Award ($2,500): Dr. Melvin Calvin, University of California.

Roebling Medal of the Mineralogical Society of America: Prof. Felix K. L. Machatschki, Vienna University.

Royal Geographical Society medals: Sir Raymond Edward Priestley, Founder's Medal; Comdr. William R. Anderson, U.S. Navy, Patron's Medal.

Rumford Premium (medals and $5,000) of the American Academy of Arts and Sciences: Dr. George Wald, Harvard University.

Scientific Apparatus Makers Award ($1,000) in chemical education: Dr. Arthur F. Scott, Reed College.

Sedgwick Memorial Medal of the American Public Health Association: Dr. Louis I. Dublin, Institute of Life Insurance.

Lawrence Sperry Award of the Institute of the Aeronautical Sciences: Robert G. Loewy, Vertol Aircraft Corporation.

Mary Clark Thompson Medal of the National Academy of Sciences: Dr. Roman Kozłowski, University of Warsaw.

Trudeau Medal of the National Tuberculosis Association: Dr. Edith M. Lincoln, New York University–Bellevue Medical Center.

Viking Fund awards (medal and $1,000) of the Wenner-Gren Foundation for Anthropological Research, Inc.: Dr. Raymond W. Firth, University of London; Dr. Henri Victor Vallois, Musée de l'Homme; Dr. Jesse D. Jennings, University of Utah.

Wright Brothers Medal of the Society of Automotive Engineers for 1958: Kermit E. Van Every, Douglas Aircraft Company, Inc.

Theater and Motion Pictures

Academy of Motion Picture Arts and Sciences awards for 1958: Best picture of 1958—*Gigi;* best film actress—Susan Hayward (q.v.), for her performance in *I Want to Live!;* best film actor—David Niven (q.v.), for his performance in *Separate Tables;* best director—Vincente Minnelli, for *Gigi;* best supporting actress—Wendy Hiller, in *Separate Tables;* best supporting actor—Burl Ives, in *The Big Country;* best foreign-language film—*My Uncle, Mr. Hulot* (French); best feature documentary film—*White Wilderness;* best screenplay—Nathan E. Douglas and Harold Jacob Smith, for *The Defiant Ones;* best screen adaptation—Alan Jay Lerner, for *Gigi;* best original song—*Gigi* (Frederick Loewe and Alan Jay Lerner); best music scoring (drama or comedy)—Dimitri Tiomkin, for *The Old Man and the Sea;* best music scoring (musical)—André Previn, for *Gigi;* best cinematography (black and white)—Sam Leavitt, for *The Defiant Ones;* best cinematography (color)—Joseph Ruttenberg, for *Gigi;* best art direction—William A. Horning and Preston Ames, for *Gigi;* best special effects—Tom Howard, for *Tom Thumb;* best costume design—Cecil Beaton, for *Gigi;* best film editing—Adrienne Fazan, for *Gigi;* best sound recording—*South Pacific;* best documentary short subject—*Ama Girls;* best live-action short subject—*Grand Canyon;* best cartoon short subject—*Knighty Knight Bugs;* special awards—Jack L. Warner (Irving G. Thalberg Award); Maurice Chevalier.

American National Theatre and Academy (ANTA) awards: Kim Stanley, for her performance in *A Touch of the Poet;* Jason Robards, Jr., for his performance in *The Disenchanted.*

Barter Theater Award: Robert Whitehead, for production of *A Touch of the Poet, The Cold Wind and the Warm,* and *Goldilocks.*

British Film Academy awards for 1958: Best film—*Room at the Top;* best British actress—Irene Worth, for performance in *Orders to Kill;* best British actor—Trevor Howard, for performance in *The Key;* best non-British actress—Simone Signoret, for performance in *Room at the Top;* best non-British actor—Sidney Poitier, for performance in *The Defiant Ones;* best documentary film—*Glass* (Dutch); United Nations Award—*The Defiant Ones.*

Cannes International Film Festival prizes: Golden Palm—*Black Orpheus* (French); best actress—Simone Signoret, for performance in *Room at the Top* (British); best actor—Orson Welles, Dean Stockwell, and Bradford Dillman, for performance in *Compulsion* (American); best director—François Truffaut, for *The 400 Blows* (French); International Prize—*Nazarene* (Mexican); special jury prize—*Stars* (Bulgarian); special prize for comedy—*Policarpo* (Italian); special mention—*The White Heron* (Japanese).

Clarence Derwent awards ($500) for best nonfeatured performances by an actress and an actor for 1958–59: Lois Nettleton, for performance in *God and Kate Murphy;* David Hurst, for performance in *Look After Lulu.*

Milestone Award of the Screen Producers Guild: Samuel Goldwyn.

New York Drama Critics Circle awards: *A Raisin in the Sun,* best American play of the 1958–59 season; *The Visit,* best foreign play; *La Plume de Ma Tante,* best musical.

New York Film Critics Circle awards: best picture—*Ben-Hur;* best actress—Audrey Hepburn, for performance in *The Nun's Story;* best actor—James Stewart, for performance in *Anatomy of a Murder;* best director—Fred Zinnemann, for *The Nun's Story;* best screen writing—*Anatomy of a Murder;* best foreign-language film—*The 400 Blows* (French).

Antoinette Perry awards for 1958–59: *J.B.,* play by Archibald MacLeish (q.v.); *Redhead,* musical with book by Herbert and Dorothy Fields, Sidney Sheldon, and David Shaw, music by Albert Hague, and lyrics by Miss Fields; Gertrude Berg, for performance in *A Majority of One;* Jason Robards, Jr., for performance in *The Disenchanted;* Gwen Verdon, Richard Kiley, and Leonard Stone, for performances in *Redhead;* Julie Newmar, for performance in *The Marriage-Go-Round;* Charlie Ruggles, for performance in *The Pleasure of His Company;* Pat Stanley and Russell Nype, for performances in *Goldilocks;* Elia Kazan, for direction of *J.B.;* Salvatore Dell'Isola, for musical direction of *Flower Drum Song;* Bob Fosse, for choreography, and Rouben Ter-Arutunian, for costumes, of *Redhead;* Donald Oenslager, for sets of *A Majority of One;* Sam Knapp, for work as an electrician at *The Music Man;* cast of *La Plume de Ma Tante.* John Gielgud, and Howard Lindsay and Russel Crouse, special awards.

Screen Directors Guild of America Award for 1958: Vincente Minnelli, for *Gigi.*

Venice International Film Festival awards: Golden Lion of St. Mark—*General Della Rovere* (Italian) and *The Great War* (Italian); best actress—Madeleine Robinson, for performance in *A Double Tour* (French); best actor—James Stewart, for performance in *Anatomy of a Murder* (American); special jury prize—*The Magician* (Swedish).

Writers Guild of America awards for 1958: Laurel Award for Achievement—Nunnally Johnson; best drama—*The Defiant Ones;* best comedy—*Me and the Colonel;* best musical—*Gigi.*

Miscellaneous

Horatio Alger awards: Albert J. Berdis, John F. Ernsthausen, Alfred C. Fuller, Alfred L. Hammell, Walter L. Jacobs, James P. Mitchell, Charles F. Noyes, Dr. Eric A. Walker, Benjamin H. Wooten.

American Association for the United Nations Award for distinguished service to the United Nations: Dr. Auguste R. Lindt.

American Bar Association Medal: Grenville Clark.

B'nai B'rith President's Medal: President Dwight D. Eisenhower.

Charlemagne Prize of Aachen for outstanding contributions to European unity: the late General of the Army George C. Marshall (q.v.).

Collier Trophy "for the greatest achievement in aviation" in the United States in 1958: Clarence L. Johnson, Lockheed Aircraft Corporation; Neil Burgess and Gerhard Neumann, General Electric Company; Lt. Col. Howard C. Johnson and Maj. Walter W. Irwin, U.S. Air Force.

Erasmus Prize ($28,000) of the European Cultural Foundation: Dr. Karl Jaspers and Robert Schuman.

Four Freedoms Award: Henry Cabot Lodge (q.v.).

Freedom Award of Freedom House: Paul-Henri Spaak.

Grolier Society Award ($500) for an unusual contribution by a librarian to the stimulation and guidance of reading by children and young people: Evelyn Sickels, former coordinator of children's services, Indianapolis Public Library.

Harmon International Aviation Trophy for 1959: Maj. André Turcat, Nord Aviation.

International Benjamin Franklin Society Gold Medal: Dr. Herman B. Wells, president, Indiana University.

Laetare Medal of the University of Notre Dame: Robert Murphy, deputy under secretary of state.

Joseph W. Lippincott Award (medal and $500) of the American Library Association: Essae Martha Culver, Louisiana state librarian.

Nansen Medal for "services to the humanitarian cause of refugees": Oskar Helmer.

President's awards for distinguished federal civilian service: James V. Bennett, Dr. Wernher von Braun, Robert D. Murphy, Doyle L. Northrup, Dr. Hazel K. Stiebeling.

Theodore Roosevelt medals for distinguished service: Horace M. Albright, Henry Cabot Lodge (q.v.), American Museum of Natural History.

George Washington Honor Medal of the Freedoms Foundation: J. Edgar Hoover.

Woodrow Wilson Award for Distinguished Service: Dr. James B. Conant.

Wright Brothers Memorial Trophy for 1959: William P. MacCracken, Jr.

PROTESTANT EPISCOPAL CHURCH. On Jan. 14, 1959, in the Cathedral of St. Peter and St. Paul, Washington, D.C., the Rt. Rev. Arthur C. Lichtenberger, bishop of Missouri, was installed as the 21st (the 6th elected) presiding bishop of the Protestant Episcopal Church.[1] The year also

[1] Prior to his elevation to the episcopate, Bishop Lichtenberger had been a missionary in China, a professor in the General Theological Seminary, and the dean of Trinity Church Cathedral, Newark, N.J.

marked the 175th anniversary of the consecration (Nov. 14, 1784) of Samuel Seabury as the first bishop of the church in the United States. The first bishop of Connecticut, Seabury also served as the second presiding bishop (1789–92). Prior to the 1920's, when the office of presiding bishop was made elective, the office was held by the senior bishop in point of consecration.

The year 1959 also marked several other notable anniversaries, including the centennial of the Japanese Episcopal Church (*Nippon Seikokai*). The movement, begun by a few lone missionaries soon after the opening of Japan to the West in 1854 by Commodore Matthew Perry (a great-uncle of a later presiding bishop) and by another Episcopalian diplomat, Townsend Harris, grew in 10 decades, despite persecutions, war, and other obstacles, to an autonomous, self-supporting, self-propagating church, with 11 dioceses covering the entire empire and led by Japanese bishops and other clergy.

In April appropriate recognition was given to this anniversary during the meeting in Tokyo of the General Synod of the Japanese church. Among those participating were the archbishop of Canterbury; Presiding Bishop Lichtenberger; and representatives of other branches of the Anglican Communion. The event also was the occasion of the gift from United States Episcopalians of a nuclear reactor to St. Paul's (Rikkyo) University, one of the leading institutions of higher learning in Japan. The contract for the erection of the reactor by the General Atomics Company was signed in New York City on December 15.

In the United States, the year 1959 marked the 100th anniversary of the church in North Dakota and Oregon, and the centennial of the consecration of Alexander Gregg as the first bishop of Texas. All three areas have shown encouraging growth, and Texas, which was served by one bishop in 1859, had grown by 1959 to comprise five dioceses with nine bishops.

The centennial in North Dakota was marked by placing in service of a bus equipped with a modern exhibit of the church's life and work. The exhibit is moved from town to town throughout North Dakota to acquaint the citizens of that state with the Episcopal Church.

In accordance with the action of the Lambeth Conference of 1958, and at the request of the metropolitans of the Anglican Communion, the archbishop of Canterbury, early in 1959, invited the bishop of Olympia (Wash.), the Rt. Rev. Stephen F. Bayne, Jr., to be the first executive officer of the Anglican Communion. Bishop Bayne resigned his jurisdiction in Olympia to undertake this work, and the diocese elected as his successor the Rt. Rev. William Fisher Lewis, missionary bishop of Nevada.

Other changes in the missionary episcopate in 1959 included the election of the Rev. William G. Wright, director of the National Council's Home Department, as bishop of Nevada, and of the Rev. Paul A. Kellogg as the first missionary bishop of the Dominican Republic. The Episcopal Church has been at work in the Dominican Republic since 1897, but until 1940 the area was under the care of neighboring bishops, first of Puerto Rico and later of Haiti. In 1940 the General Convention organized the Dominican Republic into a separate missionary district but continued it in charge of the bishop of Haiti. It was not until 1959 that provision for a bishop of its own was made.

Headquarters of the National Council of the Episcopal Church (which is the board of directors of the Domestic and Foreign Missionary Society) are at Church Missions House, 281 Fourth Avenue, New York 10, N.Y. The official publication is *Forth* (William E. Leidt, Publisher). The president of the National Council is the Rt. Rev. Arthur Lichtenberger.

William E. Leidt,
Director of Publications, National Council, Protestant Episcopal Church.

PSYCHIATRY AND MENTAL HEALTH. During 1959 the effort to understand and control mental illness was expanded and intensified in the United States. Challenges to the structure and function of the traditional state hospital appeared at many levels. A study of the state administration of mental health services in New Jersey, for example, resulted in the recommendation of certain drastic changes, including the strengthening of state authority. In Georgia there was a shift of mental hospitals from independent status to the jurisdiction of a state public health authority. Alaska, the only state without a mental institution, succeeded in 1959 in planning and authorizing a $6.5 million state hospital to be located near Anchorage.

Accreditation.—Standards which had been accepted for years were challenged by the withholding of accreditation from many mental hospitals by the Joint Commission on Accreditation of Hospitals. There was, however, a counterchallenge to the competence of this body, which is oriented chiefly to the general hospital. As a result, future evaluations were expected to be more appropriate and acceptable.

Hospital Care.—The decline in the number of patients in mental hospitals in recent years,[1] owing largely to the use of tranquilizing drugs, decelerated in 1959 to one half of 1 per cent. In some hospitals the population actually rose.

Hospitalization methods in England continued in 1959 to be of significant interest to American health authorities. The broadening of the Worthing Experiment in England supported earlier findings that increased community out-patient and home services result in a reduction of the need for hospitalization.

After studying British "open" hospitals, a New Jersey delegation contributed to the trend in the United States away from patient isolation and toward improved community services. It offered ten recommendations which were later approved by the state. These bore upon voluntary admission, easy readmission, improved preadmission services, analysis and more economical use of nursing personnel, concern with the social as well as with the physical disorders of the patient, day care for the aged patient, establishment of improved living conditions for patients, reduced bed capacity of hospitals, re-examination of record-keeping practices, and simplification of budgeting procedures.[2] Taking action in this general area, the Veterans Administration in August announced adoption of an "open door policy" for the operation of its mental hospitals.

Financing.—A Roper poll in 1959 showed that the care and treatment of the mentally ill ranked second to education as the service most Americans were willing to pay for. This attitude seemed increasingly to be borne out in steps being taken toward financing the nation's mental health programs. Congress, for example, again proved to be generous in its appropriations. It provided $68 million for mental health, more than $15 million

[1] In state hospitals alone the decrease approximated 13,000 between 1955 and the end of 1958, when patients numbered 545,465.

[2] *Mental Hygiene*, 43:325, April 1959.

beyond the president's request. Action by the National Association of County Officials called for increased county appropriations for mental health purposes.

Repeated efforts continued to be made to include mental illness as an insurable disability.[3] A step in this direction was reflected in recent New York State workmen's compensation schedules which provide coverage for psychiatric examinations.

Personnel.—The number of mental health workers increased in 1959, but the shortage of personnel continued despite the attractions of constantly rising salaries and marked improvements in training methods and facilities.

It was estimated that in 1959 there was one psychiatrist for every 16,400 persons in the United States, compared with one for every 19,200 in 1956.

Increasing attention was being given to strengthening the role of the family physician in assuming psychiatric responsibility for his patients, and training opportunities were accordingly being offered. For this purpose a special congressional appropriation was made to the National Institute of Mental Health, and the American Psychiatric Association was conducting a joint project with the Academy of General Practice. In a related development the National League for Nursing continued to give special attention to the improved training of psychiatric aides in mental hospitals and launched a special publication for them.

Research.—During the year the National Association for Mental Health greatly expanded its research program and made grants to a number of research centers. New drugs were being developed and older ones were being constantly tested for effectiveness and specific applicability. A critical review of hereditary enzyme deficiencies, including those bearing on mental illness, was reported,[4] and another study appraised the multiple theories of and attacks on schizophrenia.[5]

In other research developments a "Health for Peace" bill was presented in Congress by Sen. Lister Hill to launch a National Institute of International Medical Research which would receive an annual appropriation of $50 million to help attack the illnesses of man wherever investigation promises to be fruitful. The Southern Regional Education Board was undertaking a study of mental health research in the South.

Interesting advances were made in the field of mental deficiency. Studies disclosed a consistent increase in chromosomes in the cells of persons afflicted with mongolism and have demonstrated the possibility of preventing cretinism through prenatal treatment of mothers suffering from thyroid deficiency. One study showed that children born in the winter are more apt to suffer from mental deficiency than those born at other times of the year.

Insanity Before Law.—With a view to revising their own statutes, several states were seriously studying the Durham decision of 1956 in which a federal court altered the basis of criminal responsibility established in the century-old M'Naghten formula.

International Developments.—On World Health Day (April 7) the World Federation for Mental Health opened World Mental Health Year with a multiprofessional, multinational program at the United Nations Headquarters in New York. In connection with the program many countries are conducting or planning mental health projects which will be reported in 1961 at a congress in Paris.

Two transnational mental health conferences of importance were held in 1959. One occurred at St. Thomas in the Virgin Islands and principally involved representatives of countries in or adjacent to the Caribbean area; and the other, the third Latin-American conference, met in Lima, Peru.

National and International Consultant,
The National Association for Mental Health.

PSYCHOLOGY. For an exhaustive bibliography of current psychological literature the reader should consult the *Annual Review of Psychology* (Annual Reviews, Inc., Palo Alto, Calif.), in which specialists critically summarize the contributions of their respective fields, and the bimonthly *Psychological Abstracts* (American Psychological Association, Washington, D.C.), in which the literature is classified and abstracted as it appears. The programs of the annual meetings of the American Psychological Association and of its regional divisions provide another important source. Reports of these appear, with titles of all contributed papers, in *The American Psychologist* (American Psychological Association, Washington, D.C.), the monthly organ of the association.

The following discussion must necessarily be limited to a sampling of recent contributions in the fields of experimental, social, and applied psychology.

Experimental Psychology.—The greatest research and theoretical activity in experimental psychology exists in the areas of learning, sensory and perceptual processes, motivation, thinking, and physiological psychology.

Learning.—Much of the smoke and din of the battle of theories seems to be subsiding, and each contestant is applying himself to the task of theory construction on a "live and let live" basis. It does seem that research in the area of situation-response (S-R) theory continues most active and fruitful. This may be because of the greater ease with which the mind can picture its elementalistic variables. Especially noteworthy is the increasingly vigorous attack on problems of motivation in relation to learning and the strong attempt to clarify the distinctions and relations between motivation and habit. Illustrative of this trend, as well as of the delineation of newer approaches to motivation and reward, are recent papers by Neal E. Miller.

Statistical learning theory is a newcomer in the field of learning, but its influence is increasing. Although its publications still are relatively few in number, a sizable number of experimental studies triggered off by the stochastic model conceptions of William K. Estes have appeared. Estes, Frank Restle, C. J. Burke, and others have also published a number of theoretical papers conceptualized under the aegis of probability learning.

In general it may be said that the range of phenomena encompassed as variables in the investigation of learning is becoming wider, with motivation and perception as foci of this expansional trend. Also noteworthy is an increasing attention to the nature of the subject's responses. Conceptualization in terms of interrelations between abstracted functions is giving way hopefully to some consideration of the performing individual and what he does as part and parcel of the learning act.

Thought.—Interest is being revived in the ancient field of problem solving and thinking. The

[4] Snyder, Laurence H., "Fifty Years of Medical Genetics," *Science,* 129:7–13, Jan. 2, 1959.

[5] Kety, Seymour, "Biochemical Theories of Schizophrenia," *Science,* Part 1, June 5, 1959; Part 2, June 12, 1959.

most comprehensive contemporary theoretical work in this field is a report on a symposium at the University of Colorado entitled *Contemporary Approaches to Cognition* (Cambridge, Mass., 1957) by Jerome S. Bruner, Charles E. Osgood, and others. The method known as semantic differentiation, which was initiated by Osgood, is continuing to bear fruit in the study of the structure of meaning and the problem of its relative dependence upon or independence from the mold of language. Another central topic is that of decision making, which is being treated largely in terms of a probabilistic orientation, as, for example, in the work of Robert D. Luce and Howard Raiffa, *Games and Decisions* (New York 1957).

Sensation and Perception.—The currently outstanding publication in the field of vision is the monumental *The Vertebrate Visual System* by the late Stephen Polyak (Chicago 1957). Its 1,390 pages are undoubtedly destined to play a future role similar to that of Hermann Helmholtz's classic on physiological optics during the past 100 years. Experimental contributions abound in the fields of flicker, adaptation, electroencephalography, and photoreceptor process. Considerable new work has been done in perception on figural after effects.

Publication in the field of hearing has also been very active. Both auditory sensory and perceptual phenomena are being subjected to study in terms of their physiological underpinning. The work in this field has been greatly stimulated by the Armed Forces—National Research Committee on Hearing and Bio-Acoustics.

Social Psychology.—The greatest productivity in social psychology during recent years has been in the field of social influence on attitude and opinion change. An important theoretical contribution to the subject is Leon Festinger's *A Theory of Cognitive Dissonance* (Evanston, Ill., 1957). Dissonance is held to be a motivating state inducing the individual to reduce it to bring about consonance and to avoid behavior and situations which tend to increase dissonance. This generalized position, which has stimulated a number of research papers, is supported by precise definition and a wealth of data.

Other studies deal with the identification of situational causes of attitude change, the nature of individual differences in tendency to change, and the effect of pre-existing personality differences on susceptibility to change under varying conditions.

A second field of social psychology showing great activity has been that of social perception. Topics such as the role of response categories, the personality of judges, and implicit assumptions in judges have been focal centers of much of the experimentation.

Applied Psychology.—A check of the relative number of articles appearing in the several branches of psychology reveals the domination of clinical psychology, psychological therapy, counseling psychology, and the supporting fields of developmental psychology and abnormal psychology.

Outside the clinical area, educational psychology is the largest field of application. Actually the findings of all fields of psychology have educational implication, as is evident from such topics as have been mentioned: learning, motivation, perception, and social change. In addition there are such other topics of special interest to the educator as the measurement of educational achievement and intellectual growth, adjustment problems of pupils and teachers, and psychological problems of administration. Educational psychology is a broad field and the interested person will find much in the psychological literature pertinent to its application.

PUBLIC HEALTH. Although a recurrence of Asian influenza, which struck the United States in epidemic proportions in the fall and winter of 1957, was expected in 1958, there were no reports of confirmed cases until February 1959. Sporadic outbreaks of both Type A2 (Asian) and Type B influenza began to occur during that month and continued to be reported for the remaining winter months.

The total number of paralytic poliomyelitis cases reported in the United States in 1958 was 3,697—almost 50% higher than in 1957. This increase ended the steady downward trend in incidence since 1954. By the end of 1958 about 50 million people under 40 years of age had had three injections of Salk vaccine, and some had had a fourth injection, but about 40 million people under 40 had had no vaccine. About half of the 3,697 paralytic cases occurred in children under 5, the group with the least amount of vaccine protection. To meet this situation, the U.S. Public Health Service, in cooperation with the American Medical Association and the National Foundation, campaigned vigorously to promote vaccination programs. The possible utilization of one or more orally administered live-virus vaccines—the subjects of large-scale tests in a number of countries—awaited conclusive determination of the safety and effectiveness of such vaccines. (See also MEDICINE; PEDIATRICS.)

Death Rates.—The general death rate in the United States in 1958 was 9.5 per 1,000 population. This was the 11th consecutive year in which the death rate remained below 10 per 1,000.

The infant death rate was 26.9 per 1,000 live births, and the maternal death rate, 3.5 per 10,000 live births. The tuberculosis death rate fell from 7.8 per 100,000 population in 1957 to 7.0 in 1958. The principal diseases of childhood—scarlet fever and streptococcal sore throat, diphtheria, whooping cough, and measles—which caused about 4 deaths for every 100,000 youngsters in 1949, were responsible for only about 1 death per 100,000 in 1958.

Chronic diseases continued to cause a majority of deaths in the United States. Together, diseases of the heart and blood vessels and cancer accounted for 70% of all deaths in 1958. The death rate for the major cardiovascular-renal diseases in 1958 was 524.0 per 100,000 population, and the cancer death rate was 145.6 per 100,000 population. (See also DEATH, CAUSES OF.)

Births and Marriages.—There were an estimated 4,250,000 births and 1,445,000 marriages in the United States in 1958.

Public Health Service.—The principal federal health agency, the Public Health Service, of the U.S. Department of Health, Education, and Welfare, continued its programs of research, medical care for specially designated groups, and technical and financial aid to state and local agencies.

In 1959, Congress appropriated $756,361,208 for the Public Health Service, an increase of $190,603,411 over the 1958 appropriation. More than two thirds of this amount was allocated to

the states and to nonfederal institutions for public health and medical research programs.

Increasing attention was given during the year to the growing health problems related to the modern environment, including air and water pollution and the effects of natural and man-made radiation. The service cooperated with Army, Navy, Atomic Energy Commission and Maritime Administration authorities in radiological protection and surveillance programs, and monitored radiation levels in air, water, and milk. A National Conference on Air Pollution, called by the service in November 1958 and attended by more than 1,000 representatives of industry, research organizations, and federal, state, and local agencies, recommended extension of the Federal Air Pollution Act and expanded research efforts, with particular attention to the problem of motor vehicle exhausts.

Investigations conducted by or with the support of the service included engineering studies, air sampling to detect cancer-causing substances, and communitywide air surveys. The newly created Division of Water Supply and Pollution Control gave grants totaling $47 million to aid in construction of sewage treatment works, most of the assistance going to cities of less than 125,000 population. An important phase of research in this area centered on problems created by manufacture of new chemicals and synthetics, and studies of radioactivity in water.

In March 1959 the National Advisory Committee on Radiation, set up by the surgeon general in 1958 to advise him on radiological health matters, recommended a comprehensive program of control of all sources of radiation and expanded research and training in this field, with principal federal responsibility in the Public Health Service. In August 1959 the president established by executive order a Federal Radiation Council, designated the secretary of health, education, and welfare as chairman, and directed the department to intensify its radiological health efforts, including research, development, technical assistance, enforcement, and public information on ionizing radiation. In September, Congress enacted legislation authorizing a permanent Federal Radiation Council and clarifying the responsibility of the states for radiation safety measures. (See also RADIATION; SANITARY ENGINEERING.)

Research.—The National Institutes of Health, main research arm of the Public Health Service, in 1959 awarded an unprecedented 9,166 research-project grants and 5,779 training grants and fellowships, totaling $202 million. Congressional appropriations for the institutes' programs totaled $294.4 million, and an additional $30 million was appropriated for construction of health research facilities.

Substantial progress was made in the search for better chemical agents to treat cancer and in the evaluation of drugs for the treatment of mental illness. A collaborative study of 40,000 mothers and their babies was directed toward finding causes of cerebral palsy, mental retardation, and related disorders. Scientists in various institutes cooperated in finding new basic knowledge of neurostructural bases of behavior. Clinical studies were initiated to evalute promising new compounds for dietary control of dental caries and treatment of high blood pressure.

An experiment involving induction of leukemia in mice by means of a virus extracted from a mouse sarcoma stimulated investigation of the possible viral origins of some human cancers and constituted one of the major achievements of the year.

The second in a series of long-term programs to coordinate aging studies was established at Yeshiva University through a grant from the National Institutes of Health's Center for Aging Research.

A new synthetic pain-killing drug—10 times more powerful than morphine and 50 times more powerful than codeine—was developed by scientists at the institutes and given the name phenazocine. In addition to high potency, phenazocine causes less respiratory depression than morphine, has low toxicity, and is effective against certain forms of severe pain which morphine does not relieve.

Women cigarette smokers were found in a cancer institute study to run the same excessive risk of developing lung cancer as men cigarette smokers. This confirmed a belief of other investigators that there is no factor peculiar to men which contributes to the development of this form of cancer.

Medical Services.—In continuing to provide services for merchant seamen and other designated federal beneficiaries, the Public Health Service in 1959 maintained 16 hospitals (including two for treatment of narcotic addiction and other psychiatric disorders, 1 for tuberculosis, and 1 for leprosy), 26 outpatient clinics, and 99 outpatient offices.

Ministering to about 345,000 Indians and 37,500 Alaska natives through hundreds of health facilities that reach from above the Arctic Circle to the Mexican border, the Division of Indian Health conducted the largest and most comprehensive civilian health program within the federal government.

In 1959, the 13th year of the cooperative state-federal program for the construction of hospital and medical facilities (Hill-Burton program), 77% of the need for general hospitals, but only 16% of the need for chronic disease hospitals, 37% of the need for nursing homes, and 52% of the need for mental hospital beds, were met. For all types of hospitals, 855,000 additional beds were still needed, according to state plans on record as of Jan. 1, 1959.

Services to the States.—Grants-in-aid funds for state and local health programs amounted to $265,475,000 in federal appropriations for 1959, reflecting increases of $65,000,000 for hospital and medical facilities construction and $700,000 for venereal disease special projects, as compared with 1958 appropriations. Funds for tuberculosis control, however, were decreased by $500,000. To help strengthen other state and local health programs, $1,972,848.13 was allocated for public health workers' professional traineeships, $199,939.79 for air pollution control training and demonstration projects, and $442,300 for grants to schools of public health in the provision of public health training.

LEROY E. BURNEY,
Surgeon General, U.S. Public Health Service.

PUBLIC OPINION SURVEYS. The 1960 political campaigns in the United States probably will see a wider use than ever before of private surveys financed by the several candidates. Although in Great Britain and West Germany the major political parties have engaged for years in systematic public opinion research, it was not until 1956 that private political polls became common in the United States. The trend continued in 1958, and the upset victory of Nelson Rockefeller in that year's New York gubernatorial election was widely ascribed to his skillful use of private survey findings. This trend has been decried in some quarters as encouraging appeals to selfish group interests at the expense of the national welfare, as blunting differences between the parties on crucial issues, and as producing candidates who follow public opinion instead of boldly attempting to lead it. On the other hand, candidates for public office have always, and quite properly, sought to learn the desires and preferences of the voters, and scientifically conducted surveys simply provide a more accurate method of achieving this end.

The shifting nature of public sentiment far in advance of a general election is illustrated by the recent resurgence of Republican Party fortunes and the rising popularity of Vice President Richard Nixon, as chronicled by leading polls during the year. Surveys made early in 1959 showed a heavy voter preference for the Democratic Party, with only a bare majority of those questioned approving of Dwight D. Eisenhower as president.

By autumn, however, the proportion of voters approving of Eisenhower had risen from 52% to 68%, and the Republican Party had regained much of its lost support. Further, "trial heats" conducted by the Gallup Poll showed Nixon comfortably ahead of any Democratic candidate for president. As the year drew to a close, the vice president was the nomination choice of 68% of Republican voters. Democrats showed no such heavily weighted consensus. Sen. John Kennedy and Adlai Stevenson were each favored by slightly over a fourth of the party's supporters, and no

other individual was named by more than 10%.

In Great Britain, the Conservative victory in the October 1959 election was correctly forecast by all three national polling agencies. Errors in the estimated division of the popular vote were well under 2%.

A 13-nation survey by the World Gallup Poll found widespread public approval of an exchange of visits between Soviet Premier Khrushchev and President Eisenhower, with fewer than one person in ten disapproving of the idea. Although opposition was strongest in the United States, a clear majority of the American public endorsed the proposal, and at the close of Khrushchev's United States tour in September, only 19% of those polled thought his visit had been "a bad thing." A "before-and-after" Gallup Poll survey of the American public's "image" of the Soviet premier found that favorable references increased from 13% to 27%, while unfavorable references remained about the same. After the visit, more people than before characterized him as "intelligent" and "cooperative," and fewer regarded him as "domineering" and "ruthless," although there was a considerable rise in the proportion who called him "untrustworthy." Only 20% of the American public expressed a belief in Khrushchev's sincerity in wanting to work out an effective disarmament plan.

The year 1959 marked the first occasion on which Soviet citizens were polled on a political question. At the request of the World Gallup Poll, Radio Moscow interviewed some 90 Russians concerning the exchange of visits between Khrushchev and Eisenhower. While all of the Muscovites approved of the idea, there were varied expectations concerning the outcome.

Visitors to the USSR reported the beginnings of market research efforts there, now that consumer goods are in greater supply. Also, it was reported that the Communist Hungarian government has already conducted several studies of people's buying habits and needs.

Creation of the 6-nation European Economic Community (q.v.) is expected to increase greatly the use of public opinion surveys in western Europe. A three-day conference entitled "Market Research on a European Scale" was held in Paris in the summer of 1959.

The World Association for Public Opinion Research, with members in 24 countries, held its 1959 conference in Brighton, England. The theme was "Widening Frontiers of Research," and reports of new activity in Yugoslavia, Spain, and Africa were read.

In spite of these encouraging developments, there is emerging a cautious attitude toward opinion surveys on the part of some governments. It is reported that the United Arab Republic, for example, now requires governmental permission for surveys involving more than 50 respondents.

A survey of the 545 members of the American Association for Public Opinion Research shows that 61% are research directors of corporations, or executives of market or opinion research companies; 29% are employed by academic institutions; and 10% represent government agencies, foundations, and educational or charitable institutions. At the 1959 meeting of the association, held at Lake George, N.Y., Elmo Roper was presented with the Julian L. Woodward Memorial Award for his distinguished career in public opinion research.

PAUL B. SHEATSLEY,
Eastern Representative, National Opinion Research Center, University of Chicago.

PUBLIC ROADS, Bureau of. See HIGHWAYS.

PUBLIC UTILITIES. Electric Power.—The installed capacity of electric public utility generating plants in the United States increased to 150.2 million kilowatts as of June 30, 1959, compared with 128.7 million kw. the previous year. Steam continued to increase its share of the total, accounting for 78.13%; water power accounted for 20.11%, and internal combustion for 1.75%. Of the total, 76.16% was privately owned and 23.84% was publicly owned. Average annual residential consumption increased to 3,366 kw.-hr., while the average revenue per kw.-hr. continued its long secular decline to 2.53 cents.

U.S. ELECTRIC POWER SALES, YEARS ENDING JUNE 30, 1958–59
(In billions of kilowatt-hours)

Area	1958[1]	1959[2]	Per cent change, 1958–59
New England	22.7	24.6	8.0
Middle Atlantic	89.8	94.4	5.1
East North Central	126.5	136.4	7.8
West North Central	35.1	37.7	7.4
South Atlantic	73.1	79.3	8.5
East South Central	80.1	82.1	2.5
West South Central	46.7	50.9	9.1
Mountain	24.1	26.2	8.8
Pacific	79.2	85.9	8.5
United States	577.3	617.5	7.0

[1] 1958 figures are final, as revised. [2] 1959 figures are preliminary. (Source: Federal Power Commission.)

Electric utilities received rate increases aggregating an estimated $76 million a year in 1958, and requests for increases which would total some $92 million were pending at the year's end. The propriety of allowing as expenses for rate making and tax purposes the costs of the electric utility industry's advertising program directed against public ownership was questioned by the Federal Power Commission and the Bureau of Internal Revenue. President Eisenhower, on Aug. 6, 1959, signed a bill enabling the Tennessee Valley Authority (q.v.) to obtain capital through the sale of revenue bonds (up to $750 million) to finance construction of new facilities, and requiring the agency to pay an annual return on its investment and limiting its geographical expansion.

As of December 1959, the 60,000-kw. Shippingport, Pa., nuclear power plant and two small experimental reactors (with generating capacities under 10,000 kw.) were producing commercial power in the United States. Sixteen additional commercial power reactors (11 sponsored by public utilities) were in various stages of planning, construction, or testing; three of these, all large, were to begin regular operation in 1960, and three more in 1961. One of the largest plants under construction was the Indian Point plant (near Peekskill, N.Y.) of the Consolidated Edison Company of New York. It will have a capacity of 275,000 kw. and will cost approximately $100 million. The unit cost of $363 per kw. compares with typical costs of conventional plants ranging from $115 to $180 per kw. The cost of power at the Shippingport, Pa., nuclear plant was reported at 64 mills (6.4 cents) per kw.-hr., as compared with approximately 7 mills (0.7 cent) at conventional plants. These figures indicate that the economic operation of nuclear generating plants will be somewhat further in the future than had been expected.

An experimental nuclear plant of approximately 20,000 kw. was being built in Canada, near Chalk River, Ontario, and plans were announced for a 200,000 kw. plant on Lake Huron, near Kincardine, Ontario; both are due to come into operation in 1961. In October 1959, the Peace River Power Development Company announced plans for a hydroelectric project to develop up to 4,200,000

hp. of energy in British Columbia. Work on the first stage of the program will begin in 1960. (See also ELECTRICAL DEVELOPMENTS.)

Telephone and Telegraph.—Telephones in service increased by 5.2% during 1958 to a total of 66.9 million at the end of the year. Of these, the Bell System accounted for 56.8 million, the remainder being serviced by 3,867 independent telephone companies. On July 24, 1959, the Federal Communications Commission ordered the Bell System to cut long-distance rates approximately $50 million a year, effective about September 15. On the other hand, the Bell System received rate increases of $87 million a year in 1958. Mechanization has offset, in part, rising labor costs. One of the more interesting developments in 1959 was the three-for-one stock split of the Bell company's common stock; the aggregate dividend also was increased 10%. (See also TELEPHONE.)

Western Union in December 1958 completed installation of the world's largest private wire system, a 250,000-mile network for the U.S. Air Force. The company, which received approximately $21 million in rate increases in 1958, has been seeking to offset competition by developing private lines and other services, materially changing the character of the enterprise. (See also TELEGRAPHY.)

Natural Gas.—Gas sales in the United States attained record levels in 1958, reaching 80.3 billion therms, of which 77.8 billion represented natural gas. Natural gas accounted for 30.7% of the United States energy needs in 1958, as compared with 27.7% in 1957 and 14.2% in 1947. Due in part to the uncertainty created by the Memphis case of 1958 (*Memphis L.G.&W. Div.* v. *F.P.C.*, 250 F2d 403), construction expenditures dropped from $1.77 billion to $1.62 billion, but the present pace was expected to continue at least through 1962. The S.S. *Methane Pioneer* completed its first year of transporting liquefied natural gas from Louisiana to England. A pipeline was completed to Florida in 1959.

Natural gas reserves increased by 7.6 trillion cubic feet in 1958 to reach a new peak of 254.1 trillion; net production totaled 11.5 trillion cubic feet. Major additions to reserves were found in Texas and Louisiana. The scramble for gas in the producing fields continued and forced average wellhead prices upward from 11.3 to 11.7 cents per thousand cubic feet. Turbulent economic conditions were highlighted by a decision of the U.S. Supreme Court on June 22, 1959 (*Atlantic Refining Company v. Public Service Commission of New York*) overturning a Federal Power Commission order permitting the pipeline company to pay 21.4 cents per thousand cubic feet after originally finding a 17-cent figure reasonable. The producers had refused to sell at the lower price. The court decision, in effect, cautioned the FPC that it should consider the price to be charged for natural gas before approving supply contracts. (See also GAS; PETROLEUM.)

Security Offerings.—New capital requirements of the utilities industries fell off somewhat in 1958, although the amount of gas securities offered continued to rise. Figures covering a four-year period are shown in the accompanying table.

U.S. UTILITY SECURITY OFFERINGS*
(Millions of dollars)

Category	1955	1956	1957	1958
Electric	$1,497	$1,457	$2,504	$2,379
Gas	991	646	1,075	1,298
Telephone	1,105	1,390	1,331	1,291
Other utilities	59	46	40	14
Total	$3,652	$3,539	$4,950	$4,982

* As compiled by Ebasco Services, Inc.

Transit.—Interest in monorail transportation was expressed in five cities—Washington, New Orleans, Los Angeles, Seattle, and Detroit. Seattle planned a one-mile system. In Detroit, however, a committee advised against a proposed 54-mile network. The Chicago Transit Authority experimented with electronically guided buses. (See also URBAN TRANSIT.)

(See also FEDERAL POWER COMMISSION; LAW; SECURITIES AND EXCHANGE COMMISSION.)

Professor of Economics and Business Administration, University of Maryland.

CONSOLIDATED EDISON

Consolidated Edison is constructing this $100 million nuclear power plant at Indian Point on the Hudson River, near Buchanan, N.Y., about 40 miles north of New York City.

PUBLISHING. See BOOK PUBLISHING AND SALES; GRAPHIC ARTS; MAGAZINES; NEWSPAPERS.

PUERTO RICO. Puerto Rico, lying 1,000 miles southeast of Florida, is the smallest and easternmost island of the Greater Antilles. It is approximately 100 miles long and 36 miles wide, and has an area of 3,435 square miles. Self-governing in local affairs, Puerto Rico is a commonwealth in voluntary association with the United States, which handles its international relations and defense activities. Puerto Ricans are also citizens of the United States.

Population.—Puerto Rico's total population as of July 1, 1959, was estimated at 2,342,428. The capital, San Juan, has a population of about 400,000. Other important cities (with 1950 census figures) are Ponce (99,492), Mayagüez (58,949), and Caguas (33,759).

The birth rate during the first half of 1959 was 30.2 per thousand (30.9 during the same period in 1958); the death rate was 6.3 per thousand (7.4 in 1958). In 1958–59, net emigration, almost entirely to the United States mainland, totaled 37,212 (27,000 in 1957–58).

Government.—Government officials and members of the bicameral legislature are elected every four years on the date of the United States presidential election. In 1959 the legislature had 38 members in the Senate and 62 members in the House of Representatives. The chief officials were Luis Muñoz Marín, governor; Antonio Fernós Isern, resident commissioner in Washington, where he sits in the U.S. House of Representatives; Roberto Sánchez Vilella, secretary of state; and Luis Negrón Fernandez, chief justice of the Supreme Court.

Economy.—During the past decade, Puerto Rico has attracted world attention because of the speed and effectiveness of its economic development. In the decade between 1948–49 and 1958–59, the commonwealth's gross product rose from $718 million to $1,406 million. In the same period its total net income rose from $597 million to $1,148 million; its yearly per capita income, from $272 to $493. Property valuation in 1958–59 was $1,643 million. The operating budget of the commonwealth in 1958–59 was $220 million—equal to that of the previous year.

Education.—Well over a third of the island's population is receiving some kind of formal education. According to a United Nations report published in 1957, this is the world's highest percentage (in the United States the figure is less than one fourth). A special drive has reduced adult illiteracy to 15%, as against 25% in 1949 and 85% at the time of Puerto Rico's annexation by the United States. The commonwealth spends more than a third of its income on education, but there is still a shortage of teachers and accommodations. In addition, the amount spent per pupil in the public school system ($67 annually) is low when compared with that spent in certain mainland areas. In 1957–58 there were 564,443 pupils in public day-schools and 48,847 in accredited private schools.

The University of Puerto Rico has increased its attendance in the past two decades from 5,000 to 18,222. There are two other institutions of higher learning, Catholic University in Ponce, and Inter American University in San Germán.

Agriculture and Industry.—Although the increased mechanization of agriculture, the automation of factories, and changes in the method of handling dock cargoes have played major roles in raising the island's gross product, they have also

resulted in a mounting social problem—increased technological unemployment. In 1958–59, some 90,000 workers, comprising 14% of the labor force, were unemployed. The average hourly wage in July 1959 was 85.4 cents.

A decade ago, Puerto Rico was still predominantly an agricultural country. However, in 1958–59 the net income from manufacturing was $244 million ($18 million more than in 1957–58); that from agriculture, $162 million. While agricultural exports rose sharply in 1958–59, the rate of growth in that branch of the economy is still far behind the growth in manufacturing. The problems created by old patterns of land tenure and outmoded methods of farming, together with the urgent need to improve grading, packaging, canning, and marketing and distribution, have retarded the rate of development in agriculture.

Dairy farming, which barely existed a decade ago, now ranks second to sugar (193,991 short tons refined in 1957–58) in economic importance. In the coffee regions in the western mountains, a government program for distributing better trees and improving methods of cultivation has begun to produce results. Puerto Rico's coffee production (7,800 tons in 1957) is recognized as the world's least efficient. The yield is about 150 pounds per acre, as compared with Hawaii's 2,000.

The number of new factories established with government help reached a total of 599 in 1958–59, an increase of 51 over 1957–58. The trend of the government's promotion efforts has been increasingly toward interlocking industries in which the byproducts of one become the raw materials of the next. Work was begun in 1959 on the establishment of a foreign trade zone in Mayagüez. According to plans, manufacturers may import duty-free parts and raw materials into the zone for local assembly and manufacture.

Mining.—In 1958, mineral production, principally of cement and stone, was valued at $17,689,000—$2,576,000 less than in 1957. This was the first decrease in the value of mineral output since 1953.

Trade and Tourism.—Puerto Rico's external trade was $1,315 million in 1958–59, as compared with $1,195 million in 1957–58 and $555 million in 1948–49. Imports during 1958–59, predominantly from the mainland United States (about 85%) were $807 million; exports (about 95% to the United States mainland) were $508 million. Foodstuffs continue to be the principal imports, along with chemical products, machinery, shoes, and automobiles. Textile products, foundation garments, leather goods, plastics, and metal products continue to lead in the list of manufactured exports. In 1957–58, imports to the United States mainland included the following values: sugar, $112 million; tobacco leaf, $12.4 million; rum, $5.9 million; and textiles, $118.6 million.

The 1958–59 tourist season broke all records (over 136,000 nonresident hotel guests), and two new luxury hotels were completed. Before 1949, Puerto Rico had four accredited hotels, with 335 rooms; by the end of 1958, hotels numbered 39, with 2,790 rooms.

Principal Events, 1959.—The year was celebrated as the 100th anniversary of the birth of Luis Muñoz Rivera, father of the present governor, and himself an outstanding leader. Muñoz Rivera obtained Puerto Rico's autonomy from Spain in 1897, immediately before the Spanish-American War.

The admission of Alaska and Hawaii to the Union as states intensified the debate on Puerto Rico's ultimate political status. The sentiment in favor of eventual statehood seems to be gaining, although Governor Muñoz Marín and his Popular Democratic Party continue to insist that the present commonwealth status is best designed to fit Puerto Rico's needs, and should be regarded as permanent, though subject to occasional changes. The Fernós bill, introduced into the U.S. Senate during the year, provides for a popular referendum on the issue of statehood when Puerto Rico's per capita annual income equals that of the poorest state. The debate over the issue was intensified by the release of figures prepared by the U.S. Bureau of the Budget, showing that statehood in 1959 would have cost the commonwealth an extra $188 million in contributions to the U.S. Treasury.

The conference of United States governors, meeting for the first time outside the continental United States, was held in San Juan in August.

Several serious strikes in 1959 taxed the government's conciliation and arbitration facilities. The most important of these was in the telephone communications industry. Service was disrupted in many parts of the island, and there was considerable sabotage by cutting trunk cables.

The third Casals Music Festival took place in San Juan in May. The programs were recorded and broadcast throughout Latin America by the Voice of America. The first San Juan Drama Festival, with plays in English, was held early in the year. The island's only English-language daily newspaper, the San Juan *Star*, began publication on November 2.

QUARLES, Donald Aubrey (64), American engineer and government official: b. Van Buren, Ark., July 30, 1894; d. Washington, D.C., May 8, 1959. During six years with the Defense Department, as assistant secretary for research and development (1953–55), as Air Force secretary (1955–56), and, after 1957, as deputy secretary of defense, he made an impressive record in shaping the nation's defense effort, particularly in the development of the guided missile and artificial earth satellite programs.

Quarles was graduated from Yale University in 1916. During World War I, he served in Europe with the famous Rainbow Division. After his

discharge in 1919 with the rank of captain, he joined the Western Electric Company's engineering department (after 1925, the Bell Telephone Laboratories), where he was instrumental in the development of much new telephone equipment, including open-wire insulation and the coaxial cable.

During World War II, Quarles was in charge of the Bell Telephone Laboratories' radar research development program. In August 1946 he was appointed to the federal government's Joint Research and Development Board (later, the Research and Development Board), becoming chairman of its electronics committee in 1949.

In 1952 Quarles became a vice president of the Western Electric Company and president of the Sandia Corporation, a nonprofit subsidiary of Western Electric engaged in atomic research and development. He was appointed assistant secretary of defense for research and development on July 28, 1953; secretary of the Air Force on Aug. 11, 1955; and deputy secretary of defense on March 26, 1957, which position he held at the time of his death.

QUARTZ CRYSTAL. United States consumption of raw quartz crystal declined 13% in 1958, as compared with 1957. The most important use of quartz crystal is for making piezoelectric units used in the electronics industry. In 1958 the number of units produced decreased 8%. No domestic output of electronic-grade crystal was reported to the U.S. Bureau of Mines. Brazil continued to be the chief source (89%) of electronic- and optical-grade quartz crystal. Total imports declined from 432,100 pounds in 1957 to 273,900 in 1958, a drop of 37%.

QUASIMODO, Salvatore, Italian poet: b. Syracuse, Italy, Aug. 20, 1901. His selection as winner of the 1959 Nobel Prize in literature was announced in Stockholm, Sweden, on Oct. 22, 1959. The poet was cited for "his lyrical poetry, which with classical fire expresses the tragic experience of our time." Little known outside his native country, Quasimodo is well known in Italy as a prolific poet and translator and as founder and leader of the so-called hermetic school of Italian poetry. This movement originated during the Fascist regime, when a number of poets wrote in obscure words which "hermetically sealed" or veiled the meaning of their poetry.

After earlier technical studies, Quasimodo went to Rome in 1921 to study the classics. He was employed by the Italian government's public works department, but by 1930 decided to devote himself to writing and teaching. Eventually he settled in Milan, where from 1938 to 1940 he wrote for *Tempo*, a weekly. Later he was appointed professor of literature at the city's Giuseppe Verdi Conservatory of Music.

Quasimodo's poems were first published in 1930 in the Florentine magazine *Solaria*. His reputation rests mainly on five volumes: *Ed è subito sera* (1942), which includes some of his early work, *Giorno dopo giorno* (1947), *La vita non è sogno* (1949), *Il falso e vero verde* (1956), and *La terra impareggiabile* (1958).

The author also translated into Italian works by Aeschylus, Virgil, Shakespeare, Melville, and others. (For further discussion of his work, see ITALIAN LITERATURE.)

QUEBEC. The largest of the Canadian provinces, Quebec has an area of 594,860 square miles (15.4% of the total area of Canada). The population, according to the 1956 census, is 4,628,378 (5,032,000 as of Sept. 1, 1959). The overwhelming majority of the population is of French origin (83%) and Roman Catholic (83%). In 1956, 3,240,838 persons lived in urban localities, while 1,387,540 constituted the rural population. Principal cities, with 1956 populations, are: Montreal, 1,109,439 (Greater Montreal, 1,620,758); Quebec, the capital, 170,703 (Greater Quebec, 309,959); Verdun, 78,262; Sherbrooke, 58,668; Trois-Rivières, 50,483; and Hull, 49,243. Montreal (q.v.) is the metropolis of Canada and the second largest French-speaking city (after Paris) in the world.

Government.—The government comprises a lieutenant governor named by the government of Canada; an Executive Council of 21 members, 5 of whom have no portfolio; a Legislative Council of 24 members appointed for life by the lieutenant governor in council; and a Legislative Assembly of 93 members elected for five years. The present (1959) lieutenant governor is the Hon. Onésime Gagnon. The Hon. Antonio Barrette (Union Nationale Party) became premier on Jan. 8, 1960, succeeding the Hon. J. M. Paul Sauvé, who died on Jan. 2, 1960. Membership in the Legislative Assembly is divided as follows: Union Nationale, 72 (1 vacancy); Liberal, 19; Independent, 1. In the Canadian Parliament, the province is represented by 24 members in the Senate and 75 in the House of Commons.

Finance.—For the 1958–59 fiscal year, the total revenue of the province amounted to $546,859,705; ordinary expenditure, $453,041,819; and net capital expenditure, $93,444,148. The net funded debt was $304,157,425.

Education.—The schools governed by the Education Act are either Catholic or Protestant, and in both types French and English are taught. In 1958 the entire school system included 10,413 schools, 56,707 teachers, and 1,241,595 pupils. Teacher training is provided in 112 normal schools. Secondary education is provided by public schools and 92 *collèges classiques*, 3 of which have modernized their curricula. Higher education is offered by 6 universities.

Purchasing Power.—The purchasing power of Quebec's population was estimated at $6,165 million during 1958; salaries and wages totaling $4,150 million made up the greater part of the amount. Retail trade in 1958 amounted to $3,597 million.

Hydroelectric Energy.—The actual capacity of turbines installed in the Province of Quebec represents 44.0% of the total Canadian installation and about one third of the resources recorded at the present time. Hydroelectric turbines installed in 1958 represent an increase of 900,000 horsepower, and bring the total turbine installation in Quebec up to 9,858,000 hp., or 7,351,000 kilowatts, with active construction underway for other large-scale projects.

Touring Quebec in June, Queen Elizabeth, with Prince Philip (behind her, right), visits an aluminum plant in Arvida.

NATIONAL FILM BOARD

Increased capacity is expected to amount to 2,781,700 hp. within the next three years.

Transportation and Communications.—In 1958 Quebec had 32,232 miles of surfaced roads out of a total road mileage of 43,750. There were 946,661 registered motor cars, 5,081 miles of railroads, and 1,187,442 telephones.

Agriculture.—Agricultural land covers an area of 66,615 square miles or about 12% of the total area of the province. In 1958, 8,560,000 acres were under cultivation (including pastures). For 1958 the aggregate value of agricultural production was estimated at $615,497,000. The three leading crops are hay and clover, oats, and potatoes. The cash income of farm operations was valued at $414,495,000 and was derived from the sale of dairy products ($166,702,000); livestock ($132,820,000); poultry and eggs ($47,302,000); field crops ($11,235,000); fruits and vegetables ($20,415,000); forest products, maple products, tobacco, honey, and others ($36,021,000).

Forestry.—The commercial forests of the province cover an area of 264,160 square miles. The wood cut during 1957 was valued at $321,342,963, including pulpwood, $222,651,228; lumber, $74,959,904; veneer, excelsior, matches, and similar products, $7,062,880; and charcoal and firewood, $11,541,106. In 1958 the pulp and paper industry provided employment to 28,000 persons, and had a payroll of $129 million and a gross value of production exceeding $600 million. Newsprint production was estimated to have totaled 3.2 million tons, valued at approximately $360 million.

Mines and Quarries.—The value of mineral production in 1958 was estimated at $395,565,306, subdivided as follows: metals, $200,431,138; industrial minerals, $107,332,185; and building materials, $87,801,983.

The most important news item to come out of the iron ore fields of Quebec in 1959 was the announcement of a $300 million development program by the Quebec Cartier Mining Co. The company has awarded contracts for the building of a 193-mile railroad, a hydroelectric plant on the Hart-Jaune River, a concentrator at Lac Jeannine, two mining villages—one at Lac Barbel, the other at Port-Cartier—and dockloading facilities at the latter place. Production is scheduled to begin in 1961, at the annual rate of 8 million tons of concentrates.

Manufactures.—Manufacturing establishments during 1958 paid out $1.5 billion in salaries and wages to 447,000 workers. The gross value of factory shipments was estimated at $6,679,965,000. Chief industries include pulp and paper, nonferrous smelting and refining, petroleum products, slaughtering and meatpacking, cotton yarn and cloth, factory clothing, railway rolling stock, electrical appliances, and synthetic textiles.

Principal Events, 1959.—The year's most important event in the Province of Quebec was the death on September 7 of Premier Maurice Duplessis, who was on an inspection tour of the Ungava region. Duplessis had been deputy from Trois-Rivières since 1927, and prime minister of Quebec since 1944. He had previously served in that post from 1936 to 1939.

On September 11, the Hon. J. M. Paul Sauvé succeeded Duplessis as prime minister and leader of the Union Nationale Party. Sauvé was deputy of Deux-Montagnes County since 1930, and minister of youth and social welfare since the foundation of that department in 1946. Premier Sauvé died suddenly from a heart attack on Jan. 2, 1960, and was succeeded by the Hon. Antonio Barrette, also of the Union Nationale.

On June 26 the formal opening ceremony of the St. Lawrence Seaway (q.v.) was held in Montreal. Present at the official opening were Queen Elizabeth II, then on a tour of the province; President Eisenhower; and Canadian Prime Minister John Diefenbaker.

In order to permit easier access to higher studies for gifted students, the Legislative Assembly passed a law placing $10 million at the disposal of the minister of youth and social welfare to distribute in student bursaries and loans, and also to give financial help to students pursuing advanced or specialized studies abroad. The law was ratified on March 5. On the same date, legislation was approved creating the Montreal Metropolitan Corporation and the Interurban Corporation of Ile Jésus, both completely new in the municipal organization of the province.

Shortly before his death, Premier Duplessis officially opened the Montreal-Laurentian Autoroute, the first modern toll road in Canada. The Autoroute is 29 miles long and joins Montreal to St. Jérôme; it comprises three lanes in each direction, separated by a 100-foot strip in the center (40 feet on the island of Montreal). The two main bridges, crossing Des Prairies River and Thousand Islands River, are respectively, 1,850 and 3,300 feet long and each measures 92 feet in width.

The tercentenary of the arrival in "La Nouvelle-France" of François Xavier de Laval-Montmorency, who founded the Roman Catholic Church on Canadian soil, was celebrated in Quebec City in October.

J. C. McGee,
Director, Quebec Bureau of Statistics.

RADIATION. Radiation as a part of our environment is not new. It has been with us from the beginning of time, but until about the turn of the century and the discovery of X-rays it had been slowly but steadily losing its overall strength. Man in his development not only has adapted himself to radiation, but he may even have derived from it, in some small measure, his present physical stature. This is not to imply that we should lack concern over our increasing radiation environment, but we must also look upon it sensibly. Many years, or even decades, of research are needed

before the radiation protection problem is fully understood. Moreover, the problem will become even more widespread and complicated as man properly exploits new and expanded peaceful uses of atomic energy.

The Nature of Radiation.—Our radiation environment is both of natural and, since 1895 and the discovery of X-rays, of man-made origin. The natural sources consist mainly of radium and its products in the earth's crust, and cosmic rays from outer space. The human body itself contains radioactive potassium, carbon, and radium. Man-made radiations include X-rays (medical and industrial), fall-out, waste products from the atomic energy industry, and radiations from many common household devices ranging from television receivers to luminous timepieces.

All radioactive material is undergoing a constant process of decay or loss of strength. The rates of decay between different radioactive elements vary widely; the time for a given quantity to lose half its strength (called half-life) varies from small fractions of a second to millions of years.[1]

When radioactive material enters the body, it continuously irradiates the tissue nearby as long as the material remains. On the contrary, irradiation of the body by X-rays (for example, in diagnostic or therapeutic applications) continues only while the X-rays are turned on. No "lingering" or "residual" radiation remains after the beam is cut off. But in either case, a body cell has no way of knowing or distinguishing between the sources of the radiation that may strike it. A cell may be equally affected by a ray from an X-ray machine outside the body or from a particle of radium lodged as closely as in the next cell. Basically the interaction between all kinds of radiation and the body cells is essentially the same.

External exposure to local gamma rays has been estimated to account for roughly 49% of the total body dose of radiation from natural causes. The remainder of naturally caused radiation comes from external exposure to cosmic rays (about 24%), internal exposure to radium and its products (20%), and internal exposure to potassium-40 (7%). All of these values may vary widely.

Radiation Effects.—Radiation effects on the human body may be divided broadly into two classes: (1) genetic effects or damage to the germ cells which play an essential role in our heredity process; (2) somatic effects, or damage to the body cells, exclusive of germ cells. Whereas somatic effects are limited to the individual who is exposed, genetic effects may be transmitted through the family strain for many generations. It is estimated that it will take some 50 generations for genetic damage, once produced, to work itself out of the human system. Somatic effects, if they occur, may show up as leukemia or some other malignancy, slight shortening of the expected life span, etc. It is important to note that any effect that may be produced by radiation can also occur from other causes, mostly unknown. Very rarely may a radiation-produced disease be specifically identified as such.

There is virtually no knowledge today which would indicate that there may be some threshold of radiation exposure below which no damage will occur and above which damage probably will occur. All radiation protection philosophy is based on the unproved assumption that no such threshold exists; thus, any exposure may presumably cause some damage, however small or undetectable. Within the past year or two the viewpoint is becoming accepted that any radiation exposure may entail some risk, though not necessarily. The big problem now facing us is how to balance properly the uncertain risks against the more certain gains (see below, *Federal Radiation Council*).

Deleterious effects of radiation at normal levels (background, medical, occupational, fall-out, etc.) can be detected only by the most elaborate statistical procedures. There may be some slight reassurance in this fact; the situation is not so critical that we can clearly see the harm. The long-range genetic picture is not so bright, although some findings in 1959 may lead to a less pessimistic outlook than now exists.

Current Radiation Environment Situation.—It is still not possible to assess with any accuracy the relative contribution from each source of radiation exposure because conditions vary too greatly between locations and between individuals. Control of radiation exposure to the germ cells is considered to be most critical, however, since any damage that may occur there is believed to be irreversible and cumulative. Protection criteria designed mainly for genetic protection will provide, at the same time, acceptable somatic protection under most circumstances.

Evaluations of the contribution of the various sources of radiation to our total genetically significant dose have been made by the National Academy of Sciences and other bodies. Roughly summarized, these evaluations are as follows: natural background radiation (all sources), 40%; irradiation from medical procedures, 50%; exposure of radiation workers and public exposure from all radiation operations, 3%; fall-out, 3%; and miscellaneous sources, 4%, for a total of about 9 rems (or units of radiation dose) up to age 30. While these percentages will not bear close scrutiny, their relative values are believed to be reasonable.

National and International Protection Efforts.—Knowledge of the existence of the possible hazards of radiation goes back some 60 years. A concerted attack on the problem was begun with the establishment of the International Commission on Radiological Protection (ICRP) in 1928. This body determined the first permissible dose level in 1934. A similar national effort was started in the United States with the establishment of the National

At Floyd Bennett Field, Brooklyn, shipments of radioactive wastes from Brookhaven National Laboratory are stowed aboard a Navy ship for disposal at sea. The waste-disposal problem was underscored in congressional hearings in 1959.

BROOKHAVEN NATIONAL LABORATORY

[1] The approximate half-life of some isotopes: radium-226, 1,622 years; strontium-90, 28 years; potassium-40, more than 1 billion years; carbon-14, 5,600 years; and iodine-131, 8 days.

Committee on Radiation Protection and Measurements (NCRP) in 1929. The two bodies have worked together closely since that time.

Use of the radiation protection criteria established by the NCRP in 1936 (slightly lower than those of the ICRP) enabled the Manhattan District, which built the first atomic bomb, to perform its operations with one of the best safety records known to industry. Thus, today, we do not find ourselves plunged into a situation for which no preparation has been made. However, a basic difficulty in establishing absolute radiation protection criteria continues to be the almost total lack of knowledge of the specific effects of low-level radiation exposure on the human system. The impossibility of experimenting with human beings and the lack of accidents that might provide useful protection data compel the adoption of protection criteria based on an absence of information.

In simple terms, the maximum permissible dose for radiation workers is a dose of radiation that, in the light of present knowledge, is not expected to cause appreciable bodily injury to that person at any time during his lifetime. Thus far there is no evidence that radiation workers exposed continually at the maximum permissible level (even when it was 10 times higher than recommended today) have been injured. The permissible radiation levels for members of the population are even lower than for radiation workers.

In January 1957 and April 1958 the NCRP introduced a lower value of the maximum permissible dose (MPD) for radiation workers. It is now set at an average of 5 rems per year (previous values were: 1934, 60 rems; 1936, 30 rems; 1948, 15 rems). At the same time an MPD of one tenth that for radiation workers was recommended for people living in the vicinity of radiation sources where small amounts of radiation might escape. This was considered to be a very conservative recommendation, since there has been no demonstration of damage at the higher level allowed for radiation workers.

In July 1959 the ICRP recommended an MPD for the population at large from all sources of radiation at one tenth the occupational allowance (in addition to natural background radiation).

While recognizing the impracticability of establishing a meaningful average somatic dose for the population, the ICRP, for long-range planning purposes, made the tentative suggestion (not specific recommendation) that the *average* dose for the population at large be one third the *maximum* for individuals of the population at large. At the same time, the ICRP suggested an *average* genetic dose, for long-range planning purposes, of one tenth the *maximum* for individuals.

Congressional Hearings.—The Joint Committee on Atomic Energy held a series of hearings on radiation matters in 1959. Following is a summary of its findings (with dates of hearings).

Industrial Radioactive Waste Disposal (Jan. 28–Feb. 3, and July 29, 1959).—For the first time the magnitude of the waste-disposal problem that the United States faces in the future was disclosed at these hearings. The disposal of radioactive waste could easily be one of the most serious limitations on the expansion of the nuclear industry. Burial at sea would be one disposal method, and suggestions for accomplishing this in "in-shore" areas at depths of less than 300 feet have been made but not yet accepted. In the meantime, the U.S. Atomic Energy Commission (AEC) will continue to license sea disposal only in depths of over 6,000 feet in accordance with NCRP recommendations made in 1954. (See also CHEMISTRY.)

Federal-State Relationships in the Atomic Energy Field (May 19–22, 1959).—An important outcome of these hearings has been a bill (S. 2568) amending the Atomic Energy Act of 1946 and leading to the transfer of certain radiation control activities to the states. Such responsibilities will be taken up by the states when and as the states can demonstrate the necessary technical capability.

Fall-out from Nuclear Weapons Tests (May 5–8, 1959).—Basically, these hearings were an extension of the 1957 fall-out hearings and were designed to update information previously developed. New evidence showed that average fall-out levels in the Northern Hemisphere had increased considerably since 1957, and also that the rate of fall-out is greater than previously thought. (The average time that fall-out remains in the stratosphere is now estimated at 1 to 5 years instead of the 1957 estimate of 5 to 10 years.) Evidence also showed that while fall-out varies greatly with locality, thus causing "hot-spots," these probably do not change the overall hazard to the world's population. (More recent information developed by the AEC and the Public Health Service have shown that the levels of radiation from fall-out are now decreasing somewhat and can be expected to continue to do so, provided no further weapons testing takes place.)

Biological and Environmental Effects of Nuclear War (June 22–26, 1959).—These hearings emphasized the well-known fact that a nuclear attack on the United States could be disastrous. However, in the committee's own words: "Probably the most significant finding presented to the subcommittee was that civil defense preparedness could reduce the fatalities of the assumed attack on the United States from approximately 25% of the population to about 3%. The provision of shielding against radiation effects would at the same time protect against blast and thermal effects for the vast majority of the population."

Employee Radiation Hazards and Workmen's Compensation (March 10–19, 1959).—It was generally agreed that radiation disease should be compensable under all compensation systems and that suitable standards should be provided by which the causal relationship between radiation exposure and injury can be established. Any radiation-produced disease should have complete medical treatment during the course of disability and for whatever time necessary to bring about complete rehabilitation of the individual. There was no agreement as to how these objectives could be met.

A number of bills relative to health protection against radiation effects were introduced in the 86th Congress, although most of them have not been passed. Several had to do with the vesting of greater responsibilities in the Public Health Service than heretofore. Also included were measures for increasing public education and the education of specialists relative to radiation control.

Federal Radiation Council.—One of the most important events at the governmental level was the establishment by executive order of the president on Aug. 14, 1959, as well as by legislative action (S. 2568), of the Federal Radiation Council, consisting of the secretaries of the departments of Health, Education, and Welfare, Defense, and Commerce, and the chairman of the Atomic Energy Commission. This council will be charged with developing a national policy with regard to radiation control.

As acceptable radiation levels for the population as a whole cannot be decided on the basis of scientific opinion alone, it is essential that some high-level policy body make the decision as to how much risk the nation is willing to accept in exchange for the gains derived from the use of radiation. The Federal Radiation Council will work with the advice of the National Committee on Radiation Protection and Measurements and the National Academy of Sciences. The recommendations of the NCRP will continue to guide federal policy, unless and until the council deems it wise to do otherwise.

Research.—Research advances in recent years are too numerous to mention in detail. However, important progress is being made in the development of techniques and procedures for controlling radioactive contamination, particularly in the removal of strontium-90 from milk and other food products.

Using calcium-based resins, it has been found possible to remove up to 94% of the strontium-90 from separated milk; removal of strontium-90 from cream involves a dilution process followed by separation of the cream from the water. Methods for decontamination of other foods have thus far met with much less success.

Large-scale AEC studies of both living and deceased persons whose bodies contain radium are

helping to establish the basic relationship between body burden and deleterious effects. Results thus far indicate that the present base is satisfactory.

Genetic studies on mice have given at least a preliminary demonstration of a dose rate effect that has not heretofore been known. If verified, it might indicate that very low exposure rates may be less harmful than presently assumed.

Scientists of the Argonne National Laboratory have succeeded in flushing out radioactive plutonium from the bodies of rats, even after the treatment has been delayed for several days. Two compounds, DTPA and BAETA, grasp the atoms of plutonium in octopus-like molecular tentacles and form a water-soluble chemically inert complex that is flushed from the rats' bodies by normal elimination processes. These compounds are not poisonous to humans.

Research in the biomedical field conducted by various agencies, in particular by the AEC and the Health, Education, and Welfare Department, will be accelerated during the coming years. Pieces of evidence are beginning to indicate that the problem of controlling the radiation hazard of fall-out may be a little less serious than was previously thought to be the case. There is no great margin for optimism at this time, but advances in this direction can be reasonably expected.

RADIO AND TELEVISION. Highlights of the year 1959 in radio and television are reviewed below in three sections: (1) The Radio-Electronics-TV Industry; (2) Radio and Television Engineering; and (3) Radio and Television Programs. For additional information, see the Index entries, *Radio* and *Television.*

THE RADIO-TV-ELECTRONICS INDUSTRY

After a brief slowdown during the recession of 1958, the electronics industry took another spurt forward in 1959 to continue its phenomenal ten-year growth. Factory sales of all electronic products rose 16% over those of 1958 to pass the $9 billion mark. This represented a gain of over 250% since 1950. Revenue for all sources, including broadcasting and servicing, was estimated at $15 billion.

Increases occurred in all major categories, but the greatest rise was in military electronics, with consumer goods ranking second. Electronics also began moving to a greater degree into the new field of space exploration, with its virtually unlimited horizon.

TV-Radio-Phonograph Sales.—Both television and radio receiver sales, which had declined in 1958, came back strongly in 1959. Retail sales of TV sets did not reach the peak years of 1953–57, but increased from 5.1 million in 1958 to over 5.7 million in 1959. Radio factory sales made even greater gains, increasing from 11.9 million to about 15.5 million for radio's best sales record since the postwar boom years. Auto sets showed the greatest increase (from 3.7 to 5.6 million), due to the recovery of the automobile market. Factory sales of phonographs increased from 4.2 to 4.3 million.

At the end of 1959 the Electronic Industries Association (EIA) estimated there were 52.5 million television receivers and almost 140 million radios in use. Of the latter, one third were in automobiles.

The advent of stereophonic sound reproduction provided a stimulus to the phonograph and combination radio-phonograph market, and much greater gains are expected after stereophonic radio transmission standards have been adopted (possibly in 1960). A National Stereophonic Radio Committee was formed by EIA in 1959 to analyze the various proposed stereo systems.

Military Electronics.—The production of electronic equipment and components for the military services continued to occupy half the industry's capacity and probably more than half of its engineers in 1959. Dollar volume rose from $4.1 to $4.5 billion—equal to the dollar volume of the entire electronics industry in 1952. While the national defense appropriations appeared likely to level off in 1960, with reductions in some areas, electronics is expected to continue to increase its share of the total appropriation. In 1959 it represented about 29% of all military procurement.

Industrial Electronics.—Sales rose from $1.4 to $1.6 billion in 1959, with computing and data-processing equipment moving steadily into commerce and industry. Gains continued in closed-circuit television, mobile radio communications, instrumentation, and automation processes in industry. Advances also were made in electronic aids for medicine, educational TV, and electronic meteorological equipment.

New Components Increase.—Spurred by the need for lighter, more compact, and more reliable components, many new and more rugged electronic parts have appeared in recent years. Through various technological advances, manufacturers have combined the functions of previously separate components into single devices of greater reliability and effectiveness. These devices accounted for an increasingly large share of the components market in 1959.

Semiconductor devices, which were scarcely known a decade ago, had grown into a sizable business by 1959. Sales rose from $229 to nearly $380 million as the output of transistors nearly doubled. Receiving tubes, however, still found a substantial market with sales rising from $342 to $367 million.

Employment and Wages.—More than 700,000 persons were employed in electronics manufacturing in 1959. Of this total, 100,000 were engineers, 500,000 were production workers, and about 110,000 were executive and sales employees.

There were an estimated 4,600 electronics producers in 1959, of which only 1,500 were equipment manufacturers. Although electronic plants are located in every state except Alaska, 70% of manufacturing employment is concentrated in the six states of New York, Pennsylvania, New Jersey, Massachusetts, Illinois, and California.

The Bureau of Labor Statistics reported the average weekly earnings of workers in the radio-TV-phonograph industry at more than $86 in 1959, up $4 from 1958.

Exports and Imports.—The sharp rise in 1959 of Japanese shipments of electronic products (particularly transistor portable radios), constituting the first serious threat to the United States electronics industry, drew strong protests from domestic manufacturers. EIA appealed to the Office of Civil and Defense Mobilization for government curbs in the interest of national security.

While total United States exports declined in 1959, electronic shipments were off far less than most other products. Electronic exports totaled $412 million, as compared with $427.6 million in 1958. An increasing number of United States

manufacturers made investments abroad or licensed the use of their designs and processes to foreign companies.

JAMES D. SECREST,
Executive Vice President,
Electronic Industries Association.

RADIO AND TELEVISION ENGINEERING

Television broadcasting throughout the world continued a steady growth in 1959, but the pace of expansion in the United States slackened as compared with previous years. Approximately 20 new stations began broadcasting during the year, bringing to 565 the total number of television transmitting stations on the air in the United States at the end of 1959.

Auxiliary television broadcast services expanded in the United States in 1959. Community antenna systems, which distribute signals received from distant transmitters to individual homes by special cable, numbered more than 560. Low-power "translator" stations, operating in the upper ultra-high-frequency (UHF) band, increased from 146 to 186.

Elsewhere in the world, television broadcasting continued its growth. The accompanying table lists the countries reported to have regular television service at the end of 1959, and gives the latest available statistics as to the number of transmitters and receivers in regular use.[1]

SUMMARY OF WORLD TELEVISION, 1959

Country	Transmitting stations	Receiving sets
Algeria	2	28,000
Argentina	1	400,000
Australia	9	618,000
Austria	10	88,200
Belgium	4	350,000
Bermuda	1	8,000
Brazil	7	85,000
Canada	51	5,534,000
China, Communist	2	5,000
Colombia	1	150,000
Cuba	13	365,000
Cyprus	1	3,000
Czechoslovakia	6	450,000
Denmark	6	300,000
Dominican Republic	4	13,000
El Salvador	2	15,000
Finland	4	21,000
France	25	1,300,000
Germany, East	10	425,000
Germany, West[1]	27	2,900,000
Guatemala	2	20,000
Honduras[3]	1	400
Hong Kong[2]	...	3,000
Hungary	3	30,000
Iran	1	12,000
Iraq	1	9,000
Italy	25	1,500,000
Japan	66	2,949,000
Korea	1	2,700
Lebanon[3]	2	1,500
Luxembourg	1	4,000
Mexico	14	600,000
Monaco	1	11,000
Netherlands	3	500,000
Nicaragua	1	5,000
Nigeria[3]	1	1,000
Peru	3	27,500
Philippines	2	25,000
Poland	4	138,000
Portugal	5	35,000
Rumania	2	20,000
Saudi Arabia	1	2,500
Spain	3	130,000
Sweden	18	450,000
Switzerland	7	67,800
Thailand	2	40,000
United Kingdom	27	10,000,000
United States[4]	565[5]	58,200,000
Uruguay	1	15,000
USSR	69	3,000,000
Venezuela	5	200,000
Yugoslavia	5	12,000

[1] Includes the Saar. [2] Service supplied by closed-circuit system. [3] Inaugurated regular television service in 1959. [4] Includes regularly operating stations under United States jurisdiction in Guam and Puerto Rico. In addition, the United States armed forces operate 11 low-power stations in the United States and possessions (5 in Alaska, 2 in the Canal Zone, and 1 each in Okinawa, Eniwetok, Puerto Rico and Midway), and 18 low-power stations in the Azores, Bermuda, Crete, Cuba, Iran, Labrador, Newfoundland, Eritrea, Germany, Greenland, Guam, Iceland, Korea, Libya, the Philippines, and Saudi Arabia. [5] Includes 44 noncommercial educational stations. (Source: *Television Digest.*)

The first regular transatlantic television relaying was undertaken in 1959, employing the transatlantic telephone cable to relay television film pickups from Europe to the United States and Canada. The film was scanned frame by frame, and the resulting signals were then transmitted to North America, where the separate frames were re-assembled into a film for broadcast transmission. The process is relatively slow, requiring some two hours' time to transmit short sequences of television motion picture film. Scenes of President Dwight Eisenhower's visit to Europe in September 1959 were relayed to the United States by this process, and, in addition, magnetic video tape recordings of the visit were flown from Europe to the United States by jet airplane. The speed of modern jet aircraft, together with the fact that magnetic tape recordings do not require processing (as does photographic film), makes this latter process only slightly slower than the cable transmission of film pictures. The tape recordings produce pictures of greatly superior quality to those transmitted by cable.

For television relaying, a very substantial video band width is required to transmit the picture signal. Intercity television networks in the United States employ a minimum video band width of 2.7 megacycles, as compared with the much narrower available band width of about 200 kilocycles provided by the transatlantic cable. Experimental equipment demonstrated in 1959 provided a substantial reduction in the required video band width without degrading the picture quality. One demonstration, by the Technicolor Corporation, achieved a reduction in band width of 75% over the present requirement.

For several years, proposals have been made for broad-band relay circuits between the United States and Europe, utilizing very-high-frequency (VHF) and microwave relay systems. A promising new method of long-distance relaying has been opened up by the successful launching of earth satellites capable of reflecting broad-band signals over very substantial distances. A test launching of one of a series of 100-foot diameter aluminized balloons, designed to be sent aloft for experimentation with this type of relaying, was successfully conducted in October.

Television and television techniques are being used increasingly in the exploration of space. A United States satellite successfully relayed a crude television picture of cloud cover over the Pacific Ocean during the summer. The unmanned Soviet satellite fired on a course past the distant face of the moon relayed a photograph of a portion of the moon's "invisible" face back to earth using television transmission methods (see ASTRONOMY). Radio messages are now being regularly relayed by the U.S. Navy between distant points on the earth's surface by reflections from the moon, and it was announced in 1959 that a radar signal beamed from the earth toward the planet Venus had been reflected and identified in 1958 (see PHYSICS).

The Federal Communications Commission (FCC) continued to grapple with the problem of television allocations, the plan for the assignment of television broadcast channels to individual towns and cities. A comprehensive engineering

[1] In addition to the high-power regular transmitting stations included in the table, many foreign countries employ community antenna systems and low-power relay stations, as is done in the United States.

report was submitted to the commission in March by the Television Allocations Study Organization (TASO), including technical data of a wide scope for the commission's use in arriving at technical judgments in the assignment of VHF and UHF channels.

One of the principal engineering problems faced in allocating television channels is that of a substantial disparity in the effectiveness of the VHF and UHF channels. Promising developments reported in 1959, however, are expected to lead to substantially improved UHF television receiver performance, thus reducing the disparity. These include various solid-state devices, the so-called "parametric amplifiers," and the newly-discovered "tunnel diode" principle.

The first truly portable television receiver was placed on the market by Philco in 1959. This receiver operates from self-contained batteries and makes extensive use of transistors in all circuits to minimize power consumption. The picture tube is a 2-inch cathode ray tube, with an optical system which produces an 8-inch image.

Plans were announced for a unique educational television transmitting station to be carried aloft in an airplane. This system will employ television transmitters in an airplane flying at a height of 25,000 feet over central Indiana. Pictures will be transmitted on four channels in the UHF portion of the television band, two employing conventional transmitting standards and two employing experimental transmission standards utilizing only one half of the regular 6-megacycle band width. The very high transmitting antenna provided in this manner will permit service to be rendered to a distance in excess of 200 miles.

The growth of both standard broadcast (AM) and frequency modulation (FM) radio continued in the United States in 1959. The number of AM stations increased to a total of 3,454 on the air at the end of 1959, as compared with 3,323 at the end of the previous year. FM stations increased in number from 577 to 673 during the same period.

Consulting Radio Engineer.

RADIO AND TELEVISION PROGRAMS

Television, which was hit by a quiz program scandal in 1958, was rocked to its foundations in 1959 by the findings in a congressional investigation of rigged quiz shows. For several weeks the center stage was held by Charles Van Doren, 33-year-old assistant professor of English at Columbia University, who finally admitted that he received questions and answers in advance while winning $129,000 on *Twenty-One.* The producers, he said, also coached him on how to act in the isolation booth.

Van Doren, who denied for a year that he knew of quiz show irregularities, confessed in dramatic fashion on Nov. 2, 1959, during a Washington hearing by the House Special Subcommittee on Legislative Oversight (headed by Oren Harris of Arkansas). Van Doren also admitted he had lied months earlier when he told a New York grand jury that he had not participated in a rigged quiz. But even before he testified in Washington, Van Doren had returned to the office of New York District Attorney Frank S. Hogan to recant his earlier testimony. Columbia University accepted Van Doren's resignation within hours after his Washington appearance. He also lost his $50,000-a-year job with the National Broadcasting Company (NBC), which had televised *Twenty-One.* After Van Doren became a national figure in 1957 as a result of his quiz show appearances, NBC hired him as a consultant, and later he made regular appearances on the *Today* show.

Dan Enright, one of the originators of *Twenty-One* and other quiz shows, told the House subcommittee on October 9 that the fixing of quiz programs had been "a practice for many, many years." He said that a nighttime version of *Tic Tac Dough* had been rigged about 75 per cent of the time.

Mert Koplin, producer of *The $64,000 Question* and *The $64,000 Challenge,* explained to House investigators how he spent days preparing questions "from the matrix" of a contestant's experience. When a contestant was marked for extinction, the question could be placed outside this "matrix." Koplin and others testified that officials of Revlon, Inc., which sponsored both shows over the Columbia Broadcasting System (CBS), were aware of control and even insisted on it. Charles Revson, president of the cosmetics company, and his brother Martin, former executive vice president, denied any knowledge of rigging or control.

After the Washington hearings had piled up considerable evidence of quiz fixes, District Attorney Hogan said in New York that he would look into the matter of possible perjury against many persons who had testified at his inquiry. Of 150 former contestants or quiz show personnel who were questioned, Hogan estimated that two thirds might not have told the truth.

Dr. Frank Stanton, president of CBS, and Robert E. Kintner, president of NBC, told the House subcommittee in November that they were not aware of quiz show rigging at the time it occurred. CBS eliminated big-money quiz shows, but NBC said it would continue such programs under strict surveillance to make sure of no dishonesty. (Most quiz shows were owned not by the networks but by independent producers and packagers.) Stanton announced that CBS would re-evaluate its entire television operation and remove from the air any form of deceit or deception. He declared that interview programs which are rehearsed in advance must announce the use of such production techniques at the time of presentation, and that comedy shows must stop using recorded laughter or applause.

The House subcommittee heard that 12-year-old Patty Duke, a Broadway and television actress, had received $32,000 on *The $64,000 Challenge* by reciting answers given to her only minutes before the show went on the air. Other testimony disclosed that Max Hess, Allentown, Pa., department store owner, had paid $10,000 to get an employee on *The $64,000 Question* so that his store would receive publicity.

The uproar over quizzes prompted President Eisenhower to ask Attorney General William P. Rogers to study the fixing of programs. Later, Rogers said that "those who conceived the deception" might be in violation of Section 1343 of the Criminal Code.

At the end of 1959, the House subcommittee began to broaden its investigation to include many types of commercial tie-ins, such as kickbacks, payoffs, and "payola." (The latter term was coined to describe a form of bribe secretly paid to a person to promote a product, especially phonograph records played by disk jockeys.) The subcommittee questioned Dick Clark, American Broadcasting Company (ABC) disk jockey, whose program was a favorite of millions of teen-agers. Clark was ordered by ABC to divest himself of holdings in a record company and music publishing houses or

UPI

Charles Van Doren (foreground), shown at a news conference in October, admitted before a congressional inquiry on November 2 that he had participated in rigged television quiz programs. Revelations of widespread irregularities rocked the industry and led to dropping many quiz shows.

leave the network. He gave up the outside holdings.

As the congressional inquiry into "payola" continued, another popular disk jockey, Alan Freed, was dismissed from his radio show over a New York station, and shortly after lost his television program with another broadcaster. In Detroit, Philadelphia, and other cities, a number of disk jockeys were resigning or being dismissed in connection with the growing payoff scandal.

The Federal Communications Commission announced that it would conduct its own investigation, with several public hearings beginning in Washington on December 7, into quiz shows, alleged payments to disk jockeys, and questionable programing and advertising practices by broadcasting stations. Earlier, FCC Chairman John C. Doerfer had said that his group had no legal power at present to act against the improper practices brought to light by the congressional inquiry.

Before the quiz show scandal became the dominant broadcasting factor of 1959, other major developments occurred. These included Arthur Godfrey's cancer operation on April 30, which kept him off the air for six months. He came back to morning radio but eliminated his morning television show. Godfrey's only television activity was an occasional one-hour evening show.

Ingrid Bergman and Hayward Morse in a scene from *The Turn of the Screw* (October 20), a dramatic highlight of 1959.

NBC

Edward R. Murrow made news and aroused curiosity by announcing a year's leave of absence from CBS, as of July 1, to travel and reflect. The commentator continued to appear, however, on *Small World*, which he could film wherever he happened to be.

Probably the biggest single talent contract of the year was one for $25 million between Perry Como and Kraft Foods, although not all the money went to the singer. This was the amount Kraft put up to sponsor Como's new show (*Kraft Music Hall*) for two years. The money also included the cost of production and air time on NBC, plus summer replacement shows to be produced by Como's company, Roncom Productions.

The *Voice of Firestone* concert program, which had been on the air for more than 30 years (but on television only in recent years), left the air after its sponsor said no suitable time period was available on any network. ABC, which had carried the program in recent years, proposed to move the series to a new hour unacceptable to Firestone.

Omnibus, a program that strived for quality entertainment, went off television after seven years. Phil Silvers' Sgt. Ernie Bilko got his discharge papers after several years of popular comedy shows.

There was a growing trend to tape television shows abroad. Dave Garroway's *Today* originated in Paris for two weeks; Ed Sullivan did a show from Moscow; Arthur Godfrey recorded one in Hawaii; and *Person to Person* began taping interviews in Europe. NBC made use of new transatlantic cable facilities by transmitting news film from London to New York (see above, *Radio and Television Engineering*).

An outstanding news telecast was one from Moscow that featured the July 24 debate between Soviet Premier Nikita S. Khrushchev and Vice President Richard M. Nixon at the American National Exhibition. All networks presented extensive coverage of the Nixon trip to the Soviet Union, the subsequent visit to the United States by Khrushchev, and President Eisenhower's travels abroad.

A notable innovation in TV programing in 1959 was the presentation, on a local station (WNTA-TV) in New York, of the *Play of the Week*, a series of outstanding two-hour plays on video tape, repeated every night for a full week during prime viewing time. Among the early productions in this series were Robinson Jeffers' version of Euripides' *Medea*, with Judith Anderson; Ivan Turgenev's *A Month in the Country*, with Uta Hagen, Luther Adler, and Alexander Scourby; Jean Anouilh's *The Waltz of the Toreadors*, with Hugh Griffith and Mildred Natwick; and Paul Vincent Carroll's *The White Steed*, with Frank Conroy, Tim O'Connor, and Helena Carroll. Although this series was limited to a New York metropolitan area audience, it was hoped that it might set a precedent for other stations and networks.

The Business of Sex was the radio broadcast that created the most comment of the year. Narrated by Edward R. Murrow on CBS, it was a documentary on the use of prostitutes in the world of business. There were interviews with "call girls" and businessmen who purported to tell of their mutual agreements. The program contended

NBC

(*Left*) Sir Laurence Olivier starred in an adaptation of Somerset Maugham's *The Moon and Sixpence*, presented on October 30. (*Right*) Christopher Plummer (left), Julie Harris, and Jason Robards, Jr., appeared in Ibsen's *A Doll's House*, November 15.

that some companies keep "call girls" on their payrolls to entertain customers.

The Mutual Broadcasting System, the only national radio network with no television counterpart, filed a voluntary bankruptcy petition in federal court on July 1 to arrange a settlement of more than $3 million in debts; it listed assets of $579,607. The network, which underwent a fourth change in management in two years, continued in business while working out a plan to satisfy its creditors.

In a TV year which appeared, at least to the more discriminating viewer, to be too full of an ever-increasing flood of cowboys, gangsters, and adventurers, there were, nevertheless, a noticeably greater number of excellent dramatic, musical, and documentary programs. Following is an alphabetical list of the more outstanding special programs presented during the year 1959.

OUTSTANDING TV PROGRAMS IN 1959

Ah! Wilderness (*Hallmark Hall of Fame*)—The Eugene O'Neill play, directed by Robert Mulligan, produced by Mildred Freed Alberg; with Helen Hayes, Lloyd Nolan, Burgess Meredith, Betty Field, Lee Kinsolving. NBC, April 28.

America Pauses for Springtime—Variety music and narration depicting springtime in various parts of the U.S., produced by Barry Wood; with Robert Merrill, Jane Wyman, Marge and Gower Champion, Herb Shriner, Genevieve, West Point Choir, Air Force Chorale, and others; narrated by Burgess Meredith. CBS, March 30.

America Pauses for The Merry Month of May—Musical variety program staged against outdoor settings; with Marian Anderson, Art Carney, Carol Haney, Ted Rooney, and others; Burgess Meredith, host. CBS, May 18.

Another Evening with Fred Astaire—Musical variety, with Fred Astaire, Barrie Chase, the Jonah Jones Quartet, the Bill Thompson Singers. NBC, November 4.

Bells of St. Mary's—Drama, with Robert Preston, Claudette Colbert, Charles Ruggles, Marc Connelly, Nancy Marchand, Glenda Farrell. CBS, October 27.

Billy Budd (*Du Pont Show of the Month*)—Adaptation by Jacqueline Babbin and Audrey Gellen of the Herman Melville story, directed by Robert Mulligan; with Don Murray, Alfred Ryder, Roddy McDowall, James Donald, Tim O'Connor, George Eberling. CBS, May 25.

Bing Crosby Show—Musical variety, with Bing Crosby, Frank Sinatra, Peggy Lee, Louis Armstrong, and others. ABC, September 29.

Biography of a Missile (*C.B.S. Reports*)—Filmed documentary on the making and launching of a satellite rocket; narrated by Edward R. Murrow. CBS, October 27.

Browning Version, The (*Du Pont Show of the Month*)—The Terence Rattigan play, directed by John Frankenheimer, produced by David Susskind; with Sir John Gielgud, Margaret Leighton, Cecil Parker, Robert Stephens, Rhoden Streeter. CBS, April 23.

Christmas Startime (*Ford Startime*)—Musical variety featuring Leonard Bernstein conducting the New York Philharmonic, with Marian Anderson, and others; Joseph N. Welch, host. NBC, December 22.

Doll's House, A (*Hallmark Hall of Fame*)—Adaptation by James Costigan of the Ibsen play, directed by George Schaefer; with Julie Harris, Christopher Plummer, Jason Robards, Jr., Eileen Heckart, Hume Cronyn. NBC, November 15.

Fidelio—Beethoven's opera performed by the N.B.C. Opera Company; Samuel Chotzinoff, producer; Peter Herman Adler, music and artistic director; Kirk Browning, director; with Irene Jordan, John Alexander, Chester Watson, Lee Cass, and others. NBC, November 8.

(*Left*) N.B.C. Opera Company's *Fidelio*, shown November 8, featured (from left) Irene Jordan, Chester Watson, John Alexander. (*Right*) Jason Robards, Jr. (left) and Maria Schell starred in *For Whom the Bell Tolls*, produced in two parts, March 12 and 19.

NBC; CBS

For Whom the Bell Tolls (*Playhouse 90*)—The Ernest Hemingway classic presented in two parts, adapted by A. E. Hotchner, produced by Fred Coe, directed by John Frankenheimer; with Jason Robards, Jr., Maria Schell, Maureen Stapleton, Eli Wallach, Nehemiah Persoff. CBS, March 12 and 19.

Green Pastures, The (*Hallmark Hall of Fame*)—Adaptation of the Marc Connelly play, produced by Mildred Freed Alberg, directed by George Schaefer; with William Warfield, Eddie Anderson ("Rochester"), Earle Hyman, Frederick O'Neal, and others. NBC, March 23 (repeat performance; first presented Oct. 17, 1957).

Human Comedy, The (*Du Pont Show of the Month*)—Adaptation by S. Lee Pogostin of the William Saroyan novel, directed by Robert Mulligan; with Jo Van Fleet, Michael J. Pollard, Russell Collins, Thomas Chalmers, R. G. Armstrong, David Francis, and Burgess Meredith, narrator. CBS, March 28.

I, Don Quixote (*Du Pont Show of the Month*)—Adaptation by Dale Wasserman of the novel by Miguel de Cervantes, with incidents from the author's life; with Lee J. Cobb, Colleen Dewhurst, Eli Wallach, Hurd Hatfield, Peter Donat. CBS, November 9.

Killers, The (*Buick Electra Playhouse*)—Adaptation by A. E. Hotchner of the Ernest Hemingway short story, produced by Gordon Duff; with Dean Stockwell, Dane Clark, Robert Middleton, Ray Walston, Ingemar Johansson, Deborah Moldow. CBS, November 19.

Leonard Bernstein and the New York Philharmonic—Filmed portion of a concert in Moscow, featuring the first movement of Shostakovich's Seventh Symphony. CBS, October 25.

Magic with Mary Martin and *Music with Mary Martin*—Two variety programs of music and narration featuring Mary Martin; directed by Vincent J. Donehue. NBC, March 29.

Meet Me in St. Louis—Musical comedy adapted from the book by Sally Benson, directed by George Schaefer, choreography by Herbert Ross; with Myrna Loy, Ed Wynn, Tab Hunter, Jane Powell, Walter Pidgeon, Patty Duke, Reta Shaw, Jeanne Crain. CBS, April 26.

Merman on Broadway (*Ford Startime*)—Musical variety, featuring Ethel Merman, with Tab Hunter, Fess Parker, Tom Poston. NBC, November 24.

Misalliance (*Playhouse 90*)—The play by George Bernard Shaw, adapted by Meade Roberts; with Claire Bloom, Robert Morley, Siobhan McKenna, Kenneth Haigh, Rod Taylor, John Williams, Isobel Elson. CBS, October 29.

Montgomery Speaks His Mind—Filmed interview with Field Marshal Viscount Montgomery, with Edward R. Murrow and Charles Collingwood as the interviewers. CBS, April 28.

Moon and Sixpence, The—Adaptation by S. Lee Pogostin of the Somerset Maugham novel, directed by Robert Mulligan, produced by David Susskind; with Sir Laurence Olivier, Judith Anderson, Hume Cronyn, Jessica Tandy, Geraldine Fitzgerald, Denholm Elliott, Cyril Cusack. NBC, October 30.

My Three Angels (*Ford Startime*)—Comedy adapted by Sam and Bella Spewack from their Broadway play, based on a drama by Albert Husson; with Walter Slezak, Barry Sullivan, Henry Daniell, Peter Donat, George Grizzard, Ruth Hammond, Will Kuluva, Carmen Mathews, Diana Millay. NBC, December 8.

Oliver Twist (*Du Pont Show of the Month*)—Adaptation by Michael Dyne of the Dickens novel; directed by Daniel Petrie, produced by David Susskind; with Frederick Clark, Eric Portman, Robert Morley, John McGiver, Nancy Wickwire, Tom Clancy. CBS, December 4.

Pinafore (*Omnibus*)—Adaptation of Gilbert and Sullivan's *H.M.S. Pinafore*, directed by Norman Campbell, produced by Robert Saudek; with Cyril Ritchard, Irene Byatt, William Chapman, Jacquelyn McKeever, Loren Driscoll, Chester Watson. NBC, May 10.

Population Explosion (*C.B.S. Reports*)—Documentary study of uncontrolled birth-rate problems, particularly in India; narrated by Howard K. Smith. CBS, November 11.

Sounds of Eden, The (*Playhouse 90*)—Play by George Bellak, based on 1933 kidnaping, directed by Buzz Kulik, produced by John Houseman; with Kim Hunter, James Whitmore, Everett Sloane, Dick Foran, Henry Jones, Don Dubbins. CBS, October 15.

Target for Three (*Playhouse 90*)—Drama by David Davidson, directed by Robert Stevens, produced by John Houseman; with Ricardo Montalban, George C. Scott, Marisa Pavan, Liliane Montevecchi, Pedro Armendariz. CBS, October 1.

Ten Little Indians—Adaptation by Phil Reisman, Jr., of the Agatha Christie play; with Nina Foch, Barry Jones, Kenneth Haigh. NBC, January 18.

Third Commandment, The (*Kaleidoscope*)—Original television drama by Ben Hecht, attacking commercialized evangelism and faith healing; directed by Jack Smight; with Arthur Kennedy, Anne Francis, Fay Spain, John Hoyt. NBC, February 8.

Toast to Jerome Kern, A—Musical tribute to the composer, with Howard Keel, Patrice Munsel, Carol Channing, Robert Cummings, Louis Prima, Keely Smith, Lisa Kirk, and others. NBC, September 21.

Tonight with Belafonte—Harry Belafonte and Odetta in a musical program featuring American folk songs; with chorus, dancers, Sonny Terry and Brownie McGee. CBS, December 10.

Turn of the Screw, The (*Startime*)—Adaptation by James Costigan of the Henry James story; directed by John Frankenheimer; with Ingrid Bergman, Isobel Elsom, Hayward Morse, Alexandra Wager. NBC, October 20.

Wicked Scheme of Jebal Deeks, The (*Startime*)—Comedy by John D. Hess, directed by Franklin Schaffner, produced by Hubbell Robinson; with Alec Guinness, Henry Jones, Patricia Barry, and others. NBC, November 10.

Winterset (*Hallmark Hall of Fame*)—Adaptation by Robert Hartung of the Maxwell Anderson play, produced and directed by George Schaefer; with Don Murray, Piper Laurie, George C. Scott, Charles Bickford. NBC, October 26.

RAILROAD RETIREMENT BOARD. See Index entry.

RAILROADS. Due largely to developments beyond their control, Class I railroads in 1959 fell far short of achieving the economic recovery predicted for them as the year began.

Congress in May increased retirement and unemployment benefits for railroad employees, adding about $120 million a year to railroad payroll costs immediately and $247 million a year when the new benefits become fully effective. In the second half of the year a 116-day steel strike (see IRON AND STEEL) sharply reduced railroad traffic and revenue. Largely as a result of these developments railroad traffic and revenue did not greatly exceed that of the recession year of 1958.

Freight Traffic.—Revenue freight carloadings of 30,991,000 were about 765,000 above the 1958 total; revenue ton-miles of 575 billion, about 23 billion above (see Table 1).[1] Stockpiling in anticipation of the steel strike and the production speed-up that followed only partially offset losses during the strike. Carloadings in the period to July 15, when the strike began, were nearly 2 million ahead of the 1958 number. In the remaining months they were 1 million below.

Table 1—FREIGHT TRAFFIC

Year	Tons originated (millions)	Ton-miles (millions)	Ton-miles (% increase over 1939)
1939	901.7	333,438.4	...
1947	1,537.5	654,728.3	96.4
1957	1,380.3	618,193.5	85.4
1958	1,190.4	551,667.9	65.4
1959 (estimated)	1,240.0	575,000.0	72.4

Due largely to the strike, a serious car shortage predicted for the fall did not materialize. Movement of the winter wheat crop and of a record corn crop was handled satisfactorily.

Trailer-on-flat-car (piggyback) loadings totaled 415,000 cars, an increase of 50%. Such service was provided by 50 railroads, and the number was continuing to increase.

Passenger Traffic and Service.—Railroad passenger traffic continued the decline that began with the end of World War II. Passenger-miles of 22¼ billion were the lowest since 1938 (see Table 2).

The discontinuance of several money-losing trains enabled railroads to reduce their passenger deficit to $515 million, the lowest since 1950. The likelihood of further train discontinuances, particularly in heavily money-losing commuter services, led some states and cities to consider tax and other relief for the passenger-carrying railroads. A pro-

[1] Figures and statements herein refer to Class I railroads only. These railroads account for about 95% of all railroad performance. All figures for 1959 are partially estimated.

Table 2—PASSENGER TRAFFIC

Year	Passenger-miles (millions)	Per cent increase over 1938
1938	21,628.7	...
1944 (peak war year)	95,549.1	341.3
1947 (peak postwar year)	45,920.6	112.3
1958	23,268.8	7.6
1959 (estimated)	22,250.0	2.9

gram adopted in New York affords railroads both tax relief and assistance in acquiring new passenger equipment. In New Jersey a proposal to ease the railroads' tax burden was defeated in public referendum (see NEW JERSEY—*Principal Events, 1959.*) In Philadelphia (see PHILADELPHIA), railroads and the city government were cooperating to stimulate use of rail commuting facilities in the area through lower fares and improvement of service and equipment.

In an effort to help themselves, many railroads experimented with such services as reduced fares, first-class travel at coach fares plus a small charge for the sleeping accommodation occupied, "package fares" which include meals as well as transportation, and economy meals and sleeping accommodations. Several roads reported the experiments moderately successful.

In 1959 the Interstate Commerce Commission (q.v.) completed its three-year investigation of the passenger-train deficit. The principal reason for the deficit, the ICC said in its report, is "the increase in the availability and use of motor and air transportation." Supporting reasons for the decline in commutation traffic include (1) widespread adoption of the five-day week making Saturday, as well as Sunday, a nonbusiness day, and (2) commercial growth of suburbs, lessening demand for off-peak train service by housewives on shopping trips to the city.

Financial Results.—Railroads in 1959 had net railway operating income of $755 million on gross operating revenue of $9.9 billion for a return of 2.78% on investment (see Table 3). Gross operating revenue was $305 million above that for 1958. Operating expenses totaled $7,740 million, an increase of $196 million. Twenty-three Class I railroads failed to earn their fixed charges and operated at a deficit in 1959.

Table 3—EARNINGS OF CLASS I RAILROADS

Period	Net railway operating income	Annual return on investment (per cent)
1936–40 average	$ 580,277,475	2.51
1941–45 "	1,160,203,531	4.97
1946–50 "	825,803,620	3.54
1951–55 "	1,026,435,288	3.92
1956	1,068,245,689	3.95
1957	922,333,564	3.36
1958	762,296,068	2.76
1959 (estimated)	755,000,000	2.78

Employment.—For the first time in this century, the number of employees on railroad payrolls fell below 800,000. At the peak of the steel strike in October, employment fell to 786,000. By December 31 it had climbed to 796,000. Wages of railroad employees totaled $4.975 million, an increase of $45 million (see Table 4). Including retirement, unemployment, and other benefits, payroll costs were equal to 54 cents of the railroad revenue dollar.

Retirement benefits for railroad employees were increased a flat 10%, effective June 1; unemployment benefits, an average of 20%. Retirement benefits are financed jointly by employees and employers; unemployment benefits, by the companies alone. To pay for the higher retirement benefits, the tax base was raised to $400 a month of employee earnings, and the tax rate on employees and employers, to 6¼%, both effective June 1. Progressive increases in the rate are provided through 1969, when it reaches a maximum of 9%. To finance the added unemployment benefits, the tax rate on railroads was increased to a maximum of 3¾% on earnings of up to $400 a month.

Table 4—EMPLOYMENT AND COMPENSATION

Year	Average number of employees	Total compensation (millions)	Average straight time hourly rate	Average annual compensation per employee
1939	987,943	$1,863	$0.74	$1,886
1947	1,351,961	4,350	1.18	3,218
1957	986,001	5,358	2.29	5,434
1958	840,575	4,930	2.46	5,865
1959	815,000	4,975	2.55	6,110

On October 31 a three-year moratorium on changes in railroad pay scales and work rules expired. Union demands for increased wages and benefits, if granted in full, were expected by the carriers to cost an estimated $750 million a year—about equal to their entire net railway operating income in 1959. Railroads countered with demands for changes in work rules which, they claim, are outmoded and result in "featherbed" practices estimated to cost over $500 million a year. Elimination of the fireman on diesel locomotives in freight and yard service, and revision of the basic day standard under which employees receive a day's pay for each 100 or 150 miles traveled are the principal changes sought.

To protect themselves against certain types of strikes, most railroads have adopted a new "service interruption" insurance plan. Railroads thus insured may be reimbursed for certain fixed expenses for up to 365 days in a single work stoppage.

Fuel and Material Costs.—Despite slightly lower prices of fuel, including diesel oil, the price index of railroad materials and supplies rose to a new high (see Table 5). Expenditures for fuel, materials, and supplies totaled $1.5 billion, an increase of 22% over those for 1958.

Table 5—COST OF MATERIALS AND FUEL INDEX

Period	Materials and supplies (excluding fuel)	Fuel (coal and oil)	Fuel and all other materials and supplies
1947–49 Average	100.0	100.0	100.0
December 1939	55.5	47.5	52.6
October 1958	155.4	116.8	141.6
October 1959	158.6	114.8	143.2

Rates and Fares.—In contrast to the horizontal rate increases of previous years, railroads in 1959 sought to increase revenue through selective rate adjustments. A move by Eastern railroads to reduce rates on paint was permitted by the ICC to go into effect as both lawful and compensatory under the Transportation Act of 1958. The threatened loss of a large volume of coal traffic was averted by an ICC decision permitting the railroads to offer multiple-car rates.

Facilities and Equipment.—Capital expenditures totaled $829 million, about 12% over the 1958 investment but substantially below the postwar average. Two thirds went for new equipment, and the remainder was spent on additions to and betterment of roadways and structures. New equipment installed included 800 locomotive units, 40,000 freight cars, and 50 passenger-train cars. All of the locomotives were diesel, except seven gas-turbine units. On order on Dec. 31, 1959, were 200 locomotive units (all diesel), 40,000 freight cars, and 170 passenger-train cars.

In 1959 the nation's railroad plant comprised

220,000 miles of road and 370,000 miles of track. Equipment owned consisted of 29,540 locomotive units (28,300 diesel), 1,685,000 freight cars, and 31,000 passenger-train cars.

Mergers.—The Virginian and the Norfolk and Western railways merged in 1959 to become the Norfolk and Western Railway, a system of 2,746 miles of railroad and $970 million in assets. A proposed merger of the Erie and the Delaware, Lackawanna and Western railroads was approved by stockholders of both companies and was the subject of hearings before the ICC. Being studied in 1959 were possible mergers of the Atlantic Coast Line and Seaboard Air Line railroads; of the Burlington, the Northern Pacific, the Great Northern, and the Spokane, Portland and Seattle railways; and of the Milwaukee and Rock Island railroads. Studies of a proposed merger of the New York Central and Pennsylvania railroads were discontinued.

Research.—The industry's central research laboratory in Chicago received equipment for its new isotopes laboratory, and programs were begun to use radioactive materials for tracer technique studies. A cooperative program on irradiation of goods and vegetables to increase storage life and reduce refrigeration requirements was conducted with the Army.

Reducing the incidence of overheated journal bearings (hot-boxes) on freight cars continued as a primary research objective. Research also continued in many aspects of track construction and maintenance. Tests of prestressed concrete ties made under improved methods of manufacture were watched with interest.

Table 6—RAILWAY TRAFFIC, BY MAJOR COUNTRIES
(In millions of passenger-kilometers and freight net ton-kilometers; one kilometer equals 0.62137 mile)

Country	Passenger-km. 1956	Passenger-km. 1957 (prelim.)	Ton-km. 1956	Ton-km. 1957 (prelim.)
Argentina	15,384	15,884	14,873	14,313
Australia[1,2]	...	...	11,894	12,050
Austria[3]	5,748	5,902	7,328	7,592

Switzerland	7,307	...	3,537[6,22]	...
United Kingdom[23]	34,010	36,357	35,111[6]	34,139[6]
United States[24]	45,409	41,700	950,718	906,900
USSR[25]	142,400	153,400	1,079,100	1,212,800
Yugoslavia	7,208	7,914	11,869[6]	12,984[6]

Note—Figures relate to domestic and international traffic on all railway lines within each country shown, except those railway lines entirely within an urban unit, and plantation, industrial, mining, funicular, and cable railways. Passenger figures include all except military, government, and railway personnel when carried without revenue; ton-km. figures represent freight net ton-kilometers, and include all goods, whether carried by fast or ordinary trains, except service traffic, mail, baggage, and nonrevenue government stores, unless otherwise indicated.

[1] Twelve months ending June 30. [2] Government railways. [3] Federal railways. [4] Société Nationale des Chemins de fer Belges. [5] Full carloads only, excluding military traffic. [6] Includes service traffic. [7] Excludes small parcels. [8] Includes Newfoundland. [9] Source: *Hsin Hua Monthly*. May include service traffic. [10] Société Nationale des Chemins de Fer Français only. [11] Excludes occupation traffic. [12] Excludes light railways. [13] Twelve months beginning April 1. [14] State railways. [15] Excludes livestock. [16] Includes government traffic. [17] Full carloads only. [18] Includes South West Africa and Vryburg-Bulawayo line of Rhodesia Railways. [19] National railways (RENFE) only. [20] Excludes suburban railways. [21] Includes mail and weight of mail cars. [22] Includes mail and passengers' baggage. [23] Excludes Northern Ireland. Excludes London Transport Railways. The figures relate to British Railways. [24] Forty-eight states. [25] May include service traffic. (Source: Statistical Office of the United Nations, *Statistical Yearbook, 1958*.)

World Railway Traffic.—Figures on railway traffic are presented in Table 6 for leading nations for which relatively recent data are available.

CHARLES O. MORGRET,
Manager, Public and Special Services, Association of American Railroads.

RECLAMATION. The daily activities of nearly 10 million persons on farms and in cities and industrial centers in 17 Western states are vitally affected by water supplies provided by the U.S. Bureau of Reclamation of the U.S. Department of the Interior. Significant progress in meeting these and future water needs in the semiarid West was made by the bureau in the 1959 fiscal year.

Construction was completed on three water storage dams (Howard Prairie in Oregon, and Twitchell and Casitas dams in California) with a combined storage capacity of 551,000 square feet; three diversion dams (Soda Creek in Oregon, Robles in California, and Woodston in Kansas); and 410 miles of canals, pipelines, laterals, and drains. These facilities added about $195 million to the federal government's total investment of $3 billion in Western projects.

Other structures completed included: Glendo Powerplant, Wyoming; Big Thompson Powerplant, Colorado, marking completion of the Colorado–Big Thompson Project; Wanship and Gateway power plants, Utah; Helena Valley Tunnel and pumping plant, Montana; and the world's highest (700 feet) steel-arch bridge over the Colorado River at Glen Canyon, Arizona.

Major construction contracts awarded included: Foss Dam, Oklahoma; Stanaker Dam and second stage of Willard Dam, Utah; Prineville Dam, Oregon; Paonia Dam, Colorado; and the generator and turbine for the last unit of Hoover Dam power plant, Nevada. Work also was started on initial features of the Farwell unit of the Missouri River Basin Project, Nebraska, and the San Angelo Project, Texas.

Irrigation facilities were completed to serve 199,471 acres of land, increasing the bureau's irrigable acreage total to 8,049,642. Of the 6,756,737 acres actually irrigated, 3,407,057 received full irrigation service, 3,254,388 acres received a supplemental service, and 95,292 acres, a temporary water supply. Project farms produced crops valued at $987 million in 1958, raising the cumulative gross crop value since the start of the program in 1906 to $14.2 billion.

Bureau projects delivered 260 billion gallons of water to 106 municipalities and 68 industrial entities throughout the West.

Installed hydroelectric generating capacity of 45,450 kw. was completed, bringing total capacity at the bureau's 41 plants to 5,137,550 kw. Total revenues of $70,968,412 were received on bureau sales of 26,504,260,413 kw.-hr. of energy.

The number of recreational visitors to bureau reservoirs continued upward, tripling in the last eight years to reach 19.5 million visitor days of use in 1958.

Planning investigations were under way at the fiscal year's end on 134 projects in 17 Western states and Alaska. Comprehensive surveys of multi-

purpose water development also were in progress in 10 river basins and in 12 sub-basins of the Missouri River Basin.

Results of evaporation tests conducted at Oklahoma's Lake Hefner by the Bureau of Reclamation and the U.S. Geological Survey were announced in 1959. These tests showed a 9 per cent reduction of evaporation loss through use of a monomolecular layer of hexadecanol on the reservoir surface. The tests are continuing.

A total of 465 construction, material, equipment, and supply contracts, with a combined value of $72 million, was awarded in the fiscal year 1959. At the fiscal year's end, 145 construction contracts were in progress with a total face value of about $345 million.

A total of 48 repayment contracts were executed for repayment of costs of Reclamation project works, bringing to $916,073,149 the total value of all Reclamation repayment contracts. Water users have repaid $140,294,832, and delinquencies are negligible.

Three land openings were conducted on the Columbia Basin project in Washington, where 76 farm units aggregating 7,792 acres were made available for settlement.

FLOYD E. DOMINY,
Commissioner of Reclamation.

RECORDS, Phonograph. During 1959 the record industry continued to grow and prosper. Total sales of all types of records went ahead of the previous year by about 20 per cent.

However, some manufacturers were disappointed in the progress of the new stereophonic records, although demand for regular high-fidelity long-playing records continued to grow beyond normal expectations. It is now believed that stereo records are probably accounting for something less than 20 per cent of all 12-inch long-playing records. This slow growth does not seem to be due to lack of public appreciation of the undoubted merits of stereo sound, but it is apparent that most music lovers have been slow in installing the special equipment which is required for the proper reproduction of these records. Although regular high-fidelity records may be played on stereo phonographs with improved reproduction, it is not possible to play stereo records on the older type (monaural) phonographs.

In the closing months of 1959, the industry was shocked by the revelation of the so-called "payola" scandal. It was revealed that a number of prominent disc jockeys employed by radio stations in some large cities had been accepting, if not demanding, cash payments or other favors from certain record manufacturers, or from wholesale distributors, as a consideration for featuring their recordings in program arrangements. City and federal governmental agencies began investigations of this practice, and the situation will be examined further by congressional committees during the 1960 session. (See also RADIO AND TELEVISION—*Radio and Television Programs.*)

The peculiar rhythm and arrangement which has come to be known as "rock 'n' roll" music continues in undiminished popularity with the younger buyers of records, and after six years of general acceptance bids fair to become a permanent part of the American musical tradition. However, the rock 'n' roll of 1959 was quite different from the old-fashioned rock 'n' roll beat by which this arrangement first became famous. Many of the folk singers of the South and West have blended their country style with elements of true rock 'n' roll, and the final result has been further softened by the use of string instruments.

POPULAR RECORDS

Following the lead of the motion picture and television industries, a body known as the National Academy of Recording Arts and Sciences was organized recently for the purpose of making awards annually for outstanding accomplishment in all phases of recorded music. Selections are made by popular vote of the members, who are record company employees engaged in creative or technical work. Administrative or sales executives are not members of the academy.

It is now generally accepted by the industry that these awards (the trophy is called a "Grammy") are a more accurate appraisal of artistic merit in all categories of recorded music than are the limited polls reflecting the opinion of disc jockeys, juke box operators, or other specialized groups. Academy awards in 1959, announced on a coast-to-coast television program on November 29, included the following:

Bobby Darin, who records for Atco, was not only voted the best new artist of the year, but his recording of *Mack the Knife* was selected as record of the year.

Duke Ellington (Columbia) was a double winner. His rendition of *Anatomy of a Murder* was voted the best performance by a dance band, and the same selection was voted the best musical composition first recorded in 1959.

Ella Fitzgerald (Verve) was honored for the best female vocal performance in the selection, *But Not for Me.* She also won first place as soloist for the best jazz performance, with *Ella Swings Lightly.*

Frank Sinatra (Capitol) won two awards, both as a result of his album, *Come Dance with Me.* This was selected as the best album of the year, and his rendition was voted the best male vocal performance.

Dinah Washington (Mercury) was voted to have recorded the best rhythm and blues performance for her selection, *What a Difference a Day Makes.*

Jimmy Driftwood (RCA-Victor) was chosen as composer of the best song of the year, *The Battle of New Orleans.* The Columbia rendition of this number by Johnny Horton was voted best country and Western performance of the year.

For the best Broadway show album, Columbia's *Gypsy* shared honors with RCA-Victor's *Redhead.*

A new category of popular music, best performance by a chorus, was easily won by Columbia's recording of *The Battle Hymn of the Republic* by the Mormon Tabernacle Choir.

The award for the best performance by an orchestra went to David Rose and his orchestra with Andre Previn, M-G-M artists, for the selection *Like Young.*

Capitol Records was another winner with the Kingston Trio, which won an award for the best folk performance of the year with its rendition of *Kingston Trio at Large.*

During 1959 there were, of course, many outstanding successes in the field of popular music other than those cited by the academy. Among the best of the singles were the following:

Just as Much as Ever, Bob Beckham (Decca)
Primrose Lane, Jerry Wallace (Challenge)
Lonely Street, Andy Williams (Cadence)
Deck of Cards, Wink Martindale (Dot)
Put Your Head on My Shoulder, Paul Anka (ABC-Paramount)
Love Potion #9, The Clovers (United Artists)
Morgen, Ivo Robie (Laurie)

In the annual poll of disc jockeys, Bobby Darin tied for first place with Lloyd Price, pushing Elvis Presley down to second place. Connie Francis was voted the best pop female vocalist. The Everly Brothers were voted the best popular vocal combination, with The Coasters ranking second, and the Kingston Trio third. The disc jockeys picked Ray Anthony for the best popular band of 1959.

The readers of *Down Beat* magazine selected Frank Sinatra and Ella Fitzgerald as the best male and female singers. They picked Count Basie in the category of the best jazz band, and Les Brown for the best dance band.

The Record Industry Association of America, Inc., now undertakes to audit sales figures of various records which are proposed as eligible for a Gold Record Award and, in the event that it is found that sales have surpassed the required

minimum, provides a certification to that effect. Gold Record Awards attested to by RIAA during 1959 were as follows:

Oklahoma!, Gordon MacRae (Capitol)
He's Got the Whole World in His Hands, Laurie London (Capitol)
Tom Dooley, Kingston Trio (Capitol)
Hymns, Tennessee Ernie Ford (Capitol)
The Music Man, Meredith Willson (Capitol)
Johnny's Greatest Hits, Johnny Mathis (Columbia)
Sing Along with Mitch, Mitch Miller (Columbia)
Catch a Falling Star, Perry Como (RCA-Victor)
Hard Headed Woman, Elvis Presley (RCA-Victor)
Patricia, Perez Prado (RCA-Victor)
Peter Gunn, Henry Mancini Orchestra (RCA-Victor)

JOHN W. GRIFFIN,
Executive Secretary, Record Industry Association of America, Inc.

CLASSICAL RECORDS

The stereophonic disc, introduced commercially in 1958, began to gain considerable consumer acceptance in 1959. By the year's end, about 25% of all classical record sales were in the stereo category. This trend to stereo seemed certain to persist, particularly in view of the general improvement in quality and the vast increase in quantity of stereo issues.

Other media of stereophonic recording became available during the year. The RCA Victor tape cartridge, utilizing four-track tape at a speed of 3¾ inches per second, had been announced in 1958, but mechanical difficulties in production delayed its actual commercial introduction until the second half of 1959. Critical reports on it were conflicting, and the initial public response to the cartridge does not seem to have been overwhelming.

Meanwhile, the Ampex Corporation, through a subsidiary, United Stereo Tapes (UST), countered with an alternative recorded tape medium—this one also using four-track tape, but on standard open reels and at a speed of 7½ inches per second. There was wide agreement that UST's four-track tape recordings, when played on high-quality equipment, equaled the lofty sonic standards previously set by recordings on two-track tape at 7½ inches per second; and of course the economic advantage of four-track tape (twice as much music on the same amount of tape) was obvious.

Several important producers of classical recordings made their catalogues available to UST for processing and distribution—among them, Everest, Mercury, Vanguard, Vox, and Westminster. In addition, the announcement toward the end of the year that London Records would make its recordings available to UST beginning in 1960 gave further evidence that the open-reel, four-track medium was off to an auspicious start.

In the classical field no large new companies were formed in 1959, though some long-established European labels—Deutsche Grammophon, Odéon, Pathé, and Telefunken—were introduced (or reintroduced) in the United States during the course of the year by American manufacturers and importers. The year was notable for the return to recording activity by Dario and Dorle Soria, creators of the Cetra-Soria and Angel lines, who reappeared as producers of the Soria Series for RCA Victor. Typical of the Soria Series was the new Sir Thomas Beecham recording of Handel's *Messiah*, encased in a leather-spined, linen-covered box and accompanied by a lavishly illustrated book of annotations printed in Switzerland.

Stereo re-recording of more or less standard repertoire continued to provide the major companies with most of their new releases. In many cases the re-recordings were made by the same artists who had previously recorded the music for monophonic discs; for example, the nine Beethoven symphonies conducted by Bruno Walter; the Shostakovich First and Fifth Symphonies conducted by Leopold Stokowski; the Beethoven Opus 18 Quartets played by the Budapest String Quartet; the *Messiah* conducted by Sir Thomas Beecham, Sir Malcolm Sargent, and Hermann Scherchen; Donizetti's *Lucia di Lammermoor*, featuring Maria Callas, and Puccini's *Madama Butterfly*, featuring Renata Tebaldi. However, some fresh ground was broken, too, as exemplified by the first complete recordings of Wagner's *Das Rheingold* and Verdi's *Macbeth*.

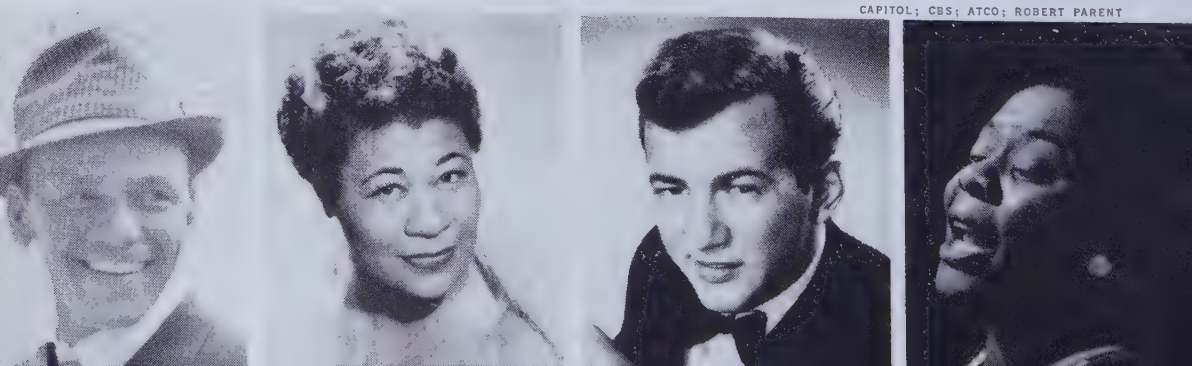
A cutting down of new classical issues was observable throughout the industry as the year progressed. The public had clearly been offered more new merchandise than it could possibly digest, and a trend toward fewer and better recordings was in the making. The previous glut had come about in part because of exclusive recording contracts that guaranteed an artist a certain number of new recordings every year. Thus, along with the trend toward fewer new issues, there was a concomitant trend toward fewer exclusive contracts, which promised the advantage of greater freedom both for the record companies and the artists.

Following is a sampling of notable recordings which appeared in 1959; except where otherwise indicated, all are available in both stereo and monaural form.

Bach, *Brandenburg Concertos:* Stuttgart Chamber Orchestra, Karl Münchinger, conductor (London; 3 LP's).
Bach, *St. Matthew Passion:* Teresa Stich-Randall, Hilde Rössl-Majdan, Waldemar Kmentt, Uno Ebrelius, Hans Braun, Walter Berry, soloists; Vienna Chamber Choirs, Boys' Choir of the Schottenstift, Vienna State Opera Orchestra, Mogens Wøldike, conductor (Bach Guild; 4 LP's).
Beethoven, Concerto for Piano and Orchestra, No. 4, in G: Leon Fleisher, pianist; Cleveland Orchestra, George Szell, conductor (Epic).
Beethoven, The Nine Symphonies: Columbia Symphony Orchestra, Bruno Walter, conductor (Columbia; 7 LP's).
Beethoven, Symphony No. 2, in D: Royal Philharmonic Orchestra, Sir Thomas Beecham, conductor (Angel).
Brahms, Concerto for Piano and Orchestra, No. 2, in B flat: Artur Rubinstein, pianist; RCA Victor Symphony Orchestra, Josef Krips, conductor (RCA Victor).
Brahms, Concerto in D for Violin and Orchestra: Henryk

Outstanding popular record artists in 1959: (from left) Frank Sinatra, Ella Fitzgerald, Bobby Darin, and Dinah Washington.

CAPITOL; CBS; ATCO; ROBERT PARENT



Szeryng, violinist; London Symphony Orchestra, Pierre Monteux, conductor (RCA Victor).

Gesualdo, Madrigals and Sacred Music: Vocal Quintet and String Quartet, Robert Craft, conductor (Columbia).

Glinka, *A Life for the Czar:* Teresa Stich-Randall, Nicolai Gedda, Boris Christoff, and other soloists; Chorus of the Belgrade Opera and Lamoureux Orchestra, Igor Markevitch, conductor (Capitol-EMI; 3 LP's; monaural only).

Handel, *Messiah:* Jennifer Vyvyan, Monica Sinclair, Jon Vickers, Giorgio Tozzi, soloists; Royal Philharmonic Orchestra and Chorus, Sir Thomas Beecham, conductor (RCA Victor; 4 LP's).

Handel, *Messiah:* Pierrette Alarie, Nan Merriman, Leopold Simoneau, Richard Standen, soloists; Vienna Academy Chorus and Vienna State Opera Orchestra, Hermann Scherchen, conductor (Westminster, 4 LP's; stereo only).

Haydn, Symphonies No. 100, in G (*Military*), and No. 101, in D (*Clock*): Vienna State Opera Orchestra, Mogens Wøldike, conductor (Vanguard).

Mozart, Symphonies No. 32, in G, and No. 38, in D (*Prague*): London Symphony Orchestra, Peter Maag, conductor (London; stereo only).

Prokofiev, Concerto for Violin and Orchestra, No. 2, in G minor (with Mendelssohn, Concerto for Violin and Orchestra): Jascha Heifetz, violinist; Boston Symphony Orchestra, Charles Munch, conductor (RCA Victor).

Rachmaninoff, Concerto for Piano and Orchestra, No. 3, in D minor: Van Cliburn, pianist; Symphony of the Air, Kiril Kondrashin, conductor (RCA Victor).

Ravel, Concerto for Piano and Orchestra, in G (with Shostakovich, Concerto for Piano and Orchestra, No. 2): Leonard Bernstein, pianist; Columbia Symphony Orchestra, Leonard Bernstein, conductor (Columbia).

Rossini, *Il Barbiere di Siviglia:* Roberta Peters, Cesare Valletti, Robert Merrill, Fernando Corena, Giorgio Tozzi, and other soloists; Metropolitan Opera Chorus and Orchestra, Erich Leinsdorf, conductor (RCA Victor, 4 LP's).

Schubert, Impromptus, Op. 90, No. 2 and 4 (with other pieces by Schubert and Liszt): Sviatoslav Richter, pianist (Monitor; monaural only).

Schubert, Quintet in A (*Trout*): Clifford Curzon, pianist; members of the Vienna Octet (London).

Shostakovich, Symphony No. 1, in F: Symphony of the Air, Leopold Stokowski, conductor (United Artists).

Strauss, *Capriccio:* Elisabeth Schwarzkopf, Christa Ludwig, Nicolai Gedda, Dietrich Fischer-Dieskau, Hans Hotter, and other soloists; Philharmonia Orchestra, Wolfgang Sawallish, conductor (Angel, 3 LP's).

Stravinsky, *Threni:* soloists; Schola Cantorum and Columbia Symphony Orchestra, Igor Stravinsky, conductor (Columbia).

Tchaikovsky, *Swan Lake:* Orchestre de la Suisse Romande, Ernest Ansermet, conductor (London; 2 LP's; stereo only).

Verdi, *Macbeth:* Leonie Rysanek, Carlo Bergonzi, Leonard Warren, Jerome Hines, and other soloists; Metropolitan Opera Chorus and Orchestra, Erich Leinsdorf, conductor (RCA Victor, 3 LP's).

Wagner: *Das Rheingold:* Kirsten Flagstad, Set Svanholm, George London, and other soloists; Vienna Philharmonic Orchestra, Georg Solti, conductor (London, 3 LP's).

Editor, "High Fidelity" Magazine.

JAZZ RECORDS

The recording industry provided an unusually broad coverage of jazz history during 1959—history of the distant and recent past and of the provocative present—and gave insights regarding the future.

The distant past was explored in an adventurous series of four disks, *The Music of New Orleans* (Folkways), for which Samuel B. Charters taped performances by, and talks with, aging musicians who have been associated with jazz in New Orleans since the beginning of the century. Another excellent disk, *Jazz Begins* (Atlantic) by the Young Tuxedo Brass Band, also captured the flavor of early New Orleans jazz. Ragtime, one of the elements contributing to jazz in its formative stage, was put on records by two veteran pianists who were among the most skilled performers in that field: 75-year-old Eubie Blake on *The Wizard of the Ragtime Piano* (20th-Fox) and 64-year-old Lucky Roberts on *Happy-Go-Lucky* (Period).

Those jazz musicians whose style falls between the early traditional and the recent modern, and who have been pointlessly neglected for the past

decade, finally found a champion in Stanley Dance, an Englishman, who went to the United States to track down and record what he referred to as "mainstream" jazzmen. These recordings, released on the Felsted label, brought deserving new recognition to saxophonist Buddy Tate (*Swinging Like . . . Tate!*), clarinetist Buster Bailey (*All About Memphis*), trombonist Dickie Wells (*Bones for the King*), and pianist Earl Hines (*Cozy's Caravan*). Several other "mainstreamers" also returned to the recording studios in 1959, including clarinetists Joe Marsala, on *Chicago Jazz* (Stere-O-Craft), and Clarence Hutchinrider, on *Music from the Gaslight Era* (Aamco). The burgeoning interest in these middle-era musicians was capped by the release of a two-disk set, *Spirituals to Swing* (Vanguard), which contained highlights of two important concerts presented at Carnegie Hall in 1938 and 1939.

The most provocative jazz group to appear during 1959 was a vocal trio—Lambert, Hendricks and Ross—considered by many to be the first real jazz singing group ever formed. Their stock-in-trade, vocalized versions of well-known instrumental jazz arrangements with exceptionally appropriate lyrics by Jon Hendricks, was caught at its best on *The Swingers* (World Pacific). Nina Simone, a pianist and singer, made a highly promising debut on *Little Girl Blue* (Bethlehem). How-

Recording session for Rossini's *Il Barbiere di Siviglia*, with Erich Leinsdorf conducting, shows use of separate microphones to produce two channels for stereophonic sound.

DAVID DREW ZINGG

ever, the most intriguing peek at a potentially vital force in the future of jazz was offered by Ornette Coleman, who plays a plastic alto saxophone and forms his solos from slashes and smears which are frequently only vaguely associated with any central musical core. His disks were *Something Else* (Contemporary), *Tomorrow Is the Question* (Contemporary), and *The Shape of Jazz to Come* (Atlantic).

The fad of recording jazz versions of Broadway show scores gave way during 1959 to a concentration on background music for private-eye television shows, stimulated by Henry Mancini's *The Music from "Peter Gunn"* (Victor). The film version of *Porgy and Bess* resulted in numerous jazz treatments of its score, of which the most interesting were by Miles Davis (Columbia), Louis Armstrong and Ella Fitzgerald (Verve), and Rex Stewart and Cootie Williams (Warner Brothers). A much more significant connection between jazz and films, however, was the increasing number of film scores written by jazz musicians. Transferred to records, these included Duke Ellington's *Anatomy of a Murder* (Columbia), John Lewis' *Odds Against Tomorrow* (United Artists), and Miles Davis' *Elevator to the Scaffold* (Columbia).

Other interesting jazz records issued in 1959 included:

At His Very Best, Duke Ellington and His Orchestra (Victor)
Breakfast Dance and Barbecue, Count Basie's Orchestra (Roulette)
Concert!, George Lewis' Band (Blue Note)
Duke Ellington at the Cotton Club (Camden)
Free Blown Jazz, Tony Scott (Carlton)
Great Jazz Standards, Gil Evans' Orchestra (World Pacific)
Historic Jazz Concert at Music Inn (Atlantic)
Kid from New Orleans, The, Kid Ory (Verve)
Kind of Blue, Miles Davis Sextet (Columbia)
King of New Orleans Jazz, The, Jelly Roll Morton and his Red Hot Peppers (Victor)
Lightnin' Hopkins (Folkways)
Mingus Ah Um, Charles Mingus (Columbia)
Oh, Play That Thing!, Pee Wee Erwin (United Artists)
Pres and Teddy, Lester Young–Teddy Wilson (Verve)
Songs for Swingers, Buck Clayton (Columbia)
Sweetest Since Gabriel, The, Doc Evans (Audiophile)
You're Getting to Be a Habit with Me, Ruby Braff (Stereo-Craft

JOHN S. WILSON,
Reviewer of Jazz Records, "The New York Times" and "High Fidelity" Magazine.

RED CROSS, American National. Providing assistance to the armed forces, veterans, and their families accounted for nearly 39% of Red Cross expenditures for the 1958–59 fiscal year. Services for members of the armed forces and their dependents included counseling; financial grants or loans totaling $10,749,000; recreational programs; and medical social services and recreation for patients in 286 military hospitals. Veterans and their dependents were given counsel, financial aid, and assistance in obtaining benefits for which they were eligible. In 174 veterans hospitals and domiciliary homes, 17,200 volunteers monthly supplemented institutional services.

Largest of the Red Cross' 298 operations to aid victims of disasters followed floods of late January in New York, Pennsylvania, Ohio, West Virginia, and Indiana. During the emergency phase, the organization handled an extensive inquiry service and operated 84 shelters which provided meals, clothing, medical and nursing care, and housing. Over 27,200 persons received emergency care, including 14,500 rescue and cleanup workers. More than 10,800 families were given long-term financial aid. During the year an additional 61,600 persons and 6,200 families affected by disaster were aided. Red Cross expenditures for disaster services in the United States and abroad totaled $6,904,982. In addition, thousands of volunteers gave their services to carry out programs of disaster relief and preparedness.

Through the Blood Program, over 2,300,000 voluntary blood donations were collected during the year. Two regional programs were opened to bring the total to 54. Some 3,900 civilian and federal hospitals in 49 states and the District of Columbia received Red Cross blood for treatment of patients.

New educational materials and methods were developed to promote safety. Among the innovations were dryland outboard motorboat demonstrations to teach how to reduce boating accidents. The Red Cross also operated 24,300 highway first-aid stations, mobile units, and detachments; enrolled 3,300 persons in 25 aquatic schools; issued over 2,500,000 first aid and water safety certificates; and authorized 156,000 first aid and water safety instructors.

In 1959, Red Cross Nursing Services observed its 50th year, adding to its achievements a program to improve the care of the chronically ill and aged in nursing homes. Over 38,000 professional nurses served as volunteers in community clinics and blood centers and taught home nursing courses. Nurses gave the equivalent of 10 calendar years in caring for the year's disaster victims.

Increased numbers of the organization's 20,500,000 enrolled junior members took part in chapter and community programs. Through programs to foster international understanding, cultural exchanges were arranged, and school, health, and recreation supplies valued at $954,000 were sent to children in some 60 countries.

The international assistance program also provided aid for refugees in Morocco, Tunisia, and India, and to flood victims in Europe and South America. Searches conducted with the help of other Red Cross societies located missing persons in 800 instances; and throughout 1959, Red Cross and family packages were forwarded regularly to all Americans known to be detained in Communist China.

REFUGEES AND DISPLACED PERSONS. World Refugee Year.—The most significant development for refugees and displaced persons in 1959 related to the designation of the period July 1, 1959, through June 30, 1960, as World Refugee Year.[1] This international program emphasizes the belief that the tragic situation which affects millions of human beings throughout the world can be relieved only by joint action of voluntary and governmental agencies and greater coordination of services within the United Nations. Special emphasis is being placed on closing the refugee camps in Europe.

The World Refugee Year is being administered by the new Executive Committee of the High Commissioner's Program for Refugees which succeeded the Executive Committee of the U.N. Refugee Fund (UNREF) as of Jan. 1, 1959. The group advises the United Nations high commissioner for refugees (UNHCR), Dr. Auguste R. Lindt, who was re-elected by the U.N. General As-

[1] The United Kingdom's proposal for a World Refugee Year was adopted by the Executive Committee of the U.N. Refugee Fund in September 1958 and received the support of the U.N. General Assembly in a resolution passed on Dec. 5, 1958. Fifty-nine governments joined in proclaiming the year; nine governments (from the Soviet bloc) dissented, and seven (representing Asian and Arab members) abstained.

sembly on Nov. 14, 1958, for a two-year term, and who has expressed the hope that thousands of refugees will be settled during this year.

Special contributions pledged to the World Refugee Year in 1959 included in the following:

Monaco, 1 million French francs; Morocco, payment of charges for unloading inland transport and storage of supplies for refugees from Algiers; Tunisia, same as Morocco; United Kingdom, £100,000 to the national committee of World Refugee Year in the United Kingdom; United States, $4 million (exclusive of the $40 million annual contribution for direct assistance to refugee programs), plus $100,000 for refugees from Tibet, $80,000 for Chinese refugees in Hong Kong, and $150,000 for relief of refugees in Morocco and Tunisia; International Confederation of Free Trade Unions, $50,000 for Office of the U.N. High Commissioner for Refugees programs; Iceland, admission of 20 refugee fishermen; Belgium, resettlement of 100 difficult cases, through the Entre 'Aide Socialiste Belge, in collaboration with the World Council of Churches.

On Nov. 4, 1959, U.N. Secretary General Dag Hammarskjöld, reporting on the progress of the World Refugee Year, said that only $3 million had been donated by that date, two thirds of which came from the United States. He said that 65 countries and territories were participating in the program, in addition to 70 private organizations.

In an earlier statement (May 15) on the special effort, the secretary general reported that there were still 2 million refugees in need of assistance from the United Nations. Refugee statistics are approximate at best, but there are, according to recent estimates of the UNHCR, 135,000 nonsettled refugees throughout Europe. Some 19,000 of these have been in camps for more than 10 years, and one third of their children were actually born in these places. It is hoped that in the near future 13,000 of the 32,000 still living in camps will emigrate, and that 19,000 others will be re-established in the countries where they are now located.

President Eisenhower called a special White House conference on May 21–22 to discuss United States participation in World Refugee Year. About 160 civic and volunteer agency leaders attended the session and called for increased governmental assistance to refugees.

Activities of United Nations Organizations.—In 1959 the number of nonsettled refugees in Europe and within the mandate of the UNHCR totaled 32,000 living in camps and 100,000 living outside of these formal camp communities without permanent settlement. The distribution of these refugees within the mandate of the United Nations who live in camps in Europe was reported by the UNHCR on July 1, 1959, as follows: Austria, 10,300 refugees (including 2,700 Hungarians recently arrived) in 45 camps; Germany, 11,930 in 53 camps; Greece, 820 in 8 camps; and Italy, 3,350 in 8 camps. (Thousands of other refugees are in camps not under United Nations jurisdiction.) Some camps provide temporary shelter; others are converted military cantonments, factories, or former concentration camps.

While there is a slow decline in the refugee population left in Europe following World War II, the general problem has increased in other areas. The Hungarian revolt in 1956 displaced thousands of persons, and over the past four years other refugee movements have occurred in Communist China, Southeast Asia, and North Africa, and a few minor incidents have created local refugee problems. The UNHCR, reporting in 1959 on the Hungarian refugee problem, said that "solutions have been found or are in sight for more than 95% of these refugees."[2]

While the Hungarian refugee problem in Yugoslavia was completely solved before 1959, the expenditures incurred for transportation, housing, and care left the Yugoslavian government with a deficit of more than $3.6 million. The total number of refugees who left Hungary was estimated at 200,000; of these, 180,000 entered Austria and 20,000 went to Yugoslavia. After repatriation or resettlement, there remained in Austria 14,900 refugees, including the 5,000 in official camps. For those who do not wish to settle outside the country, a $3.5 million program has been drawn up for housing, credit facilities, education, and employment opportunities. United States surplus food supplies were made available to assist in the feeding program.

In the past three years, serious refugee problems developed in Tunisia and Morocco when large numbers of refugees from Algeria entered these countries without means of support. The "host" governments were faced with problems of care and maintenance. The situation, beyond the capacity of the local authorities, grew serious. Appeals were made to UNHCR, and contributions of $116,000 were made available to the International Red Cross for distribution in aid and assistance.

Later, the problem of Algerian refugees became worse. It was estimated that 125,000 were in Tunisia and a similar number in Morocco. In late 1958 and 1959, appeals for assistance were made by the League of Red Cross Societies and the Red Crescent Societies, with the support of the UNHCR. It was estimated that by the end of 1959, contributions of $2,440,000 would be necessary, but only a portion of this amount was received.

There are over 1 million Chinese refugees from the mainland living in Hong Kong in almost unimaginable poverty and in overcrowded and unhealthy conditions. Appeals were made to governments and voluntary organizations, but by late 1959 the response had been most disappointing. Funds to aid the Chinese refugees in Hong Kong are included in the United Kingdom's plans for the World Refugee Year. In addition to the mainland refugees, there are in Hong Kong approximately 10,000 White Russian refugees, remaining since World War II, whose problem can best be solved by resettlement in European countries.

Elsewhere in Asia there are about 15,000 refugees from Tibet in Bhutan, Nepal, and India.

Much more complicated and difficult of solution is the problem of the refugees in the Middle East. Because of the serious and, in some instances, exaggerated political, ethnic, or other problems involved, the Palestine refugee programs may eventually be the source of even more serious international involvement in that area. Most authorities agree that the problems will require urgent diplomatic efforts and generous offers of resettlement from many countries requiring skilled and unskilled personnel.

The number of registered refugees living around the borders of the state of Israel in 1959 is placed at 1,087,628 (in 1950 the total registered was 960,021). These are under the supervision of the director of the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA). The refugee population approximates 15% of the local nonrefugee resident population, which is placed at 6,923,952. In the Gaza Strip the refugee population is registered at 243,343, compared with the local nonrefugee population of 106,415. In other countries in the Middle

[2] For his efforts on behalf of Hungarian refugees, Oskar Helmer, Austrian minister of the interior in 1956, received the Nansen Medal on Oct. 13, 1959. The award, named for the late Fridtjof Nansen, a Norwegian who was first high commissioner for refugees for the League of Nations, is presented annually for outstanding endeavor in the refugee field.

East, the percentage of registered refugees versus local population is as follows: Jordan, 58.9%; Lebanon, 8.2%; Syria, 2.6%.

In December 1959, authorities of the United Nations announced that more than $35 million was pledged for the support of refugees under United Nations programs. Of this sum, about $25 million will come from the United States. The major portion of this money will be used to support UNRWA during an extension of its mandate for a three-year period beyond June 30, 1960 (approved by the General Assembly on December 9). UNRWA has responsibility for more than 1 million Arab refugees and over 300,000 refugees of World War II and the Hungarian and Algerian conflicts. Israel refrained from voting on the issue because of the controversial clause calling for the return of many of the Arab refugees to Israel for repatriation. It was "the opinion of the Israeli government" that the Arab refugees should be settled in Arab countries as a more compatible solution. (See also UNITED NATIONS—*General Assembly.*)

Voluntary Agencies.—The services to refugees and displaced persons rendered by the United Nations agencies and individual governments are supplemented by those of numerous voluntary agencies. In the United States alone there are nearly 40 such agencies. Generally, these are related to welfare agencies sponsored by various church groups or nationally organized welfare services. Fifteen church-related agencies have been serving the needs of refugees since World War II, and at least one third of these became interested because of the prewar concentration camps in Germany. Ten of these voluntary agencies in the refugee field are sponsored by ethnic or nationalistic bodies. Organizations such as the Red Cross and CARE (Cooperative for American Relief Everywhere, Inc.) have close governmental relations, but are not public agencies as such. The U.S. Committee for Refugees, with headquarters in New York City, is an independent citizens group composed of individuals and persons related to some church or other agency serving refugees. This committee is spearheading the organization of city and state programs for the World Refugee Year.

RELIGION. Major developments among the principal religions of the world in 1958 are reviewed in this article under the following headings: (1) Introduction: A General Survey; (2) Protestantism; (3) Catholicism; (4) Oriental Religions, Islam, and Eastern Orthodoxy; and (5) Judaism. The largest individual religious bodies in the United States and Canada are treated under separate headings—for example, BAPTIST CHURCHES, CHRISTIAN SCIENCE, CONGREGATIONAL CHRISTIAN CHURCHES, etc.; and membership figures are tabulated in the article CHURCH MEMBERSHIP, U.S.

INTRODUCTION: A GENERAL SURVEY

There were many signs of religious vitality in the world in 1959. Church membership in the United States reached an all-time high, embracing 63% of the population. New records were also established in church attendance, and in contributions to charitable causes. There was a boom in church building, with an increased use of new architectural forms. Moslems stepped up missionary activities in the United States; and in Africa, Islam was gaining ten times as many converts as Christianity. In Chicago, a foundation comprising Orthodox, Reform, and Conservative Jews was begun in 1959 for proselytizing non-Jews. As Protestants throughout the world joined in celebrating the 450th anniversary of the birth of John Calvin, Protestants in the United States reported that the number of missionaries supported by them on foreign fields had increased by 10,000 since 1951.

Yet, many religious leaders questioned the significance of such signs of apparent vitality. It was pointed out that Americans still spend 15% more for cigarettes each year than they give to all charities. Also, sociological studies indicate that the basic religious orientations of Americans have remained relatively unchanged over the past half-century. The worldwide celebration of the 100th anniversary of the publication of Darwin's *Origin of Species* (see GENETICS) recalled centuries of adjusting traditional religious views to new scientific theories, and there were many indications that further adjustment is necessary. For example, the implications for traditional religious thought of space travel and the possible existence of sentient beings in other parts of the universe were widely discussed.

Changing sociological patterns also are bringing about modifications of some traditional religious social views. A World Council of Churches study group recommended planned parenthood through a variety of means acceptable to Christian conscience. Another World Council of Churches conference, meeting in Thessalonika, considered Christian responsibility toward areas of social change, and urged a greater awareness on the part of Christians of the political and economic revolutions occurring in many parts of the world. The first East-Asian Christian Conference, at Kuala Lumpur, concentrated on Asian problems, and one in Denmark considered European problems.

All of the traditional religious bodies of the world continued to grapple with the threat of Marxist ideology and Communist political action. Followers of traditional Asian faiths were especially shocked by the forced flight of the Dalai Lama from Tibet (q.v.). As Buddhists celebrated the 2,500th anniversary of the birth of Gautama Buddha, they heard calls to a greater awareness of the social implications of their faith. Reports from Communist China indicated a further rapid consolidation of Chinese Christian churches under government control.

A National Council of Churches study conference recommended that the United States recognize Communist China and establish closer cultural relations with Communist countries—a recommendation that brought a mixed reception from church leaders. The visit to the United States by Soviet Premier Nikita Khrushchev (q.v.) resulted in varied comments from religious spokesmen. Some felt that steps should have been taken to make the Russian leader more aware of the role of religion in American life. In Germany, the 10th annual *Kirchentag* (literally, church day) brought 40,000 German Protestants from both sides of the Iron Curtain to Munich for 5 days; 370,000 attended the closing service. East German delegates experienced increased difficulties in attending the *Kirchentag.* The East German government claimed that 75% of its youth now participate in ceremonies of the Communist Youth Dedication movement rather than in traditional religious observances.

One response of world religious bodies to these

and other challenges was a greater concern for unity. In January, Pope John XXIII announced a forthcoming Ecumenical Council to consider the divisions now existing among Christians. In some quarters it was felt that a special approach might be made by Roman Catholics toward Eastern Orthodox Christians. Leaders of the World Council of Churches drafted a cautious but friendly statement on the pope's announcement, and called for greater cooperation between Catholic and Protestant Christians in existing economic and social programs. The 10th annual meeting of the Central Committee of the World Council, at Rhodes, urged closer understanding between Protestant and Eastern Orthodox groups, while Eastern Orthodox leaders indicated that their response to the pope's proposed Ecumenical Council would not jeopardize their relations with the World Council. Roman Catholic observers said that in any case only bishops of the Roman Catholic Church would be official members of the council.

J. A. MARTIN, JR.,
Crosby Professor of Religion, Amherst College.

PROTESTANTISM

In 1959 the Protestant world commemorated the 450th anniversary of John Calvin's birth (July 10, 1509) and the 400th anniversary of the final Latin edition of his *Institutes*. The focal point of these celebrations was Geneva, Switzerland (Calvin's permanent home after 1541), where a service on May 31 inaugurated the summer-long Festival of Sound and Light.

A number of events during 1959 testified to growing Protestant efforts to achieve Christian unity. In the United States, two significant developments in the field of student work contributed toward realizing this aim. First, four denominations—The United Presbyterian Church in the USA, Disciples of Christ, United Church of Christ, and Evangelical United Brethren Church—merged their student activities into a newly constituted United Campus Christian Fellowship. Second, the historic Student Volunteer Movement was merged with the Interseminary Movement and the United Student Christian Council to form a single cooperative student work agency, the National Student Christian Federation.

The second General Synod of the United Church of Christ, bringing together the Congregational Christian Churches (q.v.) and the Evangelical and Reformed Church, met at Oberlin, Ohio, in July to complete its organization. A Statement of Faith was adopted by the church, but final consideration of the proposed Constitution was postponed for one year. In Boston, in May, the American Unitarian Association and The Universalist Church of America approved a merger "at the earliest feasible date," probably by May 1961.

In the Netherlands, the Reformed and Lutheran churches adopted an agreement which provides for intercommunion and pulpit exchange. However, in Great Britain, the General Assembly of the Church of Scotland, meeting in Edinburgh on May 26, rejected proposals for closer relations with the Church of England. The Scottish church contended that the creation of "bishops-in-presbytery," which had been put forward in 1957 as a basis for union, were "unacceptable in that they imply a denial of the catholicity of the Church of Scotland. . . ."

One of the conspicuous recent features of world Protestantism has been the drawing together of churches into regional councils. The East Asian Christian Conference was formally constituted at Kuala Lumpur, Malaya, on May 14. Representatives from the Protestant churches of seven Latin

WIDE WORLD

In Washington Cathedral on January 14, the Rt. Rev. Arthur C. Lichtenberger (second from left at top) becomes presiding bishop of the Protestant Episcopal Church, succeeding Bishop Henry Knox Sherrill (second from left, foreground).

European countries formed a similar conference. In addition, an All-European Protestant Conference, aimed at bridging the gap between churches in eastern and western Europe, was held at Frankfurt, Germany, in January. Also in January, an All-European Church Conference met at Nyborg, Denmark; practically all non-Roman Catholic churches, including the Moscow Patriarchate, were represented. In addition to the primary purpose of these conferences, which was to consider the joint responsibility of the various churches in a particular area, there was a manifest concern for religious liberty. In this regard, the Central Committee of the World Council of Churches, in session at Rhodes, Greece, in August, scheduled a full debate on religious liberty in Roman Catholic countries. This debate was planned for the council's meeting to be held in Scotland in 1960.

The annual *Kirchentag* in Germany, a great mass-meeting which brought together nearly 500,000 people, was held in Munich, August 12–16. Including Christians from both East and West Germany, the *Kirchentag* served as a reminder of the "lay renaissance" in European Protestantism. Closely related to the *Kirchentag* are the lay academies which have been established in seven European countries so that laymen may join together to consider their Christian vocations. These academies, linked to each other by the Directors' Association of the Laymen's Colleges of Europe, maintain a close contact with the World Council of Churches' Department of the Laity.

The annual National Church Architectural Conference, held at Los Angeles in February, called attention to the great building boom in American Protestantism. The Board of Missions of The Methodist Church (q.v.) reported that during 1958, Methodists spent almost $125 million on new buildings or building improvements. The Southern Baptist Convention (see BAPTIST CHURCHES) expended even more—$171 million.

WINTHROP S. HUDSON,
Professor of the History of Christianity, Colgate Rochester Divinity School.

CATHOLICISM

In his first message to the world at large, a radio broadcast on the occasion of Christmas 1958, Pope John XXIII noted that the words "unity and peace" could sum up the living substance of the teaching of his predecessor, Pius XII. Reaffirming this need, the pontiff said: "We intend to pursue humbly but with earnestness the task to which we

are encouraged by the words of Jesus, the divine Good Shepherd . . . that all may be one."

A few weeks later, on Jan. 25, 1959, in the course of an allocution to a group of eminent cardinals, Pope John XXIII gave precise form to the thought expressed in his Christmas message as he announced his intention of calling together representatives of the Christian world for an ecumenical council on the unity of the church. A communiqué issued at the Vatican stated that "the convocation of the ecumenical council in the thought of the Holy Father aims not only at the edification of Christian peoples, but is intended also as an invitation to the separated communities in quest of unity, to which so many hearts aspire in so many parts of the earth."

This council, which may be held within the next two years, will be only the 21st of its kind in the 20 centuries of Christian history. The last ecumenical council was summoned to the Vatican by Pius IX; it met on Dec. 8, 1869, and sat until July 18, 1870. Besides important canons relating to the constitution of the church, the council decreed the dogma of the pope's infallibility when speaking *ex cathedra* on matters of faith and morals.

Addressing himself to heads of states in his Easter message on March 28, 1959, Pope John emphasized the great responsibility resting today upon world leaders. Their high calling, he said, "establishes them not as judges but as guides to the nations." To these nations they are "in duty bound to guarantee respect for the fundamental rights of the human person." The pope pointed out the tormented Catholics of eastern Europe, whose tribulations are "a living and painful witness to the lack of true peace and its proper fruits."

Pope John sent his first encyclical letter, *Ad Petri Cathedram,* on June 29, 1959. Returning again to matters of unity, the pontiff also concerned himself with social order and noted with satisfaction that inequalities among classes provoked by the early period of industrialization have become less marked and that "there is no longer a question merely of employer and employed." Employers, he wrote, "should provide in some suitable way for the workers to share more and more in the fruit of their labor and feel themselves partners in the whole enterprise."

A steadily growing inclination among Roman Catholic scholars and organizations to explore all possible avenues of approach to fruitful dialogue with other religious bodies marked the year 1959. Protestant and Catholic scholars working together in the field of Biblical studies have done much excellent and objective work. Some of these scholars think that agreement in linguistic studies has reached the point where a uniform English translation of the Bible acceptable to both Catholics and Protestants is a real possibility.

American Catholics are helping to create a new image of the United States in the world. Francis Cardinal Spellman in an allocution given in Rome, Italy, on Oct. 13, 1959, commented on the extent and activity of the United States foreign assistance program. The billions of dollars now being spent for economic aid overseas, said the cardinal, represent "a personal contribution by every working American, who, through his taxes, assumes part of the burden of want, of sorrow, of unfulfilled hopes, that lies so heavily upon the peoples of poorer lands."

The Catholic Relief Services, sponsored by the hierarchy of the United States, is one of the most active of the voluntary organizations engaged in works of global charity. In the course of 1958 this agency shipped to 51 countries more than one billion pounds of foodstuffs, clothing, and urgently needed medicines valued at $81 million.

Oriental Religions, Islam, and Eastern Orthodoxy

An Oriental challenge to Western traditional religion and political ascendancy continued in 1959. In the metropolitan centers of the United States, the results of over fifty years of Hindu, Buddhist, and Islamic activity took form. A steady stream of Oriental religious philosophers visited, lectured, and made converts in the course of the year. Individual followers of such Oriental prophets as Meher Baba, Sri Aurobindo, and Krishnamurti number in the tens of thousands.

There are other followers of Oriental religions who may trace their identity with Asian faith to military service in countries such as Japan and Korea. Among these were budding artists and writers who became deeply impressed with the utter simplicity and charm of Eastern art and searched for the spiritual motivation behind it. Such a quest might occasion an encounter, let us say, with Zen Buddhism and its claim of a direct apprehension of the truth. That encounter was facilitated for many by Daisetz Teitaro Suzuki, the "St. Paul of Zen Buddhism," who as a New York resident gave an impressive support to the Buddhist cause.

Buddhism.—The revival of Buddhism in its Asian homelands was not without significant repercussions in the Western world. Throughout the year, for instance, Boris Erwitt, a New Yorker of Russian-Jewish origin, ordained as a Buddhist monk, presided over a congregation at the American Buddhist Academy in New York City. His was the Shin sect, to which most American Buddhists belong. These constitute a group apart from the Zen Buddhists, who have attained an avant-garde status and have made a lasting impression on the so-called "beat generation." (The success of Jack Kerouac's *The Dharma Bums,* published in 1958, gives an inkling of Zen Buddhism's close touch with certain young intellectuals in the United States.)

On June 20, 1959, the Dalai Lama charged that Communist China was engaged in exterminating the Tibetan people and menacing both the religion and culture of his land. An exile in India since March when he fled his capital, Lhasa, the Dalai Lama pressed his claims throughout the summer as spiritual and temporal leader of Tibet. Despite widespread sympathy in the free world, his appeal to the United Nations on September 9 remained virtually unheeded. (See also Tibet.)

On Sept. 25, 1959, Talduwe Somarama Thero, a Buddhist monk who practiced at a hospital of indigenous medicine, shot the prime minister of Ceylon, S. W. R. D. Bandaranaike, who died the next day. Feelings ran high against the monks, traditionally objects of reverence. Although most of the people of Ceylon are Buddhists, a growing public reaction against the participation of monks in politics had been felt in the country for months. (See also Ceylon.)

Hinduism.—Concern continued to mount within Hindu circles over the mass conversion of untouchables (a low caste) to Christianity. Delegates to a convention of depressed-class workers which met at Hyderabad, India, late in 1958 adopted a resolution on this issue. It appealed to all untouchable laborers to discourage such conversions and requested the government to segregate these converts from other untouchables. Other resolutions asked

for proportionate representation for scheduled classes in public service, and for state and federal funds to aid such segments of society under a statutory board.

Islam.—The Islamic penetration of Africa continued in 1959. In a country like Nigeria, nearing commonwealth status within the British family of nations, Moslems, despite numerical inferiority, gained an upper hand in public affairs. Indeed, Islam prospered in the wake of ebbing imperialism. In North Africa, even before French President de Gaulle enunciated his new policy for Algeria (q.v.), the rebels had scored something of a moral victory: On April 25, 1959, French Roman Catholic priests serving with their country's army in Algeria formally condemned the use of torture and summary execution of civilian and military prisoners by the French authorities.

Islam could claim adherents in the United States, too, where the Koran was attracting attention, particularly among some elements of the Negro population. In Chicago, Los Angeles, New York, and Washington, Moslem centers of proselyting were established.

About 500 students of Cairo's al-Azhar University, Islam's highest and oldest institution, demonstrated on Sept. 26, 1959. Their protest was against the mass execution of 13 Iraqi army officers and 4 civilians the previous Sunday in Baghdad, Iraq. It was Cairo's second demonstration within a week against the regime of Abdul Karim al-Kassem.

Islamic strength in Asia and Africa increased, although contrary to every precedent in the history of aggressive and missionary faiths. The Moslems offered no education and had no medical institutions. Their religious services and houses of worship lacked color, music, and imaginative ritual. Yet they shared an emotional anticolonialism with their would-be converts.

Eastern Orthodoxy.—The fierce struggle for leadership within Eastern Orthodoxy was accompanied during the year by complex jockeying with both Protestantism and Roman Catholicism. This was particularly the case in late August at the meeting of the Central Committee of the World Council of Churches on the Greek island of Rhodes. When the largely Protestant World Council of Churches was formed in 1948, Russian Orthodoxy refused to join it, denouncing it as a Western imperialist façade. Nevertheless, 11 Orthodox churches did join, including the four historic patriarchates of Constantinople, Alexandria, Antioch, and Jerusalem. In 1959 the Russian Orthodox Church changed its position; it sent observers to Rhodes and asked the World Council of Churches to send a top-level delegation to the Soviet Union in December.

On his September visit to the United States, Soviet Premier Khrushchev, asked about the relatively large crowds of young Russians whom foreign visitors saw at church services, ascribed the phenomenon to curiosity. He did maintain, however, that religious freedom and freedom of conscience are the real reasons why church attendance is so widely practiced in the Soviet Union. The main issues before the 2½ million Eastern Orthodox believers in the United States is the question of acceptance or rejection of Russian Orthodox leadership. Actually, only one small Russian Orthodox group in the United States owes allegiance to Moscow's patriarchal authority.

In the Church of Greece a crisis has arisen over the insistence of the government on overdue church reforms. Included in such long-pending reforms are educational standards for priests and bishops, reorganization of diocesan boundaries, and reactivation of a canon law which prohibits the transfer of bishops. These vital issues were docketed for meetings of the Holy Synod held in the spring and summer of 1959. One complicating factor was an organic cleavage between the hierarchy and the lay leadership. The clergy was inclined to reserve the right of final authority in all matters of ecclesiastical substance, while the laity laid claim to a voice in all basic decisions.

EDWARD J. JURJI,
Professor of Islamics and Comparative Religion, Princeton Theological Seminary.

JUDAISM

Judaism in America is divided into three branches: Orthodox, Conservative, and Reform—each numbering over 1 million formal adherents. Most of the remaining Jewish population has less formal but nevertheless tangible association with Judaism, participating in Jewish customs and ceremonies and Jewish institutional life. The central Reform congregational body, the Union of Ameri-

can Hebrew Congregations (UAHC), reported 585 congregations at its 45th General Assembly in November 1959, when it launched a 3-year campaign to raise $15 million for the development of both the union and its rabbinical seminary, the Hebrew Union College–Jewish Institute of Religion (HUC–JIR). The convention also went on record as opposing the use of gambling "as a means of raising funds for the synagogue." All major national Jewish religious groups are now opposed to any form of gambling in synagogues.

The Conservative body, the United Synagogue of America, reported 685 congregations at its biennial convention, also in November, when it formally inducted 80 congregations into membership. On that occasion, representatives of Judaism in 22 countries joined in creating a World Council of Synagogues (paralleling the Reform group's World Union for Progressive Judaism).

Synagogues have grown markedly, especially in the suburbs. For example, in the New York metropolitan area 57 new Reform congregations were founded since 1946, 57 Conservative since 1947, and 35 Orthodox since 1949. Growth has been impressive also in other areas of the country.

The rabbinical seminaries also reported growth. The HUC–JIR established a new center of learning, the Frank L. Weil Institute of Advanced Studies in Religion and the Humanities, with the object of affording to scholars "the opportunity for an objective and impartial investigation of problems central to religion as they relate to . . . history, philosophy, theology, literature, art and the like . . ."

The Jewish Theological Seminary (Conservative) celebrated in June the 50th anniversary of the founding of its Teachers Institute. Its founder and first dean, Mordecai M. Kaplan, professor of philosophies of religion at the seminary, delivered the commencement address at the 65th annual commencement in June.

Yeshiva University (Orthodox), combining a theological seminary, an undergraduate division, a Women's College, and a Teachers' Institute for Men, opened its 72d academic year in September 1959 with more than 3,500 students (the largest enrollment in its history).

The national rabbinical bodies sought to advance ethical living and the study of Torah. The Reform movement placed special emphasis on social action. In April, Maurice N. Eisendrath, president of the UAHC, issued an appeal to the Reform movement to start a program of education and debate on the question of capital punishment. In May the UAHC appealed to American Jews to work with other religious groups in giving moral and financial support toward solving the Arab refugee problem in the Middle East. Both the Conservative and Orthodox movements stressed adult education, publishing books, study guides, visual aids, and other program materials used widely in synagogues. Both also established marriage counseling services for their adherents.

The Synagogue Council of America, representing the three wings of Judaism, coordinated American Jewish responses to many religious and ethical questions. The New York Board of Rabbis, in April, announced plans for an International Synagogue and Jewish Center at New York International Airport (Idlewild). This center is to complement a Roman Catholic chapel in use and a Protestant chapel under construction.

An important development was the completion in June of the First Study of Jewish Education conducted by the American Association for Jewish Education. It showed an increase of 131.2% in Jewish school enrollment during the past decade, from 239,400 in 1948 to 553,600 in 1959. Enrollment in Sunday schools was 249,600 and in weekday schools, 304,000. Most of these schools were conducted under congregational auspices: 38.6%, Conservative; 28.1%, Reform; and 28.1%, Orthodox. About 11% were noncongregational and 1.3% were Yiddish.

REPRESENTATIVES, House of. For list of members, see UNITED STATES; and for legislation, see the Index entry, *Congress, U.S.*

REPUBLICAN PARTY. Preparation for the elections of 1960, with plans and hopes for the reversal of unfavorable election results in 1958, dominated Republican Party activities in 1959. Controlling the national executive departments (but with President Eisenhower constitutionally ineligible to succeed himself), the party occupied a minority position in both houses of Congress and in most of the state governments. Vice President Richard M. Nixon (q.v.) was clearly in the lead for the presidential nomination, especially in organization support but also in opinion polls. Gov. Nelson A. Rockefeller (q.v.) of New York, frequently mentioned as a contender, announced on December 26 that he would not be a candidate. The president remarked (July 1) that he would not publicly or privately attempt to determine the nominee.

With the opening of the 86th Congress, struggles developed over party leadership. House Republicans on January 6 voted 74–70, after a brief, bitter fight, to elect Charles A. Halleck of Indiana as minority leader instead of Joseph W. Martin, Jr., of Massachusetts, who had led his party colleagues for 20 years. In the Senate, where the leadership was vacant because of the retirement of William F. Knowland of California, Everett M. Dirksen of Illinois was elected minority leader by a vote of 20–14, January 7, over John Sherman Cooper of Kentucky. Cooper was supported by senators identified as party liberals.

At a meeting of the Republican National Committee in Des Moines, Iowa, on January 22–23, Chairman Meade Alcorn spoke bluntly of the need to change "the false image of the Republican Party as the party of big business and the vested interests." He obtained approval for a study Committee

on Program and Progress (appointed February 25) and for policies to recruit new precinct workers for 1960, establish local screening committees for candidates, expand party training schools and clubs, and enlarge field work and public relations of the National Committee.

Chairman Alcorn on April 1 announced his resignation to return to law practice, and on April 11, Sen. Thruston B. Morton of Kentucky was elected the new chairman. Some slight advance opposition to his selection was based on the argument that the position demanded full-time service. At its April 11 meeting the National Committee also accepted the invitation of Chicago, with its pledge of $400,000, to house the 1960 Republican National Convention, opening on July 25.

Vice President Nixon told the Young Republican National Federation in Denver, Colo., on June 19, 1959, that the great issues in the campaign of 1960 would be control of inflation and deficit spending. He counseled that the party must not allow its opponents to seem to offer a more effective program and that Republicans must show that through their leadership there were more jobs, homes, highways, slum clearance, medical research, and social security coverage than under Democrats —that "the Republican administration produced the things that the Democrats promised." Reporting to Chairman Morton of the National Committee on September 27, the Committee on Program and Progress presented a preface and four task force statements. "Republicans believe," it said, "in a central government vigilantly alert to the needs of the people and strong enough to defend the people, to help keep the economy in balance, and to make certain that a life of dignity is within the reach of every American."

Important shifts in the administration resulted from the resignation of John Foster Dulles (q.v.) as secretary of state, on April 15, because of cancer, and from Senate rejection, 49–46, on June 19, of Lewis L. Strauss, who had served by recess appointment as secretary of commerce. The succeeding cabinet members, announced respectively on April 18 and July 21, were Christian A. Herter and Frederick H. Mueller (qq.v.).

RESINS. See Index entry.

RESPIRATORY DISEASES. In 1959 there was further progress in knowledge of the etiology, prevention, and treatment of acute respiratory diseases. Nevertheless, acute respiratory infections continued to be the main cause in the United States of absenteeism from schools and work. According to a United States National Health Survey, 65% of the 438 million acute conditions involving "either restriction of activity or medical attention" from July 1957 to June 1958 were due to respiratory illnesses. The overall incidence of all acute conditions was 2.6 per person. The ratios were approximately the same among male and female groups. This study showed that "respiratory illnesses caused 1,172,000,000 days of restricted activity including 593,000,000 days of bed disability, 219,000,000 days lost from work, and 196,000,000 days from school." The report pointed out that this period covered the time when epidemic Asian influenza occurred and may represent an unusual proportion of acute conditions. It has been repeatedly shown, however, that from 40% to 50% of visits to the doctor's office are for some form of acute respiratory disease. In the National Health Survey the rate of acute respiratory infections was 4.0 for children under 5 years of age and 1.6 for those 65 or over.

WIDE WORLD

Meade Alcorn (right), who resigned as Republican national chairman, raises the arm of his successor, Sen. Thruston B. Morton of Kentucky, after latter's election, April 11.

In a recent paper entitled *The Control of Acute Respiratory Disease in Industry,* Dr. L. H. Whitney, medical director of the American Telephone and Telegraph Company, stated that it is most important that "sickness absence problems be attacked from a broad base. There is good reason to believe that there is strong interrelationship between a man's health, behavior, and job performance with the kind of man he is, where he comes from, what he wants and needs, what he is facing now in his home and personal life and what he faced in the past. There is little doubt that when science has made available to us the means for the prevention and control of the common cold, the favorable impact on absence will be spectacular."

At the present time, if current knowledge concerning acute respiratory disease were implemented, 50% of such sickness could be wiped out because the etiology of 50% of all acute respiratory infections occurring in children and adults now is known. The agents involved are the influenza viruses, types A, B, C, and D; the recently isolated myxoviruses and adenoviruses; the JH2 and 2060 viruses; the ECHO viruses; and other recently isolated but unclassified strains of viruses associated with respiratory tract infections, particularly in children. Preparation of appropriate vaccines with these viruses and their application would be expected to be effective in preventing illnesses. (See also PEDIATRICS.)

The relationship between repeated acute respiratory infections due to viruses and chronic respiratory disease is not clearly defined. Repeated assaults on the respiratory system by these agents may well be a basic cause of chronic bronchitis. An increasing number of investigators consider that a "single cold" may not be serious, but that repeated attacks by one or several groups of viruses may alter lung structure and thereby lower the resistance of the respiratory tract to bacterial agents. Evidence of this fact is that the sixth leading cause of death in the United States continues to be the pneumonias, which often begin with a so-called "minor respiratory illness."

Acute infections of the respiratory tract due to different groups of viral agents cannot yet be differentiated clinically. Laboratory procedures must be depended on to separate them. These include methods for (a) isolating viruses and (b) determining specific antibodies to the causal agent. At best both are laborious procedures and

are only set up for use on a routine basis in a relatively few of the nation's medical and state health department centers. In practice, therefore, most physicians make a diagnosis on the basis of personal judgment derived from direct examination of the patient. They generally divide infections into two groups, those caused by viruses and those caused by bacteria.

The treatment given to both groups is generally the same. Antibiotics are used liberally by physicians to treat minor respiratory illnesses (virus infections) even though they have no effect on the course of the illness. The rationale back of such treatment is that antibiotics might prevent the inception of a bacterial complication. Such so-called "indiscriminate use" of antibiotics is condemned by many physicians. On the other hand it has been pointed out by others that it is probably the widespread use of antibiotics in the treatment of upper respiratory infections of both bacterial and nonbacterial (virus) etiologies which has resulted in the great decline in the prevalence of osteomyelitis, sinusitis, mastoiditis, and bacterial pneumonias. The group of organisms known as staphylococci is the only one manifesting major resistance to therapy with antibiotics. Among these only certain epidemic strains are a problem.

With respect to known virus infections of the respiratory tract, prevention through the development and use of vaccines is promising. The successful use of influenza virus vaccines has been repeatedly demonstrated, and adenovirus vaccines have also been shown to be effective.

It has been and should be repeatedly pointed out that the effectiveness of any vaccine depends on a corresponding specificity of the causal agent. Thus influenza A and B virus vaccines can be expected to prevent infections due to specifically related influenza A and B viruses. It can be expected that the time will come soon when vaccines containing many different groups of respiratory viruses will be available for use.

During 1959 no major epidemic outbreaks of influenza occurred. Sporadic occurrences of Asian influenza infections were reported in the United States and other countries during the fall and the winter of 1958–59. Influenza outbreaks due to type B influenza were also reported. The total prevalence of acute respiratory infections due mainly to viral agents was high. In selected studies in infants and young adults, 50% of the infections could be identified as being due to one of the known viral agents. On the other hand, with available methods, from 40% to 50% of respiratory infections in children and adults still cannot be diagnosed from the etiological standpoint. These infections are generally of a mild nature and fall in the common cold category.

Dean, School of Medicine,
University of Southern California.

RETAIL STORE SALES. Consumer spending at retail stores in the United States in the fiscal year ended June 30, 1959, totaled $210 billion—an all-time record and 5% above the previous fiscal year. Rising personal income was the major factor contributing to increased consumer purchases. By the fiscal year-end, retail sales were exceeding $18 billion per month.

Approximately 1,960,000 retail firms shared in these sales, with chain stores accounting for $45 billion, or about one fifth of the total sales volume.

Sales have risen more than 275% from the pre-World War II levels, with rising prices playing a major role in the gain. After price adjustment, the physical volume of retail sales rose about 75% in this period. On a per capita basis, retail sales increased from about $420 per person in 1941 to $1,210 per person in the fiscal year 1959.

SALES OF RETAIL STORES
(In millions of dollars)

	Fiscal year ended June 30	
	1958	1959
All retail stores	199,511	208,768
Durable goods stores[1]	65,111	68,344
Nondurable goods stores[1]	134,400	140,424
Durable goods stores:		
Automotive group	35,912	37,248
Furniture and appliance group	10,369	10,661
Lumber, building, hardware group	10,646	11,473
Nondurable goods stores:		
Apparel group	12,432	12,891
Drug and proprietary stores	6,501	6,863
Eating and drinking places	14,811	15,089
Food group	49,489	50,910
Gasoline service stations	15,317	16,317
General merchandise group	21,183	22,514

[1] Includes estimates for other retail stores not shown separately.
(Source: U.S. Department of Commerce: Bureau of the Census and Office of Business Economics.)

Almost two thirds of consumer income after taxes was channeled into retail stores in 1959. Durable goods stores received more than 20%; nondurable goods stores, 43%.

All major types of retailers registered sales gains from the fiscal year 1958 to 1959. Sales of drug stores and gasoline service stations each rose 6%, continuing the substantial growth rate which has prevailed in recent years. New and more diversified drug products and the growing number of automobile registrations have been primary factors in these gains.

Sales by dealers in automotive and building materials recovered from the 1958 sales slump. Automotive store sales rose 4% above the fiscal year 1958, while building material dealer sales rose 8%. The food store sales gain slackened to 3% in 1959, compared with gains in excess of 5% in previous years. Food prices showed little change in 1959; the sales rise reflected the growth in population.

Food stores received 24 cents out of every dollar spent at retail stores. Automotive stores received 18 cents, general merchandise stores 11 cents, gasoline service stations 8 cents, eating and drinking places 7 cents, apparel stores 6 cents, furniture stores and building material dealers 5 cents each, and drugstores 3 cents. The balance was distributed among miscellaneous durable and nondurable goods stores.

Retailers held inventories valued at almost $25 billion in June 1959. Nondurable goods stores maintained their stocks at $13.2 billion throughout the fiscal year. Durable goods outlets during the year added almost $1 billion to their inventories, which totaled $11.7 billion at the fiscal year end; after seasonal adjustments.

RÉUNION. An island in the Indian Ocean, about 420 miles east of Madagascar, forming an overseas department of France. Area, 970 square miles; pop. (est. 1958), 318,000, about a fifth of whom are Europeans (mainly French) and the remainder of mixed descent. Saint Denis (41,863) is the capital and chief city. Réunion is governed by a prefect and an elected General Council of 36 members. In 1957 there were 262 primary schools

(55,288 pupils), a secondary school (1,185), and 4 special schools.

The sugar crop, grown on large plantations owned by a few proprietors, is of chief economic importance. Output in 1958–59 totaled 185,000 short tons, raw value. Other crops are tapioca, vanilla, manioc, coffee, tropical fruits, tobacco, and plants for perfume. Manufactures include refined sugar, industrial alcohol, rum, essential oils, and canned goods. Exports in 1958 totaled 6,217 million francs CFA; imports, 10,150 million. Sugar, the chief export, totaled 191,183 metric tons, valued at 5,353 million francs CFA. Foreign trade is mostly with France. Réunion has a 79-mile coastal railway and about 541 miles of roads. Air France provides regular services. French President Charles de Gaulle and Premier Michel Debré visited Réunion on July 9–10, 1959, and pledged continued French aid toward the island's economic development.

[1] Unincorporated place within town. [2] Capital. [3] 1956 census.

Executive.—Chief state officers in 1959:
Governor: Christopher Del Sesto (Republican)
Lieutenant Governor: John A. Notte, Jr.
Secretary of State: August P. LaFrance
Treasurer: Raymond H. Hawksley
Controller: Charles W. Hill
Attorney General: J. Joseph Nugent
Commissioner of Education: Michael F. Walsh

Constitution and Judiciary.—The present constitution went into effect in 1843. The Supreme Court comprises five justices; chief justice in 1959: Francis B. Condon.

Legislature.—The General Assembly comprises a 44-member Senate (in 1959, 23 Democrats and 21 Republicans) and a 100-member House of Representatives (71 Democrats and 29 Republicans). It meets annually commencing the first Tuesday in January.

The 1959 General Assembly passed a great body of legislation during its longest session in 35 years (January 6–May 25), 97 items of which failed to receive the governor's approval. Besides adopting a 1959–60 fiscal year budget of $79.6 million and continuing some temporary taxes, it established sales and use tax collection procedures and slightly amended the sales tax. Other enactments clarified and expanded existing legislation on wills; authorized the Rhode Island Business Development Company to expand its borrowing in anticipation of taxes; raised state aid to towns for highway maintenance to $1,000 a mile; widened regulations on the sale, distribution, handling, and possession of food, drugs, and cosmetics; and tightened restrictions on obscene literature. Four State Bar Association recommendations enacted into law were a Uniform Declaratory Judgments Act, a Uniform Act for Simplification of Fiduciary Security Transfers, widened service provisions for mechanics lien citations, and expanded powers for guardians of veteran wards.

The Rhode Island College of Education was reorganized as a liberal arts college; the Board of Trustees of State Colleges was directed to consider the establishment of two-year community colleges; a $50,000 fund was created to back bank loans to students; and a State Scholarship Commission was organized to provide scholarships to 5% of each year's high school graduates.

The legislators also tightened control of small arms; required registration of all boats under 65 feet in length; limited combined temporary disability insurance and workmen's compensation payments to $62 weekly; and permitted banks to invest 80% of deposits in mortgages.

Special legislative committees were set up to reapportion the House of Representatives on the basis of the 1960 census and to consider: a uniform commercial code; revision of the banking laws; the feasibility of a central state authority to perform certain functions normally handled by individual communities; and retirement benefits for state employees and teachers.

Finance.—State revenue of $102,433,078 in the 1958–59 fiscal year comprised $78,474,675 from state tax sources, $22,658,209 from the federal government, and $1,300,194 from all other sources. Tax revenue consisted of $22,051,202 from a 3% general sales tax, $6,730,203 from corporate income taxes, $14,306,362 from motor fuel taxes, $3,360,469 from licensing, and $32,026,439 from all other state tax sources. Expenditures of $105,548,359 comprised $17,193,481 for education, $38,108,558 for health, welfare, and safety, $21,808,595 for highways, and $28,437,725 for all other purposes. Long-term indebtedness on June 30, 1959, amounted to $76,812,946, exclusive of $11,965,000 for self-supporting enterprises guaranteed by the state.

Banking.—As of June 10, 1959, there were four national banks with assets of $542,867,000, demand deposits of $237,646,000, and time deposits of $241,932,000. State banks numbered 15 on June 30, 1959, with $913,750,952 in assets, $229,214,537 in demand deposits, and $587,261,534 in time deposits.

Education.—School attendance is compulsory between the ages of 7 and 16, inclusive. Operating expenditures of $43,544,411.20 ($385 per pupil) for public elementary and secondary education in the 1958–59 school year included $33,095,840 from local school districts, $9,206,081 from the state, and $1,242,488 from the federal government. Outlays for construction and improvements amounted to $3,897,088.26, and teachers' salaries averaged $5,025 (high school, $5,172.96; elementary, $4,938.64).

RHODE ISLAND SCHOOL STATISTICS, 1958–59

Type of school	No.	Teachers	Students
Public elementary (k–6; k–8)	280	3,112	82,766
Public junior high (7–9)	41	1,186	23,670
Public senior high (10–12)	29	1,246	24,074
Private and parochial elementary and secondary	127	1,655	50,123
Colleges and universities	8	...	16,677

Social Welfare.—Public assistance expenditures in the 1957–58 fiscal year from state and federal funds (excluding institutional costs) totaled $16,748,215, including $6,172,974 for the aged, $6,105,399 for dependent children, and $2,481,897 for general relief. For the 12 months ending June 30, 1959, the number of recipients of public assistance averaged 35,199 monthly.

State expenditures in the 1957–58 fiscal year for mental health activities totaled $7,356,079; for correctional and penal programs, $2,285,120. State institutions (with inmate populations as of July 1, 1959) include: 1 hospital for the mentally deficient and epileptic (887); 1 hospital for the mentally ill (3,419); 2 training schools for delinquents (143); 2 adult correctional institutions (277); and 1 maximum custody penal unit (248).

Labor Force.—In July 1959 the state's labor force totaled 345,000. Nonfarm employment reached 282,300 on August 15, which was below the average of 284,000 for the year ending August 1958 but slightly above the 275,300 for the latter month. Of those employed in mid-August 1959, 41.1% were in manufacturing, 18% in trade, 13.6% in government, and 11% in service industries. Unemployment dropped sharply to 25,200 in July 1959 from the 40,000 of the previous August. The state paid $24,393,575 in unemployment compensation during the 1958 calendar year.

Manufacturing.—There were 119,917 employees in manufacturing plants in 1957 who earned $456,111,000 in wages. Value added by manufacture totaled $766,887,000, and outlays for new plant and equipment amounted to $35,238,000.

The state's new plan for financing industrial construction was well under way in 1959, and substantial gains were in evidence. (See also below, *Principal Events, 1959.*) Production workers averaged $71.58 for an average workweek of 38.9 hours in August 1959.

RHODE ISLAND MANUFACTURES, 1957

Product or industry	Average no of employees	Salaries and wages (thousands of dollars)	Value added by mfr.[1] (thousands of dollars)
Textile mill products	30,671	$103,558	$150,722
Nonelectrical machinery	12,708	58,248	93,439
Primary metal industries	7,511	35,806	68,916
Fabricated metal products	7,847	31,675	55,708
Food and kindred products	5,355	22,737	43,803
Rubber products	4,993	22,221	38,921
Printing and publishing	4,149	17,290	29,002
Electrical machinery	3,196	9,714	19,977

[1] For definition, see text footnote 1 in the article, *Industrial Production.* (Source: *Annual Survey of Manufactures: 1957.*)

Mining.—In 1958, Rhode Island ranked 49th among the states in the value of its mineral output, with .01% of the national total. Valued at $2,249,000, the 1958 output was the highest ever recorded, marking a rise of more than 64% over the $1,369,000 total for 1957. The gain resulted from increased production of sand and gravel, which achieved a value of $1,883,000 for 2,038,000 short tons in 1958. Stone ranked second in output in the state, which also produces all the nation's domestic amorphous graphite.

Fisheries.—The commercial fish and shellfish catch in 1958 was valued at $4,604,744, a slight rise from the $4,511,231 for 1957. The chief species were hard clams (3,246,012 pounds of meat valued at $1,474,824) and fish for reduction (77,910,271; $648,615).

Agriculture.—Cash farm income for the first seven months of 1959 totaled $10,493,000, compared with $11,905,000 for the same period of 1958. For the full year 1958, income comprised $15,688,000 from livestock and livestock products, $6,331,000 from crops, and $76,000 from government payments. Principal cash sources were dairy products, $8,473,000, and eggs, $3,889,000. Forest, greenhouse, and nursery products yielded $2,726,000.

RHODE ISLAND CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	169	125	160
Corn (1,000 bu.)	284	282	264
Hay (1,000 tons)	41	39	35
Peaches (1,000 bu.)	14	19	16
Potatoes (1,000 cwt.)	845*	987	959

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

The state had 2,100 farms in 1958. Total acreage (1954) was 154,674 (34,980 acres in harvested cropland). Livestock on farms (Jan. 1, 1959) included 22,000 cattle and 499,000 chickens (excluding commercial broilers). Family and hired workers engaged in farming during the week of Sept. 26–Oct. 2, 1954, numbered 3,989.

Transportation and Communications.—State and federal funds disbursed for roads and highways in the calendar year 1958 totaled $29,373,345, and 44.607 miles of new highways were completed.

Highways and roads on Jan. 1, 1959, totaled 4,177 miles (3,153 surfaced). Registered *motor vehicles* numbered 325,937 on July 31, 1959, including 267,078 passenger cars. There were (1958) 6 *railroads* operating 181.58 line miles and (1959) 5 regularly scheduled *airlines* and 10 *airports and airfields* (5 commercial and municipal, 2 military, 2 private, and 1 other).

Communications media (1959) included 12 AM and 5 FM *radio stations;* 2 VHF *television stations;* 7 daily *newspapers* (circulation, including Sunday, 473,339) and 17 other newspapers; and (January 1) 87,300 business and 236,600 residential *telephones.*

Principal Events, 1959.—Christopher Del Sesto, who narrowly missed election two years previously, became the state's first Republican governor in 20 years, with his inauguration on January 6.

The year was marked by a strong recovery from the 1957–58 recession. During the first nine months of 1959, nonfarm employment averaged a 2.7% increase (7,200 jobs) over the comparable period of 1958, with much of the increase (5,000 jobs) attributed to manufacturing. All three major industry groups—textiles, metals and machinery, and jewelry—shared in the rise, with machinery and electrical and electronic equipment recording the chief gains. Also for the first nine months, sales tax receipts showed retail sales of nonfood items up 13.7% over the comparable period of 1958. Residential construction contracts for the first eight months rose 36.4% in dollar value.

Industrial construction was stimulated by the state's new plan for financing industrial plants. This arrangement provides for private financing, through nonprofit industrial foundations, with mortgage insurance for up to 90% of the cost furnished by the Rhode Island Industrial Building Authority. Partly as a result of such favorable terms, new construction started or announced by October 1959 amounted to 765,000 square feet of plant space, up about 48% over the full-year totals for either 1957 or 1958. Included in the 1959 figure were three new plants for out-of-state industry. In addition, Rhode Island firms purchased or leased over 500,000 square feet of existing space for expansion. It is estimated that new industry and expansion in 1959 will have provided up to 2,800 new job opportunities, with operations from out-of-state accounting for 1,800 of the total.

The Sixth Annual Jazz Festival (July 2–5) provided its usual complement of outstanding jazz musicians in concert at Newport. Featured, in addition to the Jazz Festival All Stars and the Kingston, Erroll Garner, and Oscar Peterson trios, were three major band groups led by Johnny Dankworth, Maynard Ferguson, and Count Basie.

GRACE M. SHERWOOD,
State Librarian, Rhode Island State Library.

RHODES. See DODECANESE ISLANDS.

RHODESIA AND NYASALAND, Federation of. Comprising a British federal state since 1953, these Central African territories are bordered by the Belgian Congo and Tanganyika on the north, Mozambique on the east, the Union of South Africa and Bechuanaland Protectorate on the south, and Portuguese West Africa on the west. The federation comprises the self-governing territory of Southern Rhodesia and the protectorates of Northern Rhodesia and Nyasaland. Total area, 487,640 square miles. The federal capital is Salisbury, Southern Rhodesia.

The population was estimated at 7,990,000 in June 1959, compared with 7,780,000 in June 1958. It comprised 7,660,000 Africans, 297,000 Europeans, and 36,000 Asians and non-African Colored persons. In 1958 there were 16,951 immigrants, including 14,317 British subjects of European stock.

FEDERATION OF RHODESIA AND NYASALAND

Component	Square miles	Population[1]	Capital
Northern Rhodesia	288,130	2,360,000	Lusaka
Southern Rhodesia	150,333	2,860,000	Salisbury
Nyasaland	49,177[2]	2,770,000	Zomba
Total	487,640	7,990,000	

[1] June 1959, est. [2] Including 12,298 square miles of lakes.

Government and Political Events, 1959.—A governor general (Lord Dalhousie took office in 1957) is assisted by an appointed Executive Council of cabinet ministers.

The first African member of the council, Jasper Zengeza Saranhu, was sworn in on April 1 as parliamentary secretary to the minister of home affairs, with particular responsibility for racial affairs. There is also an African Affairs Board composed of 3 European and 3 African members. The Federal Assembly has 59 members, of whom 57 are elected (including 12 Africans). Following the elections to the assembly in 1958, the United Federal Party, which is moderate in its racial policy and is headed by Prime Minister Sir Roy Welensky, held 44 seats and thus commands the two-thirds majority needed to make constitutional amendments. The Dominion Party, which advocates "white supremacy," has 8 seats. The formation of a liberal political group, the Central African Party, was announced on Feb. 9, 1959, by Sir John Moffat, who said the party would follow a multiracial policy.

It was announced by British Prime Minister Macmillan on July 21 that an advisory commission to prepare in 1960 the next constitutional steps to be taken by the federation would consist of 11 members from the United Kingdom, 2 from the Commonwealth, and 13 from Central Africa, including 5 Africans. Sir Roy Welensky, who had conferred with British government officials in London on July 4–16, described the formation of the commission as an "imaginative and constructive step." Southern Rhodesia's Legislative Council approved the commission's formation on July 28, but African members of Northern Rhodesia's Legislative Council objected to the lack of parity between the number of Africans and Europeans on the proposed commission.

States of emergency were declared in Southern Rhodesia on February 26 and in Nyasaland on March 3 after numerous clashes occurred between political demonstrators and security forces. Federal troops dispatched to the disturbed areas restored peace and order by late March, but 52 Africans were killed during the riots and other disturbances in February and March. The demonstrations in Nyasaland were reportedly led by the Nyasaland African National Congress in protest against federal racial policies and the territory's inclusion in the federation. Dr. Hastings Banda and other leaders of the congress were arrested on March 3, and the congress itself was banned. Other African political organizations in Rhodesia were also outlawed. A Nyasaland Committee of Inquiry headed by Sir Patrick A. Devlin investigated the situation and reported on July 16 that the government had been justified in proclaiming a state of emergency, that the Nyasaland African National Congress had created the disturbed situation by following a policy of violence, and that there "was no detailed plan for massacre and assassination," as had been charged.

Finance.—Budget revenues for the 1960 fiscal year were estimated at £53,137,000; expenditures, at £72,300,000, including £18,215,000 provided from loan funds. With a revenue surplus of £3,322,000 brought forward, a surplus of £2,374,000 was anticipated for the fiscal year. Expenditures included £19,754,000 for administration and development services, £14,777,000 for social services, and £4,571,000 for defense. Capital expenditures for fiscal 1960 were: Federal Power Board, £5,660,000; railways, £4,308,000; government buildings, £3,584,000; communications, £1,456,000; roads and bridges, £865,000; and other public works, £1,318,000.

Education.—In 1958 there were 249 federal and 54 nonfederal schools attended by 73,813 pupils of European, Asian, and mixed ancestry. African pupils attend nonfederal (chiefly mission) primary and secondary schools. There were 467,567 pupils enrolled in 1958 in these schools in Southern Rhodesia, 246,703 in Northern Rhodesia, and 271,302 in Nyasaland.

Transportation.—Public roads in the federation aggregate 63,000 miles. The state-assisted Central African Airways provides services between major towns and to Nairobi and certain other foreign cities, as well as weekly service to London. There are international airports at Salisbury and Livingstone.

Production and Trade.—The economy is dependent to a great extent on mining, particularly copper, and the federation is the world's second largest copper exporter. A decline in world copper prices and a curtailment of foreign investment led in 1958 to a reduction in business activity, unemployment, and a decrease in national income. By the end of the year, however, a recovery in copper prices (from £160 per ton in January to £260 in November), combined with increased copper production and government belt-tightening measures such as credit controls, had improved the general economic situation. Due to the slump in copper prices early in the year, total mining value declined in 1958 to £102,557,000 (Northern Rhodesia, £77,225,000, including £71,098,000 from copper output) from £122,100,000 in 1957.

Total exports of the federation in 1958 totaled £133 million (down 18% from 1957); imports, £158 million (down 10%). Exports of tobacco, the federation's chief cash crop, totaled 143,274,000 pounds and were valued at £27,834,000. Food exports in 1958 included: maize (corn), 116,000 tons (valued at £1,620,000); tea, 20,880,000 pounds (£2,955,000); and peanuts, 20,311,000 pounds (£584,000). Mineral exports from Southern Rhodesia were: asbestos, 94,981 tons (valued at £7,397,000); gold (£6,780,000); chrome ore, 411,081 tons (£3,026,000); and zinc, 31,000 tons (£1,673,000).

CENTRAL PRESS

Kariba Dam, huge hydroelectric project on the Zambezi River between Northern and Southern Rhodesia, will have an installed capacity of 1.2 million kw. Here, G. C. M. Heathcote (l.), race affairs officer, and Sir Mwanawina Lewenika, paramount chief of Northern Rhodesia, tour site.

Manufactures, including chiefly tobacco products, textiles, and metal, are produced in more than 1,200 factories. Chief exports of processed and manufactured goods in 1958 were: apparel (£1,456,000); cobalt metal, 1,046 tons (£1,431,000); ferro chrome, 7,150 tons (£1,002,000); hides, 7,098 tons (£701,000); radio sets, 39,332 (£521,000); cotton piece goods, 3,293,000 square yards (£460,000); fresh and preserved meats, 5,494 tons (£871,000); and cigarettes, 1,118,000 pounds (£474,000).

Major imports in 1958 included: wheat, 92,825 tons (£1,957,000); cotton piece goods, 35,997,000 square yards (£3,941,000); electrical machinery and appliances (£4,481,000); other industrial machinery (£4,481,000); gasoline (£3,594,000); other petroleum products (£4,179,000); mining machinery (£2,232,000); and fertilizers (£2,454,000). Imports from the United States totaled £7,711,000.

Four-Year Development Plan.—The federation's new development plan for 1959–63 was presented to the Federal Assembly in 1959. It is estimated to cost £76,764,000, of which £57 million is for economic services, including over £31 million for electric power projects and £18,250,000 for transportation and communications facilities (including £10,742,000 for the Rhodesia Railway). Allocations for education totaled £5,072,000, and for health services, £4,013,000.

About £25 million of development expenditures is for completion of the Kariba hydroelectric power project to dam the Zambezi River. Closure of the new Kariba Dam on Dec. 3, 1958, began the formation of the world's largest man-made body of water, Lake Kariba, which when completed in July 1959 totaled about 175 miles in length and 20 miles in average width. The first electric power from the dam was expected early in 1960. During the inundation of about 2,000 square miles of forest land, government game wardens transported to safety thousands of wild animals which otherwise would have perished from drowning or starvation.

Southern Rhodesia

The population of 2,860,000 (est. mid-1959) includes about 2,630,000 Africans, 215,000 Europeans, and 15,200 of other races.

Government and Political Events, 1959.—On July 10, 1959, Humphrey V. Gibbs was appointed governor (succeeding Sir Peveril William-Powlett), thereby becoming the first local resident to assume the office. He is responsible to a 30-member elected Legislative Assembly. Premier Sir Edgar Whitehead heads the United Federal Party, which won 17 seats in the 1958 elections while running on a middle-of-the-road racial platform. The minority Dominion Party, pledged to maintain "white supremacy," has 13 seats. A new political group, the Constitutional Development Party, announced its formation on May 25, 1959, as a segregationist party advocating "separate development" of the races.

The government banned the Southern Rhodesian African National Congress and 3 other African political organizations in February 1959 as a result of political unrest, but on May 20 lifted the state of emergency it had imposed in February. Measures taken to implement the political ban included the Preventive Detention Bill which was approved by the assembly after important modifications. Other legislation in 1959 removed discriminatory bars against Africans, the most important of which was the Industrial Conciliation Bill to permit multiracial trade unions.

Government revenue for the 1960 fiscal year was estimated at £19,517,000; ordinary expenditure from revenue funds, at £21,719,000; and disbursements from loan funds, £6,258,000.

Transportation.—The highway network in 1958 aggregated about 5,000 miles, and secondary roads totaled some 32,000 miles. The government-owned Rhodesia Railways operates 1,544 miles of railway, exclusive of 400 miles of line to Lourenço Marques, Portuguese East Africa. Central African Airways serves the territory, using the main airports at Salisbury and Bulawayo.

Northern Rhodesia

The population of 2,360,000 (mid-1959 est.) includes about 2,280,000 Africans, 73,000 Europeans, and 8,800 of other races. The seat of government is at Lusaka; other important towns include Ndola, Luanshya, Mufulira, Kitwe, and Chingola.

Government and Political Events, 1959.—Evelyn Dennison Hone, chief secretary in Northern Rhodesia, was sworn in as governor on April 23, 1959, succeeding Sir Arthur E. T. Benson, who retired in May. The governor is assisted by a 10-member Executive Council (comprising 4 official and 6 nonofficial legislators) and a 30-member Legislative Council (including 6 official, 2 nominated, and 22 elected members).

The first general elections to the Legislative Council held under the new constitution took place on March 20, 1959, and resulted in the election of 14 Europeans and 8 Africans. Only about one third of approximately 25,000 qualified African voters participated in the elections, however, partly because the Zambia African National Congress, which had been banned by the governor on March 12, urged Africans to boycott the elections. The ruling United Federal Party won 13 seats in the new Legislative Assembly; the Central African Party, a newly organized political group, captured 4 seats; the Dominion Party and the African National Congress each received 1 seat; and 3 independent candidates were elected. The newly formed Executive Council, announced on March 27, 1959, consists of 5 United Federal nonofficial members and 1 independent nonofficial member.

Government revenue for the fiscal year 1960 was estimated at £15,838,000; expenditure, £16,180,000.

Transportation.—Rhodesia Railways operates 507 miles of main line, from the Victoria Falls to the Belgian Congo, and 229 miles of branch lines. Roads aggregate about 20,000 miles, including 4,000 miles of main highways. Central African Airways operates internal and external services from airports at Lusaka, Livingstone, and Ndola.

Nyasaland

The population is estimated (mid-1959) at 2,770,000, including 2,750,000 Africans, 8,800 Europeans, and 11,900 others.

Government and Political Events, 1959.—The governor (Sir Robert P. Armitage, appointed in 1956) announced on Aug. 24, 1959, that the number of Africans in the new Legislative Council would be increased from 5 to 7 members, thereby increasing the nonofficial representatives to 13 in number, and that government official representation would be raised from 12 to 14 members. On September 23, two Africans were appointed for the first time to the 7-member Executive Council. In addition, an all-African Protectorate Council, composed of 20 representatives of 3 African councils, advises the government on legislation affecting the African population.

As a result of the serious disorders in Nyasaland during early 1959, the government detained some 600 members of the African National Congress and charged them with "crimes of a political nature." The state of emergency declared in March remained in effect for most of the year.

In 1959–60, government revenues were estimated at £5,928,000; expenditures, £6,140,000.

Transportation.—The Nyasaland Railway system has a 524-mile main line from Lake Nyasa to Beira (on the east coast) which crosses the Zambezi River by means of the world's longest railway bridge (12,064 feet). The road system totals about 6,000 miles, including 2,000 miles of highways. Central African Airways serves the territory.

ROCKEFELLER, Nelson Aldrich, governor of New York State: b. Bar Harbor, Me., July 8, 1908. Overwhelmingly elected Republican governor of New York on Nov. 4, 1958, in a year when the national political tide ran heavily against his party, Nelson A. Rockefeller was considered throughout most of 1959 as Vice President Nixon's leading prospective contender for the Republican presidential nomination in 1960. On December 26, however, he withdrew from the race and, at the same time, announced his resolve not to accept the vice presidential nomination if offered.

Rockefeller was graduated from Dartmouth College in 1930. In addition to his vast business interests, he actively participated in government affairs, especially in the international field. His posts included those of assistant secretary of state for Latin American Affairs (1944–45), chairman of the Advisory Board for International Development (1950–51), and special assistant to the president on foreign policy (1954–55). In 1958, beginning his New York gubernatorial campaign as a "dark horse" candidate, he quickly overtook his opponent, Democratic incumbent Averell Harriman, who had been favored to win.

During the first year of his administration, Rockefeller proved to be a vigorous administrator. Although in regard to some of his proposals he met with opposition from Republican legislators as well as from Democrats, his program was, in the main, favorably considered. Of particular interest to the governor were sufficient taxation for a "pay-as-you-go" budget, ways to combat juvenile crime, efficient reorganization of the state government, and means of meeting the increased costs of education. (See also New York.)

ROGERS, William Pierce, U.S. attorney general: b. Norfolk, N.Y., June 23, 1913. A former deputy attorney general of the United States (1953–57), Rogers took office as attorney general on Nov. 8, 1957. He had served as assistant district attorney of New York County (1938–42; 1946–47) and as chief counsel of both the Senate's War Investigating Committee (1947–48) and its Permanent Subcommittee on Investigations (1948–50).

Civil rights matters continued to occupy much of the attention of Attorney General Rogers in 1959. On January 15, at a news conference in Washington, he called on Negroes to exercise their right to vote under the Civil Rights Act of 1957, which empowers the Justice Department to sue on behalf of citizens denied voting privileges. He later recommended, in Boston on March 21, a stronger voting measure "to meet deficiencies in the present federal statute."

Although Rogers cautioned Congress on March

11 to go slow in enacting legislation that would broaden the federal government's power to enforce civil rights, and although he earlier expressed confidence that the Southern states would achieve a peaceful solution to their school segregation problems, he urged (March 20) before the Senate Judiciary Subcommittee that the use of force or threats of force to block court integration orders be made a federal crime.

On December 31, in a report to President Eisenhower relative to the disclosure of rigged quiz shows and other shady practices on television (see RADIO AND TELEVISION), Rogers recommended "more timely and vigorous action by the regulatory agencies" and new laws to end "the spectacle of corruption in the broadcast industry."

ROMAN CATHOLIC CHURCH. Since his coronation on Nov. 4, 1958, Pope John XXIII has created 31 new cardinals: 23 in 1958 and 8 in 1959. Among those elevated in 1959, at a consistory held in Rome on December 17, were two Americans: Archbishop Aloisius Muench, the apostolic nuncio to Germany, and Archbishop Albert G. Meyer of Chicago. The new appointees raised the number of Americans in the Sacred College to six, and the total number of cardinals to 79—nine more than the strength decreed by Pope Sixtus V in 1586. Three cardinals died during the year: Georges Cardinal Grente, on May 4 at Le Mans, France; Cristano Cardinal Luque, on May 7 at Bogotá, Colombia; and Federico Cardinal Tedeschini, on November 2 at Rome.

In 1959 the Roman Catholic population of the world was estimated at 496,512,000. That of the United States (including Alaska and Hawaii) reached 39,505,475, an increase of 3,481,498 over the 1958 total. The new total includes for the first time all Catholic families of the defense forces abroad and in all other services (diplomatic, specialized agencies, etc.) outside of the continental United States. Roman Catholics in Canada numbered 7,546,000 in 1959, and the total Catholic population of Latin American countries was estimated at 191,055,000.

Guiding Roman Catholics throughout the world are approximately 381,500 priests, of whom 116,000 are members of various religious orders and 265,500 belong to the secular clergy.

Seven of the 26 United States archdioceses (Chicago, Boston, New York, Philadelphia, Newark, Detroit, and Los Angeles) report Catholic populations in excess of one million. Brooklyn is the largest diocese, with a Catholic population of 1,473,480. The United States hierarchy in 1959 counted 224 prelates: 6 cardinals, 33 archbishops, and 187 bishops.

Ordained priests in the United States totaled 52,689 in 1959, or 2,506 more than in the previous year. A total of 16,185 parishes with resident pastors was reported. (Including the 568 parishes without resident clergy, there was a record total of 16,753 parishes in the United States.) The Catholic missions reported 595,155 Negro Catholics in 1959, a gain of 20,000. Catholic American Indians numbered approximately 100,000.

Again in 1959 the growth of church-sponsored schools and universities in the United States paralleled the increase in Catholic population. The number of full-time pupils in elementary and high schools showed an increase of 189,951. Pupils in 9,814 parish elementary schools numbered 3,994,001, while those in the 473 private elementary schools totaled 89,859. The 1,583 parish and diocesan high schools reported 500,304 pupils, a gain of 13,298. The 845 private high schools, with 310,464 students, showed a gain of 14,315. Enrollments in Catholic colleges and universities reached 290,867, an increase of 19,374 students over 1958. The total number of all Catholic educational establishments in 1959 was 13,619, and their full-time teaching staffs comprised 10,429 priests, 4,506 brothers, 920 scholastics, 96,516 sisters, and 43,745 lay teachers.

Studies for the priesthood in 1959 were pursued in 94 diocesan seminaries and 424 religious order seminaries, novitiates, and scholasticates. A total of 38,105 candidates were reported.

Three new establishments increased the number of Catholic hospitals in 1959 to 942. General hospitals offered 133,819 beds; specialized hospitals, 11,371. Patients treated increased by 344,541 to a new high of 12,084,317.

The 580 Catholic newspapers and magazines reached a circulation of 24,273,972 in 1959, or a gain of more than a half a million copies over 1958.

WIDE WORLD

American Archbishops Aloisius J. Muench (l.), apostolic nuncio to West Germany, and Albert G. Meyer of Chicago meet in the Vatican prior to the ceremony on December 17 in which they were elevated to cardinal by Pope John XXIII.

Pope John assisted at the ceremony marking the 100th anniversary of the North American College in Rome, Italy, on Oct. 11, 1959. In a gracious gesture of affection for the American church, the pontiff delivered his first public address in English, a language acquired since his elevation to the papacy. He spoke warmly of the "vigorous faith" showed by the church in the United States.

Archbishop Egidio Vagnozzi, the seventh apostolic delegate of the Holy See to the United States, arrived in Washington in May 1959. He succeeds Amleto Giovanni Cardinal Cicognani. The new apostolic delegate stated on his arrival that the United States of America "is today not only one of the great powers on earth, but *the* great power of the Western, democratic, Christian free world."

Pope John announced on November 28 that the African territories of the Belgian Congo and Ruanda-Urundi had been transformed from missionary territory into ecclesiastical territory, comprising eight archdioceses. At the same time, in his fourth encyclical letter, the pope urged greater missionary activity and expressed his confidence in the native clergy.

On November 20, the new National Shrine of the Immaculate Conception in Washington, D.C., was dedicated in the presence of eminent Catholic churchmen. The building, classed as the largest Roman Catholic church in the United States, was begun in 1922 and is not yet finished. The total cost of the structure, an adaptation of Romanesque and Byzantine architectures, is estimated at $30 million when completed.

ROWING. See SPORTS, GAMES, AND SHOWS.

RUANDA-URUNDI. A United Nations trust territory in central Africa, administered by Belgium. Area, 20,916 square miles; pop. (est. 1958), 4,700,000, including 7,109 Europeans, mostly Belgians. The majority of the population consists of Bahutu tribesmen, who have been dominated by the aristocratic Batutsi, comprising about 15% of the population. Usumbura (54,796) is the capital and chief city.

Government.—The territory has been united for administrative purposes with the neighboring Belgian Congo.

The Belgian governor (who is under the governor general of the Belgian Congo) is aided by an advisory General Council of Europeans and Africans appointed by himself. Each of the two states (Ruanda and Urundi) is headed by a native *mwami* (chief) and has a native High Council. Elected native councils serve on the local level. (See below, *Principal Events.*)

Finance.—Revenue in 1958 was estimated at 1,024.1 million Belgian francs; expenditure, 1,018.1 million. Under a 10-year development plan begun in 1952, Belgium has provided about 3.3 billion francs in grants and interest-free loans (through 1959) for the expansion of transport facilities, modernization of agriculture, and improvement of native welfare.

Education.—About 40% of children aged 7 to 12 attend school, but only about 1% proceed beyond the elementary level. Most schools are conducted by missions, chiefly Roman Catholic. In 1957 there were 2,817 schools on the primary and preschool levels (241,263 pupils), 24 secondary and technical (2,904), and 25 teacher-training (2,060). A few score students attend universities in the Belgian Congo and Belgium.

Transportation and Communications.—Ruanda-Urundi has no railroads. Usumbura, on Lake Tanganyika, is served by steamers which connect with the railhead of the Tanganyika railroad. The territory has 1,626 miles of principal and secondary roads, and about 4,400 miles of local roads and tracks. Usumbura has a major airport. Motor vehicles number 4,550 (1957); telephones, 1,514 (1958).

Economy.—Ruanda-Urundi's marginal economy is faced with the constant possibility of famine. Close to 90% of the population is engaged in subsistence farming and cattle raising. Principal food crops are bananas, sweet potatoes, maize, manioc, sorghum, beans, and peanuts. Cash crops, grown mainly on European-owned plantations and by a few African farmers, include coffee (28,873 metric tons in 1957), cottonseed, palm oil, and pyrethrum. There are a few small industries for processing foodstuffs and serving other local needs. Cassiterite (2,511 metric tons in 1957), tungsten ore, and a few other minerals are mined in small quantities. Exports in 1957 totaled 2,414.6 million francs; imports, 2,536.0 million.

Principal Events, 1959.—Early in November the Bahutu tribes in Ruanda rose up against their former overlords, the Batutsi, and burned and pillaged Batutsi villages for several days. Congolese troops were rushed to Ruanda on November 8, and Belgian paratroopers from the Belgian Congo arrived as reinforcements three days later. A total of 124 persons were reported killed (unofficial estimates were higher) before order was restored in mid-November. On November 10 the Brussels government announced a reform program for 1960 designed to establish Ruanda and Urundi as constitutional monarchies with increased self-rule. Administrative subordination to the Belgian Congo was to be ended, and indirectly elected state councils were to be constituted to exercise legislative power jointly with the *mwami* in each of the two states.

RUBBER. A new world record for consumption of new rubber (free world consumption plus natural rubber imports into Soviet bloc countries) was established in 1959 and amounted to 3,600,000 long tons (2,100,000 natural; 1,500,000 synthetic), as compared with 3,230,000 long tons (1,982,500 natural; 1,247,500 synthetic) used in 1958.

Consumption of new rubber in the United States in 1959 amounted to 1,600,000 long tons, an increase of 17% over the 1,364,000 tons used in 1958. Synthetic rubber accounted for 65.5% of this consumption in 1959. The other free nations of the world used 450,000 tons of synthetic rubber in 1959, or about 30% of the total synthetic rubber usage.

Industry shipments of all pneumatic tires in the United States in 1959 totaled more than 114 million units, an increase of 11% over 1958. Shipments of replacement tires for passenger cars were at a record 65.5 million units, up more than 6%; replacement truck and bus tires totaled 9.9 million units, up more than 7%; and shipments of tractor and implement tires for both original and replacement use aggregated 1.96 million units, up almost 8% over 1958.

Inflated with 50,000 gallons of water, this dam, made of nylon coated with neoprene, stretches 150 feet across the Los Angeles River, and may be deflated in case of flood.

	1,263	1,224	1,600

[1] Estimates by Natural Rubber Bureau. [2] Data incomplete, according to International Rubber Study Group.

Synthetic Rubber.—Two new fluorinated organic rubbers for improved service at high temperatures while in contact with various liquids, and a fluorinated silicone rubber with similar properties were announced in 1959. A new easily processed chlorosulfonated polyethylene and two new castable urethane rubbers were also marketed. Shell Chemical Company announced the commercial availability of synthetic natural rubber at 30 cents a pound, and Phillips Chemical Company marketed *cis*-4-polybutadiene at 35 cents a pound. Montecatini in Italy began semicommercial production of ethylene-propylene copolymers that could be of interest to rubber products manufacturers.

Industry Developments.—Emphasis continued on the further development of methods of latex masterbatching of carbon blacks in general-purpose styrene-butadiene rubber (SBR). Dehydrating and drying of synthetic rubber in the Banbury internal mixer instead of in oven dryers, which could be followed by dry mix masterbatching of carbon black or other materials, was another new development. High-speed and fully mechanized two-roll mills were suggested for improving and speeding up dry mixing operations at reduced cost.

Materials and Products.—Several new antiozonates (materials for preventing premature cracking and failure of tires from exposure to the increasing concentration of ozone in certain urban areas) were put on the market. New catalysts for

the manufacture of polyether-type urethane foam rubber made possible "one shot" processes that have aided in reducing the cost of such foam. A new nylon tire cord based on caprolactam entered the field, and improvements in rayon tire cord continued.

New products included an all-butyl rubber passenger car tire with improved traction on wet surfaces and low noise level, more wire-cord truck tires of various constructions, more low-profile tires, timing and V-belts that transmit power from both sides of the belt, turnable conveyor belts, space suits for use above 45,000 feet altitude, and urethane solid industrial tires with outstanding wear resistance. (See also CHEMISTRY.)

RUHR. See Index entry.

RUMANIA. A Communist-type people's democracy in southeastern Europe, Rumania is bounded on the south by Bulgaria, on the west by Yugoslavia and Hungary, on the north and northeast by the Soviet Union, and on the southeast by the Black Sea. It occupies an area of 91,700 square miles and has a population (1956 census) of 17,489,794. The country is divided into 16 administrative regions, including the Hungarian (Magyar) Autonomous Region. The capital is Bucharest (Bucureşti), with a 1956 population of 1,236,906. Other principal cities (with 1956 populations) include Cluj, 154,752; Timişoara, 142,251; Stalin (formerly Braşov), 123,882; Ploeşti, 114,560; Iaşi, 112,989; Arad, 106,457; and Brăila, 102,491. These and other urban areas account for 31.3% of the total population, compared with 23.4% in 1948. The Rumanians are the principal ethnic group. The largest minorities (1956 census) are: Hungarians 1,650,000 (1957 est.); German, 365,000 (1957); Jewish (Yiddish), 144,198; Ukrainian, 58,112; and Yugoslav (Serb and Croat), 46,464.

Government.—Rumania has a totalitarian government similar to those of other Communist states, although the constitution (1952) declares the country to be the Rumanian People's Republic. The Grand National Assembly, a 437-member parliament (1957) with only nominal powers, is defined as the supreme legislative body. The assembly elects a 19-member Presidium which exercises the legislative functions in the interim between its sessions. Present chairman of the Presidium is Ion Gheorghe Maurer, elected Jan. 11, 1958. A Council of Ministers is headed by Premier Chivu Stoica.

The government relies for political support on the Democratic Popular Front (DPF), a Communist-controlled mass organization. The principal force within the front is the Rumanian Workers' Party (RWP), founded in 1948 by the fusion of the Communist and Social Democratic parties; in 1958 it had an estimated membership of 720,000. First secretary of the Central Committee of the RWP is Gheorghe Gheorghiu-Dej. The DPF also includes the late President Groza's Ploughmen's Front, the Hungarian People's Union, and various Communist labor, youth, and other organizations.

The judicial system is similar to those of other Communist states. The constitution guarantees universal suffrage and the secret ballot, but only the names of DPF candidates are allowed on the ballot. Regional and local people's councils are instruments of the central authorities. By means of an interlocking party-state system, the Rumanian Workers' Party has complete control over the country.

Education.—The country's educational system is state-controlled and secularized. Seven years of free education is obligatory. In 1957–58 there were 6,641 preschool centers (with 281,141 children); 15,683 primary schools (1,818,979 pupils); and 448 secondary schools (156,290). There were also 2,023 elementary and secondary schools (219,612 pupils) for minorities, instruction being given in some 15 different languages. There are about 628 specialized and technical schools (123,954 pupils) and 13 teacher-training institutions (2,683). In 1957, Rumania had 42 institutions of higher learning, including 4 universities, with 80,919 students.

The country's educational system is being modeled on that of the Soviet Union by the establishment of 7-year schools and 11-year schools. In line with Soviet policies, Rumania in 1959 embarked on a system of education requiring students to work for a certain number of days in industry. During 1959 the authorities criticized on several occasions the minority-language schools, particularly those in the Hungarian Autonomous Region, which felt the effects of the Hungarian revolution of 1956. A unification of the Hungarian and Rumanian universities of Cluj was effected in 1959. The University of Bucharest, founded in 1864, is the most important institution of higher learning, and the Rumanian Academy of Science in Bucharest is the country's principal center of research.

Religion.—Over 75% (13,670,000 in 1950) of Rumania's population belongs to the Rumanian Orthodox Church. Under pressure from the government, the Uniate Church (Greek Catholic)—the religion of 9% of the population in 1947—broke off relations with the Vatican in 1948 and joined the Orthodox Church. Like all other religious communities, the Roman Catholic Church has been persecuted and restricted in its activities. It embraces approximately 8% of the population. The Law on Religious Cults, passed on Aug. 4, 1949, theoretically guarantees freedom of religion, but imposes full state control over the church.

Finance.—The 1959 budget provided for revenues of 51.8 billion lei (1 leu = U.S.$0.1470)[1] and expenditures of 51.0 billion lei. Of the expenditures, 28.9 billion lei were allocated for the national economy, 11.9 billion lei for social and cultural affairs, and 3.6 billion lei for national defense.

Defense.—The peace treaty of 1947 limited Rumanian armed forces to 138,000 men, but this restriction has been violated, and it was estimated that Rumanian military and police forces numbered about 215,000 officers and men in 1955. Rumania "agreed" at the Warsaw Treaty Organization meeting in May 1958 to cut her armed forces by 55,000 men. The Rumanian armed forces are "Sovietized," and the Soviet Union has access to Rumanian military and naval installations.

Transportation.—Rumania had 7,610 miles of railroads in 1955, of which only about 400 miles were double-tracked. There were 61,794 miles of roads in 1956, but only a small percentage of this figure represents modern hard-surfaced roads. The Second Five-Year Plan (1956–60) provides for a modernization of about 1,500 miles of roads. Rumania has small Danube and Black Sea fleets.

Agriculture.—In 1959 the government continued to emphasize expansion of collectivized agriculture. The socialist sector—cooperative, collective, and state farms—included an estimated 67% of the country's arable land (35.8 million acres) in early 1959. In 1957 there were 2,819 collective farms, representing 415,000 households and embracing 1,524,000 hectares of land. In 1958, agricultural production fell off sharply from the previous excellent crop year. Grain production declined from a record high of 11.5 million tons in 1957 to 7.3 million tons in 1958. Principal crops and 1957 output (in thousands of metric tons) are as follows: wheat, 3,701.4; rye, 152.1; corn, 6,337.9; barley, 417.3; oats, 392.6; potatoes, 3,058.0; sugar beets, 2,043.0; and sunflower seed, 255.0. Output of milk in 1958 totaled 1.1 million hectoliters; meat, 226,296 tons; sugar, 188,082 tons; and cheese, 36,636 tons.

In attempts to reach complete socialization of the agricultural sector of the economy, the government in 1959 announced a series of decrees concerning both the status of private peasants and socialized farmers. In March, private peasants were prohibited from keeping more land than they could work, and the collectives were authorized to seize any land worked by hired laborers. Leasing of agricultural land was also prohibited. A reorganization of state farms also reportedly increased responsibilities for both farm councils and party organizers. The success of these measures seems to be indicated by a series of government reports claiming the addition of as many as 300,000 new families and 850,000 hectares of farm land to the socialist sector in the first quarter of 1959.

Industry.—According to official reports, industrial production for 1958 was 9.7% above that in 1957. Industrial targets for 1958 were reportedly exceeded by 3.9%. Chief industrial products with

[1] Although the official rate is 6.80 lei to U.S.$1, the tourist rate is approximately 12 lei to U.S.$1.

production figures for 1958 and 1957 are shown in the accompanying table.

RUMANIAN INDUSTRIAL PRODUCTION
(In thousands of metric tons, unless otherwise noted)

Product	1957	1958
Coal	7,055	7,387
Iron	686	737
Steel	864	932
Coke	435	563
Petroleum	11,180	11,336
Cement	2,421	2,687
Chemical fertilizers	18	28
Electric power (billion kw.-hr.)	5.4	6.2
Tractors (units)	5,500	7,003
Grain combines (units)	2,301	5,901
Motor vehicles (units)	5,334	6,842
Radio sets (units)	112,982	138,642

The government continued in 1959 to draw attention to economic crimes against the state, such as theft and embezzlement. The Ministry of Transport and Telecommunications was particularly under fire at the beginning of 1959 for deficiencies in economic control. Construction on major projects completed in 1958 included two rolling mills, three chemical plants, and three steel furnaces. A new pipeline (227 miles in length) was completed between Rumania's gas fields and Tiszapolkoniya in northeastern Hungary, thus enabling the Soviet Union to move forward in its plans for a coordinated industrial pattern in eastern Europe.

Foreign Trade.—About 70% of Rumania's foreign trade is with the countries of the Soviet bloc. Trade with Western, Middle Eastern, Asian, and South American countries continued to expand in 1959. In 1958, trade with France increased 48% over 1957, and trade with Greece was up 47%. Among the more important treaties of trade concluded in 1959 are those with Yugoslavia and Sweden. In February 1959 the arrival in the United States of a shipment of Rumanian residual fuel oil, purchased by a Pennsylvania oil company, created much protest. Industrial machinery and equipment accounted for 13% of Rumania's total exports in 1958; petroleum, wood products, cereals, fruits, vegetables, and ores are other major export items. Rumania's chief imports include coke, iron ore, cotton, pharmaceutical products, and machinery.

Principal Events, 1959.—At the beginning of the year the Rumanian government allowed relatively free emigration of Rumanian Jews to Israel, and it was estimated that in January alone 8,000 exit permits were issued. The government claimed its policy was based on "humanitarian" considerations of the problems of families long divided. The emigration tapered off, however, after a series of protests by the United Arab Republic, and by midyear it virtually ceased.

Several governmental changes were announced during 1959. On April 11 it was reported that Dimitru Simulesen succeeded Emil Bodnaras as minister of transport and telecommunications, Alexandru Sencovici succeeded Stefan Voitec as minister of the consumer goods industry, and Carol Loncear took Gherasim Pope's place as minister of heavy industry. The three persons who lost their portfolios were retained as deputy premiers. It would seem that the changes were made necessary as a result of criticism of economic practices and failures. Other changes included the dismissal of Petru Costache as minister of local government, and the appointment of Gheorghe Radulescu as minister of commerce in place of Marcel Popescu.

Cases involving embezzlement, theft, and other crimes against the state continued to plague Rumania in 1959. Certain Rumanian writers and composers continued to draw official criticism for failure to abide by the tenets of "socialist realism." There have been constant complaints in periodicals about "sterility in style and message" in some literary creations.

A general salary increase (8% to 25%) was announced on August 1 for all state employees. On August 28, price reductions on about 2,500 items went into effect, mainly on food and consumer goods, but certain items such as meat and dairy products were increased in price.

In foreign affairs Rumania followed the Soviet lead. At the meeting of the Council for Mutual Economic Assistance in May at Tiranë (Albania), Rumania was included in the proposed electric power complex linking Russian and eastern European networks. In the resultant specialization of machine production in the Soviet-bloc countries, Rumania is to emphasize production of oil drilling and processing equipment. In June, Rumania suggested a conference of Balkan states to examine a "peace zone" proposal, but it was rejected by Greece as a propaganda move. Relations with Yugoslavia generally followed the pattern of the Soviet bloc, with a period of tension and recrimination in the first half of the year followed by a period of easier relations at midyear.

During his secret visit to Rumania on October 19–25, Soviet Premier Khrushchev conferred with Rumanian leaders.

WAYNE S. VUCINICH,
Professor of History, Stanford University.

RURAL ELECTRIFICATION ADMINISTRATION. The Rural Electrification Administration (REA) is a lending agency of the U.S. Department of Agriculture, created in 1935 to finance the extension of central station electric service to persons in rural areas. A loan program for the improvement of rural telephone service was authorized by Congress in 1949.

Electrification Program.—At the close of fiscal year 1959, REA-financed electric systems were serving more than 4.6 million farmers and other rural consumers in 46 states, Puerto Rico, and the Virgin Islands. Its 985 active electrification borrowers included 926 cooperatives, 42 public power districts, 13 other public bodies, and 4 electric companies.

Slightly more than half of the electrified farms in the United States are served by rural electric systems financed by REA. Farm consumption of electricity reached an average of 3,816 kilowatt hours per farm in 1958. Consumption of electricity by farm and other rural consumers served by REA-financed systems has been increasing at a rate of about 11% a year.

About 63% of the $177.3 million loaned by REA during fiscal year 1959 will be used to finance system improvements and to provide for additional sources of power. The loans, approved to 234 borrowers in 45 states, will provide about 163,000 kilowatts of new generating capacity, as well as initial electric service for 95,869 rural consumers. Congress has authorized $136 million in new loan funds for the fiscal year 1960, and $25 million in reserve. In addition, $210,589,749 in carry-over funds is available for lending purposes.

The following are cumulative statistics on the REA electrification program through June 30, 1959, unless otherwise noted:

Miles of line energized (Dec. 31, 1958)	1,424,441
Number of consumers served (Dec. 31, 1958)	4,596,540
Total congressional loan authorizations	$4,152,928,288
Total loans approved	$3,942,338,539
Total funds advanced	$3,358,263,066

As of July 1, 1959, REA electric borrowers had paid to the federal government a total of

$1,147.5 million on their loans. This included $628.1 million repaid on principal, $373.0 million paid in interest, and $146.4 million paid ahead of schedule. Only two borrowers were overdue in payments amounting to $100,877.

Telephone Program.—Through the use of REA loan funds, 665 telephone borrowers are in the process of providing new or improved telephone service to 1,191,324 rural subscribers in 45 states. As of June 30, 1959, REA had approved a cumulative total of $575,213,415 in loans to these borrowers, of which $402,878,138 had been advanced. The assistance available through REA has enabled 531 systems to place 2,062 new dial exchanges in service. An estimated 65% of the farms in the United States now have telephone service.

The program continues to advance. During the fiscal year 1959, REA loans amounting to $98.9 million went to 216 telephone systems in 38 states. The funds will provide new or improved telephone service to 179,050 subscribers.

REA telephone borrowers had paid to the federal government a total of $22.3 million on their loans by July 1, 1959. This included $11.6 million repaid on principal, $9.1 million paid in interest, and $1.6 million paid ahead of schedule. Thirteen borrowers were overdue in payments amounting to $300,000.

DAVID A. HAMIL,
REA Administrator.

SAAR. An industrial and mining area on Germany's western border, comprising a state of the Federal Republic of Germany. For several years after World War II, the Saar was under a semiautonomous regime economically linked with France. Under the Franco-German agreement of Oct. 27, 1956, the Saar reverted politically to West Germany on Jan. 1, 1957, but remained in a customs and monetary union with France during a temporary transition period. On July 5, 1959, the Deutsche mark replaced the French franc, customs barriers with West Germany were abolished, and the Saar became economically linked with West Germany. France retains certain long-term rights to the purchase of Saar coal.

SAINT HELENA. This British crown colony in the South Atlantic (aggregate area, 119 square miles; pop., 5,385 in 1958) comprises St. Helena (47 square miles; pop., 4,802 in 1958), lying some 1,200 miles from the west coast of Africa, and two widely separated dependencies: Tristan da Cunha (38 square miles; pop., 257 in 1958), a small group of islands lying 1,500 miles south-southwest of St. Helena and including the uninhabited islands of Gough, Nightingale, and Inaccessible; and Ascension (34 square miles; pop., 326 in 1958), which lies 750 miles northwest of St. Helena. Jamestown (pop., 1,568), the capital, is St. Helena's chief port. A governor (Robert Edmond Alford, appointed Feb. 12, 1958) is assisted by an Executive Council consisting of not more than 7 members, and by an Advisory Council of not more than 10 members.

Saint Helena.—Revenue in 1958 totaled £194,946, and expenditure, £210,213. There were 12 schools (11 primary and 1 secondary), with 1,262 pupils in 1958. Cultivation of New Zealand flax is the major industry; from 3,250 acres, 916 tons of hemp and 275 tons of tow were produced in 1958. Manufactures include rope, twine, and lace; principal products of the fishing industry are mackerel, albacore, tuna, and bonito. Exports in 1958 were valued at £80,798 (flax fiber, £42,226); and imports, £231,136, including £138,355 from the United Kingdom. All-weather motor roads total 65 miles.

Ascension.—Ascension is a barren, rocky peak, volcanic in origin and destitute of vegetation except for about 10 acres on which vegetables and fruit are grown for the inhabitants of Georgetown, the only settlement. The island is the site of an important cable and wireless station, and lies near the end of the Atlantic range for rockets fired from Cape Canaveral, Fla. Late in 1959, Canadian scientists were building a base where they could conduct research on the detection of intercontinental missiles in flight.

Tristan da Cunha.—The island consists of an extinct volcano rising to 7,640 feet. There is a habitable area of 12 square miles (30 acres cultivated). Meteorological and signal stations are maintained by the Royal Navy. An administrator (Peter Andrew Day) is assisted by a 10-member Island Council (8 elected) and by the Island Women's Council. A South African company conducts a fishing operation for rock lobsters, and by agreement maintains on the island a doctor, nurse, agriculturist, and schoolteacher.

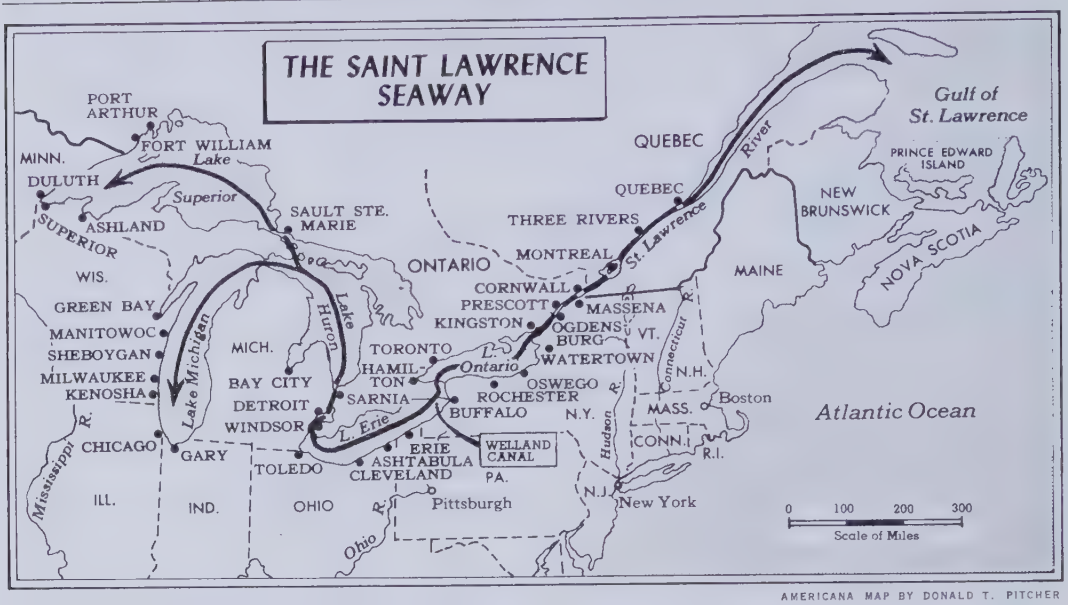
SAINT LAWRENCE SEAWAY AND POWER PROJECT. In 1959 the billion-dollar construction project on the International Rapids section of the St. Lawrence River was completed and dedicated. About $650 million worth of dams and international powerhouses were finished, and roughly $350 million in navigation locks were completed. Including the Canadian locks downstream (at the Beauharnois Power Project in Quebec and at the Lachine Rapids near Montreal), the total expenditure on the St. Lawrence Seaway had been $471 million for navigation, in addition to $650 million for power.

On June 26, 1959, President Dwight D. Eisenhower and Queen Elizabeth II joined in ceremonies at St. Lambert, near Montreal, to open the seaway officially. Thousands gathered to hear the speeches of dedication and to watch the royal yacht *Britannia* move ceremoniously into the St. Lambert Lock, first step into a man-made navigable waterway that now extends to Duluth, Minn.

On the next day, the queen and her party reached the United States and were greeted by Vice President Richard M. Nixon at Eisenhower Lock, second of the two United States locks in the international waterway to the Great Lakes. From the lock Queen Elizabeth rode to the Moses-Saunders Dam, a unit in the $650 million hydroelectric power project on the United States–Canada border near Cornwall, Ontario. At the center of this power dam, at the international border, the queen and



AMERICANA MAP BY DONALD T. PITCHER

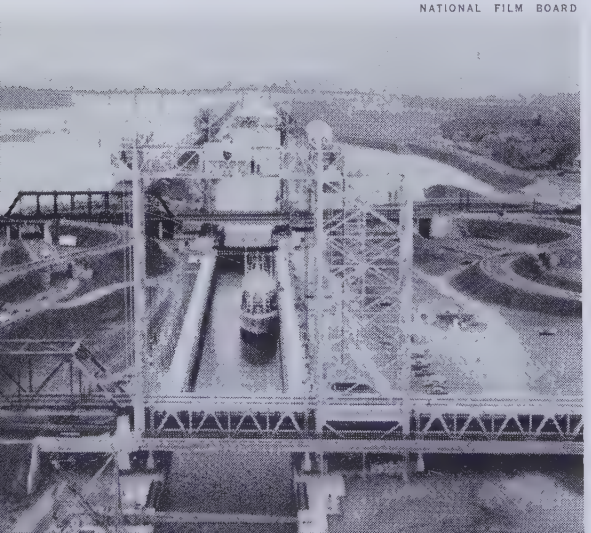
the vice president unveiled an International Friendship Monument.

Construction Progress.—The power dam which the queen helped to dedicate was the key to the whole seaway. Indeed, the St. Lawrence Seaway would not yet be built were it not for the St. Lawrence Power Project. The marketable power in the river, and particularly Ontario's need for it, made the whole dual-purpose development feasible. In effect, the power structures created the pool where for ages there were rapids, and it remained only to construct the locks to enter this pool.

Actually, there are four major structures in the power project, plus many miles of earth dikes: (1) the power dam itself; (2) Long Sault Spillway Dam, the curved, gated structure upstream from the power dam which lets flood flows spill down the south channel of the river; (3) Massena Intake, a combined concrete dam and pumping station which plugs a power canal that formerly flowed into Massena, N.Y., and in its place pumps a new water supply for domestic and industrial purposes for the city; and (4) Iroquois Control Dam, 25 miles upstream from the power dam where it can keep water levels under control through the Thousand Islands section of the river, even though the power pool level may be fluctuated radically.

Aerial view of the St. Lambert Lock (near Montreal) of the St. Lawrence Seaway, dedicated on June 26. Vertical lifts enable ships to pass under twin spans of Victoria Bridge without delay. In background is Jacques Cartier Bridge.

NATIONAL FILM BOARD



Bertram H. Snell Lock and Eisenhower Lock each lift shipping 45 feet along the 10-mile Wiley-Dondero Canal on the New York State side of the river and into the pool behind the major power project structures. Then, at the upper end of the power pool, the low-lift Iroquois Lock on the Ontario side of the river allows shipping to move past Iroquois Control Dam and the difference in river levels (up to 5 feet) which the dam will create in controlling the river's level upstream.

The St. Lawrence Seaway, to be navigable to 80% of the world's oceangoing vessels, is intended to be the whole stretch of water from the Gulf of St. Lawrence to and through all five of the Great Lakes. But that part of the seaway and power project dedicated in 1959 was only enough to admit 27-foot navigation up the St. Lawrence to Lake Ontario. From there on through the lakes much remains to be done if this inland waterway is to become truly the continent's "fourth seacoast."

First, the Welland Canal, deepened to accommodate seaway traffic, must be widened to carry the volume of ships that the St. Lawrence River locks can bring to it. The 27-mile Welland Canal provides passage between Lake Ontario and Lake Erie. Its guard lock at the Lake Erie end and its seven lift locks elevate shipping by the 326-foot-high Niagara escarpment. Three of the Welland Canal's locks are twin structures now, and there is an immediate need that the other five be made double if the 37-year-old waterway is not to be the bottleneck of the seaway.

Once past the Welland Canal, westbound ships that use the seaway have the water-levels problem behind them but the problem of water depths still prevails throughout the Great Lakes. Early in 1958 it was predicted that it will be 10 years before most seaway ports can handle fully loaded ships.

The waterway at Buffalo, N.Y., needs dredging; so do such important seaway ports as Erie, Pa., Cleveland and Toledo, Ohio, Chicago, Ill., Milwaukee, Wis., and Duluth, Minn.; and to these may be added such cities as Ashtabula, Lorain, and Sandusky in Ohio, Port Huron, Saginaw, and

Marquette in Michigan, and Ashland, Wis., all with harbors that need deepening to accommodate cargoes from overseas.

Detroit is one large city with enough draft for the seaway's vessels, but it typifies the second need of the ports along the lakes and their connecting waterways. Like most of the seaway cities, it lacks berth space for oceangoing vessels.

In the connecting channels alone, the United States government has spent about $46 million and must spend another $100 million to deepen such rivers as the Detroit, St. Clair, and St. Marys.

Seaway Traffic.—Although the new seaway was officially dedicated on June 26, ships first began using the waterway on April 25, 1959. Two Canadian icebreakers, used for ceremonial purposes, led the way as nearly a score of ships entered the entrance at St. Lambert. The first oceangoing vessel through the seaway reached Chicago on April 30, little more than 4½ days after entering. The city greeted the 353-foot Dutch vessel with a festive celebration as it berthed at Navy Pier.

Before the seaway was closed down to oceangoing vessels for the winter early in December, officials estimated that 6,600 ships and 20 million tons of cargo will have passed through in its first season. Ships were using the new route at the rate of 30 a day. By the end of September, 14.2 million cargo tons had been carried on the seaway from Montreal to Lake Ontario, an increase of 67% over a comparable period in 1958 by ships using the old canals. The tonnage in 1959 fell short of the 25 million total which was forecast, but the deficit was laid to the late start of shipping and to the steel strike. Seaway tolls, announced in March 1959 by the United States and Canada, were predicated on a volume of 25 million tons for the first year, gradually rising to 50 million tons annually. Amortization would be achieved in 50 years under this schedule of revenue.

(For further references, see the Index entry, *Saint Lawrence Seaway and Power Project.*)

ARTHUR J. FOX, JR.,
Senior Staff Editor, "Engineering News-Record."

SAINT LOUIS. The largest city (in population) in the Mississippi River Valley, St. Louis, Mo. (pop. in 1950 census, 856,796; est. pop. Jan. 1, 1958, 870,000), is the core city of a standard metropolitan area which includes four counties in Missouri and three counties in Illinois with a population estimated at 2 million.

Since there is no practical way by which the city boundaries can be extended, most of the population growth in the area has occurred in St. Louis County, which surrounds the city west of the Mississippi River. County population has increased from 274,230 in 1940 to an estimated 600,000 in 1959. This population growth was reflected in the fact that in 1958 public elementary and high school enrollment in the county exceeded city enrollment for the first time. County enrollment in 1959 was 111,650, compared with 103,235 in the city.

The city has a mayor-council form of government created by a home-rule charter adopted in 1914. Raymond R. Tucker (Democrat) was serving his second term as mayor in 1959, and his party was firmly in control of all officers elected on a citywide basis. The city government performs functions of both a city and a county.

A significant change in 1959 city tax yields resulted from an increase in the earnings tax from ½% to 1%, effective August 1. This tax is applicable to the earnings of all who work in the city.

Business activity in 1959 recovered from the decline which had affected the nation generally. In September 1959 total employment in the metropolitan area was 854,000, compared with 847,700 in the same month in 1958, and unemployment was 41,400, compared with 64,300 a year earlier. Contracts for residential construction for the first eight months in the St. Louis area amounted to $128.9 million, an increase of 54.6% over that for the same period of 1958.

Significant progress on major civic improvement projects was realized during 1959. An eight-mile section of the Mark Twain Expressway, which will link downtown St. Louis with Interstate Route 70 to the west, was opened to traffic in July. Completion of the Daniel Boone Expressway linked the Red Feather Highway in the city with U.S. Route 40. The Urban Redevelopment Corporation had six 13-story apartment buildings near completion in the Plaza project and plans ready for a large office building for the Blue Cross Hospital Plan. Clearance of 462 acres of land in the Mill Creek Valley project, which will be developed for both industrial and residential use, was proceeding on schedule.

Work was finally started to clear the way for the Jefferson National Expansion Memorial along the downtown riverfront. This memorial, a joint project of the city and the National Park Service, is scheduled for completion in 1964. A corporation financed by local businessmen has developed plans for construction of a 50,000-seat municipal stadium near the waterfront north of the memorial.

On Nov. 3, 1959, the voters of both the city and the county overwhelmingly defeated a proposed plan for city-county coordination. The plan was prepared by a 19-member Board of Freeholders created in 1958. The proposal would have created a City-County District with authority to perform seven governmental services (traffic, transit, planning, economic development, civil defense, sewers, and certain police functions) on an area-wide basis. Existing governments in the area would have remained but would have given up jurisdiction over the functions assigned to the district. Defeat in the county indicated an unwillingness to accept any formal plan for joining the city and county governments, while opposition in the city was led by those who favored complete consolidation of all governments in the area under a single government of the City of St. Louis.

An important addition to the educational and cultural facilities of the St. Louis area was the completion of the Pope Pius XII Memorial Library on the campus of St. Louis University. This library is the only place in the United States which has microfilms of the historic documents of the Vatican Library in Rome.

CARL A. MCCANDLESS,
Professor of Political Science, Washington University (St. Louis); Former Associate Director, Metropolitan St. Louis Survey.

SAINT LUCIA. See WEST INDIES FEDERATION.

SAINT PIERRE AND MIQUELON. Main islands of two small island groups off the Grand Bank south of Newfoundland, forming an overseas territory of France. Total area, 93 square miles; pop. (1958), 4,904. The town of Saint Pierre (3,400) is the capital. The territory is ruled by a governor and an elected General Council of 14 members. On Dec. 16, 1958, the council decided that Saint Pierre and Miquelon would retain its status as an overseas territory under the new French Constitution. Primary school pupils numbered 1,078 in 1958 (mainly in Roman Catholic schools); those in secondary and vocational schools, 247. Fishing (mainly cod) and the manufacture of fish products are the chief industries. Silver fox and mink are bred. Exports, mainly fish products, totaled 341 million francs CFA in 1958; imports, 780 million. The territory is linked by cable and steamship service with Europe, and by steamship and air service with Nova Scotia and Prince Edward Island.

SAINT VINCENT. See WEST INDIES FEDERATION.

SALES. See RETAIL STORE SALES; WHOLESALE SELLING.

SALT. The United States produced about 27% of the world's output of common salt (sodium chloride) in 1958. United States production declined from 23,844,000 short tons in 1957 to 21,-

911,000 tons in 1958. Four leading companies with 12 plants supplied 50% of the output, and over 1 million tons were produced by each of five plants. Six states provided 88% of the total. The 1958 output included 3,761,000 tons of evaporated salt, 5,407,000 tons of rock salt, and 12,743,000 tons of salt in brine. Imports for consumption were 611,043 tons in 1958, compared with 650,845 tons in 1957, a decrease of about 6%. Exports declined from 390,707 tons in 1957 to 363,009 tons in 1958, or a 7% decrease. Apparent consumption decreased from 24,107,000 tons in 1957 to 22,159,000 tons in 1958, or about 8%. Chemical uses claimed about 68% of the total produced. As in the past four years, chlorine manufacturing was the most important single use. (See MINERAL PRODUCTION for table showing output of major countries.)

SALVADOR. See EL SALVADOR.

SALVATION ARMY. During 1959 The Salvation Army maintained its operations in 86 countries and colonies, and preached the Gospel in 120 languages. Figures for 1957 indicate there are 26,887 commissioned officers and cadets and 26,408 full-time employees in its service, augmented by several hundred thousand volunteer lay members. At its headquarters in London, England, Gen. Wilfred Kitching continued as international leader.

Among Salvation Army worldwide services are 136 hospitals, dispensaries, and clinics, treating 164,204 in-patients and 759,044 out-patients; 140 children's homes; 828 day schools; 214 residences for various age groups; 16 industrial homes for women; 90 homes for unwed mothers; 13 training schools for girls; 140 good-will centers and slum posts; 4 prison-gate homes; 187 shelters and workshops for men; 83 employment bureaus; 8 leprosaria; and 6 institutes for the blind.

The United States command of The Salvation Army continued in 1959 under Commissioner Norman S. Marshall, national commander, and four other commissioners, each commanding a number of states as follows: Eastern, Commissioner Holland French; Central, Commissioner Claude Bates; Southern, Lt. Commissioner William Davidson; and Western, Lt. Commissioner Samuel Hepburn. In the United States there are 8,019 centers of operation, including 1,108 corps, 167 outposts, 720 institutions, and other centers of work. More than 5,000 commissioned officers are assisted by 10,000 full-time employees.

Among The Salvation Army's social institutions in the United States are 113 men's social service centers, which in 1957 provided a rehabilitation program for 62,181 homeless men; 34 maternity homes and hospitals, which provided service for 10,610 persons, primarily unmarried mothers and over 8,000 babies; 5 general hospitals, which cared for 15,514 patients; 15 Evangeline residences for young business women; and 76 homes and lodges for men, women, and children. In addition, 35,879 mothers and children were sent to summer camps; 1,128 missing persons were located through missing persons' bureaus, and 99,610 persons were assisted in finding jobs. Assistance was given 12,209 prison inmates or their families, and 2,864 prisoners were paroled to The Salvation Army during the year. Emergency assistance was given persons stranded in strange communities and also at disasters, floods, fires, and storms.

During 1959 General and Mrs. Kitching visited Salvation Army facilities throughout the United States, and for the first time in The Salvation Army's 22-year history in Mexico, an international leader of the organization conducted services there.

Active in Alaska since 1899, The Salvation Army in 1959 organized a service extension program to serve the interior, including Nome, Kodiak, and Seward. Its services to the aged were augmented by the opening of a residence in Detroit, Mich., accommodating 300 persons, and garden apartments with 18 units in Redondo Beach, Calif. In the Southwest, Salvationists are teaching English to migrant Mexican farm workers, and are otherwise aiding them.

NORMAN S. MARSHALL,
National Commander.

SAMOA. This group of Polynesian islands lies in the South Pacific some 2,700 miles east of Australia and 4,200 miles southwest of San Francisco. Samoa comprises the political units of American Samoa, lying east of longitude 171°W., and Western Samoa, lying west of that line. The total area of 1,205.3 square miles supports a population (1958 est.) of 124,820.

AMERICAN SAMOA

An unincorporated insular possession of the United States, American Samoa lies between 13° and 15° south latitude and between 167° and 171° west longitude. It has an area of 75.3 square miles and a population of 21,960 (1958 estimate). It consists of seven islands divided into three groups: (1) Tutuila (on which is the capital, Pago Pago) and Aunu'u; (2) Manu'a (includes Ofu, Olosega, and Ta'u); and (3) Rose (uninhabited) and Swains' islands.

Government.—The governor and the territorial secretary are appointed by the secretary of the interior with the approval of the president of the United States. Peter Tali Coleman was named governor on Oct. 15, 1956, and Alan Mills MacQuarrie was appointed territorial secretary in February 1954. The executive branch also comprises departments of Legal Affairs and Public Safety (attorney general), Agriculture, Budget and Finance (treasurer), Public Works, Education, Medical Services, Port Administration, and Local Government (Samoan affairs). The organization of the government is defined in the Code of American Samoa, which contains all local laws. Citizens of American Samoa are nationals of the United States.

The local government officials of the territory are all Samoans, and village, county, and district councils have full authority to regulate local affairs within their jurisdiction. The advisory Legislature, or Fono, is composed of a Senate of 15 members, elected in accordance with Samoan custom from among the chiefs, and a House of Representatives of 18 members, elected by secret ballot.

An Executive Council, established by the governor in 1956, comprises three district governors, the president of the Senate, and the speaker of the House, who act as consultants to the governor on all legislative matters and on other matters pertaining to local problems.

In addition to five district courts, the judicial branch includes one high court of three divisions (appellate, trial, and probate) presided over by Judge Arthur A. Morrow.

Finance.—During the fiscal year ending June 30, 1959, the government of American Samoa operated under a direct federal appropriation of $130,625 and a federal grant-in-aid of $1,219,400. Receipts from local sources during the fiscal year were $911,818.34, and disbursements totaled $1,990,103. The Bank of American Samoa, which is owned and operated by the government, showed resources totaling $2,147,441.82 as of June 30, 1959.

Education.—School attendance is compulsory for all children of ages 7 to 15, inclusive. About 99% of the total population of 10 years of age and over is literate. The villages provide the elementary school buildings (grades 1–6) and the living quarters for teachers, and the territo-

SCHOOL STATISTICS, MAY 1959

Type of school	No.	Teachers	Pupils
Village elementary (grades 1–6)	45	180	3,529
Demonstration school (grades 1–8)	1	4	111
Government school for stateside children	1	3	48
Junior high schools (grades 7–9)	5	46	1,393
High school (grades 10–12)	1	11	193
Vocational school (grades 10–13)	1	4	53
Teacher-training college (grade 13)	1	1	12
Nursing school	1	5	40
Private and parochial elementary (grades 1–9)	7	34	1,070
Total	63	288	6,449

rial government furnishes school buildings, teachers, equipment, and supplies for secondary schools (grades 7–9 and grades 10–13). For the school year 1959–1960 the government appropriated $368,397 for education.

Public Health and Social Welfare.—In general, the adult population is well nourished, but malnutrition in infants is not uncommon. Poor infant feeding is a result more of ignorance than of unavailability of food. The government spends approximately $454,000 per year on medical care and public health and provides a central hospital of 154 beds, a 56-bed tuberculosis unit, and a 20-bed leprosarium, besides district dispensaries and a number of village public health nurses.

The government employs American-trained staff physicians who work with Samoan medical practitioners and nurses. Modern facilities for surgery, obstetrics, and other treatment are available at the general hospital. About 50,000 outpatient visits are made to the hospital clinics annually.

Production and Trade.—Essentially agrarian in economy, American Samoa has approximately 1,500 plantations averaging 10 acres and representing approximately 31% of the land area. The government operates a 248-acre experimental farm through its Department of Agriculture. Subsistence crops (with approximate annual tonnages) consist of bananas (2,500), breadfruit (2,400), and taro (1,500). Other subsistence crops include papayas, pineapples, sweet potatoes, tapioca, coffee, cacao, and yams. Swine (numbering 3,500), poultry (16,000), and dairy cattle (266) are the principal livestock. Copra production during the fiscal year 1959 amounted to 1,100 tons with a value of $114,393.06.

A modern and efficient tuna packing cannery, employing approximately 400 Samoans, is operated by a California concern. During the fiscal year 1959 this concern exported fish and fish products valued at an estimated $8,029,557.

Foreign trade for the 1959 fiscal year comprised imports valued at $2,029,266 and exports worth $8,319,894. Imports were mostly from the United States, Australia, New Zealand, and Japan.

Transportation and Communications.—During the early part of 1959 Transocean Air Lines commenced nonscheduled biweekly plane service nonstop from Honolulu to Samoa. In October 1959 Pan American World Airways eliminated its Honolulu-Samoa flight through Nandi, Fiji, but also began a scheduled nonstop operation from Hawaii to Samoa. Samoan Air Lines began a twice-daily scheduled operation, six days a week, between Western and American Samoa. Preliminary rough clearing of some 167 acres of the new Tafuna airport runway has been accomplished. This marks the first tangible step in the development of a modern international airport, which will have a 9,000-foot runway able to accommodate jet aircraft. It is expected that the airport will be used as a midway stop on flights between Australia and New Zealand and Honolulu.

Two passenger liners call at Pago Pago every three weeks en route to the United States from a South Pacific tour. A New Zealand vessel calls every month. Freighters from the United States call from time to time. Four interisland vessels maintain schedules between Western Samoa and American Samoa and four motor launches are maintained for intraisland use.

There are approximately 80 miles of roads, 40 miles of which are considered main roads, with 4 miles surfaced. Of 274 registered motor vehicles, 146 are private automobiles. The government operates a telephone system and a small local radio station (WVUV), which broadcasts programs in both English and Samoan. Newspapers and periodicals include a daily news sheet, the Samoan-language weekly *Failauga Samoa* and the quarterly *O le Fa'atonu,* in English and Samoan.

PETER TALI COLEMAN,
Governor of American Samoa.

WESTERN SAMOA

Until World War I a German territory, Western Samoa has been administered by New Zealand since 1919 (from 1946 under a trusteeship agreement with the United Nations). Its area of 1,130 square miles, supporting a population (Dec. 31, 1958) of 102,860, comprises the islands of Savai'i (700 square miles) and Upolu (with Manono, Apolima, and other small islands, 430 square miles). In the 1956 census the population was 97,237 (Upolu, 70,429; Savai'i, 26,898), of whom 88,036 were full Samoans. Apia, located on Upolu, is the chief port, center of trade, and capital.

Government.—In 1959 Western Samoa took a major step toward complete independence planned by the end of 1961, by instituting a cabinet in October. Throughout most of the year the government had comprised the New Zealand high commissioner (G. R. Powles, who assumed office on March 1, 1949); a Council of State of which he, as presiding official, and the two Samoan *fautua* (high chiefly advisers) were members; an Executive Council of ministers; and a Legislative Assembly.

The new cabinet, sworn in on October 1, grew out of an authorization bill passed by the New Zealand House of Representatives two days earlier. The cabinet is headed by a prime minister (Mr. Mataaba) and comprises all former elected members of the Executive Council, which it replaces, and two additional members. It was planned that the high commissioner would withdraw from active administration except through the exercise of his powers in the Council of States.

The Legislative Assembly, for which new elections are scheduled in 1960, comprises 48 members (41 Samoans, 5 Europeans and 2 officials).

Government revenue in 1958 totaled £NZ1,305,000; expenditure, £NZ1,037,000. (The Samoan and New Zealand pound have the same value.)

Education.—Government expenditure on education was £NZ204,000 in 1958. In government schools there were some 15,000 pupils; in mission schools, 8,000. Higher education facilities are provided by the Samoa College at Apia and by St. Mary's College at Vaimoso.

Economy.—Principal food crops are taros, bananas, and coconuts. In 1958, imports were valued at £NZ2,221,000 (£NZ739,000 from New Zealand, including chiefly meat (£NZ207,000), sugar (£NZ86,000), and cotton goods (£NZ99,000). Exports totaled £NZ2,948,000 in value, chiefly to the United Kingdom (£NZ1,298,000) and New Zealand (£NZ1,287,000). Major exports were bananas (885,000 cases valued at £NZ1,008,000), copra (10,000 tons, £NZ619,000), and cocoa (4,000 tons, £NZ1,237,000).

Transportation and Communications.—In 1959, roads totaled 380 miles, of which 227 miles were in main roads. Steamship sailings and air services of Tasman Empire Airways, Ltd. link the territory with Tahiti, Fiji, Australia, and New Zealand. Communications with Pago Pago (American Samoa) are maintained on frequent schedules by launches and the newly established Samoan Air Lines which now makes two regular daily trips six days a week between the two Samoas.

SAN FRANCISCO. Second most populous city in California and 11th in rank (1950 census) in the United States, San Francisco has approximately 822,200 residents (Jan. 1, 1960) living in an area of 44.8 square miles.

The consolidated city and county is governed by a mayor and 11-member Board of Supervisors who serve four-year terms. The budget for the fiscal year 1960–61 was $225,045,010, and the tax rate, $8.09 per $100 assessed valuation, to yield $111,236,923. Other revenue, estimated at $143,808,087, was derived from state and city sales taxes and other sources.

During 1959 the city's economic health was stimulated by a marked upsurge in building which, to a lesser degree, was paralleled in other phases of the city's activity. During the first eleven months of the year, traffic at the municipal airport, for example, was up 8.3% over that of the corresponding period of 1958; bank debits topped $54.5 billion for the year (a climb of over 8%); and employment increased an average of 2.5%. The number of vehicles crossing the Bay Bridge was up 5.6%, and that over the Golden Gate Bridge rose 8.0%.

WIDE WORLD

Workmen prepare Candlestick Park, new home of the San Francisco Giants, for the 1960 season. The 45,000-seat stadium was turned over to the baseball club in February 1960.

As the year drew to a close, San Francisco was in the midst of the greatest building boom of its history, with close to $625 million in new construction either under way or in the planning stages. Among the dozen major structures reshaping the downtown skyline were the new office of the Crown Zellerbach Corporation, an impressive, glass-walled building; the John Hancock Building, of brown granite; the headquarters of the Bethlehem Pacific Coast Steel Corporation; and the head office of the American Trust Company. Numerous other buildings were under construction, including a group of tall apartment houses on Telegraph, Nob, and Russian hills and on the heights overlooking the Golden Gate.

At the municipal election of Nov. 3, 1959, the voters authorized further construction by approving two bond issues: $7,575,000 for the rehabilitation of the Civic Auditorium, and $1,800,000 to complete the restoration of the Palace of Fine Arts. Toward the financing of the latter project, $4 million had previously been made available—$2 million by the State of California, and a $2 million gift by a San Franciscan, Walter S. Johnson. Earlier approved by the voters and under way was a new $19 million Hall of Justice.

Plans to meet the problems posed by the skyrocketing population of the city and its environs moved forward. One of the greatest of these is the $220 million Golden Gateway Project, by which an area of 28 blocks near the center of the city is to be transformed into a district of large apartments and office buildings interspersed with landscaped parkways. To relieve vehicular congestion in the business and industrial areas, off-street parking was being provided by the city on an ever-growing scale. One such facility, nearing completion in 1959, was a 972-car garage under the Civic Center Plaza. A second garage, with a 1,000-car capacity, is scheduled for completion in 1960.

In the November election the chief interest was in the race for mayor (traditionally nonpartisan) between the incumbent, George Christopher (Republican) and Russell L. Wolden (Democrat), county assessor. After a spirited campaign, the voters returned Christopher to office with a plurality of more than 50,000. Six incumbent members of the Board of Supervisors were also re-elected.

Six weeks earlier, national interest centered on San Francisco's politely hospitable welcome of September 20 to Soviet Premier Nikita Khrushchev during his United States tour.

Throughout the 1959 baseball season the San Francisco Giants continued to receive the warm support of northern California fans. The team's new home, a handsome $11 million stadium with a capacity of 45,000, was being built at Candlestick Point near the city's southern boundary. It was expected to be completed in time for the opening of the 1960 season.

OSCAR LEWIS,
Co-editor of "A History of San Francisco"; Author of "The Big Four," "The Autobiography of the West" (1958), and other books.

SAN MARINO. The world's smallest republic, located in the Apennine Mountains of Italy, 140 miles north of Rome. Area, 23 square miles; pop. (est. 1959), 15,000. The capital is San Marino (2,481). Language and currency are Italian, and a customs union exists with Italy. A 60-member Grand and General Council is elected every 4 years by male suffrage. Two members are appointed to serve as regents for six-month periods. The budget for the fiscal year ended March 31, 1958, totaled 853 million lire. San Marino has 35 elementary schools, a technical school, and a high school. Wine, woolen goods, hides, and building stone are exported, and tourism is an important source of income.

On April 29, 1959, the council passed a new electoral law which extended the life of the council to 5 years, gave women the right to vote (effective in 1960), and provided that San Marinese residents in North and South America may vote by mail. In the elections of September 13, the Christian Democrats obtained 27 seats; the Social Democrats, 9; the Communists, 16; and the leftist Socialists, 8. The ruling coalition consists of Christian Democrats and Social Democrats. On October 8, several Communist and leftist Socialist leaders were sentenced to long prison terms on charges of having sought illegally to extend the tenure of the leftist regime in 1957.

SAND AND GRAVEL. United States output of sand and gravel in 1958 was 647,736,000 short tons, of which 249,512,000 tons was sand and 398,224,000 tons was gravel. In 1957, output totaled 631,506,000 (revised) tons, comprising 235,757,000 tons of sand and 395,748,000 tons of gravel. Production of sand and gravel continued on an unbroken upward swing for the ninth year, with an increase of 8% in 1958. The principal markets were for construction projects such as highways, airfields, commercial and industrial buildings, and public utilities.

SANITARY ENGINEERING.[1] The development of sanitary engineering during 1959 was characterized by an increasing awareness of the intensifying hazard of microchemical factors in man's environment.[2,3] This hazard is engendered (1) by the widening use in household, industry, and agriculture of the varied products of our developing chemical industries; (2) by the increasing concentration and variety of the waste matters released to air, water, and soil by these industries and by the burning of fuels and the agricultural use of chemicals; and (3) by the exposure of a mounting labor force to dangerous manufacturing processes.

[1] Based in part on the Chadwick lecture presented by the author before the Royal Society of Health at Harrogate, England, in April 1959.

Air Pollution.—Some of the microchemical substances that reach the atmosphere from industrial operations and the combustion of fuels are toxic or irritating in themselves. Others, such as ozone, are shown, by important researches in Los Angeles and elsewhere, to be generated by photochemical reactions in the atmosphere. Certain of these secondary air pollutants are known to cause temporary eye irritation, atmospheric haze, rubber cracking, and crop damage. The possibility of more serious effects on higher animals remains under study for both primary and secondary air pollutants.

By contrast with the eye-irritating smogs of Los Angeles, where petroleum products compose most of the fuels used and the principal air pollutants are oxidizing substances, such as nitrogen oxides and ozone, the recurrent London "peasoupers," which have been responsible for bronchial irritations and sometimes for death among people with respiratory or cardiac ailments, have been shown to contain reducing (principally sulfur) compounds released by the combustion of coal.

Strontium-90 discharged into the atmosphere in the testing of nuclear weapons has remained the isotope of chief concern in radioactive fall-out.[4] Attention has been called, however, to the further danger of carbon-14, which is produced in the atmosphere by the reaction of neutrons with nitrogen nuclei.[5] Fall-out of nuclear debris has been found to be taking place more rapidly than expected, and the contamination of high-flying aircraft by such debris has come under observation.

In order to ascertain the degree of atmospheric pollution, the U.S. Public Health Service has expanded the National Air-Sampling Network, and a number of states have elaborated their own networks for more intensive coverage of sources of air pollution. Thus far, the national network measures only the concentration of particulate matter: solid particles and liquefied droplets. However, the incidental radioactivity of these substances is also being recorded.

Water Pollution.—For the monitoring of water supplies, the U.S. Public Health Service has established water-sampling stations on the Great Lakes and many interstate streams. Here the effects of radioactive fall-out, radioactivity induced in water that has been used as a coolant in the nuclear energy industry, and radioactive waste materials from various sources are being measured. At the same time, other significant properties of polluted waters are being evaluated with special reference to the odor- and taste-producing and toxic contributions of chemical industries.

The increasing competition for water by agriculture (supplemental irrigation), municipalities, and industries has been responsible for the creation of water resources commissions in a number of states. North Carolina, for example, will eventually assign to its commission the water functions of all agencies that have a part in water use. The resulting loss of one of the most important engineering functions of the state board of health is a radical departure from established administrative practice. The need for changing the water laws of states in which the doctrine of riparian rights prevails in order to ensure a more equitable and effective exploitation of water as a natural resource is also being debated in a number of state legislatures.

S. Smith Griswold, Los Angeles air pollution control officer, points to photo of an auto exhaust purifier which he hopes will become standard equipment on all new cars.

Water Treatment.—The fluoridation of public water supplies has continued to increase with no untoward experiences reported. The preferred source of fluorides remains sodiumsilico fluoride, but there has been an increase in the use of hydrofluosilicic acid, a liquid. Altogether, there appears to be an orientation toward the purchase of liquid rather than dry water-treatment chemicals. Liquid alum is a notable example.

Sewage Disposal.—In the disposal of municipal sewage, two processes, both of them relatively simple in conception, have found wider adherence. The first process is the discharge of settled sewage of coastal cities into the sea through long submerged outfalls extending into deep water far from shore, and the release of the anaerobically digested settled solids through the same or parallel pipes. Secondary treatment, which normally follows primary sedimentation, is thereby avoided. The other process is the treatment of the sewage from relatively small communities in stabilization ponds, constructed as rude earth basins. Sedimentation and benthal digestion of settleable solids, combined with the photosynthetic activity of algal blooms, as well as evaporation, are held responsible for the good performance of these ponds. By contrast, tertiary treatment of sewage after trickling filtration or activated-sludge treatment is coming under study for the purpose of producing an effluent that is substantially free from oxygen-consuming or taste- and odor-producing pollutants. Where water is in short supply, tertiary treatment may permit the more immediate re-use of the treated water. For the stabilization of strong organic industrial water, such as packing-house wastes, a heated anaerobic contact process, in principle not unlike the activated-sludge process, is being developed.

The mushrooming of dwellings in the fringe areas of cities has created serious problems of sewage disposal. The installation of public sewerage has often presented technical as well as economical and administrative difficulties. In its absence, individual lots have been provided with disposal devices. Where septic tanks followed by subsurface leaching systems cannot be employed satisfactorily because of the tightness of the soil, aerobic treatment units, either with re-use of their effluent in the flushing system of the dwelling or with disposal of the greatly purified effluent to the soil, are under test.

The opening of the St. Lawrence Seaway (q.v.) has called attention to the need for sewage treatment systems that will operate equally

well in both fresh and saline waters. Means for the safe disposal or stabilization of human wastes in rocket ships are also under study.

Nuclear Energy Wastes.—The U.S. Atomic Energy Commission has followed two general precepts in its management of radioactive waste materials: "Concentration and containment of high-level radioactive wastes, and dilution and dispersion in nature of low- and intermediate-level wastes." It is generally admitted that the present practice of storing high-level wastes is only an *ad hoc* solution of the problem, and that the method of their ultimate disposal remains to be determined. Research and development are currently oriented toward fixation of the wastes—that is, their incorporation in chemically inert media—on the one hand, and toward their direct and deep discharge into the ground on the other. Fixation would permit their safe storage in the sea as well as in the ground. (See also CHEMISTRY.) The recommended maximum permissible concentrations of radioactivity in air and water have been reduced by a factor of ten for areas of dense population in order to keep the genetic effects of radiation to a minimum.[6]

Food Sanitation.—It is estimated that some 400 chemicals, including antibiotics, are being added to foods as preservatives, antioxidants, thickeners, thinners, moisteners, emulsifiers, and coloring agents. The allowable concentration of these substances needs to be determined before they are admitted to commercial use. Their number has become so great that the federal Food and Drug Administration (q.v.) has been forced to shift to producing groups the burden of proof of the nontoxicity of marketed products in recommended amounts. The increase in the radioactivity of milk as a result of radioactive fallout on pastures and forage crops is being monitored by the U.S. Public Health Service in a number of regions.

SARAWAK. See BORNEO.

SARDINIA. An island in the Mediterranean Sea west of the Italian Peninsula, forming, with nearby islands, an autonomous region of Italy. Area (of the region), 9,301 square miles; pop. (est. 1954), 1,322,898. Cagliari (pop. 1951, 138,539) is the capital and chief city. Principal occupations are farming, livestock raising, mining, and fishing.

SASKATCHEWAN. Situated between Alberta and Manitoba, Canada's other Prairie provinces, Saskatchewan extends over 251,700 square miles, including 13,727 square miles of lakes. The province's population totals 906,000 (est., September 1959), and its largest cities are Regina, the capital, 100,800; Saskatoon, seat of the provincial university, 82,769; Moose Jaw, 31,800; and Prince Albert 22,000.

Government.—The crown is represented by a lieutenant-governor, who is advised by an Executive Council (cabinet) drawn from the majority party in the unicameral legislature. Elected for a maximum term of five years, the Legislative Assembly is subject to dissolution on advice of the cabinet. The Co-operative Commonwealth Federation (CCF), under the leadership of Premier Thomas C. Douglas, has been in office since 1944. In the 1959 legislature, which was elected in 1956, the CCF held 36 seats, while the official Liberal opposition had 14, and the Social Credit Party, 3. The province was represented by 16 Progressive Conservative members and one CCF member in the federal House of Commons; it has six seats in the Senate.

Finance.—Estimated budgetary revenues for the fiscal year ending March 31, 1960, are $133,325,210, and expenditures, $133,245,440. The net debt of the province was $41,283,921 on Dec. 31, 1958.

Education.—During the 1957–58 school year there were 151,667 pupils in public elementary schools, 40,280 in public secondary schools, 3,196 in private schools, and 147 in the provincial School for the Deaf at Saskatoon. The University of Saskatchewan had 3,544 full-time degree students, while the two teachers colleges graduated 585.

Transportation and Communications.—There are 165,000 miles of municipal and provincial roads, the latter accounting for 8,155 miles of the total, including 2,011 miles of paved and 6,090 miles of graveled roads. Railway mileage in the province is 8,739. On March 31, 1959, there were 314,178 licensed motor vehicles, of which 199,495 were passenger automobiles. The government transportation company operated 52 buses on runs totaling 3,210,385 miles in 1958. The major cities are served by national airways, while the provincial government operates an air service to the north and an air ambulance. There were 210,237 telephones in service at the end of 1958, and 14 radio and 5 television transmitting stations.

Agriculture.—Cash farm income in 1958 was estimated at $571,600,000, the major items being wheat, $271,925,000; oats, $7,210,000; barley, $32,555,000; flax, $17,880,000; cattle, $102,793,000; dairy products, $29,183,000; poultry and eggs, $20,617,000; and hogs, $33,737,000. Adverse weather conditions, including a heavy early snowfall, threatened to reduce materially the quality and yield of the 1959 grain crops, about 25% of which were still unharvested in mid-October 1959. The preliminary estimate of grain production for 1959 was (in millions of bushels) wheat, 192; oats, 83; barley, 87; rye, 2.5; and flax, 11.3.

Mineral Production.—Preliminary figures for 1958 indicate that the value of mineral production was $213,720,594, an increase of $52,233,562 over 1957. Values and quantities of the chief minerals were: uranium, $58,705,000 (5,869,500 pounds); copper, $19,160,327 (75,345,369 pounds); zinc, $10,611,504 (97,711,822 pounds); gold, $3,030,302 (89,179 ounces); silver, $1,149,996 (1,323,813 ounces); coal, $4,021,596 (2,073,985 tons); sodium sulfate, $2,764,651 (167,397 tons); salt, $1,290,000 (45,500 tons); structural materials (cement, clay, sand, gravel), $8,993,038; oil, $100,905,000 (46,500,000 barrels); natural gas, $1,431,000 (15.9 billion cubic feet). During 1958, 507 oil wells (to total 3,664) and 18 gas wells (to total 191) were drilled.

Other Production.—For the year ending March 31, 1958, commercial fish production was valued at $2,010,084, forest products at $7,693,874, and ranch-raised and wild fur at $3,253,059. Gross capital investment for 1958 was $627 million, and construction of all types totaled $376 million. Net commodity production, including agricultural products ($807 million) and manufacturing products ($326 million), reached $1,133 million in 1958. Retail trade was estimated at $902 million in 1958. Personal income in 1958 totaled approximately $1,095 million.

Principal Events, 1959.—On the provincial political scene, party standings in the Legislative Assembly remained the same as the CFF retained the Kinistino electoral division in a June by-election. In September the Liberal Party elected W. Ross Thatcher, a rancher and former businessman of Moose Jaw, as its leader.

At the 1959 session of the legislature, 111 public and 13 private bills were passed. Enactments included a provision for new types of liquor outlets for both men and women, subject to local option, and the institution of a farm credit plan to

[6] "Congressional Atomic Energy Group Studies Waste Disposal Problem," *Science*, 129:375 (1959).

assist young farmers to establish themselves on economic farm units.

In July the government appointed a South Saskatchewan River Development Commission to guide development of provincial aspects of the huge water, irrigation, and power project announced in 1958. Construction of the dam on the South Saskatchewan River near Outlook had commenced earlier in the year. The Saskatchewan Power Corporation began operating new generating stations at Saskatoon and Estevan which would increase its total generating capacity to 514,000 kilowatts by the end of 1959.

Saskatchewan farm organizations sponsored a mass delegation to Ottawa to request deficiency payments on grain delivered to the Canadian Wheat Board during the crop years 1955 to 1958. The delegates were accompanied by farmers from the other Prairie provinces when they met the federal cabinet on March 10, 1959.

The University of Saskatchewan celebrated its 50th anniversary, and Dr. J. W. T. Spinks, dean of graduate studies, was appointed to succeed Dr. W. P. Thompson, who retired as president of the university on November 1.

In July, Queen Elizabeth II and Prince Philip visited Saskatchewan. Principal stops were made at Saskatoon (July 22) and Regina (July 23).

ALLAN R. TURNER,
Archival Assistant, Saskatchewan Archives Board.

SAUDI ARABIA. This kingdom in the Arabian Peninsula covers an area of 609,841 square miles and is bounded by Jordan and Iraq on the north; Kuwait on the northeast; the Persian Gulf, Qatar, the Trucial States, and Muscat and Oman on the east; Aden and Yemen on the south; and the Red Sea on the west. The distance along the Red Sea is about 1,100 miles, and bordering it is a coastal plain, called Tihama, which varies in width from 30 miles in the south to a few miles in the north at ʿAqaba. From the plain, mountains rise abruptly to 8,000–9,000 feet in the region around Mecca, and a plateau descends gradually eastward to the Persian Gulf region where there are wide mud flats and a barren limestone desert marked by oases.

Population.—No census has ever been taken, but the population is about 6 million, divided among the four provinces as follows: Hejaz, 1,250,000; Nejd, 1,500,000; Asir, 1,000,000; and al-Hasa, 2,250,000. Jidda, the most populous city (250,000), is the main port and commercial city, and, until 1958, the site of most departments of government, as well as the residence of most accredited foreign diplomats. Other cities in the Hejaz are Mecca (125,000), the holy city of Islam; Medina (50,000); and al-Taif (25,000). In the oil-producing area on the east coast, principal cities are Ras Tanura, Dhahran, Hofuf, Dammam, and al-Khobar, and in the interior the capital city of Riyadh, with an expanding population of nearly 200,000 in 1959, is fast becoming a modern and urbanized center.

Government.—King Saud ibn Abd al-Aziz ibn Abd al-Rahman al-Faisal al-Saud succeeded his father on the throne in 1953 and immediately appointed his brother Faisal as crown prince and prime minister. Absolute control of the state is in the hands of the Saud family. On May 11, 1958, King Saud issued a royal decree revising the Statute of the Council of Ministers. The new statute, consisting of 50 articles which for the present serve as a constitution for the government of the state, provides for a president of the Council of Ministers appointed by the king. Other ministers are appointed by the king on the recommendation of the council's president, who has been Crown Prince Faisal. On the resignation of the president, all members of the council must resign, and the president may also demand the resignation of an individual minister. Meetings of the council are secret, and the council acts as a legislative body as well as the executive cabinet of the government. Its membership is limited to ministers of state, department ministers, and royal advisers who may be appointed to the council by the king on the recommendation of the council president. Every minister has the right to present to the council a project of law within the scope of the functions of his ministry, and the council may pass or reject it. Veto power over acts of the council rests with the king.

WIDE WORLD

Arriving in Cairo, August 31, on state visit, King Saud of Saudi Arabia is escorted by UAR President Nasser (right).

Religion and Education.—The great majority of Saudis adhere to the Wahhabi sect, which follows the Hanbalite legal code of the Sunnite creed and was developed in the 18th century as a puritanical movement to oust non-Moslem philosophies and practices from Islamic society. The government removes most fees and charges for pilgrims entering the holy cities of the Hejaz, and encourages the influx of pilgrims from all Moslem lands.

Primary education throughout the land is free of charge but schools are not available in every locality. A considerable portion of the budget is spent for education. The buildings of King Saud University in Riyadh were ready for use in 1959, although not many students were prepared for entrance. ARAMCO has established training schools for the children of its employees and has about 3,000 pupils enrolled. In addition, there are numerous religious schools for the education of jurists and theologians.

Finance.—The Saudi Arabian currency is based on the riyal (SR), which is officially equal to U.S.$0.27 but was sold on the free market for U.S.$0.193 during most of 1959; 40 riyals are equal to one gold Saudi sovereign (SS), which has a gold content of U.S.$8.24. In 1952 the Saudi Arabian Monetary Agency was established to strengthen and stabilize the currency of the state and to fix its value in relation to foreign currencies, to act as the central banking agency for the government, to regulate commercial banks and exchange dealers, and to approve imports and allocate foreign exchange for imports. The state budget for 1959 announced in January balanced revenues and expenditures at SR1,410 million, with SR160 million set aside for debt retirement. About 90% of the income of the government is derived from oil royalties and taxes on oil industries. A very sizable portion of the expenditures goes to support various Arab tribes and their leaders who are almost entirely dependent on the king's largess.

Transportation and Communications.—Over 10% of the budget is expended on expanding and maintaining means of transport and communication. Most highways in Saudi Arabia are inadequate for the limited traffic. Hard-surfaced roads are too expensive for the number of motor vehicles, and the difficult volcanic terrain, shifting sands, intense heat in summer, and flash floods in winter present engineering problems of the first order. The government-owned railroad connecting Riyadh with Dammam and Dhahran has 351 miles of main track and has proved very important in developing and modernizing Riyadh. The government hopes to extend the railroad to Jidda on the west coast, via Mecca and Medina.

The principal seaports are Jidda (on the Red Sea), which handles about one third of all imports, and Dammam (on the Persian Gulf), which handles nearly half of all imports. Two other ports, Ras Tanura and al-Khobar, process the remainder of the imports. Jidda, Dhahran, and Riyadh are stops on international air lines, and the Royal Saudi Arabian Airlines serves Riyadh, Medina, Dhahran, Hofuf, and al-Kharj, and has scheduled service to Egypt, Syria, Lebanon, Jordan, Yemen, Sudan, Ethiopia, and Pakistan.

Petroleum Resources.—The Arabian American Oil Company (ARAMCO) originally held concessions for the development of oil resources in 440,000 square miles of territory, including rights in Saudi Arabia's share of the Neutral Zone and preference rights considerable distance west of the exclusive concession area. Since 1933, when the concession was granted, ARAMCO has relinquished rights in the Neutral Zone, all preference rights west of the 46th meridian, and in about

100,000 square miles. The Paul Getty Oil Company holds the concession for the Neutral Zone, and the Japanese Petroleum Trading Company in 1957 obtained concession for oil resources in the Neutral Zone's offshore area.

ARAMCO continues exploration and geological work throughout Saudi Arabia; in 1959 three groups of seismographers and three structural drilling parties were working in the remote Rub al-Khali (Empty Quarter), and two other teams were exploring northern regions. A complicated grid of pipelines has been constructed to carry crude oil to tankers and refineries. A new line in Khursaniyah was being built in 1959. The Ras Tanura refinery has an estimated capacity of 189,000 barrels daily.

In 1958, ARAMCO produced 370,485,754 barrels of oil, and its total production since 1933 was 3,400,339,604 barrels of crude oil. Furthermore, its estimated proved reserves were about 36,700,000,000 barrels. Additional reserves undoubtedly will be found as exploration reveals new fields. ARAMCO also operates a 1,068-mile-long pipeline connecting the Abqaiq field with Sidon, Lebanon. The western portion of the line is operated by Trans-Arabian Pipe Line Company (TAPLINE), an ARAMCO subsidiary.

About 50% of ARAMCO's net income goes to the Saudi Arabian government in taxes and royalties. About 14,600,000 barrels were produced by Getty Oil for Saudi Arabian account. Estimated oil receipts for the Saudi Arabian government in 1958 were about $304,000,000.

Agriculture.—Due to lack of water, less than 15% of the land is arable. The principal agricultural crop is dates; annual production approximates 500,000 tons, all of which is consumed locally, and sizable amounts are imported from Iraq. Sorghum is the second largest crop. Other crops are wheat, rice, coffee, fruits, and vegetables. The raising of sheep and goats is the main occupation of the Bedouin tribes. The raising of horses and camels has greatly decreased in recent years. Experimental agricultural institutes have been set up at al-Kharj and in the province of al-Hasa. When irrigation projects under construction are completed, more water for agricultural purposes will be available, although most of the water to be brought into Riyadh from the Euphrates will be used by the urban population.

Principal Events, 1959.—The main problems of the state have centered around a financial crisis. Oil expansion slowed very materially in 1956 and greater production was not resumed until 1958. World oil markets were depressed, thus reducing expected oil income to Saudi Arabia. With government expenditures running ahead of income in 1957, drastic curtailment was ordered in 1958 and was continued throughout 1959. Strict budgetary control was instituted and various import items such as automobiles were cut back drastically. All commercial banks were ordered to deposit 15% of their capital with the Saudi Arabian Monetary Agency to strengthen the finances of the state. Pressure was put on the oil companies to produce more oil and to increase royalties paid to the government. Of the 15 fields discovered by ARAMCO, only eight were operated in 1958, and the government believed that far greater production was possible.

Abdallah al-Tariki, director general of petroleum and mineral affairs for Saudi Arabia, led an 8-man delegation to the Arab Petroleum Congress at Cairo in April and took a leading part in its deliberations. After ARAMCO had offered two seats on its board of directors to representatives of the Saudi Arabian government, Abdallah al-Tariki and Hafidh Wahhab were nominated in April 1959 to serve as the two members.

Resumption of diplomatic relations with Great Britain were refused until the Buraimi Oasis dispute was settled. During the year, Japan established diplomatic relations with Saudi Arabia, and West Germany raised its representation to the level of an embassy.

King Saud paid an official state visit to the United Arab Republic on August 31–September 4. He and President Nasser reportedly agreed to cooperate in opposing Communist expansion in Iraq and to continue the blockade of the Suez Canal (q.v.) directed against Israel.

SYDNEY N. FISHER,
Professor of History,
The Ohio State University.

SAVINGS. Liquid savings of individuals in the United States totaled more than $216 billion at the beginning of 1959. During 1958 these savings, which include currency, checking and savings accounts, and United States government securities, increased by $11 billion. This was the largest yearly gain in liquid savings in nine years. Saving in these liquid forms continued at a very high rate in the first three quarters of 1959.

The increase in total liquid assets stemmed almost wholly from growth in savings accounts (including shares in savings and loan associations), as is shown in Table 1. Savings accounts amounted to more than $129 billion at the end of 1958, a gain of more than $12 billion during the year. Both demand deposits and currency increased only slightly during 1958. These liquid assets, which earn no interest, totaled a little more than $57 billion at the end of 1958. Individuals continued to reduce their holdings of United States government securities as their yield became less competitive with other forms of investment. A decline of $2.5 billion in holdings of these securities during 1958 was the largest in several years and brought the total held at the end of the year to about $29 billion.

Table 1—ESTIMATED LIQUID ASSET HOLDINGS OF INDIVIDUALS IN THE UNITED STATES
(In billions of dollars)

Assets	1956[1]	1957[1]	1958[1]
Currency	21.1	21.1	21.4
Demand deposits	35.9	35.2	36.0
Time deposits	73.3	79.3	86.3
Savings and loan shares	33.9	38.2	43.6
U.S. government securities	31.1	31.6	29.1
Total[2]	195.3	205.4	216.4

[1] End of the year. [2] Includes the holdings of farmers and professional persons, but not trust funds administered by corporate trustees. (Sources: Federal Reserve Board and Securities Exchange Commission; data adjusted for differences in coverage.)

The large increase in total personal liquid assets in 1958 was brought about by a rise in average holdings as well as by a small increase in the number of spending units that possessed liquid assets. Approximately 42.5 million of the 57 million spending units had some liquid assets at the end of 1958, compared with 42 million a year earlier, according to the Federal Reserve Board's *1959 Survey of Consumer Finances.* Liquid assets of $5,000 or more were held by 10% of spending units, while smaller amounts were held by 65%, as is shown in Table 2.

Although some low-income consumers had large holdings of liquid assets, the higher the level of income, the more likely were large holdings to be possessed. Liquid assets of $5,000 or more were held by 34% of spending units at the income level

Table 2—SIZE OF LIQUID ASSET HOLDINGS WITHIN SELECTED INCOME GROUPS, EARLY 1959

Amounts of total liquid assets held[2]	Percentage distribution of spending units within income groups[1]				
	All spending units	Under $1,000	$3,000–$3,999	$6,000–$7,499	$10,000 and over
None	25	61	28	7	2
$1–$499	31	17	36	43	12
$500–$1,999	22	12	18	29	26
$2,000–$4,999	12	5	11	15	26
$5,000 and over	10	4	7	7	34
Total[3]	100	100	100	100	430

[1] Liquid assets are based on interviews in January through March 1959. [2] Includes all types of United States government securities, checking accounts, and savings accounts in banks and savings and loan associations and credit unions; excludes currency holdings. [3] Details may not add to totals because of rounding. (Source: *1959 Survey of Consumer Finances.*)

of $10,000 and over, compared with 4% of units with incomes of less than $1,000.

SCOTLAND. Occupying the northern part of the island of Great Britain, Scotland (area, 30,410 square miles) comprises 33 counties and 196 burghs within the United Kingdom. The population was 5,223,000 on June 30, 1958, compared with 5,150,000 in mid-1957. Principal cities and their 1957 estimated populations are: Glasgow, 1,085,100; Edinburgh (the capital), 467,000; Aberdeen, 186,800; and Dundee, 178,500.

Scotland is represented by 16 Scottish peers in the House of Lords and by 71 members in the House of Commons. In local elections completed on May 7, 1959, the Conservatives won five municipal councils previously controlled by the Labour Party. Lord Strathclyde is secretary of state for Scotland in the present British government. The Scotland Bill of Aug. 1, 1958, provided for a general government grant to local authorities in place of specific grants for such purposes as education, health, and town planning.

In 1957–58 there were 2,903 primary schools (with 605,719 pupils); 785 secondary schools (239,454 students); and 1,079 centers for further education (213,512 students). University enrollment in 1958–59 totaled 17,576 students (St. Andrews, 2,391; Glasgow, 6,557; Aberdeen, 2,062; and Edinburgh, 6,566).

Grains were grown on 1,060,086 acres in 1958; green crops (including beans, peas, and potatoes) occupied 499,268 acres; and grazing land, 1,230,383 acres. In 1958 the fish catch (excluding salmon and sea trout) was 292,443 tons, valued at £13,879,011. Shipbuilding, steelmaking, and mining are principal industries. Scotland's first nuclear power plant was put into operation at Chapel Cross on Feb. 25, 1959. Construction was under way in 1959 on the new Firth of Forth Bridge (see BRIDGES).

SCULPTURE. See PAINTING AND SCULPTURE.

SEATON, Frederick Andrew, U.S. secretary of the interior: b. Washington, D.C., Dec. 11, 1909. A newspaper publisher, he was appointed secretary of the interior by President Eisenhower on May 28, 1956, and remained in that position after Eisenhower's inauguration for a second term.

Educated at Kansas State College (1927–31), Seaton became the head of several firms that published newspapers and operated radio and television stations in the West and Middle West. He served two terms in Nebraska's unicameral legislature (1945–59), and in 1951 was appointed to fill a U.S. Senate vacancy. Named assistant secretary of defense on Sept. 3, 1953, he was transferred to the president's White House staff in 1955.

Seaton, who had been an active proponent of Alaskan statehood, presented to the House Committee on Interior and Insular Affairs in January 1959 the administration's case for the admission of Hawaii to statehood. On several occasions he also defended the administration's program for achieving a balanced budget by holding down expenses and increasing taxes.

SECRET SERVICE, U.S. A branch of the Treasury Department, the Secret Service was established on July 5, 1865. In 1959, Secret Service agents made security arrangements and protected the president during his visits to Canada, Mexico, Europe, and Asia. They also made security arrangements and protected the vice president when he visited the USSR and Poland.

During the fiscal year ended June 30, 1959, Secret Service agents captured 19 plants for the manufacture of counterfeit money, and $1,924,536 in counterfeit bills. Of that total, only $260,329 was successfully passed on storekeepers and cashiers. The balance was captured before it could be put into circulation. Seizures of counterfeit coins totaled $7,173.57, of which $6,766.32 was passed. There were 308 new counterfeit note issues and variations thereof during the fiscal year, and 343 persons were arrested for violating the counterfeiting laws. There were 40,655 forged government checks received for investigation. Agents completed investigations of 32,173 forged checks worth $3,015,304 and arrested 2,878 check forgers, but on June 30, 1959, there was a backlog of 24,659 forged checks awaiting investigation. There were 5,232 forged United States savings bond cases received for investigation, and agents completed investigation of 3,618 forged bonds worth $518,190, and arrested 67 persons for bond forgery.

Arrests for all other offenses totaled 167. There were 3,163 convictions, representing 98.1 per cent of convictions in all cases prosecuted, some of which were pending from the previous year.

Cases of all types received for investigation totaled 53,271, and 19,060 cases were pending at the beginning of the year. Although 42,816 cases were closed during the year, there were 29,515 cases awaiting investigation as of June 30, 1959.

U. E. BAUGHMAN,
Chief, U.S. Secret Service.

SECURITIES. See STOCKS AND BONDS.

SECURITIES AND EXCHANGE COMMISSION. A bipartisan, quasijudicial agency of the United States government, the Securities and Exchange Commission (SEC) administers several laws in the general field of securities and finance which were enacted during the years 1933–1940 for the protection of the investing public. In 1959 the commission celebrated its 25th anniversary.

Securities Act of 1933.—This law requires registration with the commission of securities offered

for public sale. It also prohibits fraud and deceit in the sale of securities (buttressed by SEC powers of investigation and enforcement), and it provides recovery rights to defrauded investors.

The objective of the registration requirement is to provide disclosure of financial and other information concerning securities offered for public sale. A prospectus containing the salient facts must be delivered to investors. Registration does not connote commission approval of the merits of securities, nor is registration a warranty of the accuracy of the facts disclosed. However, penalties attach to the filing of false information, and investors who suffer losses in the purchase of registered securities have important recovery rights if the facts are misrepresented.

The filing of registration statements during fiscal 1959 reached a new high of 1,226, proposing public offering of securities aggregating $16.6 billion, some $300 million less than the all-time high of $16.9 billion recorded in fiscal 1958. Securities registered for public sale in fiscal 1959 aggregated $15.7 billion, bringing the total of registered securities to $162.9 billion.

Securities Exchange Act of 1934.—Under this law, companies whose securities are listed on national securities exchanges must register with the commission and file annual and other periodic reports, thus providing disclosure of current financial and other information for the investing public. At the end of fiscal 1959, 3,808 security issues of 2,236 issuing companies were so listed, and the trading volume therein during the year amounted to $53.4 billion.

Under the law, holders of listed securities also must be provided pertinent information when their proxies are solicited on corporate matters. In addition, management officials and large stockholders of listed companies must report their transactions in the equity securities of such companies and are accountable to the issuer for short-term trading profits therein—measures designed to curb misuse of "inside" information. During the year 1,975 proxy statements and 39,275 insider trading reports were filed.

This law further provides a system for the regulation of securities markets designed to eliminate all impediments to free and open markets, and the commission exercises a continuing surveillance in the interest of promoting just and equitable principles of trade and curbing fraud, manipulation, and other unlawful conduct. Persons or firms who conduct an over-the-counter securities business must register with the commission and conform their trading practices to the law and SEC rules thereunder. At the end of fiscal 1959, 4,907 brokers and dealers were so registered. Also registered were 14 exchanges and one over-the-counter securities association.

To augment this regulatory system, the commission is empowered to investigate complaints or other indications of law violation and to enforce sanctions against violators. In the exercise of these law-enforcement activities, the commission during fiscal 1959 referred 45 cases to the Department of Justice for prosecution, sought court injunctions for fraud or other law violations in 58 cases, and instituted 111 administrative proceedings on the question of whether the registration of broker-dealer firms should be denied or revoked.

Public Utility Holding Company Act of 1935.—This law provides for SEC regulation of the financial and related activities of holding company systems of electric and gas utility companies in the interest of protecting investors and consumers against certain abusive practices. It also provides, generally speaking, that holding company operations shall be confined to an integrated system of utility properties, that their corporate and capital structures be simplified, and that voting power among security holders be redistributed on a fair and equitable basis. Each such system must register with the commission.

The law prescribes standards governing mergers, consolidations, purchase of utility securities and assets, issuance and sale of securities, servicing contracts, and similar matters.

Offerings of system securities to the public and financial institutions in late 1959 were running at about $480 million per year, and sales of securities by subsidiaries to their respective parent companies approximated $372 million a year. Most of these funds are used for property additions and improvements.

The integration and simplification program was virtually completed by 1959. This program, together with exemptions from the law because of the intrastate character of operations or otherwise, has resulted in the release from SEC jurisdiction of 2,064 of the 2,387 companies which at one time or another were subject to the law. Of the 2,064 companies, 924 with aggregate assets of $13 billion were divested by holding companies because they were not retainable under standards of the law; 777 were dissolved or absorbed in consolidations; and 363 were exempted or converted to some other status. It is expected that 18 holding company systems with assets of about $10.8 billion will continue as registered systems subject to continuing regulation by the commission.

Investment Company Act of 1940.—This law provides for the regulation of companies engaged primarily in the business of investing and trading in securities in order to curb certain abusive practices. The commission is not empowered, however, to supervise the investment activities of such companies. The extent of public investor interest in the securities of investment companies is evidenced by the growth of registered investment companies from $2.5 billion in 1941 to $20 billion at the end of fiscal 1959, when 512 investment companies were registered.

Other Functions.—The commission also administers the Trust Indenture Act of 1939, which governs trust indentures pursuant to which debt securities are issued, as well as the Investment Advisers Act of 1940, which prescribes certain standards governing the activities of investment advisers, and it serves as adviser to federal courts in corporate reorganization proceedings under Chapter X of the Bankruptcy Act.

SEGRÈ, Emilio Gino, American physicist: b. Tivoli, Italy, Feb. 1, 1905. On Oct. 26, 1959, the Swedish Academy of Sciences announced that Segrè and Owen Chamberlain (q.v.) would share the 1959 Nobel Prize in physics. The two scientists, colleagues at the University of California at Berkeley, performed successful experiments in 1955 which confirmed the existence of the antiproton.

After serving in the Italian Army, Segrè took his doctorate at the University of Rome in 1928, and from 1930 to 1935 he taught physics there under Enrico Fermi, who later played a key role in developing the atomic bomb for the United States. Segrè left Rome to become professor of physics and director of the physics laboratory at the University of Palermo. One of a group of Italian scientists who chose exile to escape the Fascists, Segrè in 1938 went to the United States and became a researcher at the University of California's radiation laboratory. From 1943 to 1946 he headed a team of nuclear scientists working at Los Alamos, N. Mex.; he then returned to Berkeley as professor of physics.

Working with Chamberlain and other scientists, Segrè succeeded in creating and observing an antiproton in 1955. This was accomplished by directing a stream of protons of 6.2 billion electron volts at a copper block, creating a profusion of subatomic particles, a few of which were antiprotons. The mutual annihilation of a proton and an antiproton, with a resultant release of energy, was photographed at the radiation laboratory in April 1958.

SEGREGATION, Racial. See EDUCATION; NEGROES, AMERICAN.

SEISMOLOGY. Earthquakes in 1959.—The year 1959 was unusually quiet in regard to seismic occurrences. The year began with a slight quake near the coast of Brittany, France, on January 2, and minor damage was reported in the Channel Islands. Numerous slight quakes occurred around the globe in the first three months of 1959, but only one shock was of magnitude 7 or over (on a scale of 0 to 10). That came in Peru on February 7, but it caused no damage.

Activity increased somewhat in the second quarter. Extensive damage was done in the Mugla Province of Turkey on April 25, but the first casualties of the year resulted from a quake (magnitude 7½) centered off the northern coast of Taiwan (Formosa) on April 26; several persons were killed, but property damage was minor.

The sharpest earthquake of the year (magnitude 8 to 8¼) occurred on May 4 near the east coast of Kamchatka, off the Bering Sea. Only one person was killed, but several were injured. On May 24, Mexico experienced a quake which was only of magnitude 6¾, but it was felt strongly in Mexico City and one casualty was reported from Oaxaca. Slight damage was done, with one casualty, in northern Chile on June 14 by a quake of magnitude 7¼.

Three of the year's most severe earthquakes, from the standpoint of loss of life, came in August, including one in the United States. Southern Taiwan suffered 16 fatalities on August 15 in a quake of magnitude 6¾. On August 17–20 a series of earthquakes struck the Yellowstone Park area in Wyoming and Montana. An estimated 28 persons, mostly campers and vacationers, were killed in the resulting landslides, including a major slide on the Madison River in Montana. Many of the familiar landmarks in the park were affected by the tremors and extensive damage was caused to park facilities. (See also MONTANA; WYOMING.)

The largest number of casualties from an earthquake in 1959 resulted from shocks which struck Mexico on August 26, claiming 40 lives in the State of Veracruz. Albania suffered two fatalities and considerable property damage in a quake on September 1. In the South Pacific, the Kermadec Islands were shaken by a series of quakes on September 14–15, and the shocks continued intermittently throughout September and October, but without damage. At least 8 were killed in a quake on October 25 in the Erzurum area of Turkey. On December 24 a slight earthquake occurred in southern Peru.

Seismological Research.—The most important event in research seismology in 1959 was the release by the State Department in July of the report of President Eisenhower's Panel on Seismic Improvement, a special group of the President's Science Advisory Committee. The panel, headed by Dr. Lloyd V. Berkner, president of Associated Universities, Inc., was appointed on Dec. 28, 1958, and charged with reviewing the feasibility of improving seismic nuclear detection.[1]

When a disturbance, whether artificial explosion or natural earthquake, occurs within the earth, waves are generated both through the earth (body waves) and along the surface (surface waves). The body waves are compressional when the earth's motion is longitudinal in the direction of the wave, and torsional when the motion of the earth is transverse to the wave. An explosion in a homogenous earth, being a symmetrical source, gives rise only to compressional waves and to transverse waves with a vertical component. Moreover, an earthquake, being a fracture, generates a compression ahead of the pushing rock and a rarefaction behind it. An explosion, on the other hand, generates compression in all directions. Body waves can therefore be used to discriminate between an explosive and an earthquake source.

[1] The question of underground nuclear tests and means of detecting, or concealing, them played a key role in the continuing East-West talks in Geneva in 1959, and the report of the Berkner panel was presented to the conference by the United States in June.

UPI

Earthquakes in Yellowstone Park area (August 17–20) produced this massive landslide at Madison Canyon in southern Montana. Series of slides caused an estimated 28 deaths.

Surface waves are channel waves or guided waves, in which the energy is confined or guided by the outer layers. They form two distinct groups: Love waves, in which the earth particles move in a horizontal plane, and Rayleigh waves, in which the earth particles move in elliptical orbits in the vertical plane. Love waves have a higher velocity, and hence arrive earlier at a seismic observatory. Both types cover a complete spectrum within periods of a few seconds to several minutes, the wave length or period increasing with the depth of penetration. Columbia seismologists, using seismographs of much longer periods than hitherto thought feasible, have detected surface waves which have penetrated halfway down into the earth, a finding which opened a completely new field of investigation.

The president's special panel suggested practical research in the investigation of both body waves and surface waves which would provide a seismic means of differentiating between an earthquake and an explosion. The panel conceded that the Soviet Union in recent years, by its financial emphasis on seismic research, has come "to enjoy a position superior in many respects" to that of the United States. But the group gave the assurance that the United States has "sufficient talent and instrumentation . . . to match and surpass this Soviet effort." Dr. Frank Press, formerly of Columbia and now of the California Institute of Technology, was named chairman of a committee to implement the recommendations of the president's panel.

(See also COAST AND GEODETIC SURVEY; GEOLOGY.)

J. JOSEPH LYNCH, S.J.,
Director, Fordham Seismic Observatory.

SELECTIVE SERVICE. The Selective Service System has been in continuous operation in the United States since 1948. On March 23, 1959, Congress extended to July 1, 1963, the authority to induct men under current legislation.

The Selective Service System registers men at age 18, classifies them as to availability for service, and selects men to fill calls for military personnel issued by the Department of Defense, which an-

nually requires several hundred thousand men to maintain the strength of the armed forces. Most of this requirement is met by enlistment, but the difference between the numbers enlisting and the number required is supplied by the Selective Service System through inductions.

Deferments from active duty are provided for men who satisfactorily participate in the Reserve and the National Guard. If a man is discharged from the Reserve after 6 years of satisfactory Ready Reserve participation, he is eligible for draft classification IV-A as having completed service under the Universal Military Training and Service Act. The effect of this deferment policy is to induce men to enter and remain in the Reserve, thus maintaining the strength and stability of the Reserve forces.

One effect of Selective Service classification is to divide manpower between military and civilian needs. Deferments in the national interest are provided for persons engaged in study or activities vital to the nation. Through its responsibility to defer such persons, the Selective Service System influences men to prepare for, enter, and remain in occupations contributing to the national health, safety, or interest. This channeling of civilian manpower to strengthen the nation is a main function of the Selective Service System.

Deferments are provided in cases where induction would result in extreme hardship to dependents. Also deferred are apprentices and agricultural workers. Exemptions are provided for ministers and divinity students, some aliens, some officials, veterans, and sole surviving sons. Particular stress in recent years has been accorded to the deferment of scientists, engineers, and teachers, in order to help ease the nationwide shortages in these critical occupational fields. Deferment of students has been a traditional Selective Service concern. Since 1951 the system has administered tests to more than 600,000 college students. The results of these tests provide local boards with a guide in considering students for deferment. College class standing is an alternative criterion.

The Selective Service System is also responsible for the deferment of members of the Standby Reserve, numbering more than 1.6 million men and women by the autumn of 1959. These reservists, subject to recall in the event of war or a national emergency declared by Congress, may be recalled only after their availability has been determined by Selective Service. Local boards determine whether a standby reservist is available for recall, should remain in vital civilian work, or should remain in civil life because his recall would result in extreme hardship to dependents.

The Selective Service System also selects applicants for enlistment in the "critical skills" reserve program. Under this program, a man who believes he possesses a critical skill which is being utilized in an industrial or research activity affecting national defense, may apply to the local board for selection for enlistment in the Ready Reserve. If selected, he enlists, performs 3 to 6 months of active duty for training, then serves the remainder of his 8-year enlistment in the reserve.

The fourth major responsibility of the system is to be prepared to function in an emergency. To meet this responsibility, the system engages in planning and training to the end that any of its components will be in a position to supply manpower and manpower information under emergency conditions.

Through December 1959, inductions under the law totaled 2,619,507. Of these, 2,508,283 were inducted into the Army, 83,858 into the Marine Corps, and 27,366 into the Navy. During 1959 the Department of Defense called for the following number of men: January and February, 9,000 each; March, 8,000; April, 7,000; May and June, 6,000 each; July, 8,000; August and September, 7,000 each; October, November, and December, 9,000 each.

The Selective Service System has National Headquarters in Washington, D.C., and 56 divisional headquarters—in each state, New York City, the District of Columbia, Guam, Puerto Rico, the Virgin Islands, and the Canal Zone. Local boards, nearly 4,000 in number, are manned by volunteers in every county or comparable political subdivision with the exception of heavily and sparsely populated areas. Nearly 40,000 citizen volunteers fill many posts in the system. Paid personnel are provided for local board clerical work and for duties in state and national headquarters.

LEWIS B. HERSHEY,
Lieutenant General, U.S. Army;
Director, Selective Service System.

SENATE, U.S. For list of members, see UNITED STATES; and for legislation, see the Index entry, *Congress, U.S.*

SENEGAL. The Republic of Senegal, situated on the northwest coast of Africa, is an autonomous republic of the French Community (q.v.) and a member of the Mali Federation (q.v.). Estimated area, 76,124 square miles; pop. (est. 1958), 2,300,000, including (in 1956) 48,593 nonindigenous persons, mainly French. French is the official language. Chief cities and populations (est. 1957): Dakar, the capital, 234,500; Rufisque, 49,800; Kaolack, 46,800; and Saint-Louis, 39,800.

Government.—A former French overseas territory included within the federation of French West Africa (q.v.), Senegal chose the status of a member state of the French Community on Nov. 25, 1958. As an autonomous republic, Senegal has the right of self-rule in domestic affairs, with the Community exercising control of foreign relations, defense, currency, strategic minerals, and certain other matters. Senegal adopted its constitution on Jan. 24, 1959. The Legislative Assembly consists of 80 members elected by universal suffrage for a five-year term. The president of the council (premier) is invested by a majority in the assembly. Mamadou Dia, a leader of the African Federalist Party, is premier.

Education and Religion.—In 1958 there were 457 schools with a total of 86,575 pupils (25.6% of the school-age population). Expenditure on education totaled 1,856 million francs CFA, or about 12.5% of the budget. The University of Dakar had 1,069 students in 1958. The majority of the natives are Moslems; the remainder are mostly animists, with some Christian communities existing among the Diola and other ethnic groups.

Finance.—The ordinary budget for 1958 totaled 13,876 million francs CFA; the extraordinary budget, 1,068 million (the franc CFA equals 2 metropolitan francs). In the period 1947–57, French financial aid granted under the Economic and Social Investment Development Fund (FIDES) was equal to about $140.5 million.

Transportation.—The republic's railway (641 miles) runs from Dakar to the eastern border and has branches to Saint-Louis, Linguère, and other towns. Roads and trails total 7,286 miles (1956), including 1,011 miles of highways. Dakar is an important international air terminus and a major port of western Africa.

Production.—Agriculture is the chief occupation and provides the bulk of exports. There is some livestock raising (cattle, sheep, and goats), and fishing is important along the coast. Output of peanuts, the principal cash crop, totaled 808,467 metric tons (unshelled) in the 1957–58 season. Of secondary importance are palm kernels, castor beans, gum arabic, tobacco, and sisal. Chief subsistence crops are millet, manioc, maize (corn), peanuts, and rice. Industries, centered mainly in Dakar, include cement, chemicals, soap, beer, peanut oil (132,000 metric tons in 1958), and other foodstuffs. Native handicraftsmen produce pottery, jewelry, and woven goods. The chief minerals are phosphates and titanium concentrates.

Foreign Trade.—Exports in 1958 totaled 28.8 billion francs CFA; imports, 43.8 billion (figures include data for Mauritania and Soudan, whose foreign trade passes mainly through Dakar). Senegal's chief exports are peanuts, peanut oil, and phosphates (105,000 metric tons in 1958).

Principal Events, 1959.—Elections to the Legisla-

tive Assembly on March 22 were won by the Progressive Senegalese Union, led by Premier Mamadou Dia and Léopold Senghor. The Union (which on March 25 was absorbed in the new African Federalist Party) obtained all 80 seats in the assembly. The chief election issue was Senegal's participation in the Mali Federation (q.v.), supported by the victorious party, and opposed by the leftist African Regroupment Party and leading Moslem elements. Balloting was marked by attacks on polling places and other violence, and the army was required to restore order in several towns. Mamadou Dia was re-elected premier on April 5. French President Charles de Gaulle, in an address in Saint-Louis on December 12, declared that the Mali Federation would attain to full sovereignty with the aid and accord of France.

M. J. G.

SEYCHELLES. This British crown colony (area, 156¼ square miles; pop., est., 41,081 in 1957) lying in the Indian Ocean 970 miles east of Zanzibar consists of 62 coral reefs and some 30 islands; of the latter the largest is Mahé (56 square miles), on which is Victoria, the capital and chief port. Other principal islands are Praslin, Silhouette, La Digue, Curieuse, and Félicité; dependent islands include the Amirantes, Alphonse, Bijoutier, St. François, St, Pierre, and the Cosmoledo group.

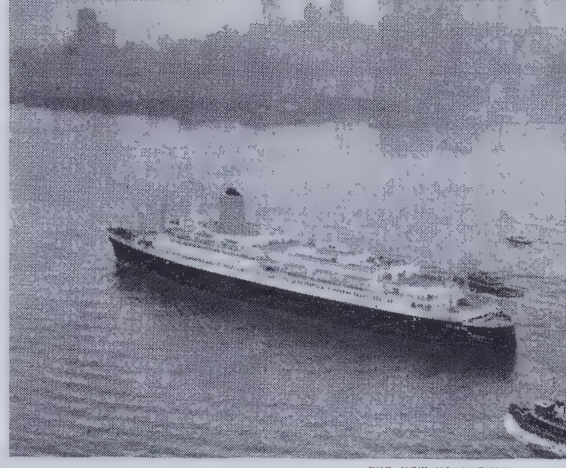
A governor (Sir John Thorp, assumed office in 1958) presides over the 8-member Executive Council and the 12-member Legislative Council. Revenue in 1958 was Rs.4,622,819; expenditure, Rs.5,395,796 (1 Seychelles rupee = U.S.$0.21); the 1959 approved recurrent estimates also showed a substantial deficit. Some Rs.5 million was allocated to development in 1959. A further sum of Rs.13,333,000 is to be expended on a 5-year development program beginning in 1960. There are 33 primary schools and 5 secondary schools.

In 1958 the chief exports were copra (5,598 tons), cinnamon leaf oil (82,190 kilograms), guano (16,805 tons), salt fish (144 tons), patchouli leaves (9,713 kilograms), and vanilla (600 kilograms). Imports were valued at Rs.9,495,612; exports at Rs.8,165,878. About 84 of the 120 miles of roads are motorable. A system of 40 miles of tarmac roads is nearing completion. Steamships on the Bombay-Mombasa-Durban run call at Victoria.

SHETLAND ISLANDS. Situated northeast of the Orkney Islands (q.v.) and off the northern coast of Scotland, this archipelago of about 100 islands forms a Scottish county (known also as Zetland). Aggregate area, 551 square miles; estimated population, 18,400 in December 1957, compared with 19,352 at the 1951 census. The most populous among 19 inhabited islands are Mainland, on which is Lerwick (1951 pop., 5,538), the capital and chief port; and Yell, Unst, Whalsey, West Burra, and Bressay. Principal industries are fishing, wool production and weaving, and the cultivation of oats, barley, and potatoes. The breeding of sheep, cattle, and the islands' famous ponies is also important.

SHIPBUILDING. United States.—Private shipbuilding in the United States during 1959 reflected the worldwide drop in ship construction from the 1958 peacetime high. Falling back from 5th to 8th place in world shipbuilding, United States yards maintained significant activity largely through U.S. Navy contracts and the continuing subsidization of private ship replacements by the Maritime Administration.

Department of Labor statistics for all construction and repair workers in private shipyards showed a decrease to 124,700 in January 1959 from 125,400 for the previous January, with a further drop to 123,100 by July. Average hourly earnings, however, were up in July 1959 to $2.73 for a 39.3-hour workweek from the $2.58 for 39.8 hours reported a year earlier.



THE NEW YORK TIMES

West Germany's newest luxury liner, the *Bremen*, moves into New York harbor, July 16. A former French troopship (the *Pasteur*), the 32,336-gross-ton liner was bought by North German Lloyd and reconditioned at a cost of $17 million.

On Jan. 1, 1959, there were 75 merchant ships (aggregating 1,542,500 gross tons) on order, under construction, or awaiting delivery in privately-owned shipyards.[1] In the following 9 months, contracts were awarded for 19 new vessels, including 15 general cargo fleet replacements for 5 berth line operators; 2 diesel-powered container cargo vessels; a tanker; and a Great Lakes ore carrier. The 25 deliveries for private accounts in the same period included 21 tankers, 2 ore carriers, a self-unloader, and a ferry. Launchings comprised 18 tankers, including the 810-foot *National Defender;* the Maritime Administration's 21,000-ton N.S. *Savannah,* world's first nuclear-powered merchant ship (see ATOMIC ENERGY); 1 ore carrier; 1 ferry; and 1 Coast and Geodetic Survey vessel.

U.S. Navy contracts awarded to private shipyards through September 1959 totaled $279 million. Congress also approved construction of 3 guided-missile frigates; 3 guided-missile destroyers; 4 nuclear-powered submarines; 1 fleet ballistic missile submarine tender; 1 amphibious transport dock; 1 amphibious assault ship; 2 escort vessels; 1 submarine chaser; 1 escort research ship; and 1 oceanographic research ship.

Future construction plans envisage continuation of the Maritime Administration's subsidization of private operators; a sister superliner to the *United States;* an American President Line passenger ship; Great Lakes ore carriers; roll-on roll-off, lift-on lift-off, and container-type ships; and Maritime Administration nuclear projects.

The opening of the St. Lawrence Seaway (q.v.) increased foreign and domestic commerce on the Great Lakes during 1959. Iron ore shipments to July 1 were up to 27,463,168 tons, compared with 11,800,000 for the first six months of 1958. The steel strike, however, curtailed fleet activity and consequently decreased lake shipbuilding and repair work. Fleet shipments fell to 34,202,000 gross tons by October 1 from the 38,277,000 for the same date in 1958, and only 2 commercial vessels were built, compared with 4 for 1958.

[1] The 75 ships comprised 47 tankers, 19 cargo vessels, 3 Great Lakes ore carriers, 2 ferries, and 1 each of a seatrain, self-unloader, Coast and Geodetic Survey vessel, and a nuclear-powered passenger-cargo ship. The seatrain and 1 tanker were cancelled during the year.

Maritime Administration studies have resulted in the adaptation of Great Lakes ship construction to withstand the rigors of constant docking impact. The seaway, however, with its 15 locks, has raised navigational problems which must be resolved to accommodate the expected increase in traffic foreshadowed by the now more than 30 steamship companies using the route. Operators of ocean-going ships will have to adapt their vessels to meet these problems. Coastal and intercoastal shippers already rely on roll-on roll-off, lift-on lift-off, and container-type ships for such traffic. For inland waterway commerce, self-propelled and nonpropelled small craft provide the best service. (See also INLAND WATERWAYS.)

WORLD SHIP CONSTRUCTION

(Vessels of 1,000 gross tons or more under contract for construction as of July 1, 1959, excluding the USSR)

Nation	No. of ships	Gross tons	Nation	No. of ships	Gross tons
World total	1,919	24,855,731[1]	United States	68	1,213,200
Great Britain	369	4,686,736	Italy	73	1,156,650
Germany	312	3,779,880	Denmark	73	859,900
Japan	164	3,266,700	Spain	83	664,565
Sweden	179	2,843,320	Yugoslavia	65	536,600
Netherlands	131	1,654,985	Belgium	35	429,850
France	90	1,439,800	Poland	50	305,600
Norway	97	1,309,000	Others[2]	130	708,945

[1] Comprising 39 passenger vessels (534,819 gross tons), 729 tankers (16,124,651 gross tons), and 1,151 cargo ships (8,196,261 gross tons). [2] Comprising Finland, East Germany, Canada, Australia, India, Taiwan, Portugal, Hong Kong, Greece, Argentina, Bulgaria, Turkey, Philippines, and Ireland, each with less than 1% of the world's tonnage.

Shipbuilding in Other Countries.—Gross world tonnage of construction under way or on order on July 1, 1959 (excluding the USSR) decreased noticeably to 24,855,731 from the 31,240,368 gross tons of the previous July, with Great Britain, Germany, and Japan registering declines. Vessels under construction also dropped sharply to 1,919 from 2,415 in July 1958.

Great Britain maintained her lead in world construction with 18.9% of all shipping, despite a drop from 1958 in both tonnage and vessels. Germany, retaining second place with 15.2%, sent its largest liner, the *Bremen,* on its maiden voyage in 1959. Japan, in third place with 13.1%, had the world's largest seagoing vessel, the 104,520-ton *Universe Apollo.* Sweden held firm in fourth place with 11.4%. The United States, in eighth place with 4.9%, gave way to the Netherlands (fifth place, with 6.6%), France (sixth, with 5.8%), and Norway (seventh, with 5.3%).

SHOE INDUSTRY. United States Output.—In 1959 the American shoe industry produced an estimated 728.6 million pairs of shoes, an increase of 146 million over the 1958 output.

One of the reasons for increased shoe production was the introduction of the oval toe, a modified point, and a wider range of both color and style for men. Output of colored footwear for children also increased because of the introduction of new pastels and a wider variety of styles.

A dramatic new development of 1959 was the introduction of "Evershine," a chemically treated leather for men's and children's shoes. Produced by Genesco, the shoes thus treated need only be wiped with a cloth to restore the original luster.

Over 900 manufacturers employing some 261,000 workers (excluding rubber workers) comprise the American shoe industry. In 1959, women's footwear accounted for 47.5% of total production, or 344,185,000 pairs, and men's shoes for 19%, or 137,674,000 pairs. Misses', children's, boys', youths', and infants' footwear accounted for 139,684,000 pairs, and other categories for 107,097,000 pairs.

Retail prices of shoes increased slightly from a $6.10 average in 1958 to $6.33 in 1959, due to higher leather and production costs. Factory prices were expected to average about $3.76 per pair, as compared with $3.66 in 1958. Totals for shoe sales in all retail stores were $2,221 million in 1958, compared with $2,090 million in 1957.

The American shoe industry continued to produce slightly over 40% of the world's footwear. Thus the United States was the best-shod nation, with shoe consumption averaging slightly more than 3.66 pairs per capita.

World Output.—The estimated world production of leather footwear for 1959 was 1,821,600,000 pairs. Those countries with per capita production of one or more pairs in 1958 are listed in the accompanying table.

Country	Per capita shoe output (pairs)	Country	Per capita shoe output (pairs)
United States	3.66	Denmark	1.34
United Kingdom	2.80	Germany	1.36
Canada	2.76	Cuba	1.30
Australia	2.56	Norway	1.24
New Zealand	2.55	South Africa	1.22
Switzerland	1.84	Argentina	1.21
Israel	1.78	Austria	1.17
Ireland	1.64	France	1.17
Netherlands	1.62	Chile	1.04
Sweden	1.45	Brazil	1.00

SICILY. An island of the Mediterranean Sea off the southwest tip of the Italian Peninsula, forming, with nearby islands, an autonomous region of Italy. Area (of the region), 9,923 square miles; pop. (est. 1954), 4,462,220. Chief cities are Palermo, the capital, 501,005; Catania, 300,298; and Messina, 220,790. The regional government is headed by a ministry responsible to an elected 90-member parliament. Sicily's chief exports are citrus fruits, wine, olives, wheat, and sulfur. Formerly one of Italy's most backward areas, Sicily has recently benefited from the Italian government's program for the economic development of the south.

In the Sicilian regional elections of June 8, 1959, the Christian Democrats obtained 34 seats (37 in 1955); the Communists, 21 (20); and the left-wing Socialists, 11 (10). The Sicilian Christian Social Union, founded by Silvio Milazzo, who split with the Christian Democrats in 1958, won 9 seats. On July 28, Milazzo was re-elected as head of the regional government, and his Communist-supported coalition government, formed on August 12, again included leftists and rightists. Milazzo resigned on December 7, when his budget was rejected in parliament, but was re-elected on December 18. (See also ITALY.)

SIKKIM. See Index entry.

SILK. United States.—During the first ten months of 1959, according to the American Silk

Council, United States consumption of raw silk was 39,425 standard bales of 132.275 pounds, approximately 25% higher than for the same period in 1958 (31,426 bales). Imports of 39,813 bales were about 56% higher than for the same ten-month period in 1958 (25,392 bales). Consumption for the full year 1958 was 40,070 bales, and imports totaled 35,020 bales.

World Production.—World raw silk output totaled 33,150 metric tons in 1958 (an increase of about 3% over 1957), as shown in the accompanying table.

RAW SILK PRODUCTION, BY MAJOR COUNTRIES, 1958

Country	Metric tons	Country	Metric tons
Belgian Congo	50	Japan	20,014[1]
Brazil	180	Korea	337[2]
Bulgaria	30	Lebanon	14
China	7,548	Poland	4
France[3]	9	Rumania	15
Greece	30	Spain	40
Hungary	20	Syria	15
India[4]	866	Turkey	267
Indochina[6]	178	USSR	2,500
Iran	145	Yugoslavia	60
Italy[5]	828		

[1] First 9 months of 1959, 14,001. [2] First 6 months of 1959, 95.7. [3] First 8 months of 1959, 8. [4] First 6 months of 1959, 570. [5] First 6 months of 1959, 443.9. [6] South Vietnam, Cambodia, Laos. (Source: International Silk Association.)

World Consumption.—Reported raw silk consumption in 1958 totaled 17,825 metric tons, with Japan and the United States again leading the users, as shown in the accompanying table.

RAW SILK CONSUMPTION, BY MAJOR COUNTRIES
(In metric tons)

	1958 (12 months)	1959 (for period specified)
France	695	367 (9 months)
Germany	216	120 (6 months)
Great Britain	152	117 (6 months)
Italy	1,549	1,002 (6 months)
Korea	275	...
Japan	12,217	11,876 (9 months)
Switzerland	336	302 (9 months)
United States	2,385	2,085 (9 months)

Marketing.—The American market was no exception to the rule of increased consumption of raw silk during 1959. A substantial increase in consumption took place in Japan, where weavers enjoyed an excellent year for the export of their woven goods, thus bringing into balance the supply and demand factors in the raw silk market. The price in New York of 20/22 denier, Grade 2A advanced from a low of $3.20 a pound in January 1959 to $4.20 a pound in November. The year also witnessed the liquidation of about 50% of the Japanese government-held stocks.

(See also TEXTILE INDUSTRY.)

JOHN McN. SULLIVAN,
President, American Silk Council, Inc.

SILVER. The accompanying table shows world silver production, in millions of fine ounces. The Western Hemisphere supplied nearly two thirds of the total.

Year	World	U.S.	% U.S.	Year	World	U.S.	% U.S.
1949	174.0	39.94	22.9	1954	214.2	35.58	16.6
1950	203.3	42.31	20.8	1955	223.4	36.47	16.3
1951	199.7	39.91	20.0	1956	224.4	38.95	17.4
1952	215.5	39.84	18.5	1957	230.1*	38.72	16.9
1953	221.7	37.74	17.0	1958	236.8	36.80	16.0

* Revised. (Source: U.S. Bureau of Mines.)

United States.—Production declined from 38,165,000 ounces in 1957 to 34,111,000 ounces in 1958, or about 11%. In the first 10 months of 1959, output from mines was 26,409,969 ounces (preliminary).

Canada.—In 1958, output of 31,087,681 ounces was an increase over the 28,823,298 ounces produced in 1957. In the first 9 months of 1959, silver output was 23,835,647 ounces, compared with 23,184,722 ounces in 1957.

Mexico.—The world's leading producer of silver reported an output of 47,589,528 ounces in 1958, compared with 47,149,513 ounces in 1957. Output in the first 7 months of 1959 was 25,379,000 ounces, compared with 26,810,000 ounces in the corresponding months of 1958.

(See MINERAL PRODUCTION for table showing output of major silver-producing countries.)

SINGAPORE. Separated from the southern end of the Malay Peninsula by the Straits of Johore, this former British crown colony became a self-governing state within the Commonwealth on June 3, 1959. Singapore Island and adjoining islets have an area of 224.5 square miles. The population of 1,549,000 (est. Dec. 31, 1958) consists of 1,180,000 Chinese, 190,000 Malaysians, 130,000 Indians and Pakistanis, and 49,000 others.

Government.—In accordance with the new constitution (prepared in 1957) and the State of Singapore Bill (Aug. 1, 1958), Singapore was granted home rule at midnight on June 2–3, 1959. The United Kingdom retains responsibility for the new state's defense and foreign affairs. The former governor (Sir William Goode) became ceremonial head of state for a transitional period of six months, after which a native (Yusof Bin Ishak) assumed the office as the first Malayan-born head of state; the ex-governor is United Kingdom high commissioner in Singapore. The new state is governed by a 9-member Council of Ministers responsible to a 51-member Legislative Assembly, which is elected by popular vote to a 5-year term. Following the first state elections of May 30, 1959, party alignment in the assembly was as follows: People's Action Party, 43; Singapore People's Alliance, 4; Malay Alliance, 3; and 1 independent. Prime Minister Lee Kuan Yew heads the first state cabinet, which took office on June 5, 1959 (see below, *Principal Events*).

Finance.—Public revenue for 1958 was estimated (in sterling) at £29,069,637; expenditure, at £32,320,741. The common currency is the Malayan dollar, which equals U.S.$0.33.

Education.—The high illiteracy rate (54% of the population over 15 years of age at the 1947 census) has been reduced in recent years through a large-scale education program. In 1958 there were 702 schools with a total enrollment of 295,023 pupils; they include 263 government and grant-aided English schools (with 131,613 pupils), 244 government and grant-aided Chinese schools (127,515), and 66 government Malay schools (14,493). The University of Malaya had 1,812 students in 1958; Nanyang University, 1,340 students; and Singapore Polytechnic, 1,300.

Transportation.—The second major Commonwealth port after London, Singapore is served by 40 major shipping lines and handles about 60 million tons of freight annually. Singapore Airport provides facilities for the Malayan Airlines and 14 foreign airlines. In 1958 there were 478 miles of roads. The Malayan Railway operates 16 miles of railroad which connects by causeway with Malaya.

Production.—The economy is dependent on Singapore's position as an entrepôt port and processing center for Southeast Asia. Major industries are the milling of rubber and tin smelting. Production of rubber for export in 1958 totaled 206,400 metric tons, and of exported tin metal, 8,000 metric tons. Shipbuilding and repairing, marine engineering, and construction are also important. In recent years the government has encouraged the manufacture of light consumer goods. Principal manufactures include rubber products, building materials, furniture, textiles, paper, metal products, food products, and beverages. Output of coconut oil was 31,200 metric tons in 1958. Production of electricity in 1958 was 564 million kw-hr. (up 14% over 1957).

Although 85% of the state is rural, agriculture is of minor importance. Rubber, tobacco, coconuts, vegetables, and fruits are grown, and poultry and hogs are raised for local consumption. Lumber processing is a minor industry. The fish catch was 10,200 metric tons in 1957.

Foreign Trade.—Singapore handles about 70% of the Federation of Malay's annual exports and imports. In 1958, Singapore's total exports totaled M$3,144 million; imports, M$3,744 million. Crude rubber accounts for over 40% of export value, followed by tin, petroleum products, lumber, coconut oil, and copra. Chief imports include textiles (primarily for re-export), iron and steel products, machinery, fuels, chemicals, and foodstuffs. In 1958 the United Kingdom took 10% of Singapore's total exports, and provided 12% of imports; the United States received 7% of exports, and supplied 4% of imports.

Principal Events, 1959.—In preparation for self-government, compulsory elections were held on May 30, in which over 90% of the electorate of about 600,000 participated. The leftist People's Action Party (PAP) received 54% of the popular vote and won a dominant majority of 43 seats in the Legislative Assembly. The party's announced goal is to achieve an "independent, democratic, non-Communist socialist" state uniting Singapore with the Federation of Malaya. As a condition for forming a government, the PAP obtained the release of eight party leaders who had been imprisoned in 1956–57 for violating the antisubversive law.

The new government, headed by Prime Minister Lee Kuan Yew, the 35-year-old, British-educated secretary general of the PAP, took office on June 5. Its first official action was to ban, on June 8, eight publications which it called "pornographic" and an offense to public morality. On July 19, the government ordered community centers to remove all publications which had been supplied by the United States Information Center.

Singapore and Britain agreed on August 22 to establish a joint committee for consultation on foreign affairs and defense.

SMALL BUSINESS ADMINISTRATION. The Small Business Administration (SBA) is a permanent and independent agency of the federal government which provides a wide range of services to small businesses. The administrator, Wendell B. Barnes, resigned as of Nov. 21, 1959, and was succeeded by Philip McCallum, who was appointed by the president on the same date.

In the 6½ years since it began operations, the agency has approved about 18,000 loans totaling $850 million to assist small firms which could not obtain private financing. It has approved more than 9,000 loans valued at about $100 million to help victims of storms, floods, and other disasters rebuild or replace their businesses and homes, or to help small businesses which had suffered economic injury because of drought or excessive rainfall. In addition, the SBA has helped small business concerns obtain more than 75,000 government contracts totaling about $3 billion; has assisted many thousands of small firms with management and technical problems; and has cosponsored, with leading educational institutions, some 700 administrative management courses attended by about 20,000 small business owners and managers.

In other programs, which got fully under way in 1959, the SBA approves, regulates, and helps finance privately owned small business investment companies which provide equity-type and long-term financing for small business, and finances research into the problems of financing and managing small business concerns. By the end of 1959 the agency had licensed about 50 small business investment companies. Also, it had made 52 grants totaling about $2 million for research studies by educational institutions and state agencies.

Philip McCallum,
Administrator.

SMITH, Sidney Earle (62), Canadian public official and educator: b. Port Hood, Nova Scotia, March 9, 1897; d. Ottawa, Ontario, March 17, 1959. After a distinguished career as a lawyer, teacher of law, and university administrator, Sidney E. Smith served from 1957 until his death in the cabinet of Prime Minister John Diefenbaker as Canada's secretary of state for external affairs.

His education at the University of King's College (B.A., 1915; M.A., 1919) was interrupted by military service in France with the 9th Canadian Siege Battery in 1916–18 and the Royal Flying Corps in 1918–19. On completion of his formal training in law at Dalhousie University (LL.B., 1920) and Harvard University (1920–21), he was admitted to the Nova Scotia bar. He taught on Dalhousie University's Faculty of Law (1921–25) and at Toronto's Osgoode Hill Law School (1925–29), and served as Dalhousie's dean of the Faculty of Law (1929–34). He wrote *Selection of Cases on the Law of Trusts* (1928) and co-authored *Manual of Canadian Business Law* (1930) and *Selection of Cases on Equity* (1931).

In 1934, at the age of 37, Smith became president of the University of Manitoba. His success there and later (1944–45), as principal of University College, Toronto, led to his appointment in 1945 as president of the University of Toronto, where he established a reputation during his 12-year tenure as an "eloquent advocate of liberal education."

After the Conservative Party's victory in the elections of June 10, 1957, he was invited by Prime Minister Diefenbaker to join the cabinet as foreign minister, and he took office on September 13.

SMITHSONIAN INSTITUTION. This institution was created by act of Congress in 1846, under the will of James Smithson, English chemist, as "an establishment for the increase and diffusion of knowledge among men." The purposes of the institution are carried out by research, exploration, publication, and museum and art gallery exhibits. In addition to the original endowment, which has been increased from various sources over the years, the Smithsonian Institution now administers ten "bureaus" supported wholly or in part by Federal appropriation.[1]

Activities and Accessions.—During 1959 the institution continued its scientific investigations, chiefly in the fields of anthropology, astrophysics, biology, and geology, and several field expeditions were in progress in the interests of these researches. Construction work continued on the Smithsonian's new $36 million Museum of History and Technology, at a site between 12th and 14th Streets on the Mall in Washington, D.C.

The National Museum collections were increased by approximately 1,145,000 specimens during 1959, bringing the total catalogue entries to more than 52 million. The exhibits-modernization program was successfully continued, and three

[1] These are the United States National Museum, the Bureau of American Ethnology, the Astrophysical Observatory, the National Collection of Fine Arts, the Freer Gallery of Art, the National Air Museum, the National Zoological Park, the Canal Zone Biological Area, the International Exchange Service, and the National Gallery of Art (with separate board of trustees).

new halls were opened to the public—the Graphic Arts Hall, the Hall of Gems and Minerals, and the Textile Hall. An event of the year of particular public interest was the unveiling of the large Fényövi elephant in the rotunda of the Natural History Building. The Maude Monell Vetleson collection of Chinese jade carvings was also placed on display. Members of the museum staff conducted field work in Central America, South America, the Caribbean area, Europe, and many parts of the United States.

The National Gallery of Art received 370 accessions. It held eight special exhibits. The National Collection of Fine Arts sponsored 17 special exhibits, and its Traveling Exhibition Service circulated 100 exhibitions. The Freer Gallery of Art acquired many choice specimens of Oriental art.

Anthropologists on the staff of the Bureau of American Ethnology continued their researches and publication in archaeology and ethnology. The River Basin Surveys unit continued its archaeological work at sites threatened by dam and reservoir construction, particularly in the Missouri Valley.

The work of the Smithsonian Astrophysical Observatory continued along four principal lines—solar astrophysics, upper atmosphere, meteors, and the satellite-tracking program. The division of radiation and organisms continued its researches on the photomechanisms in plants as controlled by radiant energy.

The National Air Museum accessioned 341 specimens, including an early example of a German one-man helicopter; a DM-1 delta-winged glider of World War II; a replica of the Army's Explorer I, the first United States earth satellite placed in orbit, together with its Jupiter C carrier missile; the recovered nose cone of the Jupiter C; and a recovered instrumented capsule from a long-range ballistic missile. A site for the new building for the Air Museum was approved in 1959.

The National Zoological Park accessioned 1,286 individual animals during the year, noteworthy among which were a herd of 14 reindeer, three Rocky Mountain goats, five pronghorn antelopes, six albatrosses, the first Dall sheep ever exhibited in an American zoo, and a pair of Pallas' cats. A female wisent was born in captivity.

Publications and Library.—Of the 81 new publications appearing under the Smithsonian imprint during 1959, outstanding works included: *Studies in Invertebrate Morphology,* papers by 18 contributors published in honor of Dr. Robert Evans Snodgrass; *Pueblo del Arroyo, Chaco Canyon, New Mexico,* by Neil M. Judd; *The Journals of Daniel Noble Johnson (1822–1863), United States Navy,* edited by Mendel L. Peterson; *First Book of Grasses,* 3d., by Agnes Chase; *Checklist of the Millipeds of North America,* by Ralph V. Chamberlin and Richard L. Hoffman; *Ichneumon-flies of America North of Mexico,* by Henry and Marjorie Townes; *The Native Brotherhoods: Modern Intertribal Organizations on the Northwest Coast,* by Philip Drucker; and *The North Alaska Eskimo: a Study in Ecology and Society,* by Robert F. Spencer. The Smithsonian Library, including its various branches, houses approximately 982,600 volumes.

Visitors.—The year's recorded visitors to the Smithsonian buildings reached an all-time high of more than 11 million, including the main Smithsonian Building, the Natural History Building, the Arts and Industries Building, the Aircraft Building, the Freer Gallery, the National Gallery of Art, and the National Zoological Park. About 400 persons visited the Canal Zone Biological Area, Barro Colorado Island, Panama.

PAUL H. OEHSER,
Chief, Editorial and Publications Division.

SOAP AND SYNTHETIC DETERGENTS. The United States is one of the world's largest producers and consumers of soaps and synthetic detergents. Household consumption accounts for about 85% of production, with the balance used in industrial cleaning and processing. Domestic per capita consumption has been increasing for several years. In 1958 this figure stood at 28.1 pounds, compared with 25.4 pounds only ten years before. Postwar economic development, the very broad range of washable products in everyday use, and the ease of household laundering have favorably affected per capita consumption despite the greater efficiency of soaps and detergents achieved through intensive chemical research.

Since World War II, synthetic detergents have increasingly penetrated markets traditionally dominated by packaged and bar home laundry soaps, until they now represent around 75% of total sales. Although broad-scale presentation of synthetics occurred somewhat later in Europe, they have also gained increased popularity there. In Austria, Belgium, France, the Netherlands, and Switzerland, synthetics presently claim approximately 50% of total sales, and in Germany they have reached 66% of the total.

According to the Association of American Soap & Glycerine Producers, Inc., estimated annual sales of soap and synthetic detergents in the United States in recent years are as follows:

Year	Soap*	Synthetic Detergents	Total
	(Amount in millions of pounds)		
1948	3,088	636	3,724
1956	1,506	3,068	4,574
1957	1,367	3,507	4,874
1958	1,299	3,594	4,893

* Excludes liquid soaps and scouring cleansers.

About 85% of synthetic detergents sold in 1958 were solid, and some 15% were liquid. Solid synthetic detergents were the first to win wide consumer acclaim, but liquid synthetic detergents have shown a strong upward trend since 1954.

Glycerine.—Glycerine is a co-product of soap manufacture. With the ascendancy of synthetic detergents, the supply of glycerine from soap production has declined. In recent years this decline has been largely offset by sizable production of glycerine from propylene. In 1958, production of glycerine in the United States totaled 213 million pounds, of which an estimated 100 million pounds were made from propylene.

SOCIAL SECURITY. Most gainfully employed persons have protection under a public program (federal or state-federal) against the major risks to the economic security of the family and the individual: old age, prolonged disability, unemployment, or death of the family breadwinner. The Social Security Act covers all these risks.

The Social Security Administration, a unit of the Department of Health, Education, and Welfare, has the responsibility for three major programs under the Social Security Act: federal old-age, survivors, and disability insurance. (Another Social Security Act program—federal-state unemployment insurance—is the responsibility of the Department of Labor.) The Social Security Administration is also responsible for the federal aspects of the public assistance, maternal and child health, and child welfare programs, and administers operations under the Federal Credit Union Act.

During 1959 most states held their regular biennial legislative sessions and made some changes in their public assistance and unemployment insurance laws. Federal legislation of 1959 included amendments to the railroad retirement and railroad unemployment insurance programs; a three-month extension of the temporary unemployment com-

pensation program enacted in 1958; changes in nonservice-connected pensions for veterans and their dependents (see VETERANS ADMINISTRATION); broadening of the scope of federal employee benefits by providing for government sharing in the cost of health insurance; and minor coverage amendments in old-age, survivors, and disability insurance.

Old-Age, Survivors, and Disability Insurance.—A law signed Sept. 16, 1959, made coverage available for policemen and firemen in four additional states and gave certain states more time to arrange for coverage of a small group of state and local government employees.

At the beginning of 1959, about 55,600,000 of the gainfully employed were in covered jobs, and another million were covered jointly by the railroad retirement and old-age, survivors, and disability insurance programs. During the year, employers and employees paid contributions at the rate of 2½% each and the self-employed at 3¾%. In 1960, 1961, and 1962, employers and employees will each pay 3% and the self-employed will pay 4½%. Beginning Jan. 1, 1959, the maximum taxable amount of earnings became $4,800 a year.

The higher benefit amounts provided by the 1958 amendments were effective in January. For the fiscal year ended June 30, 1959, monthly benefit payments totaled $9.2 billion. In September 1959 about 13,486,000 persons were receiving benefits at a monthly rate of $828.5 million. The average benefit to a retired worker was $81.18. Benefits for the dependents of disabled-worker beneficiaries, first payable for September 1958, numbered 109,000 by September 1959.

Public Assistance.—The federal government makes grants to help the states finance their assistance programs for four groups of needy persons: dependent children, the aged, the blind, and the permanently and totally disabled. These programs are administered by the states; the federal government shares in the costs within certain maximums. The 1958 amendments to the Social Security Act changed the basis for federal financial participation, making additional funds available to the states, simplifying administrative procedures with respect to the federal matching formula, and achieving a greater degree of equity in financing the programs by relating the federal share in the payments to the state's fiscal capacity as measured by its per capita income.

During 1959, federal funds were being used for old-age assistance, aid to the blind, and aid to dependent children in all states. Programs of aid to the permanently and totally disabled were in operation in 49 states at the end of the year. In September, 2,917,000 persons were receiving aid to dependent children. Old-age assistance payments were going to 2,404,000 persons; about 109,000 persons were receiving aid to the blind; and 344,000 persons were receiving aid to the permanently and totally disabled. Average payments were $64.79 per aged recipient, $69.18 per blind recipient, $28.58 per person getting aid to dependent children, and $63.66 for aid to the disabled. By July 1959, Guam—included under the public assistance and child health and welfare provisions of the Social Security Act by the 1958 amendments—was making payments under approved plans for all four of the special types of assistance, as well as for general assistance.

State and local governments administer a program of general assistance without federal aid. In September 1959 an estimated 393,000 cases were getting general assistance; the average payment per case was $69.62.

The total spent for assistance during the fiscal year 1958–59 was about $3,574 million, comprising $3,148 million for the federal-state programs and $426 million for general assistance.

Maternal and Child Health and Child Welfare.—The Social Security Act authorizes federal grants to the states to extend and improve health and welfare services for mothers and children.

Federal payments made to the states for maternal and child health services totaled $16,494,000 in the fiscal year 1958–59. Typical services were prenatal clinics, child-health conferences, immunizations, public health nursing services, and services of physicians and dentists for children of school age.

Federal grants amounting to $15,216,000 were made to the states for services for crippled children in 1958–59. Locating these children, diagnosing their condition, providing or locating skilled care for them, and working with private and public groups concerned with their care and training are among the services provided.

During the year ended June 30, 1959, the federal government paid $11,833,000 for child welfare services to help the states protect and care for homeless, dependent, and neglected children, and children in danger of becoming delinquent.

Federal Credit Unions.—The Social Security Administration is responsible for the chartering and supervision of credit unions organized under the Federal Credit Union Act. These are cooperative organizations designed to promote thrift among their members and to create a source of loans for provident and productive purposes. Membership is limited to groups having a common bond of association, occupation, or residence. On June 30, 1959, about 9,300 of these credit unions were in operation with a total membership of about 5,500,000.

W. L. MITCHELL,
Commissioner, Social Security Administration.

SOCIAL WELFARE. Public and voluntary social welfare programs in the United States continued in 1959 to cover a widening range of social services to individuals and families from all economic, social, and educational levels. There continued to be a steady increase in appropriations by federal, state, and local governments for the support of public welfare programs. Also, the total amounts raised through voluntary contributions increased as part of expanded fund-raising drives in a growing economy. (See UNITED FUNDS AND COMMUNITY CHESTS; PHILANTHROPY.)

During 1959 the great majority of state legislatures were in session, and as a result a number of laws directed toward strengthening various aspects of the public welfare programs were enacted. Since the legislation was developed primarily in terms of individual state situations, no major nationwide trends were observable. It is important to note, however, that there was substantial legislative activity in the areas of: administration, services to the aged, the blind, children and youth, corrections, medical care, and mental health.

No major federal legislation was enacted in 1959 with respect to public welfare, as customarily defined. Rather, there was continued emphasis by states on putting into effect the extensive amendments to the Social Security Act enacted in 1956 and in 1958. Since the latter amendments did not go into effect until October 1958, much of the impact of this substantial legislation was of major significance for 1959. Generally there was a con-

tinuation of special emphasis on casework services to individuals and families, as well as providing somewhat more adequate assistance in cases of financial need. States made further progress in the development of programs to implement the 1956 amendments, which placed stress upon services in public assistance directed toward self-care, self-support, and the strengthening of family life.

Public Assistance.—The year 1959 was marked by a substantial increase in caseloads in aid to dependent children and aid to the permanently and totally disabled, as an aftermath of the recession of the winter of 1958–59. While other factors contributed to this increase—the caseloads in both programs had been moving upward over the years—the upward trend was accentuated by the economic situation. On the other hand the slow recent downward trend in old-age assistance, a result primarily of the extension of old-age and survivors insurance to more beneficiaries, continued in 1959.

The net changes resulted in a small decrease in old-age assistance from a total caseload of 2,460,000 in June 1958 to 2,420,000 in June 1959. The average payment to these recipients, including vendor payments for medical care, increased from $61.39 to $64.76 in the same period. For aid to dependent children the caseload increased from 2,733,000 recipients to 2,929,000 recipients, with the average payment per individual recipient, including vendor payments for medical care, rising from $27.29 to $28.39. The increase in caseload in aid to dependent children was 7.2%, as compared with an increase of 11.5% in the amount of total payments. For aid to the blind the caseload rose only from 108,000 to 109,000, but average payments increased from $66.72 to $69.04. The program of aid to the permanently and totally disabled, not yet in effect in all states, increased from a caseload of 313,000 in June 1958 to 339,000 in June 1959, with average grants rising from $60.71 to $63.37. In this rapidly expanding program the number of recipients increased by 8.5% and the total amount of payments to recipients by 13.3%.

The general assistance program strongly reflected the change in the nation's economic situation. The already expanded load of 418,000 cases in June 1958 rose to a peak of 480,000 in February and March 1959, and then declined to 388,000 in June. This program always involves seasonal changes, but these changes are more acute when there are significant fluctuations in the economy.

During 1959 several policy areas in the public assistance program received special attention, although no changes in law resulted. One of these was the growing emphasis upon the need for abolition of all residence requirements for public assistance, a proposal actively supported by the secretary of health, education, and welfare. Also, in August 1959 at the annual Governor's Conference, resolutions were adopted which called for a uniform one-year ceiling in the public assistance categories and for enactment of interstate compacts directed toward better provisions through general assistance for needy people who move across state lines.

The general concern about "stateless" persons and about the fact that federal funds should be available to help take care of needy people irrespective of where they live is expected to lead toward some change in existing residence requirements for public assistance under the Social Security Act.

Another major area of attention during 1959 was the program of aid to dependent children. The changing characteristics of this mounting caseload, growing out of basic changes in American society, have led to special concern over parents who desert their children or over parents who are not married. Such concern was reflected in a special study of the aid to dependent children program of the federal Bureau of Public Assistance, made in the last quarter of 1958. (See also SOCIAL SECURITY.)

Child Welfare.—Latest available data show that in June 1958 about 417,000 children in the United States were receiving child welfare services. Of this total, 292,000 received services through public agencies and 125,000 from voluntary agencies. Public child welfare agencies provided services to 43 out of every 100,000 children in the country and voluntary agencies to 19 children per 100,000.

Special attention was given during the year to homemaker service as an effective means of strengthening a child's family situation. Much attention was also directed toward the development of day-care services under a licensing authority, particularly for children of working mothers. (See also CHILD WELFARE.)

Substantial increases in the volume of child welfare services, more effectively to meet current demands and to strengthen protective and preventive services, will be dependent upon increased appropriations at all levels of government. Steady gains were noted in state and local appropriations in 1959 for child welfare programs. (A very small proportion of the total cost of such services is carried by the federal government.)

Services to the Aged.—Concern for and programs to meet the needs of the increasing numbers of older people who must have specialized services, with or without financial assistance, were widely stressed in 1959. As a growing number of agencies and groups enter the field, there is a gradually developing clarification of services and a growing recognition of the fact that a broad program of services is essential to meet the varying needs of older people. Staff members are being added to federal and state social welfare agencies in order to give increasing leadership in this field. Voluntary agencies are likewise strengthening their programs for the aged. (See also OLD AGE.)

Medical Care.—The 1958 changes in the Social Security Act encouraged the development of more effective vendor payment programs for medical care of public assistance recipients. While the scope of such programs varies widely from state to state, some type of program was in effect for one or all of the four categories of public assistance by June 1959 in 45 of the 53 state and territorial jurisdictions.

Advisory Councils.—The 1958 amendments to the Social Security Act provided for an Advisory Council on Public Assistance and for an Advisory Council on Child Welfare Services. Each council has 12 members appointed by the secretary of health, education, and welfare, and each is to report its findings and recommendations by Jan. 1, 1960. Both councils were quite active in 1959, and comprehensive reports, with major recommendations, were expected to be filed by the end of 1959. It was expected that the reports would be of substantial importance in relation to any proposals for immediate and long-range changes in federal legislation affecting both public assistance and child welfare services.

Voluntary Social Welfare Programs.—With increased financing, voluntary social welfare agencies have continued to strengthen their programs. In those agencies with higher standards the focus is generally on skilled services in carefully defined areas. Such agencies are in a position to set high standards, to experiment with newer types of services, and to provide demonstrations which may lead to broader use of specialized services in the

public as well as the voluntary agencies. In a number of instances special research projects are pointing the way toward more understanding of problem areas and more effective ways of dealing with them.

White House Conferences.—During 1959 the National Committee for the White House Conference on Children and Youth, to be held in March 1960, was actively engaged in the compilation of basic materials and the development of the conference program. Planning at the national level was supported by widespread activity on the part of the states, with many active state committees and often with substantial local activity. By the end of 1959 each state was to have submitted a comprehensive report on its progress in the broad field of child welfare over the past decade and on its goals for the future.

The National Advisory Committee for the White House Conference on Aging, to be held in January 1961, was appointed by the president. It also was active, with 20 basic subcommittees set up to develop position papers on a wide range of subject matter. State committees and commissions in the field of the aging faced much activity during 1960 in preparing for the 1961 conference.

(For discussion of social welfare developments in other countries see articles on those countries and consult the Index entry, *Social Welfare.*)

ELLEN WINSTON,
Commissioner, North Carolina State Board of Public Welfare.

SOCIALISM. Socialism in 1959 showed its greatest strength, as in former years, in western Europe, while becoming increasingly influential in Asia and Africa. Socialists urged the strengthening of social welfare services, greater democratic public planning for increased production, full employment, and a more equitable distribution of income. On the international front, they opposed colonialism and national aggression and supported controlled disarmament and greater economic and cultural aid to underdeveloped countries.

International Activities.—Socialist international bureaus such as the Socialist International, the Asian Socialist Conference, and the Socialist Union of Central-Eastern Europe continued to represent Socialist viewpoints on international issues. Numerous conferences were held by affiliated groups representing Socialist women, youth, teachers, members of the press, and legislators.

The Sixth Annual Congress of the Socialist International, meeting in Hamburg, Germany, July 14–17, and attended by representatives from affiliated groups in 38 countries, with a membership of 10,702,475, voted in favor of a summit conference, declared their solidarity with the people of West Berlin in their right to liberty, and affirmed that the solution of the Berlin problem could be found only in the context of a united democratic German republic. Favoring negotiated disarmament, they maintained that any disarmament agreement should not alter the balance of military power; they also urged the continuance of the truce in nuclear tests. The recommendation was made that industrialized nations should devote at least 1% of their national income for aid to underdeveloped countries.

Europe. *Great Britain.*—In Great Britain the Labour Party lost strength in the parliamentary elections of October 8, electing only 258 members of Parliament, as compared with 277 in the 1955 election. Labour's percentage of the popular vote was 43.8%, as compared with 46.4% in 1955. After the elections, Aneurin Bevan was voted deputy leader of the Parliamentary Labour Party, with Hugh Gaitskell remaining as leader of the national party. During the year the party supported a plan for military disengagement in central Europe, urged a more liberal colonial policy, and advocated Britain's giving up her nuclear bombs if all countries except the United States and the Soviet Union agreed not to manufacture and stockpile them. In domestic affairs the party campaigned for such goals as strengthened social services, the renationalization of steel and road transport, and public investment in private industries.

France.—The Socialist Party in France remained outside of the Gaullist government of Premier Michel Debré, maintaining its role of "constructive opposition." In March it obtained about one eighth of the popular vote, as it had in previous elections. It recommended controlled suspension of nuclear tests for two years, the liberation of the peoples of the African community, an Algeria with its own institutions but linked to France, and progress toward economic and political unity among the democratic countries of Europe. Guy Mollet continued as the party's secretary. A dissident Socialist group, known as the Autonomous Socialist Party, gained increasing prominence; among its new recruits was a former premier, Pierre Mendès-France.

West Germany.—The Social Democratic Party continued to be the chief opposition party. On July 1, its candidate for president, Dr. Carlo Schmid, received 386 votes in a special electoral college, as compared with 526 votes for the successful candidate, Dr. Heinrich Luebke, of the Christian Democratic Union Party. In Lower Saxony, the Social Democrats increased their proportion of total votes cast in the state elections from 35.2% (1955) to 39.5%; in Schleswig-Holstein, from 35.9% to 36.8%; and in the city state of Bremen, from 47.8% to 54.9%. In the Rhineland-Palatinate, the party's parliamentary representation advanced from 31.7% to 34.9%. In Bremen the Social Democrats, having elected 61 out of 100 deputies, again formed a coalition government headed by Socialist Minister-President Wilhelm Kaisen.

In November the party chairman, Erich Ollenhauer, submitted to the delegates to the party congress a new party program which declared that "the greatest and most urgent task is to preserve peace and promote freedom," and which allocated to the private sector of the economy a larger field of effort than had former German Socialist platforms. The majority of delegates to the party congress agreed that national defense was the duty of every citizen, called for international condemnation of weapons of mass destruction, and urged reunification of Germany in a "militarily relaxed European zone."

Italy.—The end of 1959 found the Italian Socialist movement divided into three parts. The largest group, the Socialist Party, which for years had closely cooperated with the Communist Party, re-elected Pietro Nenni as party secretary in January and called for the "autonomy" of the party. It declared that the democratic method must be chosen as the road to socialism and maintained that socialism must guarantee the fundamental civil rights of man. At the same time the convention declared its unwillingness to have the party cease its cooperation with the Communists in certain towns and cities and in trade unions and consumer cooperatives.

Following this convention the Social Democratic Party, supporters of Amintore Fanfani's coalition government and led by Giuseppe Saragat, decided against a merger with Nenni's party until it had completely severed its ties with the Commu-

nists. A minority of the Social Democrats led by Matteo Matteotti disagreed with this policy and resigned from Parliament to form the "Socialist Initiative" Party. The Social Democrats remained outside the government after the fall of Fanfani's coalition cabinet at the end of January.

Other Countries.—Socialists continued in their leadership of the governments of Denmark, Norway, and Sweden. In Sweden the Social Democrats won a victory on May 14 in the final passage of an old-age pension law which provides for a pension of approximately two thirds of a person's average income in the most favorable 15 years of his working life. In the September 28 municipal elections in Norway, the Labor Party received, as in the previous elections, about 43% of the votes cast, though suffering a slight drop in the number of seats won. In Finland the Social Democrats, who formed the chief opposition party, continued to advocate neutrality between the Western and Eastern military groupings. In Iceland, Premier Emil Jonsson, Social Democrat, headed a minority government most of the year. In the October elections, Social Democrats elected 9 members of Parliament, polling 15.2% of the votes.

In the parliamentary elections in Austria in May, the Social Democratic Party elected 78 representatives, an increase of 4, while the People's Party won 79, a decrease of 3. Following the elections, leaders of the two parties formed another coalition government, the Socialists obtaining the posts of vice chancellor, interior, foreign affairs, and three others. The Social Democrats worked for a public medical service system for Austria similar to Britain's.

In the Netherlands the Labor Party in the general elections of March 12 returned to the States-General 48 members, compared with 50 in 1956. The Catholic People's Party returned 49. Under the leadership of the former prime minister, Willem Drees, the party served as the government's opposition during the remainder of the year.

The year in Belgium witnessed a reversal of a historic position of the Socialist Party when it supported, with the Christian Social and Liberal parties, government subsidies for the operation (though not for capital improvements) of Catholic schools on the same scale as those granted to public schools. Socialists agitated for measures looking toward the independence of the Belgian Congo.

The Swiss Socialists proposed that a referendum be held prior to any decision to equip the Swiss Army with atomic weapons. In the October 25 elections for the National Council, the Social Democratic Party won 51 seats (a drop of two from 1955) out of a total of 196 seats, the Radicals increasing their representation from 50 to 51.

Socialists throughout Europe joined with the Spanish Socialists in exile in denouncing the persecution of Socialists, trade unionists, and others in Franco Spain, and in opposing the admission of Spain to the North Atlantic Treaty Organization as long as such persecutions continued.

The Americas. *United States.*—The Socialist Party–Social Democratic Federation (SP–SDF) continued as the United States affiliate of the Socialist International. It proposed through its executive committee, under the chairmanship of Mayor Frank P. Zeidler of Milwaukee, that every effort should be made to obtain controlled and supervised disarmament, including balanced withdrawal of military forces to each nation's own borders. It also condemned agreements with West Germany and other nations by which the United States would supply them with parts of nuclear weapons. It continued the party's demand for equal civil rights for Negroes and urged drastic expansion of public housing and educational, health, and social security services.

Canada.—The Co-operative Commonwealth Federation (CCF) and the Canadian Labour Congress (CLC) laid the foundation for a new Labour-Socialist Party to include organized labor, Socialists, and farm and progressive groups. The CCF remained in control of the government of Saskatchewan. In the Manitoba elections of May 14 the CCF won 10 seats (a decrease of one), while increasing its popular vote by over 20%. In Ontario it polled 17% of the vote and won five seats in the provincial legislature (a decrease of two). In the international field the party supported a summit conference and urged a loose federation of the governments of East and West Germany as a step toward the holding of free elections throughout Germany.

Latin America.—In Jamaica, British West Indies, the People's National Party, a Socialist organization led by Norman W. Manley, chief minister of Jamaica, won 28 seats (an increase of 10) in the House of Representatives, out of a total of 45. In the West Indies Federation the Federal Labour Party proposed the complete independence of the island in 1960. Socialist groups were active in Venezuela, Costa Rica, Argentina, Brazil, Chile, Uruguay, Cuba, and other countries in Latin America.

Middle East and Asia. *Israel.*—The Mapai (Socialist) Party, under the leadership of Premier David Ben-Gurion, increased its representation in the 120-member Knesset (Assembly) from 40 to 47 and received 38.5% of the popular vote. One of the chief issues of the campaign was the government's sale of Israeli-made arms to West Germany. In December, following the elections, Ben-Gurion formed a new Socialist-dominated government—a coalition of five parties. On April 1 the government began the operation of the labor exchanges (the official employment bureaus), formerly operated by Histadrut, Israel's labor organization. In the Histadrut elections, the Mapai Party retained its absolute majority.

India.—The Indian Socialist Party denounced Communist China's attack on the people of Tibet, criticized the Communist Party of Kerala for its suppression of civil rights, and urged the colonial powers to respect the African struggle for freedom. It continued its negotiations for unity with the Lohia Socialists.

Japan.—The Socialist Party in the prefectural (state) and local elections in April gained a majority of the prefectural assembly seats in Fukuoka and also its governorship. They won 38 seats and the Liberal Democrats, 71 in the June elections to the upper house of the Diet. One third of the seats in the lower house were held by Socialists. In the fall, a group of right-wing Socialists who had merged with the left wing in 1955 left the party because of its alleged domination by pro-Communist labor groups, and formed a Democratic Socialist Party.

Other Countries.—In the first general elections in Nepal, the Nepali Congress Party, a Socialist party, won 74 seats in Parliament out of a total of 109, and on May 27 B. P. Koirala, Socialist leader, was inaugurated prime minister. In the May 30 elections in Singapore, the People's Action Party, pledged to "the creation of an independent, democratic, non-Communist Socialist Malaya," won 43 out of the 51 seats in the Legislative Assembly of the new state of Singapore. Lee Kuan Yew, secretary-general of the party, became the country's first prime minister. In Burma the Socialist Party continued to be the most influential force in the Anti-Fascist People's Freedom League, which controlled the Burmese government. Friction persisted between the supporters of Prime Minister Ne Win and the former prime minister, U Nu.

In Ceylon, Socialists lost a vigorous leader of the Asian Socialist movement in the death by assassination of Ceylon's prime minister, S. W. R. Bandaranaike. In Indonesia the Socialist Party gave its approval to President Sukarno's recommendation to revive the 1945 constitution which gave representation in Parliament to "functional" as well as political groups.

Africa.—In Ghana, Kwame Nkrumah, Labour prime minister, declared in his Freedom Day address that it was Ghana's "moral obligation to help the rest of Africa to gain her freedom." In Madagascar the Legislative Assembly and Senate elected Philibert Tsiranana, founder of the Malgache Democratic Socialist Party, to become president of the Malgache Republic. Socialists were active in many other African countries.

Australia and New Zealand.—In March the Labour Party emerged as the winner in the elections in New South Wales. The party remained the chief opposition party in Australian political activities. In New Zealand the Labour Party, under the leadership of Prime Minister Walter Nash, continued in control of the government, supporting programs for full employment, improved social services, greater import and export controls, and increased aid to underdeveloped countries.

NORMAN THOMAS,
Chairman, Post-War World Council;
Author of "A Socialist's Faith."

SOCIETIES AND ORGANIZATIONS. The following pages contain a selected list of some of the principal associations, societies, foundations, and trusts of the United States and Canada. In each case, the information has been supplied by the organization concerned. Additional related material may be found in the articles on the principal government agencies, religious bodies, etc.

Academy of Motion Picture Arts and Sciences.—Established to advance the arts and sciences of motion pictures and to foster cooperation among the creative leadership of the motion picture industry for cultural, educational, and technological progress. Membership: 2,299. Publications: *Academy Players Directory; Screen Achievement Bulletins.* The 31st annual presentation of the Academy awards took place on April 6, 1959. (See the article PRIZES AND AWARDS.) President, B. B. Kahane; exec. director, Margaret Herrick. Headquarters: 9038 Melrose Ave., Los Angeles 46, Calif.

Academy of Natural Sciences of Philadelphia.—Founded in 1812, the Academy is the oldest center for the study of natural sciences in the Western Hemisphere, maintaining active research departments and a large modern natural history museum. Its study collections include many minerals and fossils, 1 million plants, 15 million shells, 3 million insects, 1 million fish, 150,000 bird skins, 22,000 mammals. It has sponsored over 500 field collecting expeditions to all parts of the world. Membership: 2,500. Publications: *Frontiers* (natural history bimonthly); *Proceedings* (scientific annual); *Notalae Naturae;* monographs. President, M. Albert Linton; director, H. Radclyffe Roberts; managing dir., Kenneth W. Prescott. Address: 19th and the Parkway, Philadelphia 3, Pa.

Academy of Political Science.—Devoted to impartial study in the fields of economics, politics and public law. Membership: 8,000 individuals; 1,800 organizations. Publications: *Political Science Quarterly; Proceedings* of meetings held in New York City. President, Lewis W. Douglas; exec. director, Mary M. Anger. Headquarters: 413 Fayerweather Hall, Columbia University, New York 27, N.Y.

Adult Education Association of the United States of America.—Founded in 1951 to further the idea of education as a process continuing throughout life. Membership: 5400. Publications: *Adult Education* (quarterly); *Adult Leadership* (monthly). President, Phillip Klein; exec. director, Glenn Jensen. Headquarters: 743 N. Wabash Ave., Chicago 11, Ill.

Alcoholics Anonymous (The General Service Board of AA, Inc.)—A self-supporting nonsectarian society of recovered alcoholics, banded together for the purpose of helping others to recover from alcoholism. Membership: approx. 250,000 in over 7,000 affiliated international groups. Publications: *Alcoholics Anonymous; AA Comes of Age; Twelve Steps and Twelve Traditions; AA Grapevine* (monthly). Address: P.O. Box 459, Grand Central Station, New York 17, N.Y.

American Academy of Arts and Letters.—Founded in 1904 by the National Institute of Arts and Letters for the furtherance of literature and the fine arts in the U.S. Membership limited to 50. Publications: Catalogues of art and manuscript exhibitions; *Proceedings,* 2nd Series No. 9; *Yearbook* 1959. On May 20, 1959, a public ceremonial was given jointly with the National Institute of Arts and Letters. (For details, see *National Institute of Arts and Letters* entry below.) The annual meeting is held in December. President, Mark Van Doren; secretary, Allan Nevins. Headquarters: 633 West 155th St., New York 32, N.Y.

American Academy of Arts and Sciences.—Founded in 1780 for the encouragement and diffusion of every art and science. Membership: 1,400. Endowment: $1,000,000. Publications: *Proceedings; Daedalus; Memoirs; Bulletin.* President, Kirtley F. Mather; secretary, J. Lawrence Oncley. Annual meeting is held the 2d Wednesday in May, in Boston. Headquarters: 280 Newton St., Brookline 46, Mass.

American Academy of Political and Social Science.—Organized in 1889, to provide a forum for the discussion of national and world questions. Membership (Jan. 1, 1959): 14,850. Publications (1959): *The Annals; Contemporary China and the Chinese; Prevention of Juvenile Delinquency; Partnership for Progress: International Technical Cooperation; Resolving the Russian-American Deadlock; American Civilization and its Leadership Needs; Inflation.* The 63d annual meeting was held in Philadelphia in April 1959. President, James C. Charlesworth; editor, Thorsten Sellin. Headquarters: 3937 Chestnut St., Philadelphia 4, Pa.

American Association for the Advancement of Science.—Founded in 1848 to promote advancement in all fields of the natural, social, and economic sciences. Membership: 58,300. There are 285 affiliated societies with a combined membership of more than 1,000,000. Endowment: $472,600. Periodical: *Science.* President, Chauncey D. Leake; exec. officer, Dael Wolfle. Headquarters: 1515 Massachusetts Ave. NW, Washington 5, D.C.

American Association of Law Libraries.—Organized to promote librarianship; develop and increase the usefulness of law libraries; cultivate the science of law librarianship; and foster a spirit of cooperation among the members of the profession. Membership: 875. Publications: *Law Libraries in the United States and Canada; Law Library Journal; Index to Legal Periodicals.* President, Frances Farmer; secretary, Doris R. Fenneberg. Headquarters: College of Law Library, University of Toledo, Toledo 6, Ohio.

American Association of University Professors.—The professional organization for college and university teachers and investigators in the United States and its territories, Canada, and American-controlled institutions of higher education abroad, the association endeavors to bring about more effective cooperation among the members of the profession, promote discussion of educational problems in institutions of higher learning, create means for authoritative expression of the public opinion of the teachers, make collective action possible, and maintain and advance the ideals and standards of the profession. Membership: (Jan. 1, 1959) 41,264. Publication: *Bulletin* (quarterly). President, Bentley Glass; gen. secretary, William P. Fidler. Headquarters: 1785 Massachusetts Ave. NW, Washington 6, D.C.

American Association of University Women.—Founded in 1882, the association acts as spokesman for educated women, seeking to make their influence felt and to enlarge their opportunities for service. It supports research fellowships for women and gives international grants to bring women of other countries to the U.S. for study. Membership: over 140,000 in 1,413 branches. Fellowship Endowment: $2,043,032. Publication: *Journal* (issued Oct., Jan., March, and May). President, Dr. Anna L. Rose Hawkes; gen. director, Dr. Pauline Tompkins. Headquarters: 1634 I St. NW, Washington 6, D.C.

American Automobile Association.—Established to provide services to car-owning members on the basis of national and international reciprocity, and to work for improvement of motoring conditions generally. Membership: over 6,374,061 in 746 member organizations. Publications include *Sportsmanlike Driving* (3d ed.). The annual meeting was held in Atlantic City, N.J., Sept. 22–23, 1959. President, Frederick T. McGuire, Jr.; secretary, William B. Spencer. Headquarters: 1712 G St. NW, Washington 6, D.C.

American Bankers Association.—The national organization of banking, representing more than 99 per cent of banking resources. As part of its educational program, the Association conducts the American Institute of Banking; Stonier Graduate School of Banking at Rutgers University; and National Trust School at Northwestern University. Membership (1959) 17,690 banks and branches. Publication: *Banking* (monthly). The 85th annual convention was held at Miami Beach, Fla., Oct. 25–28, 1959. President, John W. Remington; vice pres., Carl A. Bimson; treas., I. F. Betts. Headquarters: 12 East 36th St., New York 16, N.Y.

American Bar Association.—Established to uphold and defend the U.S. Constitution and maintain representative government; advance jurisprudence; promote the administration of justice, and the uniformity of legislation and judicial decisions throughout the nation; uphold the honor of the legal profession, and apply its knowledge and experience for the public good. Membership: 95,000. Publications: *American Bar Association Journal* (monthly); *American Bar NEWS* (monthly); *Annual Report; American Citizenship Bulletin* (quarterly); numerous specialized manuals. The 82d annual meeting was held in Bal Harbour–Miami Beach, Fla., Aug. 24–28, 1959. President, John D. Randall; secretary, Joseph D. Calhoun. Headquarters: 1155 East 60th St., Chicago 37, Ill.

American Bible Society.—Founded in 1816 to translate, publish, and distribute the Scriptures, without note or comment. Membership: approx. 375,000. Publication: *Bible Society Record.* President, Daniel Burke; secretary, Robert T. Taylor. Headquarters: 450 Park Ave., New York 22, N.Y.

American Book Publishers Council.—Founded to further the interests of its members in their relationships with other segments of the industry, the government, and the public; to serve as a clearinghouse of information on publishing techniques and practices; to collect and publish statistics concerning book publishing; and to increase the distribution of books. Membership: 160 publishing firms. President, Curtis G. Benjamin; managing director, Dan Lacy. Headquarters: 24 West 40th St., New York 18, N.Y.

American Cancer Society, Inc.—Organized in 1913 to collect, collate, and make available statistical information relative to the incidence, mortality, and curability of cancer; encourage research and training of personnel in the detection, diagnosis, treatment, and prevention of cancer; and foster the establishment of cancer treatment facilities. Membership: 188 persons; 60 chartered divisions. Publications: *Cancer; Cancer News; CA: A Bulletin of Cancer Progress; Annual Report.* The annual meeting was held at New York, N.Y., Oct. 26–30, 1959. President, Warren H. Cole; secretary, Granville Whittlesey, Jr. Headquarters: 521 West 57th St., New York 19, N.Y.

American Catholic Sociological Society.—See the article, *Sociology.*

American Chemical Society.—Founded in 1876 to encourage the advancement of chemistry in all its branches, this organization endeavors to promote "research in chemical science and industry" and to maintain high standards among its members. Membership: 90,000. Publications: *Journal of the American Chemical Society; Chemical Abstracts; Industrial and Engineering Chemistry; Journal of Chemical and Engineering Data; Chemical and Engineer-*

ing News; Analytical Chemistry; Journal of Agricultural and Food Chemistry; Journal of Physical Chemistry; Journal of Organic Chemistry; Chemical Reviews. Meetings for 1960: Cleveland, Ohio—April 5–14; New York, N.Y.—September 11–16. President, Albert L. Elder; exec. secretary, Alden H. Emery. Headquarters: 1155 16th St. NW, Washington 6, D.C.

American Civil Liberties Union.—Founded in 1920 to maintain and extend throughout U.S. jurisdiction the principles of the Bill of Rights, as essential to the functioning of democracy for majorities and minorities alike. Membership: 50,000, including that of 27 affiliates. Publications: *Civil Liberties;* various pamphlets. Chairman, Ernest Angell; director, Patrick Murphy Malin. Headquarters: 170 Fifth Ave., New York 10, N.Y.

American College of Dentists.—Founded in 1920 to promote the ideals of the dental profession and advance its standards and efficiency; to encourage graduate studies and continuing educational effort by dentists; to stimulate research; to improve public understanding of oral health service; and to recognize meritorious achievement by conferring fellowship in the College on qualified persons. Membership: about 3,000 in 32 sections. Publication: *Journal of the American College of Dentists* (quarterly). President, Donald W. Gullett; secretary, Otto W. Brandhorst. Office of Secretary: 4236 Lindell Blvd., St. Louis 8, Mo.

American College of Physicians.—Founded in 1915 to maintain and advance the highest possible standards in medical education, medical practice, and clinical research. Membership: 10,000. Endowment: approx. $575,000. Publication: *Annals of Internal Medicine.* President, Howard P. Lewis, M.D.; exec. secretary, E. R. Loveland. Headquarters: 4200 Pine St., Philadelphia 4, Pa.

American College of Surgeons.—Founded in 1913 to elevate the standards of surgery and to improve hospital care of the patient. Membership (1959): 23,250. Publications: *Surgery, Gynecology & Obstetrics* (monthly); *Bulletin* (bimonthly). Regional surgical meetings are sponsored each year in addition to an annual Clinical Congress. President, Dr. Owen H. Wangensteen; director, Dr. Paul R. Hawley. Headquarters: 40 East Erie St., Chicago 11, Ill.

American Council of Learned Societies.—A privately supported federation of national organizations devoted to the encouragement of humanistic studies and humanistic aspects of the social sciences. Membership: 30 professional societies. Publications (1959): *Annual Report; ACLS Newsletter;* and publications under the Program in Oriental Languages. The annual meeting was held in Rochester, N.Y., Jan. 24–26, 1959. Chairman of Board of Directors, Robert M. Lumiansky; president, Frederick Burkhardt. Headquarters: 345 East 46th St., New York 17, N.Y.

American Council on Education.—Founded in 1918, the Council is a center of cooperation and coordination for the improvement of education at all levels, with emphasis on higher education. Membership: 141 organizations; 1,046 educational institutions, school systems, and departments of education. Publications: *The Educational Record; Higher Education and National Affairs.* President, Arthur S. Adams; secretary, Helen D. Bragdon. Headquarters: 1785 Massachusetts Ave. NW, Washington 6, D.C.

American Dental Association.—Established in 1859 "to encourage the improvement of the health of the public and to promote the art and science of dentistry." Membership (1959): 94,197 in 54 state and 450 local societies. Publications: *The Journal of the American Dental Association* (monthly); *Dental Abstracts* (monthly); *Journal of Oral Surgery, Anesthesia and Hospital Dental Service* (bimonthly); *Index to Dental Literature* (quarterly and annually); *American Dental Directory* (annually); *Accepted Dental Remedies* (annually). In 1959, the Association conducted aptitude tests for approximately 5,500 prospective dental students; sponsored National Children's Dental Health Week, Feb. 8–14, and continued to urge communities to adopt water fluoridation. The 100th annual session was held in New York City, Sept. 14–18, 1959. President, Dr. Paul H. Jeserich; secretary, Dr. Harold Hillenbrand. Headquarters: 222 E. Superior St., Chicago 11, Ill.

American Economic Association.—Organized in 1885 for the encouragement of economic research and freedom of economic discussion, and the issuance of publications on economic subjects. Membership: 9,400, and 3,600 subscribers. Publications: *American Economic Review; Papers and Proceedings* of Annual Meetings; occasional monographs. The 1959 annual meeting was held in Washington, D.C., Dec. 27–30. President, Arthur F. Burns; secretary, James Washington Bell. Headquarters: Northwestern University, Evanston, Ill.

American Farm Bureau Federation.—Organized in 1920 as a free, independent, non-governmental, voluntary organization of farm and ranch families for the purpose of analyzing their problems and formulating action to achieve educational improvement, economic opportunity and social advancement, thereby promoting the national welfare. Membership: 1,576,462 families. Publication: *Nation's Agriculture.* President, Charles B. Shuman; secretary-treas., Roger Fleming. Headquarters: 2300 Merchandise Mart, Chicago 54, Ill.

American Federation of Labor and Congress of Industrial Organizations.—See separate article under its own heading.

American Foundation for the Blind.—Established in 1921 to promote the interests of blind people throughout the United States. Publications: *Directory of Agencies Serving Blind Persons in the United States and Canada; The New Outlook for the Blind; Touch and Go;* books and pamphlets. President, Jansen Noyes, Jr.; secretary, Richard H. Migel. Headquarters: 15 West 16th St., New York 11, N.Y.

American Geographical Society.—A research institution founded in 1852 for the advancement of geography in its scientific, educational, and cultural aspects; its practical applications; and its bearing on fundamental problems of human existence and human relationships. Membership: 4,200. Publications: *Geographical Review* (quarterly); *Focus* and *Current Geographical Publications* (10 issues a year); various books. President, Walter A. Wood; director, Charles B. Hitchcock. Headquarters: Broadway at 156th St., New York 32, N.Y.

American Geophysical Union.—Founded in 1919 to promote the study of problems concerned with the figure and physics of the Earth and its environment in space; to initiate and coordinate researches which depend upon international cooperation and to provide for their scientific discussion and publication; to facilitate special research projects; and to promote and coordinate the study of the various branches of geodesy and geophysics in the U.S. Membership: 5,900 individuals; 36 organizations. Publications: *Journal of Geophysical Research* (monthly); English ed. of *Izvestiya* (Geophysics series of USSR Acad. of Sciences—monthly); *Transactions* (quarterly); *Geophysical Monograph Series.* President, Lloyd V. Berkner; genl. secretary, A. Nelson Sayre; exec. secretary, Waldo E. Smith. Headquarters: 1515 Massachusetts Ave. NW, Washington 5, D.C.

American Historical Association.—Founded in 1884 for the promotion of historical studies, the collection and preservation of historical manuscripts, and for kindred purposes in the interest of American history and of history in America. Membership: approx. 7,000. Publications: *American Historical Review; Annual Report* (including *Writings in American History*); annual prize volumes; and various studies for teachers. The 74th annual meeting was held in Chicago, Ill., Dec. 28–30, 1959. President, Allan Nevins; exec. secretary, Boyd C. Shafer. Headquarters: 400 A St. SE, Washington 3, D.C.

American Hospital Association.—Founded in 1898 to promote the public welfare through the development of better hospital care for all people. Membership (1959): 7,361 institutions; 5,059 persons. Publications: *Hospitals; Trustee* (journal for hospital governing boards). The 1959 annual convention was held Aug. 24–27 in New York City. President, Russell A. Nelson, M.D.; director, Edwin L. Crosby, M.D. Headquarters: 840 N. Lake Shore Dr., Chicago 11, Ill.

American Institute of Architects.—Founded in 1857 to organize and unite the architects of the U.S.; to promote the esthetic, scientific, and practical efficiency of the profession; to advance the standards of architectural training and practice; and to coordinate the building industry and the architectural profession to insure the improvement of living standards. Membership: 13,000 in 130 chapters; 11 state organizations. Publications: *Journal* (monthly); *Memo* (biweekly). President, John Noble Richards; secretary, J. Roy Carroll, Jr.; exec. director, Edmund R. Purves. Headquarters: The Octagon, 1735 New York Ave. NW, Washington 6, D.C.

American Institute of Chemical Engineers.—Its purpose is the advancement of chemical engineering in theory and practice and the maintenance of a high professional standard among its members. Membership: 19,380. Publications: *Chemical Engineering Progress* (monthly); *A.I.Ch.E. Journal* (quarterly); various monographs and symposium series. Four meetings are held each year. President, Donald L. Katz; secretary, F. J. Van Antwerpen. Headquarters: 25 West 45th St., New York 36, N.Y.

American Institute of Electrical Engineers.—Established to advance the theory and practice of electrical engineering and its allied arts and sciences, and to maintain high professional standards among its members. Membership: 53,000. Endowment: $1,250,000. Publications: *Electrical Engineering* (monthly); *Annual Transactions;* various papers and pamphlets. President, J. H. Foote; exec. secretary, N. S. Hibshman. Headquarters: 33 West 39th St., New York 18, N.Y.

American Institute of Graphic Arts.—A national educational, non-profit organization founded in 1914 to raise standards of design and manufacture of printing and allied graphic arts in the U.S. Membership: 1,800. Publications: *Fifty Books of the Year* (annual); *Design and Printing for Commerce—50 Advertisements of the Year* (annual); *Textbook Exhibit* (annual); *Graphics in Packaging* (annual); *Children's Books* (biennial); *Paperback Book Cover Show; Newsletter* (quarterly). An evening printing workshop course is given in cooperation with the New York School of Printing. Three clinics—Design, Trade Book, and Textbook—meet monthly Oct.–June to consider design and production problems. A medal is presented annually to a distinguished practitioner. The annual meeting was held June 4, 1959. President, Edna Beilenson; secretary, Robert Cato; exec. admin., Joyce Morrow. Headquarters: 5 East 40th St., New York 16, N.Y.

American Institute of Mining, Metallurgical, and Petroleum Engineers.—Established to promote the arts and sci-

ences connected with the economic production of the useful minerals and metals. Membership: 35,000. Publications: *Journal of Metals; Journal of Petroleum Technology; Mining Engineering.* The 1959 annual meeting was held in San Francisco, Calif., Feb. 16–19. President, Howard C. Pyle; secretary, Ernest Kirkendall. Headquarters: 29 West 39th St., New York 18, N.Y.

American Iron and Steel Institute.—Founded to promote the interest of the iron and steel industry. Membership: 2,700 individuals; 101 companies. Publications: *Steelways; Steel Facts; Annual Statistical Report; Yearbook; Directory of Iron and Steel Works of the U.S. and Canada;* various technical and engineering booklets. The general meeting is held in May in New York City. President, B. F. Fairless; exec. vice pres., Max D. Howell; secretary, George S. Rose. Headquarters: 150 East 42d St., New York 17, N.Y.

American Law Institute.—Founded in 1923 to do constructive work for the law. Its present projects include the drafting of a federal income tax statute, a model penal code, and a federal estate and gift tax statute, a study of the foreign relations law of the U.S., revision of the Restatements, and a program of continuing legal education. Membership: 1,500. President, Harrison Tweed; director, Herbert F. Goodrich. Headquarters: 133 South 36th St., Philadelphia 4, Pa.

American Legion, The.—A patriotic, non-political organization founded in 1919 by veterans of World War I. Veterans of World War II and the Korean War were made eligible for membership in 1942 and 1950. Membership: 2,694,431 in 58 departments and 16,863 posts. Publication: *The American Legion Magazine* (monthly). Activities include child welfare work, a junior baseball program, a national high school oratorical contest, boy scout work, and citizenship training. The 41st national convention was held in Minneapolis–St. Paul, Minn., Aug. 22–27, 1959. Headquarters: 700 N. Pennsylvania St. (P.O. Box 1055), Indianapolis 6, Ind.

American Library Association.—See separate article under its own heading.

American Mathematical Society.—Founded in 1888 to serve the interests of advanced mathematical research. Membership: approx. 6,500 individuals; 152 institutions; 14 corporations. Publications: *Bulletin; Proceedings; Transactions; Mathematical Reviews; Notices; Colloquium* Publications; *Mathematical Surveys; Memoirs.* President, E. J. McShane; secretary, J. W. Green. Headquarters: 190 Hope St., Providence 6, R.I.

American Medical Association.—Founded in 1847 to promote the science and art of medicine and the betterment of public health. Membership: 176,000 in 53 state and territorial associations. Publications include the *Journal; Today's Health;* ten monthly journals devoted to special fields of medicine; books, pamphlets, and reprints. The 1959 annual meeting was held in Atlantic City, N.J., June 8–12. President, Louis M. Orr, M.D.; exec. vice pres., F. J. L. Blasingame, M.D. Headquarters: 535 N. Dearborn St., Chicago 10, Ill.

American Meteorological Society.—Founded in 1919 for the development and dissemination of knowledge of meteorology and the advancement of its professional ideals. Membership: 7,000. Endowment: $30,000. Publications: *Bulletin; Journal of Meteorology; Meteorological Abstracts and Bibliography; Compendium of Meteorology; Weatherwise; Meteorological Monographs; Dynamic Meteorology and Weather Forecasting; Glossary of Meteorology;* Conference Proceedings. President, Sverre Petterssen; exec. secretary, Kenneth C. Spengler. Headquarters: 45 Beacon St., Boston 8, Mass.

American Museum of Natural History.—An institution founded and incorporated in 1869 to encourage and develop the study of the natural sciences. Fifty-eight exhibition areas interpret every aspect of the natural world, and the Guide-A-Phone system transmits individual lectures to visitors. The Museum sponsors extensive research in its laboratories and field stations, and its Department of Public Instruction employs the largest staff of teachers of any museum in the world. Membership: 88,907. Publications: (Technical) *The Bulletin, Novitiates, Anthropological Papers;* (Popular) *Natural History* (10 issues yearly), *Junior Natural History, Man and Nature* series; (Professional Journal) *Curator.* Attendance (year ended June 30, 1959): Museum, 1,845,506; Hayden Planetarium, 615,520. President, Alexander M. White; director, James A. Oliver. Address: Central Park West at 79th St., New York 24, N.Y.

American Newspaper Publishers Association.—Established to gather and disseminate to members information on problems of the newspaper publishing business. Membership: 848 daily newspapers. The 1959 Convention was held April 20–23 in New York City. President, D. Tennant Bryan; gen. mgr., Cranston Williams. Headquarters: 750 Third Ave., New York 17, N.Y.

American Nurses' Association.—The professional organization for registered nurses founded in 1896 to foster high standards of nursing practice, promote professional and educational advancement of nurses, and encourage better nursing care for all. The American Nurses' Foundation, Inc. serves as a center for nursing research. Membership: nearly 200,000. Publications: *American Journal of Nursing; Facts About Nursing.* President, Mathilda Scheuer, R.N.; exec. secretary, Mrs. Judith G. Whitaker, R.N. Headquarters: 10 Columbus Circle, New York 19, N.Y.

American Petroleum Institute.—Founded in 1919 to further cooperation with the government; foster trade in American petroleum products; and promote the interests of the industry and the improvement of its members through scientific studies. Publications: *Statistical Bulletin* (weekly); *Advance News* (weekly); *Tax Economics Bulletin* (bimonthly); *Quarterly; Annual Statistical Bulletin.* President, Frank M. Porter; secretary, Willard M. Wilson. Headquarters: 111 West 50th St., New York 20, N.Y.

American Philatelic Society.—Founded in 1886 to disseminate knowledge of philately and to assist its members in acquiring and disposing of stamps. Membership: 13,000; chapters, 275. Endowment: $100,000. Publication: *The American Philatelist.* President, C. C. Cratsenberg; exec. secretary, H. Clay Musser. Central Office: P.O. Box 800, State College, Pa.

American Philosophical Association.—Founded in 1901 to promote the study and the teaching of philosophy. Membership: 1,697. Endowment: $10,000. Chairman, Cornelius Krusé; secretary-treas., Lucius Garvin. Address: University of Maryland, College Park, Md.

American Philosophical Society.—Founded in 1743 for the promotion of useful knowledge. Membership: 500 American and 75 foreign members. Publications: *Proceedings; Transactions; Memoirs; Year Book.* During 1958, the Society awarded 172 grants from the Penrose Fund totaling $165,651; 50 grants totaling $53,937 from the Johnson Fund; and 3 fellowships and 1 grant totaling $14,550 from the Daland Fund. Two meetings are held annually, in April and November, in the historic Hall on Independence Square. President, Henry Allen Moe; exec. officer, William J. Robbins. Headquarters: 104 S. Fifth St., Philadelphia 6, Pa.

American Physical Society.—Founded in 1899 for the advancement and diffusion of the knowledge of physics. Membership: 14,000. Publications: *Physical Review; Reviews of Modern Physics; Bulletin.* President, V. F. Weisskopf; secretary, K. K. Darrow. Headquarters: 538–552 West 120th St., New York 27, N.Y.

American Political Science Association.—Founded in 1903 to encourage the study of government and contemporary public affairs. Membership: 6,700. Publication: *The American Political Science Review.* President, Carl B. Swisher; exec. director, Evron M. Kirkpatrick. Headquarters: 1726 Massachusetts Ave. NW, Washington 6, D.C.

American Psychiatric Association.—Promoting further study of all phases of mental disorder; better maintenance of high standards in all agencies concerned with mental health; further psychiatric education and research. Membership: 11,175. Publications: *American Journal of Psychiatry; Newsletter* (monthlies). The 1960 annual meeting was held in Atlantic City, N.J., May 9–13. President, William Malamud; secretary, C. H. Hardin Branch. Addresses: 1270 Avenue of the Americas, New York 20, N.Y.; 1700 18th St., NW, Washington 9, D.C.

American Psychological Association.—Founded in 1892 to advance psychology as a science, as a profession, and as a means of promoting human welfare. Membership: 17,500. President, D. O. Hebb; exec. secretary, John G. Darley. Headquarters: 1333 16th St. NW, Washington 6, D.C.

American Rocket Society, Inc.—Organized in 1930 for the advancement of astronautics and the sciences and engineering techniques relating thereto. Membership (1959): 14,000 individuals; 150 organizations. Publications: *ARS Journal* (monthly); *Astronautics* (monthly); Russian Supplement to *ARS Journal* (quarterly); *ARS Roster* (annual). Activities in 1959 included the awarding of 21 fellowships, and the inauguration of the Russian Supplement of the ARS Journal on a grant from the National Science Foundation. The 14th annual meeting was held in Washington, D.C., Nov. 16–20, 1959. President, Dr. Howard S. Seifert; exec. secretary, James J. Harford. Headquarters: 500 Fifth Ave., New York 36, N.Y.

American Society for Psychical Research.—Incorporated in 1904 for the systematic investigation of phenomena that are prima facie inexplicable on any generally recognized hypothesis, especially those phenomena suggesting the survival of human personality after death and the occurrence of extrasensory perception. Membership: 850. Endowment: $275,000. Publication: *The Journal of the American Society for Psychical Research* (quarterly). President, George H. Hyslop, M.D.; chairman, research committee, Prof. Gardner Murphy; research assoc., Laura Abbott Dale. Headquarters: 880 Fifth Ave., New York 21, N.Y.

American Society of Civil Engineers.—Established in 1852 to promote the advancement of the science and profession of engineering. Membership: 43,100; 140 local sections and sub-units; 143 Student chapters and sub-units. Publications: *Civil Engineering* and *Proceedings* (monthlies); *Transactions* (annual); special manuals of engineering practice. The annual convention was held Oct. 19–24, 1959, in Washington, D.C. President, Frank A. Marston; secretary, William H. Wisely. Headquarters: 33 West 39th St., New York 18, N.Y.

American Society of Composers, Authors, and Publishers.—Founded in 1914 to protect its members against unauthorized public performance (for profit) of their copyright musical works, and to arrange for the payment of royalties for authorized performances. Membership: 5,062 composers and authors; 1,312 publishers. President, Stanley Adams; secretary, Deems Taylor. Headquarters: 575 Madison Ave., New York 22, N.Y.

American Society of International Law.—Organized in

1906 to foster the study of international law and to promote the establishment and maintenance of international relations on the basis of law and justice. Membership: 2,700. Publications: *American Journal of International Law* (quarterly); *Proceedings* (annual). The 53d annual meeting was held April 30–May 2, 1959, in Washington, D.C. President, Herbert W. Briggs; secretary, Edward Dumbauld. Headquarters: 1826 Jefferson Pl. NW, Washington 6, D.C.

American Society of Mechanical Engineers, The.—Established in 1880 to promote the art and science of mechanical engineering and the allied arts and sciences. Membership (1959): 48,000. Publications: *Mechanical Engineering* (monthly); *Applied Mechanics Reviews* (monthly); *Transactions* (issued as 5 quarterly journals, covering Applied Mechanics, Heat Transfer, Basic Engineering, Engineering for Power, and Engineering for Industry); *Mechanical Catalog* (annual). President, G. B. Warren; secretary, O. B. Schier, II. Headquarters: 29 West 39th St., New York 18, N.Y.

American Sociological Association.—A nationwide organization seeking to stimulate and improve sociological research, instruction, and discussion; and to encourage cooperation among sociologists. Membership: 6,300; 9 regional and affiliated societies. Publications: *American Sociological Review; Sociometry; Employment Bulletin;* special bulletins. President, Howard Becker; secretary, Donald Young; exec. officer, Matilda White Riley. Headquarters: 100 Washington Sq. E., New York 3, N.Y. (See article, SOCIOLOGY.)

American Standards Association, Inc.—A national coordinating agency founded in 1918 to provide systematic means for the development of voluntary standards in the U.S. Membership: 2,073 companies: 121 trade associations and technical societies. Publication: *The Magazine of Standards* (monthly). The 10th National Conference on Standards was held Oct. 20–22, 1959, in Detroit, Mich. President, J. R. Townsend; managing dir. and secretary, George F. Hussey, Jr. Headquarters: 10 East 40th St., New York 16, N.Y.

American Youth Hostels, Inc.—To help all, but especially young Americans, to acquire a greater appreciation of the out-of-doors, and of the culture and history of peoples at home and abroad, by providing simple accommodations for their use while traveling primarily by foot or bicycle, thus promoting their health, welfare and education and furthering mutual understanding among peoples of differing backgrounds and points of view. Membership: 13,500. Publications: *AYH Handbook–Hostelers Manual; National Sponsored Trips Travel Bulletin.* President, Henry W. Trimble, Jr.; secretary, Mrs. Ernest Neumann; exec. director, Justin J. Cline. Headquarters: 14 West 8th St., New York 11, N.Y.

Archaeological Institute of America.—Founded in 1879 to foster archaeological research and to disseminate the resulting knowledge. Membership: approx. 3,200. Publications: *American Journal of Archaeology,* for scholars, and *Archaeology,* for laymen (quarterlies); *Bulletin* (annual). President, Prof. George E. Mylonas. Headquarters: 5 Washington Square, N., New York 3, N.Y.

Art Institute of Chicago.—Established to maintain schools of art and design; to form and exhibit art collections; and to cultivate the arts of design. Membership: 22,222. Publications: *Art Institute of Chicago Quarterly;* various catalogues. Mellon Lectures in the Fine Arts was delivered by Naum Gabo on *A Sculptor's View of the Fine Arts.* The regular Sunday evening series of Mellon concerts was held throughout the fall and winter, and in the spring the Gallery held its 16th American Music Festival. LecTour, an electronic guide system, was extended to additional galleries, bringing to 20 the total number of rooms with this service. Attendance for fiscal year ending June 30, 1959: 951,608. Director: John Walker. Address: Constitution Avenue at 6th St., Washington 25, D.C.

National Geographic Society.—See separate article under its own heading.

National Grange, Patrons of Husbandry, The.—A rural fraternity founded to improve and strengthen the farm home; advance the welfare of agriculture; support good government at local, state, and national levels; advance the cause of education; work for equity among all groups; and advance the cause of good citizenship. Membership: 850,000 in approx. 7,000 Grange units. Publication: *The National Grange Monthly.* Master, Herschel D. Newsom; secretary, Harry A. Caton. Headquarters: 744 Jackson Pl., Washington 6, D.C.

National Health Council.—Founded in 1921, the Council enables its members, more than 65 national organizations concerned with health, to work together, and with others, to promote better health throughout the nation, improve their own services, and encourage formation and effective operation of state and local health councils and services. President Ruth B. Freeman, Ed.D.; exec. director, Philip E. Ryan. Headquarters: 1790 Broadway, New York 19, N.Y.

National Industrial Conference Board, Inc.—An independent, nonprofit organization, established in 1916, conducting scientific research in the fields of economics, business management, and human relations. Membership: more than 3,700 subscribing associates. Publications: *Desk Sheet* (weekly); *Previews; Road Maps of Industry* (economic charts); *Economic Almanac* (biennial); research reports, chart books, basic industrial data. The 44th annual meeting will be held May 19–20, 1960, at New York City. President, John S. Sinclair; secretary, Herbert S. Briggs. Headquarters: 460 Park Ave., New York 22, N.Y.

National Institute of Arts and Letters.—Founded in 1898 for the furtherance of literature and the fine arts in the U.S. Membership 250. Publications: *Proceedings,* 2d Series, No. 9; *Yearbook,* 1959; Catalogues of art and manuscript exhibitions: *The Impressionist Mood in American Painting; Works by Candidates for Grants in Art;* and others. On May 20, 1959 a public ceremonial was given jointly with the American Academy of Arts and Letters. New members were inducted, medals and honors awarded, and 18 arts and letters grants of $1,500 each were given. Exhibition was made of the works of newly-elected art members, grantees in art and the recipients of the Award of Merit Medal for the Novel, Aldous Huxley, and the Brunner Award for Architecture, Edward Larrabee Barnes; as well as manuscripts by newly-elected literature members, grantees in literature, recipients of Fellowships of the Academy, Harold Brodky and Edmund Keeley; the Gold Medal for Graphic Art, George Grosz; the Gold Medal for Drama, Arthur Miller; the Marjorie Peabody Waite Award to an artist, Leon Hartl; the Richard and Hinda Rosenthal Foundation Award, Frederick Buechner; Award for Distinguished Service to the Arts, Elizabeth Ames, and the Medal for Good Speech on the Stage, Katharine Cornell. The annual meeting was held on Jan. 28, 1959. President, Glenway Wescott; secretary, Léonie Adams. Headquarters: 633 West 155th St., New York 32, N.Y.

National Jewish Welfare Board.—The national association of 357 Jewish Community Centers and YM-YWHAs with a combined membership of 610,000 member of the World Federation of YM-YWHAs and Jewish Community Centers. As the government-authorized agency for serving the religious, welfare, and morale needs of Jewish personnel in the U.S. Armed Forces, JWB serves 374 full and part-time Jewish chaplains at home and abroad and 269 local Armed Services Committees. Aggregate annual budgets of Centers affiliated with JWB exceed $21,000,000. In 1959, JWB continued to sponsor the Jewish Book Council, Jewish Music Council, and Jewish Center Lecture Bureau. President, Solomon Litt; exec. vice pres., Samuel D. Gershovitz; secretary, Alan J. Altheimer. Headquarters: 145 East 32d St., New York 16, N.Y.

National Recreation Association.—A national, nonprofit service organization established in 1906 to help young and old make the best use of their leisure by providing field service, leadership training, information, and public education, plus International Recreation Service outside the U.S. Membership: 1,786 public and private agen-

cies; 4,136 individual workers; 17,250 contributing members. Publication: *Recreation.* Chairman of the board, Grant Titsworth; exec. dir., Joseph Prendergast. Headquarters: 8 West 8th St., New York 11, N.Y.

National Research Council.—See above, *National Academy of Sciences.*

National Research Council of Canada.—Occupied principally with industrial and scientific research affecting the expansion of Canadian industries or the utilization of Canadian natural resources. Annual budget: approx. $30 million. Publications: Canadian Journal of Biochemistry and Physiology, of Botany, of Chemistry, of Microbiology, of Physics, of Zoology; *Annual Report; NRC Review; NRC Research News* (monthly); *List of Publications,* 1918–1952 (3d. ed. and supplements). In 1959–60, grants of $5.9 million were made for research in natural sciences in universities; and scholarships and fellowships awarded in excess of $1.5 million. President, E. W. R. Steacie. Headquarters: National Research Bldg., Ottawa 2, Ont.

National Safety Council.—A nonprofit, nonpolitical organization founded in 1913 to reduce the number and severity of all kinds of accidents. It serves as a clearinghouse for information on causes and prevention of accidents. Membership: over 12,500 organizations. Publications: *National Safety News; Traffic Safety; The Industrial Supervisor; Safety Education; Safe Worker; Safe Driver; Safe Railroader; Safe Builder; Home Safety Review; Farm Safety Review.* President, Howard Pyle; exec. vice pres., G. C. Stewart; secretary, R. L. Forney. 425 N. Michigan Ave., Chicago 11, Ill.

National Society for Crippled Children and Adults, Inc.—Organized in 1921 to help the crippled through programs of care and treatment; rehabilitation; research into causes, prevention, and improved treatment; and education of the public, professional persons, parents, and employers. Membership: 52 state and territorial societies; 1,600 local societies. Publications: *Rehabilitation Literature, Easter Seal Bulletin* (monthlies); *Parent Pamphlet Series;* various pamphlets and reports. The 1959 convention was held in Chicago, Ill., Nov. 29–Dec. 2. President, John J. Lee; exec. director, Dean W. Roberts, M.D. Headquarters: 2023 W. Ogden Ave., Chicago 12, Ill.

National Society of Professional Engineers.—Organized in 1934 to advance the public welfare and to promote the professional, social, and economic interest of the professional engineer. Membership: 50,000 registered engineers; 50 state societies; 400 local chapters. Publications: *American Engineer, Legislative Bulletin,* and *Engineering Employment Practices Newsletter* (monthlies); *Executive Research Survey Reports.* President, Harold A. Mosher; secretary, Paul H. Robbins. Headquarters: 2029 K St. NW, Washington 6, D.C.

National Travelers Aid Association.—Founded in 1917, the Association provides consultant and advisory service to member societies in order to promote cooperation and improve standards; distributes information concerning migration; and conducts regional conferences, institutes, and training courses. Membership: 101 local societies; 944 cooperating organizations and individuals on call where no regular Travelers Aid Society exists. Publication: *Shifting Scenes.* President, Donald S. Stralem; secretary, Mrs. Reynolds Holding; gen. director, Mrs. Savilla Millis Simons. Headquarters: 72 West 45th St., New York 36, N.Y.

National Tuberculosis Association.—Organized to study, and disseminate knowledge of, the causes, treatment, and prevention of tuberculosis and related health problems; and to promote international relations concerning control of the disease. Membership: 5,375; approx. 3,000 affiliated organizations. Publications: *American Review of Respiratory Diseases; Bulletin; Tuberculosis Abstracts* (all monthlies); various books and pamphlets. For the fiscal year 1959–60, the Association made 37 grants for medical research and awarded 25 fellowships for medical education and research. The 1959 annual meeting was held in Chicago, Ill., May 24–29. President, H. McLeod Riggins, M.D.; secretary, Mrs. Wallace B. White. Headquarters: 1790 Broadway, New York 19, N.Y.

National Urban League.—Founded in 1910 for the improvement, through interracial leadership, of the living and working conditions of Negroes, and of cooperation and understanding between the races. Membership: 50,000 in 63 local Leagues in 31 states. President, Theodore W. Kheel; secretary, Mollie Moon; exec. director, Lester B. Granger. Headquarters: 14 East 48th St., New York 17, N.Y.

National Woman's Christian Temperance Union.—Organized in 1874 to promote total abstinence through an education program teaching the effects of beverage alcohol on the mental, moral, social, spiritual, and physical well-being of the individual and the nation. Membership: approx. 400,000 in U.S.; World's WCTU organized in 70 countries. Publications: *The Union Signal* (semimonthly); *The Young Crusader* (monthly for children). President, Mrs. Glenn G. Hays; corresp. secretary, Mrs. Fred J. Tooze. Headquarters: 1730 Chicago Ave., Evanston, Ill.

New-York Historical Society.—Founded in 1804, it comprises a 400,000 volume reference library and a museum of American history, particularly that of the city and state of New York. Membership: 700. Special exhibitions in 1959 include: Miniature Models of Antique Automobiles, 1877–1914; Abraham Lincoln Sesqui-Centennial Exhibition; The Hudson, River of History, from Lake Champlain to the Sea, 1609–1959; Rediscovered Painters of Upstate New York, 1700–1875; Two American Naval Heroes: Matthew G. and Oliver H. Perry. Accessions include 242 volumes from the library of Chancellor Robert R. Livingston (1746–1813); collection of 14 letters written and signed by General John Armstrong (1758–1843) to James Madison, Baron von Steuben and others; portrait of Martin Van Buren (1782–1862) by Henry Inman (1801–46); tilt-top table c. 1825 with inlaid portraits of George and Martha Washington and Gen. Lafayette; 28 miniature models of antique automobiles. Director, Dr. R. W. G. Vail. Address: 170 Central Park West, New York 24, N.Y.

Parents and Teachers, National Congress of.—See under *National.*

Photographic Society of America.—Founded in 1933 for the promotion of the art and science of photography. Membership: over 10,000 members and over 1,200 camera clubs; 350 or more clubs affiliated through 20 camera club councils; about 450 additional miscellaneous members included in a list of firms, libraries, laboratories, and government bodies. Publications: *PSA Journal;* various news bulletins. Exec. secretary, Randolph Wright, Jr. Headquarters: 2005 Walnut St., Philadelphia 3, Pa.

Planned Parenthood Federation of America, Inc.—Devoted to a program of family planning, education for marriage and parenthood, and research in the field of human reproduction, the Federation aims to improve present contraceptive techniques; develop new, simple, safe, and inexpensive methods for use in overpopulated world areas; and to investigate infertility and sterility problems. Membership: 103 state leagues and local committees which operate service clinics in 29 states and the District of Columbia. National director, William Vogt, Sc.D. Headquarters: 501 Madison Ave., New York 22, N.Y.

Red Cross, American National.—See separate article under its own heading.

Rockefeller Foundation.—Founded in 1913 to promote the well-being of mankind through the advancement and effective application of knowledge to human interests in specific fields of medical and natural sciences, agricultural sciences, social sciences, and the humanities. Principal fund (market value Dec. 31, 1958): $578,661,640. Publications: *President's Review; Annual Report; Rockefeller Foundation Grants* (quarterly). President, Dean Rusk; secretary, Flora M. Rhind; treasurer, Edward Robinson. Headquarters: 111 West 50th St., New York 20, N.Y.

Rotary International.—A world fellowship of business and professional executives to further thoughtfulness of and helpfulness to others in business and community life and to promote international understanding. Membership: 10,400 clubs in 114 countries; 481,000 Rotarians. Overseas offices are located in London, England, and Zurich, Switzerland. Publications: *The Rotarian; Revista Rotaria* (in Spanish). Since 1947, Rotary Foundation Fellowships have been awarded to 1,201 college graduates from 67 countries for one year of study in 44 countries. Total grants awarded during the 13-year period amount to more than $3,000,000. The 50th annual convention was held in New York City in June, 1959. President, Harold T. Thomas (Auckland, N.Z.); gen. secretary, George R. Means. Headquarters: 1600 Ridge Ave., Evanston, Ill.

Rural Sociological Society.—See article, SOCIOLOGY.

Russell Sage Foundation.—Established by Mrs. Russell Sage in 1907 for improvement of social and living conditions in the U.S.; now devoted primarily to a research and consultation program designed to increase the utilization of social science principles in various fields of social practice. An 11-member board of trustees handles administration. Assets (market value, Sept. 30, 1959): $25,720,000. Publications (1959): *Experiment in Mental Patient Rehabilitation,* H. J. Meyer and E. F. Borgatta; *Sociology and the Military Establishment,* M. Janowitz; *Education for Child Rearing,* O. G. Brim, Jr.; *Philanthropy in England, 1480–1660,* W. K. Jordan; *Annual Report, 1958–59.* Chairman of the Board, Eli Whitney Debevoise; president, Donald Young; treasurer, Dave H. Morris, Jr.; secretary, Leonard S. Cottrell, Jr. Headquarters: 505 Park Ave., New York 22, N.Y.

Scottish Rite Masonry.—See above, *Freemasonry.*

Seeing Eye, Inc., The.—Founded in 1929 to train dogs as guides for blind persons; to teach instructors how to train the dogs; and to teach blind persons how to use the dog guides. Membership: 15,000. President, James Carey; exec. vice president, George Werntz, Jr. Headquarters: Morristown, N.J.

Sloan Foundation, Alfred P.—Originally established in 1934 to make grants-in-aid for projects in economic education to fully accredited educational institutions, the Foundation more recently has given financial assistance to scientific research and provided for scholarships and fellowships. Fund reserves: $165,378,291. During its entire existence, up to Dec. 31, 1958, the Foundation has made grants totalling $47,114,810. President, Alfred P. Sloan, Jr.; chairman of the board, Albert Bradley; exec. director, Arnold J. Zurcher; vice president, Raymond P. Sloan; secretary-treas., James F. Kenney. Headquarters: 630 Fifth Ave., New York 20, N.Y.

Sloan-Kettering Institute for Cancer Research.—Founded in 1945 as an affiliate of Memorial Center for Cancer and Allied Diseases for the purpose of engaging in cancer research. A gift of $2,400,000 for construction, and originally a $200,000 annual operating gift for 10 years

(now $400,000 pledged for a five-year period) was made by the Alfred P. Sloan Foundation. Research is also supported by contributions from the public, either directly or through governmental and private agencies. Control and management is vested in a board of 21 trustees. Acting Director, A. R. T. Denues, Ph.D.; chairman, Warren Weaver, Ph.D.; president, Frank A. Howard; secretary, Edward C. Delafield. Headquarters: 410 East 68th St., New York 21, N.Y.

Smithsonian Institution.—See separate article under its own heading.

Social Science Research Council.—Its purpose is to advance knowledge concerning human relations through the development of research in the social sciences. Membership: 30 members of the board of directors, of whom 21 are designated by 7 national social science organizations and 9 are elected as directors-at-large. In 1958–59 the Council awarded 4 faculty research fellowships; 65 research training fellowships; 8 political theory and legal philosophy fellowships; 28 grants-in-aid and 33 faculty research grants for research unrestricted as to field; 9 grants for research on American governmental processes; 4 senior awards for research on American governmental affairs; 10 grants for research on the Near and Middle East; and 25 auxiliary research awards; jointly with the American Council of Learned Societies, 14 grants for Slavic and East European Studies, and 25 grants for Asian Studies; and 45 grants for travel to international conferences. President, Pendleton Herring; vice pres., Paul Webbink. Headquarters: 230 Park Ave., New York 17, N.Y.

Society for the Study of Social Problems.—See the article, SOCIOLOGY.

Special Libraries Association.—Formed in 1909 by librarians of business, professional, governmental, and industrial organizations to promote the collection, organization, and dissemination of information in specialized fields and to improve the usefulness of special libraries and information services. Membership: approx. 5,000. Publications: (periodicals) *Special Libraries; Technical Book Review Index;* (books) *Handbook of Commercial, Financial and Information Services; Handbook of Scientific and Technical Awards in the United States and Canada, 1900–1952; National Insurance Organizations in the United States and Canada; Picture Sources: An Introductory List; SLA Loan Collection of Classification Schemes and Subject Heading Lists; Sources of Commodity Prices; Special Libraries Association—Its First Fifty Years, 1909–1959; Technical Libraries; Translators and Translations: Services and Sources.* At the 50th annual convention in June 1959, the first 20 members were selected for the SLA Hall of Fame. President, Dr. Burton W. Adkinson; exec. secretary, Bill M. Woods. Headquarters: 31 East 10th St., New York 3, N.Y.

Synagogue Council of America.—The spokesman agency for religious American Jewry made up of the Rabbinical Council of America, the Rabbinical Assembly of America, the Central Conference of American Rabbis, the Union of Orthodox Jewish Congregations in America, United Synagogue of America, and the Union of American Hebrew Congregations. The Council represents its constituencies before U.S., U.N., and UNESCO agencies, and cooperates with the Protestant and Catholic denominations. President, Rabbi Max D. Davidson; exec. director, Rabbi Marc H. Tanenbaum. Headquarters: 110 West 42 St., New York 36, N.Y.

Travelers Aid Association, National.—See under *National.*

Twentieth Century Fund.—An endowed foundation for research and public education on economic and social issues and problems. Assets (Dec. 31, 1958): $17,552,440. In 1959 the Fund issued *The Economy, Liberty and the State, Honduras: A Problem in Economic Development* and *Pension Funds and Economic Power.* Studies in progress pertaining to the U.S. economy include: distribution costs and methods, urban development, nuclear energy, use of leisure time, and civil-military relations. Projects of international scope include studies of Europe's needs and resources, the European Coal and Steel Community, Southeast Asia, Yugoslavia, and a broad survey of economic, social, and political conditions in tropical Africa. Director, August Heckscher. Headquarters: 41 East 70th St., New York 21, N.Y.

United Community Funds and Councils of America, Inc. (formerly COMMUNITY CHESTS AND COUNCILS OF AMERICA, INC.).—The national association of local United Funds, Community Chests, and Community Welfare Councils, organized in 1918 to advance the cause of united social planning and federated financing in local communities; and to provide advisory service in the fields of health and welfare planning, campaigns, public relations, research, personnel, labor-employer participation, and volunteer leadership. Membership (1959): 2,004 united funds, chests, councils, and state affiliates. Publications: *Community* (monthly); various bulletins, studies, and manuals. For 1959, $427,262,622 was raised for the support of health and welfare services. National conferences are held biennially. President, John A. Greene; secretary, William D. F. Morrisson. Headquarters: 345 East 46th St., New York 17, N.Y.

United Service Organizations, Inc.—Established in 1941, USO is a federation of six voluntary agencies serving the religious, spiritual, social, welfare, recreational, and educational needs of the men and women in the Armed Forces. Member agencies are the Young Men's Christian Associations, National Catholic Community Service, National Jewish Welfare Board, Young Women's Christian Association, The Salvation Army, and National Travelers Aid Association. In 1959 there were 245 USO service units operating in the U.S. and abroad. Chairman, Harvey S. Firestone, Jr.; vice chairman, Emil Schram; president, Holgar J. Johnson; secretary, Mrs. Francis T. Christy; exec. director, Edwin E. Bond. Headquarters: 237 East 52d St., New York 22, N.Y.

United States Junior Chamber of Commerce.—A nonprofit corporation providing men aged 21 to 35 with an opportunity for personal development and achievement through participation in local and national affairs, and, through Junior Chamber International, in world affairs. Membership: 200,000. Publications: *Future; Action* (monthlies). The 1960 convention will be held in St. Louis, Mo., June 20–23. President, Robert H. Clark; exec. vice pres., Ben L. Swanson. Headquarters: Boulder Park, Box 7, Tulsa 2, Okla.

Veterans of Foreign Wars of the United States—Founded in 1899; chartered by the U.S. Congress in 1936. A fraternal, patriotic, historical, and educational organization active in promoting Americanism and civic improvement and in supporting legislation benefiting disabled veterans and national security. Membership: 1,200,000 active. Publication: *V. F. W. Magazine.* The 1959 national convention was held in Los Angeles, Calif. Commander-in-chief, Louis G. Feldmann; adjutant general, Julian Dickenson. Headquarters: Broadway at 34th St., Kansas City 11, Mo.

Woman's Christian Temperance Union, National.—See under *National.*

Women's Clubs, General Federation of.—See under *General.*

World Council of Churches.—Official instrument of 171 denominations representing all major branches of the Reformation, the Old Catholics, the Eastern Orthodox, and other ancient Eastern churches in some 50 countries. Membership represents over 170,000,000 persons. Work is carried on through three main divisions: Study; Ecumenical Action; and Interchurch Aid and Service to Refugees. Assemblies are held every six years (Evanston, Ill., 1954; next assembly, New Delhi, India, Nov, 1961). In the interim, the Council is governed by a Central Committee of 90 members which meets yearly. Dr. Franklin Clark Fry (USA) is chairman. Publications: *Ecumenical Press Service* (Weekly); *Ecumenical Review* (quarterly); *Ecumenical Courier* (bimonthly). Presiding officers of the Council are six presidents: Bishop Otto Dibelius (Germany); Dr. John Baillie (Scotland); Rt. Rev. Henry Knox Sherrill (USA); Bishop S. U. Barbieri (South America); Metropolitan Juhanon (India); Archbishop Iakovos (Greek Orthodox). General secretary, Dr. W. A. Visser 't Hooft. Headquarters: 17 Route de Malagnou, Geneva, Switzerland. Exec. head, New York Office, Dr. Roswell P. Barnes. Address: 156 Fifth Ave., New York 10, N.Y.

Young Men's Christian Associations, National Council of the.—See under *National.*

Young Women's Christian Association of the U.S.A.—An organization for young women over 12 endeavoring to improve their mental and physical well-being and to encourage their spiritual growth in keeping with Christian traditions. In the U.S. there are more than 1,900 YWCA units; through the World YWCA, the National Board is allied with YWCA work in 69 other countries and territories. Publications: *The YWCA Magazine; National YWCA Bulletin; The Bookshelf.* The 22d National Triennial Convention is scheduled for May 8–13, 1961, in Denver, Colo. President, Miss Lilace Reid Barnes; gen. secretary, Edith M. Lerrigo. Headquarters: 600 Lexington Ave., New York 22, N.Y.

Zionist Organization of America.—Founded in 1897, the present ZOA program seeks to safeguard the integrity and independence of Israel as a free and democratic state; to assist in the economic development of Israel; and to strengthen Jewish sentiment and consciousness as a people and promote its cultural creativity. Membership: 250,000, including its affiliates, Young Judaea and B'nai Zion. Publications: *The American Zionist; The Organization Letter; ZINS; Z.O.A. Reporter.* The annual convention was held at Washington, D.C., Sept. 10–13, 1959. President, Abraham A. Redelheim; national secretary, Dr. Sidney Marks. Headquarters: 145 East 32d St., New York 16, N.Y.

Compiled by R. M. C.

SOCIOLOGY. Deviant Behavior.—Sociologists are conducting a variety of research studies regarding the nature of delinquency and crime under the broad and significant heading of deviant behavior. In a group of articles in the April 1959 issue of the *American Sociological Review* new dimensions are suggested for deviant behavior. For example, 16 different modes of deviant behavior are given, including the four types (previously proposed by Robert K. Merton) of innovation, ritualism, retreatism, and rebellion. The new additions (by

Robert Dubin) include the behavioral and value types of innovation and ritualism. Ritualism, it may be noted, is considered as deviant behavior because it "rejects facets of the social system without seeking substitutes," while at the same time overconforming in certain particulars.

Somewhat complementary to the aforementioned studies is the monumental collection of 186 papers edited by Sheldon Glueck, *The Problem of Delinquency* (Boston 1959). More than 100 authorities have contributed to it "a set of materials that is eclectic and far-ranging" in respect to the causes, treatment, and prevention of delinquency, while at the same time taking cognizance of "the legal problems inherent in society's efforts to cope with its maladjusted youngsters." Two targets are kept in mind, namely, "welfare and justice." The proposed treatment of delinquent behavior depicts "all relevant points of view," and presents "the multiple forces and factors" involved in seeing "the delinquency problem whole." (See also CRIME—*Delinquency and Crime Prevention.*)

Sociology of the Military.—Sociologists are entering the government service in increasing numbers, particularly through research pertaining to the military branches. The roles of the military aspects of life are receiving sociological attention, as indicated in *Sociology and the Military Establishment,* prepared for the American Sociological Society by Morris Janowitz, and published in 1959 by the Russell Sage Foundation. Among the topics discussed under the relatively new term "military sociology" are the nature of cold war welfare, social aspects of small unit efficiency, social structure and cultural aspects of military organizations, group behavior under stress, indoctrination, and the soldier and international relations.

Operational Research.—Operational research methods are receiving increasing attention by sociologists. Among the newer developments are the theory of games, linear and dynamic programing, and queuing. These new methods are based on new trends in mathematics and on the use of symbols. Operational research is defined as "the application of scientific methods, techniques, and tools to problems involving the operation of systems so as to provide those in control of the operations with optimum solutions to the problems" (Churchman, Charles West, and others, *An Introduction to Operations Research,* New York 1957).

Sociological Theory.—In *Symposium on Sociological Theory,* edited by Llewellyn Gross (Evanston, Ill., 1959), 19 papers by 20 contributors deal with the latest frames of sociological orientation, such as images of society and problems of concept formation, the concept of levels in social theory, models in social science, and the problem of objectivity. An underlying implication of these papers is that sociological theory includes processes "of social groups everywhere and in all times." The editor of this volume asserts that "values play a significant role in the process of creating a social science."

The close relation of sociological theory to social problems is indicated in *Sociology Today, Problems and Prospects,* edited by Robert K. Merton and others, and published in 1959 under the auspices of the American Sociological Society. In this work 25 papers review current sociological literature on social problems, analyze some of these problems, and suggest appropriate research methods. Seven of the papers discuss problems in the separate sociological fields of politics, law, education, religion, the family, art, science, and medicine. The study of the sociology of the law specifically received a new emphasis in the summer 1959 issue of *Social Problems,* for the entire issue of eight major papers dealt with the sociological aspects of specific legal problems.

Sociological Societies.—At the 54th Annual Meeting of the American Sociological Society (which has changed its name to American Sociological Association), held in September in Chicago, a special session was assigned to "an analysis of the sociological profession." A broad basis for this discussion was a paper prepared for the occasion by Talcott Parsons and published in the August issue of the *American Sociological Review.* This paper set the tone for the special session by indicating a number of problems for consideration. They included the following:

(1) How far have the canons of scientific adequacy and objectivity been established as a working code by sociology?

(2) How clear is the differentiation between sociology and its "neighboring scientific disciplines"? (It is suggested that sociology has reached the stage where it occupies a favorable middle position with reference to the other behavioral sciences.)

(3) How far is sociology differentiated today from sociological practice, or application to social problems?

(4) How far is sociology as a scientific discipline being distinguished from "the non-scientific aspects of the general culture, such as philosophy, religion, literature, and the arts, as well as the general *Weltanshauung*"?

(5) In what ways is the profession of sociology fitting into the structure of society and being given recognition by the general public? How can the distortions to which sociology is subjected by society in general be corrected? What can be done to improve "the public image of the sociologist"?

(6) Since teachers of sociology are advanced faster by their skills in research than by showing teaching ability, what can be done to keep some of the best teachers from being drawn away from the undergraduate teaching field wherein lies "so much of the discipline's strength"?

Other special topics that aroused interest at the same annual meeting of the society were: age status and social structure, the use of computers in the simulation of social processes, the sociology of psychiatric care, occupational sociology, the sociology of science, the distinguishing features of the sociologist's role and changes occurring in these features; and the ways by which sociology as a profession can reduce its handicaps, improve the methods of recruitment to the profession, raise the standards of training for sociologists, and obtain new sources of financial support for sociology.

The themes to be developed at the next session of the American Sociological Society to be held in New York, Aug. 29–31, 1960, include the history of sociology, sociological methodology, the field of social psychology, and several special topics, including the sociologies of power relations, ideological conflicts, planning for development, popular culture and recreation, and deviation.

Doctoral and Master's Degrees.—In the July and November 1959 issues of the *American Journal of Sociology* it was reported that at 68 departments of sociology in the United States and Canada in the year 1958, a total of 171 doctor of philosophy degrees were recommended, as compared with 113 granted in 1957. In addition, 247 master's degrees were recommended in 1958, compared with 230 for 1957.

University of Southern California.

SOFTBALL. See SPORTS, GAMES, AND SHOWS.

SOIL BANK. See AGRICULTURE.

SOIL CONSERVATION. Several factors combined to strengthen the soil and water conservation movement in the United States during 1959. Growing appreciation by state and local governments of the benefits derived from getting farms and ranches under conservation plans had encouraged many thousands of landowners to invest more heavily in ways to speed up their conservation work. Local and state interests, both private and governmental, were contributing at least a fourth of the operating costs of soil conservation districts, not including expenditures by farmers and ranchers in applying conservation plans on their own land. The contributions to soil conservation districts included appropriations, facilities and services, and contributions by private individuals, civic and municipal groups, business firms, and associations and clubs.

In the fiscal year 1959, approximately 29 million acres were added to soil conservation districts by formation of 55 new districts and additions of

land to old districts. This brought the total number of districts to 2,861, comprising 1,622 million acres and 94.7% of all farms and ranches. An additional 113,350 farmers and ranchers, whose land totaled 39 million acres, became cooperators with their districts and started applying conservation plans and practices. This made a total of 1,859,439 farm and ranch operators who either had finished or were working toward complete conservation. Their land totaled nearly 564 million acres, of which 365 million acres had been scientifically planned on the basis of its needs and capabilities.

The Soil Conservation Service continued to provide technical assistance to the districts through its central offices in all 50 states and through more than 3,000 work units and some 300 area offices. Field specialists in many categories were maintained in the states to guide the technical phases of the work on the land.

New conservation plans were prepared for 29 million acres by 92,801 farmers and ranchers assisted by Soil Conservation Service technicians. Also, to meet changed conditions, existing plans were revised for 15,572 farms covering 8,600,000 acres. Technicians serviced more than a million farms during the 1959 fiscal year.

Soil and conservation surveys were made on more than 48 million acres, and range site surveys on 14 million acres of western grazing land. This brought the total land surveyed for conservation purposes to more than 709 million acres, of which 93,500,000 acres were lands of the ranges.

Of major importance in 1959 was completion of the survey work and analysis of data in connection with the National Inventory of Soil and Water Conservation Needs, authorized by Congress and started in 1957. The inventory includes data on present land uses of all the nation's land; expected changes based on land capabilities by 1975; needs for conservation treatments on croplands, pasture and range, forest and woodlands, and lands in urban, industrial, and other uses; and an inventory of watersheds in all states and their needs for flood prevention and water control treatments, in addition to soil and water conservation methods on farms, ranches, and forest lands. The inventory was scheduled for publication in the 1960–62 period.

By September 1959 the people occupying 1,199 small watersheds, including more than 85 million acres, had formed watershed protection organizations and had made application to the Soil Conservation Service for assistance in planning their projects. Of the total number, 498 watersheds had been approved for planning, and 209 watersheds in 45 states had been planned and had started operations on the land.

Some examples of conservation practices applied on the land of watersheds are given below:

For soil conservation on farmland:		
Contour farming	2,461,000	acres
Conservation crop rotations	1,373,200	acres
Crop residue utilization	2,207,000	acres
Terracing	95,800	miles
Strip cropping	158,400	acres
Tree planting	109,600	acres
Pasture planting	1,816,900	acres
Wildlife area improvements	282,800	acres
For water control and conservation:		
Floodwater retarding dams	1,114	units
Structures for stream stabilization and sediment control	2,828	units
Improvement of stream channels	1,664	miles
Water diversions	177	miles
Revegetation for roadside erosion control:		
Planting grasses and legumes	161,644	acres
Planting trees and shrubs	172,480	acres

A 4-cent soil conservation postage stamp, issued Aug. 26, 1959, commemorated the more than a quarter of a century of cooperative work to protect and improve the soil resources of the nation. The stamp was the world's first to honor concerted efforts to eliminate waste from the use of the land.

SOLAR STUDIES. See ASTRONOMY; INTERNATIONAL GEOPHYSICAL YEAR.

SOLOMON ISLANDS. See WESTERN PACIFIC ISLANDS, BRITISH.

SOMALIA. See SOMALILAND.

SOMALILAND (SOMALIA). A trust territory on the east-central coast of Africa, administered by Italy under a 10-year mandate scheduled to end on July 1, 1960. Area, 178,201 square miles; pop. (est. 1958), 1,320,000, including about 30,000 Arabs and 4,300 Italians. Mogadiscio (83,115) is the capital and chief port. The greater part of the native population consists of nomadic or seminomadic Somali tribesmen. Arabic and numerous tribal dialects are spoken.

Government.—Pending the attainment of independence in 1960, the trusteeship administration has been headed by an Italian administrator advised by a three-nation United Nations council. The government within the territory consists of a 90-member Legislative Assembly (which will also serve as a Constituent Assembly) elected by universal suffrage on March 4–8, 1959. Premier Seyyid Abdullah Issa heads a 10-member ministry approved by the administering authority on June 27, 1959. The leading political party is the Somali Youth League, which holds 83 seats in the assembly.

Education and Religion.—School facilities are for the most part available only in towns and larger villages. Although school attendance has increased many times over since 1950, pupil enrollment comprises only a small part of the school-age population. In 1957–58 there were 308 schools of all types, with a total of 34,297 pupils. Students on the higher levels attend schools in Italy and the United Arab Republic. There is no written Somali language; Italian and Arabic are the languages of instruction in the territory. Most Somalis are Moslems.

Finance.—The budget for 1957 totaled 101,142,807 somalos. Italy has provided about half of the annual revenue, although under the 7-year development plan (begun in 1954), internal income has steadily increased. In 1958 the territory's revenue totaled about 60 million somalos, as compared with 41 million in 1955. In early 1959 the U.S. Development Loan Fund extended a $2 million loan to the Credito Somalo to spur the development of small enterprises in manufacturing.

Transportation and Communications.—Somalia has no railroads. Roads total about 5,863 miles, including 374 miles asphalted and 54 macadamized. International airlines serve Mogadiscio, which is also an Indian Ocean port. Passenger cars numbered 2,217 in 1958; commercial vehicles, 3,202; telephones, 1,400.

Economy.—The principal economic activity is livestock raising, mainly cattle, sheep and goats, and camels. Subsistence crops include durra, millet, maize (corn), beans, and rice. Bananas and sugar cane (10,000 short tons in 1958–59), grown mainly on Italian-owned plantations, are the chief cash crops; cotton and sisal are also produced in small quantities. The Italian administration's program of dam construction, well digging, reclamation, and irrigation has resulted in increased output of cereals, cash crops, and livestock. Manufactures consist mainly of refined sugar, meat products, hides and skins, canned goods, soap, and handicraft items. Exports (largely bananas, live animals, and livestock products) totaled 76,722,900 somalos in 1957; imports, 116,825,800. Trade is mostly with Italy.

Principal Events, 1959.—Pre-election rioting took place in Mogadiscio on Feb. 25, 1959, when opposition parties protested against the electoral law as favoring the ruling Somali Youth League. In the elections to the Legislative Assembly on March 4–8, the Somali Youth League obtained 61 uncontested seats. Of the 29 contested seats, the Somali Youth League won 22; the Somali Inde-

pendent Constitutional Party, 5; and the Liberal Somali Youth Party, 2. The Somali Youth League, a pro-Western party which stands for the peaceful reunion of Somalis now spread over five territories (including Ethiopia), again dominated the government formed by Premier Seyyid Abdullah Issa on June 27.

The Legislative Assembly called in August for the attainment of independence prior to Dec. 2, 1960, the date originally scheduled for the expiration of the 10-year trusteeship agreement. On November 9, Italy informed the U.N. Trusteeship Council that Somalia would be ready for independence before the scheduled time, and on December 5 the U.N. General Assembly voted to move up the date of independence to July 1, 1960.

In accordance with a report by former U.N. Secretary General Trygve Lie, a three-nation arbitration commission was named in 1959 to seek a settlement of the border dispute between Somalia and Ethiopia. The disputed area, which is near Wal Wal and contains wells important to the nomadic tribes, was the scene of clashes between Somalis and Ethiopians in early December 1959, when 26 persons were reported killed.

M. J. G.

SOMALILAND, French. See FRENCH SOMALILAND.

SOMALILAND PROTECTORATE. With a 450-mile coast on the Gulf of Aden, this British protectorate (established in 1887) is bordered on the east by Somaliland (an Italian trust territory under the United Nations), on the south by Ethiopia, and on the west by French Somaliland. It has an area of about 68,000 square miles, and a population of 650,000 (est. mid-1958), consisting almost entirely of Somali tribesmen who are Sunni Moslems of the Shafi'ite sect. They are mostly nomadic herdsmen, tending camels, sheep, and goats. Hargeisa (pop., 40,000) is the seat of government; other leading towns are Berbera, the chief port (about 20,000), Borama, Burao, Erigavo, and Las Anod.

The governor is Sir Douglas Basil Hall, who presides over a Legislative Council of 29 members (14 elected). After elections to be held in 1960 the Legislative Council is to consist of 36 members, 33 of whom will be elected nonofficials. A ministerial system (4 of the ministers being Somalis) is to be introduced. The currency is the East African shilling. Local revenue in 1958–59 was £1,165,247; expenditure, £1,636,982. United Kingdom grants totaled £1,385,583. In 1959, 43 Somali boys' schools were maintained by the government, accommodating 2,795 pupils. There were 120 grant-aided private Koranic elementary schools (2,750 pupils), 4 girls' schools (210 pupils), 1 English elementary school, and 1 Indian elementary school.

In 1958 imports totaled £4,017,261; exports (chiefly of livestock and skins), £1,729,821. Prospecting for oil is being carried out. Communications are by sea to Berbera; air services are provided to Hargeisa and Berbera by Aden Airways. There are 2,500 miles of roads motorable in the dry season.

SORGHUMS. See Index entry.

SOUDAN. The Soudanese Republic, situated in northwest Africa, is an autonomous republic of the French Community (q.v.) and a member of the Mali Federation (q.v.). Estimated area, 464,873 square miles; pop. (est. 1958), 3,700,000, including (in 1956) 7,382 nonindigenous persons, mainly French. French is the official language. Chief cities and populations (est. 1957): Bamako, the capital, 68,600; Kayes, 29,500; and Ségou, 21,000.

Government.—Formerly a French overseas territory (French Sudan) included within the federation of French West Africa (q.v.), Soudan chose the status of a member of the French Community on Nov. 24, 1958. As an autonomous republic, Soudan has the right of self-rule in domestic affairs, with the Community exercising control of foreign relations, defense, currency, strategic minerals, and certain other matters. Soudan adopted its constitution on Jan. 23, 1959. The Legislative Assembly consists of 80 members elected for a five-year term by universal suffrage. The president of the council (premier) is designated by the president of the assembly and invested by a majority in the assembly. Modibo Keita, leader of the African Federalist Party, was named premier on April 17, 1959.

Education and Religion.—In 1958 there were 298 schools with a total of 44,801 pupils (8.2% of the school-age population). Expenditure on education amounted to 1,320 million francs CFA, or about 24.6% of the budget. Slightly more than half the natives are Moslems; animists constitute most of the remainder, with Christians numbering less than 1%.

Finance.—The budget for 1958 amounted to 5,818 million francs CFA (one franc CFA equals 2 metropolitan francs). In the period 1947–57, French financial aid granted under the Economic and Social Investment Development Fund (FIDES) was equal to about $79.4 million.

Transportation.—Landlocked Soudan is connected with the Atlantic coast by the Dakar-Niger Railroad, whose eastern terminus is Koulikoro (32 miles east of Bamako). Roads and trails total 6,976 miles (1956), including 1,651 miles of highways. The airport at Bamako handles international traffic.

Production and Trade.—The chief economic activities are agriculture and livestock raising. The Moslem nomadic peoples of the northern region are breeders of cattle, sheep, and goats. The Negro peoples of the southwest and central regions cultivate millet, rice, maize (corn), peanuts, yams, sweet potatoes, and cassava. Output of peanuts, the chief cash crop, totaled 88,950 metric tons (unshelled) in the 1957–58 season; other cash crops are cotton, kapok, shea butter, and gum arabic. Fishing in the lakes and streams is of some importance. The few industries are mainly rice milling, cotton and kapok ginning, and vegetable-oil processing. Traditional handicraft items include leatherwork, carpets, and rugs. French aid has concentrated on land improvement and irrigation, and development of rice cultivation and stock raising. Exports consist chiefly of peanuts and other cash crops, animals and animal products, and dried fish. Foreign trade passes mainly through the port of Dakar, in Senegal (q.v.), and separate statistics for Soudan are not available.

Principal Events, 1959.—In the elections of March 4, 7, and 8, the Soudanese Union, led by Modibo Keita, won 76% of the 703,032 votes cast, and obtained all 80 seats in the Legislative Assembly. The remainder of the popular vote went to the opposition Soudanese Regroupment Party. Following the elections, the Soudanese Union was absorbed in the African Federalist Party, a new party of the Mali Federation (q.v.). Modibo Keita was named premier of Soudan on April 17.

M. J. G.

SOUTH AFRICA, Union of. A sovereign member of the Commonwealth of Nations since 1909, South Africa is the only independent state in Africa below the Sahara which is the permanent home of white people. Though outnumbered nearly four to one by nonwhites, the whites of the Union possess a monopoly of political and economic power and social prestige.

Area and Population.—The total area of the Union is 472,685 square miles, divided between four provinces as follows: Cape Province (including Walvis Bay), 277,113; Transvaal, 110,450; Orange Free State, 49,838; and Natal, 35,284. By June 30, 1958, the population was 14,418,000 and was still increasing at the rate of 2% a year. There were 3,011,000 whites (divided 60–40% between Afrikaans- and English-speaking persons); 9,606,000 native Africans or Bantu; 441,000 Asians, almost all

Indians; and 1,360,000 Coloreds, of mixed descent. As of June 30, 1959, the population was estimated at 14,673,000.

Of the chief cities, Johannesburg had in 1957 an estimated population of 1,030,200 (393,000 whites); Cape Town, the legislative center, 709,200 (280,800); Durban, a major port, 612,800 (177,000); Pretoria, the administrative capital, 335,300 (176,000); Port Elizabeth, 239,600 (95,200); and Germiston, a mining center, 213,200 (95,000).

South Africa controls two small islands, Prince Edward and Marion, lying 1,200 miles southeast of Cape Town, and administers South West Africa (q.v.).

Education.—Education in the Union is almost entirely segregated, not only as between whites and nonwhites, but also as between English- and Afrikaans-speaking persons. Education for whites is free and compulsory between the ages of 7 and 16, and as of 1955 there were 2,676 government and government-aided schools with 574,136 pupils and 261 private schools with 43,823 pupils. Education for Africans was placed under government control in 1953 and since 1958 has been directed by the Department of Bantu Education. In June 1958, African schools enrolled 1,239,413 pupils, of whom about 910,000 were in lower primary classes, 282,000 in higher primary classes, and 47,000 in postprimary classes. In 1957, 366 Africans received secondary school certificates, and in 1959 just over 300 entered universities as full-time students. As of June 1957, there were 1,637 African university students, including those taking correspondence courses.

Of the nine universities in South Africa, four are English-medium institutions (Cape Town, Natal, Rhodes, and Witwatersrand); four are Afrikaans-medium institutions (Orange Free State, Potchefstroom, Pretoria, and Stellenbosch); and the ninth, the University of South Africa, is chiefly for external students. In 1956 they had a combined enrollment of 22,604 full-time and 9,079 part-time students. (See also below, *Principal Events, 1959.*)

Government.—The constitution of the Union is embodied in the South Africa Act of 1909. South Africa is governed by Parliament, comprising Queen Elizabeth II, who is represented by a South African governor general (on Dec. 6, 1959, Charles R. Swart was appointed to succeed the late Dr. Ernest G. Jansen); a Senate, consisting since 1955 of 89 members, of whom 71 are elected and 18 are nominated; and a House of Assembly of 163 elected members. Only whites may be elected to Parliament. In the general election of April 16, 1958, the National Party, led by Prime Minister Johannes G. Strijdom (d. Aug. 24, 1958; succeeded on September 2 by Dr. Hendrik F. Verwoerd), won 103 seats, and the United Party, under Sir de Villiers Graaff, 53 seats, though they each polled approximately the same percentage of the votes. Four new parliamentary seats created for Colored voters, who had been removed from the common roll in Cape Province in 1956, were won by independents associated with the United Party in a separate election held on April 3, 1958. Under the Promotion of Bantu Self-Government Act of 1959, the seats of the three representatives of Africans in the House of Assembly and the four in the Senate will be abolished in 1960.

Each province is administered by an elected Provincial Council working with an appointed administrator. The chief functions of the provinces are to administer schools (apart from those for Africans) and hospitals and to supervise road building, and they may levy taxes for these purposes. In the provincial elections of Oct. 14, 1959, the National Party maintained its control of the Cape, Transvaal, and Orange Free State councils, though its majorities were lowered in 28 seats in the two former provinces from those achieved in 1958, and the United Party of the Natal Provincial Council.

Finance.—National income amounted to £1,988 million (£1 = $2.80) in the year ending June 30, 1958, an increase of 3% over the preceding year, as compared with 7.7% increases in the two previous years. The chief reason for the lower rate was the decrease in the income from farming, fishing and forestry, and minerals other than gold. The effects of the recession were limited by substantial increases in gold output and in government capital expenditure, and by a net capital inflow of £69 million in the 18 months ending June 30, 1959 (there had been a net outflow of £20 million in the calendar year 1957).

The International Bank for Reconstruction and Development (IBRD) made a 10-year, $11.6 million loan for railway expansion to the South African government on June 10, 1959, bringing IBRD lending in that country to $196.8 million, of which $43 million has been repaid. Gold and foreign exchange reserves stood at $317 million at the end of 1958, as compared with $288 million a year earlier, and this made it possible to relax some restrictions on imports and, on Jan. 5, 1959, to reduce the discount rate of the South African Reserve Bank from 4½ to 4%. As of Aug. 31, 1959, reserves totaled $371 million. The 1959–60 budget decreased subsidies and increased taxes, and revenue was expected to amount to £335.9 million, as compared with £317 million in 1958–59. Expenditure was estimated at £299.2 million. The Union is scheduled to introduce decimal coinage in 1961.

Transportation and Communications.—South Africa has 12,021 miles of railways and 205,917 miles of roads. Scheduled service is provided by 2 domestic and 12 foreign airlines. In 1956 there were 779,000 radios; in 1957, 799,702 telephones.

Mining.—Gold production in 1958 totaled 17,665,739 fine ounces valued at £220 million, as compared with 17,030,737 ounces valued at £212 million in 1957; in the first half of 1959 it amounted to 9,672,395 ounces (£120 million). Employment in the gold mines held steady in 1958 at 548,000, including 480,000 Africans. Earnings from uranium increased from £50 million in 1957 to £53.2 million in 1958, when 6,245 tons of uranium oxide were produced, placing uranium second only to gold as an earner of foreign exchange. In the latter part of 1958 gem diamond stones made a good recovery, and industrial diamonds, though threatened in the United States market by competition from synthetic diamonds, continued to hold their own through their relative cheapness compared with the synthetic product; total exports were valued at £30.7 million in 1958. Output of other minerals in 1958 included 37,080,000 metric tons of coal and 2,208,000 metric tons of iron ore.

Agriculture.—Drought and black spot disease reduced the citrus crop from 7.8 million cases in 1957 to 6.7 million in 1958. Expectations for 1959 were more favorable, however, and in the long run South Africa hopes substantially to increase its overseas markets for fruit. Wheat also had a disappointing harvest of 22,350,000 bushels in 1958, necessitating sizable imports. Output of other agricultural products included 133 million bushels of corn, 1,097 million pounds of meat, and 9,876,711 hides and skins. The price was low for the 312 million pounds of wool produced. The brightest spot was the record production of 1,118,500 short tons of raw sugar.

Industrial Production.—Private enterprise is encouraged, and turnovers in the manufacturing industry were maintained fairly satisfactorily in 1958. With rising costs and keen competition, however, manufacturers have had to review their methods of production and to be content with small margins of profit. The government also participates in industry, and the South African Coal, Oil and Gas Corporation, Ltd. (SASOL), its oil-from-coal enterprise, plans to spend £3 million in the next three years on capital improvements. A new project is planned by the Electricity Supply Commission (ESCOM), the public power company, for northern Natal at a cost of £27 million. In 1958 the Union produced a total of 20,208 million kw.-hr. of electricity. Output of other industrial products included 2,724,000 metric tons of cement, 1,582,800 tons of pig iron and ferroalloys, and 1,836,000 tons of steel, of which two thirds were supplied by the government-owned South African Iron and Steel Industrial Corporation, Ltd. (ISCOR).

External Trade.—The Union normally has a deficit on visible trade, and this worsened from £98.2 million in 1957 to £166.3 million in 1958. This was due largely to a decline in the value of exports (excluding gold) from £451.6 million to £390.4 million, produced mainly by a fall in world prices, and to a moderate increase in imports, from £549.8 million in 1957 to £556.7 million in 1958. The £220.1 million derived from gold production was, however, more than sufficient to cover the 1958 deficit. In the first half of 1959, exports totaled £204.8 million; imports, £243.5 million; and gold production, £117 million.

The most noticeable change in South Africa's foreign trade in 1958 was the growing importance of West Germany, which became the third largest supplier, with the United Kingdom and the United

States in first and second places. Taking into account products indirectly traded, Germany also became the Union's third largest customer, after the United Kingdom and the Federation of Rhodesia and Nyasaland, though in direct trade the United States occupied this position.

Principal Events, 1959.—In the course of a long and contentious parliamentary session that opened on Jan. 23, 1959, the Nationalist government passed far-reaching apartheid measures which complete its pattern of political, economic, and educational racial separation throughout South Africa. The Industrial Conciliation Amendment Act intensifies apartheid in the trade unions and further restricts their powers to manage their own affairs. It also closes all legal loopholes regarding job reservation for whites or nonwhites by permitting the minister through the Industrial Tribunal to make quota reservations, percentage reservations, or reservations in absolute numbers without any necessity of uniformity in any industry or area. Under the Extension of University Education Act and the University College of Fort Hare Transfer Act the minister of Bantu education has forbidden the entry of nonwhites into the two "open" universities, Witwatersrand and Cape Town, after Jan. 1, 1960. Indians and Coloreds may no longer attend Fort Hare, which has been transferred from Rhodes University to government control. The three ethnic African colleges, of which Fort Hare will be one, an Asian college, and a Colored college are to be controlled as to staff, students, and curriculum by the government.

Many questions have been raised by the 1959 Promotion of Bantu Self-Government Act, an extension of the 1951 Bantu Authorities Act, which avowedly seeks to establish eight or nine ethnic territories out of 264 separated Bantu reserve areas and to lead them toward self-government. These territories are to be kept in touch with the minister of Bantu development through secretaries general appointed by the minister; their African authorities, except for an elected one third of those at the lowest level, are nominated by the government and are subject to dismissal. Africans working in "white" areas are to be kept in touch with their tribal areas through native ambassadors to the principal cities. Because of this structure, the government decided that it was no longer useful to retain the native representatives in Parliament. The new law is looked on by the Nationalists as proof that they genuinely support separate development for Africans. Prime Minister Verwoerd maintains that no limit will be put on their development toward self-rule. The government plans to buy land to join native holdings and is trying to develop a group of productive African land users by limiting the number of native farmers and grouping those no longer participating in subsistence agriculture into villages within the reserves. It has established the Bantu Investment Corporation but thus far has endowed it with only £500,000. Since the government is determined to keep private capital out of the reserves, it is difficult to see how, without vastly increased financing, they can be made productive for their own 4 million inhabitants and also attractive to those natives in the "white" areas.

The United Party strongly opposed in Parliament many aspects of the new legislation. It raised questions about the boundaries of the ethnic territories, doubted the advisability of buying more land for the reserves, and fought unsuccessfully against establishing apartheid in higher education and against removing the native representatives from Parliament. It took a stand, in fact, in favor of somewhat increasing nonwhite representation. At its annual conference on Aug. 11–13, 1959, the majority's refusal to support buying more land for African resettlement helped lead to a split which resulted in 12 of its parliamentary members breaking away. This group, which calls itself the Progressives, is pressing for more formal contacts between whites and nonwhites and for greater consideration of the interests of the latter. It is supported by many persons outside Parliament, including Harry Oppenheimer, head of the Anglo-American Corporation, and J. G. N. Strauss, former leader of the United Party.

After several postponements the so-called treason trial was reconvened on August 3, with 30 of the original 156 defendants who had been arrested in December 1956 placed on trial once more. Meanwhile, on May 27, Albert J. Luthuli, president of the African National Congress and a moderate, was banished to his Natal home and prohibited from attending meetings for five years. Ronald Segal, editor of *Africa South*, who is well known for his anti-Communist as well as anti-apartheid writings, also was barred from attending meetings for five years.

Beginning in June, widespread indications of African discontent appeared. Riots in Cato Manor, outside Durban, reflected economic strains and resentment at efforts to move unemployed women back to the reserves. They were followed by meetings in the Natal reserves, protesting unemployment, low wages, and general frustrations and often culminating in violence. The government retaliated with force, arrests, and imprisonments. Meanwhile, the African National Congress, the Indian National Congress, the Congress of Colored Persons, and the left-wing Congress of Democrats, joined in this instance by many members of the Liberal Party, encouraged the boycott of South African goods agreed on at the All-African People's Congress held at Accra in December 1958. On Nov. 17, 1959, the U.N. General Assembly passed (62–3, with 7 abstentions) a resolution regretting the Union's racial policies.

GWENDOLEN M. CARTER,
Professor of Government, Smith College.

SOUTH AMERICA. A continent in the Western Hemisphere. Estimated area, 6,870,000 square miles; population (est. 1958), 134 million. (See articles on the South American countries and the Index entry *South America.*)

SOUTH CAROLINA. South Atlantic state, United States; one of the original 13 states. The "Palmetto State" ranks 40th in area and 25th in population among the 50 states.

Dramatic photo of rioting in June—near Durban, South Africa—shows police attacking mob of native women who, angered by government curbs against their home stills, had raided municipal beer halls. Four native men were killed.

WIDE WORLD

Area and Population.—Area: 31,055 square miles (land, 30,305; inland water, 750), divided into 46 counties. Population: (1950) 2,117,027; (est., July 1, 1958) 2,391,000. Urban places with populations above 10,000 in 1958 (as estimated by the State Board of Health) are:

Anderson	24,306	Greenwood	16,119
Brandon-Judson[1]	11,008[2]	Orangeburg	17,389
Charleston	80,097	Rock Hill	29,155
Columbia (*capital*)	112,339	Spartanburg	42,595
Florence	26,242	Sumter	26,002
Greenville	72,051		

[1] Unincorporated. [2] 1950 federal census figure.

Executive.—Chief state officers in 1959:
Governor: Ernest F. Hollings (Democrat)
Lieutenant Governor: Burnet R. Maybank
Secretary of State: O. Frank Thornton
Treasurer: Jeff B. Bates
Attorney General: Daniel R. McLeod
Comptroller General: Elridge C. Rhodes
Supt. of Education: Jesse T. Anderson

Constitution and Judiciary.—The present constitution went into effect in 1895. The Supreme Court comprises five justices; chief justice in 1959 was Taylor H. Stukes.

Legislature.—The South Carolina General Assembly comprises a 46-member Senate and a 124-member House of Representatives which meet annually commencing the second Tuesday in January. (See below, *Principal Events, 1959.*)

Finance.—In the 1958–59 fiscal year, state revenue of $386,134,272.39 comprised $209,466,233.73 from state tax sources, $94,185,317 from the federal government, and $82,482,721.66 from other sources. Tax revenue consisted of $58,516,992.67 from a 3% general sales tax, $18,355,988 from individual income taxes, $13,744,833 from corporate income taxes, $51,912,224.92 from motor fuel taxes, $41,847,577 from licensing, and $25,088,618.14 from other sources. Expenditures of $399,824,153.71 comprised $97,761,334 for education, $21,541,145 for health, welfare, and safety, $96,589,588.82 for highways, and $183,932,085.89 for other purposes. Long-term indebtedness on June 30, 1959, amounted to $205,768,292.91.

Banking.—As of June 10, 1959, the state's 25 national banks had $653,021,000 in assets, $474,469,000 in demand deposits, and $106,632,000 in time deposits. The 114 state banks and 6 cash depositories had assets of $382,465,426, demand deposits of $215,451,304, and time deposits of $76,031,213.

Education.—Attendance at school is not legally compulsory in South Carolina. Operating expenditures for public elementary and secondary education in the 1958–59 school year totaled $92,725,052 ($177.10 per pupil), comprising $30,302,547 from local school districts, $58,889,681 from the state, and $3,532,824 from the federal government. Outlays for construction and improvements amounted to $15,521,950, and teachers' salaries averaged $3,288 (high school, $3,446; elementary, $3,187).

SOUTH CAROLINA SCHOOL STATISTICS, 1958–59

Type of school	No.	Teachers	Students
Public elementary (1–8)	990	12,166	405,720
Public secondary (7–12)	404	7,762	194,789
Private and parochial elementary and secondary	69	673	14,061
Junior colleges	8	...	1,773
Colleges and universities	25	...	28,505

Public Assistance.—In the 1958–59 fiscal year, public assistance expenditures from state and federal funds (excluding institutional costs) totaled $26,361,395, including $15,685,269 for the aged, $6,292,581 for dependent children, and $3,227,002.59 for the permanently and totally disabled. A monthly average of 66,075 persons received public assistance.

Labor Force.—The number of nonfarm employees was up slightly in July 1959 to 530,400 from 520,900 in the previous July and from an average of 528,600 for the 12 intervening months. Of the 1959 total, 43.1% were employed in manufacturing, 18.2% in trade, and 17% in government. Insured unemployment in July 1959 fell to 10,673 from 16,358 a year earlier.

Manufacturing.—The state's 2,142 manufacturing plants in 1958 employed an average of 188,825 persons who received $535,682,721 in wages. Value of production totaled $2,792,741,670, and outlays for new plant and equipment amounted to $112 million. Production workers averaged $62.32 for an average workweek of 41 hours in August 1959.

MAJOR SOUTH CAROLINA MANUFACTURES, 1958

Product or industry	Average no. of employees	Salaries and wages (thousands of dollars)	Value of annual product
Textiles & allied products	145,796	$406,740	$1,923,748
Textiles	122,422	357,915	1,756,762
Clothing	22,978	47,997	162,014
Forest products	13,390	42,370	236,140
Paper and pulp	4,693	20,540	138,398
Food products	7,681	18,587	189,514
Electric power production	2,104	8,515	112,768
Chemical & allied products	2,368	6,142	80,686
Stone, clay, glass products	3,928	10,021	49,633
Foundry and machine shops	2,852	9,595	44,590

(Source: South Carolina State Development Board.)

Among major new industrial developments of 1959, the $38 million pulp mill of Bowaters Carolina Corporation near Rock Hill began continuous operation; ground was broken for a $5 million facility of Springs Cotton Mills at Lancaster; and Chemstrand Corporation began construction of a $15 million unit of a $60 million nylon manufacturing plant at Greenwood.

Mining.—In 1958 South Carolina ranked 42d among the states in the value of its mineral output, with 0.14% of the national total. It was first in output of rare metals, second in china clay (17% of domestic output), kyanite, vermiculite, and zircon, and fourth in mica. Barite was produced and peat was reported for the first time.

SOUTH CAROLINA MINERAL PRODUCTION, 1958

Mineral	Short tons	Value
Clays	929,000	$ 5,157,000
Sand and gravel	2,946,000	2,858,000
Stone	3,637,000	5,229,000
Other minerals	...	9,599,000
Total	...	$22,412,000[1]

[1] Total adjusted to eliminate duplicating the value of clays and stone. (Source: U.S. Bureau of Mines and the South Carolina Geological Survey.)

Agriculture.—Cash farm income for the first nine months of 1959 dropped slightly to $247,908,000 from $252,751,000 for the corresponding period of 1958. For the full year 1958, income comprised $109,288,000 from livestock and livestock products, $227,004,000 from crops, and $33,062,000 from government payments. Principal income sources in 1958 were tobacco, $78,529,000; cotton lint, $53,503,000; forest products, $33,905,000; and cattle, $25,257,000.

SOUTH CAROLINA CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Corn (1,000 bu.)	24,103	28,954	25,731
Cotton lint (1,000 bales)	598	299	415
Cottonseed (1,000 tons)	251	124	173
Cowpeas (1,000 bu.)	289	168	192
Hay (1,000 tons)	534	580	497
Oats (1,000 bu.)	14,038	13,101	13,893
Pecans (1,000 lb.)	3,640	8,000	4,500
Potatoes (1,000 cwt.)	875*	488	540
Soybeans (1,000 bu.)	1,782	5,611	5,920
Sweet potatoes (1,000 cwt.)	1,386*	689	756
Tobacco (1,000 lb.)	159,758	131,100	142,560
Wheat (1,000 bu.)	2,971	3,124	3,936

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

The state had 122,000 farms in 1958. Total acreage (1954) of 11,069,000 included 3,393,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 613,000 cattle, 550,000 hogs, and 4,714,000 chickens (excluding commercial broilers). Some 166,000 family and hired

workers were engaged in farming in the week of Nov. 22–29, 1959.

Transportation and Communications.—State and federal funds disbursed for highways in the 1958–59 fiscal year totaled $63,817,639, and 1,367 miles of new construction were completed.

Highways and roads on Aug. 30, 1959, totaled 54,130 miles (27,522 surfaced). Registered *motor vehicles* numbered 849,694 on Aug. 15, 1959, including 674,785 passenger cars. There were (1958) 16 *railroads* operating 3,331.15 line miles; (1959) 6 regularly scheduled *airlines;* and (1959) 75 *airports and airfields* (40 commercial and municipal, 5 military, and 30 private).

Communications media (1958) included 67 AM and 10 FM *radio stations;* 8 *television stations;* 18 daily *newspapers* (1957 circulation, 452,471) and 80 other newspapers; and (Jan. 1, 1959) 136,100 business and 355,600 residential *telephones.*

Principal Events, 1959.—Gov. Ernest F. Hollings was inaugurated on January 20, a week after the General Assembly convened for a session which extended into late May. For the purpsoe of wiping out an existing deficit and to meet increased expenditures, the legislature enacted a tax program designed to yield an additional $28 million annually in General Fund revenue. Major new tax measures introduced a withholding system for payment of state personal income taxes and eliminated as an allowable state income tax deduction any sum of up to $500 paid in federal income taxes. Newly imposed levies included a petroleum products tax; 3% taxes on charges for telephone, telegraph, dry-cleaning, and laundry services and for electricity; a tax of 10% on most entertainment admissions; and a license tax on businesses where coin-operated machines are located. Beer and cigarette taxes were raised.

In an effort to alleviate the problem of crowded court dockets, the chief justice of the state Supreme Court was empowered by statute to supervise the calendars of the trial courts, to call additional terms of court, to transfer circuit judges from one assignment to another, and to assign more than one judge to a circuit.

Three presidents were chosen for state-supported institutions of higher learning and for one private college. They are Robert C. Edwards, Clemson Agricultural College; Robert L. Sumwalt, University of South Carolina; Charles S. Davis, Winthrop College; and Charles F. Marsh, Wofford College (Methodist).

The State Development Board reported that over $177 million was invested in establishing new industries and expanding old ones during the first 11 months of 1959. Twelve companies announced that they would establish new plants in the state at a cost of $83,165,000. Eight others declared their intention to expand existing plants at a cost of $3,800,000. The new industries alone will mean 3,000 additional jobs within the state.

The year 1959 was one of the wettest on record in South Carolina. Hurricane Gracie, which struck the state on September 29, caused heavy damage to unharvested crops, particularly in the storm's path between the Charleston-Beaufort area and Columbia. The crops most affected were cotton, corn, pecans, peanuts, and soybeans. The estimated crop loss exceeded $2,500,000.

South Carolina in 1959 had the longest continuous section of interstate highway under contract in the entire nation. Interstate Route 26, which was under construction, will extend from a point in Dorchester County near Charleston almost to the North Carolina line in Spartanburg County, a distance of 204 miles, including a connection with the city of Columbia.

University of South Carolina.

SOUTH DAKOTA. North Central state, United States; admitted to the Union, Nov. 2, 1889. The "Coyote State" ranks 16th in area and 40th in population among the 50 states.

Area and Population.—Area: 77,047 square miles (land, 76,536; inland water, 511), divided into 68 counties. Population: (1950) 652,740; (est., July 1, 1958) 684,000. Urban places with 1950 populations above 7,500 are: Aberdeen, 21,051; Brookings, 7,764; Huron, 12,788; Mitchell, 12,123; Rapid City, 25,310; Sioux Falls, 52,696; Watertown, 12,699; and Yankton, 7,709. Pierre (5,715) is the *capital.*

Executive.—Chief state officers in 1959:
Governor: Ralph Herseth (Democrat)
Lieutenant Governor: John F. Lindley
Secretary of State: Selma Sandness
Treasurer: Albert O. Hamre
Attorney General: Parnell J. Donohue
Auditor: Harriett Horning
Supt. of Public Instruction: M. F. Coddington

Constitution and Judiciary.—The present constitution went into effect in 1889. The Supreme Court comprises five justices; chief justice in 1959 was Charles S. Hanson.

Legislature.—The South Dakota Legislature comprises a 35-member Senate (in 1959, 20 Democrats and 15 Republicans) and a 75-member House of Representatives (43 Republicans and 32 Democrats), which meet in odd-numbered years commencing the first Tuesday after the first Monday in January. (See below, *Principal Events, 1959.*)

Finance.—In the 1958–59 fiscal year, state revenue of $123,741,476.94 comprised $65,235,573.39 from state tax sources, $35,362,194.95 from the federal government, and $23,143,708.60 from other sources. Tax revenue consisted of $17,623,246 from a 2% general sales tax, $20,797,420.52 from motor fuels, $7,019,428.45 from licensing, and $19,795,478.42 from other sources. Expenditures of $119,473,079.74 comprised $22,702,924.56 for education, $13,219,150.23 for health, welfare, and safety, $45,912,652.77 for highways, and $37,638,352.18 for other purposes.

Banking.—As of June 10, 1959, the state's 34 national banks had $407,163,000 in assets, $248,261,000 in demand deposits, and $125,627,000 in time deposits. The 138 state banks had assets of $374,150,746.60, demand deposits of $238,828,190.90, and time deposits of $103,772,380.92.

Education.—School attendance is compulsory between the ages of 6 and 16, inclusive. National Education Association estimates for the 1959–60 school year showed operating expenditures of $46,200,000 ($345 per pupil). Revenue was estimated at $44,500,000 from local school districts, $4,350,000 from the state, and $2,700,000 from the federal government. Capital outlays amounted to $8,500,000, and teachers' salaries averaged $3,600 (high school, $4,150; elementary, $3,400).

Estimates for 1959–60 indicated 114,000 pupils in public elementary schools taught by 5,740 teachers, and 38,000 students in public secondary schools with 2,357 teachers. There were (1958–59) 14,610 students in colleges and universities.

Public Assistance.—In the 1958–59 fiscal year, public assistance expenditures from federal and state funds (excluding institutional costs) totaled $10,607,656, including $6,196,149 for the aged, $3,594,283 for dependent children, and $702,316 for the permanently and totally disabled. A monthly average of 21,388 persons received aid.

Labor Force.—Nonagricultural employees numbered 139,050 on July 15, 1959, compared with 135,650 on the previous July 15, and with the 131,000 average for 1958. Of the 1959 total, 27.5% were in trade, 26.9% in government, and 14% in service industries. Unemployment of 4,550 persons in July 1959 was down from 4,750 a year earlier.

Manufacturing.—In 1957, wages of the 11,482 persons employed in manufacturing in the state totaled $48,364,000. Value added by manufacture totaled $94,487,000, and outlays for new plant and equipment amounted to $2,504,000. In August 1959, production workers earned $87.90 for an average workweek of 46.1 hours.

Leading manufactures are those of food and kindred products, which in 1957 employed 7,642

persons, paid $34,041,000 in wages, and added $69,481,000 in value by manufacture; and printing and publishing (1,557; $5,489,000; $10,645,000).

Mining.—In 1958 South Dakota ranked 39th among the states in the value of its mineral output, with 0.25% of the national total. It produced 52% of the nation's beryl, and was first in gold output; second in concentrates of columbium-tantalum; fourth in sheet mica; and seventh in uranium.

SOUTH DAKOTA MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Beryl concentrates	240	$ 129,000
Clay[1]	155,000	155,000
Feldspar (long tons)	23,229	145,000
Gold (fine ounces)	570,830	19,979,000
Sand and gravel	14,705,000	9,179,000
Silver (fine ounces)	153,000	138,000
Stone	1,395,000	4,095,000
Uranium ore	35,489	530,000
Other minerals	...	7,800,000
Total	...	$41,534,000[2]

[1] Excludes bentonite, which is included in "Other minerals." [2] Total adjusted to eliminate duplication of value of clays and stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1959 dropped sharply to $419,640,000 from $477,050,000 for the corresponding period of 1958. For the full year 1958, income comprised $478,912,000 from livestock and livestock products, $206,011,000 from crops, and $25,027,000 from government payments. Principal income sources in 1958 were: cattle, $275,929,000; hogs, $108,109,000; wheat, $89,531,000; and corn, $44,132,000.

SOUTH DAKOTA CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Barley (1,000 bu.)	14,192	15,646	5,265
Corn (1,000 bu.)	108,551	105,192	79,774
Flaxseed (1,000 bu.)	5,547	8,312	3,432
Hay (1,000 tons)	4,364	5,190	3,414
Oats (1,000 bu.)	92,400	121,953	40,385
Potatoes (1,000 cwt.)	918*	757	438
Rye (1,000 bu.)	3,934	5,497	1,588
Soybeans (1,000 bu.)	1,712	2,978	1,576
Wheat (1,000 bu.)	35,044	55,722	18,204

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

The state had 61,700 farms in 1958. Total acreage (1954) of 44,949,000 included 17,760,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 3,392,000 cattle, 1,591,000 hogs, 1,329,000 sheep, and 9,008,000 chickens (excluding commercial broilers). Some 78,000 family and hired workers were engaged in farming during the week of Nov. 22–29, 1959.

Transportation and Communications.—State and federal funds disbursed for highways in the 1958–59 fiscal year totaled $34,122,518.45, and 915.5 miles of new construction were completed.

Highways and roads on Jan. 1, 1959, totaled 92,096 miles (47,916 surfaced). Registered *motor vehicles* numbered 367,796 in 1958, including 244,004 passenger cars. There were (1959) 8 *railroads* operating 3,916.9 line miles; 4 regularly scheduled *airlines;* and 202 *airports and airfields* (59 commercial and municipal, 2 military, and 141 private).

Communications media (1959) included 22 AM *radio stations;* 7 *television stations;* 12 daily *newspapers* (circulation, 163,850) and 165 other newspapers (160,000); and (January 1) 50,100 business and 155,000 residential *telephones.*

Principal Events, 1959.—On January 1 the Democrats assumed political power in the state for the first time since the 1930's. Democrat Ralph Herseth became governor, and members of his party controlled most of the other constitutional offices and the state Senate. Divided political authority influenced the 36th session of the legislature, which ended March 6 after passing approximately 400 bills and authorizing expenditures of $61,400,000. New laws included only one general tax measure, which increased the excise tax on cigarettes from 3¼ to 5 cents. Among other legislation were the authorization for a Citizens Tax Study Commission, a new formula for distributing state aid to schools, the creation of a teachers' retirement system, and an appropriation of $800,000 for relocating the School for the Blind at Aberdeen. A new driver's licensing law, with an "implied consent" provision for the compulsory revocation of the license of a driver refusing to submit to a test for drunkenness, was declared unconstitutional on November 30 by Minnehaha County Circuit Judge Francis Dunn.

Other political events of significance included Fay Wheeldon's victory over Wendell H. Hanson in a run-off election for mayor of Sioux Falls on April 28, the appointment of Yankton attorney Frank Biegelmeier to the state Supreme Court on May 11, and the official announcement on December 30 by Democratic Sen. Hubert H. Humphrey of Minnesota that he was entering the South Dakota preferential primary for president in 1960.

On December 16 the 21-member Citizens Tax Study Commission, under the chairmanship of Everett Creaser of Watertown, began its final meetings. These resulted in recommendations to the governor for a "balanced system of revenue" that would include a strengthened sales tax, an income tax, severance tax, and transaction tax on the sale of real property.

Economic conditions were influenced by the summer drought which helped reduce crops (see above, *Agriculture*) and caused a number of counties to be classified as "disaster areas" by the federal government. Two other developments of economic import were the announcement on February 24 that Sioux Falls Stock Yards, with a sale of 1,522,415 head the previous year, had moved into the top ten of the nation's livestock markets, and the signaling of the beginning of construction on the Big Bend Dam project, as notice was given on July 3 to bidders for construction of a bridge over the Missouri River near Fort Thompson. (See also DAMS.)

With the attainment of statehood by Hawaii, the geographic center of the United States shifted westward to a point in South Dakota near its boundaries with Montana and Wyoming. In 1958, admission of Alaska had shifted the center from Kansas to a point 11 miles west of Castle Rock in South Dakota's Butte County, at latitude 44°59′N. and longitude 103°38′W.

Other events of 1959 included the first annual conference (March 7) for Indian tribal judges at the University of South Dakota; a disastrous fire in Deadwood and nearby forests (September 8); and the appointment (November 30) of Joe Foss, former governor and Marine Corps flier as commissioner of the new professional American Football League.

Principal Events by: CEDRIC C. CUMMINS,
Professor of History,
State University of South Dakota.

SOUTH SEA ISLANDS. See FRENCH POLYNESIA; PACIFIC ISLANDS; WESTERN PACIFIC ISLANDS, BRITISH.

SOUTH WEST AFRICA. Situated on the Atlantic Ocean and bordered by Angola on the north, Bechuanaland Protectorate on the east, and Cape Province on the south and southeast, this former

League of Nations mandate is administered by the Union of South Africa. It contains the Caprivi Zipfel, a strip of land 20 to 60 miles wide and 300 miles long, which is controlled by the Union Ministry of Native Affairs; and encompasses Walvis Bay (374 square miles), which is part of Cape Province but is administered with South West Africa. Total area, 317,725 square miles; population (mid-1959 est.), 554,000, comprising (in 1958) 452,000 Africans of numerous tribes (some 200,000 Ovambos being the largest), 66,000 Europeans, and 21,000 Colored persons. The capital is Windhoek (1959 est. pop., 36,000, including 20,000 whites).

Government.—An administrator (D. T. du P. Viljoen) is assisted by an 18-member Legislative Assembly. The territory is represented in the Union House of Assembly by 6 elected members, and in the Senate by 2 elected and 2 nominated members. Local government is administered by magistrates in 21 districts.

Education.—The educational system is not compulsory for native and Colored children, and is separated according to race. In 1959 there were 279 schools for native and Colored pupils (with a combined enrollment of 35,000), including 12 government schools, 2 schools with secondary classes, and 2 teacher-training schools. For white children, there were 56 government schools (with 11,943 pupils) in 1957.

Finance.—Government revenues for 1957–58 were estimated at £17,117,577; expenditure, £17,077,060, including £1,301,910 for education, £936,290 for public works, and £771,810 for administration.

Transportation.—South Africa's railway system aggregates 1,486 miles, and connects with the South African Railways system at De Aar. The road network comprises 3,392 miles of motor highways and 28,000 miles of dirt and graveled roads. Scheduled air services at Windhoek and Keetmanshoop airports are operated by South African Airways. Principal seaports are Walvis Bay and Lüderitz.

Economy.—Mining, fishing, and stock raising are the chief industries. Mineral production in 1958 was estimated at $65 million (down 25% from 1957). Chief minerals and 1958 exportable values were: gems and industrial diamonds, $42 million; lead, copper, and zinc concentrates, $20 million; and manganese, $3 million. Fish and fish products are valued at about $25 million annually. In 1958, output of processed pilchard was 115,003 tons; rock lobster products totaled 4,089,314 pounds; and the whitefish catch was 6,619,566 pounds. Exported karakul pelts in 1958 totaled 2,708,644, valued at £5,168,996. The Union of South Africa provides about 80% of the territory's annual imports, and receives 25% of total exports.

Principal Events, 1959.—Although the Union of South Africa has refused to report annually to the United Nations on the status of the territory since 1946, Johannes G. Van Der Wath, Union representative to the United Nations, unofficially reported on October 20 to the General Assembly's Trusteeship Committee about economic developments in South West Africa. He said his government had given "first priority" for improving the native water supply, had appropriated in 1959 more than £2 million for road construction, was allocating annually £293,000 for native education, and had reserved large areas of land for native tribes. Nevertheless, on November 17 the General Assembly approved seven resolutions which condemned the Union's alleged violations of its mandate in the territory. The resolutions deplored particularly the removal of natives from their lands in order to settle Europeans there, and specifically demanded that South West Africa be placed under a United Nations trusteeship.

Twelve Africans were killed and about 50 were injured in clashes at Windhoek on December 10 between security forces and demonstrators protesting the planned removal of Africans from their present locations. On December 21 the U.N. Committee on South West Africa adopted a resolution requesting the Union government to "desist from the use of force and from enforcing the removal of residents of the Windhoek location." Nine African states also protested these developments.

W. R. F.

SOUTHEAST ASIA TREATY ORGANIZATION (SEATO). An international organization for the collective defense and the preservation of peace in Southeast Asia and the Southwest Pacific. SEATO was established under the Southeast Asia Collective Defense Treaty, signed at Manila, the Philippines, on Sept. 8, 1954 (came into force, Feb. 19, 1955). Treaty signatories, who form SEATO's membership, are: United States, Great Britain, France, Australia, New Zealand, Philippines, Pakistan, and Thailand. A protocol to the treaty guarantees the defense of Cambodia, Laos, and South Vietnam, although these states are not members of the organization. Chief organs of SEATO are:

(1) The Council, consisting of ministerial representatives of the member nations who meet at least once a year and decide on matters of broad policy.

(2) The Council Representatives, who meet in Bangkok, Thailand, usually every two weeks and carry on the business of the organization.

(3) The Military Advisers, who advise the Council on military matters and carry on the work of military planning in its broadest phases.

Other committees and offices which work under the Council Representatives deal with research on Communist tactics, economic and social problems of SEATO nations, educational and cultural cooperation among member nations, and public relations. In 1957 a permanent executive secretariat was established at Bangkok, and Pote Sarasin of Thailand was appointed SEATO's first secretary general. A Military Planning Office was also established in 1957, with headquarters at Bangkok, and Brigadier L. W. Thornton of New Zealand was later named as chief.

The fifth annual conference of the Council took place at Wellington, New Zealand, April 8–10, 1959. A major theme was the need for improved standards of living and greater economic opportunity for the peoples of Southeast Asia to counter the effects of Communist subversion. C. Douglas Dillon, United States under secretary of state for economic affairs, who attended in the place of the ailing Secretary of State John Foster Dulles, noted an attempt by Communist China to disrupt established trade patterns by slashing prices, and recommended that economic measures be taken to help affected nations. In its concluding communiqué, the Council noted that Communist China's activity in the Taiwan Strait area in 1958 showed that the Communists were ready to use violence up to the point where they encountered firm resistance. Emphasizing the need to improve economic and social conditions, as well as maintain military vigilance, the Council approved projects to develop skilled labor and technicians, including the establishment of the SEATO Graduate School of Engineering in Bangkok, Thailand. A SEATO budget of $896,860 was approved for fiscal 1959–60.

At an informal meeting of the Council in Washington on Sept. 28, 1959, member nations discussed the crisis current in Laos and reiterated their determination to abide by their treaty obligations regarding Laos.

SOUTHERN RHODESIA. See RHODESIA AND NYASALAND, FEDERATION OF.

SOVIET LITERATURE. The third Congress of Soviet Writers, which took place in Moscow on May 18–23, 1959, did not readmit Boris Pasternak, who was expelled from the Soviet Writers Union after he had received the 1958 Nobel Prize in literature. The Soviet press tried to present the congress as a turning point of Russian literary life, but the congress fell short of these expectations.

The exchange of messages between the congress and the Central Committee of the Communist Party reiterated the familiar Communist attitude toward literature: "Soviet writers must inspire people in their struggle for communism, educate them according to Communist principles, and instill in them high moral virtues and a complete rejection of bourgeois ideology and morals."

In a speech to the congress, Premier Khrushchev recommended that writers who had deviated from Communist ideals be re-educated and rehabilitated rather than publicly criticized. This policy, which many thought might later lead to Pasternak's reinstatement in the Soviet Writers Union, was reasserted several months later in the controversy over a short story published by Sergei Voronin, editor of Leningrad's literary magazine, *Neva.* Although the Leningrad party leaders criticized the story, they urged that Voronin be helped by serious comment rather than by attacks such as he had received in September from Sergei Smirnov, editor of *Literaturnaya Gazeta,* the Soviet Writers Union paper. Another sign that there might be a more tolerant literary atmosphere in the USSR was the replacement of Alexei Surkov, the intransigent and bureaucratic secretary general of the Soviet Writers Union, by Konstantin Fedin, a prominent writer.

War Novels.—One of the most significant features of the year's literary production was the revival of the war novel. It ranged from the purely descriptive *Raid to San and Vistula* by Peter Vershigora, to the more complex *The Living and the Dead* by Konstantin Simonov, and *The Span of Earth* by the young George Baklanov. Simonov's novel frankly depicts the Russian reverses of 1941, laying bare the blunders of the army leaders and the disorganization of the services. His hero is a politically suspect officer who arrives at the front from a Siberian concentration camp. *The Span of Earth,* an equally blunt novel, is concerned with the horrors of war. More conventional is *The Last Volleys* by Yuri Bondarev.

The most vivid image of the war appears in Mikhail Sholokhov's realistic novel, *They Fought for the Motherland.* Only a few chapters of this novel have appeared thus far in Soviet periodicals. *The Hard Field* by Anatoly Kalinin occupies a place by itself among war novels. In this widely read and controversial book, the hero is a writer who goes to a kolkhoz in the Don region to work on a war novel. By using this setting, Kalinin is able to examine the process of literary creation, life in the country (Sholokhov's influence is evident in these sections), and the war adventures of a young Cossack.

Other Fiction.—Most of the novels on contemporary life lack artistic quality and have only illustrative or documentary value. Worth mentioning, with these reservations, are *Eagle's Steppe* by Mikhail Bubennov, a long narrative about young men and women who join to work on the virgin lands in the Altai region of Siberia; *Beyond the Moskva River,* by Vartkes Tevekelyan, a description of the life of the Soviet ruling elite; *Stronger Than the Atom* by George Berezko, a tendentious novel which aims at proving that Soviet Army men and commanders are inspired only by lofty Communist ideals; *The Sources* by Grigory Konovalov, a rather pedestrian chronicle of a proletarian family under the Soviet regime; *Honor* by Grigory Medynsky, which deals with the problem of juvenile delinquency; *Tramontana* by Pavel Sazhin, who depicts life on the shores of the Sea of Azov; *The Source at a Birch Tree* by Nicholas Shundik, a colorful picture of the postwar era in the extreme north; and *August Again* by Nina Ivanter, a naïve but pleasant tale devoted to contemporary Russian youth.

Of much greater artistic quality is *The Time of Great Expectations* by Konstantin Paustovsky, one of the leading Soviet writers. This novel forms the fourth part of his autobiography, recreating with humor and vividness the early stages of the revolution in the south of Russia. Certain chapters are dedicated to Isaac Babel, the remarkable storyteller whose works were considered counter-revolutionary after his arrest in the late thirties. It is significant that Paustovsky's warm sketch of Babel and his praise of his art were passed by the censors.

The novels on industrial production include *On the River* by Alexei Yugov (the building of a power station), *Party Commission* by Leo Uvalov (coal industry in the Don Basin), and *The Salamander* by Vassily Ocheretin (the steel industry). None of them possessed ideological or artistic distinction. The only contemporary work on village life of real worth has been the sequel to *Virgin Soil Upturned* by Mikhail Sholokhov, of which only brief and tantalizing sections have appeared in *Pravda* over the last three years.

Drama.—*The Third Pathetic,* another play about Lenin by Nicholas Pogodin, was highly publicized in the press. But the light comedies such as *The Cook* by Anatoly Sofronov, *The Twelfth Hour* by Alexei Arbuzov, and *The Violins of Spring* by Alexander Shtein were the real box office successes.

Translations.—Among recent Russian works released in English translation in 1959 were Andrey Biely's *St. Petersburg* (tr. by John Cournos), Pavel Nilin's *Comrade Venka* (tr. by Joseph Barnes), Alexei Pisemsky's *One Thousand Souls* (tr. by Ivy Litvinov), some of Boris Pasternak's poems (tr. both by Eugene Kayden and George Reavey), his autobiography *I Remember* (tr. by David Magarshack), and his early tale *The Last Summer* (tr. by George Reavey).

SPACE FLIGHT. Highlights in space technology, exploration, medicine, and law during the second year of the so-called space age are reviewed in the following article in four sections:

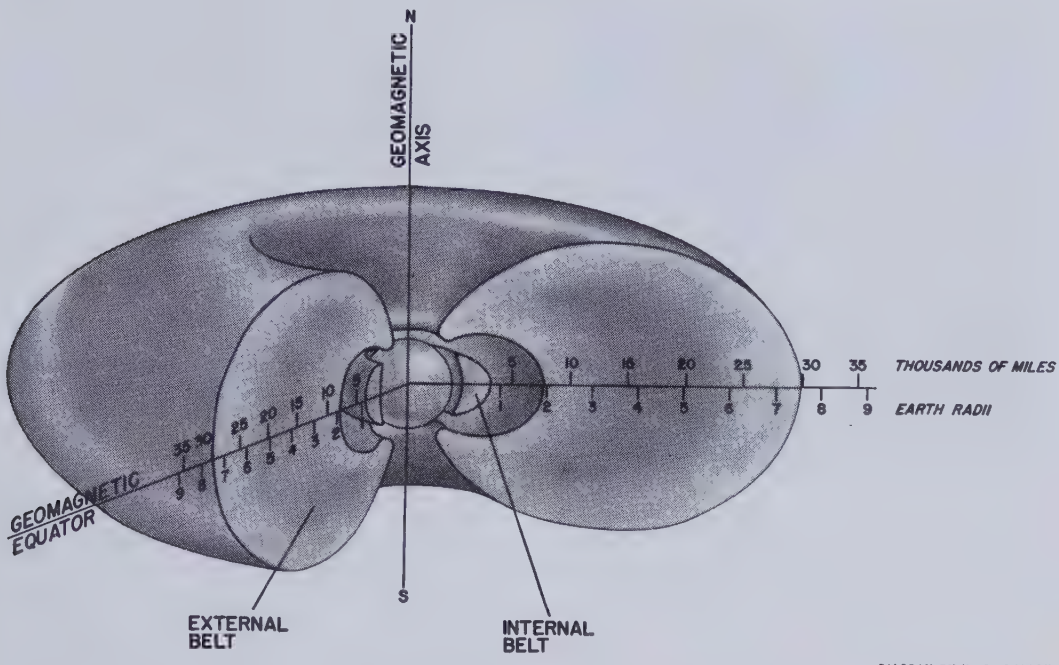
(1) Astronautics—Space Science and Technology
(2) Space Exploration in 1959
(3) Space Medicine
(4) Space Law

For additional information, see Advanced Research Projects Agency; Astronomy; Atmosphere Research; National Aeronautics and Space Administration; and the Index entry, *Space Flight.*

Astronautics—Space Science and Technology

Ever since the first man-made earth satellite was launched on Oct. 4, 1957, space technology and its related sciences have experienced a phenomenally fast evolution. This article gives a brief survey of progress in space science and technology, with emphasis on developments of the past year.

Earth and Its Environment. *The Van Allen Radiation Belts.*—Several important steps have been taken recently in advancing the geophysical sciences. One of the most significant research achievements of the International Geophysical Year (IGY)



Schematic Diagram of Van Allen Radiation Belts

Probable structure of the inner and outer Van Allen radiation belts, surrounding the earth between 600 and 30,000 miles above the geomagnetic equator, is shown in this diagram based on limited data radioed to earth from satellites and space probes. The outer belt is particularly subject to sudden fluctuations because of solar particle streams. The entire Van Allen region may be less sharply defined than is indicated here, and there may be more than two intense radiation zones.

satellite program in 1958 was the revelation of the existence of layers of energetic particles in the outer atmosphere. Dr. James A. Van Allen of Iowa State University recognized the earth-girdling belt of high-intensity radiation detected by the instrument package contained in the early Explorer satellites, and he was given credit for its discovery.

More recent satellite flights, together with the Pioneer moon shots, confirmed the existence of energetic, high-speed, electrically-charged particles, both electrons and protons, in certain regions of space, comprising the great radiation belt of the earth. These particles are in a broad belt—actually a series of belts—surrounding the earth at latitudes of less than 70° and at altitudes of between 600 and 30,000 miles.

The density and composition of this region vary radically with altitude. The inner belt or zone contains electrons ranging from very high energies down to at least 200 kev. (thousand electron volts) as measured by Explorer VI, and down to at least 10 kev. according to Sputnik III. The data provided by Sputnik III also indicated that there are more electrons in the lower than in the higher energy ranges, with the number continuing to increase in each successive lower energy range. The protons of the inner belt appear to arise from the interactions of cosmic rays with the outer fringe of the atmosphere. The outer Van Allen belt is not clearly separated from the inner belt in its electron content, but shows a clear separation in proton content.

The protons of the outer belt, which has its maximum intensity at about 10,000 miles altitude, appear to be of solar origin and therefore of much lower energy than protons of the inner belts. The particles are of lower energy (lower velocity) than cosmic rays, but their intensity (number per unit cross section) is at least 10,000 times as great as that of cosmic rays near the earth's surface.

The Van Allen belts present a hazard to future space ships and their pilots, since the impact of high-energy electrons against the shell of a space vehicle will generate harmful X-rays. There exists also the potential problem of drag or resistance caused by the electrical charge deposited on a vehicle traveling through such a radiation belt; it is believed that the Vanguard I satellite may have acquired a potential of some thousands of volts by this means.

Upper Atmosphere Nuclear Tests.—In a series of tests conducted under the code name of Project Argus, electrons were artificially injected into the upper atmosphere by the detonation of nuclear bombs carried by rockets to high altitudes. These tests, which took place in August and September 1958, confirmed the theory that electrons travel along the lines of the earth's magnetic field, and confirmed the prediction that electrons produced by the explosion would create artificial auroral luminescence at specific regions in the Northern and Southern hemispheres. The data obtained in Project Argus have vastly increased our knowledge of the earth's magnetic field. Valuable information was obtained also from two similar experiments, Teak and Orange, at considerably lower altitudes in August 1958. (See also ATOMIC ENERGY.)

Shape of the Earth.—The shape of the earth has been calculated very accurately from perturbations in the orbit of Vanguard I (launched on March 17, 1958). An analysis of these perturbations indicates that the earth has somewhat the shape of a pear, with the stem at the North Pole. Sea level at the North Pole is about 50 feet above what was previously considered normal, while at the South Pole there is a depression of about 50 feet. The older theory considered the earth to be almost spherical, somewhat flat at the poles, and bulging at the equator by about 12 miles. The importance of this slight difference in the distribution of the earth's mass lies in the implication that

the earth may not be as plastic as originally assumed, and that very large shearing forces exist in its interior. For space flight, the discovery will be of importance in all trajectory computations where highly accurate knowledge of the earth's gravity and radius is required.

The Ionosphere.—Data provided by rocket flights during the IGY and by satellite flights in 1959 have revolutionized our understanding of the ionosphere. The ionosphere, beginning at an altitude of approximately 35 miles, is the region of ionized (electrically charged) gases, chiefly oxygen and nitrogen, which reflects high-frequency radio waves around the earth. It changes in a 24-hour cycle, and in periods of unusual solar activity it is so altered as to disrupt radio communications. It consists of at least four layers: the D layer, at altitudes from 35 to 50 miles; the E layer, at 60 miles; the F_1 layer, at 120 miles; and the F_2 layer, at 180 miles. At night the two F regions merge together, the E layer becomes patchy in nature, and the D layer seems to disappear entirely.

Measurements from earth-based radio soundings had led to the erroneous belief that the layers of the ionosphere were well-defined layers of intense ionization, and that the ionization was caused largely by ultraviolet radiation from the sun. The new data indicate that the ionization is caused largely by solar X-rays (and only in part by ultraviolet radiation), and that the entire ionosphere is a connected region (rather than a series of distinctly separate, intense layers) with only minor variations in the density of the charged particles. The data also show that the bulk of the ionosphere lies above 180 miles, or above the F_2 layer, rather than below that altitude as previously supposed. Thus the ionosphere's disturbing effect on communications will extend to much higher altitudes than expected, and may affect certain satellite-to-satellite communications.

Before the advent of rocket astronomy our understanding of ionization by solar ultraviolet and X-ray emission was based on indirect evidence. The daily cycle of growth and decay in the density of electrons at altitudes between 50 and 200 miles provided only an indication of the ionizing action of these high-energy radiations. In 1959, with the direct records of the sun's emission in this region of the spectrum (obtained from rocket and satellite instruments), Dr. Herbert Friedman suggested the following explanation: Ultraviolet Lyman-alpha radiation induces the formation of the lowest (or D) layer of the ionosphere by ionizing nitric oxide, even though this compound is present only in a concentration of one part per million. The E layer can be attributed principally to X-rays from the sun's corona, which ionize any of the atmospheric gases.

It had been known previously that the electron density of the E layer varies in perfect harmony with the number of sunspots; the rocket observations reveal a similar correlation with solar X-ray emission. When the sun is unusually active, the increased intensity of X-rays arriving in the E layer increases the overall electron density, and the output of harder and more penetrating X-rays in the 5-to-20-angstrom band spreads the E layer to lower altitudes. In the top (or F) layer of the ionosphere, most of the ionization is apparently caused by the far-ultraviolet emission associated with the principal resonance line of singly ionized helium, at 304 angstroms.

Measurements from satellites, together with measurements of the transmission (along the lines of the earth's magnetic field) of radio waves generated by lightning flashes, indicate that electrons can be found at distances up to several earth diameters. The connection between intense solar activity and X-rays from the sun gives rise to the hope that additional knowledge will lead to the ability to forecast disturbances to communications, particularly in polar regions. In these regions radio reflections from auroras are generally attributed to ionization produced by corpuscular streams, but X-rays have in some cases accounted for this. The prediction of disturbances to communications is of significance for the transmission of both military and commercial messages.

Continued studies of the radiation belts contributed to an explanation of one of the paradoxes discovered earlier in the investigation of the upper atmosphere. Rocket experiments over White Sands, N.Mex., and Fort Churchill, Manitoba, had yielded the surprising result that at altitudes between 90 and 140 miles the atmospheric density was greater, and the thermodynamic temperature of the air was much warmer, in the Arctic auroral region than over New Mexico. It appears that heating of the air molecules in the upper atmosphere in the Arctic takes place because of collisions with trapped energetic particles of the outer radiation belt. The radiation belts follow the contours of the earth's magnetic field, and the trapped particles, especially those forming the outer belt, are led into the earth's atmosphere at the auroral regions. The heat of collision of these energetic particles with air molecules is sufficent to yield measured temperatures of 4,000°F. over Fort Churchill, as compared with 2,000°F. readings obtained over New Mexico. (See also ATMOSPHERE RESEARCH; METEOROLOGY AND CLIMATOLOGY.)

The Moon and Beyond.—Measurements of some of the characteristics of the moon were reported for the first time during the approach of the instrumented Soviet rocket Lunik II to the moon on Sept. 13, 1959. The measurements indicated an absence of surrounding radiation, an increase in concentration of ionized particles just above the moon's surface, and a magnetic field of not over 50–100 gamma close to the moon's surface (implying an effective magnetization of not more than 5% of that of the earth). This very low magnetism suggests a lack of magnetic elements such as iron or nickel in the moon's composition, and tends to confirm the theory that the moon did not originally separate itself from the earth, which does contain a large portion of heavy magnetic materials. On the other hand, one explanation attributes the earth's magnetism to the dynamo action of convection currents in its liquid core, so that the slight magnetism on the moon may indicate only the absence of a liquid core. It can be presumed that the moon (because of its small size) cooled faster than the earth, and is completely solidified.

The circumnavigation of the moon early in October 1959 by the Soviet rocket Lunik III has furnished us with photographic records of the other side of the moon. The relatively unbroken surface shown by the pictures tends to back the theory that the gravitational pull exerted by the earth on the moon may have caused disruption of the moon's near-side crust.

High-altitude rockets have disclosed strong sources of ultraviolet radiation in space. Since the earth's atmosphere screens out radiation in the ultraviolet region, only by sending instruments above the atmosphere can we make such observations. Photos of the sun, spectrographic data, and an observation of the sky have been obtained. Strong ultraviolet emissions, more powerful than cosmic radio waves, have been found to emanate from the regions of the stellar configurations Virgo

(Spica) and Orion, probably from gaseous nebulae.

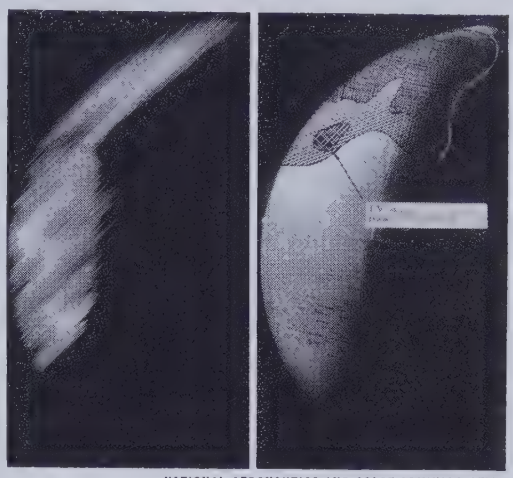
One observation disclosed a peculiar spectral phenomenon in a certain region of the moon; it is believed to be due to the evolution of gas, possibly from a volcanic formation. Observations also have been made to determine pressures, densities, and estimated temperature and composition of the atmospheres of Mars and Venus.

Meteorology.—Crude observations from one of the Vanguards and one of the Explorers indicate that it is possible to observe cloud patterns from satellites and thereby to aid in weather forecasting. The data obtained in 1959 were so crude that they were not suitable for meteorological purposes, but further refinements in resolution, vehicle stabilization, and data transmission techniques were under way by the end of the year. Measurements of the earth's heat balance and thermal phenomena at high altitudes were being studied in the hope they would give clues to the influence of the outer layers of the atmosphere on weather. Photographic observations of cloud formations from high-altitude rockets have given us pictures of a quality suitable for meteorological forecasting. (See also METEOROLOGY AND CLIMATOLOGY.)

Propulsion.—Research leading toward a high-performance, liquid-propellant, nuclear-powered rocket engine progressed in 1959. The engine uses a reactor as a heat source and hydrogen as a working fluid. The technical problems, including the use of high-temperature materials, rapid nucleonic and flow control response, and thermal equilibrium of adjacent parts, are indeed complex and difficult. It will be a number of years before a complete and flyable nuclear engine can be developed.

The first test of a nuclear reactor experimental device for rocket propulsion (called Kiwi A) was made on June 20, 1959, at Las Vegas, Nev. Results of the test, carried on under the general designation of Project Rover, were encouraging. Information published in 1959 indicated some results of studies of the use of a series of nuclear bomb explosions to push vehicles into space. Although vehicles propelled in this manner could have extremely high payload capabilities, they would appear to pose tremendous technical problems.

Work has been started by the National Aeronautics and Space Administration (NASA) on a rocket engine of 15,000-pound thrust using liquid hydrogen and liquid oxygen as propellants. This combination of fuels gives increased engine performance (which in turn permits higher payloads for space vehicles) than can be obtained with standard rocket fuels. Two of these engines will be used to make up the second stage of the Atlas Centaur rocket, designed to put payloads in excess of 5,000 pounds into a 300-mile orbit.



NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

(*Left*) The first crude picture transmitted from Explorer VI shows a sunlighted area of the central Pacific Ocean and its cloud cover. Picture was transmitted August 14 while satellite was crossing Mexico, 17,000 miles above earth. (*Right*) Lined areas represent a cloud-cover map which has been superimposed on section of globe covered in satellite picture. Crosshatching indicates density of cloud cover.

The Saturn rocket, transferred from the Army to NASA by a presidential order signed in October 1959, will be powered by a cluster of eight rocket engines giving a total thrust of 1.5 million pounds. Eventually it will be capable of putting a payload of between 15,000 and 30,000 pounds into orbit; and if high-energy propellants are used in several of the upper stages, it may be possible to increase this payload weight to about 55,000 pounds in a 300-mile orbit.

A contract was let by NASA in December 1958 for the development of a liquid-propellant rocket engine of 1.5 million pounds thrust. It is intended to use a cluster of these big rocket engines (probably four or more) to make a huge booster rocket called Nova. The Nova will be needed for manned expeditions to the moon and to other planets. (See also CHEMISTRY; MISSILES.)

Guidance.—Progress has been made in perfect-

(*Left*) Officials of the Redstone Arsenal at Huntsville, Ala., inspect a one-fourth scale model of the Saturn booster. Shown are the exhausts of a cluster of eight engines which will develop 1.5 million pounds of thrust. (*Right*) Workmen continue fabrication of the giant Saturn rocket. Struts leading to outer "wagon wheel" rim will provide support for cluster of fuel tanks and engines. This unit is only the first stage of the Saturn, which when completed will exceed 200 feet in length.

[1] Without accurate guidance. [2] 100-mile orbit.

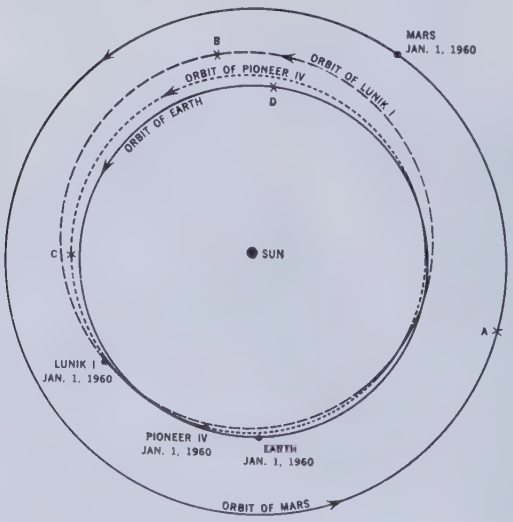
ing guidance devices for achieving accurate satellite orbits. Basically similar to those used in missiles, the devices consist of two categories: those using radio signals from ground computers to guide vehicles into the proper paths; and those using inertial guidance systems in the vehicles themselves, with their own computers and timers. With this progress in electronics and guidance, it has been possible to predetermine satellite trajectories with amazing accuracy. The few probes that have been sent into deep space by the United States have used a fairly crude radio guidance system for determining their mid-course trajectories. Work remains to be done on more accurate mid-course guidance systems, as well as on guidance systems for the terminal phases of deep space probes to accomplish maneuvers near (or landings on) the moon or one of the planets.

It is now known that rocket engines can be ignited after they have been in space for some time. The re-entry rockets of the Discoverers functioned after the vehicles had made many orbits around the earth. It has also been possible to stabilize a vehicle in space with a relatively high degree of accuracy, to reorient and rotate satellites on command from the ground, and to control remotely satellite-borne transmitters. (See also MISSILES.)

Communications.—It has been established that it is possible to communicate with satellites, sending and receiving messages from space. The first such messages were transmitted from Sputnik I in 1957. Project Score (in which President Dwight D. Eisenhower's Christmas message to the world was broadcast from an Atlas satellite launched on Dec. 18, 1958) has shown that it is possible to rebroadcast radio messages from the upper atmosphere. The series of Discoverer satellites has shown that it is possible to send commands to satellites, change their course, and determine their recovery schedule. Certain high-frequency bands are preferred for this type of communication, because they are less subject to ionospheric disturbance. By 1960 enough data on ionospheric refraction had been obtained to enable

Orbits of the Soviet solar satellite Lunik I (long dashes), launched on Jan. 2, 1959, and of United States space probe Pioneer IV (short dashes), launched on March 3, 1959, are shown drawn to approximate scale in relation to orbits of the earth and Mars (solid lines). Points marked *A*, *B*, *C*, and *D*, indicate aphelions of each orbit; dots show positions of planets and artificial satellites on Jan. 1, 1960.

AMERICANA DIAGRAM BY ROBERT S. ANDERSON



Opposite page: **(*Top*) This schematic drawing of the inner solar system shows earth's nearest neighbor planets, Mars, Venus, and Mercury—the goals of intensive space research (including unmanned space probes) in the early 1960's.**

(*Middle*) Historic photo at right, taken by the Soviet space vehicle Lunik III on Oct. 7, 1959 (diagram below), gave man his first glimpse of the far side of the moon. The photo shows about 70 per cent of the moon's hidden side (including many prominent features named by Russian scientists), together with some familiar features visible from earth. Above the center of the moon's near side (shown for comparison at left), a cross marks the approximate region where Lunik II landed on Sept. 13, 1959, thus becoming the first man-made object ever placed on the moon.

(*Bottom*) Launched early on Oct. 4, the Soviet "cosmic laboratory," Lunik III, passed some 4,900 miles under the moon's south pole at 14:16 Greenwich Civil Time on Oct. 6. At about 03:30 GCT on Oct. 7, when approximately 40,000 miles beyond the moon, Lunik III's two 35-mm. cameras began photographing the moon's far side. These pictures, automatically processed in the space vehicle, were radioed back to Soviet stations as the Lunik III made its first return trip toward the earth. The probe reached its closest point to the earth (about 30,000 miles) on Oct. 18. The completion of its first orbit, which was nearly perpendicular to the moon's orbital plane, is shown by the broken line.

scientists to predict and make allowances for some of these effects.

Because of the large distances involved, a radio signal sent from a ground station via a satellite to another ground station is severely attenuated or diminished in strength. Passive systems, which merely reflect signals transmitted from the ground, permit the use of very simple satellites, but require high-power, large, low-noise ground transmitters and receivers. Active systems, while permitting smaller and simpler ground installations, require small, low-power receivers and transmitters in the satellites. During 1959 progress was made by NASA in developing very light, metal-coated plastic balloons which are intended to serve as passive radio-signal reflectors. It is planned to send radio signals from the large tracking antenna at Goldstone, Calif., to similar large antennas on the east coast by reflection from one of the balloon satellites.

An outstanding achievement announced in 1959 was the establishment of a radar contact with the planet Venus. The contact was accomplished by the Lincoln Laboratory of the Massachusetts Institute of Technology, using very sensitive low-noise amplifiers and an automatic computer for discriminating the received signal from the noise that accompanied it. (See PHYSICS.)

Man in Space.—Project Mercury was officially set up by the United States in October 1958; responsibility for the program lies with NASA. Its purpose is to place a manned space capsule in orbital flight around the earth, investigate man's reactions and capabilities in this environment, and recover the capsule and pilot safely. The manned capsule will re-enter the atmosphere in a fashion similar to a missile warhead, using heat protection and special pilot equipment to permit rapid deceleration and survival in space. The following preliminary investigations have been made: (1) air-drop tests of the capsule; (2) escape-systems studies and tests ("Little Joe" launchings); (3) free-flight and wind-tunnel investigations; (4) impact tests; (5) parachute tests; and (6) tests of the life-support system. Seven military pilots ("astronauts") were selected carefully to commence training for this mission.

On September 9, 1959, a full-scale Project Mercury test ("Big Joe") was run, using an Atlas launching vehicle. The empty capsule was satisfactorily recovered from the Atlantic Ocean after traveling 1,500 miles. On December 4 a rhesus monkey named Sam was sent up 55 miles and recovered in a "Little Joe" test launching of a model capsule. Tests aimed at developing high reliability in the Project Mercury hardware, and leading to placing a man in space in 1961, will continue.

By late 1959, the United States and the USSR had launched instrumented animals (including three monkeys, four mice, three dogs, and one rabbit) to high altitudes. The Soviet satellite Sputnik II contained a dog. Tests simulating some of the conditions to be encountered by men rocketed into space have been made with huge centrifuges, vacuum chambers, airplanes, and artificial solar radiation. These experiments show that man can withstand considerable exposure to high accelerations, extreme temperatures, altered atmospheres, and altered diets, as well as some exposure to weightlessness.

NASA's X-15 research plane is designed as a "near-space vehicle" to reach an altitude of 100 miles and a speed in excess of 3,600 miles per hour. Its purpose is to study flight problems in the upper atmosphere and to determine: (1) skin temperatures of the plane; (2) ability of the pilot to control the plane under the great accelerations of near space flight; (3) effectiveness of the plane's aerodynamic and space attitude controls; and (4) aeromedical information regarding the pilot.

On March 15, 1959, a compatibility test was run on the X-15 and the B-52 mother ship from which it is launched. Tests were also made on some of the X-15's instrumentation. The X-15 was equipped with an interim engine, and on September 17 flew for the first time under its own power, reaching a speed of 1,300 to 1,400 miles per hour and an altitude of over 50,000 feet. The interim engine has approximately one fourth the power of the final engine, which is scheduled to be flight-tested in early 1960. A 485-mile tracking range is ready to transmit electronic data on pilot safety and aircraft conditions to the ground by a combination of radar, telemetering, and radio equipment. (See also AERONAUTICS.)

Future U.S. Space Programs. *NASA Program.*—The National Aeronautics and Space Administration (q.v.) is responsible for those space programs which are primarily scientific in nature and which may have ultimate commercial value. NASA also has been given responsibility for the development of large booster rockets.

One of the highlights of 1959 was the formulation and publication of a coherent, logical space-science program for NASA, giving a statement of objectives and problems, and a long- and short-range program dealing with atmosphere research (for the sun and planets, as well as the earth), ionospheric physics, energetic particles, electric and magnetic fields, gravitation, astronomy, and the biosciences. This program is aimed to provide quantitative answers to such questions as: What gases are in the atmosphere of Mars? What is the crust of the moon made of? What is the sun like? What is the energy balance of the atmosphere? The accomplishment of this extensive program will entail the launching of additional deep-space probes and satellites, including stationary (24-hour-period) and passive communications satellites.

Department of Defense Program.—Launchings of the Discoverer vehicles, which have facilitated the research and development of various space systems, will be continued during 1960 to obtain further scientific data, to perfect payload recovery techniques, and to obtain developmental data for other programs. The first launchings of experimental Midas vehicles, carrying infrared seekers to detect the launching of big rockets, are scheduled to take place in 1960. The Midas vehicles are intended eventually to provide a system for giving the United States very early warning of an impending rocket attack, and thus increase the effectiveness of other active and passive defense systems.

The year 1960 is expected to see also the launching of the first experimental communications satellite aimed at obtaining secure military communications, which cannot be disrupted by sabotage, solar activities, or inclement weather. The first version will be a delayed-repeater system in which signals received from a ground station will be recorded on magnetic tape and rebroadcast when the satellite is in range of the intended ground receiver station. Development of a satellite reconnaissance system will continue during 1960, and several attempts will be made to launch a navigation satellite, which in its ultimate form will enable ships, submarines, and aircraft to fix their locations within a range of error on the order of 0.1 mile. The Department of Defense also will continue development of the Dyna-Soar, a rocket-launched research craft similar to the X-15, but designed to fly at higher altitudes and higher speeds. (See also ADVANCED RESEARCH PROJECTS AGENCY.)

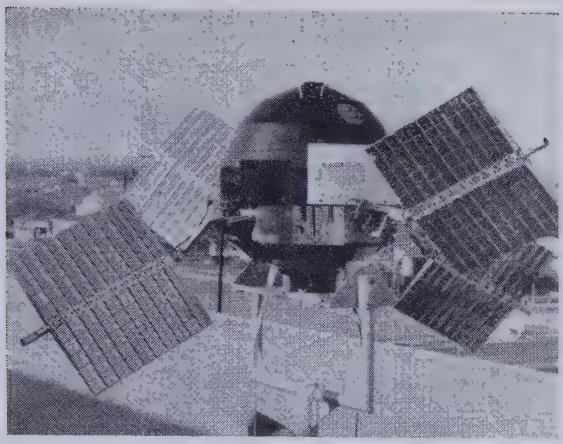
GEORGE P. SUTTON,
Director, Institute for Defense Analyses, Advanced Research Projects Division.

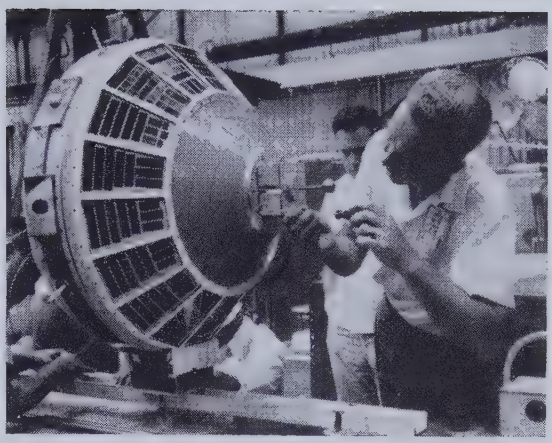
SPACE EXPLORATION IN 1959

Space exploration in 1959 proceeded at a rapidly increasing tempo that was characterized by a series of spectacular achievements by the United States and USSR. Much additional information concerning the radiation belts surrounding the earth has been obtained, as well as more detailed knowledge of the magnetic fields of the earth and space and of solar-terrestrial relationships (see above, *Astronautics—Space Science and Technology*).The United States rocketed two monkeys (Able and Baker) a distance of 1,500 miles, reaching a maximum altitude of 300 miles, and recovered them unharmed on May 28; a third monkey (Sam) was rocketed to a height of 55 miles and was recovered unharmed on December 4. The Russians have sent two dogs and a rabbit to altitudes of at least 280 miles, and have recovered them in good health.

In the United States, most launchings of space flights have occurred at the Atlantic Missile Range in Florida, but several vehicles have been launched from the newer Pacific Missile Range in California. These ranges have been equipped with improved tracking, safety, and telemetering equipment, and additional launching stands are being constructed in both places. Many of the high-altitude rocket shots which have provided upper atmosphere data have been launched by the United States from other sites, including Fort Churchill, Manitoba, and from ships at sea. Great Britain's launching station at Woomera, Australia, also became more active in testing high-altitude missiles during 1959.

Tracking of space vehicles was augmented during 1959, and additional tracking stations had been installed or were being installed at the end of the year in Alaska, Hawaii, Spain, South Africa, Japan, and other areas. A satellite "fence" across the southern part of the United States was put in operation during the year. It is capable of detecting the passage of both active satellites (which send out radio signals) and passive (silent) satellites, and makes possible the detection of foreign satellites over the United States. Data from this fence and from various radio tracking stations all over the world, together with optical tracking information from special IGY cameras operated by the Smithsonian Astrophysical Laboratory, are collected at data centers for evaluation and determination of the exact orbit or space trajectory. One





WIDE WORLD; UPI

(*Left*) Explorer VI, launched on August 7, was named the "Paddle Wheel" satellite because of its four large vanes, which contained solar cells to convert the sun's rays into electrical energy and provide power for instruments and transmitters. such center is operated by the National Aeronautics and Space Administration (NASA), and another by the U.S. Defense Department. Automatic techniques for handling the data were being put into effect at the end of 1959.

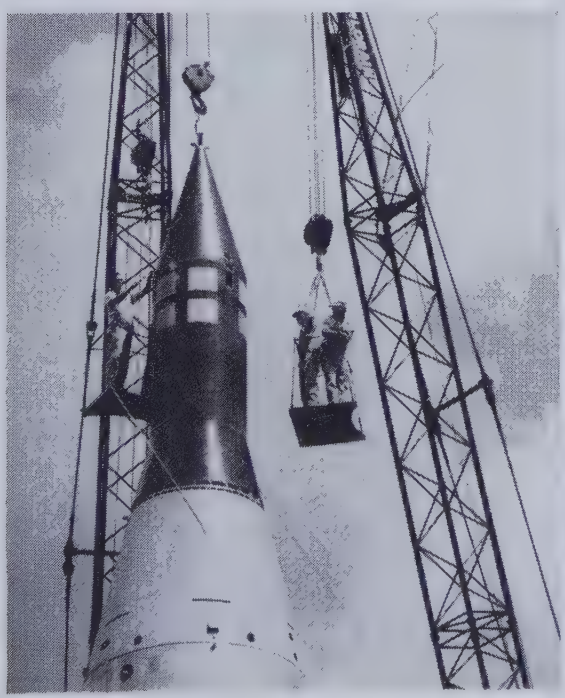
U.S. Satellites.—In 1959 the United States successfully launched four earth satellites under the auspices of NASA, and six satellites under the Air Force Discoverer program. The objective of the NASA launchings was the scientific investigation of the earth's upper atmosphere and of space.

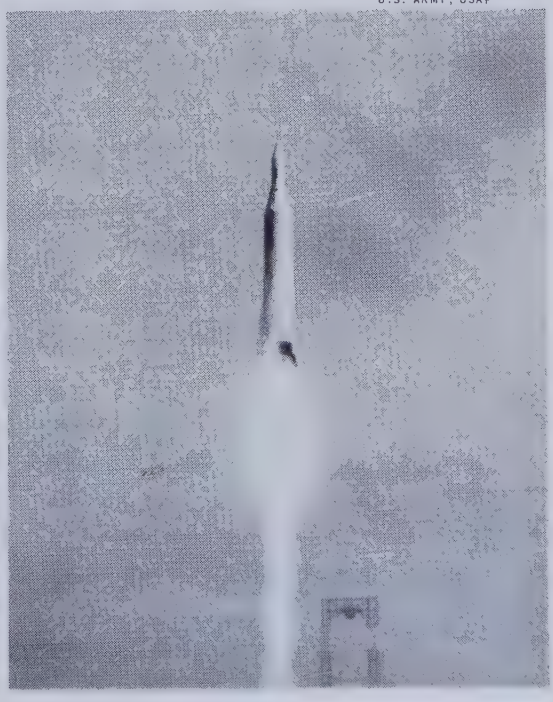
Vanguard II, a satellite intended to obtain pictures of the cloud cover of the earth, was launched on Feb. 17, 1959. The 20-inch spherical satellite contained two photocells diametrically opposite each other on the surface and placed at 45 degrees from the satellite's stable spin axis. As the photocells of the spinning satellite swept in turn over the sunlit portion of the earth, electric signals were generated which corresponded to the different degrees of brightness of light reflected by clouds, sea, and land masses. These electrical signals were stored on magnetic tape and telemetered on command to ground stations. The satellite transmitted information until March 7, when its batteries gave out at the end of their predicted life. However, an unanticipated wobbling motion in the satellite's spin scrambled the picture as seen by the photocells, and made the work of reassembling the electrical signals into a picture very difficult and time consuming, if not impossible. While no useful cloud cover pictures were obtained immediately, the successful operation of the electronics and the loud clear signals did prove the validity of the idea.

Explorer VI, launched on Aug. 7, 1959, was the first satellite to be placed in orbit by a Thor-Able III vehicle. The first stage of this vehicle was an Air Force Thor intermediate-range ballistic missile (IRBM), modified to receive the upper stages. The second and third stages were improvements of the upper stages used in the Vanguard vehicle. The assembled three-stage vehicle was 90 feet high and weighed over 105,000 pounds. The 142-pound satellite (heavier than any previous United States satellite, with the exception

(*Left*) Juno II, U.S. Army space probe vehicle, is assembled in the field. The shroud covering the upper stages is designed to protect them from heat in the atmosphere. (*Right*) Launching of a Juno II, which sent Explorer VII into orbit in October.

U.S. ARMY; USAF





of the Atlas-Score) contained 15 major experiments. Its orbit was selected to obtain a very broad sampling of the region of space about the earth. The satellite was given the nickname "Paddle Wheel" because of its four large paddle-shaped vanes (containing solar cells) mounted symmetrically around the waist of its spheroid-shaped body. Eight thousand solar cells were used to transform solar energy into electrical energy for replenishing the storage batteries supplying power to the scientific instruments and transmitters.

The experiments aboard fell into six main categories: (1) radiation belt measurements; (2) measurements of the earth's magnetic field; (3) studies of the propagation and behavior of radio waves; (4) determinations of the size and speed of micrometeorites; (5) tests of the performance, efficiency, and operation of the solar cells; and (6) photographs of cloud cover of the earth. The cloud cover photographs were more successful than in the similar Vanguard attempt because the satellite did not develop a wobbling motion. A photograph of the central Pacific Ocean showing heavy and broken cloud areas, as well as clear

(*Left*) Lunik III, 614-pound space vehicle launched by the Soviet Union on October 4, transmitted back the first photographs of the far side of the moon. (*Right*) The 13.4-pound payload of Pioneer IV, launched by the United States on March 3, passed 37,300 miles from the moon and went into orbit around the sun. Striped pattern is designed to regulate temperature by reflection and absorption of solar heat.

areas, was the first to be released. Due to the narrow band pass of 1.5 cycles per second imposed by technical limitations of the telemetering equipment, it took 40 minutes of telemetering to transmit one photograph to earth.

Vanguard III's launching on Sept. 18, 1959, was the final launching of the first satellite program to be initiated by the United States.[1] The last of 15 rockets, the launching vehicle carried a more powerful third stage than had the earlier Vanguards. The 50-pound payload placed in orbit was over twice the weight of previous Vanguard satellites. Instruments in the satellite were designed to measure solar X-rays, the earth's magnetic field, and space environmental conditions. A battery of 62 small silver-zinc cells was used to power the satellite for an estimated life of 90 days. The satellite itself was made of magnesium and fiber glass and looked somewhat like an ice cream cone. It was a 26-inch long tapered tube attached to a 20-inch diameter spherical body. A proton precessional magnetometer was located in the tip of the tapered tube to separate it as far as possible from the influence of the other equipment. The X-ray detectors used were developed for the purpose at the Naval Research Laboratory.

The Explorer VII satellite was launched on Oct. 13, 1959, into a relatively low orbit for investigations of cosmic rays, solar-terrestrial relationships, and micrometeorites. The launching vehicle was a Juno II (a modified Army Jupiter IRBM) which stood 76 feet high and weighed about 60 tons when fueled. The satellite instruments were designed for: (1) measurements of the radiation balance of the earth; (2) measurements of Lyman-alpha and X-ray emissions by the sun; (3) determination of heavy primary cosmic rays with a mass number greater than three; (4) micrometeorite detection; (5) cosmic ray measurements; (6) solar cell tests; (7) temperature measurements of the satellite, its power supply, and its instruments. The satellite was designed as part of the United States contribution to the International Geophysical Year (IGY), and was the last of the series of IGY rockets. It was equipped with a clock to turn off its solar-cell-powered transmitter at the end of one year to prevent the satellite from occupying valuable space in the radio communications spectrum after it had outlived its usefulness.

The U.S. Air Force in 1959 launched a series of Discoverer satellites under a program of experimentation with recoverable capsules. With the launching of Discoverer VIII in late November, six of the Discoverers had been successfully launched in 1959 (although doubts were expressed in some quarters as to whether Discoverer I had been placed in orbit): Discoverer I, February 28; Discoverer II, April 13; Discoverer V, August 13; Discoverer VI, August 19; Discoverer VII, November 7; and Discoverer VIII, November 20. The satellites were launched into polar orbits and (with the exception of Discoverer I) were designed to release an instrumented capsule after a number of orbits around the earth. It was hoped to retrieve the capsules with C-119 Flying Boxcars equipped with trapeze-like devices to catch the parachuting capsules. The capsules contained radio devices to emit signals to aid in locating them, but successful recoveries were prevented by a variety of technical failures.

The Discoverer vehicle uses a Thor booster rocket, with a 150,000-pound-thrust rocket engine, and a new upper stage called Agena, with a storable-propellant rocket engine and with separate instrumentation. The Discoverers provided useful data on attitude control of satellites in space, telemetering, recovery techniques, orbit prediction, and space medicine.

Lunar and Deep Space Probes.—The first artificial planet was added to the solar system when the Soviet space rocket popularly called Lunik I (also called Mechta) passed within several thousand miles of the moon and into an orbit about the sun. Lunik I was launched on Jan. 2, 1959, at 10:00 A.M. Greenwich Civil Time by a three-stage vehicle 104.9 feet in length. The entire third stage of the rocket, weighing 3,244 pounds, was launched on the journey into space. The rocket contained scientific instruments, tracking and telemetry transmitters, and a device to release a cloud of sodium vapor in space.

The first vehicle of the Western world to be launched free of the earth's gravity and into a solar orbit was Pioneer IV, launched on March 3, 1959. This vehicle achieved its primary objective of attaining escape velocity on an earth-moon trajectory, and transmitted much valuable scientific information back to earth before its batteries failed near the end of their predicted 90-hour lifetime.

[1] The Vanguard program was initiated with the responsibility of placing at least one satellite in orbit about the earth. Three were successfully placed in orbit, eight attempts failed, three vehicles were used in preliminary tests, and one was given to the Smithsonian Institution.

The Pioneer IV flight came after five days of intense solar activity and found levels of radiation intensity about 10 times higher, and of a considerably deeper extension into space, than had the Pioneer III (launched Dec. 6, 1958), which was in flight during a time of solar quiet.[2]

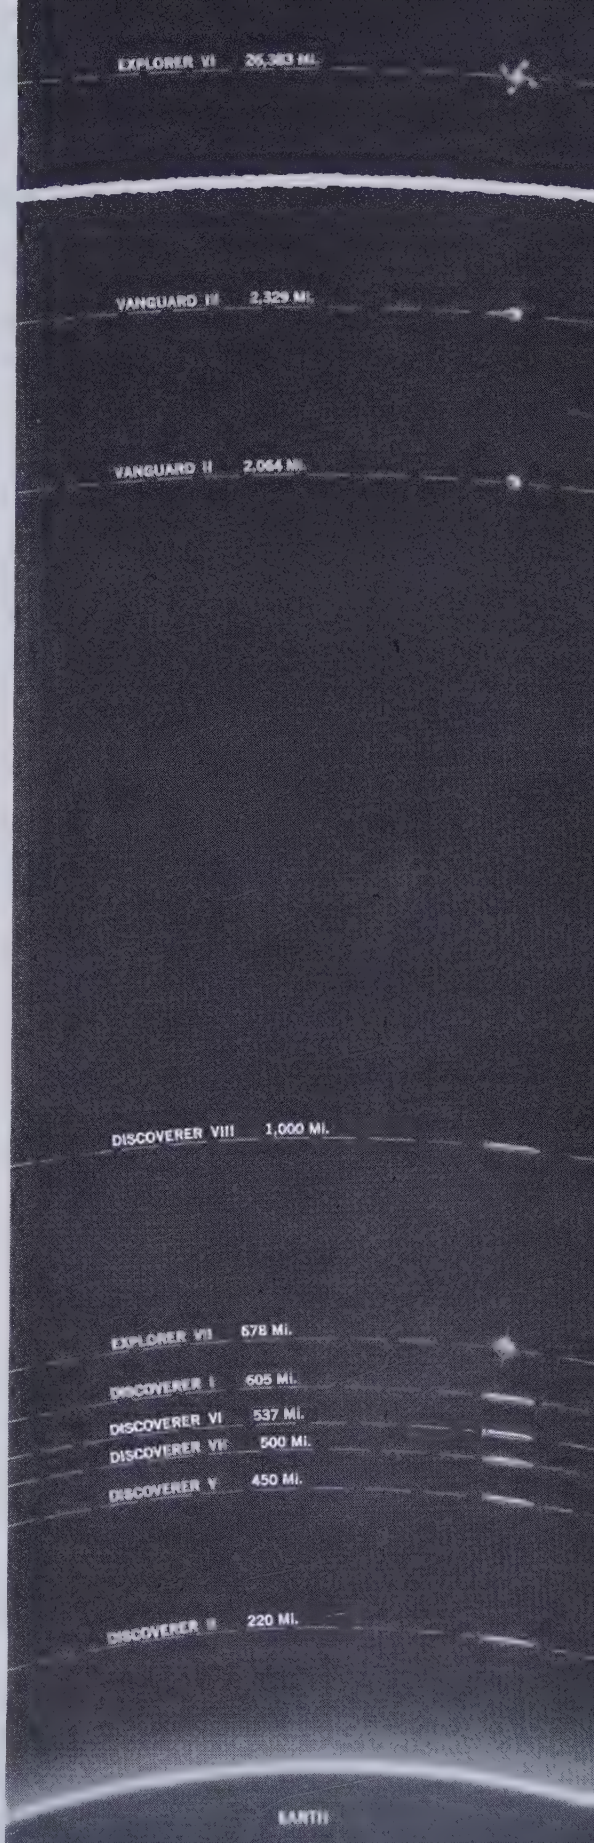
The Soviet space vehicle Lunik II became the first man-made vehicle to contact the moon, at 9:02 P.M. Greenwich Civil Time (5:02 P.M. EDT), Sept. 13, 1959. In addition to scientific research instruments, the rocket also contained a number of medals or pennants bearing the inscriptions "USSR" and "September 1959." Equipment was carried to release a cloud of sodium vapor in space. The artificial comet thus formed was photographed from a number of astronomical observatories in the Eastern Hemisphere and provided more precise trajectory data than could be achieved by electronic means alone. The location of the impact on the moon, according to articles appearing in the Soviet press, was in the vicinity of the Sea of Serenity. The Russians reported that "constructive measures were taken to secure the intactness of the pennants during the impact on the Moon." If these measures were successful, the moon now bears its first artifacts of earthly origin.

Lunik III, launched only three weeks after the lunar impact shot, again made history by obtaining the first photographs of the side of the moon never seen by man, after passing the moon at a distance of about 4,900 miles. The photographs were taken on October 7, when the Soviet rocket was about 40,000 miles from the moon; they were processed automatically, and then transmitted to earth by a type of television. Prior to release of the pictures, a team of Soviet scientists had assigned names to the most outstanding features in the photographs.[3] Exact descriptions of the features of the scientific payload and capabilities of the rocket were not disclosed by the Soviets. (See also ASTRONOMY.)

Other Space Explorations.—In late March 1959 the United States released a report on Project Argus. This report described the scientific results of experiments conducted in August and September 1958 in which three small atomic bombs were exploded at high altitude over the South Atlantic. The experiments were performed to study the physical effects from atomic bomb bursts above the major portion of the earth's atmosphere. These experiments have provided a sound basis for interpretation of the Van Allen belts of natural radiation surrounding the earth, and have also confirmed predictions, obtained by extrapolation of surface measurements, of the shape and intensity of the earth's magnetic field to distances of over 10,000

[2] On Nov. 26, 1959, the United States launched a three-stage Atlas-Able rocket in an attempt to send a 372-pound package of instruments to the moon. The vehicle malfunctioned and fell into the Atlantic when the fiberglass protective covering of the third stage fell off prematurely.

[3] The name "Sea of Moscow" was given to a 180-mile-wide depression north of the lunar equator, and a bay in the southern part of this depression was named "The Bay of Astronauts." Other names assigned included "Lomonosov," after the man (Mikhail V. Lomonosov, 1711–1765) credited by the Russians with the development of the first working model of a helicopter; "Joliot-Curie," after the well-known French Communist nuclear scientist; and "Tsiolkovsky," after a Russian authority (Konstantin E. Tsiolkovsky, 1857–1935) on rockets and space travel.



Relative heights (at initial apogee) of earth satellites launched in 1959 are shown in this diagram. The Soviet space probe Lunik III (not shown), which became a satellite of the earth after photographing the moon, went into an irregular orbit with its maximum distance from earth estimated at about 300,000 miles. The jagged line above Vanguard III indicates a discontinuity in the altitude scale.

miles. The experiments were directed by the Advanced Research Projects Agency.

In two separate experiments, called Teak and Orange, the Atomic Energy Commission on Aug. 1 and Aug. 12, 1959, set off hydrogen bombs at altitudes of about 25 to 40 miles above Johnston Island, 700 miles southwest of Hawaii. The bombs were reported to be in the megaton range—much larger than the kiloton bombs used in the Argus experiments. The tests produced severe ionospheric disturbances, which resulted in disruption of radio communications over a wide area of the Pacific for a period of hours. New Zealand scientists in Samoa (located across the equator at the magnetic conjugate to Johnston Island) reported seeing an artificial aurora at the time of the experiments. (See also ATMOSPHERE RESEARCH; ATOMIC ENERGY.)

Progress was made in 1959 on the United States manned satellite program, Project Mercury. Intended to send a man into space and to recover him safely, the program is being conducted under the management of NASA with the assistance of the Advanced Research Projects Agency of the Department of Defense. (See above, the section on *Astronautics—Space Science and Technology*, and the article NATIONAL AERONAUTICS AND SPACE ADMINISTRATION.)

During 1959 the pace of upper-atmosphere rocket soundings was maintained at a level comparable to, but somewhat less than, that set during the IGY. Studies were made of atmospheric and ionospheric properties, and some rocket astronomy was done. In the United States extensive programs were conducted by the Air Force Cambridge Research Center, by the U.S. Naval Research Laboratory, and by the National Aeronautics and Space Administration. The French continued their work with the Veronique sounding rocket in Africa, and the Japanese continued research using their Kappa VI type rocket in northern Japan. Soviet research included recovery experiments with

dogs and rabbits. The United Kingdom continued with the Skylark rocket at Woomera, Australia, and rocket flights were conducted from Fort Churchill, Manitoba, with United States and Canadian rockets.

ROBERT F. FELLOWS,
Staff Scientist, Office of Space Sciences, National Aeronautics and Space Administration.

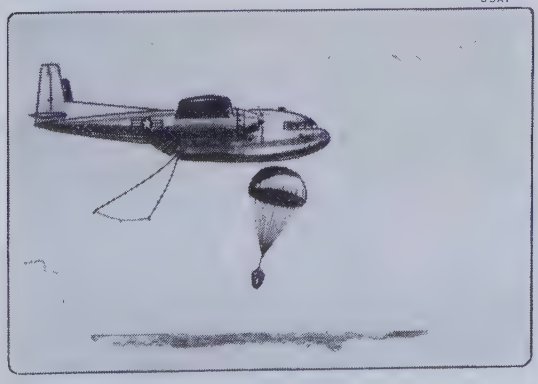
SPACE MEDICINE

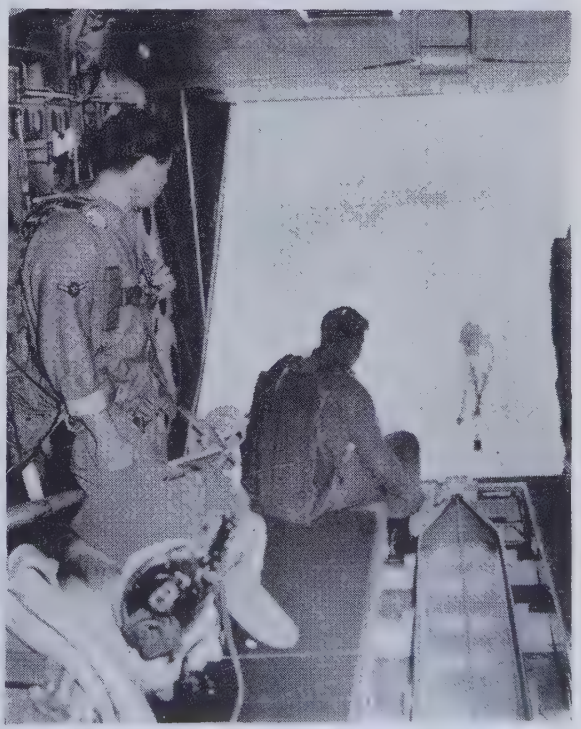
"Space medicine" is a term frequently applied to the broad area of physical, biological, and psychological research on the problems of protecting man from the hazards of space travel and assisting him to overcome the unaccustomed conditions of life in space sufficiently well to perform the functions required of him. A new term for this general area, "bioastronautics," was coined in 1958 and has gained widespread currency.

In comparison with the accomplishments in space medicine in the past decade, gains in 1959 were modest. Although several biological space probes were carried out, bioscientists were, in general, much busier with ground preparations for extra-atmospheric testing and research to be accomplished in subsequent years. The year was marked by five main types of activity: (1) intensive evaluation of the significance for living things of the physical data and the very limited biological information obtained from the year's successful probes; (2) consolidation of this information with years of practical experience in the bioengineering of advanced vehicles of various kinds, in order to specify details of construction needed to accommodate living creatures, including men, in earth-orbiting vehicles proposed for various projects; (3) laboratory simulation of various aspects of the space environment, and the study of their effects on animal and human well-being and behavior; (4) development and testing of protective personal gear, environmental control techniques and hard-

(*Below*) Drawing illustrates the recovery technique for Discoverer re-entry capsules. After the orbiting capsule is directed on a re-entry trajectory by a retro-rocket system, a parachute opens at about 55,000 feet and C-119 aircraft in the recovery area "home in" on a beacon transmitted by the capsule. When visual contact is made, the plane scoops up the payload with its special air-snatch gear. If the air recovery fails, ships in the area retrieve the capsule from the ocean. (*Right*) In test run, a plane hauls in model of the Discoverer capsule caught by its recovery apparatus. Technical failures upset all recovery attempts in 1959.

USAF





ware, and situational displays (which, like pictures, maps, or radar scopes, would show the spaceman his course and location with respect to the earth, moon, and solar system); and (5) some serious thinking about the possible results and implications of their future programs, both for life on this planet and for such extraterrestrial life forms as might be discovered elsewhere.

Rocket Space Probes in 1959.—Little important information was added to that from previous years by biological payloads boosted into space in 1959, although confirmation of physiological results of prior shots increased scientific confidence in predictions regarding effects of short-duration flights on man.

Soviet scientists, for example, confirmed their earlier results showing only minor effects of rocket flights to extreme altitude on the respiration, blood pressure, and heart rate of properly conditioned, conscious dogs. The animals were fired to, and successfully recovered by parachute from, heights greater than those previously achieved in the series of Soviet experiments. Some dogs fell in specially constructed full-pressure suits from altitudes of over 200 kilometers, while others descended in pressurized capsules ejected at heights of about 450 kilometers. Though the incidence of failures to recover live animals in this series was not stated, the Soviet workers emphasized strongly the engineering difficulties in maintaining proper stabilization and control of the dynamic forces imposed upon capsule occupants during re-entry.

The Army-Navy team of United States scientists, which in December 1958 successfully launched into a ballistic trajectory a small monkey named Gordo, using an Army Jupiter missile, repeated its success on May 28, 1959, at Cape Canaveral, Fla., with two passengers in separate small capsules: a tiny female squirrel monkey named Baker and a larger male rhesus monkey named Able. Instrumented to telemeter back cardiovascular and respiratory data, they showed findings qualitatively similar to results obtained in the Aerobees fired at Holloman AFB, N.Mex., in 1949–52, although the duration of both acceleration and weightlessness in the Jupiter shots was considerably greater. Provisions were made for the Able monkey to perform a simple performance task during the flight, but a required last-minute substitution of an untrained American-born monkey for the previously trained foreign-born monkey eliminated this portion of the experiment.

The U.S. Air Force also inaugurated a bioastronautic program in 1958, using vehicles in the Discoverer series launched into polar orbits from Vandenberg AFB, Calif. The first shot occurred on April 13, 1959, when an instrumented life-support cell suitable for mice was placed aboard Discoverer II and fired into a nominally circular orbit with an apogee of 354 kilometers. All biological equipment worked satisfactorily during the period of over 24 hours that it remained in orbit. At the end of this time the recovery capsule was ejected from the remainder of the satellite at the wrong point in orbit because of a timer malfunction, and is believed to have landed in the vicinity of the Spitsbergen islands on April 14, 1959, instead of near Hawaii, where recovery teams were waiting. The capsule was not found.

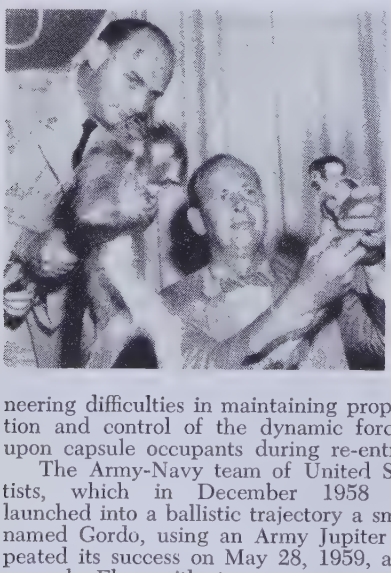
Encouraged by this limited success, the Air Force Ballistic Missile Division attempted another launching on June 3, 1959, with four mice. Discoverer III, which contained this payload, did not go into orbit, however, and only about 13 minutes of questionable data were obtained from the animals.

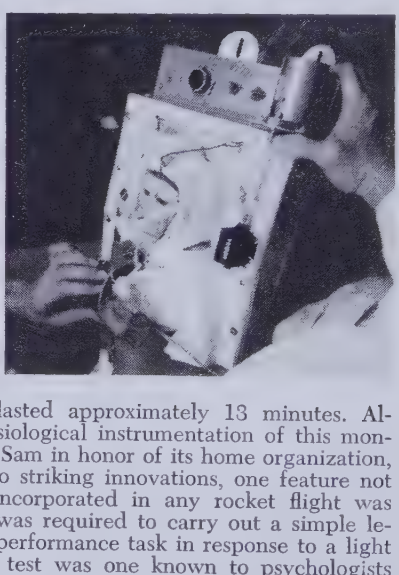
Near the close of the year still another short-range ballistic firing was carried out with an animal aboard. In a test conducted by the National Aeronautics and Space Administration (NASA) to prove the special separation and escape system of the Project Mercury capsule (see below, *Preparations for Human Space Flight*) a monkey (furnished by the USAF School of Aviation Medicine) enclosed in a self-contained life cell (biopack) went along. The flight, which went off on Dec. 4, 1959, attained a peak altitude of about 55 miles and lasted approximately 13 minutes. Although physiological instrumentation of this monkey, named Sam in honor of its home organization, presented no striking innovations, one feature not previously incorporated in any rocket flight was used: Sam was required to carry out a simple lever-pulling performance task in response to a light signal. The test was one known to psychologists as a "shock-avoidance" task, in that the animal is conditioned to perform as desired by the use of weak and painless electric shocks during the early phases of training.

The flight itself was completed without mishap, and the capsule was retrieved in 3 hours by the Navy destroyer *Borie* from the ocean about 200 miles off Wallops Island, Va., where the launching occurred. The monkey was in excellent shape when removed from the life cell; he was later flown to the School of Aviation Medicine together with data recorded on the flight.

Planetary and Space Environments.—Data collected from space probes and satellites is steadily adding to our knowledge and understanding of the physical characteristics and phenomena of the space milieu. Thermal forces, geomagnetic storms, solar phenomena, and ambient radiation in space all have important implications in weather forecasting, communications, and bioastronautics.

Explorer VII, the last (and heaviest) of the





(*Left*) Monkeys Able and Baker are introduced to the press after their 1,700-mile flight in the nose cone of a Jupiter missile, May 28. Recovered by ships in the Atlantic, they showed no ill effects from their journey. Shown holding them are Maj. Gerald Champlin (l.) and Dr. Donald Stullken. (*Right*) One of several monkeys trained for the flight is fitted in a contour couch like that used by Able. Test was part of the man-in-space program.

Virgil I. Grissom, Capt. Donald K. Slayton, Lt. Col. John H. Glenn, Jr., Lt. M. Scott Carpenter, and Capt. L. Gordon Cooper, Jr. The models are of an Atlas launching vehicle (left) and the space capsule which will carry an astronaut in the first orbital flight, set for 1961. (*Right*) In one phase of their training program, three astronauts experience weightlessness inside cabin of looping transport plane.

NASA-International Geophysical Year (IGY) satellites, was launched Oct. 13, 1959, into a stable, near-equatorial orbit with perigee and apogee at 344.5 and 677.9 miles, respectively. For its weight (92.3 lbs) it represented by far the most sophisticated and productive scientific space package launched by the United States. By the end of the year it was still telemetering new and useful data through its 20-megacycle transmitter, with an active life expectancy of one year.

Preliminary analyses of data obtained by Explorer VII have yielded information of considerable significance to biomedical workers. The Van Allen radiation layers now appear to be less sharply demarcated than previously thought, with extensive fringes between and below the two originally described layers. The ionizing components of these radiation belts, together with the heavy cosmic primaries, show variations in spatial distribution and intensity which appear related to solar activity and geomagnetic perturbations.

The biological impact of these ionizing radiations and particles in space cannot be determined until many more pieces of this massive tridimensional "jig-saw puzzle" are found, identified, and fitted into their proper places. Nothing has been discovered to change the exposure factor initially calculated for the first orbiting astronauts, which is well within the exposure limits prescribed by the Atomic Energy Commission.

As the data from the radiation belts have been collected and correlated with the known mass and

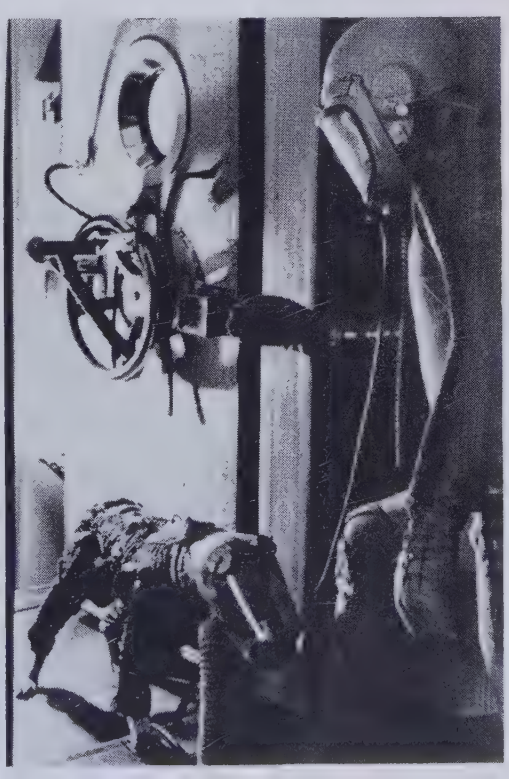
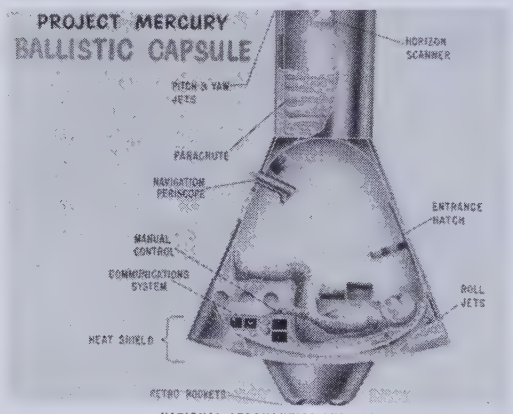
SOVFOTO



magnetic field of the earth, an interesting and potentially very useful astrophysical hypothesis has been developed. If the size, density, and magnetic field of a celestial body can be determined, then the existence of encircling radiation layers can be accurately predicted. For this reason, data furnished by Soviet scientists are interesting and highly relevant to future plans for manned lunar landings and exploration. The Russians have reported that telemetered data received from Lunik II, which reached the moon on Sept. 13, 1959, revealed only a very slight magnetic field. This would indicate that a manned lunar vehicle has no entrapped radiation gauntlet to run as an additional hazard to the difficult moon landing itself.

Spectrophotographic analysis of Venus and Mars in 1959 also was of biological interest. A Lowell Observatory scientist has reported that Martian surface areas (which, because of color changes, have been suspected of bearing vegetation) reflect the presence of carbon, hydrogen, and oxygen in proportions suggesting the presence of organic matter. Scientists at Georgetown Observatory have presented similar evidence for the presence of nitrogen tetroxide in Venus' atmosphere; and two Office of Naval Research physicists, in a balloon gondola 18 miles above the Midwestern prairie of the United States, made observations (unhampered by water vapor in the earth's own air) which indicate the presence of water vapor in the Venusian atmosphere. (See also ASTRONOMY.)



Cross-section drawing of the astronaut's capsule.

Preparations for Human Space Flight.—Preparations proceeded rapidly in the United States in 1959 for launching a manned satellite sometime in 1961–62. NASA contracted for the design, construction, and testing of a one-man capsule (Project Mercury) to be launched into orbit and reenter the earth's atmosphere with its occupant semi-supine, the better to tolerate acceleration as high as 21 g during launching and 16 g during re-entry. Weighing approximately 1 ton, the capsule will be launched by a modified Atlas intercontinental ballistic missile.

Short- and long-range ballistic test shots from Wallops Island and Cape Canaveral have already begun. One contained a monkey from the USAF School of Aviation Medicine, as noted above; others will carry chimpanzees; and later flights may be manned, for training and testing purposes prior to an orbital shot.

Seven astronauts to "fly" the Mercury capsule were selected from Navy, Marine Corps, and Air Force experimental flight test pilots who had been exhaustively screened for physical defects and tolerance for the predicted physiological and psychological stresses of orbital flight. Once selected, the astronauts were immediately enrolled in an extensive program carefully designed to provide them with the additional skills and knowledge which may be required of them during this epochal step in man's exploration of the unknown. The astronaut will not be going along solely for the ride or as a passive observer; he will be provided with displays and controls which will enable him to bypass the automatic equipment at any time and complete the mission with manually operated controls. (See also above, the section on *Astronautics—Space Science and Technology;* also the article, NATIONAL AERONAUTICS AND SPACE ADMINISTRATION.)

The USSR, too, was rumored to be selecting and training astronauts, although official confirmation of Soviet press statements was not forthcoming in 1959. United States observers have pointed out, however, that the payload of Sputnik III (1½ tons) would be quite adequate for a manned satellite. The engineering problems of providing safe re-entry and recovery yet to be solved have been emphasized by Soviet workers, and this may well be the last limiting factor in manned orbital flight to yield, in both the USSR and the United States.

Problems of Extraterrestrial Life.—Biologists, fascinated by the scientific and philosophical implications of past or present life on other planets, have repeatedly emphasized the importance of not tossing away chances to collect evidence of such life. They have therefore urged for both practical and theoretical reasons that contamination of other planetary surfaces, including that of the moon, be carefully avoided. Not only might earthly organisms confuse the precontamination picture, but their introduction on another planet might lead to such changes in them or in organisms native to the planet that efforts to clarify the previous situation would be scientifically impossible.

This difficulty became a matter for discussion between the U.S. National Academy of Sciences and corresponding bodies in other countries, particularly the Moscow Academy of Sciences, in 1959. Even prior to any international agreements, however, it became apparent that efforts were being made to prevent such a possibility. Moscow radio announced shortly after the lunar impact shot that steps had been taken to prevent contamination of the moon by its Lunik II rocket. Assurance was given by Soviet scientists, according to this source, that no earthly microorganisms were aboard.

In the United States, NASA notified the National Academy of Sciences that all practical precautions would be taken with each vehicle fired in the direction of other planetary bodies, including the moon, to preclude the possibility of transporting organisms from earth to their surfaces. Although the likelihood that there is indigenous life on the moon at this time is considered to be almost fantastically remote, evidence that it might have existed there in the past, or have been carried there somehow through space, would, indeed, be of considerable scientific significance.

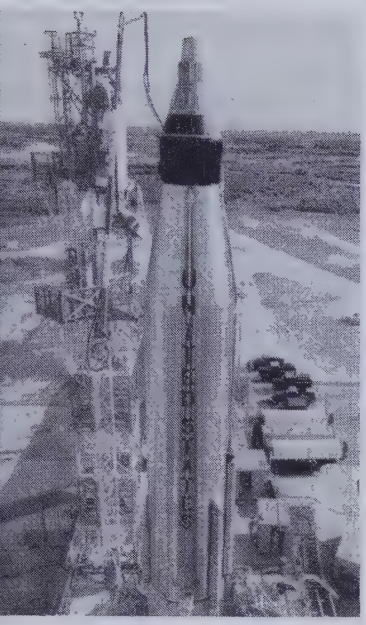
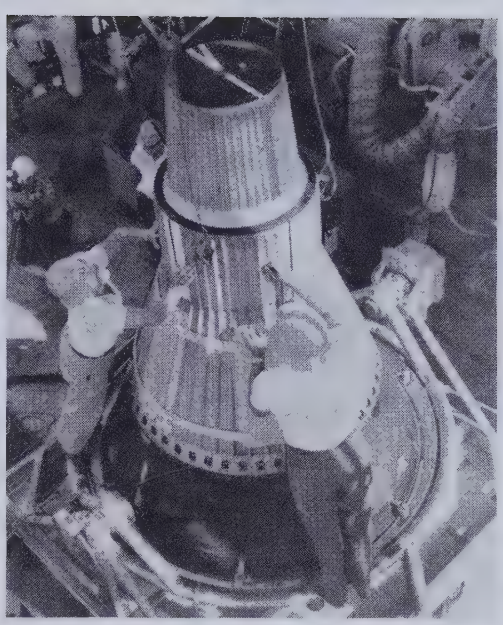
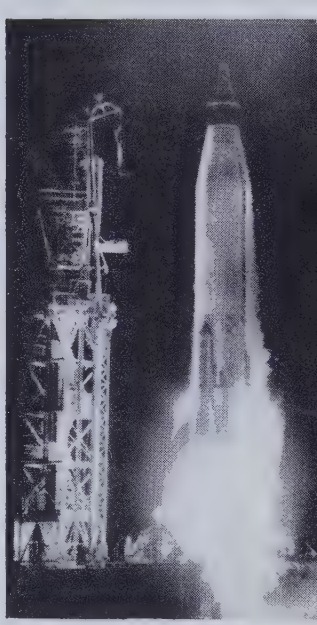
Brigadier General, USAF (MC); Assistant for Bioastronautics and Surgeon, Air Research and Development Command.

SPACE LAW

In 1959 space law received much more attention throughout the world than in the preceding year. Discussions generally were concentrated on practical questions relating to peaceful uses of







NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Preparations proceeded in 1959 for manned space flight under NASA's Project Mercury. (*Left*) With the service tower rolled back, an Atlas lauching rocket topped with an astronaut capsule stands poised for flight. (*Center*) Workmen ready capsule model for test flight. Upon re-entry into atmosphere, blunt end of capsule may heat to temperature of 3,000°F. space, rather than on academic problems such as the upper limits of national sovereignty. After the flight of the Soviet rocket Lunik II to the moon in September 1959, the question of possible territorial claims in outer space was raised again, even though a Soviet lawyer declared that the USSR would make no claim on the moon.

The first university courses devoted entirely to space law were offered in 1959 at McGill University's Institute of Air and Space Law in Montreal, at the Law Faculty of the University of Paris, and at the Academy of International Law in The Hague.

At the International Astronautical Federation's second colloquium on legal problems of space, convened in London on September 4, it was decided that the Permanent Legal Committee of the federation, created in 1958, should be replaced in 1960 by another international institution for the study of space law. In the interim, the general counsel of the federation was authorized to establish working groups entrusted with the consideration of special problems. The French Astronautical Society created a committee on space law in 1959, and a conference on the law and sociology of space was held in New York on March 20 under the auspices of the American Rocket Society.

The American Bar Association, which published an *Inventory of Space Law Literature,* is working on a code of space law; and alternative sets of legal rules have been published by Dr. Michel Smirnoff of Yugoslavia and other lawyers.

The U.S. House of Representatives' Science and Astronautics Committee, successor to the Select Committee on Astronautics and Space Exploration, and the Senate's Aeronautical and Space Sciences Committee held frequent meetings and hearings in 1959 on problems of outer space. Legal problems arising from man's probing of space received particular attention at the hearings on international control of outer space, on United States policy on the control and use of outer space, on satellites for world communications, and on Project Mercury. Two publications prepared for the use of these committees by their consultants are devoted to space law: *Survey of Space Law* (a House document), with an excellent bibliography prepared by Spencer M. Beresford; and *Symposium on Space Law* (a Senate document), prepared by Mrs. Eilene Golloway, containing the texts of selected articles published from 1951 to 1958, including some which originally appeared in the Soviet Union.

The Ad Hoc Committee on the Peaceful Uses of Outer Space, created by the 1958 U.N. General Assembly, first convened in May 1959 and established a special legal subcommittee which prepared a report for consideration by the 1959 session of the General Assembly. The report recommended that priority be given to the settlement of a number of problems, including freedom of outer space for exploration and use, liability for injury and damage caused by space vehicles, allocation of radio frequencies (already under consideration by the International Telecommunication Union), identification of space vehicles, and coordination of launching, re-entry, and landing of space vehicles. The subcommittee considered as premature any formal discussion of limits of territorial airspace, exploration of celestial bodies, and relations with living beings on other planets,

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

as well as the preparation of a code of space law.

On Dec. 12, 1959, the U.N. General Assembly adopted a resolution establishing the permanent 24-nation Committee on the Peaceful Uses of Outer Space. The Soviet Union, which had refused to serve on the ad hoc committee because of a preponderance of Western members, joined the United States in drafting the resolution. SPACE RESEARCH. See ATMOSPHERE RESEARCH; NATIONAL AERONAUTICS AND SPACE ADMINISTRATION; SPACE FLIGHT.

SPAIN. Strategically situated in the Iberian Peninsula of southwestern Europe, Spain is bounded on the north by the Bay of Biscay and the Pyrenees Mountains, which separate it from France; on the east by the Mediterranean Sea; on the south by the Mediterranean and the Atlantic Ocean; and on the west by the Atlantic and Portugal. Including the Balearic Islands and the Canary Islands, Spain has a total area of 194,232 square miles. The estimated population in 1958 was 30,128,056. Madrid, the capital, has a metropolitan population of over 2 million (1959 est.). Barcelona, an important industrial center, has a population of 1,453,000 (1958 est.), and Valencia, the agricultural center of the rich Levantine area, is the third largest city with 558,000 (1958 est.). Other leading cities are Seville, Málaga, Saragossa (Zaragoza), Bilbao, and Murcia.

Government.—The present Spanish regime was established in 1939. Generalissimo Francisco Franco Bahamonde is both the chief of state and head of the official political party, the Falange. He is assisted by ministers with administrative and advisory functions. The 542-member Cortes (Parliament) is restricted in its powers to the approval of official decrees. Free elections are held only for municipal offices and only heads of households may vote for the candidates, who are carefully screened by the government.

General Franco was endowed with life tenure as chief of state by the Law of Succession of March 31, 1947, approved by the Cortes and ratified by a national referendum. This fundamental law also provided for a Council of Regents to select Franco's successor. Juan Carlos, 22-year-old son of Juan, Count of Barcelona, and grandson of Alfonso XIII, is being trained for the succession. He will not be eligible for the royal post until he is 30 years of age, and his elevation is opposed by many Spaniards and passively disputed by his father.

Finance.—The Spanish government has tried repeatedly to revise expenditures and receipts in an effort to balance the budget, but deficits appear inevitable. The budget for 1959 totaled 50,462,072,000 pesetas. Of this amount, 5,959,445,000 pesetas were appropriated for the army, the Department of Interior received 5,276,833,000, public works were provided with 7,856,106,000, and 4,808,192,000 pesetas were allocated to education. The Spanish peseta was stabilized at 60 to U.S.$1 on July 21, 1959.

Education and Religion.—Through continued emphasis on education, Spain has reduced its illiteracy to 14.24% of the population over 10 years of age (1950 census). The government provides free and compulsory elementary education and requires religious training in all public and private schools. On Dec. 31, 1958, there were 3,028,700 students and 66,471 teachers in primary schools and, in 1956–57, 5,275 private schools, with 17,140 instructors and 462,407 students. In 1954, 292,503 students were enrolled in secondary schools. The 12 state universities in 1956–57 had 62,215 students.

Roman Catholicism is recognized officially "as the only religion of the Spanish people" by the concordat signed with the Vatican in 1953 which provided for the nomination of bishops by the Spanish government and the chief of state. There are some 26,000 Protestants, 3,000 Jews, and a relatively small number of Moslems in Spain, but they do not enjoy full religious freedom. Both public pressure and official policy prohibit proselytizing and public or advertised religious services.

National Defense.—Spain has an army of more than a third of a million men, modernly equipped by a program of joint United States and Spanish military action since 1953. While the program is technically under Spanish control, most of the matériel has been supplied by the United States. The air force and navy have also been modernized under this program. The air force has been provided with jet fighters, and the United States has constructed air and naval bases in Spain. The airbase at Morón de la Frontera, the supply base at San Pablo, the naval base at Rota, the major airbase at Saragossa, and subsidiary bases cost over $400 million.

Transportation and Communications.—Spain in 1958 had more than 75,000 miles of highways, consisting of some excellent main arteries and many secondary roads which are well maintained. Although the government has restricted the importation of automobiles and trucks, and Spain does not produce them in great quantity, as of Jan. 1, 1958, there were 193,007 automobiles and 114,627 trucks. The railway network consists of 8,273 miles of standard-gauge and 3,061 miles of narrow-gauge lines. Iberia, the most important Spanish airline, maintains regular service to other European countries, North Africa, South America, and the United States. On Jan. 1, 1958, the Spanish merchant marine consisted of 1,646 vessels, totaling 1,507,080 tons. There were 1,477,904 telephones in service in 1958. Regular television service, inaugurated in 1956, was expanded in 1959, when there were 50,000 television sets in the Madrid area and 15,000 in the rest of Spain.

Economic Conditions.—Production increased in Spain during 1958 by 2%, following a continued trend in recent years. The assistance of the United States was a major factor in this progress, as were also the increased capital, raw materials, and electric power available. With increased production, Spain was confronted with a crisis arising from inflation and the overvaluation of the peseta in terms of foreign exchange.

In July 1959 the Spanish government, after protracted negotiations, adopted a comprehensive program of economic stabilization, including internal fiscal and credit measures, easing of trade restrictions, and membership in the Organization for European Economic Cooperation (OEEC). The foreign exchange system was reformed and the par value of the peseta was reduced to 60 pesetas to the U.S. dollar, in agreement with the International Monetary Fund (IMF), effective July 21, 1959. In turn, the IMF permitted the Spanish government to draw $50 million to fulfill the program and an additional $25 million within 12 months. Spain also arranged credits of $100 million with the OEEC, $130 million with the United States government, and $68 million with commerical banks in the United States.

By devaluing the peseta the Spanish exchange structure was unified. Trade was also freed from many restrictions to eliminate inflationary pressures and give greater flexibility to the economy. The government began at once to abolish price controls and the quantitative restrictions on the import of certain commodities. The demands of both the government and private agencies for capital produced an expansion of bank credit and a trend toward inflation. Foreign investors had been reluctant to place their funds in Spain because of restrictions imposed by Spanish law, but in December 1958 a law liberalized restrictions on foreign investment in petroleum exploration and production. To attract capital, foreign investors were later permitted a 50% share in the ownership of mining and industrial enterprises, and greater freedom in the transfer of earnings and the repatriation of capital.

In 1958 the cost-of-living index, based on the pre-civil war base of 100, was 807.7. The money supply in November 1958 totaled 179 billion pesetas, including currency in circulation and bank deposits, and was 12% higher than in November 1957. The living standard of the average Spaniard is among the lowest in Europe. However, the new economic program demanded more austerity from the Spanish people and in 1959 produced a price increase while wages remained static.

Agriculture and Fisheries.—Spanish agricultural production was barely sufficient to meet modest domestic needs in 1958. Work in irrigation, recla-

mation, resettlement, and reforestation continued at an accelerated pace but did not produce the desired results. Spanish agriculture did not keep up with industrial progress, and the demand for unskilled industrial labor led to the migration of unemployed farm workers.

Cereal production for 1958 was estimated at 7.2 million metric tons, the second best crop in recent years. The 1958 wheat crop of 4.4 million tons supplied most of the domestic requirements and permitted a modest export of the surplus, but was inadequate to supply feed for consumption by the large livestock industry.

The 1958–59 citrus crop was estimated to have increased by one third over 1957–58 to 1.5 million tons. Olive production decreased slightly to 40,480 tons, and olive oil production was estimated at 310,000 tons. Olives, citrus fruits, and wine are important export items.

Output of sugar increased substantially in 1958 to 448,000 tons of beet sugar and 30,000 tons of cane sugar. The estimate of sugar production in 1959 was increased to 460,000 tons, largely because of the increase in the production of beet sugar. Cotton production in 1958 was estimated at 185,000 bales of short-staple and 13,500 bales of long-staple. The crop was insufficient to meet the demands of domestic consumption, and considerable imports from the United States, paid for by the United States with aid funds, were necessary to maintain textile production.

Fish have become a staple in the Spanish diet, but the fishing industry is relatively inefficient by western European standards. In 1957 there was only an 80,000 metric ton increase over the 612,000 metric tons of fish caught in Spanish waters in 1955. Meat production increased by 10% in 1958 to 524,000 tons, but some meat had to be imported.

Manufacturing and Mining.—Industrial production rose 7.8% in 1958 over 1957 despite supply difficulties, rising costs, and other obstacles. Electric power was estimated at 16.350 billion kw.-hr. in 1958, some 14% over that in 1957. Thermal power installations increased but hydroelectric plants actually decreased from 82% in 1957 to 68% of the total in 1958, resulting in an increased demand for the import of coal and petroleum. Spain made plans, in 1959 for the erection of its first atomic power station near Burgos, to cost an estimated 3.2 billion pesetas and to be completed by 1965.

Steel production increased 9.6% in 1958 to 1,475 million tons as a result of financial aid from the United States. The production of coal was still insufficient to meet the growing industrial demand, despite a 3.6% increase in 1958 to 17.1 million tons. There was a substantial recession in the Spanish textile industry during 1958. While Spain has enjoyed a building boom in recent years, construction reflected the problems caused by industrial expansion in a country of limited resources, for the government's efforts to meet the housing shortage impeded capital investment in other fields.

Foreign Trade.—Spain has a long record of deficits in foreign trade. In 1958, exports totaled $490 million; imports, $818 million. Imports increased only $5 million over 1957 as a result of rigid restrictions on import licenses and foreign exchange. Exports increased $30 million over the 1950–57 average, but failed to meet foreign exchange requirements. Gold and foreign exchange reserves continued to decline and reached the precarious total of less than $66.4 million at the beginning of 1959.

Agricultural products accounted for 65% of Spanish exports. Manufactured goods accounted for only 10% of the exports in 1957 and for only 6% during the first ten months of 1958. Spain's major trading partner is the United States. In 1958, United States imports from Spain totaled $55.36 million; exports, $214.6 million. Some 60% of United States imports were vegetable food products and beverages; one fourth of total exports to Spain consisted of raw cotton, and one third comprised edible vegetable oils. Most of the shipments were under the economic assistance programs.

UPI

Generalissimo Franco (in uniform) walks beside President Eisenhower at Torrejon airbase near Madrid on December 21, during a stop on the president's 11-nation goodwill tour.

Principal Events, 1959.—Discontent, rigidly restricted by an alert Spanish government, increased in Spain during 1959. While much of this restlessness could be attributed to economic causes, there was evidence that there were political factors also. Generalissimo Franco had the difficult role of reconciling dissident supporters and the strong rule he represented with the passive resistance of Spanish individualism, and he evidently hoped to retain his health for another decade in order to resolve national problems and consolidate the principles of his National Movement. By July 21, 1959, economic pressures had forced the government to conclude negotiations for economic stabilization, but the political problems still remained.

On February 1, a group of liberal and rightist Spaniards announced the formation of a new and illegal party to oppose the regime, the Spanish Union (Union Española). The announcement reflected a growing restiveness among the enemies of the Franco regime and a desire for the end of the dictatorship and the establishment of a liberal, constitutional monarchy. In March the clandestine Socialist Party urged the Count of Barcelona to break openly with Generalissimo Franco, recall Juan Carlos, and issue a manifesto defying Franco as a rallying point of opposition to the regime. Political action was impeded, however, by the fear of civil war and the alert security measures adopted by the government. Franco announced that he would tolerate no serious agitation and that he would rule the nation until his death, when a king or a regent might succeed him.

Another serious evidence of dissent, particularly in Catalonia, appeared in friction between civil authorities and the Roman Catholic Church, which opposed the centralization imposed by the Spanish government.

Communist activity increased in Spain during the year. Some agitators of the party entered Catalonia secretly and scattered throughout the nation to persuade the non-Communist opponents of the regime to join in a unified front and convert passive discontent into a program for revolutionary action. The government countered the clandestine

activity with the arrest in June of 123 persons charged with agitating for a national strike. Although there had been strikes earlier in the year, this strike never materialized. Nevertheless, late in November, 25 persons were tried for issuing illegal propaganda in connection with the strike, and 20 of them were sentenced to prison terms.

The government fined 369 Spanish citizens for maintaining unauthorized deposits in Swiss banks. This activity had been revealed in 1958 and had affected the economy by taking needed capital from Spain.

Another issue was raised by the desire of Franco to reconcile the animosity which had prevailed since the Spanish Civil War by removing the bodies of the dead of both sides to the recently completed, giant crypt in the so-called Valley of the Fallen. The generalissimo ceremoniously transferred the remains of José Antonio Primo de Rivera, founder of the Falange and martyr of the Civil War, from the Escorial to the costly new crypt, and he dedicated the shrine on April 1.

As the network of United States bases in Spain neared completion, there were over 18,000 Americans, including 8,000 servicemen and their families, stationed in Spain. Spaniards, despite their traditional reserve toward foreigners, accepted the American influx with forbearance.

In foreign relations, the Spanish government attempted to strengthen its ties with Arab nations in the Middle East. The 255-year-old controversy with Great Britain over Gibraltar continued to arouse speculation in the press and adversely cloud Anglo-Spanish relations. Generalissimo Franco supported President Eisenhower in his decision to meet Soviet Premier Khrushchev, and the Spanish foreign minister conferred with the president in London during his discussions with the western allies prior to Khrushchev's visit to the United States in September.

Franco conferred with President Dwight Eisenhower during the latter's visit to Madrid on Dec. 21–22, 1959, at the end of the president's goodwill, 11-nation tour. The meeting of the two leaders served to emphasize Spain's decreasing isolation in international affairs.

[1] Including Alhucemas Islands, the Chafarinas Islands, and Peñón de Vélez de la Gomera. [2] Including the island of Corisco and the Elobeys.

Possessions in North Africa.—Ceuta is located at the eastern entrance to the Strait of Gibraltar. It contains a military post and is governed as part of the Spanish Province of Cádiz. Economic activities include fishing and ship fueling. Melilla is governed as part of the Spanish Province of Málaga. Trade, fishing, boatbuilding, and manufacturing are of chief importance.

Ifni.—Ifni is a Spanish enclave on the Southwest coast of Morocco. It was constituted a province of Spain in 1958, and is ruled by a governor under the director general of African provinces in Madrid. Sidi Ifni (7,651) is the capital and chief town. Grains, grapes, fruit, and dates are grown, and there is some coastal fishing. In late 1957 and early 1958, fighting took place between the Spanish forces and the guerrilla Moroccan Liberation Army.

Spanish Sahara.—Spanish Sahara is a large, sparsely populated territory which is mostly desert in the interior. In 1958 it was constituted a province of Spain, and is ruled by a governor under the director general of African provinces in Madrid. Aiun (El Aiun; pop., 3,142), in Saguia el Hamra, is the capital. There is some fishing and production of cacao. In late 1957 and early 1958, fighting took place at Villa Cisneros (in Rio de Oro) and Aiun between Spanish forces and the Moroccan Liberation Army. On Jan. 10, 1960, it was revealed in Madrid that several American oil companies had obtained rights to prospect for oil in Spanish Sahara.

Spanish Guinea.—Spanish Guinea, a province of Spain, is ruled by a governor aided by territorial administrators. The European population totaled 4,436 in 1950. The port city of Santa Isabel (28,868), on Fernando Poo, is the capital. The territory's budget for 1956 totaled 125.9 million pesetas. In 1956 there were 126 primary schools (20,333 pupils), a secondary school (139), and 2 technical schools (282). The economy on the mainland is predominantly agricultural. Fishing and cattle raising are important on Fernando Poo. Cacao exports totaled 26,900 metric tons in 1957. Other important cash crops are coffee (1956 output, 6,350 metric tons), bananas, palm oil, palm kernels, and hardwoods. Exports in 1956 totaled 930.4 million pesetas; imports, 551.3 million. Trade is mostly with Spain. There are airports at Santa Isabel and Bata (in Rio Muni). In 1959 the Gulf Oil Company and its Spanish partner, CEPSA, obtained concessions to seek oil in Spanish Guinea.

SPANISH LITERATURE. One of the interesting aspects of contemporary Spanish literature is the fact that many of Spain's writers have been working in exile since the civil war of 1936–39. As a result, Spanish literature has been produced on two fronts: in Spain and in foreign countries—a statement that is borne out by the index of the first 100 issues of *Cuadernos americanos,* a periodical published in Mexico. Compiled by Angel Flores, the index shows that much of the material published in the magazine is the work of expatriate Spanish writers.

However, in Spain itself new names continually appear, especially in the literary magazines. These periodicals include *Indice,* which recently has lost some of its prestige, *Insula,* and *Papeles de Son Armadans.* An objective account of the Spanish literary scene may be found in "Carta de España," a regular feature of the Puerto Rican literary quarterly, *Asomante.*

Poetry.—New volumes of poetry by established poets include *El ciervo* by León Felipe, who is now living in Mexico. Blas de Otero gathers poems from two previous volumes in *Ancia,* and Carmen Conde has published *Los monólogos de la hija,* verses inspired by her mother.

In the realm of poetry criticism, Carlos Bousoño has made a study of the work of Vicente Aleixandre (*La poesía de Vicente Aleixandre*), the lyric poet who wrote the excellent *Sombra del paraíso* (1944). The late Juan Ramón Jiménez (1881–1958), winner of the 1956 Nobel Prize for literature, has inspired a number of critical studies. Among the best of these is *Juan Ramón Jiménez en su poesía* by Guillermo Díaz Plaja. Ricardo Gullón contributed *Conversaciones con Juan Ramón,* a revealing account of the great poet's last years in Puerto Rico, and *Páginas escogidas,* a compilation of Jiménez' selected works. Of a more general nature was *Antología de la poesía española, 1957–1958,* compiled by Jiménez Martos.

Fiction.—Among the outstanding recent Spanish novels are *Los hijos muertos* by Ana María Matute, *Cabeza rapada* by Jesús Fernández Santos, and *Las afueras* by José Luis Goytisolo. In 1958 the latter won the Biblioteca Breve Prize, one of Spain's many literary awards. Another prize-winner

was Fernando Bermúdez de Castro's *Pasos sin huellas,* which received the Planeta Prize.

Writers living outside of Spain were also represented. Ramón José Sender, who became a naturalized United States citizen in 1946, recently brought out *Los laureles de Anselmo.* Two writers living in Argentina were also represented. Ramón Gómez de la Serna, the inventor of the literary genre known as the *greguería* (a hybrid of prose aphorism and poetic metaphor), compiled *Flor de greguerías.* Rafael Alberti, the postmodernist lyric poet, published *Sonríe China,* written in collaboration with his wife, María Teresa León.

Nonfiction.—Books on Spanish culture and history were prominent. *Historia de la civilización española,* a thorough survey, was written by Emilio González López and published in the United States. Claudio Sánchez Albornoz' *Españoles ante la historia* was published in Buenos Aires. The German Hispanist, Karl Vossler, produced the scholarly *Espíritu y cultura en el lenguaje,* and Vicente García de Diego brought out the second edition of his *Manual de dialectología española.* Other important research volumes included Juan Bautista Avalle-Arce's *La novela pastoril española* and Fernando Díaz Plaja's *Antología del romanticismo español.*

Other recent books deal significantly with Spanish literature and literary figures. Gerald Brenan, the British Hispanist, is the author of *Historia de la literatura española,* published in Buenos Aires. The correspondence of Miguel de Unamuno y Jugo (1864–1936), with notes and comments by Manuel García Blanco, was edited under the auspices of the Hispanic Institute, New York City. Unamuno and Antonio Machado y Ruiz (1874–1947) were the subjects of Sánchez Barbudo's *Estudios sobre Unamuno y Machado. Paisaje y literatura de España,* with an introduction by Julián Marías, is a fine anthology of the Generation of 1898, those writers who promoted the patriotic and literary revival following Spain's defeat in the Spanish-American War. Other important writers of the past were treated with the critical insight of the modern scholar in volumes that included Dámaso Alonso's *La poesía de San Juan de la Cruz,* Américo Castro's *Hacia Cervantes,* López Jiménez' *Los hermanos Bécquer,* and Antonio Vilanova's *Las fuentes y los temas del Polifemo de Góngora.*

Translations.—Among the recent Spanish novels which became available in English translation in 1959 were Juan Goytisola's *Children of Crisis* (tr. by Christine Brooke-Rose) and *The Young Assassins* (tr. by John Rust), and Pio Baroja's *The Restlessness of Shanti Andía* (tr. by Anthony Kerrigan). José Ortega y Gasset's *Man and Crisis,* translated by Mildred Adams, appeared in 1958. Two translations of Spanish literary classics were published in 1959: *Celestina;* or, *The Tragi-Comedy of Calisto and Melibea* by Fernando de Rojas, translated by Phyllis Hartnall, and *Little Sermons on Sin* by Alfonso Martínez de Toledo, the Archpriest of Talavera, translated by Lesley Byrd Simpson. Seymour Resnick and Jeanne Pasmantier edited a two-volume *Anthology of Spanish Literature in English Translation,* published in 1958.

SPICES. United States spice imports in 1958 totaled 135,738,000 pounds, a slight decrease from the 137,738,000 pounds in 1957. The decline was due mainly to a drop in mustard seed imports of 5,378,000 pounds.

Ten imported commodities showed gains in 1958, eight were substantially unchanged, and six dropped in poundage. Pepper, the industry's bellwether, advanced 3,118,000 pounds to 38,077,000; and paprika rose 1,545,000 pounds to 8,367,000. Cinnamon and nutmeg, two other traditional members of the top ten spices in import volume, showed smaller gains.

Domestic production of mustard seed showed an even greater decline than did imports, decreasing from 35,405,000 pounds in 1957 to 12,854,000 pounds in 1958. Since a large share of United States mustard seed imports, as well as most of domestic production, is in the same general area (Montana in the United States, and Alberta in Canada), poor crop conditions in 1958 accounted for both imported and domestic declines.

Production of chili peppers and paprika in the United States rose to 11.2 million pounds in 1958, from 10.8 million in 1957. Domestic output of sesame seed in 1958 remained at approximately 10 million pounds.

U.S. Department of Commerce import figures for leading spices in 1958, are shown in the accompanying table.

U.S. IMPORTS OF SPICES, 1958

Spice	Pounds	Value
Pepper	38,077,460	$8,948,078
Mustard seed	18,227,596	1,161,249
Sesame seed	14,737,050	2,379,263
Cinnamon	13,417,744	3,520,060
Paprika	8,367,453	2,587,694
Poppy seed	7,140,687	1,361,770
Caraway seed	6,815,843	627,627
Capsicums	6,090,013	1,216,989
Ginger	3,213,868	623,820
Nutmegs	2,702,679	3,394,064

SPORTS, GAMES, AND SHOWS. New major leagues for professional athletes were formed in three sports in 1959. Expansion was under way in a fourth sport and was being considered in a fifth. The new leagues were in baseball, football, and soccer. The National Basketball Association scheduled the inclusion of a team from a ninth city (Chicago) in 1960, and the National Hockey League was investigating the advisability of giving franchises to Los Angeles, Pittsburgh, and Quebec City.

The formation of a third major baseball league, called the Continental League, was announced in New York City on July 27. At the head of the founding group was William A. Shea, chairman of the New York mayor's committee to get a second big league team for the city. This committee was formed after the New York Giants and the Brooklyn Dodgers of the National League had transferred to the west coast, leaving only the American League's Yankees in New York beginning with the 1958 season. The Continental League, with Branch Rickey as president, hoped to begin competition with the 1961 season.

The new football circuit—the American Football League—was formed in August. It hoped to start its schedule in 1960 with a 14-game round-robin. Joe Foss, a former governor of South Dakota, was picked to head the organization.

A new International Soccer League, with teams from 11 nations and New York City, was organized, and play was planned to begin on May 25, 1960. Most of the schedule will be played in the Polo Grounds. The foreign teams will play

after finishing their regular league games at home. The new circuit will include teams from Northern Ireland and Eire (in alternate years) and from England, Scotland, Sweden, West Germany, Austria, Hungary, France, Italy, and Portugal.

During the year, fans in the United States saw much thrilling competition both on and off television. In only their second season at Los Angeles, the Dodgers won the World Series by beating the Chicago White Sox, 4 games to 2. Each of the three games in the series played in the Los Angeles Coliseum drew more than 90,000 fans. The unbeaten Syracuse University football team defeated the University of California at Los Angeles on December 5 for its 10th victory of the regular season.

In other team competition, the Boston Celtics won the National Basketball Association play-offs to replace the St. Louis Hawks as the professional champions, and the Montreal Canadiens continued as the top team in the National Hockey League by finishing first in the regular season standings and by retaining the Stanley Cup in the play-offs.

The American professional golf scene was dominated by Art Wall, Jr., who won the Masters and collected more than $50,000 in tournament prize money during the year, and by Bob Rosburg, who took the Professional Golfers' Association championship. Jack Nicklaus won the United States amateur title.

In international horse races, Jamin, a French entry, won the $50,000 International Trot, at Roosevelt Raceway, Westbury, N.Y., and, in thoroughbred racing, Bald Eagle of the Cain Hoy Stable won the $100,000 Washington (D.C.) International at Laurel.

Americans took considerable punishment in boxing and tennis during the year. Ingemar Johansson stopped Floyd Patterson of Brooklyn in the third round of a June 26 bout in New York City to become the first Swede to win the world heavyweight championship. The United States tennis team lost the Davis Cup to Australia, and Neale Fraser of the Aussie team beat Alex Olmedo in the final of the United States national singles. A Brazilian, Maria Bueno, scored a tennis sweep by taking the women's Wimbledon and United States crowns.

The host team dominated the third Pan-American Games held in Chicago from August 27 to September 7, winning 121 gold medals out of 164; Argentina was second with 9. The American men beat the Soviet Union track team in a return meet held July 18–19 in Philadelphia, but the American women lost for the second time to the Russian women.

In swimming, Becky Collins of Indianapolis set three world records in the Amateur Athletic Union's national championships. An American, Mrs. Greta Andersen Sonnischen, was the first woman to finish in the annual English Channel swim. Alfredo Camarero of Argentina was the winner.

Donald Campbell of England broke his own world speed record on water in his jet-powered *Bluebird II* with a time of 260.35 miles per hour on Lake Coniston, England, in May.

Jack Brabham of Australia won the world auto racing drivers' title—on foot. He pushed his disabled Cooper Climax the last half mile at Sebring, Fla., on December 12 in the final Grand Prix point race of the year, to finish fourth in the race and first in the final standing with 31 points.

The United States scored impressive equestrian victories in the National Horse Show in Madison Square Garden, the Pennsylvania National at Harrisburg, Pa., and the Royal Winter Fair in Toronto. But United States ski hopes for the 1960 Olympics were shattered when Bud Werner of Steamboat Springs, Colo., suffered a broken leg on the slalom course at Aspen, Colo., on December 12. Werner had been named skier of the year by the National Ski Association.

Carol Heiss of Ozone Park, N.Y., retained the women's world, North American, and United States figure skating championships. David Jenkins of Colorado Springs again took the world and United States men's titles, and Don Jackson of Canada scored in the North American championship meet.

The National Collegiate Athletic Association held championship play in soccer for the first time, with the title going to St. Louis University.

Following are summaries of some of the developments in major sports activities in 1959, together with listings of champions and of many outstanding performances. Team or residential affiliations are provided for each winner, where possible, but are usually indicated only once for a multiple winner—the first time his name is listed.

Archery

World Championships

(Stockholm, Sweden, August 5–9)

Men—James Caspers, Racine, Wis. (2,247 pts.)
Women—Mrs. Ann Corby, Bloomfield, N.J. (2,023)
Men's Team—U.S. (James Caspers, Robert Kadlec, James Neeley; 6,633)
Women's Team—U.S. (Mrs. Corby, Lucille Shine, Carole Meinhart; 5,847)

United States Championships

National Archery Association

(Lancaster, Pa., August 17–21)

Men—Wilbert Vetrovsky, Cleveland (3,473 pts.)
Women—Carole Meinhart, Pittsburgh (3,732)
Men's Team—Minneapolis (2,961)
Women's Team—Philadelphia (2,800)

National Field Archery

(Bend, Oreg., July 27–30)

Men's Instinctive—Carl Heinrich, Richmond, Mich. (2,799 pts.)
Women's Instinctive—Faye Sconyers, Modesto, Calif. (2,182)
Men's Freestyle—Robert Kadlec, Rochester, Minn. (2,970)
Women's Freestyle—Cloe Roberson, Samaria, Mich. (2,621)
Men's Heavy Tackle—Jim Palmer, Dansville, N.Y. (2,663)
Women's Heavy Tackle—Anna Van Dolson, Vallejo, Calif. (1,758)

Auto Racing

American Races

Indianapolis Speedway (500 miles, May 30)—Rodger Ward, Indianapolis (driving a Leader Card Special; Speed, 135.856 mph.)
Florida Grand Prix of Endurance, 12 Hours (Sebring, March 21)—Phil Hill, Santa Monica, Calif., and Olivier Gendebein, Belgium (Ferrari; speed, 81.46 mph.; distance, 977.6 miles)
U.S. Grand Prix (Sebring, Fla., Dec. 12)—Bruce McLaren, New Zealand (Cooper Climax; speed, 98.87 mph.; time, 2:12:36.6; distance, 218.4 miles)

European Races

Grand Prix of France and Europe (Rheims, July 5)—Tony Brooks, Britain (Ferrari; speed, 128 mph.; time, 2:01:26; distance, 260 miles)
Grand Prix of Britain (Aintree, England, July 18)—Jack Brabham, Australia (Cooper Climax; speed, 89.88 mph.; time, 2:30:11.6; distance, 225 miles)
Grand Prix of Germany (Berlin, Aug. 2)—Tony Brooks (Ferrari; speed, 139 mph.; time, 2:09:31.6; distance, 311 miles)
Grand Prix of Italy (Monza, Sept. 13)—Stirling Moss, England (Cooper; speed, 125 mph.; time, 2:04:05; distance, 258 miles)
Grand Prix of Holland (Zandvoort, the Netherlands, May 31)—Joakim Bonnier, Sweden (British Racing Motors; speed, 94 mph.; time, 2:05:26; distance, 196 miles)
Grand Prix of Monaco (Monte Carlo, May 10)—Jack Brabham (Cooper Climax; speed, 67 mph.; time, 2:55:51.3; distance, 196 miles)
Grand Prix of Portugal (Lisbon, Aug. 23)—Stirling Moss (Cooper; speed, 96 mph.; time, 2:11:56; distance, 211 miles)
Le Mans (France, June 20–21) 24-Hour Endurance—Carroll Shelby, Dallas, and Roy Salvadori, Britain (Aston Martin; speed, 112 mph.; distance, 2,717 miles)
Mille Miglia (Brescia, Italy, May 31)—Mario Carlo Abate and Gianni Balzarini, Italy (Ferrari; time, 2:06:16.8)

INDIVIDUAL CHAMPIONS

World—Jack Brabham, Australia (31 pts.)
U.S. Auto Club Big Car—Rodger Ward

Sports Car Club of America

Class B Modified—John Staver, Virginia, Minn.
Class B Production—James Jeffords, Milwaukee
Class C Modified—Walt Hansgen, Westfield, N.J.
Class C Production—Robert Grossman, West Nyack, N.Y.
Class D Modified—Alan Connell, Fort Worth
Class D Production—Fred Spross, Poughkeepsie, N.Y.
Class E Modified—Gaston Andrey, Framingham, Mass.
Class E Production—Pierre Mion, Arlington, Va.
Class F Modified—Don Sesslar, Lancaster, Ohio
Class F Production—Harry Blanchard, Greenwich, Conn.
Class G Modified—Arthur Tweedale, Falls Church, Va.
Class G Production—Charles Stoddard, Mentor, Ohio
Class H Modified—James Eichenlaub, Ellwood City, Pa.
Class H Production—Ray Heppenstall, Philadelphia
Class I Production—Paul Richards, Wappinger Falls, N.Y.
Class J Production—A. Edward Wright, Richmond, Va.
Formula III—James Haynes, New York
Rally—*Driver:* Juanita De Loof, Manhattan Beach, Calif.; *navigator:* Mel De Loof, Manhattan Beach, and Thomas R. Lusk, Alexandria, Va. (tied)

BADMINTON

Thomas Cup (world men's team championship)—Indonesia
Uber Cup (world women's team championship)—U.S.
All-England (unofficial world) Championships (London, England, tourney ending March 21)—*Singles:* Tan Joe Hok, Indonesia; *women's singles:* Heather Ward, England; *doubles:* Lim Say Hup and Teh Kew San, Malaya; *women's doubles:* Mrs. E. J. Timperley and Mrs. W. C. E. Rogers, England
U.S. Championships (Detroit, tourney ending April 4)—*Singles:* Tan Joe Hok, Indonesia; *women's singles:* Judith Devlin, Baltimore; *doubles:* Lim Say Hup and Teh Kew San, Malaya; *women's doubles:* Judith and Susan Devlin; *mixed doubles:* Judith Devlin and Michael Roche, Baltimore

BASEBALL

The Los Angeles Dodgers, playing only their second year on the west coast, finished strong at the end of the 1959 baseball season to wind up in a tie for first place with the Milwaukee Braves after both clubs had overtaken the National League leader, the San Francisco Giants. In a two-out-of-three-game play-off, the Dodgers won two in a row by scores of 3–2 and, in 12 innings, 6–5. Then, weary but willing, they faced the Chicago White Sox, the American League flag winners, in the World Series.

The White Sox, feared for their spectacular fielding, shut out the exhausted Dodgers in the first game and added to the indignity by belaboring five Dodger pitchers for 11 runs. But, since Los Angeles had risen to the league championship from a seventh-place finish the season before, it could not be counted out. And, indeed, the Dodgers won the next three games, by scores of 4–3, 3–1 and 5–4. In the fifth game, the White Sox, held to 5 hits, got a run in the fourth inning for the only score of the game. A record crowd of 92,706 watched the fifth contest in Los Angeles. It was the third straight day the crowd exceeded 90,000. But the sixth game wrapped up the championship for the Dodgers as they scored 6 runs in the fourth inning and won by 9 to 3.

Larry Sherry, a pitcher called up from the minors by the Dodgers in midseason, won two games in the series in relief roles and appeared in two other series games.

While fans witnessed in 1959 the spectacular rise of the Dodgers they also watched the fall of the once-mighty New York Yankees. The Yankees had been picked to win the American League pennant again and to retain the world title. They got off to an indifferent start, dropped to last on May 20, and finished in third place.

But if interest flagged from time to time in the pennant races, fans were kept in something of a turmoil by the formation of a third major league, called the Continental League, which hoped to start competition with the 1961 season. At the outset there were five entries in the new circuit—New York, Toronto, Denver, St. Paul–Minneapolis, and Houston. Atlanta and Dallas–Fort Worth were added later, and on Jan. 29, 1960, Buffalo entered the league as the eighth member. Branch Rickey was named president of the new league.

On the playing field, Harvey Haddix of the Pittsburgh Pirates pitched 12 straight innings against the Braves on May 26 without permitting a batter to reach first base. But in the 13th inning an error put the first batter aboard and the Braves went on to win, 1–0. No other major leaguer had pitched so many consecutive perfect innings.

The fans got a double dose of All-Star baseball for the first time, with the National League winning the first game by 5–4 on July 7 at Pittsburgh, and the American League winning the second game, 5–3, on August 3 at Los Angeles.

After the season, the critics named Nelson (Nellie) Fox, the White Sox second baseman, and Ernie Banks, Chicago Cubs shortstop, as the most valuable players in their respective leagues. The batting title in the American League was won by Harvey Kuenn of the Detroit Tigers, who hit .353, and in the National League by Hank Aaron of the Braves, who batted .355. The Cy Young Memorial Award, for the best pitcher in the majors, went to Early Wynn of the White Sox.

In the customary juggling of managers, the Tigers replaced Bill Norman with Jimmie Dykes; Bill Jurges succeeded Mike Higgins with the Boston Red Sox; Fred Hutchinson took over for Mayo Smith at Cincinnati; Charlie Grimm followed Bob Scheffing as the Cubs' manager; Kansas City released Harry Craft and hired Bob Elliott; and the Braves signed Charley Dressen to a two-year contract to replace Fred Haney.

Besides winning the pennant and world title, the Dodgers were the most popular team, attracting 2,070,720 fans to the vast Coliseum in Los Angeles. A total of 9,994,200 watched National League games during the year—the third highest figure in the league's history. The American League drew 9,149,454 spectators, with the Yankees accounting for 1,552,030 at their home games. Some observers claimed that a lot of fans went to the ball park to see the Yankees lose.

PROFESSIONAL—MAJOR LEAGUES

National League (Final Standing)

Club	Won	Lost	Pct.
Los Angeles*	88	68	.564
Milwaukee*	86	70	.551
San Francisco	83	71	.539
Pittsburgh	78	76	.506
Chicago	74	80	.481
Cincinnati	74	80	.481
St. Louis	71	83	.461
Philadelphia	64	90	.416

American League (Final Standing)

Club	Won	Lost	Pct.
Chicago	94	60	.610
Cleveland	89	65	.578
New York	79	75	.513
Detroit	76	78	.494
Boston	75	79	.487
Baltimore	74	80	.481
Kansas City	66	88	.429
Washington	63	91	.409

* Includes two-game play-off.

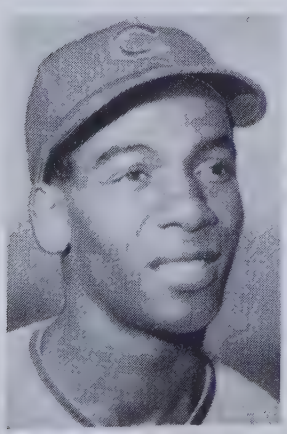
World Series—Won by Los Angeles Dodgers; attendance 6 games, 420,784; net receipts, $2,626,973.44; commissioner's share, $394,046; players' share (first 4 games only), $892,365.04, including full share of $11,231.18 for each Dodger and $7,275.17 for each White Sox player; clubs' and leagues' share, $1,340,562.40

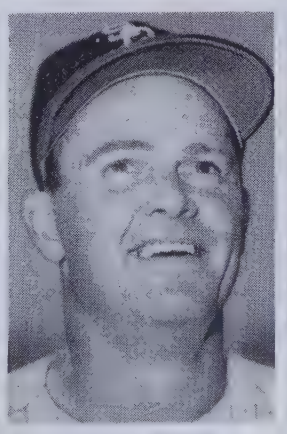
Standings: Los Angeles (NL) won 4 games, lost 2, pct. .667; Chicago White Sox (AL) won 2, lost 4, pct. .333

First Game (Chicago, Comiskey Park, Oct. 1): Chicago 11, Los Angeles 0; *Second Game* (Chicago, Comiskey Park, Oct. 2): Los Angeles 4, Chicago 3;

Sports headliners of 1959 included (left to right) Ernie Banks of the Chicago Cubs and Nelson Fox of the White Sox, most valuable players in their respective leagues; Maria Bueno of Brazil, winner of both the Wimbledon and United States women's championships; and Art Wall, Jr., who won the Masters golf tourney at Augusta and was the year's leading money-winner.

WIDE WORLD





WIDE WORLD

Larry Sherry (51) World Series pitching hero for the Los Angeles Dodgers, is congratulated by teammates as they leave field after defeating White Sox in final game, 9-3.

Third Game (Los Angeles Coliseum, Oct. 4): Los Angeles 3, Chicago 1; *Fourth Game* (Los Angeles Coliseum, Oct. 5): Los Angeles 5, Chicago 4; *Fifth Game* (Los Angeles Coliseum, Oct. 6): Chicago 1, Los Angeles 0; *Sixth Game* (Chicago, Comiskey Park, Oct. 8): Los Angeles 9, Chicago 3

All-Star Games—*First game* (Pittsburgh, July 7): National League 5, American League 4; *second game* (Los Angeles, Aug. 3): American League 5, National League 3.

Most Valuable Player—*American:* Nelson Fox, Chicago second baseman; *National:* Ernie Banks, Chicago shortstop

Cy Young Memorial Award (outstanding major league pitcher)—Early Wynn, Chicago White Sox

Rookies of Year—*American:* Bob Allison, Washington outfielder; *National:* Willie McCovey, San Francisco first baseman

Leading Batters—*American:* Harvey Kuenn, Detroit Tigers; .353; *National:* Hank Aaron, Milwaukee Braves, .355

Home Runs—*American:* Rocky Colavito, Cleveland, and Harmon Killebrew, Washington, 42 each; *National:* Ed Mathews, Milwaukee, 46

Runs Batted In—*American:* Jackie Jensen, Boston, 112; *National:* Ernie Banks, Chicago, 143

Leading Pitchers—Best percentage (10 or more wins)—*American:* Robert Shaw, Chicago (18–6), .750; *National:* Elroy Face, Pittsburgh (18–1), .947.

Most Wins—*American:* Early Wynn, Chicago, 22; *National:* Sam Jones, San Francisco, Lew Burdette, Milwaukee, and Warren Spahn, Milwaukee, 21.

Earned-Run Average—*American:* Hoyt Wilhelm, Baltimore, 2.19; *National:* Stu Miller, San Francisco, 2.84

Managers of Year—*American:* Al Lopez, Chicago; *National:* Walter Alston, Los Angeles

Professional—Minor Leagues

(Where two teams are named, the first won the regular-season championship, the second won the play-off; otherwise the team named won both. Asterisk (*) indicates that the play-offs determine championship. Letters in parentheses indicate league class.)

Alabama-Florida (D)—Montgomery; Selma

American Association (AAA)—*East:* Louisville; *West:* Omaha; *play-off:* Minneapolis

Appalachian (D)—Morristown; no play-off

National Amateur Federation—*Junior:* Detroit and Cincinnati (tied)
American Legion—Thomas A. Edison Post, Detroit
Babe Ruth League—Tulsa
National Congress—Houston Fed-Marts

Basketball

Growing interest and some controversy featured the 1958–59 basketball season. In the United States a west coast team won the National Collegiate Athletic Association (NCAA) championship and an east coast team won the National Invitation Tournament in Madison Square Garden. The world amateur tournament was held in Santiago, Chile, and a political note was injected into it by a team from the Soviet Union.

Among the professional basketball players, the Boston Celtics were at the top when all the results were in. By scoring a record four-game sweep over the Minneapolis Lakers in the National Basketball Association's final play-offs, the Celtics replaced the St. Louis Hawks as world professional champions.

In winning the NBA scoring title, Bob Pettit of the Hawks set six major records, including most points in a season (2,105); highest game average (29.2); and most 50-point games in a season (3). Boston and Minneapolis staged the wildest scoring spree in basketball history on February 27, with the Celtics finally winning by 173–139. Seven NBA records were shattered in the one game.

In a postseason development, the NBA revealed that Chicago would enter the league for the 1960–61 season, bringing the number of teams in the circuit to nine.

It was reported also that Los Angeles and San Francisco might be admitted.

The top college honors were gained by the University of California, which defeated West Virginia in the final of the NCAA tournament. Playing in Louisville, Ky., on March 21, the west coast five took a 39–33 lead at half-time and went on to win by 71–70. Kansas State, the No. 1 team in the UPI and AP polls, had been eliminated by Cincinnati in the Midwest regional final. Pacing the Cincinnati quintet was Oscar Robertson, who was named to most all-America teams at the end of the season. With 978 points (an average of 32.6 points per game), Robertson won the national major college scoring title for the second straight season. Other players honored on most all-America fives were Jerry West of West Virginia, Bob Boozer of Kansas State, Bailey Howell of Mississippi State, and Johnny Cox of Kentucky. Cox had helped Kentucky snap Auburn's 30-game winning streak with a 75–56 victory at Lexington on February 21. In the National Invitation Tournament, St. John's University of Brooklyn defeated Bradley, 76–71, in an overtime final to become the first team to win the event three times.

Despite the excellent quality of American basketball in general, a weak Air Force team was sent to represent the United States in the world amateur tournament. This team was routed by the Russians, 62 to 37, and by Brazil, 81 to 67, in the final round. The Soviet quintet, on its way to the title after winning 5 games in a row, refused to meet the Nationalist Chinese team from Taiwan, and Brazil was recognized as champion. The reasons given for sending a weak team from the United States were that the excellent players on Amateur Athletic Union teams were busy in January with their own league games, and that collegians were occupied with their studies.

At the start of the 1959–60 season, Soviet men's and women's teams toured the United States, with the men winning two out of six games and the women taking all of their six games.

Amateur

Major Tournaments

NCAA—California (defeated West Virginia in final, 71–70)

National (New York) Invitation—St. John's (defeated Bradley in overtime period of final, 76–71)

National Intercollegiate (NAIA)—Tennessee State (defeated Pacific Lutheran in final, 97–87)

Men's AAU—Wichita Vickers (defeated Phillips Oilers in final, 105–83)

Women's AAU—Wayland College, Texas (defeated Nashville Business College in final, 43–37)

College Conference Champions

(Figure in parentheses are for conference games only)

Ivy League—Dartmouth (won 13, lost 1)
Yankee Conference—Connecticut (won 8, lost 2)
Middle Atlantic (University Division)—St. Joseph's (won 7, lost 0)
Middle Atlantic (Northern College Division)—Hofstra (won 10, lost 1)
Middle Atlantic (Southern College Division)—West Chester (won 5, lost 2)
Mid-Eastern—Iona and Lemoyne (each won 4, lost 1)
Ohio Valley—Eastern Kentucky (won 10, lost 2)
Southern—West Virginia (won 11, lost 0)
Border—New Mexico State (won 9, lost 3)
Atlantic Coast—North Carolina State (won 12, lost 2)
Big Eight—Kansas State (won 13, lost 0)
Western (Big Ten)—Michigan State (won 12, lost 2)
Midwest—Knox (won 15, lost 1)
Mid-American—Bowling Green and Miami (each won 9, lost 3)
Pacific Coast—California (won 14, lost 2)
West Coast—St. Mary's (won 11, lost 1)
Skyline—Utah (won 13, lost 1)
Rocky Mountain—Idaho State (won 9, lost 1)
Southwest—Texas Christian (won 12, lost 2)
Southeastern—Mississippi State (won 13, lost 1)
Missouri Valley—Cincinnati (won 13, lost 1)

Billiards

World Champions—*3-Cushion:* Harold Worst, Grand Rapids, Mich.; *pocket:* Willie Mosconi, Haddon Heights, N.J.

U.S. Amateur 3-Cushion Champion—Edward Lee, New York A.C.

Bobsledding

World Championships (mile course, St. Moritz, Switzerland, Feb. 6–15)—*2-man:* Eugenio Monti (pilot) and Renzo Alvera (brake), Italy (time: 5:23.86 for 4 runs); *4-man:* Art Tyler (pilot), Gary Sheffield, Parker Vooris, Tom Butler, U.S. (5:10.82)

North American Championships (mile course, Lake Placid, N.Y., Feb. 21–22)—*2-man:* Fred Fortune and Jack Young, Lake Placid (4:58.33); *4-man:* Stanley Benham (pilot), Neil Rogers, Jim Lamy, Charles Pandolph, Saranac Lake, N.Y. (4:44.84)

Bowling

American Bowling Congress Tournament (St. Louis, Mo., tourney ending April 26)—*All-events:* Ed Lubanski, Detroit (2,116 pts.); *singles:* Ed Lubanski (764); *doubles:* Gib Fischbach and Barney Vehige, St. Louis (1,372); *team:* Pfeiffer Beer, Detroit (3,243)

Women's International Bowling Congress Tournament (Buffalo, N.Y.)—*All-events:* Pat McBride, Grand Rapids, Mich. (1,927); *singles:* Mae Ploegman Bolt, Chicago (664); *doubles:* Sylvia Wene and Adele Isphording, Philadelphia (1,263); *team:* Bill Snethkamp-Chrysler, Detroit (3,030)

National Match-Game Champions (Bowling Proprietors' Association of America)—*Singles:* Billy Welu, St. Louis (311.48 Petersen pts.); *women's singles:* Marion Ladewig, Grand Rapids, Mich. (149.33 Petersen pts.); *doubles:* Don Carter and Tom Hennessey, St. Louis (31 Petersen pts.); *women's doubles:* Marion Ladewig and LaVerne Carter, St. Louis (6,043); *team:* Budweiser Beer, St. Louis (12,576); *women's team:* Steelcase Majors, Grand Rapids, Mich. (10,905)

U.S. Duckpins Tournament (Baltimore)—*All-events:* Bill Bursey, Washington, D.C. (1,301); *women's all-events:* Frances Wilson, Washington, D.C. (1,190); *singles:* Hilmar Sperschneider, Baltimore (473); *women's singles:* Dorothy Cridlin, Richmond, Va. (432); *doubles:* Vernon Marsch and Frank Hugelmeyer, Baltimore (850); *women's doubles:* Ruth Freeman and Audrey Atkinson, Baltimore (774); *team:* Chevy Chase Chevrolet, Washington (2,081); *women's team:* Carousel-Eastway, Baltimore (1,882)

Boxing

Ingemar Johansson became the first Swedish-born fighter to win the world heavyweight title when he knocked out Floyd Patterson in the third round at Yankee Stadium, New York, on June 26. But the outside-the-ring fighting which that bout provoked continued for the rest of the year.

WIDE WORLD

Wilt (the Stilt) Chamberlain, star rookie of the Philadelphia Warriors, uses his seven-foot height to grab a rebound in game with Syracuse. Leaving the University of Kansas to turn professional, he became the top NBA player.

The Manhattan district attorney launched an investigation into the promotional aspects of the fight after he had uncovered violations of the rules of the New York State Athletic Commission. As a result of the investigation, Patterson's pilot, Cus D'Amato, had his manager's and second's licenses revoked, and Bill Rosensohn, who had staged the bout, had his promoter's license suspended for three years.

In a defense of his title earlier in the year, in Indianapolis on May 1, Patterson stopped Brian London of England in 11 rounds.

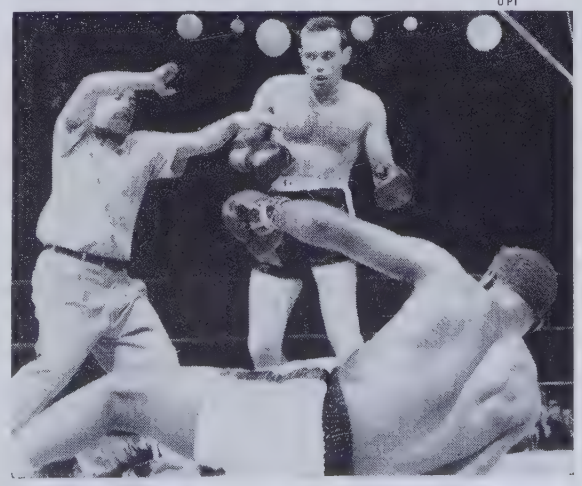
Sugar Ray Robinson was another fighter who had trouble outside the ring in 1959. The National Boxing Association (NBA) declared his world middleweight title vacant on charges by Carmen Basilio, former champion, that he could not get Sugar Ray to honor an agreement for a return bout. New York State and Massachusetts continued to recognize as champion Robinson, who had regained the 160-pound title from Basilio in March 1958. On Jan. 22, 1960, Robinson's version of the title was stripped from him by Paul Pender of Brookline, Mass., in a 15-round split-decision bout in Boston.

Basilio and Gene Fullmer of West Jordan, Utah, fought for the NBA version of the title in Los Angeles on August 18, Fullmer scoring a knockout in the 14th round to regain the title he had lost to Robinson in May 1957. In a defense on December 4 at Logan, Utah, Fullmer outpointed Spider Webb of Chicago.

Two challengers for the world welterweight championship were turned back in 1959. Don Jordan of Los Angeles

Ingemar Johansson of Sweden, new heavyweight champion of the world, stands over Floyd Patterson after scoring stunning victory at Yankee Stadium, June 26. Referee Ruby Goldstein signals end of bout in 2:03 of the third round.

UPI



defeated Virgil Akins of St. Louis on April 24 in Akins' home town, and beat Dennis Moyer in Portland, Oreg., on July 10 in successful defenses of his world title.

Joe Brown of New Orleans, one of the busiest of titleholders, defended his lightweight crown three times. He scored over Johnny Busso of New York in Houston on February 11, stopped Paolo Rosi of Italy in the ninth round in Washington on June 3, and halted Dave Charnley, the British Empire champion, at the end of five rounds in Houston on December 2.

The aging but indefatigable Archie Moore knocked out Canada's Yvon Durelle in the third round in Montreal on August 12 to keep the world light heavyweight title. Moore, who is "between 44 and 50" years of age, had outpointed Durelle in a title bout the previous December.

New world champions rose in the featherweight and bantamweight divisions. Davey Moore of Springfield, Ohio, captured the 126-pound title by knocking out Hogan (Kid) Bassey of Nigeria in the 13th round on March 18. He also beat Bassey in 11 rounds on August 19. The 118-pound title was won by Jose Becerra of Mexico, who stopped Alphonse Halimi of France in three rounds in Los Angeles on July 8.

Pascual Pérez of Buenos Aires kept the flyweight title in two defenses. He beat Kenji Yonikura in 15 rounds in Tokyo on August 10, and stopped Sadao Yaoita in 13 rounds in Osaka on November 5.

World Professional Champions
(Dec. 31, 1959)

Heavyweight—Ingemar Johansson, Sweden
Light Heavyweight—Archie Moore, San Diego
Middleweight—Gene Fullmer, West Jordan, Utah (recognized by the National Boxing Association); Ray Robinson, New York (recognized by New York and Massachusetts state athletic commissions)
Welterweight—Don Jordan, Los Angeles
Lightweight—Joe Brown, New Orleans
Featherweight—Davey Moore, Springfield, Ohio
Bantamweight—Jose Becerra, Mexico
Flyweight—Pascual Pérez, Argentina

National AAU Championships
(Toledo, Ohio, April 2–4)

112 Pounds—Gil Yanez, Toledo
119 Pounds—Fred Griffin, Toledo
125 Pounds—Roy Houpe, Columbus, Ohio
132 Pounds—Quincy Daniels, Seattle
139 Pounds—Brian O'Shea, Chicago
147 Pounds—Vernon Vinson, Cleveland
156 Pounds—Wilbert McClure, Toledo
165 Pounds—Jimmy McQueen, Elyria, Ohio
178 Pounds—Cassius Clay, Louisville, Ky.
Heavyweight—James Blythe, Hartford
Outstanding Boxer—Wilbert McClure
Team—Ohio Association (27 pts.)

National Collegiate AA Championships
(Reno, Nev., April 2–4)

119 Pounds—Ron Nichols, San Jose State
125 Pounds—Bobby Cornwell, Washington State
132 Pounds—Nick Akana, San Jose State
139 Pounds—Joe Bliss, Nevada
147 Pounds—Buddy Rausch, Idaho State
156 Pounds—Terry Smith, Sacramento State
165 Pounds—Charles Mohr, Wisconsin
178 Pounds—John Horne, Michigan State
Heavyweight—Hal Espy, Idaho State
Team—San Jose State, Calif. (24 pts.)

Bridge, Contract

World Team Championships (New York, N.Y.; final hand, Feb. 15)—Italy (defeated U.S. and Argentina in a 3-way contest)

Spring Nationals
(Seattle, Wash., March 14–22)

Harold S. Vanderbilt Cup Team (final hand, March 25)—B. Jay Becker, John R. Crawford, George Rapee, Tobias Stone, all of New York; Sidney Silodor, Havertown, Pa.; Norman Kay, Merchantville, N.J.
Men's Pairs—John Swanson, Berkeley, Calif., and James Pestaner, San Francisco
Women's Pairs—Mrs. Bert Epstein, Beverly Hills, Calif., and Blossom Grossblatt, Los Angeles
Mixed Pairs—Mary Jane Farell, Los Angeles, and Alvin Roth, Washington, D.C.
Open Pairs—Edward O. Taylor, and Lewis Mathe, Los Angeles
Individual—Joe Jabon, Seattle

Summer Nationals
(Chicago, Ill., July 25–August 2)

Masters Team—Oswald Jacoby, Dallas; Samuel Stayman, Victor Mitchell, Morton Rubinow, William Grieve, all of New York; Ira Rubin, Los Angeles
Masters Mixed Team—Mr. and Mrs. Charles J. Solomon, Robert Jordan, Mrs. Sally Young, all of Philadelphia; Peter Leventritt, New York
Life Masters Pairs—Edward Rosen and Daniel Rotman, Chicago
Men's Pairs—Harry J. Fishbein, New York, and John Gerber, Houston
Women's Pairs—Dorothy Hayden, Hastings-on-Hudson, N.Y., and Betty Goldberg, Baltimore
President's Pairs—Mrs. G. Bass, Milwaukee, and Thomas Laverenz, Whitefish Bay, Ill.

Winter Nationals
(Coronado, Calif., November 28–December 6)

Masters Team—Lewis Mathe, Edward Taylor, Meyer Schleifer, all of Los Angeles, and Don Oakie, San Francisco
Men's Team—Oswald Jacoby; Robert Sharp, Covington, Ky.; Ivan Erdos and Oliver Adams, Los Angeles
Women's Team—Mrs. John Simon, St. Louis; Mrs. Robert Sharp, Covington, Ky.; Mrs. Sidney Kasle, Indianapolis; Mrs. Stanley Alcorn, San Antonio; Mrs. Paul McDaniel, Houston
Masters Pairs—Samuel Stayman and Morton Rubinow, New York
Mixed Pairs—John R. Crawford and Dorothy Hayden
Individual Life Master—Leo Pressburg, Hawthorne, Calif.

Canoeing

U.S. Senior Paddling Champions
(Washington, D.C., July 25)

1-Man Single Blade—Istvan Hernek, Hudson, Ohio
Tandem Single Blade—Frank Krick and Jake Kastner, Philadelphia
4-Man Single Blade—Edward Budrock, Robert Manley, Paul Bouchnewich, and Stuart Messur, Yonkers, N.Y.
1-Man Kayak—Joe Redela, Washington, D.C.
Tandem Kayak—Miklos Tottossy and Joe Redela, Washington, D.C.
4-Man Kayak—Kenneth Wilson, Fred G. Wolters, Jr., Donald O'Brien, and Eric Feicht, all of New York
1-Woman Kayak—Mary Ann DuChai, Hudson, Ohio
Team—Washington C.C. (31 pts.)

Checkers

World Champions—*3-Move:* Walter Hellman, Gary, Ind.; *2-move:* Samuel Cohen, London, England; *go-as-you-please:* Thomas Wiswell, Brooklyn; *blindfold:* Newell W. Banks, Detroit
U.S. Champion—Walter Hellman

Chess

World Champions—*Men:* Mikhail Botvinnik, USSR; *junior men:* Carlos Bielicki, Argentina; *women:* Elizabeth Bykova, USSR; *students (team):* Bulgaria
World Challengers' Tournament—*Men:* Mikhail Tal, USSR; *women:* Mme. Kira Zvorkina, USSR
U.S. Champions—*Men:* Bobby Fischer, Brooklyn; *women:* Lisa Lane, Philadelphia; *men's open:* Arthur B. Bisguier, New York; *women's open:* Sonja Graf-Stevenson, Los Angeles; *men's amateur:* Russell Chauvenet, Silver Spring, Md.; *women's amateur:* Lisa Lane; *junior:* Robin Ault, Cranford, N.J.; *speed:* James T. Sherwin, New York
Rosenwald Trophy—Bobby Fischer

Cross-Country

NCAA (4 miles)—Al Lawrence, University of Houston (20:35.7); *team:* Michigan State (44 pts.)
ICAAAA (5 miles)—Crawford Kennedy, Michigan State (23:51.8); *team:* Michigan State (50 pts.)
Heptagonal (5 miles)—Richard M. Greene, Army (24:42); *team:* Army (31 pts.)
AAU (10,000 meters)—Al Lawrence (32:22.4); *team:* Houston

Curling

U.S. Championships (Green Bay, Wis., March 30–April 4)—Hibbing, Minn. (Frank Kleffman, skip)
U.S. Women's Championships (Wausau, Wis., Feb. 15)—Skokie Club Thistles, Glencoe, Ill. (Mrs. David Wilson, skip)
Gordon Grand National—Utica No. 1 Rink (Roy Read, skip)
Gordon International Medal—Canada (defeated United States, 519–336)
Canadian Champion—Regina, Sask. (Ernie Richardson, skip)
Mitchell Medal—Utica No. 3 Rink (George Johnston, skip)
Douglas Medal—Hamilton (Ont.) Thistles (Ross Tarlton, skip)
Ardsley—St. George Curling Club, Montreal (W. E. Thompson, skip)

Cycling

Tour de France (2,706 miles)—Federico Bahamontes, Toledo, Spain (123:46:45)

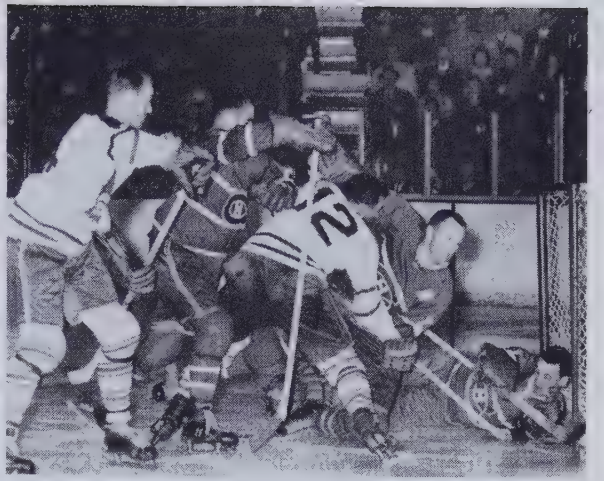
World Championships
(Amsterdam and Zandvort, the Netherlands)

Professional

Road—Andre Darrigade, France
Sprint—Antonio Maspes, Italy
Pursuit—Roger Rivière, France
Motor-Paced—Guillermo Timoner, Spain

Amateur

Road—Gustav Schur, East Germany
Sprint—Valentino Gasparella, Italy



WIDE WORLD

(*Left*) Billy Cannon, L.S.U. halfback and No. 1 college football player of 1959, eludes tacklers as he returns punt 89 yards for touchdown which defeated Mississippi, 7–3. (*Right*) In final game of 1959 Stanley Cup hockey play-offs, won again by Montreal, goalie Jacques Plante of Les Canadiens sprawls on ice to block scoring effort by Toronto's Ron Stewart (12).

Pursuit—Rudi Altig, West Germany
Motor-Paced—R. E. Van Houwelingen, the Netherlands

U.S. Amateur Championships
(Kenosha, Wis.)

Senior Open—James Rossi, Chicago
Mile—David Sharp, Pacific Palisades, Calif.
2 Miles—James Rossi
5 Miles—Jack Hartman, Los Gatos, Calif.
10 Miles—James Rossi

Dog Shows

Westminster Kennel Club Show (New York, N.Y., Feb. 9–10)—*Best in show:* Miniature poodle, Ch. Fontclair Festoon of Dunwalke Kennels, owned by Clarence Dillon, Far Hills, N.J. (2,544 dogs shown)
International Kennel Club Show (Chicago, Ill., April 4–5)—*Best in show:* Pekingese, Ch. Chik T'Sun of Caversham, owned by Mr. and Mrs. C. C. Venable, Atlanta, Ga. (2,541 dogs shown)

Fencing

World Championships
(Budapest, Hungary, July 14–26)

Individual—*Foil:* Allen Jay, England; *épée:* Bruno Khabarov, USSR; *saber:* Rudolf Karpati, Hungary; *women's foil:* Emma Efimova, USSR
Team—*Foil:* USSR; *épée:* Hungary; *saber:* Poland; *women's foil:* Hungary; *over-all:* USSR

United States Championships
(Los Angeles, June 27–July 4)

Individual—*Foil:* Joseph Paletta, U.S. Navy; *épée:* Henry Kolowrat, Fencers Club, New York; *saber:* Thomas Orley, Pannonia A.C., San Francisco; *women's foil:* Maria del Pilar Roldan, Mexico
Team—*Foil:* New York University; *épée:* U.S. Army Modern Pentathlon Team; *saber:* Salle Santelli, New York; *women's foil:* Los Angeles A.C.; *3-weapon:* Fencers Club, New York; *over-all:* Fencers Club, New York

National Collegiate AA Championships
(Annapolis, Md., March 27–28)

Individual—*Foil:* Joseph Paletta, Navy; *épée:* Roland Wommack, Navy; *saber:* Al Morales, Navy
Team—Navy (72 pts.); *second:* New York University (65)

Fly and Bait Casting

National Association Championships
(Columbus, Ohio, August 18–23)

(Distances given represent the total distance for the three longest of five casts made in each of two events, involving different baits or flies.)

All-Around—Marion Garber, Toledo
All-Distance—Marion Garber (3,184 ft.)
Distance Baits—Sib Liotta, Cleveland (2,221 ft.)
Distance Flies—Jon Tarantino, San Francisco (1,113 ft.)
All-Accuracy—William Peters, Toledo (392 pts.)
Accuracy Baits—John Crewdson, Chicago (197 pts.)
Accuracy Flies—Dick Fujita and Tom Sibila, Cleveland; Steve Aleshi and Baldi Darnay, Kansas City, Mo.; Jim Randall, Hartford, Conn.; and Marion Garber (all tied)

Women

All-Accuracy—Mel Gavin, St. Louis (390 pts.)
Accuracy Baits—Mel Gavin (194 pts.)
Accuracy Flies—Mel Gavin (192 pts.)

Football

Only one major college team finished the 1959 football season undefeated. Syracuse, which had been completely overlooked as a contender for national honors in the preseason forecasts, completed its first unbeaten campaign by defeating the University of California at Los Angeles, 36 to 8, on December 5, for its 10th victory of the year. Such a record made it easy for the coaches in the United Press International voting and for the writers and broadcasters in The Associated Press poll to name Syracuse the nation's No. 1 team in their final balloting. In the postseason Cotton Bowl game at Dallas (Jan. 1, 1960) Syracuse continued its streak by defeating Texas, 23–14.

While Syracuse provided a sustained drive to rise to the top and to stay there, Navy delivered a single-day blow to Army that startled the football world by its magnitude. The Middies, playing before 100,000 fans at Philadelphia's Municipal Stadium on November 28, overwhelmed favored Army, 43–12, rolling up the biggest score in the 60 games of the rivalry between the academies.

Form also was upset early in the season when Northwestern crushed Oklahoma, 45–13, and Tennessee topped third-ranked Auburn, 3–0, in opening games. Oklahoma, along with Louisiana State, had been at the top of preseason polls. Oklahoma also was beaten by Texas and Nebraska, and Tennessee toppled L.S.U. from the ranks of the undefeated.

Billy Cannon of L.S.U. won the John W. Heisman Memorial Trophy as the year's best college football player, and Ben Schwartzwalder of Syracuse won about every honor possible for a football coach for the season.

A new professional league, organized as the American Football League in 1959, was hoping to begin competition with the 1960 season. The cities in the circuit were Boston, New York, Buffalo, Los Angeles, Dallas, Houston, Denver, and (after a franchise in Minneapolis–St. Paul was withdrawn in January 1960) Oakland.

The prospect of open interleague warfare became likely when the National Football League owners voted on Jan. 28, 1960, to grant a franchise to Dallas for the 1960 season and to admit Minneapolis–St. Paul in 1961. AFL Commissioner Joe Foss denounced the action as "an out-and-out attempt to wreck our league." The Dallas club, owned by Lamar Hunt, founder and president of the AFL, is regarded as a key franchise in the new circuit, and the city is considered capable of supporting only one professional football team.

In National Football League competition in 1959, the New York Giants and Baltimore Colts retained their conference titles. In the championship game at Baltimore on December 27, the Colts defeated the Giants for the second straight year, 31–16, as their great quarterback, Johnny Unitas, led his club in a fourth-quarter splurge of 24 points that swept away a 9–7 deficit in the third period.

Paul Hornung of Green Bay tallied 22 points on the final day of the season for a league-leading total of 94 points, to pass Pat Summerall, a kicking specialist for the Giants who finished with 90 points.

The commissioner of the NFL, Bert Bell, died on Oct. 11, 1959, and was succeeded on an interim basis by Austin Gunsel, the league treasurer. On Jan. 26, 1960, Pete Rozelle, general manager of the Los Angeles Rams, was elected the new commissioner.

Pete Dawkins, an Army football star of the 1958 season, attracted considerable attention by gaining a place on the Oxford rugby team that defeated Cambridge in a traditional match on December 8.

Major Bowl Games
(Games played Jan. 1, 1960, unless otherwise indicated)

Rose (Pasadena, Calif.)—Washington 44, Wisconsin 8
Sugar (New Orleans)—Mississippi 21, Louisiana State 0
Cotton (Dallas)—Syracuse 23, Texas 14

Orange (Miami)—Georgia 14, Missouri 0
Gator (Jacksonville, Fla., Jan. 2, 1960)—Arkansas 14, Georgia Tech 7
Liberty (Philadelphia, Dec. 19, 1959)—Penn State 7, Alabama 0
Sun (El Paso, Texas, Dec. 31, 1959)—New Mexico State 28, North Texas State 8
Tangerine (Orlando, Fla.)—Middle Tennessee State 21, Presbyterian 12
Bluebonnet (Houston, Dec. 19, 1959)—Clemson 23, Texas Christian 7
Blue-Gray Game (Montgomery, Ala., Dec. 26, 1959)—North 20, South 8
Senior Bowl (Mobile, Ala., Jan. 9, 1960)—North 26, South 7
Shrine North-South Game (Miami, Dec. 26, 1959)—North 27, South 17
Shrine East-West Game (San Francisco, Jan. 2, 1960)—West 21, East 14
Pro Bowl (Los Angeles, Jan. 17, 1960)—West 38, East 21

College Conference and League Champions

(Figures in parentheses represent wins, losses, and ties in conference games only)

National (AP and UPI Polls)—Syracuse

* The NFL title was won at Baltimore on December 27 by the Colts, who defeated New York, 31–16.

Canadian Professional Football

Grey Cup (November 28)—Winnipeg Blue Bombers defeated Hamilton Tiger-Cats, 21–7.

Golf

A couple of professional golfers who swing their clubs as if they were holding baseball bats did some excellent hitting along the fairways in 1959. Art Wall, Jr., of Pocono Manor, Pa., finished with a flourish in the Masters Tournament at Augusta, Ga., on April 5 to win with a 72-hole score of 284. He had five birdies on the last six holes in his final round and posted a 66.

Another player who holds his club with a baseball grip, Bob Rosburg of Palo Alto, Calif., took the Professional Golfers' Association title with a 277, turning in a 66 in the final round on August 2 at Minneapolis.

In the U.S. Open, held at the Winged Foot Club in Mamaroneck, N.Y., Rosburg finished as runnerup to Billy Casper, Jr., of Apple Valley, Calif. Casper's 72-hole total was 282 to Rosburg's 283.

The United States amateur title was won by 19-year-old Jack Nicklaus of Columbus, Ohio. He beat Charley Coe of Oklahoma City, 1 up, in the 36-hole final, scoring a birdie 3 on the last hole as Coe finished with a par.

Women golfers were paced by Mickey Wright of San Diego, Calif., who won the open for the second year in a row; Betsy Rawls of Spartanburg, S.C., winner of the Ladies PGA championship; and Barbara McIntire of Lake Park, Fla., who became the amateur titleholder.

In team competition between the United States and Britain, the Americans won the Walker and Ryder cups. The Canada Cup was captured by the Australian team of Peter Thomson and Kel Nagle with a 563 total, and the International Trophy competition, held simultaneously with the Canada Cup, was won by Stan Leonard of Vancouver, B.C., who beat Thomson in a play-off.

Wall was the leading money-winner among the men. By the year's end he had collected more than $50,000. Miss Rawls earned more than $25,000 to finish first among the women.

Sam Snead turned in a sensational round in the tournament named after him and held at his home course in White Sulphur Springs, W.Va. Snead carded a 59, the lowest 18-hole score on record in PGA-sanctioned competition. This accomplishment helped him to win the tourney with a 259 total, only 2 strokes above the four-round PGA record set by Mike Souchak in the 1955 Texas Open.

Men's Individual Champions

U.S. Open—Bill Casper, Jr., Apple Valley, Calif.
U.S. Amateur—Jack Nicklaus, Columbus, Ohio
PGA—Robert Rosburg, Palo Alto, Calif.
Tournament of Champions—Mike Souchak, Grossinger, N.Y.
Augusta Masters—Art Wall, Jr., Pocono Manor, Pa.
U.S. Public Links—William Wright, Seattle, Wash.
North-South Amateur—Jack Nicklaus
Eastern Open—David Ragan, Chattanooga, Tenn.
Eastern Amateur—Ward Wettlaufer, Buffalo, N.Y.
Southern Amateur—Richard Crawford, El Dorado, Ark.
Trans-Mississippi—Jack Nicklaus
Western Open—Mike Souchak
Western Amateur—Dr. Edgar Updegraff, Tucson, Ariz.
NCAA—Richard Crawford, University of Houston
British Open—Gary Player, South Africa
British Amateur—Deane Beman, Silver Spring, Md.
British PGA—Dai Rees, Wales
French Open—David Thomas, Wales
French Amateur—Henri de LaMaze, Paris
German Open—Kenneth Bousfield, England
Canadian Open—Doug Ford, Paradise, Fla.
Canadian Amateur—John Johnston, Vancouver, B.C.
Canadian PGA—Stan Leonard, Vancouver, B.C.
Mexican Open—Angel Miguel, Spain
Australian Open—Kel Nagle, Australia
World Senior Professional—Willie Goggin, San Jose, Calif.
PGA Senior—Willie Goggin
U.S. Senior—Willie Goggin

Women's Individual Champions

U.S. Open—Mickey Wright, San Diego, Calif.
American Open—Beverly Hanson, Fargo, N.Dak.
U.S. Amateur—Barbara McIntire, Lake Park, Fla.
PGA—Betsy Rawls, Spartanburg, S.C.
Titleholders'—Louise Suggs, Sea Island, Ga.
Heart of America Open—Beverly Hanson
Eastern Amateur—Mrs. Edward McAuliffe, Haverhill, Mass.
Western Open—Betsy Rawls
Western Amateur—JoAnne Gunderson, Seattle, Wash.
North-South—Ann Casey Johnstone, Mason City, Iowa
Trans-Mississippi—Ann Casey Johnstone
Southern—Judy Eller, University of Miami, Fla.
NCAA—Judy Eller
Canadian Open Amateur—Marlene Stewart Streit, Toronto
Canadian Closed—Marlene Stewart Streit
British Open Amateur—Elizabeth Price, England
U.S. Junior—Judy Rand, Aurora, Ohio
U.S. Senior—Mrs. Harrison Flippin, Ardmore, Pa.
North-South Senior—Mrs. Charles Bartholomew, Haverhill, Mass.

Men's Team Champion

Canada Cup (professionals)—*Team:* Australia (Peter Thomson, 275; Kel Nagle, 288—563); *International Trophy:* Stan Leonard, Canada (beat Thomson with par 4 on extra hole after tie at 275)
Walker Cup—United States 9, Great Britain 3
Ryder Cup—United States 8½, Great Britain 3½
NCAA—University of Houston
U.S. Public Links—Dallas, Texas

Gymnastics

Men's National AAU Championships
(Amherst, Mass., April 24–25)

All-Around—John Beckner, Los Angeles Turners (106.65 pts.)
Horizontal Bar—Arthur Shurlock, U. of California (18.35)
Parallel Bars—John Beckner, and Edward Scrobe, New York A.C. (tied at 18.25)
Side Horse—John Beckner (18.40)
Still Rings—Jamile Ashmore, Army (18.60)
Swinging Rings—Thomas Darling, Pittsburgh, Pa., unatt. (9.00)
Long Horse—Donald Tonry, Pond's Palaestrum, Champaign-Urbana, Ill. (17.80)
Tumbling—Harold Holmes, Urbana, Ill., unatt. (9.40)
Trampoline—Ron Munn, Amarillo, Texas, unatt. (9.45)
Calisthenics—Jamile Ashmore (18.55)
Rope Climb—Garvin Smith, Los Angeles, Calif., unatt. (time: 0:02.9)
Team—Los Angeles Turners (44 pts.)

Women's National AAU Championships
(Kent, Ohio, May 8–9)

All-Around—Ernestine Russell, Michigan State (70.95 pts.)
Uneven Parallel Bars—Marta Nagy, U. of Colorado (17.90)
Side Horse Vaulting—Ernestine Russell (18.20)
Balance Beam—Muriel Davis, Pond's Palaestrum (17.90)
Tumbling—Teresa Montefusco, Flint Acrolympian Club (9.00)
Calisthenics—Betty J. Maycock, Cleveland, Ohio, unatt. (18.20)

National Collegiate AA Championships
(Berkeley, Calif., March 20–21)

All-Around—Armando Vega, Penn State (551.25)
Horizontal Bar—Stan Tarshis, Michigan State (96.5)
Parallel Bars—Armando Vega (95.5)
Side Horse—Art Shurlock, California (97.0)
Still Rings—Armando Vega (94.0)
Flying Rings—Jay Werner, Penn State (94.0)
Tumbling—Dave Dulaney, Penn State (85.5)
Trampoline—Ed Cole, Michigan (92.0)
Free Exercise—Don Tonry, Illinois (94.5)
Rope Climb—Don Littlewood, Penn State (time: 0:03.5)
Team—Penn State (152 pts.)

Handball

National AAU—*1-wall singles:* Oscar Obert, New York A.C.; *1-wall doubles:* Oscar and Rudy Obert, New York A.C.
National Combined AAU–YMCA—*4-wall singles:* John Sloan, Chicago YMCA; *4-wall doubles:* John Sloan and Phil Collins, Chicago YMCA; *masters 4-wall doubles:* Oscar Penchaf and George Miller, Toledo YMCA

Harness Racing

Seven trotters from seven countries were imported into the United States to oppose Trader Horn on August 1—opening night at Roosevelt Raceway, Westbury, N.Y. Trader Horn, with Billy Haughton in the sulky, was the 17–20 favorite, even though the distance to be covered was a mile and a half, or half a mile more than the usual distance at which American trotters race. The keenest opposition was expected to come from Jamin, the French entry. In 28 races in Europe between January 1958 and Aug. 1, 1959, Jamin had scored 21 victories. Whether his ballyhooed passion for artichokes was the key, or whether Jamin was simply the best trotter in the world, the French horse took the $50,000 International Trot at Roosevelt, beating Tornese of Italy by half a length and finishing three quarters of a length in front of the third-place Trader Horn.

The other horses in order of finish were Icare IV, Italy; Ivacourt, Germany; Adept, Sweden; Philip Frost, Canada; and Jens Protector, Norway. The race served greatly to increase interest in international trotting, for it had been generally assumed that American standardbreds were superior to foreign horses. Jamin won three times and placed second once and third once in five starts in the United States. In balloting conducted by the U.S. Trotting Association, Jamin was named the aged trotter of the year. Jamin also finished in a tie for fourth with Diller Hanover for horse-of-the-year honors. The top award in the poll was won by Bye Bye Byrd, followed by Adios Butler and Bullet Hanover.

Bye Bye Byrd earned a record $212,192 for the year and turned in the world's fastest time on a half-mile track. The four-year-old paced a mile in 1:57⅘ at Roosevelt Raceway.

Adios Butler swept the Messenger Stakes, the Cane Futurity, and the Little Brown Jug to win pacing's triple crown, the first time any horse had achieved that distinction. Trotting's triple crown was shared by two Hanovers, Diller taking the Hambletonian and the Kentucky Futurity, and John A. winning the Yonkers Trot.

Haughton was replaced as the leading driver by William D. (Buddy) Gilmour, with 165 victories, but Haughton finished at the top of the earnings list (for the eighth straight time) with $695,296.

Records were set for attendance and betting, with 14,128,702 fans sending $793,815,975 through the parimutuel machines in the 13 states which permit such wagering.

Champions—Mile Track

Two-Year-Olds—*Pacer:* Bullet Hanover (time, 1:57; world record); *trotter:* Uncle Sam (2:01⅖)
Three-Year-Olds—*Pacer:* Adios Butler (1:55⅘; world record); *trotter:* Expresson (1:58)
Aged—*Pacer:* Widower Creed and Sunbelle (tied at 1:57⅖); *trotter:* Senator Frost (1:58⅘)

Champions—Half-Mile Track

Two-Year-Olds—*Pacer:* Muncy Hanover (2:00⅘; world record); *trotter:* Carlene Hanover (2:04)
Three-Year-Olds—*Pacer:* Adios Butler (1:59⅖; world record); *trotter:* Diller Hanover and John A. Hanover (tied at 2:03⅘)

Hockey

In hockey, an enormously popular sport in the robust Canadian climate, Dominion skaters continued their roles as the world's best players. That Canadians won the professional honors, however, came as no surprise, because the National Hockey League, in which the world's best professionals compete, is made up almost exclusively of Canadians even though the league has teams in New York, Boston, Detroit, and Chicago. Among the pro-

Tomy Lee (right), ridden by Willie Shoemaker, noses out Sword Dancer in the home stretch to capture 85th running of the Kentucky Derby at Louisville, Ky., on May 13, 1959.

WIDE WORLD

fessionals Montreal emerged as the best by finishing first in the 1958–59 league standing and winning the Stanley Cup in the postseason play-offs for the fourth straight time. The league championship was the 11th for the Canadiens. The other team in the finals was Toronto, the second Canadian city in the six-team league. Montreal defeated Toronto's Maple Leafs, who had finished fourth in the regular season, 4 games to 1. This was the first time since 1951 that both Canadian cities had gained the final.

The top individual prize among the professionals was gained by Andy Bathgate of the New York Rangers. He received the Hart Trophy as the most valuable player to his team after receiving 133 points out of a possible 180. A league point-scoring record was set by Montreal's Dickie Moore, who registered 96 points on 41 goals and 55 assists. The Art Ross Trophy went to him for the second straight time. Jacques Plante of Montreal, for the fourth time in a row, took the Vezina Trophy for allowing the fewest goals. Others honored were Alex Delvecchio of the Detroit Red Wings, winner of the Lady Byng Trophy for sportsmanship combined with ability; Ralph Backstrom of Montreal, a center who was the outstanding rookie and winner of the Calder Memorial Trophy; and Tom Johnson of Montreal, who won the James Norris Memorial Trophy as the best defenseman.

Canadians had a little more trouble in amateur competition than they did among the professionals. In the world amateur tournament, which ended in Prague, Czechoslovakia, on March 15, the North Americans kept the title on a point-total basis after finishing in a won-lost tie with the Russians. The Soviet and the Canadian teams each had 4–1 records, but the Dominion skaters made 21 goals and allowed only 7, while the USSR sextet made 20 goals and permitted 10. A squad from the Soviet Union made a successful tour of the United States in January 1959. It was undefeated in 8 games, winning 5 and tying 3.

NATIONAL HOCKEY LEAGUE
(Final Standings, March 22)

Team	Won	Lost	Tied	Points	Goals for	Goals against
Montreal	39	18	13	91	258	158
Boston	32	29	9	73	205	215

Memorial Cup (junior amateur)—Winnipeg Braves
Intercollegiate—University of Toronto

United States Intercollegiate

NCAA—North Dakota
Pentagonal (Ivy) League—Dartmouth

HORSE RACING

Sword Dancer, who finished second to Tomy Lee in the Kentucky Derby and second to Royal Orbit in the Preakness, won the Belmont Stakes—the third jewel in throughbred racing's triple crown—and was named the horse of the year for 1959. The leading jockey of the year was Willie Shoemaker, who rode Tomy Lee in the Derby and Sword Dancer in the Belmont.

Before winning the Belmont, the three-year-old Sword Dancer outraced older horses in the Metropolitan Handicap at Jamaica, and after the Belmont he outran older horses in the Monmouth Handicap. Sword Dancer's final big test came in the Woodward Stakes at Aqueduct on September 26 against such formidable opponents as Round Table and Hillsdale. With Eddie Arcaro riding, the horse owned by Mrs. Isabel Dodge Sloane beat Hillsdale by a head, with Round Table finishing third. Sword Dancer scored over Round Table again in the two-mile Jockey Club Gold Cup at Aqueduct. Sword Dancer won $537,004 in 1959, the highest by any horse during the year.

Round Table, named the champion older horse by the Thoroughbred Racing Associations (TRA), was retired after the Jockey Club Gold Cup, having scored nine victories in the year and having earned $413,380. With a career total of 43 triumphs in 66 starts, Travis Kerr's horse won $1,749,869, the most ever gained by a racer.

Warfare, owned by Mr. and Mrs. Clifford Jones, took the honors among two-year-old colts. His victories included the Cowdin and Champagne Stakes at Aqueduct and the Garden State at Camden, N.J. The Garden State on October 31, a race for two-year-olds, had a gross of $283,075, with $157,845 taken by the victor. Warfare finished with $394,610 in earnings for the year. The record for two-year-olds, $396,460, was set by First Landing in 1958.

Silver Spoon, the first filly to win the $100,000 Santa Anita Derby, was the TRA choice as three-year-old filly of the year. My Dear Girl headed the list of two-year-old fillies. Among My Dear Girl's victories were the Gardenia and the Frizette.

In thoroughbred racing's Washington (D.C.) International, Bald Eagle, the United States entry from Cain Hoy Stable, was the winner.

Records for attendance, parimutuel betting, and revenue to the states were set in 1959, the annual Associated Press survey revealed. The 24-state survey (totals in some of these states were incomplete) showed that 30,484,807 fans, an increase of 3.43% over 1958, attended the races. The parimutuel turnover was $2,391,647,521, a gain of 7.07%. The states' share was $180,382,990, a 7.49% rise.

A new Aqueduct track in New York, built at a cost of $33 million, helped to attract the fans. From September 14 through November 30, Aqueduct drew a total of 1,847,592 spectators, a daily average of 27,994. The betting handle was $178,095,629, a daily average of $2,698,419.

880 Yards—Steve Stenson (1:27.0)
¾ Mile—Don Beam, Binghamton, N.Y. (2:12.1)
Mile—Dick Ring, Brighton, Mass. (3:06.4)
2 Miles—Dan Mount, College Point, N.Y. (6:19.9)
Champion—Don Beam (17 pts.)

Senior Women

440 Yards—Jean Ashworth, Wilmington, Mass. (0:44.2)
880 Yards—Jean Ashworth (1:31.4)
¾ Mile—Jean Ashworth (2:38.2)
Mile—Jean Ashworth (3:27.8)
Champion—Jean Ashworth (20 pts.)

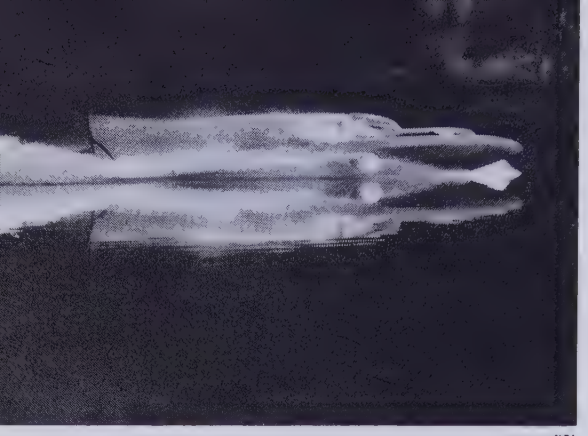
United States Outdoor
(St. Paul, Minn., January 31–February 1)

Senior Men

220 Yards—William Carow, Madison, Wis. (0:19.2)
440 Yards—Roland Carlson, Minneapolis (0:36.0)
880 Yards—Robert Snyder, Detroit (1:16.1)
¾ Mile—Ken Bartholomew, Minneapolis (2:20.1)
Mile—Ken Bartholomew (3:04.1)
2 Miles—Ken Bartholomew (5:46.6)
5 Miles—Ken Bartholomew (16:58.5)
Champion—Ken Bartholomew (21 pts.)

Senior Women

220 Yards—Jeanne Omelenchuk, Detroit (0:21.3)
440 Yards—Mary Novak, Lombard, Ill. (0:42.0)
880 Yards—Jeanne Omelenchuk (1:24.8)
¾ Mile—Jeanne Omelenchuk (2:19.3)
Mile—Jeanne Omelenchuk (3:04.5)
Champion—Jeanne Omelenchuk (20 pts.)



UPI

Skimming across Lake Coniston, England, in his jet-powered *Bluebird II* on May 14, Donald Campbell clocks an average of 260.35 mph. to better his own world water speed record.

United States Indoor
(Champaign, Ill., March 14–15)

Senior Men

440 Yards—Steve Stenson, College Point, N.Y. (0:38.3)
880 Yards—Steve Stenson (1:21.9)
¾ Mile—Steve Stenson (2:05.9)
Mile—Richard Hunt, Los Angeles (2:55.4)
2 Miles—Richard Hunt (6:30.3)
Champions—Steve Stenson and Richard Hunt (tied at 19 pts.)

Senior Women

440 Yards—Jean Ashworth (0:41.4)
880 Yards—Jean Ashworth (1:26.2)
¾ Mile—Jean Ashworth (2:21.3)
Mile—Jean Ashworth (3:14.8)
Champion—Jean Ashworth (20 pts.)

Judo

National AAU Championships
(San Jose, Calif., April 10–11)

130 Pounds—Sumi Nozaki, Gardena, Calif.
150 Pounds—Mas Yoshioka, Los Angeles
180 Pounds—Vincent Tamura, Chicago
Heavyweight—Lenwood Williams, Air Force
Grand Champion—Lenwood Williams, Air Force
Team—Southern California Club (19 pts.)

Lacrosse

National Open—Mt. Washington Club, Baltimore
Intercollegiate—Army, Johns Hopkins, and Maryland (co-champions); (division champions) *Cy Miller:* Johns Hopkins, Maryland, Army; *Laurie Cox:* Baltimore University; *Roy Taylor:* Lehigh University and Massachusetts Institute of Technology (co-champions)
North-South Game—South 10, North 9
Ivy League—Princeton

Motorboating

Major Races

Gold Cup—*Maverick* (William T. Waggoner, Jr., owner; Bill Stead, driver)
President's Cup—*Wahoo* (William Boeing, Jr., owner; Mira Slovak, driver)
Silver Cup—*Maverick*
Detroit Memorial Trophy—*Miss Supertest III* (J. Gordon Thompson, owner; Bob Hayward, driver)
Diamond Cup—*Maverick*
Harmsworth Trophy—*Miss Supertest III*
Governor's Trophy—*Hawaii Kai* (Joseph Mascari, owner; Ron Musson, driver)
International Sweepstakes Trophy—*Maverick*
Apple Cup—*Miss Pay'n' Save* (Ausland-Stoen-Anderson)
Lake Mead Cup—*Wahoo*
Martini-Rossi High Point Trophy (Season)—*Maverick* (2,525 pts.)

American Power Boat Association Champions

Inboard Hydroplanes

48-Cubic-Inch—F. C. Moor, Miami
91-Cubic-Inch—Jim Cox, Jr., Lake Alfred, Fla.
135-Cubic-Inch—R. Frank Neely, El Monte, Calif.
136-Cubic-Inch—Sidney Johnson, Cambridge, Md.
225-Cubic-Inch—Henry Vogel, Webster, N.Y.
266-Cubic-Inch—William Ritner, Gladwyn, Pa.
280-Cubic-Inch—Alton Pierson, Queenstown, Md.
Seven-Litre—George Byers, Columbus, Ohio
Pacific One-Design—Elmer Cravener, Long Beach, Calif.

Inboard Racing Runabouts

44-Cubic-Inch—A. P. Roques, Metairie, La.
Class B—Robert Rice, Arcadia, Calif.
Class E—Ralph Barker, Niagara Falls, N.Y.
Class E Service—Dick Cooper, Miami Beach
Class F Service—Henry Turner, Lake Hopatcong, N.J.
Crackerbox—Joe Herron, San Bruno, Calif.
Jersey Speed Skiff—James Camp, Newark, N.J.
Ski Racing—Les Brown, Oak Lawn, Ill.

Outboard Hydroplanes

Class A—Wally Adams, Auburndale, Fla.
Class B—David L. Christner, Quincy, Ill.
Class C—Jack Leek, Seattle
Class C Service—*Section I:* Homer Kincaid, Carbon Cliff, Ill.; *Section II:* Gerald Waldman, Milwaukee
Class D—Fred Goehl, Quincy, Ill.
Class F—Hubert Entrop, Seattle
Class M—E. S. Brady, Jr., Los Angeles

Outboard Runabouts

Class A Racing—Homer Kincaid
Class B Racing—Gene Hilton, Newton, N.C.
Class C Racing—Fred Goehl
Class F Racing—Chuck Parsons, Lodi, Calif.
Class C Service—Rocky Stone, Willamina, Oreg.

Stock Outboard Runabouts

Class AU—Edwin Wulf, Amityville, N.Y.
Class BU—Ronald Zuback, Morgan, N.J.
Class CU—Dean Mahaffey, Roseburg, Oreg.
Class DU—John Schedel, Secaucus, N.J.
Class JU—Jack Holden, Seattle
36 Class—William Kennedy, 3d, Halesite, N.Y.

Stock Outboard Hydroplanes

Class A—Edwin Wulf
Class B—Robert Hering
Class C—Bob Brown
Class D—Richard O'Dea, Paterson, N.J.

Cruiser Champions

National Predicted Log—*Hurricane III,* Dr. Allan B. DuMont, Cedar Grove, N.J. (6,637 pts.)
Herbert L. Stone Trophy—*Relax'n,* Wes Lance, Bellflower, Calif.
George W. Codrington Trophy—*Hurricane III*
Frederick W. Horenburger Trophy—*Hurricane III*
James Craig Trophy—*Reveller IV,* Frank Ruppert, Pomona, Calif.
International Trophy (Team)—New York A.C.
Express Cruiser Trophy—*Seafarer,* Anson Hoty, Red Bank, N.J.
Motor Yacht Trophy—*Valencia III,* V. J. Taubner, Pelham Manor, N.Y.
Frank Huckins Memorial Trophy—*Suzanne II,* D. W. Clephane, Larchmont, N.Y.
Bear Mountain Trophy—*Mar-Lin,* Lawrence Riordan, Nutley, N.J.

National Outboard Association Champions

Professional Hydroplanes

Class A—Bud Proffer, Flint, Mich.
Class B—Dale Kaus, Austin, Minn.
Class C—Dub Parker, Gadsden, Ala.
Class D—Dick Pond, Keokuk, Iowa
Class F—Arlen Crouch, Quincy, Ill.
Unlimited—Clay Pettefer, Lake Charles, La.

Professional Runabouts

Class A—Don Kinsey, St. Charles, Mich.
Class B—Bill Seebold, Jr., Granite City, Ill.
Class C—Stanley Levendusky, Kansas City, Kans.
Class C-1—Todd Brinkman, Springfield, Ill.
Class D—Fred Goehl, Quincy, Ill.
Class F Runabout—Clay Pettefer
Unlimited Runabout—Fred Goehl

Semiprofessional Hydroplanes

Class A—Bill Settle, Columbus, Ind.
Class B—D. Kendall, Sabetha, Kans.
Class C—Johnny Ayrs, Fort Smith, Ark.
Class D—W. F. Lavery, Jr., Cushing, Okla.

Semiprofessional Runabouts

Class A—Alan Collins, Columbus, Ind.
Class B—Ralph Collins, Columbus, Ind.
Class C—Bob Cotterman, Terre Haute, Ind.
Class D—Mike Lemon, Anderson, Ind.

High Point Drivers

Professional—Dick Pond (59,826 pts.)
Semiprofessional—Bill Settle (19,599 pts.)

Motorcycling

National Championships

Road Racing

200 Miles (Daytona Beach, Fla., March 8)—Brad Andres, San Diego, Calif. (driving an H-D; time, 2:45:04.0)
100 Miles—(Laconia, N.H., June 21)—Brad Andres (H-D; 1:42:59.47)

Cross-Country

153 Miles (Big Bear, Calif., Jan. 11)—Bud Ekins, Sherman Oaks, Calif. (Triumph, 4:20)

Endurance

500 Miles (Lansing, Mich., Sept. 6–7)—Sal Scirpo, Middletown, Conn. (Triumph, 978 pts.)
250 Miles (May 30)—John Penton, Columbus, Ohio (NSU, 833 pts.)

Hill Climb

Class A (Muskegon, Mich., Aug. 9)—*45 cu. in. amateur:* Harold Werner, Easton, Pa. (H-D, 0:08.08); *80 cu. in. professional:* Joe Hemmis, Cumberland, Md. (Triumph, 0:06.74)

Half-Mile Track

5 Miles (Minneapolis, Sept. 5)—Carroll Resweber, Cedarburg, Wis. (H-D, 4:24.93)
T.T. 7 Miles (Peoria, Ill., Aug. 30)—*45 cu. in.:* Dick Mann, El Sobrante, Calif. (BSA, 7:23.3); *80 cu. in.:* Duane Buchanan, Pekin, Ill. (H-D, 7:18.58)
8 Miles (Los Angeles, July 25)—Sammy Tanner, Houston, Texas (Triumph, 8:18.14)
10 Miles (Columbus, Ohio, June 28)—Dick Klamfoth, Groveport, Ohio (BSA, 9:14.48)
15 Miles (Heidelberg, Pa., June 14)—Dick Klamfoth (BSA, 13:58.39)

Mile Track

25 Miles (Sacramento, Calif., July 19)—Carroll Resweber (H-D, 18:13.23)
50 Miles (Springfield, Ill., Aug. 23)—Carroll Resweber (H-D, 33:25.11)

Grand National Point Champion

Carroll Resweber, Cedarburg, Wis. (52 pts.)

Pan-American Games

The third Pan-American Games were held in the United States in 1959, and the host team had little competition from the other 23 nations in the hemispheric meet. The United States was represented by a squad of 404 athletes at Chicago, where the games were held from August 27 to September 7.

Ray Norton and Lucinda Williams paced the United States in track, winning 3 gold medals each. The men's team won 18 of 22 gold medals in all, and the women's team took 8 of 10 gold medals.

The star in swimming was Chris von Saltza, who garnered 5 gold medals as the hosts swept the 10-event women's competition. The United States men won 9 of 10 events. Miss von Saltza, a 15-year-old from Santa Clara, Calif., scored in the 100-, 200-, and 400-meter freestyle, and helped win the freestyle and medley relays.

The United States swept all the wrestling titles, all the men's fencing honors, 11 of 12 men's gymnastic events, and 6 out of 7 championships in weightlifting. Victories also were scored by the United States in basketball, boxing, rowing, and shooting.

In one of the outstanding track events, Tom Murphy of Brooklyn defeated George Kerr of Jamaica in the 800-meter run. Kerr was the victor in the 400-meter run and also led the West Indies to victory in the 1,600-meter relay.

The United States finished with a total of 121 gold medals out of 164. Argentina was second in gold medals with 9. The other gold-medal winners were Brazil, 8; Canada, 7; Mexico, 6; Chile, 5; West Indies, 2; Bahamas, 2; Cuba, 2; Venezuela, 1; and Uruguay, 1.

Pentathlon, Modern

World Championships

(Hershey, Pennsylvania, September 26–30)

Individual Champion—Igor Novikov, USSR (4,847 pts.)
Team Champion—USSR (13,802 pts.); *2d:* Finland (13,287)

Polo

National Outdoor Champions

Open—Circle F, Dallas (Delmar Carroll, Ray Harrington, Jr., William A. Mayer, Russell Firestone, Jr.)
Intercircuit—Menlo Circus, Menlo Park, Calif. (William G. Gilmore, David S. Moore, Robert Skene, W. Mackall Jason)
12-Goal—Menlo Circus (Frank A. McNeilly, David S. Moore, Robert Skene, W. Mackall Jason)
20-Goal—Circle F (Russell Firestone, Jr., William A. Mayer, Ray Harrington, Jr., Lester Armour)
Butler Handicap—Oak Brook, Hinsdale, Ill. (Victor Graber, William Linfoot, Cecil Smith, Jack Murphy)

National Indoor Champions

12-Goal—Milwaukee (Paul Smithson, Jr., William E. Stevens, Donald G. McCarroll)
Sherman Memorial—Huntington (L.I.) Turtles (Joseph Schwartz, Arthur Nichols, Frank Rice)
Intercollegiate—Cornell (Bennet M. Baldwin, Peter D. Baldwin, Stanley R. Woolaway)

Racquets

National Amateur—Geoffrey Atkins, England; *doubles:* Clarence C. Pell, Jr., and C. E. Pearson, New York
Tuxedo Gold Cup—Geoffrey Atkins

Roller Skating

World Championships

(Christchurch, New Zealand, tourney ending January 12)

Singles—Robert Wollard, Santa Ana, Calif.; *women:* Carolyn Sliger, Oklahoma City
Figures—Darrell Glenn, Long Beach, Calif.; *women:* Christie Benda, Springfield, Mo.
Pairs—Ken Trotter and Ruth Heeseman, Mineola, N.Y.
Dance—Charles Wahlig and Claire Farrell, Elmont, N.Y.
Speed—John Drewry, Manasquan, N.J.; *women:* Suzanne Richardson, Detroit

Roller Skating Rink Operators Association Championships

(Boston, Mass., July 25–August 1)

Singles—*Senior:* James Mohler, North Sacramento, Calif.; *women's senior:* Sylvia Haffke, Agawam, Mass.
Pairs—*Senior:* Robert Wollard and Carol Stout, Santa Ana, Calif.; *senior dance:* Charles Wahlig and Claire Farrell, Elmont, N.Y.
Senior Fours—Mineola, N.Y. (Edmund Kline, Lillian Manzo, Kenneth Trotter, and Ruth Heeseman)
Speed—*Senior:* Gerald Gohs, Detroit; *women's senior:* Mary Merrell, Fullerton, Calif.

U.S. Amateur Roller Skating Association Championships

(Indianapolis, Ind., July 12–18)

Senior—David Julien, Livonia, Mich.; *women's senior:* Dawn Brown, Trenton, N.J.
Pairs—*Senior mixed:* David Julien and Linda Kobane, Livonia, Mich.; *women's senior:* Linda Beaton and Linda Kobane, Livonia, Mich.; *senior dance:* Marshall Rule and Gaile Gilmartin, Levittown, N.Y.
Senior Fours—Elizabeth, N.J. (Ernest Schmid, Barbara Jablonski, Paul Zukowski, and Dianne Ludwig)
Speed—*Senior:* James Richardson, Alexandria, Va.; *women's senior:* Geraldine Gehret, Reading, Pa.

Rowing

Intercollegiate Team Champions

I.R.A. Regatta (Syracuse, June 20)—*Varsity:* Wisconsin; *junior varsity:* California; *freshman:* Cornell; James Ten Eyck Trophy (team point total): Washington (14 pts.)
Yale-Harvard (New London, Conn., June 13)—*Varsity:* Harvard; *junior varsity:* Harvard; *freshman:* Yale
Eastern Association (Princeton, N.J., May 16)—*Varsity:* Harvard; *junior varsity:* Pennsylvania; *freshman:* Cornell
Eastern Association 150's (Cambridge, Mass., May 16)—*Varsity* (Wright Trophy): Harvard; *junior varsity:* Princeton; *freshman:* Harvard
Adams Cup—Harvard
Blackwell Cup—Yale
Carnegie Cup—Yale
Childs Cup—Pennsylvania
Compton Cup—Harvard
Dad Vail Trophy—Brown
Goes Trophy—Syracuse
Pennsylvania-Cornell—Pennsylvania
Washington-California—Washington
Oxford-Cambridge—Oxford

United States Championships

(Detroit, Mich., August 8–9)

Single Sculls—Harry Parker, Vesper B.C., Philadelphia
Double Sculls—Vesper B.C.
Pair-Oared Shell with Coxswain—Detroit B.C.
Pair-Oared Shell without Coxswain—Lake Washington R.C., Seattle
4-Oared Shell without Coxwain—Lake Washington R.C.
4-Oared Shell with Coxswain—Lake Washington R.C.

John Kelley, a schoolteacher from Groton, Conn., crosses the finish line four minutes ahead of his nearest rival to win the Pan-American Games marathon in Chicago, September 2. He covered the 26-mile, 385-yard course in 2:27:54.2.

WIDE WORLD

8-Oared Shell—Lake Washington R.C.
Association Single Sculls—Harry Parker
¼-Mile Dash—Paul Yeager, Potomac B.C., Washington, D.C.
Quadruple Sculls—Detroit B.C.
Intermediate 8-Oared Shell—St. Catharine's R.C., Canada
150-Pound Single Sculls—Robert Houston, New York A.C.
150-Pound ¼-Mile Single Sculls—Robert Houston
150-Pound Double Sculls—Detroit B.C.
150-Pound Quadruple Sculls—Detroit B.C.
150-Pound 4-Oared Shell with Coxswain—Detroit B.C.
150-Pound 8-Oared Shell—Detroit B.C.
Team (Barnes Trophy)—Detroit B.C. (233½ pts.)

British Henley
(Henley-on-Thames, England, July 4)

Diamond Sculls—Stuart MacKenzie, Australia
Grand Challenge Cup—Harvard
Thames Challenge Cup—Harvard
Four-Man Crews—Oxford
Double Sculls—Stuart MacKenzie, and Chris Davidge, England
Pairs—Oxford (R. B. Norton and H. H. Scurfield)

Canadian Henley
(Port Dalhousie, Ont., July 29–August 1)

Team Point Trophy—Detroit B.C. (428 pts.)
Senior Eights—Detroit B.C.
Singles—Pat Costello, Detroit B.C.
Doubles—New York A.C.

Shooting

Rifle

National Outdoor Champions

Smallbore—Cpl. Walter R. Kamila, U.S. Marine Corps
High Power (NRA match)—Ammon E. Bell, Hummelstown, Pa.
High Power (M-1 service)—Lt. Thomas W. Atwood, U.S. Army
Women's Smallbore—Lenore M. Jensen, Allen Park, Mich.
Women's High Power (NRA match)—Mrs. Miralotte Ickes, Berkeley, Calif.
Women's High Power (M-1 service)—Laura Boyt, Renton, Wash.
Civilian High Power (M-1 service)—Gerritt H. Stekeur, Latham, N.Y.

National Indoor Champions

Men—Lt. Milton Friend, U.S. Army
Women—Laura Boyt

Pistol

National Outdoor Champions

Men—Sgt. Huelet L. Benner, U.S. Army
Women—Irma Tesch, Lawton, Okla.

National Indoor Champion

Men—Sgt. William B. Blankenship, U.S. Army

Skeet

World Championships
(Lynnhaven, Va., August 2–8)

Open All-Around (4 guns aggregate)—B. C. Hartman, RCAF, Ottawa, Ont. (545 × 550)
Women's All-Around—Mrs. Katharine Dinning, Ruxton, Md. (528 × 550)
Industry All-Around—D. Lee Braun, San Mateo, Calif. (538 × 550)
Open All-Gauge—Robert Shuley, Roselle, Ill. (250 × 250)
Women's All-Gauge—Kathleen Fitchett, Baltimore (249 × 250)
Industry All-Gauge—D. Lee Braun (250 × 250)
Open 20-Gauge—Kenneth Sedlecky, Baldwin, Mich. (100 × 100)
Women's 20-Gauge—Mrs. Katharine Dinning (99 × 100)
Industry 20-Gauge—D. Lee Braun (100 × 100)
Open Small Gauge—Glenn Brown, Bloomsburg, Pa. (100 × 100)
Women's Small Gauge—Kathleen Fitchett (96 × 100)
Industry Small Gauge—Clifford Doughman, East Alton, Ill. (100 × 100)
Open Sub-Small Gauge—Alex H. Kerr, Beverly Hills, Calif. (99 × 100)
Women's Sub-Small Gauge—Mrs. C. A. McDowell, Jr., Shreveport, La. (89 × 100)
Industry Sub-Small Gauge—David Yeager, Anoka, Minn. (96 × 100)
Champion of Champions—Andy Laird, Stockton, Calif. (100 × 100)

Trap

Grand American Championships
(Vandalia, Ohio, August 21–29)

Grand American Handicap—Clyde Bailey, Oquawka, Ill. (21 yds., 99 × 100, 23–24 shoot-off)
Women's Grand American—Susan Hardy, Devon, Pa. (19 yds., 97 × 100)
Professional Grand American—R. L. Andrews, Jr., Jackson, Miss. (25 yds., 98 × 100)
Preliminary Handicap—Richard Krohn, Harvard, Ill. (19 yds., 99 × 100)
Women's Preliminary Handicap—Helen Hofman, Danville, Ill. (18 yds., 96 ×100, 23 shoot-off)
Professional Preliminary Handicap—Cliff Doughman, Alton, Ill. (27 yds. 94 × 100)
Champion of Champions—Arnold Riegger, Castle Rock, Wash. (100 × 100, 225 shoot-off)
Women's Champion of Champions—Vera Holdsworth, Calgary, Alberta (98 × 100, 24–24–25 shoot-off)
North American Clay Target—Kevin Onka, Sugar Creek, Mo. (200 × 200, 150 shoot-off)
Women's North American Clay Target—Helen Urban, Mentor, Ohio (199 × 200)
Professional North American Clay Target—Cliff Doughman (200 × 200)
High Over-All—John Kurth, Columbus, Wis. (972 × 1,000)
Women's High Over-All—Helen Urban (938 × 1,000)
Professional High Over-All—R. L. Andrews, Jr. (970 × 1,000)
National Doubles—Victor Reinders, Waukesha, Wis. (99 × 100)
Women's National Doubles—Iva Jarvis, Phillipsburg, Kans. (94 × 100)
Professional National Doubles—Cliff Doughman (99 × 100)
All-Around—Victor Reinders (390 × 400)
Women's All-Around—Iva Jarvis (374 × 400)
Professional All-Around—R. L. Andrews, Jr. (393 × 400)

Skiing

United States Championships

Jumping (Leavenworth, Wash., February 22)—Willie P. Erickson, Iron Mountain, Mich. (jumps of 273 and 268 ft.; 220.9 pts.)
Cross-Country—*30 Kilometers* (Andover, Me., March 14): Leo Massa, Finnish Ski Club, Jamaica, N.Y. (2:14:03); *15 Kilometers* (Steamboat Springs, Colo., March 6–7): Clarence Servold, Denver University (1:01:54)
Nordic Combined (Steamboat Springs, Colo., March 6–7)—Alfred Vincellette, Denver University (cross-country, 232 pts.; jumping, 219.2; total, 451.2)

Alpine
(Aspen, Colo., March 6–8)

Downhill—Bud Werner, Steamboat Springs, Colo., (2:16.2); *women:* Beverly Anderson, Mullan, Idaho (2:08.6)
Slalom—Bud Werner (total time for two runs, 2:13.1); *women:* Linda Meyers, Mammoth Lakes, Calif. (total time for two runs, 2:28.6)
Giant Slalom—Bud Werner (1:59.5); *women:* Beverly Anderson (1:40.6)
Triple Combined (downhill, slalom, and giant slalom)—Bud Werner (0.00 F.I.S. pts.); *women:* Linda Meyers (5.40 F.I.S. pts.)

North American Championships
(Squaw Valley, Calif., February 21–March 3)

Men

Special Jumping—Kalevi Karkinen, Finland (jumps of 278.8 and 290.3 ft.; 223.7 pts.)
Cross-Country—*15 Kilometers:* Pavel Kolchin, USSR (54:10.7); *30 Kilometers:* Sixten Jernberg, Sweden (1:52:59.9)
Nordic Combined—Dmitri Kochkin, USSR (60-meter jump, 224.5 pts.; 15-kilometer cross-country, 240; total, 464.5)
Downhill—Bud Werner, Steamboat Springs, Colo. (1:30.4)
Slalom—Bud Werner (total time for two runs, 2:13.9)
Giant Slalom—Christian Pravda, Sun Valley, Idaho (2:00.6)
Alpine Combined—Bud Werner (giant slalom, 2.82 pts.; slalom, 0.00; total, 2.82)
Biathlon (20-kilometer cross-country and shooting)—Lawrence Damon, Burlington, Vt. (1:48:09.3)

Women

Downhill—Linda Meyers, Mammoth Lakes, Calif. (2:05.2)
Slalom—Linda Meyers (total time for two runs, 2:00.7)
Giant Slalom—Joan Hannah, Franconia, N.H. (1:39.7)
Alpine Combined—Beverly Anderson, Mullan, Idaho (giant slalom, 0.17 pts.; slalom, 2.10; downhill, 0.76; total, 3.03)

National Collegiate AA Championships
(Winter Park, Colo., March 26–28)

Slalom—Marvin Melville, Utah (1:59.0)
Cross-Country (9 miles)—Clarence Servold, Denver (59:55.0)
Downhill—Marvin Melville (1:28.8)
Jumping—Dave Butts, Colorado (163 ft.; 222.0 pts.)
Combined Alpine—Marvin Melville (100.0 pts.)
Nordic Combined—Ted Farwell, Denver (96.7 pts.)
Team—Colorado (549.4 pts.)

Soccer

United States Champions

National Challenge Cup—McIlwaine Canvasbacks, San Pedro, Calif.
National Amateur Cup—Kutis S.C., St. Louis
National Junior Cup—New York Ukrainians

Canadian Open—Henri Salaun, Boston

Squash Tennis

National Squash Tennis Association Championship—J. Lennox Porter, New York

Swimming

American swimmers excelled at home and abroad in 1959. In the United States, six world records were set during the Amateur Athletic Union's women's national championships at Redding, Calif., July 16–19. Three were made by Becky Collins of Indianapolis, two by Sylvia Ruuska of Berkeley, Calif., and one by Carin Cone of Ridgewood, N.J. Miss Collins lowered the 110-yard, 200-meter, and 220-yard butterfly marks. Miss Ruuska set standards for the 400-meter and 440-yard individual medley, and Miss Cone clipped the 220-yard backstroke record.

In the Pan-American Games at Chicago, Nancy Ramey of Mercer Island, Wash., lowered the 100-meter butterfly mark; Miss Cone clipped the record for the 100-meter backstroke; and the medley relay team of Miss Cone, Ann Bancroft, Miss Collins, and Chris von Saltza established a world record for 400 meters. Miss von Saltza, of Santa Clara, Calif., won 5 gold medals at the games.

Mike Troy of the Indianapolis Athletic Club set a men's butterfly mark for 200 meters in Los Altos, Calif., on July 11, and on July 25, in Tokyo, Frank McKinney, Jr., also of Indianapolis A.C., established a record for the 200-meter backstroke. The United States men's medley relay team (Elton Follett, Lance Larson, Jeff Farrell, and Joe Alkire), in a dual meet with Japan, cut the 400-meter mark on July 21. The American men split two dual meets with the Japanese, winning at Osaka, 37 to 33, and losing at Tokyo, 41 to 38.

In the annual swim across the English Channel, an American, Mrs. Greta Andersen Sonnischen, 31, was the first woman to finish and collected a prize of $1,400. The overall winner was Alfredo Camarero of Argentina, whose time against 22 rivals was 11 hours 48 minutes 26 seconds.

Jon and Ilsa Konrads of Australia continued to shatter world records. Jon lowered his freestyle standards for 220 yards, 440 yards, 800 meters, and 880 yards. Ilsa bettered her own marks in the 800-meter and 880-yard events and also improved on her 1,500-meter and 1,650-yard times. Tsuyoshi Yamanaka of Japan established freestyle records for 200 meters and 400 meters.

Men's AAU Outdoor Championships
(Los Altos, Calif., July 10–12)

100-Meter Freestyle—Jeff Farrell, Naval ROTC, Yale (time, 0:56.9)
200-Meter Freestyle—Jeff Farrell (2:06.9)
400-Meter Freestyle—Alan Somers, Indianapolis A.C. (4:30.6)
1,500-Meter Freestyle—Alan Somers (17:51.3)
100-Meter Backstroke—Frank McKinney, Jr., Indianapolis A.C. (1:03.6)
200-Meter Backstroke—Frank McKinney, Jr. (2:17.9; world record)
100-Meter Breaststroke—Manuel Sanguily, unatt., Columbus, Ohio, and Cuba (1:14.6)
200-Meter Breaststroke—Ronald Clark, Detroit A.C. (2:45.6)
100-Meter Butterfly—Lance Larson, Los Angeles A.C. (1:01.1)
200-Meter Butterfly—Mike Troy, Indianapolis A.C. (2:16.4; world record)
400-Meter Individual Medley—Bill Barton, Indianapolis A.C. (5:14.6)
400-Meter Medley Relay—Detroit A.C. (John Smith, David Gillanders, Ronald Clark, Carl Woolley; 4:21.9)

WIDE WORLD

Trio of United States swimmers admire flowers after victory in the 400-meter freestyle event at the Pan-American Games. Chris von Saltza (center), 15-year-old California star, won in 4:55.9, in one of five meet-record performances which earned her five gold medals. Sylvia Ruuska (right) finished second, and Donna Graham took third place.

800-Meter Freestyle Relay—Indianapolis A.C. (Alan Somers, Dennis O'Neil, George Breen, Mike Troy; 8:35.9)
3-Meter Springboard Diving—Don Harper, Cincinnati (532.3 pts.)
10-Meter Platform Diving (San Francisco, July 12)—Gary Tobian, Los Angeles Pan-Hellenic Club (463.1 pts.)
Team Champion—Indianapolis A.C. (102 pts.)
Long-Distance (4-mile) Championship (Grand Rapids, Mich., August 12)—*Individual:* Roy Saari, El Segundo Swim Club, Calif. (1:33:22.1); *team:* New York A.C. (Drury Gallagher, Kenneth Zinkand, Henry Frey; 21 pts.)

Men's AAU Indoor Championships
(New Haven, Conn., April 2-4)

100-Yard Freestyle—Lance Larson, Southern California (time, 0:49.2)
220-Yard Freestyle—Murray Rose, Southern California and Australia (2:02.2)
440-Yard Freestyle—Murray Rose (4:18.8)
1,500-Meter Freestyle—Murray Rose (18:18.4)
100-Yard Backstroke—Charles Bittick, S. Calif. (0:55.5)
220-Yard Backstroke—Frank McKinney, Jr., Bloomington, Ind. (2:16.1)
100-Yard Breaststroke—Norbert Rumpel, Southern Illinois and Germany (1:04.9)
220-Yard Breaststroke—Norbert Rumpel (2:36.1)
100-Yard Butterfly—Frank Legacki, Ann Arbor (0:53.6)
220-Yard Butterfly—Mike Troy, Bloomington (2:18.6)
200-Yard Individual Medley—Joe Hunsaker, San Jose, Calif. (2:07.0)
400-Yard Individual Medley—George Harrison, Stanford, Calif. (4:35.8)
400-Yard Medley Relay—New Haven Swim Club (Jim Dolbey, Joe Koletsky, Tim Jecko, Elton Follett; 3:47.0)
400-Yard Freestyle Relay—Southern California (Tom Winters, Don Redington, M. Rose, Jon Henricks; 3:21.1)
1-Meter Diving—Sam Hall, Columbus, Ohio (493.35 pts.)
3-Meter Diving—Jozsef Gerlach, Ann Arbor, and Hungary (505.7 pts.)
Individual High Point Scorer—Murray Rose (21 pts.)
Team—Southern California (62 pts.)

Women's AAU Outdoor Championships
(Redding, Calif., July 16–19)

110-Yard Freestyle—Chris von Saltza, Santa Clara (Calif.) S.C. (time, 1:04.8)
220-Yard Freestyle—Chris von Saltza (2:21.1)
440-Yard Freestyle—Chris von Saltza (4:59.6)
1-Mile Freestyle—Sylvia Ruuska, Berkeley (Calif.) YMCA (21:38.9)
110-Yard Backstroke—Carin Cone, Houston Shamrock Club (1:13.3)
220-Yard Backstroke—Carin Cone (2:37.9; world record)
110-Yard Breaststroke—Marianne Hargreaves, Kris Kristensen S.S., Los Angeles (1:22.4)
220-Yard Breaststroke—Ann Warner, Santa Clara S.C. (3:02.4)
110-Yard Butterfly—Becky Collins, Indianapolis Riviera Club (1:11.2; world record)
220-Yard Butterfly—Becky Collins (2:37.0; world record)
440-Yard Individual Medley—Sylvia Ruuska (5:40.2; world record)
440-Yard Freestyle Relay—Berkeley YMCA (Patricia Ruuska, Carolyn Schuler, Sylvia Ruuska, Ann Bancroft; 4:29.0)
440-Yard Medley Relay—Santa Clara S.C. Team A (Chris von Saltza, Ann Warner, Kathy Simcek, Doxey Ransom; 4:59.9)
1-Meter Diving—Irene MacDonald, Los Angeles A.C. (381.75 pts.)
3-Meter Diving—Irene MacDonald (467.75 pts.)

Platform Diving (San Francisco, July 12)—Paula Jean Myers Pope, unatt., Los Angeles (250.70 pts.)
Leading Scorer—Chris von Saltza (26 pts.)
Team—Berkeley YMCA (76 pts.)
Long-Distance (3-mile) Championship (Grand Rapids, Mich., August 12)—*Individual:* Donna Graham, Indianapolis Riviera Club (1:15:47.5); *team:* Indianapolis Riviera Club (Donna Graham, Patsy Harrower, Nancy Galvich; 7 pts.)

Women's AAU Indoor Championships
(West Palm Beach, Fla., April 9–11)

100-Yard Freestyle—Shirley Stobs, Miami Shores (Fla.) C.C. (time, 0:57.7)
250-Yard Freestyle—Molly Botkin, Los Angeles A.C. (2:44.4)
500-Yard Freestyle—Sylvia Ruuska, Berkeley (Calif.) YMCA (5:46.6)
100-Yard Backstroke—Carin Cone, U. of Houston (1:04.3)
200-Yard Backstroke—Carin Cone (2:20.2)
100-Yard Butterfly—Nancy Ramey, Washington Athletic Club, Seattle (1:02.0)
200-Yard Butterfly—Becky Collins, Indianapolis Riviera Club (2:16.8)
100-Yard Breaststroke—Linda Clark, unatt., Los Angeles (1:13.6)
250-Yard Breaststroke—Susie Ordogh, Washington A.C. (3:24.3)
400-Yard Individual Medley—Sylvia Ruuska (4:58.2)
400-Yard Medley Relay—Berkeley YMCA (Ann Bancroft, Carolyn Schuler, Patricia and Sylvia Ruuska; 4:25.4)
400-Yard Freestyle Relay—Berkeley YMCA (Ann Bancroft, Carolyn Schuler, Patricia and Sylvia Ruuska; 3:59.5)
1-Meter Diving—Irene MacDonald, Los Angeles A.C. (414.15 pts.)
3-Meter Diving—Barbara Gilders, Detroit A.C. (461.50 pts.)
Individual High Point Scorer—Sylvia Ruuska (22 pts.)
Team—Berkeley YMCA (78 pts.)

National Collegiate AA Championships
(Ithaca, N.Y., March 26–28)

50-Yard Freestyle—Fred Westphal, Wisconsin (time, 0:22.3)
100-Yard Freestyle—Frank Legacki, Michigan (0:49.6)
220-Yard Freestyle—Dick Hanley, Michigan (2:04.3)
440-Yard Freestyle—Bill Steuart, Michigan State and South Africa (4:31.9)
1,500-Meter Freestyle—Bill Steuart (18:26.2)
400-Yard Freestyle Relay—Michigan (John McGuire, Carl Woolley, Dick Hanley, Frank Legacki; 3:21.6)
100-Yard Backstroke—Frank McKinney, Indiana (0:56.1)
200-Yard Backstroke—Frank McKinney (2:01.4)
100-Yard Butterfly—David Gillanders, Michigan (0:54.1)
200-Yard Butterfly—David Gillanders (2:02.5)
100-Yard Breaststroke—Gordon Collet, Oklahoma (1:03.2)
200-Yard Breaststroke—Bill Mulliken, Miami University, Ohio (2:21.3)
200-Yard Individual Medley—George Harrison, Stanford (2:06.7)
400-Yard Medley Relay—Michigan (John Smith, Ron Clark, David Gillanders, Dick Hanley; 3:46.1)
1-Meter Diving—Ron O'Brien, Ohio State (468.95 pts.)
3-Meter Diving—Sam Hall, Ohio State (465.1 pts.)
Team—Michigan (137½ pts.)

College Conferences

Eastern Intercollegiate—Yale
Eastern Collegiate—Pittsburgh
Mason-Dixon—American University

Table Tennis

U.S. Table Tennis Association Championships (Inglewood, Calif., March 13–15)—*Singles:* Bobby Gusikoff, New York; *women's singles:* Susie Hoshi, Los Angeles; *doubles:* Sol Schiff and Bobby Gusikoff, New York; *women's doubles:* Tiny Eller, Culver City, Calif., and Susie Hoshi; *mixed doubles:* Sol Schiff and Tiny Eller
World Table Tennis Championships (Dortmund, Germany, March 27–April 5)—*Team:* Japan; *women's team:* Japan; *singles:* Jung Kuo-Tuan, China; *women's singles:* Kimiyo Matsuzaki, Japan; *doubles:* Ichiro Ogimura and Teruo Murakami, Japan; *women's doubles:* Taeko Namba and Kazuko Yamaizumi, Japan; *mixed doubles:* Ichiro Ogimura and Fujie Eguchi, Japan

Tennis

The United States lost the Davis Cup to Australia nine months after it had won it; the chief American tennis hope, Alejandro (Alex) Olmedo of Peru, lost in the national singles two months after winning the Wimbledon final; and amateur tennis in the United States lost its top-ranked player when Olmedo turned professional and joined Jack Kramer's troupe on December 1. Thus, amateur tennis in the United States was in an unsettled condition at the year's end.

Olmedo, who won two singles and helped in the doubles as the United States beat Australia in the 1958 Davis Cup matches, was in good form during the Wimbledon tournament. He beat Rod Laver of Australia, 6–4, 6–3, 6–4, there on July 3 to win the All-England title, considered the top amateur tennis prize. But Olmedo subsequently was disqualified from the United States clay-court championships in Chicago on July 16 for listless play, after he lost to Abe Segal of South Africa, 6–2, 6–1, 6–0. Then, in the Davis Cup challenge round at Forest Hills, N.Y., Olmedo lost the opening match to Neale Fraser of Australia, 8–6, 6–8, 6–4, 8–6. Barry MacKay defeated Laver, 7–5, 6–4, 6–1, in the second match. Fraser then teamed up with Roy Emerson to check Olmedo and Earl Buchholz, 7–5, 7–5, 6–4, in doubles. Olmedo regained a little prestige and evened the series at 2-all by beating Laver, 9–7, 4–6, 10–8, 12–10, in the fourth match, which lasted 3 hours and 8 minutes—the longest 4-set match in challenge-round history. The Australians won the cup as Fraser beat MacKay, 8–6, 3–6, 6–2, 6–4, in the deciding match that was postponed after 2 sets because of darkness and completed the next day. Fraser then beat Olmedo in the national singles, 6–3, 5–7, 6–2, 6–4, at Forest Hills on September 13.

Olmedo's setbacks halted what had started as a runaway of amateur titles for South Americans. For while Olmedo was piling up honors, Maria Bueno of Brazil was sweeping the women's laurels. She took the final at Wimbledon by beating Darlene Hard of Montebello, Calif., 6–4, 6–3, and won the United States singles title by defeating Christine Truman of England, 6–1, 6–4.

Pancho Gonzales retained his world professional tennis title with a record of 47 victories and 15 losses on the professional tour, to Lew Hoad's 42–20 mark.

Major Amateur Tournaments

Davis Cup—Australia (defeated United States, 3–2, at Forest Hills, N.Y., Aug. 28–31)
Wightman Cup (Women)—United States (defeated Britain, 4–3, at Sewickley, Pa., in tourney ending Aug. 16)
U.S. Outdoor Doubles (Brookline, Mass.; finals, Aug. 23)—Neale Fraser and Roy Emerson, Australia; *women:* Jeanne Arth, St. Paul, and Darlene Hard, Montebello, Calif.
U.S. Outdoor Singles and Mixed Doubles (Forest Hills, N.Y.; finals, Sept. 13–14)—Neale Fraser; *women:* Maria Bueno, Brazil; *mixed doubles:* Mrs. Margaret du Pont, Wilmington, Del., and Neale Fraser
U.S. Clay Court (Chicago; finals, July 20)—Bernard Bartzen, Dallas; *doubles:* Bernard Bartzen and Grant Golden, Evanston, Ill.; *women's singles:* Sally Moore, Bakersfield, Calif.; *women's doubles:* Sandra Reynolds and Renee Schuurman, South Africa
U.S. Men's Indoor (New York; finals, Feb. 23)—Alejandro (Alex) Olmedo, Los Angeles and Peru; *doubles:* Alex Olmedo and Barry MacKay, Dayton, Ohio
U.S. Women's Indoor (Brookline, Mass.; finals, Feb. 27)—Lois Felix, Meriden, Conn.; *doubles:* Lois Felix and Kay Hubbell, Conway, N.H.; *mixed doubles:* Mrs. Mildred Johnson, Boston, and Dr. Donald Manchester, Auburndale, Mass.
Australian National (Adelaide; finals, Jan. 26)—Alex Olmedo; *doubles:* Rod Laver and Bob Mark, Australia; *women's singles:* Mrs. Mary Reitano, Australia; *women's doubles:* Renee Schuurman and Mrs. Mary Reitano; *mixed doubles:* Sandra Reynolds and Bob Mark
Wimbledon (England; finals, July 3–4)—Alex Olmedo; *men's doubles:* Roy Emerson and Neale Fraser; *women's singles:* Maria Bueno; *women's doubles:* Jeanne Arth and Darlene Hard; *mixed doubles:* Darlene Hard and Rod Laver
French International (Paris; finals, May 30–31)—Nicola Pietrangeli, Italy; *men's doubles:* Nicola Pietrangeli and Orlando Sirola, Italy; *women's singles:* Christine Truman, Britain; *women's doubles:* Sandra Reynolds and Renee Schuurman; *mixed doubles:* Yola Ramirez, Mexico, and Billy Knight, Britain

Major Collegiate Champions

NCAA—*Singles:* Whitney Reed, San Jose State; *doubles:* Ron Holmberg and Crawford Henry, Tulane
Eastern Tennis Association—Yale
Atlantic Coast—North Carolina
Southern—George Washington
Southeastern—Tulane
Southwest—Rice
Missouri Valley—Wichita
Western (Big Ten)—Michigan
Big Eight—Oklahoma State
Pacific Coast—U.C.L.A.

Track and Field

Even though 1959 was not an Olympic year, there was considerable international competition, with the United States serving as host. Domestic track and field activities featured an extraordinary sequence of world record-breaking performances, particularly in indoor meets.

The Soviet Union track and field squad made its first trip to the United States, and the results of the visit by the Americans to Moscow the previous year were repeated.

This time the United States increased its winning margin in the men's competition by 1 point, scoring 127 to 108 before a crowd of 54,380 at the July 18–19 meet in Franklin Field, Philadelphia. The American women again lost, by 67 to 40, getting 4 fewer points than in 1958.

In the Pan-American Games, held at Chicago August 27 to September 7, the United States team won 18 of the 22 gold medals in track, with Ray Norton and Lucinda Williams taking 3 apiece—2 each in sprints and 1 each on relay teams.

Earlier in the year, five world records were set on the same day in New York. The marks, made on February 21 at the Amateur Athletic Union's 71st national championships, were for the high jump, mile and three-mile runs, the shot-put, and the 35-pound weight throw. John Thomas of Boston University cleared 7 feet 1¼ inches at Madison Square Garden to become the first person to reach that height, indoors or out; Ron Delany of Villanova lowered his own world indoor mile mark to 4:02.5; Lt. Bill Dellinger of the Air Force set a three-mile record in 13:37; Parry O'Brien of the Southern California Striders surpassed his own shot-put mark with 62 feet 1¾ inches; and Bob Backus of the New York Athletic Club raised the 35-pound weight-throw standard to 66 feet 2¾ inches.

Delany subsequently lowered the mile mark to 4:01.4 while extending to 40 (including 34 one-mile runs) his string of indoor victories over a four-year span. Other indoor records were set by Don Bragg, who pole-vaulted to 15 feet 9½ inches, and by Al Lawrence, who sped two miles in 8:46.8.

O'Brien also surpassed his outdoor record in the shot-put with efforts of 63 feet 2½ inches and 63 feet 4 inches. Another record-breaker was Lt. Al Cantello of the Marines, who sent the javelin 282 feet 3½ inches.

Vasily Kuznetsov of the Soviet Union regained the decathlon record by scoring 8,357 points. Another Russian, Oleg Fedoseyev, bettered the hop, step, and jump mark with 54 feet 9½ inches.

Martin Lauer of Germany clipped the standard for the 110-meter hurdles with a 13.2-second clocking, but his method of starting placed the record under challenge. A Pole, Edmund Piatowski, improved the discus-throw record with a heave of 196 feet 6½ inches. Dan Waern of Sweden reduced his own 1,000-meter run record to 2:17.8.

(See also above, *Cross-Country.*)

USSR-U.S. Track and Field Meet
(Philadelphia, July 18–19)

Men

100 Meters—Ray Norton, U.S. (time, 0:10.3)
200 Meters—Ray Norton, U.S. (0:20.7)
400 Meters—Eddie Southern, U.S. (0:46.2)
800 Meters—Tom Murphy, U.S. (1:48.5)
1,500 Meters—Dyrol Burleson, U.S. (3:49.4)
5,000 Meters—Aleksandr Artynyuk, USSR (14:17.8)
10,000 Meters—Aleksei Desyatchikov, USSR (31:40.6)
3,000-Meter Steeplechase—Semyon Rzhishchin, USSR (8:51.6)
20-Kilometer Walk—Vladimir Golubnichy, USSR (1:38:-20.2)
110-Meter High Hurdles—Hayes Jones, U.S. (0:13.6)
400-Meter Hurdles—Josh Culbreath, U.S. (0:50.5)
400-Meter Relay—U.S. (Bob Poynter, Hayes Jones, Vance Robinson, Ray Norton; 0:39.8)
1,600-Meter Relay—U.S. (Dave Mills, Tom Murphy, Jack Yerman, Eddie Southern; 3:07.0)
High Jump—Robert Shavlakidze, USSR (6 ft. 9 in.)
Broad Jump—Gregory Bell, U.S. (26 ft. 7 in.)
Hop, Step and Jump—Konstantin Tsygankov, USSR (52 ft. 4 in.)
Pole Vault—Don Bragg, U.S. (15 ft. 2¾ in.)
Shot-Put—Parry O'Brien, U.S. (63 ft. 2½ in.; world record)
Discus—Al Oerter, U.S. (188 ft. 9 in.)
Javelin—Al Cantello, U.S. (262 ft. 5 in.)
Hammer Throw—Vasily Rudenkov, USSR (219 ft.)
Decathlon—Vasily Kuznetsov, USSR (8,350 pts.)
Team Scores—U.S., 127 pts.; USSR, 108 pts.

Women

100 Meters—Barbara Jones, U.S. (0:11.7)
200 Meters—Lucinda Williams, U.S. (0:23.4)
800 Meters—Lyudmila Lysenko-Shevtsova, USSR (2:11.3)
80-Meter Hurdles—Galina Bystrova, USSR (0:11.0)
400-Meter Relay—USSR (Vera Krepkina, Valentina Maslovskaya, Nonna Polyakova, Galina Popova; 0:44.8)
High Jump—Taisiya Chenchik, USSR (5 ft. 10 in.)
Broad Jump—Vera Krepkina, USSR (20 ft. 3 in.)
Shot-Put—Tamara Press, USSR (55 ft. 6¾ in.)
Discus—Mme. Nina Ponomareva, USSR (181 ft. 1½ in.)
Javelin—Mme. Birute Kaledene, USSR (181 ft. 8 in.)
Team Scores—USSR, 67 pts.; U.S., 40 pts.

Men's AAU Outdoor Championships
(Boulder, Colo., June 19–20)

100 Meters—Ray Norton, Santa Clara (Calif.) Youth Village (time, 0:10.5)
200 Meters—Ray Norton (0:20.8)
400 Meters—Eddie Southern, Texas (0:46.1)
800 Meters—Tom Murphy, New York A.C. (1:47.9)
1,500 Meters—Dyrol Burleson, Oregon (3:47.5)
5,000 Meters—Bill Dellinger, U.S. Air Force (14:47.6)
10,000 Meters—Max Truex, S. Calif. Striders (31:22.4)
110-Meter High Hurdles—Lee Calhoun, North Carolina College A.A. (0:14.0)
200-Meter Low Hurdles—Charles Tidwell, Kansas (0:22.6)
400-Meter Hurdles—Dick Howard, New Mexico (0:50.7)
3,000-Meter Steeplechase—Phil Coleman, U. of Chicago Track Club (9:19.3)
3,000-Meter Walk—Elliott Denman, New York Pioneer Club (13:52.2)
Pole Vault—Don Bragg, U.S. Army (15 ft. 3 in.)
Hammer Throw—Harold Connolly, S. Calif. Striders (216 ft. 10 in.)
Javelin Throw—Al Cantello, U.S. Marines (246 ft. 9 in.)
Discus Throw—Al Oerter, New York A.C. (186 ft. 5 in.)
High Jump—Charles Dumas, S. Calif. Striders (6 ft. 9 in.)
Shot-Put—Parry O'Brien, S. Calif. Striders (62 ft. 2¼ in.)
Hop, Step, and Jump—Ira Davis, Philadelphia Pioneer Club (50 ft. 6½ in.)
Broad Jump—Gregory Bell, Fort Wayne (Ind.) A.C. (26 ft. 1¼ in.)
56-Pound Weight Throw—Bob Backus, New York A.C. (44 ft. 3½ in.)
Team—Southern California Striders (144 pts.)

Senior Outdoor Relays
(Buffalo, N.Y., August 23)

440 Yards—U. of Chicago Track Club (Ed Houston, Frank Loomos, Willie May, Ward Miller, Jr.; 0:42.5)
Mile—New York Pioneer Club (Glenn Shane, James Phipps, James Grant, Harry Bright; 3:14.6)
2½-Mile Medley—New York A.C. (Thomas Murphy, Brian Condon, Peter Close, Edward Moran; 10:00.4)

Long-Distance Events

Marathon (Yonkers, N.Y., May 24)—John J. Kelley, Boston A.A. (2:21:54.4)
Hour Run (Costa Mesa, Calif., September 7)—Tom Ryan, Culver City (Calif.) A.C. (11 mi. 314 yds.)
15-Kilometer Run (Atlantic City, N.J., October 25)—Alex Breckenridge, U.S. Marines (45:12.0)
20-Kilometer Run (Needham, Mass., July 4)—John J. Kelley (1:04:08.6)
25-Kilometer Run (Schenectady, N.Y., September 20)—John J. Kelley (1:18:00.0)
10-Kilometer Walk (Staten Island, N.Y., May 3)—Bruce MacDonald, New York Pioneer Club (49:42.0)
20-Kilometer Walk (Baltimore, Md., June 14)—Rudolph J. Haluza, New York Pioneer Club (1:32:36.0)
25-Kilometer Walk (Chicago, August 30)—Rudolph J. Haluza (2:14:04.0)
30-Kilometer Walk (Los Angeles, May 17)—Ferenc Sipos, Vancouver Olympic Club (2:46:20.0)
35-Kilometer Walk (West Seattle, July 25)—Ferenc Sipos (3:12:44.4)
40-Kilometer Walk (Asbury Park, N.J., October 18)—Ronald Laird, N.Y. Pioneer Club (3:53:22.5)
50-Kilometer Walk (Pittsburgh, Pa., July 5)—Elliott Denman, N.Y. Pioneer Club (5:07:47.0)

Other Events

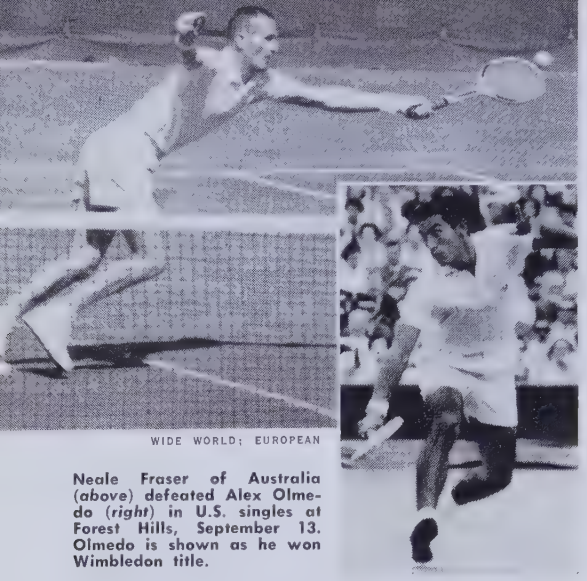
AAU All-Around (College Park, Md., August 9)—Tom Pagani, New York A.C. (7,874 pts.)
AAU Decathlon (Kingsburg, Calif., June 25–26)—Chuan-Kwang Yang, Taiwan (7,549 pts.)
AAU Pentathlon (El Monte, Calif., July 10)—Dixon J. Farmer, Orinda, Calif. (3,196 pts.)
Boston Marathon (Boston, Mass., April 19, 26 mi. 385 yds.)—Eino Oksanen, Finland (2:22:42.0)

Men's AAU Indoor Championships
(Madison Square Garden, New York, N.Y., February 21)

60 Yards—Paul Winder, Morgan State (time, 0:06.1)
60-Yard High Hurdles—Elias Gilbert, Winston-Salem Teachers College (0:07.3)
600 Yards—Josh Culbreath, Philadelphia Pioneer Club (1:11.1)
1,000 Yards—Zbigniew Orywal, Poland (2:12.6)
Mile—Ronald Delany, Villanova (4:02.5; world record)
3 Miles—Bill Dellinger, U.S. Air Force (13:37.0; world record)
Mile Walk—John Humcke, New York A.C. (6:42.2)
1,060-Yard Sprint Medley Relay (440–100–220–300)—Villanova (Ed Collymore, Joe Mannion, James Blackburn, Charles Stead; 1:53.2)
Mile Relay—Morgan State College (Louis Smith, Thomas Anderson, Hosea Smith, Nicholson Ellis; 3:16.6)
2-Mile Relay—Yale (James Stack, Ned Roache, Ed Slowik, Tom Carroll; 7:39.8)
Broad Jump—Mike Herman, New York University (tied at 25 ft. ¾ in. with John Douglas, Bates College; declared winner on basis of next-best jump)
High Jump—John Thomas, Boston University (7 ft. 1¼ in.; world record)
Pole Vault—Don Bragg, Shanahan Catholic Club, Philadelphia (15 ft. 1 in.)
16-Pound Shot-Put—Parry O'Brien, Southern California Striders (62 ft. 1¾ in.; world record)
35-Pound Weight Throw—Bob Backus, New York A.C. (66 ft. 2¾ in.; world record)
Team—New York Athletic Club (21½ pts.)

Women's AAU Outdoor Championships
(Cleveland, Ohio, June 28)

60 Meters—Isabelle Daniels, Tennessee State (time, 0:07.6)



WIDE WORLD; EUROPEAN

Neale Fraser of Australia (*above*) defeated Alex Olmedo (*right*) in U.S. singles at Forest Hills, September 13. Olmedo is shown as he won Wimbledon title.

100 Meters—Wilma Rudolph, Tennessee State (0:12.1)
200 Meters—Isabelle Daniels (0:24.1)
400 Meters—Kimberly Polson, Spartan (Los Angeles) A.C. (0:59.0)
800 Meters—Grace Butcher, Cleveland Magyar A.C. (2:21.2)
80-Meter Hurdles—Shirley Crowder, Tennessee State (0:11.7)
400-Meter Relay—Tennessee State Team "A" (Martha Hudson, Isabelle Daniels, Wilma Rudolph, Lucinda Williams; 0:47.5)
4-Kilogram Shot-Put—Earlene Brown, Spartan A.C. (46 ft. 4¾ in.)
Discus Throw—Earlene Brown (153 ft. 8 in.)
Javelin Throw—Marjorie Larney, Queens (N.Y.) Mercurettes (152 ft. 9½ in.)
Broad Jump—Margaret Matthews, Tennessee State (19 ft. 4½ in.)
High Jump—Lis Josefson, Spartan A.C. (5 ft. 4 in.)
Team—Tennessee State (132 pts.)
Pentathlon (Emporia, Kans., September 26)—Ann Roniger, unatt. (4,075 pts.)

Women's AAU Indoor Championships
(Washington, D.C., January 24)

50 Yards—Wilma Rudolph, Tennessee State (time, 0:06.2)
100 Yards—Martha Hudson, Tennessee State (0:11.4)
220 Yards—Lucinda Williams, Tennessee State (0:26.6)
440 Yards—Lillian Green, New York Police Athletic League (1:03.4)
880 Yards—Harriett Douthitt, Cleveland Recreation Department (2:36.3)
70-Yard Hurdles—Joan Terry, Tennessee State (0:09.7)
440-Yard Relay—New York P.A.L. (Barbara Brown, Linda Wood, Lillian Green, Louise Mead; 0:52.4)
440-Yard Medley Relay—Tennessee State (Wilma Rudolph, Shirley Crowder, Martha Hudson, Lucinda Williams; 0:52.3)
Standing Broad Jump—Joan Terry (8 ft. 11 in.)
Running High Jump—Ann Flynn, German-American A.C. (5 ft. ½ in.)
4-Kilogram Shot-Put—Marjorie Larney, Queens (N.Y.) Mercurettes (39 ft. 7¼ in.)
Basketball Throw—Amelia Wood, Queens (N.Y.) Mercurettes (101 ft. 8½ in.)
Team—Tennessee State University (61½ pts.)

National Collegiate AA Championships
(Lincoln, Nebr., June 12–13)

100 Yards—Charles Tidwell, Kansas (time, 0:09.3)
220 Yards—Ray Norton, San Jose State (0:20.9)
440 Yards—Eddie Southern, Texas (0:46.4)
880 Yards—George Kerr, Illinois (1:47.8)
Mile—Jim Grelle, Oregon (4:03.9)
3 Miles—Paul Whiteley, Emporia State (13:59.1)
3,000-Meter Steeplechase—John Macy, Houston U. (9:19.1)
120-Yard High Hurdles—Hayes Jones, Eastern Michigan (0:13.6)
220-Yard Low Hurdles—Hayes Jones (0:22.5)
400-Meter Hurdles—Dick Howard, New Mexico (0:50.6)
High Jump—Wayne Moss, Oregon State, and Errol Williams, San Jose State (tied at 6 ft. 9¾ in.)
Broad Jump—Ernie Shelby, Kansas (25 ft. 5 in.)
Hop, Step, and Jump—Jack Smyth, Houston U. (49 ft. 7¼ in.)
Pole Vault—Jim Graham, Oklahoma State (15 ft. 2 in.)
Shot-Put—Carl Shine, Pennsylvania (57 ft. 11¾ in.)
Discus Throw—Dick Cochran, Missouri (178 ft.)
Javelin Throw—Bill Alley, Kansas (240 ft. 5½ in.)
Hammer Throw—John Lawlor, Boston U. (207 ft. 5 in.)
Team—Kansas (73 pts.)

Other College Team Champions

Heptagonal Games—*Indoor and outdoor:* Yale
ICAAAA—*Indoor and outdoor:* Penn State
NAIA—Winston-Salem
Middle Atlantic Conference—St. Joseph's and West Chester College (tied)
Atlantic Coast—*Indoor and outdoor:* Maryland
Southern—*Indoor:* V.M.I.; *outdoor:* The Citadel
Southeastern—Louisiana State
Southwest—Texas
Central Collegiate—*Indoor:* Western Michigan; *outdoor:* Kansas
Western (Big Ten)—*Indoor:* Michigan; *outdoor:* Illinois
Big Eight—*Indoor and outdoor:* Kansas
Missouri Valley—Houston
Pacific Coast—Southern California

Volleyball

U.S. Volleyball Association Championships (Des Moines, Iowa, May 6–9)—*Open:* Hollywood (Calif.) Stars; *masters:* Hollywood (Calif.) Comets; *intercollegiate:* George Williams College; *women:* Santa Monica (Calif.) Mariners; *armed forces:* Los Alamitos (Calif.) Naval Air Station

Water Polo

AAU—*Indoor:* Illinois Athletic Club (defeated New York A.C. in final, 11–7); *outdoor:* San Francisco Olympic Club (defeated New York A.C. in final, 8–7)

Water Skiing

World Championships
(Milan, Italy, September 3–7)

Jumping—Buster McCalla, Cypress Gardens, Fla.
Slalom—Charles Stearns, South Bellflower, Calif.
Combined—Charles Stearns
Figure—Philippe Logut, France

Women

Jumping—Nancie Rideout, Cypress Gardens, Fla.
Slalom—Vicki Van Hook, Long Beach, Calif.
Combined—Vicki Van Hook
Figure—Piera Castelvetri, Italy

United States Championships
(Laconia, N.H., August 21–23)

Men's Slalom—Joe Cash, Sarasota, Fla.
Men's Jump—Buster McCalla and Mike Osborn, Cypress Gardens, Fla. (tied)
Men's Tricks—Charles Stearns, South Bellflower, Calif.
Men's Overall—Mike Osborn
Women's Slalom—Nancie Rideout, Cypress Gardens, Fla.
Women's Jump—Nancie Rideout
Women's Tricks—Vickie Vance, North Sacramento, Calif.
Women's Overall—Nancie Rideout

Weightlifting

World Championships
(Warsaw, Poland, September 29–October 4)

Bantamweight—Vladimir Stogov, USSR
Featherweight—Marian Zielinski, Poland
Lightweight—Victor Boushouyev, USSR
Middleweight—Tommy Kono, United States
Light Heavyweight—Rudolf Plukfelder, USSR
Middle Heavyweight—Lewis Martin, Britain
Heavyweight—Jurij Vlasov, USSR
Team—USSR

National AAU Championships
(York, Pa., July 31–August 1)

123-Pound Class—Charles Vinci, Jr., York (Pa.) Barbell Club (700 lbs.)
132-Pound Class—Isaac Berger, York B.C. (740)
148-Pound Class—Paul Goldberg, York B.C. (780)
165-Pound Class—Tommy Kono, York B.C. (905)
181-Pound Class—James George, American College Modern, Akron, Ohio (900)
198-Pound Class—Clyde Emrich, York B.C. (945)
Heavyweight Class—Dave Ashman, York B.C. (1,040)
"Mr. America" Contest—Harry Johnson

Wrestling

National AAU Championships
(Stillwater, Okla., April 15–18)

Freestyle

114½ Pounds—Dick Wilson, Toledo
125½ Pounds—Terrance McCann, Tulsa YMCA
136½ Pounds—Yoshitaka Nishiwaki, Japan
147½ Pounds—Newton Copple, Lincoln, Nebr.
160½ Pounds—Fritz Fivian, Oregon State
174 Pounds—Jim Ferguson, Lansing (Mich.) Recreation Club
191 Pounds—Frank Rosenmayr, San Francisco Olympic Club
Heavyweight—Bill Kerslake, Cleveland
Outstanding Wrestler—Terrance McCann
Team—Cowboy Athletic Club, Oklahoma (31 pts.)

Greco-Roman

114½ Pounds—Dick Wilson, Toledo
125½ Pounds—Masaaki Hatta, Cowboy A.C.
136½ Pounds—Eisuke Kitamara, Kansai University, Japan

147½ Pounds—Ben Northrup, San Francisco Olympic Club
160½ Pounds—Fred Boger, Irving Park, Chicago
174 Pounds—Julius Beno, San Francisco Olympic Club
191 Pounds—Adnan Kaisy, Cowboy A.C.
Heavyweight—Bill Kerslake, Cleveland
Team—Cowboy Athletic Club, Oklahoma (21 pts.)

NATIONAL COLLEGIATE AA CHAMPIONSHIPS
(Iowa City, Iowa, March 27–28)

115 Pounds—Andy Fitch, Yale
123 Pounds—Dave Auble, Cornell
130 Pounds—Stan Abel, Oklahoma
137 Pounds—Larry Hayes, Iowa State
147 Pounds—Ron Gray, Iowa State
157 Pounds—Dick Beattie, Oklahoma State
167 Pounds—Ed Hamer, Lehigh University
177 Pounds—Bill Wright, Minnesota
191 Pounds—Gordon Trapp, Iowa
Heavyweight—Ted Ellis, Oklahoma State
Team—Oklahoma State

YACHTING

NORTH AMERICAN CHAMPIONS

Men's (Mallory Cup)—Harry C. Melges, Jr., Lake Geneva, Wis.
Women's (Adams Trophy)—Mrs. James Mertz, Rye, N.Y.
Junior (Sears Cup)—John Welch, Hudson, Quebec

ONE-DESIGN CLASSES

Star World—Lowell North, San Diego
Star North American—Gary Comer, Chicago
Snipe World—Paul Elvstrom, Denmark
Snipe National—Dick Tillman, Atlanta, Ga.
Lightning International—Herman Nickels, Fenton, Mich.
Comet International—John M. MacCausland, Drexel Hill, Pa.
110 World—Al Frost, Jr., San Diego
Raven National—Al Bartolotti, Detroit
Highlander International—Mark Bratton, Corpus Christi, Texas
International One-Design World—Herman Whiton, Oyster Bay, N.Y.
Thistle National—Jerry Jenkins, Grosse Pointe, Mich.
Flying Dutchman World—Mario Capio, Italy
6-Meter North American—James C. Crang, Toronto
5.5-Meter National—Sewickley Syndicate, Pittsburgh
Luders 16 International—Cyril Cooper, Bermuda
Flying Dutchman North American—Pat and Jack Duane, Delray Beach, Fla.
Atlantic National—Hoyt O. Perry, Jr., Southport, Conn.
Finn Monotype National—Jack Knights, Annapolis, Md.
5–0–5 National—Walter Bowden, San Antonio
210 National—Edwin A. Hills, Hingham, Mass.

INTERNATIONAL

Scandinavian Gold Cup (5.5-meter)—Lasse Thoern, Sweden
King Olav Cup (6-meter)—Magnus Konow, Oyster Bay, N.Y.
International Challenge Cup (canoe)—William Kempner and Alan Emus, England

DISTANCE EVENTS

Annapolis to Newport—H. Irving Pratt's sloop *Caper*, Oyster Bay, N.Y.
Los Angeles to Honolulu—Peter Grant's sloop *Nalu II*, Newport Beach, Calif.
Chicago to Mackinac—W. J. Peacock's yawl *Feather II*, Evanston, Ill.
Port Huron to Mackinac—Wilfred Gmeiner's sloop *Apache*, Grosse Pointe, Mich.
Southern Ocean Racing Conference—Jack Marvin Brown's yawl *Callooh*, New York
Storm Trysail Block Island—Robert N. Bavier, Jr.'s sloop *Memory*, Noroton, Conn.
Fastnet Cup—Sven Hansen's yawl *Anitra*, Sweden
Buenos Aires to Rio de Janeiro—Raul G. Decker's *Tango*, Argentina

INTERCOLLEGIATE

National Dinghy (Morss Trophy)—Harvard (Hanson Robbins and W. G. Saltonstall)
Atlantic Coast Invitation (McMillan Cup)—Princeton (Ross E. Sherbrooke, James Sinclair, William Cox, Jr., George Gardner)

STANDARDS OF LIVING (LEVELS OF LIVING). **United States.**—Consumers' purchasing power and real consumption rose strongly to set new per capita records in the first half of 1959, as employment and incomes reached new highs while average prices held steady. The totals changed only slightly in the second half of the year, despite the prolonged steel strike.

Expenditures.—Consumers' real takings of durable goods in the first three quarters of 1959 were 14% higher than the relatively low levels of a year earlier. Consumers' real consumption of nondurables and services, which had moved upward in 1958 despite the recession, rose another 4%. Total real purchases of goods and services in mid-1959 were 5.5% above the prerecession high in the third quarter of 1957. Since population grew about 3% over this period, real per capita consumption advanced some 2.5%.

Consumer outlays in 1959 generally continued to follow in the broad patterns of recent years, with durable goods showing the largest fluctuation, nondurable goods taking a fairly steady share, and services rising in relative importance. (See also RETAIL STORE SALES.) Of every dollar of consumer income in 1958, 40 cents were spent for nondurable and 10 cents on durable goods, and 32 cents on services; 12 cents went to personal taxes, and 6 cents to savings.

Consumer demand for major household goods in 1959 reflected rising incomes, a pick-up in homebuilding, and some of the buying postponed from the recession of 1957–58. Items which were being produced at record rates in mid-1959 included laundry and refrigeration appliances, furniture and floor coverings, water heaters, dishwashers, and food waste disposals. Output also rose for radio and television sets, but remained well under previous peaks. In May 1959, 89% of urban homes, 73% of farm homes, and 86% of rural nonfarm homes had television sets.

Automobile sales increased to 6 million, the highest total since the record of 7.5 million in 1955. The number of privately owned passenger cars rose 1.5 million to exceed 58 million, or one car for every 3 persons. About 70% of all spending units owned one or more cars in early 1959; the proportion of multicar owners rose to 12% from 5% in 1953. (See also AUTOMOBILES.)

John Thomas, 17-year-old Boston University freshman, who cleared the bar at 7 feet 1¼ inches (marker shows nearest inch) in world record leap at Madison Square Garden, Feb. 21, 1959. At the Garden on Feb. 20, 1960, he raised the height to new world record of 7 feet 2 inches.

UPI

The energy value of the per capita food supply in 1959 continued at about 3,200 calories daily, as compared with the estimated requirement of 2,640 calories. Per capita consumption of meat was about 158.5 pounds, some 4% more than in 1958 and 25% above the 1935–39 average; consumption of poultry products also rose strongly over the year. Butter use fell to the lowest annual rate on record, although total use of food fats and oils continued at 46 pounds (fat content) per person.

The U.S. Department of Agriculture estimated that in July 1959, under a low-cost budget meeting recommended nutritional needs, one week's food for a couple with two school children would cost $24.

The rising outlays for services, in real terms, reflected a variety of built-in increases in levels of living. Electricity used per residential consumer averaged 3,366 kilowatt-hours in 1958, more than double the 1948 figure of 1,563, as a result of the greater use of appliances. Expenditures for health and medical care in the fiscal year 1958 totaled $23 billion, of which $17 billion were private outlays; the total in 1958 exceeded 5% of the gross national product, compared with 3.6% in 1928–29.

Changing patterns of leisure activity are shown in the expenditures for participation-type recreation, which have more than doubled since 1947, while admissions to spectator sports have risen only slightly. Fishermen and hunters spent nearly $3 billion, including trip expenses in 1955, according to the U.S. Fish and Wildlife Service. Boating, swimming, and bowling are other expanding mass-participant sports. Some 22 million people visited the national parks in 1959, 5% more than the previous year's record.

Homebuilding activity was at a near-record pace in early 1959 but tapered off after the spring, as the supply of mortgage funds tightened. Some 1,380,000 units were started—slightly under the all-time high of 1950. About 60% of all white and 40% of all nonwhite nonfarm families were homeowners in early 1959, as compared with 53% and 31%, respectively, in 1949; 44% of the owner-occupied homes had no mortgage debt. The median price of the new and existing houses purchased in 1958 was $12,300, and the median debt incurred was $9,300. (See also HOUSING.)

Income.—Personal income rose sharply in 1959 to a record annual rate of $387 billion, 9% above the prerecession peak. The record figure reflected a new employment record—half a million above the earlier high in 1957—increased wage rates, and longer hours. Per capita disposable income averaged $1,891 in 1959, a rise in real terms of about 2.2% from the previous high in 1957. Personal incomes in 1958 were highest on a per capita basis in Connecticut and Delaware, averaging more than double the rates in the lowest-ranking states —Arkansas, South Carolina, and Mississippi.

The average (mean) family personal income, including nonmoney income, of the 55.3 million consumer units in 1959 reached a new record high of $6,470. Their purchasing power, after allowing for federal individual income tax liabilities of about $640 and state and local income taxes of about $40, was some 1½% above the previous peak in 1957. The annual rise in real purchasing power per family has averaged 1¾% since 1947 and 1¼% in the three decades since 1929. The proportion with incomes under $4,000 (in 1958 dollars) was 36% in 1958, as against about 47% in 1947. The families with the lowest incomes were on the average an older group, with larger proportions of nonwhite and female heads, than the low-income families of a decade earlier. (See also INCOME.)

Debt and Savings.—Consumer debt, which moves with demand for durable goods and with the rise in personal incomes, rose sharply throughout 1959. The total outstanding in October 1959 was $6.2 billion, or 14%, higher than a year earlier. Extensions of new instalment debt during October were at a seasonally adjusted rate of $4.2 billion a month, while repayments totaled $3.7 billion—in both cases a record. Repayments constituted about 13% of income after taxes—about the same as in the three previous years, but well above the earlier postwar years. (See also CONSUMER CREDIT.)

Savings, nevertheless, continued high, averaging about 7% of disposable incomes in 1959, as compared with rates of 7.4% to 7.9% in the three previous years and 6.4% in 1955. About 60% of all spending units held liquid assets of less than $500 in early 1959, and about 10% held $5,000 or more—about the same ratios as in earlier postwar years. (See also SAVINGS.)

The net equity of individuals (financial assets less liabilities, excluding corporate securities) rose $16 billion in 1958 to $363 billion. The increase was $2 billion less than the postwar record set in 1957, but well above other postwar years. In addition, individuals owned corporate stocks and bonds with a market value of $377 billion, representing a large increase over the year of $110 billion. Highlights of the 1958 savings picture were a substantial liquidation of United States government issues, a postwar record growth in individuals' savings accounts in banks and savings and loan associations, and record purchases of investment company shares. Mortgage debt rose more than in the year earlier, but other consumer debt did not change.

The Department of Labor in 1959 issued an illustrated book, *How American Buying Habits Change,* which gave a comprehensive description of changes since 1888 in the levels of living of American city workers. Subjects covered included the broadened base of consumption, the increasing emphasis on leisure-time activities and education, the changes in the housewife's job, and the improvements in clothing, diet, and housing.

World Food Production.—World food output rose about 4% in 1958–59, after two years of no increase, exceeding by a fourth the average for the years 1948–49 to 1952–53. In the less-developed regions as a whole, growth in food production has exceeded population growth by about 1% in recent years, but per capita food supplies are only somewhat higher than before World War II. In many of the rice-producing countries of Asia and in parts of Latin America and Africa, production is falling behind or barely keeping up with population growth. Retail food prices rose in 1958 in 70 of the 89 countries for which data exist. (See also AGRICULTURE.)

Canada.—Consumer expenditures rose 5% in 1958 to a new high, but about half of the increase was due to higher prices, particularly for food. The rise in real personal consumption expenditures was exceeded by the growth in population, however, so that real per capita consumption fell slightly for the second successive year. Personal savings, on the other hand, rose to 9% of disposable income, one of the highest peacetime ratios on record.

Disposable personal income rose 7% in 1958, despite employment declines in mining, manufacturing, and forestry. Higher unemployment insurance payments, increased pensions and family allowances, a gain of 3.7% in average weekly wages and salaries, and expanded employment in the service industries were major factors. In the first half of 1959, earnings of factory workers rose

about 2%, while retail prices held steady. Some 163,000 homes were started in 1958, 25,000 more than the previous high in 1955.

Latin America.—Real gross output in Latin America increased some 3% in 1958, about the same as the population rise. Since there was a change in the balance of trade toward increased imports, however, average consumption levels rose about 1%; the increase in 1957 was about 4%. Real per capita income held stationary, for a total rise in the last three years of 2%.

Earlier inflationary pressures, due to monetary policies as well as to rising demand, accelerated in 1958 and early 1959 in Argentina, Brazil, and Chile. Reported changes were not very marked during this period, however, in Mexico, Venezeula, Colombia, Ecuador, and the Central American countries. Wages also rose in many countries, notably Argentina, Chile, Brazil, and Uruguay.

Rapid increases in slum districts, because of an influx of poverty-stricken peasants, and declines in prices of raw materials, have added to the region's social problems. (See also INTER-AMERICAN AFFAIRS.)

Western Europe.—Personal consumption and the construction of dwellings were major supports in the western European economy, which expanded in 1958 at a slower rate than in the two earlier years. Real private consumption rose some 3% in most countries, but dropped in Finland and Norway, and was unchanged in France. Expenditures continued to shift away from textiles and clothing and toward household durable goods; sales of automobiles rose rapidly in most countries.

Prices were stable in 1958 and early 1959, except in Spain and France, where a sharp rise in 1958 was followed by stability throughout the first half of 1959. Wages also held relatively steady in most countries, except France and West Germany, where they rose moderately.

Data on consumer expenditures in 1956 showed that in the less industrialized countries, food, clothing, and shelter, plus beverages and tobacco, took 80% to 90% of total outlays, compared with 75% or less in the others, and 60% in the United States. Supplies of consumers' durable goods were rising rapidly in a number of countries, but were still low relative to the United States. Between 6% and 17% of households with electricity in most industrial countries had refrigerators in 1956 (with the exception of 42% in Sweden), as against 95% in the United States; wide differences also existed for washing machines, radios, and television receivers.

Eastern Europe and USSR.—Per capita real incomes in 1958 were increased only slightly in Hungary, Poland, and Czechoslovakia, after strong advances in the two earlier years. The rates of increase were slowed down markedly in most other countries, apparently to keep a better balance between demand and available supplies than occurred in 1956 and 1957, when consumers' purchasing power rose faster than supplies. Exceptions were Albania, where the average rose faster than in 1957, and Eastern Germany, where wages and social security benefits were increased to offset de-rationing of food and the resultant price increases. In the Soviet Union, real personal income apparently rose about 5%. Since 1952, real wages had gone up some 30% and peasants' real income, 60%.

Per capita demand for foods, especially of higher quality, was still expanding everywhere; price reductions, credit, and other means were used by most countries to divert a larger share of consumers' purchasing to manufactured goods. Food, beverages, and tobacco absorbed half or more of net family expenditure in eastern Europe.

In early 1959, price, wage, and social security changes were introduced in most countries, indicating that a significant increase in personal consumption was planned for 1959, after the 1958 slowdown.

The rate of homebuilding in virtually every country in 1958 was enough for population growth and replacement needs, but there was much deterioration in existing housing in towns. Supplies of consumers' durable goods, except for such items as bicycles and radios, were still very small.

The number of doctors per 10,000 inhabitants, in 1956 and 1957, ranged from 8 in Poland and 12 in Rumania and Bulgaria to 15 in Czechoslovakia and 17 in the Soviet Union. Hospital beds per 10,000 inhabitants were between 40 and 50 in Poland and Rumania, about 70 in Bulgaria, Czechoslovakia, Hungary and the Soviet Union, and 117 in Eastern Germany.

Middle East.—The agrarian reform project in Egypt, which was started in 1952, was almost completed in 1958, affecting 9% of the country's total cultivated area. About 200,000 farming families were estimated to have benefited from the distribution of land. Programs along similar lines were started in Syria and Iraq late in 1958, and distribution of government and crown lands continued in Turkey and Iran.

Per capita consumption in 1958 was barely maintained in Turkey, due to the government's austerity program, and in Syria, as cereal crops were reduced. Consumption was reduced in the Sudan because of the effects of a sharp drop in cotton output. Increases in Israel were in excess of the high rate of population growth.

Cost of living indexes rose considerably in early 1959 in Turkey and Iran, but were holding steady in most other countries in the region.

Asia and the Far East.—Average consumption levels fell in 1958 in the region as a whole, but an improvement was apparently under way in early 1959. Declines were sharpest in India, Indonesia, and Pakistan, and also occurred in Burma and Thailand. Consumption probably rose in Ceylon, Taiwan, the Federation of Malaya, Singapore, Japan, southern Korea, and the Philippines. Reports of extremely large gains for 1958 came from Communist China, but United Nations analysts had not been able to appraise them.

Apparent per capita consumption of cotton cloth—the most important clothing material in Asian countries—rose from 5 meters in 1950 to more than 9 meters in 1956. In 1956 the highest averages were 22 meters in Japan and 13 in the Federation of Malaya; the lowest, 6 meters or less, were reported in Pakistan, the Philippines, South Vietnam and Burma.

Serious social problems in most cities in the region have been aggravated by heavy migration resulting from industrialization, rural population pressures, and social unrest and insecurity. There has been a general lowering of standards and reduction of facilities per capita for the city population, although expansions of planning and social service programs have helped somewhat to ameliorate conditions.

Oceania.—Real domestic consumption expanded in the fiscal year 1957–58 in both Australia and New Zealand, with the gains in Australia exceeding the high rate of population growth. Tax increases in New Zealand reduced the growth trend during late 1958.

Prices in Australia rose 18% between 1953 and mid-1959, while weekly factory earnings for men went up 30%. In New Zealand, prices were up 22% over the same period and men's wages rose 20%.

STEVENSON, Adlai Ewing, American political leader: b. Los Angeles, Calif., Feb. 5, 1900. Despite his repeated disavowals of interest in a third presidential candidacy, speculation grew in late 1959 over Stevenson's role in the complex Democratic nomination picture and the possibility that the 1960 national convention would turn to him again, especially in the event of a stalemate. These considerations arose not only from his high ranking among Democratic aspirants in public opinion surveys, but also from the conviction that he might not be disinclined to accept a draft. There were also signs that the ardor which Stevenson had aroused among rank-and-file voters of his party in previous campaigns had not diminished appreciably.

Educated at Princeton University (B.A., 1922), Harvard University Law School, and Northwestern University, Stevenson was admitted to the Illinois bar in 1926 and subsequently served as counsel to various federal agencies and as special assistant to the secretary of the Navy. Named assistant to the secretary of state in 1945, he became in turn senior adviser and alternate delegate of the United States delegation to the U.N. General Assembly in 1946–47.

In his first candidacy for public office, he was elected Democratic governor of Illinois for the 1949–53 term, but before it expired he was chosen as the Democratic candidate in the 1952 presidential elections, despite his reluctance. Although decisively defeated by President Eisenhower in that year's election, he eagerly sought and obtained the Democratic presidential nomination in 1956. Overwhelmingly defeated a second time by President Eisenhower, he announced afterward that he would not again be a candidate for the presidency, and resumed private law practice.

In the years following, Stevenson continued to speak

out on major foreign and domestic issues. In the summer of 1958 he visited several countries of Europe, Asia, and Africa, meeting with a number of world leaders including Soviet Premier Khrushchev. Later in the year, at the administration's request, he spent two weeks helping Secretary of State Dulles and other State Department officials draft a program for the meeting of NATO heads of government in Paris, December 16–18. He declined an invitation to attend the Paris conference, contending that it would place him in a position "without authority and necessarily identified with decisions I might not always agree with and could not publicly oppose."

Rumblings of informal efforts to draft Stevenson for the Democratic presidential nomination began to be heard in the autumn of 1959, but the first widely publicized action came in Wisconsin on November 14. At the state Democratic convention there, the mention of his name touched off an ovation, and a few hours later a Wisconsin for Stevenson Committee was organized. But by February 1960 the rosy hopes of his supporters began to fade, and many party strategists were discounting his chances as a contender. Just before Stevenson embarked on a two-month tour of Latin America, plans for a nationwide draft movement were suddenly abandoned.

Stevenson's position throughout all this maneuvering was to state emphatically his refusal to permit the entry of his name in any presidential primary, and to reiterate his opposition to any draft movement, although he avoided making a positive statement that he would turn down such a draft if it were forthcoming.

The former Illinois governor, in speeches and articles, criticized the administration on a number of foreign and domestic issues in 1959, although he applauded (March 5) the president's firm stand on preserving Allied rights in Berlin. In a speech at McGill University, Montreal, on May 29, Stevenson asserted that the disparity in living standards between Western nations and the underdeveloped regions constituted "the most important and fateful fact in the world today." He warned that this problem would not be solved by individual national efforts, but required rather a concerted international "program of education and basic development which will give the world's masses the opportunity to help themselves. . . ."

On the domestic front, Stevenson proposed on December 8 that new labor legislation be enacted to afford greater recognition of the public welfare in periods of prolonged strikes. He also suggested that the president be given much wider authority than exists under the Taft-Hartley Act to maintain production during negotiations.

Stevenson met in private conversation with Soviet Premier Khrushchev on September 23, during the Soviet leader's visit to a farm in Coon Rapids, Iowa. He reported afterward that the premier's position on East-West issues seemed more flexible than when he had visited him in Moscow the previous summer.

STOCKS AND BONDS. After having scored a 39% rise in 1958, the stock market slowed its tempo in 1959. The advance in average prices from the beginning of the year to the August peak was less than 11%, and the extreme range for the year amounted to less than 15%. After its moderate advance in the first seven months, the market followed an uneven course, ending the year closer to its high, for a net gain of only 8.5%.

For the most part, stocks paralleled the business and profits curve. Industrial activity rose sharply until the steel strike started in July; the Federal Reserve Board's production index, which stood at 143 in January, reached a record of 155 in June. Closing of most steel mills from mid-July until early November had a cumulative ill effect on total production and profits, and likewise weighed on stock prices.

It is a moot question, however, whether the market would have done much better if the strike had been avoided, for prices at their summer peak were high by any yardstick. Industrial issues, for example, were selling at an average of 18.5 times earnings for the preceding 12 months and provided an average yield of only 2.94%. As recently as January 1958 the average price-earnings ratio was 12 to 1 and the yield was more than 4.5%.

Market trends for 1959, as reflected in Standard & Poor's comprehensive index of 500 common stocks (1941–43 = 10), were as follows:

	Date[1]	Industrials	Rails	Utilities	500 stocks
Opening	Jan. 2	59.21	34.74	43.38	55.44
Low	Feb. 9	56.75	31.63	41.65	53.32
High	Aug. 3	65.81	38.32	45.74	61.15
Close	Dec. 31	64.50	33.82	44.74	59.89

[1] Dates are for industrials. Rail and utility highs and lows in some instances occurred on other dates.

While the market generally held within relatively narrow confines during the year, many individual stocks and groups of stocks gave spectacular performances. Among them were electronics shares, reflecting speculative interest in space-age developments; automobile parts, whose greatly increased earnings attracted attention; automobile shares, helped by enthusiasm for the new compact cars; and meatpacking, on a sharp earnings rebound.

Oil shares, on the other hand, continued under persistent pressure as their prospects were dimmed by the world flood of petroleum. Supermarket chains lost considerable ground as it became apparent that their profit margins were shrinking. Sugars reflected adverse developments in Cuba. Sulfur stocks were weighed down by price weakness in the commodity. Small loan shares were squeezed by rising interest rates.

Investor activity was at a high level throughout 1959. The volume of transactions on the New York Stock Exchange totaled 820 million shares, compared with 747 million in 1958. More shares changed hands than in any previous year since 1929, when turnover reached 1,125 million shares.

New stock offerings, while not abnormally large, were considerably greater than in 1958. The total for the first nine months was $1.8 billion, compared with $1.3 billion a year earlier. In addition, secondary distributions, such as sale of Ford stock by the Ford Foundation, came to $575 million, as against $120 million in the first nine months of 1958.

Corporate bond and note offerings, on the other hand, dropped from $7.8 billion in the 1958 nine-month period to $5.1 billion in 1959. Conditions were obviously bettered for stock offerings and worsened for bonds, which were under pressure during most of the year.

The Federal Reserve System (see BANKING) failed to counter the tightening effects of a sharp increase in loan demand, a further drop in the monetary gold stock, and heavy borrowing needs of the federal government.

Net borrowed excess reserves of member banks (the margin by which their borrowings from Federal Reserve banks exceed their excess reserves) were allowed to increase from the neighborhood of $100 million at the beginning of the year to about the $500 million level by late fall, and remained in that area for the rest of the year.

Money rates rose progressively. Average yields on highest-grade corporate bonds advanced from 4.11% at the beginning of the year to 4.61% in December, when new offerings bore returns of more than 5½%. The rate on three-month U.S. Treasury bills rose from about 2.8% at the begin-

ning of the year to more than 4%. The trend reached something of a climax in October, when the Treasury issued a four-year-ten-month note issue on a 5% basis.

Vice President,
Standard & Poor's Corporation.

STONE. In the United States, stone is sold in two principal forms—dimension stone, such as building stone and memorials, and crushed stone, which is used for concrete aggregates and road construction. Output of both forms increased in 1958.

PRODUCTION OF STONE IN THE UNITED STATES
(Thousands of short tons)

Category	Dimension stone 1957	Dimension stone 1958	Crushed stone 1957	Crushed stone 1958
Granite	539	621	41,097	31,292
Basalt	61	120	43,737*	43,945
Marble	149	136	1,274	1,269

SUDAN (formerly ANGLO-EGYPTIAN SUDAN). The Republic of the Sudan, strategically located in northeast Africa, borders on seven African countries and the Red Sea. With an area of 967,500 square miles, it extends from the southern boundary of Egypt to Kenya, Uganda, and the Belgian Congo on the south, to the Red Sea and Ethiopia (with Eritrea) on the east, and to French Equatorial Africa and Libya on the west. The Nile River traverses its entire length.

Population.—The 1956–57 official census established a population of 10,262,536. The annual rate of growth is estimated to be 3.2%, making the estimated population as of Jan. 1, 1960, 11,279,570. The population is largely concentrated along the Nile rivers, particularly in the centrally located Blue Nile and Khartoum provinces. These two provinces, which include the three towns of Khartoum, Khartoum North, and Omdurman, and the cotton growing Gezira area, account for only 6.5% of the total area, but include 25.1% of the population. The six northern provinces have a population of 7.5 million, which is largely of Arab origin and Moslem. The three southern provinces have a population of 2.8 million and are largely Negroid. The capital city of Khartoum and the two adjoining cities of Khartoum North and Omdurman have a combined population of 245,756. Other important cities are El Obeid (52,372), Wad Medani (47,677), Port Sudan (47,562), Kassala (40,612), and Atbara (36,298) the railway center.

Government.—From Jan. 1, 1956, until November 1958, the Sudan was governed under a transitional constitution providing for a parliamentary system. A coalition Council of Ministers (cabinet) of members of the Umma Party and the People's Democratic Party, under Abdullah Khalil (Umma) as prime minister, took office following elections early in 1958 and served until the army seizure of power in November 1958. Since that time, Sudan has been governed by the Supreme Council of Armed Forces, headed by Lt. Gen. Ibrahim Abboud, which maintains the judicial, legislative, executive, and security powers, and by the Cabinet of Ministers. (See below, *Principal Events, 1959.*)

Religion and Education.—Two thirds of the Sudanese population consists of the northerners, most of whom are Arabic-speaking Moslems. They belong either to the unorthodox Ansari sect or the Khatmia orthodox sect. The people in the southern part of the country are pagans and Christians who speak various central African dialects.

An estimated 6% of the people are literate. Of the adult population, 12% claim to have been to school. There are over 2,000 government-owned schools, 140 private and semiprivate schools, a Khartoum Technical Institute, several teacher-training schools, and Khartoum University. The university has an enrollment of 1,220 students.

Finance.—The budget covering the ordinary costs of running the government for the fiscal year beginning July 1959 includes estimated expenditures of £42.8 million and revenues of £42.9 million. This slight surplus compares with an estimated deficit for the previous year of £4 million, the first deficit since 1932. The monetary unit is the Sudanese pound (equal to U.S.$2.872). (See below, *Economic Development.*)

Transportation and Communication.—Few if any countries of the world are more dependent on railways than is the Sudan, which has no modern roads. As of Dec. 31, 1958, there were 2,485 route miles of single track rail line and 1,500 miles of river steamer routes. All are operated by the government. Thirty-seven airfields of varying size are in operation. The government-owned Sudan Airlines operates scheduled internal, Middle Eastern, and London services. Sixteen foreign airlines maintain scheduled service to the Sudan, including Air France, Alitalia, BOAC, and SAS.

Production.—Cotton, the most important cash crop, accounts for approximately 50% of the total value of exports. The 1958–59 crop of 2,663,361 kantars (1 kantar = 99.05 pounds) was only slightly less than the all-time record established in 1956–57. The area of 854,059 feddans cultivated was the largest ever (1 feddan = 1.038 acres). Of the total cotton crop, 2,427,000 kantars were extra-long staple. All of the crop, plus the carry-over on Jan. 1, 1959, was sold by mid-August, as a result of cash sales at or near the world price levels.

Gum arabic is the second most important crop in the Sudan, which produces from 80 to 90% of the world's needs. The 1958–59 crop is estimated at only 30,000 tons, compared with an average crop of 40,000 tons. Other crops include dura (sorghum), the major food crop, millet, wheat, maize (corn), barley, beans, onions, chilies, groundnuts, sesame, melons, dates, coffee, rice, and tobacco.

Animal husbandry is important. There are an estimated 6,907,000 cattle, 1,000,000 camels, 6,946,000 sheep, and 5,748,000 goats.

Economic Development.—Since 1946 the government has spent £88 million on development programs and has prepared a 1959–60 fiscal year budget for the expenditure of an additional £14 million. The first development program has consisted of two five-year plans.

The Managil extension project started in 1956–57 is designed to add 800,000 feddans of new land in four equal stages to the 1 million feddans now under irrigation in the Gezira area southeast of Khartoum on the Blue Nile. The first two stages have now been completed.

Due to the unfavorable economic conditions prevailing in 1957 and 1958, no new overall program for development was adopted. However, a total of £11.3 million was spent on individual projects and £8.6 was included in the 1959–60 budget for these and new projects, plus £3.6 million for the Managil project and £2.0 million for continuation of projects started under the 1951–56 five-year plan.

The 1959–60 development budget includes two significant items directed toward Sudan's efforts to diversify its agricultural production. Funds are included for experimental production of sugar cane in the area east of the Gezira irrigation scheme on the Blue Nile, about 60 miles from Khartoum, and for the production of coffee in Equatorial and Darfur provinces. Approximately 1,200 feddans of robusta coffee are now being grown by private growers in the Equatorial Province.

Foreign Trade.—Cotton and cotton seed exports in 1958 amounted to £24 million, or 60% of the total exports; gum arabic, 12.5%; peanuts, 8.7%; and sesame, 5.6%. Agricultural exports accounted for 98.9% of total exports. With low industrial production, Sudan imports practically all consumer and industrial products. Cotton piece goods, sugar, tea, coffee, metals, machinery, and vehicles are the major imports. The United Kingdom, India, Germany, and Egypt are the main trading partners, with the United States ranking seventh in importance.

Sudan's foreign trade situation improved throughout 1959 following the January decision to sell cotton at world prices. For the first seven months of 1959, Sudan's exports exceeded imports by £17 million, compared with a trade deficit of over £8 million for the same period in 1958.

Principal Events, 1959.—The most significant developments during the year were the three attempted overthrows in March, May, and November of the government of Lt. Gen. Ibrahim Abboud, who seized control on Nov. 17, 1958; the recovery of the economy following the near economic collapse of 1958; and the signing on November 8 of the Nile water agreement with Egypt.

On March 4, General Abboud dismissed all 12 members of the Supreme Council of the Armed Forces which had ruled Sudan since the November coup. A new 10-member council was appointed the next day. This reorganization in the Supreme Council was forced by three junior field commanders who served an ultimatum on General Abboud and who were included in the new Supreme Council. On May 26, authorities arrested 24 leading members of the outlawed Communist group who were accused of working to undermine the security of the country. This was followed by the arrest on May 31 of 15 army officers after a false telegram brought troops to the outskirts of Khartoum. On June 1 two of the March 5 appointees to the ruling Supreme Council were arrested without a public statement given as to the reason. On November 10 a third attempted coup was unsuccessful. Reports indicate that General Abboud continues to hold control and has even gained strength by his ability to handle the three attempted overthrows of his government.

Following the government's decision in December 1958 that the United States aid agreement should stand, Great Britain agreed on Jan. 5, 1959, to grant Sudan up to £5 million ($14 million) in export credits. On February 17, Yugoslavia agreed to extend credits for financing industrial projects.

An investment guaranty agreement with the United States was signed on March 17. Under this agreement United States investments can be made in the Sudan without the investor assuming many of the financial risks associated with foreign enterprises. The first Sudanese private commercial bank, with a capital of £1 million, was approved on April 4.

In the field of transportation there were three significant developments. In April the railway extension to Nyala in the western province of Darfur was completed, and work was started on the extension south to Wau, which, when completed, will open the south for development. On June 8 the Sudan Airways inaugurated its new Viscount service from Khartoum to London with stops in Cairo, Athens, and Rome. On July 25 Sudan signed a protocol for the construction of two cargo vessels in Yugoslavia.

On November 8 Sudan and Egypt settled an old dispute about the use of the Nile waters by each country, on which agreement was essential prior to the completion of the Aswân High Dam by Egypt and the construction of the Rosières Dam by the Sudan. The agreement, which paves the way for major economic development programs in each country, provides that after the Aswân High Dam is completed Egypt will receive 55.5 billion cubic meters of water and the Sudan will get 18.5 billion, compared with the present division of 48 billion and 4 billion, respectively. Egypt also agreed to pay compensation of $43 million for Sudanese territory flooded by the high dam and for the cost of rehabilitating 60,000 Sudanese living in the area (at Wadi Halfa).

SUDANESE REPUBLIC. See SOUDAN.

SUEZ CANAL. With the return of its "normal" operation and traffic, and the settlement of certain international issues arising out of its nationalization,[1] the Suez Canal has been doing a booming business. (A record total of 17,842 ships used the canal in 1958, as compared with the previous record of 14,666 in 1955.) The United Arab Republic's Suez Canal Authority has shown remarkable ability in dealing with the canal's administrative and technical problems. Considering the difficulties in reopening the canal for traffic after the crisis of 1956, and the relative inexperience of Egyptian pilots, engineers, and administrators, the authority has performed its task to the satisfaction of most interested parties, which are now reconciled to the UAR's undisputed authority over the waterway.

The major problem that remains to be settled is the UAR's exclusion of Israeli shipping. In 1959, all attempts failed to secure passage for Israeli ships or for foreign ships bearing Israeli goods. Several ships were detained and, in some cases, their cargo confiscated. Israel, basing her claim on the U.N. Security Council resolution of 1951 which called for Egypt to lift restrictions, pressed for her right to use the canal, but the UAR was firm in its stand that so long as a state of war exists between Israel and the Arab states, the validity of Israel's claim cannot be admitted. The issue was brought before the U.N. General Assembly when it met in the autumn of 1959. (See also ISRAEL; UNITED NATIONS.)

The deepening and widening of the canal by three United States firms at a cost of $18 million was progressing in 1959 according to schedule. From an average depth of about 45 feet—enough to accommodate 35-foot-draft ships—the canal is being expanded so that large tankers and 37-foot-draft ships may navigate safely. This work, begun early in 1959, was expected to be completed by early 1960, at which time the canal will be opened to ships of up to 46,000 tons.

Present dredging operations are considered to be only the first step in a 10-year project known as the Nasser Plan. When completed, the Nasser Plan, calling for estimated expenditures of $270 million, not only will allow for passage by 47-foot-draft supertankers, but also will provide two-way traffic through the entire length of the canal. Although annual canal earnings total over $110 million, an amply sufficient sum for current operating expenses and enlargement projects, this figure will not meet the proposed expenditures of the Nasser

[1] The most recent settlement, signed between Great Britain and the United Arab Republic on Feb. 28, 1959, provided for the return of Egyptian funds frozen in London since the nationalization of the canal in 1956, and for the resumption of trade between the two countries.

Plan. To carry out this project, the Suez Canal Authority had been negotiating with the International Bank for Reconstruction and Development for an estimated $40 million loan to cover a large part of the authority's foreign exchange needs. Finally, negotiations for the loan of $56,500,000 were concluded and the agreement was signed in Washington on December 21.

A. O. SARKISSIAN,
Analyst in Middle Eastern and East European Affairs, The Library of Congress.

SUGAR. Production of sugar beets in the United States in 1959 was estimated at a record 16.7 million short tons, 10% more than in 1958 and about 7½% above the previous record crop of

U.S. PRODUCTION OF SUGAR BEETS AND SUGARCANE
(In thousand short tons)

	Average 1948–57	1958	Prelim. 1959
Sugar beets:			
Ohio	214	309	352
Michigan	718	1,112	1,238
Wisconsin	86	117	111

United States	6,942	6,681	8,182

15.5 million tons produced in 1957. The yield per acre of 18.4 tons was also a record, 0.7 ton above the previous high of 17.7 tons in 1957. Michigan, Nebraska, Kansas, Montana, Idaho, Wyoming, Utah, and California all had record yields per acre.

CENTRIFUGAL SUGAR PRODUCTION, BY MAJOR COUNTRIES[1]
(In thousand short tons, raw value)

	Average 1950–51 to 1954–55	1958–59	Prelim. 1959–60
Argentina	773	1,184	1,203
Australia	1,125	1,525	1,390
Brazil	2,110	3,770	3,562
China (mainland)[2]	293	1,200	1,400
Cuba	6,078	6,577	6,000
Dominican Republic	657	1,020	1,040
France[3]	1,551	1,764	1,225
Germany, West[3]	1,255	2,098	1,650
Hawaii	1,066	975	1,065
India	1,690	2,642	2,900
Indonesia	578	854	885
Italy[3]	828	1,255	1,300
Mexico	900	1,477	1,670
Peru	628	825	850
Philippines	1,190	1,522	1,500
Poland[3]	1,047	1,335	1,215
Puerto Rico	1,228	1,087	1,250
Union of South Africa	689	1,135	1,070
Taiwan	724	1,066	950
U.S.S.R.[3]	3,010	6,900	6,500
United Kingdom[3]	764	899	975
United States (continental):			
Cane	566	578	710
Beet	1,785	2,225	2,350
World:			
Cane	23,728	31,869	32,056
Beet	15,410	23,780	22,453
Total	39,138	55,649	54,509

[1] Centrifugal sugar includes cane and beet sugar produced by the centrifugal process, and is the principal kind used in international trade. The production of each country is credited to the May-April year in which harvesting and sugar production began. [2] Includes both cane and beet sugar. [3] Beet sugar.

Estimated production of sugarcane for sugar and seed was also a record 8.2 million tons in 1959. This was 22% above the small 1958 crop of less than 6.9 million tons and 18% above the 1948–57 average.

About 906,000 acres of sugar beets were harvested in 1959, compared with 889,000 in 1958, and the 10-year (1948–57) average of 769,000. Sugarcane acreage was 316,000 acres, compared with 275,000 in 1958 and 313,000 in 1948–57.

Distribution of sugar for consumption in the continental United States during January–September 1959 was at the record-breaking level of 7 million tons, 4% above the corresponding period of 1958. Per capita consumption of sugar was estimated at 98 pounds in 1959, the same as in 1958.

World production of centrifugal sugar in the May 1959–April 1960 season was not expected to equal the record set a year earlier, according to estimates of the Foreign Agricultural Service of the U.S. Department of Agriculture. The expected total of 54,509,000 short tons, raw value, would be about 2% below the 1958–59 record. Although production of cane sugar was expected to reach a new high of 32,056,000 tons, production of beet sugar, estimated at 22,453,000 tons, would be 6% below the 1958–59 record.

Serious drought in some of the important sugar beet growing areas of central and eastern Europe and in the USSR was the primary cause of the smaller 1959–60 output. This would be the first time in several years that sugar production failed to rise, and the halt probably is only temporary. It will, however, give world consumption an opportunity to catch up with surplus stocks of sugar.

C. J. ENZLER,
Information Specialist, Office of Information, U.S. Department of Agriculture.

SUICIDES. See Index entry.

SULFUR. The United States is both the world's largest producer of native sulfur (71% of world production in 1958) and the largest consumer. In 1958, Mexico produced 19%, Japan 2.7%, Greece 2.6%, and a dozen other countries accounted for the remainder. World output declined from 7,300,000 long tons in 1957 to 6,500,000 tons in 1958. In addition to the output of native sulfur, the United States supply was augmented by (1) derivations from domestic and imported pyrite, and (2) byproducts, including natural and industrial gases.

In the first 10 months of 1959, output of native sulfur in the United States was 3,733,622 long

SULFUR IN THE UNITED STATES
(Thousands of long tons)

tons. Byproduct sulfur was 539,685 tons. In the same period of 1958, the figures were 3,905,990 and 504,398 tons, respectively.

(See MINERAL PRODUCTION for table showing output by major sulfur-producing countries.)

SULFURIC ACID. See Index entry.

SUMATRA. See INDONESIA.

SUMMERFIELD, Arthur Ellsworth, U.S. postmaster general: b. Pinconning, near Bay City, Mich., March 17, 1899. One of the two remaining members of President Eisenhower's original cabinet, Summerfield ended his seventh year as head of the

Post Office Department with an announcement (December 17) that he would continue to urge an increase in the first-class postage rate from 4 to 5 cents in order to check the department's continuing deficit.

Summerfield went to work at the age of 13, as soon as he finished grammar school. By 30, he was owner of one of the country's largest automobile agencies, in Flint, Mich. Entering politics in 1940, he became a Republican national committeeman in 1944 and was the party's national chairman from July 1952 until he was named to the cabinet in January 1953.

The 1959–60 appropriation for the Post Office Department, as passed by Congress in June, was $3,849 million, $49.7 million less than the president had asked. Although the rate for first-class mail had been raised by 1 cent in August 1958, the department's annual deficit was still estimated at $600 million.

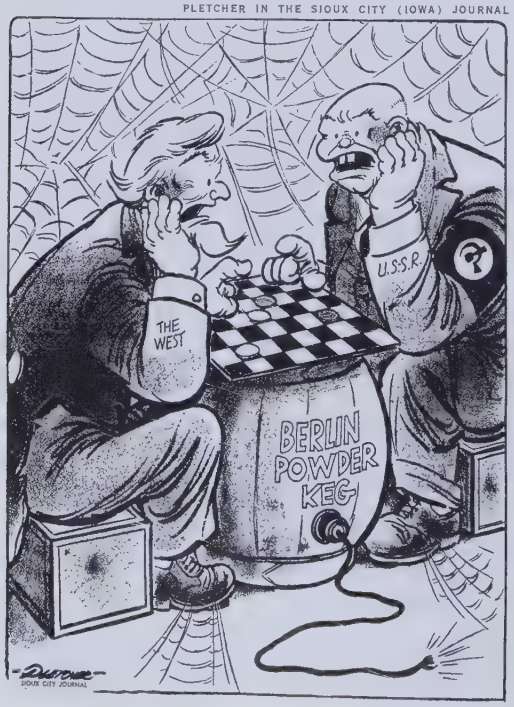
Summerfield also had to deal during the year with broader aspects of budgetary problems as a member (appointed Jan. 31, 1959) of the president's Cabinet Committee on Price Stability for Economic Growth.

(See also PHILATELY.)

SUMMIT CONFERENCE. As a result of intensive preparations made in 1959, the long-heralded, much-discussed summit conference between the leaders of the East and West was scheduled to be held at Paris on May 16, 1960. Convening of the conference constitutes the fruition of arduous efforts made over the past several years by many governments and statesmen to conduct high-level discussions for the purpose of alleviating East-West political conflicts. At the summit meeting, President Eisenhower of the United States, Prime Minister Macmillan of Great Britain, and President de Gaulle of France were expected to discuss with Soviet Premier Khrushchev such important issues as the German question, disarmament measures, and improvement of East-West relations.

"IT'S STILL YOUR YIELD!"

PLETCHER IN THE SIOUX CITY (IOWA) JOURNAL



The date, place, and agenda for the summit conference were proposed by the heads of government of Britain, France, West Germany, and the United States at the so-called Western summit meeting held at Paris in mid-December 1959; and these conditions were subsequently agreed to (with a change in the original date) by the premier of the Soviet Union. The conference, which was originally suggested by the USSR,[1] will be the second such high-level meeting to have been held in recent years, having been preceded by the Geneva conference on July 18–23, 1955, that was attended by the heads of government of the Big Four powers.[2]

Preparations made in 1959 for the summit conference comprised individual contacts between the leaders of the major powers, a conference of foreign ministers of the Big Four at Geneva, and the Western summit meeting at Paris.

East-West Contacts.—The proposal for a summit conference was renewed in 1959 by the Soviet Union in notes of March 2 to Britain, France, and the United States, which declared that the proposed conference should discuss a German peace treaty and the "abnormal situation" in West Berlin, as well as European security and general disarmament. In the same notes, the Soviet government agreed to previous suggestions by the Western powers that a conference of Big Four foreign ministers should be held first. In their replies of March 26, the Western powers declared that the "date, place, and agenda" of a summit conference should be determined at the forthcoming foreign ministers conference (see below).

The leaders of the world's great powers held differing views on the advisability of holding a summit conference in 1959. In general, it appeared early in the year that while Soviet Premier Khrushchev was enthusiastic about such a conference and Prime Minister Macmillan was at least hopeful, President Eisenhower was skeptical in regard to its usefulness, Chancellor Adenauer was reportedly opposed to holding it at all, and President de Gaulle was apparently uninterested.

A beginning toward an improvement in East-West relations leading to the summit was made by Macmillan during his visit to the USSR on Feb. 21–March 3, 1959 (for details, see MACMILLAN). Prospects for holding the summit conference were immeasurably improved by President Eisenhower's separate meetings in August–September with Adenauer, Macmillan, and de Gaulle, and by the Eisenhower-Khrushchev talks in September (for details, see EISENHOWER). The other Western leaders eventually acceded to President de Gaulle's view that a summit conference should be held at a later date, provided that international relations continued to improve in the intervening months and that the Western spokesmen prepared beforehand their "common position" on the issues to be discussed (see DE GAULLE).

During his talks at London with Macmillan in mid-November and at Paris with de Gaulle in early December, Konrad Adenauer (q.v.) reportedly changed his position and agreed that the future of West Berlin could be discussed at the summit conference as part of an over-all approach to the German problem.

[1] The suggestion for such a conference came in separate notes to the NATO countries on Dec. 10–11, 1957, and was repeated by the then Soviet premier, Nikolai A. Bulganin, on Jan. 8, 1958. It was revived by his successor, Nikita S. Khrushchev, on July 19, 1958.

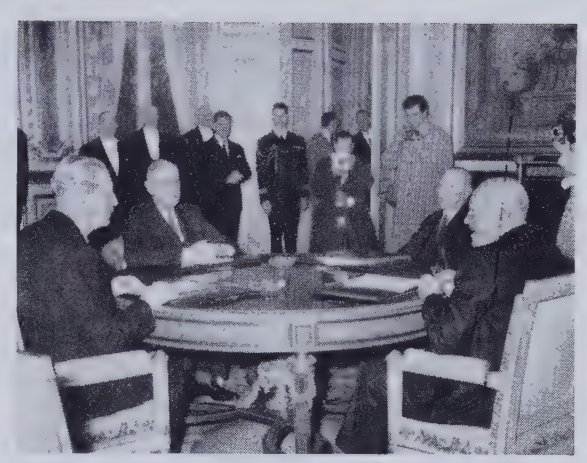
[2] President Dwight D. Eisenhower, United States; Prime Minister Anthony Eden, Britain; Premier Edgar Faure, France; and Premier Nikolai A. Bulganin, USSR.

Foreign Ministers Conference.—The foreign ministers of Britain, France, the Soviet Union, and the United States (Selwyn Lloyd, Couve de Murville, Andrei A. Gromyko, and Christian A. Herter, respectively), together with delegations representing both East and West Germany as observers, met at Geneva on May 11–June 20 and July 13–Aug. 5, 1959, to discuss a settlement of problems relating to Germany, and thereby, in the Soviet view, to prepare for a summit conference. Although the final communiqué issued by the foreign ministers described the discussions as "useful," the conferees failed to agree on any of six points proposed as a basis for solving the East-West dispute over Berlin. However, the conference resulted in agreement on the formation of a new 10-nation Disarmament Committee (see DISARMAMENT).

Proposals advanced at the conference by the East and West on the political future of Germany were rejected by the other side. The Western plan, presented on May 14, provided for the unification through free elections of both Berlin (immediately) and all of Germany (after 2½ years), the negotiation of a peace treaty with an all-German government, and limited European disarmament measures. Soviet proposals, submitted on May 19, listed three alternative methods for solving the Berlin issue: (1) elimination of Western military forces in West Berlin; (2) placement of Soviet troops in the Western garrisons there; or (3) substitution of "neutral forces" under United Nations administration for Western forces in the city. Further Soviet proposals of June 10 providing for a one-year limit on the Western occupation of West Berlin while a proposed all-German committee negotiated on reunification and a peace treaty were termed "wholly unacceptable" by the Western ministers.

Western Summit Meeting.—During their conference at Paris on Dec. 19–21, 1959, President Eisenhower, Prime Minister Macmillan, President de Gaulle, and Chancellor Adenauer decided to invite Premier Khrushchev to a summit conference to be held at Paris beginning April 27, 1960. (The date was later changed, at Khrushchev's request, to May 16, 1960.) The four Western leaders proposed that the topics of discussion at the summit conference should include Germany and Berlin, disarmament, and East-West relations.

The final communiqué on the Western summit meeting stated that the leaders had considered the views of their NATO allies expressed during the meeting of the NATO Council at Paris on Dec. 15–17, 1959 (see NORTH ATLANTIC TREATY ORGANIZATION), and that they reaffirmed the principles as set forth in the NATO Council's declaration of Dec. 16, 1958, which had demanded continued free access by the Western powers to West Berlin and had repudiated the Soviet threat to deny Western occupation rights in that city.



UPI

Preliminary to a full summit conference, Western leaders meet in Paris on December 19 to coordinate their policies. Seated (from left): Prime Minister Macmillan, President de Gaulle, Chancellor Adenauer, and President Eisenhower.

Prime Minister Macmillan's view that a "series" of summit conferences should be held in the future was reflected in President Eisenhower's letter (made public Dec. 21, 1959) to Premier Khrushchev which stated in part that a summit conference should be held "from time to time."

SURGERY. Fibrinolysin in the Treatment of Blood Clots.—Fibrinolysis is the enzymatic process by

General view of the Big Four foreign ministers conference in Geneva shows how the seating argument was solved. Delegations of the four principals (left to right: United States, France, United Kingdom, and Soviet Union) are seated at round table. The two groups from Germany are seated at small tables (West Germany, lower left; East Germany, lower right) as advisers, not as full participants at round table as USSR had demanded. The conference convened at the Palais des Nations on May 11.

WIDE WORLD

which the body normally dissolves and removes the small deposits of freshly clotted blood within its own blood vessels, formed by the constant infliction of minute injuries. Fibrinolysin (or plasmin) is the term usually applied to the substance which causes this dissolution; this or its intermediate (profibrinolysin) is the naturally occurring protein-destroying enzyme of the blood plasma which performs this important "fibrin-splitting," lytic function.

One of the earlier fibrinolytic agents was streptokinase. This material was first demonstrated in 1933, by Drs. W. S. Tillett and R. L. Garner, to occur in filtrates from beta-hemolytic streptococci. In the true sense, streptokinase is not a fibrinolytic agent, since it has no direct action on fibrin, but functions as an activator of the plasma proenzyme, profibrinolysin. By such action streptokinase converts profibrinolysin to the fibrinolytic enzyme fibrinolysin (plasmin).

Another fibrinolytic agent is trypsin, one of the enzymes produced, among other places, in the pancreas. This proteolytic enzyme not only can lyse fibrin directly, but serves also as an activator of profibrinolysin.

Each of these agents has been used therapeutically in man, and each has its faults. There are several antistreptokinase factors in normal human plasma; these limit the intensity of fibrinolytic activity of streptokinase and increase the incidence and risk of allergic or sensitivity reactions. Similarly, there is considerable antitryptic activity in human blood plasma. Doses of trypsin large enough to overcome this inhibitor activity may permit the destruction of the normal protein components in blood, including those necessary for blood coagulation.

Such considerations appear to render these compounds unsuitable or of questionable value in some of the instances when a fibrinolytic compound seems most desirable. Interest has more recently centered on the naturally occurring proteolytic enzyme of plasma (plasmin). Purified human plasminogen (or profibrinolysin, its precursor) can be isolated in a highly purified form from the globulin fraction of human blood plasma. This has been accomplished at the Ortho Research Foundation of Raritan, N.J., as one of the results of a 7-year research program on blood fractions. The profibrinolysin thus obtained is activated to fibrinolysin with streptokinase. The active material is then lyophilized and, in storage at −4°C., will remain active for several months. This fibrinolysin is strongly adsorbed on fibrin, and therefore attacks other proteins to a lesser extent.

In a report from the Department of Medicine at the Georgetown University Medical Center, Dr. K. M. Moser has made use of this effect of human fibrinolysin in the treatment of patients with blood clots in the deep veins of the legs and pelvis from which portions may break off and lodge in the lungs (embolism). When large enough to occlude completely the major lung vessels, such episodes produce sudden death. In recent years the treatment of these vein clots has been with drugs which prevent the further clotting of blood until the original clot has been organized and has grown firmly to the vein wall lining. Thus, while the extension of the thrombus (clot) or its recurrence may be prevented, the original clot remains.

At the time of his report from the District of Columbia General Hospital, Dr. Moser had treated 52 patients suffering from all forms of thrombotic disease with human fibrinolysin. The unit of measurement used in the dosage of this material is an arbitrary one based on the dissolution of 50% of a standard clot, in a test tube, in a given unit of time. The material is administered intravenously in the standard dextrose (glucose) solution over a period of two to four hours. Since the fibrinolytic activity is of relatively short duration, the administration of anticoagulant drugs to prevent the laying down of a new clot at the same site is desirable.

The overall experience with the use of this new drug has shown that marked regression of the signs of deep-vein thrombosis will occur in patients in whom the treatment was begun early after thrombosis occurred.

Bone Repair.—Considerable interest has been shown by a number of investigators and orthopedic surgeons in synthetic or plastic material which might be suitable in bonding broken bones or replacing lost or irreparably damaged segments of bone. Such substances are sometimes called "bone-glue." Ideally such a substance must include low tissue reactivity, must promote (or at least not deter) new bone formation, must adhere readily to bone, must have strength and torsional stability, and above all must be handled easily during operation. To date, these requirements have been almost impossible to attain.

Many types of plastic materials have been used safely for a wide variety of medical purposes, and such materials seemed suitable for the above requirements. Two investigators at the Hahnemann Medical College and Hospital in Philadelphia, Drs. Michael P. Mandarino and Joseph E. Salvatore, undertook research in this field. Of the several possible materials which seemed to approach the ideal requirements, rigid polyurethane foam was the compound of choice. In order to produce a dense, rigid foam a polymer was prepared (polymerization is a process whereby a number of identical molecules are joined together; the product is a polymer of the simple substance) by reacting a trihydroxy resin (resins are brown sticky materials insoluble in water) with a chemical compound called diisocyanate. The polymer thus formed is mixed at the time of operation with a catalyst (a substance which accelerates a chemical reaction, and which usually may be recovered unchanged from that reaction) which liberates carbon dioxide. The carbon dioxide released into the compound produces bubbles which permeate throughout the mixture producing a sponge-like compound. No heat is released in this reaction.

The mixture is applied between the bony surfaces to be bound together, where it rapidly hardens into a foamy, white, porous, immobilizing agent. It is apparent chemically that the polymer bonds to the surface to be held, and during its formation becomes an intimate part of the bone. It is this later property that distinguishes the substance from a glue, an adhesive, or common cement-type bonding.[1]

When this material is used in the human, it requires 20–30 minutes for fixation; complete hardening occurs within 24 hours. During this period the extremity or part is completely immobilized. At the end of this time the torsional stability is such that weight bearing (on a lower extremity) can be initiated.

The porous nature of the hardened plastic permits the ingrowth of tissue cells. Tissue sections taken from experimental animals at varying intervals revealed progressive replacement of the plastic

[1] Polyurethane foam tests as follows: bond strength to bone, 170-190 pounds per square inch; tensile strength, 800 pounds per square inch; compressive strength, 20,000 pounds per square inch with 10% deflection; density, 25–30 pounds per cubic foot; shear strength, 500 pounds per square inch; flexural strength, 1,000–1,200 pounds per square inch.

material by new bone. Polyurethane foam is slowly absorbed so that one fourth to one sixth of the original volume remains at the end of 12 months. The metabolic route and excretion of this material is still under study.

More recently this material has been used in humans by Drs. Mandarino and Salvatore in the repair of broken or diseased bone. In all cases the plastic has been well tolerated and the strength of the repaired part most gratifying.

All that is required, to date, to make this material both welcome and universally acceptable is to complete the studies on its method of dissolution, its possible toxicity, and whether it may contribute to the appearance of tumor in the human patient. To date all such studies have been negative.

Head Injuries.—Increased intracranial pressure may result from edema and swelling of the brain, from hemorrhage into the brain, and from increased intracranial blood pressure due to an injury to the head.[2] Many chemical agents have been tested by injecting intramuscularly hypertonic solutions to reduce intracranial pressure. Among these are sodium sulfate, sodium bicarbonate, magnesium sulfate, sodium arabinate, sorbitol, sucrose, and dextrose. Each is effective in reducing intracranial pressure, but each has some undesirable action that limits or prohibits its use.

As early as 1927, Drs. Frank Fremont-Smith and H. S. Forbes of the Department of Neuropathology, Harvard Medical School, suggested that urea might be a promising hypertonic agent, for in experimental animals the substance produced marked cerebrospinal fluid pressure reductions. Some 20 years later, Lowell Smyth, Gwendolyn Smyth, and Dr. Paul Settlage of the Department of Anatomy, University of Wisconsin, made the same observations on monkeys.

Apparently the suggestion of Fremont-Smith and Forbes was not put to a clinical test until the study in 1956 by Drs. Manucher Javid and Paul Settlage of the Departments of Neurosurgery and Anatomy, University of Wisconsin Medical School. In these early studies, small doses of the chemical were given and its various effects were noted carefully. In every instance there was a consistent drop in cerebrospinal fluid pressure. During the past year, Javid has reported the use of urea in 300 patients. In the experience of other surgeons, including Drs. J. G. Arnold, Jr., and H. S. Bell of the University of Maryland Hospital in Baltimore, these results have been confirmed primarily in patients with tumors of the pituitary gland or diseases of the major arteries of the brain. The drug is useful also in many other brain tumors. In general the effects of the drug are reported as poor by these latter authors in patients with head injuries and increased cerebrospinal fluid pressure due to injury. In these patients it is suggested that injury has altered the blood brain barrier so that the urea gets into the cerebral extracellular spaces and thus neutralizes the osmotic effects of this, or any, hypertonic solution.

Limb Inequalities.—Discrepancy in the length of the legs is a frequent and often a severe debility. Poliomyelitis is by far the most common cause of a short leg, ranging in frequency from 60 to 90 per cent of all cases treated. Disturbance in growth does not become apparent for about one year after the acute phase of polio. Other conditions causing a retardation in growth are infections, tumors, and injury in the actively growing areas of bone.

The treatment of limb inequalities by lengthening the shorter member has never gained wide acceptance; the gain in length, even if none of the inherent complications occur, may not approach the desired amount. Retardation of bone growth in the normal leg in children, and shortening by resection of a segment of bone in the adult, to accomplish the same purpose have been considered simpler, safer, perhaps less time-consuming, and less complicated than leg lengthening. Each has its complications, not the least of which may be delayed or non-union, as well as the long period of non-weight-bearing.

Many methods have been tried to increase or augment the circulation in a shortened limb. The few of these which have been successful have produced insignificant lengthening. The same results have attended attempts to increase oxygen tension. Very recently Drs. Vincent Richards and Raymond Stofer of the Stanford University Department of Surgery have tried a new approach to this problem. These surgeons designed a method to heat directly the growth center of bone (the epiphysis) by delivering an amount of heat sufficient to alter bone temperature, but not general body temperature, and thereby to increase the blood flow in this area.

This has been accomplished by wrapping the large thigh bone (femur) of rats and dogs in several turns of nichrome wire, both ends of which emerge through the skin of the back and are connected to a step-down transformer so that approximately 1.1 volts of alternating current could be delivered to the wrapped bone. This voltage raised bone temperature 1.5° to 2°C. The animals were attached to the current during the daytime only, and were allowed to run freely and play in their cages. At night the terminals were disconnected.

In these experiments the average increase in femur length was 5%, and the average weight increase was 15–20%; the bone increased in circumference as well as length. There was considerable enlargement of both the arterial and venous trees. The heating was carried on for periods ranging from 24 to 95 hours.

The longer heating was carried on, the more likely there was to be a complication from the bone heating. The chief complication was fracture of the shaft of the bone in some animals, but these fractures healed without difficulty. This complication led to an exploration by these same authors of the effects of bone heating on the healing of fractures. Heating resulted in solid bony union and the deposition of a luxurious callus (the exudate deposited about the fragments of a broken bone, accomplishing the work of repair).

This is an ingenious bit of animal experimentation which may well lead to its adoption in the human, particularly in the stimulation of healing of fractures, in the correction of delayed and non-union of broken bones, and possibly in the stimulation of growth of a shortened limb.

ROBERT W. BUXTON,
Professor of Surgery, University of Maryland School of Surgery.

[2] In addition to the diagnostic import of the phenomenon underlying the signs and symptoms of increased intracranial pressure, certain pathologic (abnormal) conditions are created. The compression of the medulla oblongata (the lowest or most posterior part of the brain) as a consequence of its being wedged into the upper portion of the spinal canal (foramen magnum) has been blamed for death due to respiratory or cardiac arrest. Hemorrhage into the mid-brain and the portion known as the pons is a more common complication and again may result in unconsciousness, coma, and death.

SURINAM (NETHERLANDS GUIANA). An autonomous territory of the Kingdom of the Netherlands, situated on the north coast of South Amer-

ica. Estimated area, 55,144 square miles; pop. (est. 1958), 241,000 (exclusive of some 26,000 bush Negroes and Carib Indians). Paramaribo (103,000) is the capital and chief city. The population is concentrated along the coast and consists mainly of Negroes and descendants of workers from Java and India. Chief languages are Dutch and a lingua franca called Surinam-tongo.

Government.—Surinam has self-rule in internal affairs, with foreign affairs and defense decided by the Council of the Realm at The Hague. A Dutch governor represents the Netherlands crown in Surinam. The States of Surinam (Legislative Council) consists of 21 members elected for 4 years. In the elections of June 25, 1958, the National Party obtained 9 seats, defeating the governing United Front. Premier S. D. Emanuels heads a cabinet which took office on July 5, 1958. The 1958 budget estimated revenue at 63.1 million Surinam guilders; expenditure, 63.8 million (the Surinam guilder equals U.S.$0.53).

Education and Religion.—Schools of all kinds numbered 204 in 1957 (including 135 denominational), with a total enrollment of 49,220. Chief religious groups are Moslems, Hindus, Moravian Brethren, and Roman Catholics. There is full religious liberty.

Transportation and Communications.—Surinam's one railway (Paramaribo-Kabelstation) totals 133 miles. Roads, mostly around Paramaribo, aggregate 520 miles. International airlines operate out of Zandery airport, south of Paramaribo. Passenger cars numbered 2,732 in 1958; telephones, 4,762.

Economy.—Agriculture is the principal occupation. Crops include rice (1958–59 output, 187.5 million pounds of rough rice), sugar, coffee, coconuts, citrus fruits (340,000 boxes in 1958), corn, bananas, and cacao. The thick forests yield timber and balata. Surinam is one of the world's leading producers of bauxite (1958 output, 2,988,000 metric tons). Manufactures are chiefly rum, molasses, plywood products, footwear, soft drinks, and other light items. Tourism is of some importance. Exports (mainly bauxite and rice) totaled 61.17 million guilders in 1958; imports, 71.36 million. Surinam's chief trading partners are the United States and the Netherlands.

In 1959, work was under way on the construction of a 50-mile access road from Paranam to Afobakka, site of the projected Brokopondo hydroelectric project. Construction of the $125 million project by Suralco (Surinam Aluminum Company, a subsidiary of the Aluminum Company of America) was scheduled to begin in 1960. The project will provide power for an aluminum smelter plant to be constructed at Paranam, as well as for an alumina plant to be constructed by 1974. Under the 1957 agreement between the Surinam government and Suralco, the government is responsible for providing land, access roads, and sanitation facilities, and for removing the population and buildings from the reservoir area.

SVALBARD. A Norwegian Arctic territory comprising the Spitsbergen archipelago and several other islands, about 400 miles north of Norway. Chief islands of the Spitsbergen group are West Spitsbergen (14,633 sq. mi.), North East Land, Edge Island, and Barents Island. Svalbard's total area is 24,101 square miles. The territory is administered by a governor residing at Longyearbyen, on West Spitsbergen. The population of Svalbard in 1956–57 consisted of 1,530 Norwegian coal miners working Norwegian mines, and 2,746 Russian miners operating Soviet mining concessions at Isfjord, West Spitsbergen. Norwegian coal output in 1958 totaled 291,600 metric tons; Soviet output, 349,823 in 1956.

SWAZILAND. Swaziland, bounded on the northwest and south by Transvaal Province and on the east by Portuguese territory, is one of three territories in southern Africa not part of the Union of South Africa. Administered by a British high commissioner (see also BASUTOLAND and BECHUANALAND PROTECTORATE), it has an area of 6,705 square miles, of which more than half is reserved for Swazi tribes. The population at the 1956 census was 237,041, including 229,744 Africans, 5,919 Europeans, and 1,378 Eurafricans (including 16 Asians); the population in mid-1958 was estimated at 267,000.

A resident commissioner (B. A. Marwick) representing the high commissioner has headquarters at Mbabane, the capital; the paramount chief (Sobhuza II) and a queen mother share authority in the native reserve. Revenue in 1959–60 was estimated at £1,230,037; expenditure, at £1,501,367. There are 282 schools for Africans, 9 for Europeans, and 4 for Eurafricans; pupil enrollment in 1958 totaled 30,957, comprising 29,210 Africans, 1,224 Europeans, and 523 Eurafricans.

Animal husbandry is the chief industry; livestock in 1958 included 491,679 cattle, 165,354 goats, and 32,127 sheep. Principal agricultural products are maize (corn), cotton, rice, tobacco, peanuts, bananas, citrus, pineapples, and other fruits. Mineral production (valued at £2,150,492 in 1958) comprises asbestos, tin, barites, diaspore, fluorspar, and gold. The forest industry is important; by 1959 pine trees had been planted on 169,000 acres. Exports in 1958 totaled £3,891,513, including asbestos, £2,130,952; slaughter stock, £333,088; seed cotton, £178,029; rice, £225,000; butter, £74,620; and fruit (including canned pineapple), £178,000. There are no railways, but roads aggregate about 1,150 miles and buses connect the territory with the Union of South Africa and Mozambique (Portuguese East Africa).

SWEDEN. Occupying the southern and eastern part of the Scandinavian Peninsula, the European kingdom of Sweden borders Norway on the north and east and Finland on the northeast. With an area of 173,378 square miles, Sweden is slightly larger than California; more than one half of the land portion is covered by forests.

Population.—The population as of Jan. 1, 1959, was estimated at 7,436,000. The major cities include Stockholm, with a population of 804,900 (greater Stockholm, 1,113,100); Göteborg, 397,205; and Malmö, 221,700. Ten other cities have populations of over 50,000.

Government.—Sweden is a constitutional monarchy; the present king, Gustaf VI Adolf, succeeded his father in 1950. The king exercises his powers through responsible ministers in the Council of State and presides at cabinet meetings. Dr. Tage Erlander, premier since 1946, heads a minority government of Social Democrats which took office on June 18, 1958. The Riksdag, or Parliament, is bicameral, with both houses having equal power, and elections to both are on a basis of universal suffrage. The upper house (Första Kammaren) is elected indirectly for 8 years by the county and city councils, and consists of 151 members. After fall local elections in 1958, it contained 79 Social Democrats, 32 Liberals, 22 Center Party members (formerly Agrarians), 16 Conservatives, and 2 Communists. Special elections for the lower house (Andra Kammaren) in 1958 gave the Social Democrats 111 seats; the Center Party, 32; the Liberals, 38; the Conservatives, 45; and the Communists, 5. Elections to the 231-member lower house are held every 4 years.

Education and Religion.—Education has been compulsory in Sweden since 1842. Enrollment in the universities and professional schools exceeds 60,000. Three national universities at Uppsala, Lund, and Göteborg and one private university at Stockholm offer higher degrees. More than 11,000 are enrolled in the adult folk high schools and more than 800,000 in elementary schools.

The Evangelical Lutheran Church is the established church of Sweden. Uppsala is the metropolitan see and its archbishop the titular head of the state church. Freedom of worship for other groups is permitted, and over 370,000 are nonconformists.

Finance.—The budget presented in January 1959 for the fiscal year 1959–60 provided for 12.9 billion kronor of revenues and 13.5 billion kronor of expenditures (1 krona = U.S.$0.193). The major revenues are from excise, income, and corporation taxes, and expenditures go mainly to social welfare (30%, or 3.9 billion kronor), defense (21%, or 2.83 billion kronor), and education (12%, or 1.69 billion kronor). The capital investment fund was

more than 2,266 billion kronor. Heated debate over the budget for the year contested government proposals for increased excise taxes and additional expenditures for social welfare caused by the new pension plan. The government debt had risen to over 19 billion kronor on June 30, 1959.

Transportation and Communication.—The Swedish merchant marine was increased by 305,000 gross tons in the first half of 1959 to a total of more than 3,490,000 tons. Roads total 11,000 miles, and state and private railroads, 10,050 miles. Registered radio sets number more than 2,600,000, and licenses have been issued for over 420,000 television sets. Telephones number over 2,500,000, or one for every three persons.

Labor and Cooperatives.—In proportion to its population, Sweden has the largest free labor organization in the world. Within the Federation of Trades Unions there are over 8,600 locals. The Swedish Cooperative Union had a total membership of over 1.2 million in 1958. A new labor agreement, signed in March, 1959, meant industrial peace for Sweden until 1965, and indicated labor's capacity to assume responsibility since the unions agreed to a wage decrease in view of the industrial and trade recession.

Agriculture and Industry.—With 8,710,000 acres of arable land, the Swedes must cultivate intensively in order to produce large crops, and agriculture is increasingly mechanized. Chief crops, with 1958 production figures in thousands of tons, are: wheat, 613; rye, 178; barley, 669; oats, 927; potatoes, 1,372; beets, 1,729; and hay, 4,200. The dairy industry in 1958 produced 3,347,000 tons of milk, 86,000 tons of butter, and 51,240 tons of cheese; farmers also sold nearly 350,000 tons of meat. Sweden also exports some hay and grain for Denmark's dairy industry.

Forestry, which is partly managed by farmers and partly by large enterprises, is a mainstay of Swedish industry and exports. Over 30% of Sweden's exports are in forest products. In 1958, pulp wood production totaled 4,101,000 metric tons, of which 2,357,235 metric tons were exported. Paper and board production in 1958 was 1,682,000 metric tons, of which 976,788 were exported. Over 820,000 standards of lumber were exported in 1958.

Sweden's iron deposits also serve an important purpose in furnishing metals for the steel industry, which produced 1,300,000 tons of pig iron and 1,686,000 tons of finished steel in 1958. Essential are also the 14,810,000 tons of iron ores exported and the ore furnished to the Swedish machine industry.

Industrial production, other than mining, has a seemingly limitless potential. Wood products, ships, machinery, electrical appliances, telephones, chemical goods, cars, and consumer items pour from Swedish factories. The industrial production index recovered somewhat in the first six months of 1959, when it averaged 124, as compared with 118 in 1958 (1938 = 100). Sweden's national income in 1958 was over 59 billion kronor, an increase of 4% over 1957. Investments also rose by over 1 billion kronor, from 17.3 billion in 1957 to 18.6 billion in 1958. Over 730,000 gross tons of ships were constructed in 1958; 2,304,000 tons of cement were produced; and the electrical and machine industries sent over 1.74 billion kronor of goods to foreign countries. Swedish industry is recovering from the slight recession in 1957–58, and the number of unemployed fell in August 1959 to 15,900, or 1.2% of the registered employed, from 4.3% in January, the highest since 1945.

Foreign Trade.—Sweden's exports in 1958 totaled over 10.8 billion kronor, and her imports, 12.2 billion kronor. The value of the country's exports in the first half of 1959 was 6% above that in January–June 1958, while its imports declined by 5%; exports during this period totaled 5.4 billion kronor, and imports, 5.85 billion. The import surplus, because of increased trade with dollar areas, continued to decrease, while exports showed an increase of about 328 million kronor. The major exports (with 1958 values in billions of kronor) are: minerals (2.58), forest products (3.724), and machinery (3.373). The major imports are animal and vegetable products (1.84), minerals (3.95), hides and skins, rubber, textile materials and products (1.55), and machines (3.819). The major countries from which Sweden imports (with 1958 figures in billions of kronor) are: West Germany (2.885), United Kingdom (1.718), and the United States (1.296); export countries include the United Kingdom (1.766), West Germany (1.537), and Norway (1.135). The United States ranks fifth on the list of countries to which Sweden exports.

WIDE WORLD

Replacing their crowns with miners' helmets, King Olav (left) of Norway and King Gustaf VI Adolf of Sweden enter a Swedish mine on the Norwegian monarch's visit in April.

Principal Events, 1959.—On the issue which in 1958 forced an election—the old-age pension—the Social Democratic government in May 1959 won a victory by a narrow margin of one vote (115 to 114) in the lower house. Heated debate, accompanied by the usual argument over the annual budget, furnished much press comment for the year, as did the cancellation in July of Soviet Premier Khrushchev's planned state visit. However, a trade pact with the Soviet Union signed on Dec. 23, 1958 (effective Jan. 1, 1959—Dec. 31, 1961) permits Sweden to secure needed fuels and to export heavy machinery.

Labor and agricultural agreements in March and April, respectively, ensured industrial peace until 1965. Wages and prices are linked by this agreement to the cost-of-living index, with adjustments at the end of 1959 to reflect both the year's economic improvement over the depressed conditions of the last half of 1958 and the fact that the inflationary trend continues. Free convertibility of currency came into effect in January 1959, and building controls were abolished at the same time.

A visit by King Olav, the Norwegian monarch who thus made his first state trip to Sweden, presented an opportunity for praise of the close cooperation between the two countries. The opening of the highway between Sweden and Trondheim, Norway, and the economic cooperation in that city's port and electricity development further showed the close association of the two countries.

On Nov. 20, 1959, in Stockholm, representatives of the Outer Seven countries—Sweden, Denmark, Norway, Great Britain, Austria, Switzerland, and Portugal—initialed an agreement establishing the European Free Trade Association (q.v.), whose objectives are the gradual abolishment, over a ten-year period from 1960 to 1970, of import tariffs and restrictions between the member coun-

tries. The agreement, which calls for a 20% initial reduction of import tariffs on July 1, 1960, will be presented to the individual parliaments of the seven member countries for ratification in March 1960. (See also TARIFFS.) Sweden played a leading part in discussions leading to the agreement, which held major interest for both government and people because of the importance of foreign trade to the Swedish economy.

SWITZERLAND. Situated in central Europe and bounded by Germany, Liechtenstein, Austria, Italy, and France, Switzerland is a republican confederation of 19 cantons and 6 half-cantons. Its area is 15,941 square miles; population (est. March 31, 1959), 5,215,000. Principal cities and populations (est. 1957) are: Zurich, 428,200; Basel, 200,500; Geneva, 168,900; Bern (the capital), 161,300; and Lausanne, 118,900. The four national languages are German (spoken by about 74% of the population), French (21%), Italian (4%), and Romansh (1%); the first three are the official languages.

Government.—Legislative power is exercised by the bicameral Federal Assembly. The National Council (Nationalrat) consists of 196 members who are elected every 4 years. Following the national elections of Oct. 25, 1959, the seating of the chief political parties was as follows (with number of seats held prior to the election in parentheses): Socialists, 51 (53); Radical Democrats, 51 (50); Catholic Conservatives, 47 (47); and Peasants, Artisans, and Middle Class (Farmers), 23 (22). The Council of States (Ständerat) has 44 members, 2 from each canton. The federal franchise is limited to male citizens over 21 years of age. The use of the referendum and the initiative is a significant feature of the Swiss legislative system. Executive power is held by a Federal Council of 7 members elected by the Federal Assembly for 4-year terms. The head of the Federal Council acts as president of the confederation; he is chosen annually by the assembly. On Jan. 1, 1960, Max Petitpierre succeeded Paul Chaudet as president.

Education and Religion.—Illiteracy is virtually nonexistent. In 1956, public primary schools enrolled 557,406 pupils; public secondary schools, 125,957. There are numerous commercial, trade, art, technical, and other specialized schools on the secondary level. The 9 institutions of higher learning had a combined enrollment of 17,625 students in 1957. Protestants comprise 58% of the population; Roman Catholics, 41%; and Jews, 0.6%.

Finance.—Budget estimates for 1958 (with final 1957 figures in parentheses) were: current revenue, 2,715 million francs (2,440 million); current expenditure, 2,267 million (2,238 million). The Swiss franc equals U.S.$0.233. About 40% of estimated 1959 expenditure was for defense.

Transportation and Communications.—At the end of 1956, Swiss railways totaled 3,160 miles, of which 97.7% was electrified. The highway network includes 10,615 miles of main roads. Switzerland has a navigable outlet to the North Sea via the Rhine waterway. Swissair, the national airline, and 24 foreign airlines connect Switzerland directly with all major European cities and other foreign points. In 1957 there were 347,000 passenger cars, 65,200 commercial vehicles, 1,308,000 radio receiver licenses, 31,000 TV sets, and 1,385,125 telephones. Switzerland's 120 daily newspapers had a combined circulation of 1,486,000 in 1956.

Economic Conditions.—The economy is dependent on the processing of imported raw materials into finished products for home consumption and export. Principal industrial products are machinery, chemicals, textiles, dyes, and watches, which together account for more than half of the nation's annual export value. Switzerland maintained generally high productive levels in 1958 despite a mild business recession that had particularly adverse effects on the textile, watch manufacturing, and construction industries. However, these industries made rapid recoveries in the first half of 1959.

The Swiss watch industry, which exports 96% of its total output and accounts for about half of the world's watch trade, suffered a decline in export value from 1,303 million francs in 1957 to 1,118 million in 1958. Construction activity showed a decrease from the 18,384 apartments recorded as completed in 1957 to only 12,423 in 1958. The important tourist industry registered 25 million overnight lodgings in hotels and pensions in 1958, or about the same number as in 1957. National income for 1958 was estimated at 28.3 million francs, compared with 27.3 million in 1957. The cost-of-living index (1954 = 100) declined from 108 at the end of 1958 to 104 in mid-1959.

Agriculture.—Livestock raising and dairying are the most important agricultural industries. Estimated dairy output (in million pounds) in 1958 was: milk, 6,440; butter, 1,433; and cheese, 1,587. Crop production in 1958 was generally above that of 1957. Chief crops and estimated 1958 yields were: wheat, 12,270,000 bushels; barley, 3,215,000 bushels; oats, 3,170,000 bushels; potatoes, 1,750,000 short tons (prelim.); and sugar beets, 251,000 short tons (1958–59 prelim.).

Foreign Trade.—Swiss exports in 1958 were valued at 6,649 million francs (down about 1% from 1957); imports, at 7,335 million (down 13%). Machinery and watches account for about 40% of total export value; other major exports include instruments, textiles, and pharmaceuticals. Leading imports are machines, automobiles, coal and other fuels, raw materials, semimanufactured goods, and foods. Switzerland's chief trading partners are West Germany, which in 1958 provided 26.6% of total Swiss imports and received 16.2% of exports; Italy, which supplied 11.9% of imports and took 7.5% of exports; and the United States, which provided 11.4% of imports and purchased 9.9% of exports.

Principal Events, 1959.—In the national elections held on October 25, Swiss voters elected a new National Council very similar in party alignment to the one it replaced. The Socialists lost two seats and the Communists one, and the Radical Democrats, the Liberal Democratic Party, and the Farmers Party each gained one seat. The Radical Democrats and the Socialists, each with 51 seats, emerged with the largest representations in the council. The new cabinet chosen by the Federal Assembly on December 17 comprises two members each from the Socialist, Radical Democrat, and Catholic Conservative parties, and one member of the Farmers Party.

As the result of a national referendum on February 1, Switzerland remained one of the few countries where women are not allowed to vote in federal elections. The all-male electorate voted against enfranchising women by 654,924 votes to 323,306. In a separate referendum held in Vaud on the same day, the electorate decided by a vote of 33,671 to 32,805 to give women the right to vote in cantonal elections. In March the Federal Assembly approved amendments to Vaud's constitution permitting women to vote, and Swiss women voted for the first time in history at a local election in Vaud on April 19. On September 27, the canton of Neuchâtel also approved woman's suffrage in cantonal elections.

A proposal to divide Bern into two separate cantons was defeated by a vote of 80,293 to 22,962 in a cantonal referendum held July 5. In the seven French-speaking districts where the proposal had originated, the vote was 16,354 to 15,163 against division.

The approximately 220 inhabitants of Herbriggen were evacuated from their homes in February because of a massive landslide that threatened to descend on the village from the slopes of nearby

Nadelhorn. By mid-March, however, the million-ton mass of rock, ice, and soil had stabilized itself, and the village was spared destruction.

W. R. F.

SYMINGTON, (William) Stuart, U.S. senator: b. Amherst, Mass., June 26, 1901. A former secretary of the Air Force, he was elected senator from Missouri in 1952 and 1958. Symington was a favorite-son candidate of the Missouri delegation to the 1956 Democratic National Convention, and in 1959 was considered to be a leading unannounced contender for his party's presidential nomination in 1960.

The son of a romance language professor at Amherst College, Stuart Symington traces his ancestry to the ante-bellum South. In his youth his family moved to Baltimore, where he attended a preparatory school. After serving in the Army in World War I as a lieutenant in the field artillery, he was a student at Yale College from 1919 to 1923. In the latter year he joined the Symington Company of Rochester, N.Y., a railroad equipment manufacturing firm owned by his uncle. He became executive vice president in 1927. He subsequently served as president of the Colonial Radio Company in Rochester (1930–35), president of the Rustless Iron and Steel Company in Baltimore (1935–37), and president and chairman of the board of the Emerson Electric Manufacturing Company in St. Louis (1938–45).

In 1945, Symington went to Washington, where he headed the Surplus Property Board (later, the Surplus Property Administration) until 1946, when President Truman appointed him assistant secretary of war for air. In 1947, when the military establishment was united under the Department of Defense, Symington was named first secretary of the Air Force. He resigned in 1950 in protest against the budget reduction of the number of Air Force groups from 70 to 48, but remained in the administration as chairman of the National Security Resources Board (1950–51) and as administrator of the Reconstruction Finance Administration (1951–52).

Symington was elected senator from Missouri in 1952, and was overwhelmingly re-elected in 1958. In the upper house he became identified with the liberal wing on most issues. His major concern continued to be that of maintaining a strong national defense, and he consistently took the administration to task for its efforts to trim the defense budget.

Symington demurred in 1959 about announcing his presidential aspirations, but in April he stated that he would not refuse a draft by the convention. His nationwide speaking tours toward the end of the year gave the impression that he was more interested in the nomination than his public statements would indicate.

TAIWAN (Formosa). A province of China and the present seat of the Republic of China (Nationalist), the island of Taiwan lies about 110 miles off the southeast coast of mainland China. Total area, including the Penghu (Pescadores) group and other islands, is 13,885 square miles. Population (est. Dec. 31, 1958): 10,039,000 (including the Penghu, Quemoy, and Matsu islands, and armed forces). Principal cities with populations (est. Dec. 31, 1956): Taipei, the capital (748,510); Kaohsiung, a major port (371,225); Tainan (287,797); and Taichung (249,946).

The Penghu group of 64 islands (area: 49 sq. mi.; est. pop., 83,600) lies about 30 miles off the west coast of Taiwan. Chief industries are fishing, fish processing, and agriculture.

Government.—The Republic of China is governed by a president, the National Assembly, and five councils or yuans which separately exercise executive, legislative, judicial, control, and examination functions. The president of the republic (Chiang Kai-shek, re-elected in 1954) is elected by the National Assembly for a 6-year term, and according to the constitution may serve only two terms. (See below, *The Year 1959 in Taiwan.*) The president of the Executive Yuan (Chen Cheng, appointed in 1958) acts as premier. The Legislative Yuan meets twice yearly, but effective power is concentrated in the executive. The Kuomintang exercises virtual one-party rule under the leadership of Chiang Kai-shek. The so-called mainlanders (those Chinese who fled in 1949 from Communist-controlled mainland China) number about 2 million and hold political power on Taiwan; the native Taiwanese, the majority, play a secondary role.

Taiwan's provincial government is headed by a governor (Gen. Chow Chih-jou, appointed in 1957), who is named by the central government's Executive Yuan. The 21-member Provincial Council is also appointed by the central government; the 66-member Provisional Provincial Assembly is elected for a 3-year term.

The Chinese Nationalist armed forces (about 600,000 men) are equipped with the aid of the United States and are trained under the supervision of the U.S. Military Assistance Advisory Group, commanded by Maj. Gen. Frank S. Bowen, Jr. The U.S. Seventh Fleet has protected Taiwan since 1950, and a mutual defense assistance pact between the United States and the Republic of China has been in effect since 1955.

Education.—About 62% of the population aged six and over was literate in 1955. Primary education is free and compulsory. In 1957 there were 1,597 primary schools (with 1,480,557 pupils); 197 secondary (194,586 pupils); 105 technical (69,823); and 11 teacher-training (10,112). Higher institutions (chief of which is National Taiwan University) numbered 16 and enrolled 22,779 students in 1957.

Finance.—Budget estimates of the central government for the fiscal year 1957–58 were: expenditure, NT$4,644 million (NT$4,226 million in 1956–57); revenue, NT$3,933 million (NT$4,011 million). As of Dec. 31, 1958, the basic official buying rate for the new Taiwan dollar was NT$1 = U.S.$0.0276. Central government expenditure for fiscal 1957–58 was distributed principally as follows: defense, 80%; civil administration, 14.4%; economic services, 3.1%; and social services, 2.4%. United States economic aid to Taiwan was estimated at U.S.$70 million for fiscal 1959. In addition, Nationalist China in 1959 con-

UPI

Hundreds of Nationalist Chinese marines swim in precise drill formation in a watery "parade" reviewed by President Chiang Kai-shek at a major naval base in southern Taiwan.

tracted U.S.$30.1 million in loans from the U.S. Development Loan Fund for economic development.

Transportation and Communications.—Public railways are under provincial control and total 595 miles; in addition, there are 1,718 miles of private railways, most of which are owned by the Taiwan Sugar Corporation. Roads totaled 9,743 miles in 1955. The important Cross-Island Highway connecting Taichung in the west with Lotung and Hualien in the east was scheduled for completion in late 1959. Taiwan is served by four international airlines and one domestic air service. In 1957, passenger cars numbered 5,940; commercial vehicles, 7,750; telephones, 51,513.

Production.—The 23 industries included in Taiwan's current industrial development program are expected to increase their net product by 110% during the second 4-year economic development plan (1957–60). The index of industrial production (1953 = 100) rose from 142 in 1957 to 149 in 1958. National income in 1958 was NT$31,901 million, up 6% from the previous year. There were 17,481 manufacturing establishments with 215,000 workers and a gross sales value of NT$14,897 million in 1957. The chemical, textile, and food processing industries together account for more than half of all manufacturing value. Output in 1958 of cotton yarn (27,483 metric tons) and cotton fabrics (147 million meters) decreased slightly from that in 1957. Estimated production figures for 1958 of other major industrial products are as follows (in thousand metric tons): coal, 3,180 (up 9% over 1957); cement, 1,015.2 (up 68%); steel ingots and casting metal, 106.8 (up 20%); superphosphates, 104.4 (up 11%); ammonium sulfate, 18 (up 15%); and paper, 72 (up 20%). Electricity output in 1958 was 2,880 million kw.-hr. (up 12%); installed capacity in 1957 was 585,000 kw., or nearly double that of 1951.

Agriculture, which accounted for 32.7% of the national income and employed 58% of the labor force in 1957, was expected to increase output by 20% during the 1957–60 plan period. The overall production index for 1957–58 was 145 (1934–38 = 100), as compared with 136 in 1956–57. The rice crop in 1958 was estimated at a record 1.9 million metric tons; sugar, 894,000, a postwar high; pineapples, 124,000, up 25% over 1957; and tea, 14,000. Other crops are sweet potatoes (an important staple), peanuts, bananas, soybeans, jute, citrus fruits, sesame, and vegetables. Forest products include timber, camphor, bamboo, turmeric, cinchona, and rattan.

Foreign Trade.—Exports in 1958 were valued at U.S.$155.8 million; imports (exclusive of foreign aid), U.S.$159.3 million. Imports financed by the U.S. International Cooperation Administration totaled U.S.$66.9 million. Sugar, the main export, accounted for U.S.$80.8 million; rice, U.S.$26.4 million; and tea, U.S.$6.4 million. Chief imports are ores, metals and manufactures, machinery and tools, chemical fertilizers, and crude and fuel oil. Taiwan's principal trading partner is Japan, which took 42% of exports and supplied 40% of imports in 1958.

W. R. F.

The Year 1959 in Taiwan

In 1959 the question of whether President Chiang Kai-shek should be elected for a third term gave rise to extensive debates among Nationalist Chinese in Taiwan and abroad. President Chiang's second term expires in May 1960, and according to the Constitution of Nationalist China, the president may not be elected for a third term. On May 18, 1959, Chiang reiterated a previous statement that he was against any proposal to revise the constitution to permit his re-election to a third term, but declared that he had no intention of giving up his responsibility of fighting the Communists and recovering the Chinese mainland. As Chiang talked in this confusing manner, opinion in Taiwan was divided as to his political future. While a powerful group in Taiwan maintained that Chiang must continue to serve as president, many Nationalist Chinese abroad argued that Chiang should give up the presidency and lead the nation in another capacity. As the year drew to its close, clamor increased for Chiang to continue as president after his second term.

The Tibetan revolt against the Chinese Communists in March 1959 was given full support by Taiwan. In a message broadcast on March 26, President Chiang Kai-shek declared that Tibetans would have the right to decide their own political future when the Communist regime was overthrown, and promised that the Nationalists would make every possible effort to give the Tibetans "continuous and effective aid." However, Nationalist aid was rendered difficult by the fact that the rebels could be reached only by air, and that even this was hardly practicable in view of the great distance between Taiwan and Tibet. After the Dalai Lama appealed to the United Nations for a hearing of the Tibetan question, Dr. T. F. Tsiang, the representative of Nationalist China, declared on September 29 that Free China condemned the Communist atrocities in Tibet and would welcome any proposal to examine them in the U.N. General Assembly. (See also United Nations.)

The Chinese Nationalists showed great concern over Soviet Premier Khrushchev's visit to the United States in September when he posed as a man of peace and pleaded for relaxation of international tensions. Taipei saw deception in Khrushchev's peace gestures, but was confident that the United States would not do anything detrimental to Nationalist China's interests.

On May 28, 1959, the International Olympic Committee yielded to Russian pressure and withdrew recognition from Nationalist China on the ground that it "no longer represents sports in the entire country of China." The action incurred vigorous protest from Taiwan and severe criticism in the United States, but the committee insisted that Nationalist China could be readmitted only if it dropped any reference to China in its name.

The Taiwan Strait remained relatively quiet in 1959, although there were occasional artillery duels between Communist China and the Nationalist-held offshore islands of Matsu and Quemoy. On July 5 an air battle was fought near Matsu between the Communist and the Nationalist forces. Taipei claimed that four Communist jet fighters were shot down and one was crippled so severely that it probably failed to return to its base. Although there was no sign of immediate attack on Taiwan, the Chinese Communists con-

tinued to voice their determination to "liberate" the island. To be prepared for any eventuality, the Nationalists maintained large forces on the offshore islands, and in October they further strengthened their air force with a number of supersonic RF-101 Voodoo jets from the United States.

Taiwan's economy showed a marked stability at the beginning of 1959. There was an increase in industrial output, especially of chemical products, textiles, and machinery. The living standard was high by Asian standards; and clothing, food and housing appeared adequate. But the improved living conditions brought a rapid population growth; the recent rate of population increase was 3.6% a year, as compared with the annual 3% increase in food production. To meet the needs of the growing population, the government initiated in May a 10-year development plan which would involve a total expenditure of $278 million. The program included projects in irrigation, mechanized farming, and fishing, and involved the scheduled construction of many thousands of low-cost houses, the expansion of electrification in rural districts, and a large-scale increase in transportation facilities.

Taiwan's economy suffered a severe setback in early August when flash floods, caused by the heaviest rains in 60 years, hit the central and southern parts of the island. The floods destroyed 15,000 houses and damaged 11,900. The casualty list included 2,000 dead, missing, and injured, and 169,000 homeless. Property loss was estimated at over $85 million. To avoid inflation in the rehabilitation effort, the Nationalist government ordered austerity and strict budget control. The armed forces mobilized thousands of men to assist in the rehabilitation work. By October it was reported that replanting had been completed on 16,783 hectares, or about half of the damaged land.

TARIFFS. In 1959 upward of 20 countries either instituted or were preparing comprehensive revisions of their tariffs. In Central and South America, five countries—El Salvador, Guatemala, Argentina, Colombia, and Venezuela—completed tariff revisions during the year. The two Central American countries, as well as Venezuela, employed the Uniform Customs Nomenclature of Central America (NAUCA), while Argentina and Colombia apparently continued the basic tariff nomenclatures that they had previously used. In general the newly adopted tariffs resulted in higher rates of duty on substantial numbers of items. Colombia and El Salvador employed compound rates of duty (specific plus ad valorem rates) throughout their duty schedules; Guatemala replaced many of its specific duties with ad valorem rates.

In Europe, five countries effected revisions of their tariffs. The new tariffs of Denmark, Norway, Sweden, Italy, and the United Kingdom were all based on the Brussels nomenclature (sponsored by the Customs Union Study Group), largely in anticipation of each country's participation in either the European Common Market (q.v.), the projected Nordic Custom Union of Norway, Denmark, Sweden, and Finland, or the European Free Trade Association (q.v.). The new tariffs did not substantially alter the height of individual rates of duty. The Scandinavian countries, however, largely replaced specific rates with ad valorem duties.

HAMILTON WRIGHT

Shimen Dam, major facility of an $80 million hydroelectric project planned for Taiwan, will be erected beyond this bridge on Takekan Creek in the north part of the island.

In Africa, Tunisia adopted a new tariff, effective in the fall of the year. The nomenclature was based on the Brussels model, and rates of duty were predominantly ad valorem.

During 1959 several countries undertook tariff revision projects or continued projects instituted earlier. Uruguay established a special commission to undertake a revision of its tariff. Yugoslavia approved customs procedures to be effective when a new tariff, in preparation, was completed. Israel was revising its tariff nomenclature to accord with the Brussels model. Lebanon's tariff-revision project, designed to adopt the Brussels nomenclature, was virtually completed by late 1959. Japan and Australia both began comprehensive revisions to modernize their tariff nomenclatures; Australia indicated that it intended to follow the Brussels pattern.

Partial tariff revisions resulting in duty changes on a considerable number of items were effectuated by several countries in 1959. As in recent years, Mexico made many changes in individual rates of duty, the majority resulting in higher levies on imports. Several other countries—the Dominican Republic, Peru, Sudan, Libya, Ghana, and South Africa—increased rates of duty on a substantial group of items. A few countries, including Austria and Ireland, unilaterally reduced rates of duty on a number of items.

Among the more important developments in the field of tariffs in 1959 were activities relating to the European Economic Community, widely known as the European Common Market; the European Free Trade Association (FTA); and similar projects by other groups of countries. Among other matters, the treaty for the European Common Market, designed to achieve ultimately integration of the economies of Belgium, France, West Germany, Italy, Luxembourg, and the Netherlands, called for the gradual reduction of import duties and other restrictions on trade among the six countries and the creation of a common tariff on imports from outside the Common Market area. On Jan. 1, 1959, the six member countries made an initial reduction of 10% in their customs duties on imports from one another; the second reduction, also of 10%, was expected to become effective in July 1960. During the year, experts from the Common Market countries continued work on a common tariff which was expected to be completed early in 1960. Some of the individual rates of duty in the common tariff were fixed by the original treaty; some were to be determined by calculating the arithmetic average of the existing rates

in the tariffs of the countries concerned; and some were to be established by negotiation among the six countries.

Following the breakdown late in 1958 of negotiations for a free-trade area that would encompass most of western Europe, seven countries—Austria, Denmark, Norway, Portugal, Sweden, Switzerland, and the United Kingdom (the so-called Outer Seven)—undertook to establish a free-trade area among themselves. A Ministerial Committee composed of representatives of the seven countries met at Stockholm, Sweden, in July and November to negotiate a treaty for establishment of a European Free Trade Association. The Outer Seven completed and initialed the treaty on November 20, and hoped to have it ratified by all countries concerned no later than March 1960. The treaty provided that each of the seven countries would in July 1960 reduce by 20% its import duties on trade from the other member countries, thereby matching the tariff cut planned by the six Common Market countries. Subsequent tariff reductions on trade among themselves would follow the same 10% yearly reduction schedule established by the European Common Market, completely eliminating such import duties by 1970. In contrast to the Common Market, however, the Outer Seven would each maintain their individual tariffs on goods imported from outside the free-trade area, rather than adopt a common tariff.

In Central America, three of the five countries involved in the Central American Trade Treaty (ODECA) had ratified the agreement, thus putting the treaty into force. The treaty, which provides for limited free trade among the countries involved, was binding, however, on only the three ratifying countries—El Salvador, Nicaragua, and Guatemala. By late 1959, Honduras and Costa Rica had not ratified the treaty. In Africa, the four countries that made up former French Equatorial Africa—Chad, Gabon, Congo, and the Central African Republic—announced their intention to form a customs union. Proposals were also made or studies continued during 1959 for customs unions or free trade areas involving various groups of South American and Middle Eastern countries.

General Agreement on Tariffs and Trade.—The activities of the General Agreement on Tariffs and Trade (GATT) during 1959 related chiefly to the 14th and 15th sessions of the contracting parties, which were held in May at Geneva, Switzerland, and in October–November at Tokyo, Japan, respectively. Both meetings were devoted largely to customary items of business, such as complaints regarding violations of GATT obligations and reports from various members on their actions under waivers granted to them. Three matters, however, were of major concern to the contracting parties: (1) consultations with member countries still imposing import restrictions presumably to safeguard their balance of payments; (2) consultations with the six Common Market countries on the possible effects of the Common Market on their joint trade; and (3) discussions of problems affecting international trade between the so-called underdeveloped countries and the industrial trading nations. At the 14th session, the 37 GATT members agreed to hold a major round of tariff negotiations beginning in September 1960. At that conference, negotiations would be held among member countries, between member countries and the Common Market, and between members and countries desiring to accede to GATT. In 1959, Israel and Yugoslavia both joined GATT on a provisional basis; Poland's application to accede to GATT was under consideration.

Work of the U.S. Tariff Commission.—In 1959 the U.S. Tariff Commission conducted a variety of investigations pursuant to public law and executive order; continued its tariff classification study; and answered numerous requests for information from Congress, other government agencies, and the public. As in recent years, the commission's investigatory activities occupied the greater part of its time.

Under Section 7 of the Trade Agreements Extension Act, as amended, the commission had 16 escape-clause investigations pending before it during the first 10 months of 1959. By the end of October, the commission had completed 11 of the 16 investigations, and it had terminated three investigations without formal findings. In three of the completed actions, the commission found that the domestic industry was being seriously injured as a result of increased imports and recommended to the president the imposition of increased import restrictions. In acting on the commission's recommendations, the president imposed a tariff quota on imports of certain stainless-steel table flatware, but decided not to impose increased restrictions on imports of tartaric acid and cream of tartar. In the other eight completed investigations, the commission did not recommend that the existing trade-agreement concession be modified for certain carpets and rugs, scissors and shears, hand-made glassware, calf and kip leather, axes and ax heads, hardwood plywood, mink skins, and fescue seed.

As required by paragraph 1 of Executive Order 10401, the commission in 1959 submitted to the president periodic reports reviewing the escape-clause actions previously taken by the United States on watch movements, bicycles, dried figs, and toweling of flax, hemp, or ramie. In each instance the commission found that continuation of the modified duty under the escape action was necessary to prevent serious injury to the industry involved. Except for the finding on bicycles, on which he had not acted by late 1959, the president concurred in the commission's findings.

Under Section 22 of the Agricultural Adjustment Act, the commission completed three investigations in the first 10 months of 1959 to determine whether imports of certain products were interfering with programs of the U.S. Department of Agriculture. The commission found that no changed circumstances required modification of the existing quota on long-staple cotton, and that a quota should be imposed on imports of rye, rye flour, and rye meal. The president subsequently accepted the findings on long-staple cotton, and imposed a modified quota on imports of rye and rye products. In its investigation of shelled and prepared or preserved almonds, two commissioners found that a fee should be imposed on imports of those articles and two commissioners found that no additional import restrictions were necessary. The president had not acted on the commission's report by the end of October.

By late October 1959, three complaints had been acted on by the Tariff Commission, under Section 337 of the Tariff Act of 1930, with respect to alleged unfair methods of competition and unfair acts in the importation of articles into the United States. A complaint relating to certain map-making instruments was dismissed after preliminary inquiry, and action on two complaints relating to phonograph pickup cartridges, elements, and needles was concluded with a finding that no industry in the United States was being or was likely to be injured by reason of the imports of the articles concerned.

Under Section 332 of the Tariff Act of 1930, the commission in 1959 instituted two investigations pursuant to Senate resolutions and three pursuant to resolutions of the Senate Committee on Finance. Investigations of iron ore and carpet wool for papermakers' felts were completed, and major reports were issued.

On September 14, the president signed a law permitting the duty-free entry of works of art not using conventional art materials (see also PAINTING AND SCULPTURE).

The Customs Simplification Act of 1954 directed the Tariff Commission to make a comprehensive study of the United States tariff schedules and to submit to Congress and the president proposals for their simplification. During 1959 the commission published the final sections of its proposed revised tariff schedules, and held the required public hearings. The commission expected to release its final recommendations in 1960.

JOSEPH E. TALBOT,
Chairman, U.S. Tariff Commission.

TAXATION. Developments of 1959 in the field of taxation in the United States were highlighted by congressional passage of several major tax measures, numerous court decisions and new Treasury rulings, a decline in federal tax collections, and a contrasting increase to record highs in state tax revenues.

Federal Tax Laws.—The Life Insurance Company Income Tax Act of 1959 (P.L. 86–69) established a permanent method of taxing life in-

surance companies for 1958 and thereafter. The new law taxes insurance companies on both their investment income and underwriting profits.

In order to help the highway construction program, Congress enacted a measure (P.L. 86–342) that raised the federal tax on gasoline and other motor fuels from 3 cents to 4 cents a gallon for the 21-month period of Oct. 1, 1959, through June 30, 1961.

An excise tax law tied up some of the loose ends left by the comprehensive excise tax law revision of 1958. The new enactment (P.L. 86–344) covers the stock transfer tax, the retailers' jewelry tax, exemptions from the tax on club dues for payments made for capital improvements, and other excise tax matters.

In the area of personal income taxes, a law was enacted enabling a person with whom a child is placed by an agency for legal adoption to deduct a dependency exemption for the child even though it was not in the taxpayer's home for the entire taxable year, as was previously required.

To restrict state taxation of income from interstate sales, Congress passed a bill (P.L. 86–272) barring any state from taxing in-state earnings of out-of-state firms which maintain no facilities within the state.

Tax Rates.—The corporate normal tax rate of 30% was automatically scheduled to drop to 25% on July 1, 1959, and the excise taxes on certain automobile chassis (generally passenger automobiles), liquor, and cigarettes were to return to their lower pre-Korean War rates by the same date. Once again, on June 30, 1959, President Eisenhower signed a law (P.L. 86–75) postponing all these changes, this time to July 1, 1960. The same act cuts the excise tax on transportation of persons from 10% to 5%, beginning July 1, 1960, and ends the communications tax on general telephone service on the same day.

U.S. Supreme Court Decisions.—Under most financing arrangements for the sale of automobiles and trucks, the finance company withholds a part of the money due the dealer in order to cover losses, repossessions, and other costs, and pays the dealer this withheld amount after certain conditions are met. The lower courts had split on when to tax these withheld reserves as income to dealers who reported on the accrual basis. The U.S. Supreme Court settled the dispute by holding that the crediting by the finance company to the dealer's reserve is immediately taxable to the dealer.

The Supreme Court decided that a businessman may not deduct the cost of fighting proposed legislation, even though enactment would result in his having to go out of business.

The high court also held that contractors who do "strip" mining for owners on leases of coal land are not entitled to depletion deductions if they do not make a capital investment, or acquire an economic interest in the coal in place. (See also LAW.)

Other Court Decisions.—Accident and health policy premiums were held deductible as medical expenses even if the policy covers payments for such injury as loss of time or loss of limb. A resident of Los Angeles who went to a New York physician for a medical check-up was permitted to deduct his traveling expenses to and from New York as a medical expense.

A corporate officer was allowed to deduct as a business expense the cost of reading material dealing with business matters, such as the *Wall Street Journal*, but was not allowed to deduct the cost of periodicals of general interest, such as *Time* magazine. Another corporate executive was barred from deducting unreimbursed travel expenses because it was shown that his firm would have reimbursed him for these outlays if he had so requested.

Strike benefits paid by a union to its striking members solely on the basis of need and without requiring any services to be performed for the union in exchange were held not to be taxable income to the strikers, but the Supreme Court agreed to review this case. A person who paid for special counsel and for advertising in the process of seeking a new job was not allowed to deduct these costs as an expense.

An expensive automobile given to an individual for furnishing a firm with a customer lead was held not to be taxable income to him because the firm intended the car as a gift, not as compensation. Voluntary payments made by a deceased employee's firm to his widow were held to be nontaxable to her, even to the extent that they exceeded $5,000, although a literal reading of the applicable statutory provision might seem to limit the tax-free portion of such payments to only $5,000.

One court allowed a medical doctor to deduct the cost of his own psychoanalysis because it led to a better understanding of how to deal with patients in his own practice. Another court held that doctors could band together in a way which made them taxable as a corporation for federal tax purposes, even though the applicable state law barred the practice of medicine in corporate form.

Treasury Rulings.—Items of merchandise of nominal value, such as turkeys and hams, distributed by an employer to employees at Christmas or other holidays are not taxable income to the recipient if part of a general distribution intended to promote good will among employees. But gifts of cash, gift certificates, or other items readily convertible into cash are income to the employees regardless of the amount involved.

A father may deduct as a business expense the salary he pays to his child for services rendered to the father's business, even if the child uses the salary to pay for his own support.

Termite damage may be deducted as a casualty loss if it occurs within a relatively short period of time. Casualty losses on business property may now be computed in the more favorable manner previously limited to losses on nonbusiness property.

Meals and lodging for employees required to live on the employer's premises were ruled not taxable to the employee whether furnished directly without any charge, or by way of a higher salary from which the employer deducts a charge.

A medical expense deduction will now be allowed for the cost of permanent improvements, such as stair elevators and air conditioners, which are installed on recommendation of a physician for reasons of health, as long as the improvement does not increase the value of the property on which it is installed.

Government Revenue Collections.—Federal tax collections slipped from $79,978,476,000 for the fiscal year 1958 to $79,797,973,000 for the fiscal year 1959. This marked the second year in a row that federal revenues had declined following the all-time high of $80,171,971,000 collected for the fiscal year 1957. A drop of more than $2 billion in corporation income taxes during the fiscal year 1959 was largely offset by an increase of about $2 billion in individual income taxes.

State tax collections continued their unbroken rise to new heights, reaching a peak of $15,831 million for the fiscal year 1959, as against the previous record of $14,919 million for 1958. Sales and gross receipts taxes continued to produce nearly three fifths of the total.

Per capita state taxes ranged from a high of $149.94 in Delaware to a low of $55.60 in Nebraska. The average per capita tax for 49 states went up to $91.70 for the fiscal year 1959, compared with a 48-state average of $88 for 1958.

STATE TAX COLLECTIONS, BY TYPE OF TAX[1]
(Amount in millions)

Tax source	1959[2]	1958	1957	1942
Total collections	$15,831	$14,919	$14,531	$3,903
General sales or gross receipts	3,694	3,507	3,373	632
Motor fuels	3,048	2,919	2,828	940
Alcoholic beverages	599	566	569	257
Tobacco products	680	616	556	130
Insurance	548	455	428	113
Public utilities	364	345	343	100
Motor vehicle licenses	1,381	1,319	1,289	431
Corporation licenses	360	346	408	93
Alcoholic beverages licenses	85	81	81	56
Hunting and fishing licenses	108	100	90	24
Individual income[3]	1,778	1,544	1,563	249
Corporation net income[3]	979	1,018	984	269
Property	565	533	479	264
Death and gift	349	351	338	110
Severance	392	370	338	62
Other	903	848	814	172

[1] Because of rounding, detail does not always add to total. [2] Preliminary. [3] Individual income tax figures include corporation net income tax amounts for from 1 to 3 states in each fiscal year shown. (Source: U.S. Department of Commerce.)

Local tax collections also rose to a new record high of $15,461 million for the calendar year 1958, compared with $14,511 million for the fiscal year 1957. Property taxes accounted for $13,514 million of the total.

Tax Developments in Other Countries.—Argentina raised its individual normal tax rate from 7% to 9% and lifted the top surtax rate from 43% to 45%, but simultaneously increased the nontaxable minimum income and personal deduction. Brazil adopted an individual income tax scaled from 30 cruzeiros per 1,000 on 91,000 to 120,000 cruzeiros, to 500 cruzeiros a 1,000 on more than 3,001,000 cruzeiros.

Canada raised personal income tax rates by 2 percentage points on all income brackets over $3,000 and boosted the basic corporate tax rate from 45% to 47%. It also increased from 2% to 3% the extra tax which is used to finance the old-age pension fund.

Cuba enacted an entirely new tax law with personal income tax rates scaled from 3% to 60%, while the basic business profit tax was set at 40%. The Dominican Republic increased its temporary tax surcharge to 10% so that the scale of rates on business income ranges from 7.7% on the first 3,000 pesos to 33% on taxable income over 50,000 pesos.

Ghana extended the list of activities eligible for its special five-year tax exemption period to include manufacture of glass, milk products, ice, cosmetics, pharmaceutical products, textiles, and signs.

Great Britain lowered its basic income tax rate on companies and individuals from 42½% to 38¾%. Sales taxes on luxury goods such as automobiles were cut from 60% to 50%, while other sales tax rates of 30% and 15% were cut to 25% and 12½%, respectively. Industrial firms were given a new investment allowance of 20% on new plant and equipment and 10% on industrial buildings, in addition to annual depreciation allowances.

Ireland cut the standard rate of income tax payable by companies and individuals to 35%, but made no change in the 10% profits tax. The effective corporate tax rate was therefore reduced from 47½% to 45%. Kuwait made its income tax applicable to foreign firms doing business in the country even if in partnership with a Kuwait firm, which was formerly a basis for exemption from tax.

Liberia increased its 25% corporate income tax rate on incomes over $75,000 to 30% on income between $75,000 and $100,000 and 35% on income over $100,000. Nicaragua revised its income tax schedule, which previously ran from 4% on the first 40,000 córdobas of taxable income to 18% on over 1 million córdobas, so that the upper range became 30% on over 200,000 córdobas. Pakistan sought to induce investment of foreign capital by offering a two-year tax "holiday" for companies in industries based primarily on Pakistani raw materials.

Sweden reduced its corporate income tax rate from 50% to 40% and lowered its entertainment tax from 38% to 33% of the price of a ticket. Venezuela boosted its income tax rate scale, which ran from 1½% to 26%, so that it now starts at 2% and goes to a high of 45%.

LEON GOLD,
Chairman, Tax Department,
Research Institute of America, Inc.

TAYLOR, Robert Lewis, American author: b. Carbondale, Ill., Sept. 24, 1912. Winner of the 1959 Pulitzer Prize for fiction, Taylor attended Southern Illinois University and the University of Illinois, graduating from the latter in 1933. After traveling abroad for a year and serving from 1936 to 1939 as a reporter for the St. Louis *Post-Dispatch,* he joined the staff of *The New Yorker* magazine, principally as a contributor of "Profile" and "Reporter at Large" articles. During World War II, from 1942 to 1946, he served with the U.S. Navy, returning to *The New Yorker* after his tour of duty. Other periodicals to carry the Taylor by-line have included *The Saturday Evening Post, Collier's, Redbook, Life, Esquire,* and *Reader's Digest.*

On May 4, 1959, it was announced that Taylor had been awarded the Pulitzer Prize for his novel, *The Travels of Jaimie McPheeters* (1958). This carefully researched book, picaresque in style, is a fictionalized account of an overland wagon trek to California during the gold rush of 1849. Taylor's other published volumes include *Adrift in a Boneyard* (1947), *Doctor, Lawyer, Merchant, Chief* (1948), *W. C. Fields, His Follies and Fortunes* (1949), *Professor Fodorski* (1950), *The Running Pianist* (1957), *Winston Churchill, An Informal Study in Greatness* (1952), *The Bright Sands* (1954), and *Center Ring: The People of the Circus* (1956).

TEA. World production of tea in 1959 was forecast by the Foreign Agricultural Service of the U.S. Department of Agriculture at 1,671 million pounds (excluding Communist China and the USSR). This was about 1% more than the estimated production of 1,654 million pounds in 1958 and about 24% more than the average of 1950–54. As usual, India and Ceylon were expected to produce about 70% of the total output. Only about 6% of the indicated 1959 production was expected to be produced outside of Asia.

WORLD TEA PRODUCTION*
(1,000 pounds)

	1950–54 (average)	1958 (prelim.)	1959 (forecast)
India	623,552	708,802	715,000
Ceylon	331,821	413,200	420,000
Japan	112,405	164,438	165,000
Indonesia	130,340	153,740	153,200
Pakistan	53,431	54,100	52,000
Taiwan	24,972	35,657	36,000
Kenya	15,094	25,179	26,500
Nyasaland	15,036	23,293	24,000
Mozambique	7,595	15,430	16,000
Argentina	690	5,400	6,000
World	1,344,632	1,654,287	1,671,400

* Excluding Communist China and the USSR.

African production was forecast at 93 million pounds, about 4% more than in 1958, as new plantings were beginning to bear, and output from existing acreage was increasing. African production is soon expected to reach 100 million pounds.

Latin American production was forecast at 10.3 million pounds in 1959, about 11% more than a year earlier. About 60% of Latin American production is in Argentina, where tea is a new industry. Output could increase substantially if modern processing and grading machinery becomes available.

It is expected that a large increase in production will occur in Communist China once the areas reported to have been planted since 1953 come into full bearing. Figures on China's output, however, are not available.

The United States, second only to the United Kingdom as a market for tea, imported about

103.3 million pounds in 1958, and probably imported about the same quantity in 1959. Per capita consumption of tea in the United States has been about 0.6 pounds per year since the mid-1950's.

C. J. Enzler,
Information Specialist, Office of Information, U.S. Department of Agriculture.

TEETH. See Dentistry.

TELEGRAPHY. Telex.—In 1959, Telex, an automatic telegraph exchange service which enables subscribers to dial correspondents and hold instantaneous and direct two-way telegraphic communication, was inaugurated by Western Union between cities in the United States. Already in use between New York City and Canadian cities since 1958, the service was extended from New York to Chicago, San Francisco, and Los Angeles during 1959.

Automation.—Much progress was made in 1959 toward automating and mechanizing telegraph operations, with the result that there is faster, more efficient telegraph service, especially over lines between main telegraph offices and customers' offices, and between main and branch telegraph offices. In addition, many teleprinter tieline customers were connected directly with the national transmission network.

Armed Forces.—Western Union has now completed the installation of a 450,000-mile telegraphic network linking U.S. Air Force stations throughout the world. The system has a capacity of 130 million words a day. Western Union also provided the Strategic Air Command (SAC) with the first nationwide high-speed facsimile network. This network, which links 57 stations of the Air Weather Service, is used to transmit up-to-the-minute weather maps and provide high-altitude weather information to SAC air operation centers.

Private Wire Systems.—The rapid growth of leased private wire systems is indicated by Western Union's revenues from this source. At the end of 1959, private wire revenues were at the rate of about $55 million a year. The 1959 revenues present a marked contrast with those of 1949, when private wire revenues were $8,131,000, or 4% of the total.

Integrated Data Transmission.—An important factor in the increasing demand for private wire systems is the large number of companies which are ordering networks to link electronic data machines with their widespread field organizations. As a result, most systems now being installed are engineered for data processing and management control uses, as well as for administrative messages.

Fully electronic designs are replacing electromechanical designs. For example, ultra-high-speed transmission channels, error-detecting devices, and completely automatic, transistorized switching centers have been developed by Western Union engineers to meet the exacting needs of data systems.

Some of the most advanced developments are employed in a new type of switching center in the private wire systems of the United States Steel Corporation and United Air Lines. Through the use of a "director-translator," which operates like the memory unit of a computer, these systems flash any message to the station or stations indicated by the routing code on the "common-language" tape. Each destination is represented by a small card with a special combination of electrical connections. When the code address of a message arrives, electrical impulses race through the card cabinet and instantly select the correct card. This in turn signals a rotary switch in the center, which then selects the circuit over which the message flashes to its destination.

(See also Electrical Developments; Federal Communications Commission; Public Utilities.)

George P. Oslin,
Publicity Director, Western Union Telegraph Company.

TELEPHONE. At the beginning of 1959 there were about 124,800,000 telephones in service throughout the world, a gain of 7 million since January 1958. Most of these were in North America and Europe, and more than half were in the United States alone. Countries having one million or more telephones in service were: Argentina, 1,223,509; Australia, 1,998,704; Belgium, 1,036,305; Canada, 5,122,519; France, 3,703,578; German Democratic Republic (East Germany), 1,175,131; Federated Republic of Germany (West Germany), 5,090,102; Italy, 3,182,455; Japan, 4,334,602; Netherlands, 1,402,155; Spain, 1,490,151; Sweden, 2,526,424; Switzerland, 1,475,003; USSR, 3,700,000 (est.); United Kingdom, 7,525,000; and United States, 66,645,000.

TELEPHONES BY CONTINENTAL AREAS
(As of Jan. 1, 1959—partly estimated)

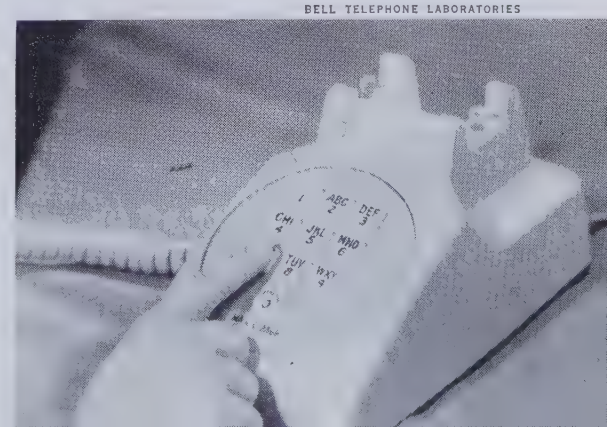
Area	Number	Per cent of world total	Per 100 population
North America	71,803,700	57.6	37.2
Central America	910,800	0.7	1.4
South America	2,999,600	2.4	2.2
Europe	37,593,900	30.1	6.6
Africa	1,768,600	1.4	0.7
Asia	6,855,500	5.5	0.4
Oceania	2,867,900	2.3	18.2
World	124,800,000	100.0	4.3

United States Service.—During 1959 a telephone user in the United States, including Alaska, could reach more than 97% of the world's telephones. About 94% of the telephones in the United States were dial-operated, and about 15 million customers could dial their own long-distance calls across the country. Approximately 4,500,000 additional customers could dial their long-distance calls to a more limited extent. About three fourths of all telephones in the United States could be reached by such "direct distance dialing" by the end of 1959. The total investment in telephone plant and equipment in the United States exceeded $25 billion in 1959.

Ocean Cables.—A second transatlantic telephone cable system was placed in service in September 1959, the first such system connecting North America with continental Europe. The previous (1956) transatlantic telephone cable system connected North America with Britain, and additional

Experimental model of the telephone of the future, which will feature push buttons rather than a conventional dial.

BELL TELEPHONE LABORATORIES



cable systems connect the mainland United States with Cuba, Alaska, and Hawaii. Another undersea cable system, between the United States and Puerto Rico—the deepest in the world—is scheduled for service early in 1960.

New Services.—During 1959 the products of modern electronics—particularly transistors and related miniature devices—continued to be introduced into the telephone industry at an accelerated pace. A compact transistorized amplifier for so-called "exchange trunks" between telephone offices was placed in production. Under development was a pulse code modulation system—equipment allowing several telephone conversations to be carried over a single pair of wires between central offices. Transistors and many other new electronic devices played an important part in building the Bell System's first electronic telephone switching system, scheduled to be placed on trial in 1960 at Morris, Ill.

Among new instruments under test or development during 1959 were a telephone set having push buttons in place of the conventional dial, a new lightweight telephone set, pocket radio receivers for signaling telephone calls, and automatic dialers. "Dataphone" service and other systems for transmitting business data at high speeds became a more important part of communications service during the year.

To test new designs for undersea telephone cables, facilities for simulating ocean environments and cable-laying operations were set up on land by Bell Telephone Laboratories, the research and development unit of the Bell System. Another product of research was an improved, electronic artificial larynx to aid people who have lost the power of speech.

Space Communications.—In cooperation with the National Aeronautics and Space Administration (q.v.), the Bell System started work on a series of experiments in which balloon-type satellites are to act as "mirrors" for reflecting radio signals over very long distances. The equipment was designed to "bounce" radio signals from aluminum-coated spheres, 100 feet in diameter, which are scheduled to be placed in orbit in 1960.

Defense.—The growing network of bypass routes around major cities was a continuing, important contribution to defense during 1959. Also during the year the Western Electric Company, manufacturing and supply unit of the Bell System, continued extension of the Distant Early Warning (DEW) Line and of the Ballistic Missile Early Warning System (BMEWS) for detecting and reporting attack by ballistic missiles. Also under development and test were the Nike-Zeus system, designed to intercept and destroy intercontinental ballistic missiles, and an accurate guidance system intended for use with the Titan intercontinental ballistic missile.

American Telephone and Telegraph Company.

TELEVISION. See RADIO AND TELEVISION.

TENNESSEE. South Central state, United States; admitted to the Union, June 1, 1796. The "Volunteer State" ranks 34th in area and 17th in population among the 50 states.

Area and Population.—Area: 42,244 square miles (land, 41,794; inland water, 447), divided into 95 counties. Population: (1950) 3,291,718; (est., July 1, 1958) 3,468,000. Urban places with populations above 10,000 (as estimated by the state Department of Public Health for July 1, 1959) are:

Bristol	19,330	Kingsport	24,350
Chattanooga	133,703	Knoxville	136,969
Clarksville	20,330	Memphis	466,299
Cleveland	13,765	Morristown	17,615
Columbia	11,218	Murfreesboro	16,342
Dyersburg	11,672	Nashville	180,694
Elizabethton	12,824	Oak Ridge	30,229
Jackson	35,641	Tullahoma	11,618*
Johnson City	30,206		

* Special census, 1958.

Executive.—Chief state officers in 1959:
Governor: Buford Ellington (Democrat)
Lieutenant Governor: William D. Baird
Secretary of State: Joe C. Carr
Treasurer: Ramon T. Davis
Attorney General: George F. McCanless
Comptroller of the Treasury: William A. Snodgrass
Commissioner of Education: Joe Morgan

Constitution and Judiciary.—The present constitution went into effect in 1870. The Supreme Court comprises five justices; chief justice in 1959 was Albert B. Neil.

Legislature.—The Tennessee General Assembly comprises a 33-member Senate (in 1959, 28 Democrats and 5 Republicans) and a 99-member House of Representatives (82 Democrats and 17 Republicans), which meet in odd-numbered years commencing the first Monday in January.

Fiscal legislation for the 1959–61 biennium authorized expenditures which included $531 million for state government operations; $259 million for spending under the General Education Act, including $8.5 million for increases in elementary and secondary school teachers' salaries; and $320 million for highway construction and maintenance. The personal property tax was removed, and the tax on machinery installed in new or expanded industries was lowered to 1%.

Other legislation created a Department of Conservation and Commerce; set up a commission for planning observance of the 100th anniversary of the Civil War; made provision for General Sessions courts in counties where they are not already functioning; provided for uniform jury selection; authorized establishment of private development credit corporations and industrial parks; and approved a compact with Alabama and Mississippi to promote the Tennessee-Tombigbee Waterway. (See also below, *Principal Events, 1959.*)

Finance.—In the 1958–59 fiscal year, state revenue of $465,825,609.13 comprised $282,781,158.95 from state tax sources, $152,549,188.59 from the federal government, and $30,495,261.59 from other sources. Tax revenue consisted of $98,324,818.58 from a 3% general sales tax, $4,805,652.08 from individual income taxes, $16,482,134.29 from corporate income taxes, $72,542,956.82 from motor fuel taxes, $561,490.71 from licensing, and $90,064,106.47 from other sources. Expenditures of $443,254,086.15 comprised $122,255,179.72 for education, $72,155,687.34 for health, welfare, and safety, $132,029,989.97 for highways, and $116,813,229.12 for other purposes. Long-term indebtedness on June 30, 1959, amounted to $114,179,500.

Banking.—As of June 10, 1959, the state's 75 national banks had $2,224,093,000 in assets, $1,409,957,000 in demand deposits, and $615,291,000 in time deposits. The 219 state banks had assets (including all public funds) of $986,454,361.84, demand deposits of $527,342,329.17, and time deposits of $363,565,409.34.

Education.—School attendance is compulsory between the ages of 7 and 16, inclusive. National Education Association estimates for the 1959–60 school year indicated operating expenditures for the state's public elementary and secondary schools at $156 million ($211.50 per pupil). Estimated revenue comprised $73 million from local school districts, $94.5 million from the state, and $8 million from the federal government. Capital outlays for construction and improvements amounted to $30.5 million, and teachers' salaries averaged $3,775 (high school, $4,100; elementary, $3,650).

In the 1959–60 school year there were an estimated 625,700 pupils in public elementary schools served by 19,165 teachers, and 184,800 public secondary school pupils with 7,200 teachers. Enrollment in colleges and universities (1958–59) totaled 56,910.

Public Assistance.—In the 1958–59 fiscal year, public assistance expenditures from federal, state, and county funds (excluding institutional costs) totaled $49,760,683, including $27,432,010 for the aged, $17,274,389 for dependent children, and $3,501,064 for the permanently and totally disabled. A monthly average of 144,672 persons received public assistance.

Labor Force.—In 1959 the state's labor force totaled 1,340,000 persons, including 215,000 agricultural workers. Nonagricultural employment in June numbered 874,300, above both the 836,100 figure of the previous June and the 849,900 average for 1958. Of nonfarm employees in June 1959, 34.4% were employed in manufacturing, 21.6% in trade, and 16.6% in government. Insured unemployment of 30,800 in July 1959 was well below the 55,350 total of the previous July.

Manufacturing.—The state's 4,100 manufacturing plants in 1958 employed an average of 287,200 persons who received $800 million in wages. Value added by manufacture (1957) totaled $2,126,529,000, and outlays for new plant and equipment amounted to $218,700,000. Production workers averaged $72.51 for an average workweek of 41.2 hours in August 1959.

MAJOR TENNESSEE MANUFACTURES, 1957

Product or industry	Average no. of employees	Salaries and wages (thousands of dollars)	Value added by mfr.* (thousands of dollars)
Chemicals and products	42,149	$226,013	$559,116
Food and kindred products	28,359	107,715	240,806
Textile mill products	30,996	87,213	154,151
Primary metal industries	14,418	64,926	144,073
Fabricated metal products	20,797	81,485	135,126
Pulp, paper, and products	9,328	43,163	114,405
Apparel and related products	32,818	73,243	107,669
Transportation equipment	6,412	29,055	86,881
Printing and publishing	11,193	47,886	79,494
Leather and leather goods	12,182	33,510	72,496

* For definition see footnote 1 in the article *Industrial Production.* (Source: *Annual Survey of Manufactures: 1957.*)

Mining.—In 1958 Tennessee was 27th among the states in the value of its mineral output, with 0.76% of the national total. It was first in output of ball clay (64% of domestic output), dimension marble, pyrites, and, for the first time, in zinc production; second in phosphate rock; and third in fullers' earth (8% of national total).

TENNESSEE MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Cement (bbl.)	8,375,000	$ 26,408,900
Clays	935,000	4,210,000
Coal	6,785,000	25,969,000
Copper	9,109	4,791,000
Manganese ore	5,935	452,000
Phosphate rock (long tons)	1,903,000	13,041,000
Sand and gravel	5,612,000	6,671,000
Stone[1]	16,850,000	26,814,000
Zinc	59,130	12,062,000
Other minerals	...	6,932,000
Total	...	$124,928,000[2]

[1] Excludes certain stone, value of which is included in "Other minerals." [2] Total adjusted to eliminate duplications in value of clay and limestone, and excludes values for processed minerals. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1959 totaled $288,177,000, compared with $278,474,000 for the corresponding period of 1958. For the full year 1958, income comprised $272,049,000 from livestock and livestock products, $216,720,000 from crops, and $26,221,000 from government payments. Principal income sources in 1958 were: cattle, $90,135,000; dairy products, $74,943,000; cotton lint, $74,633,000; and tobacco, $66,276,000.

The state had 203,000 farms in 1958. Total acreage (1954) of 17,654,000 included 4,861,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 1,753,000 cattle, 1,182,000 hogs, and 7,580,000 chickens (excluding commercial broilers). Some 278,000 family and hired workers were engaged in farming during the week of Nov. 22–29, 1959.

TENNESSEE CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	327	690	450
Corn (1,000 bu.)	55,944	59,748	67,635
Cotton lint (1,000 bales)	572	419	665
Cottonseed (1,000 tons)	229	178	272
Hay (1,000 tons)	1,769	2,178	1,978
Oats (1,000 bu.)	5,719	4,500	5,166
Potatoes (1,000 cwt.)	1,037*	660	910
Sorghum sirup (1,000 gal.)	412	630	420
Soybeans (1,000 bu.)	3,554	6,486	7,132
Strawberries (1,000 lb.)	22,837*	31,500	20,020
Sweet potatoes (1,000 cwt.)	708*	504	700
Tobacco (1,000 lb.)	138,283	121,554	127,783
Wheat (1,000 bu.)	4,046	2,660	3,720

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways in the 1958–59 fiscal year totaled $130,395,471. Approximately 125 miles of construction were completed on new location, and 2,750 miles of existing highways were improved.

Highways and roads on Dec. 31, 1958, totaled 73,661 miles (69,062 surfaced). Registered *motor vehicles* numbered 1,159,540 on June 30, 1959, including 928,380 passenger cars. There were (1959) 27 *railroads* operating 3,442.63 line miles; 11 regularly scheduled *airlines;* and 59 *airports and airfields* (32 commercial and municipal, 2 military, and 25 private).

Communications media (1959) included 107 AM and 7 FM *radio stations;* 15 *television stations,* including one educational station; 29 daily *newspapers* (circulation, 1,030,298) and 127 other newspapers (267,167); and (January 1) 253,900 business and 749,200 residential *telephones.*

Principal Events, 1959.—The legislature in its biennial session, well controlled by Gov. Buford Ellington, avoided any increase in taxation and enacted the governor's programs for governmental reorganization, education (with provision for a very small increase in teachers' salaries), and highways. It rejected milk control and municipal local option liquor bills and all of the school segregation proposals except the executive-sponsored measure giving local school boards sole authority to enforce the compulsory attendance laws. It also refused to reapportion legislative representation, unchanged since 1901, with the result that a suit was filed in federal court to force action. A panel of three federal judges decided in December that it did not have jurisdiction. The case will be appealed to the U.S. Supreme Court.

After a one-year postponement, Memphis State University was successfully integrated in the fall, with eight Negro students being registered early to avoid the possibility of violence. Also integrated was a public school at Smyrna, which admitted 16 children of Negro soldiers at Sewart Air Force Base. The third grade of Nashville public schools was integrated without incident, and the U.S. Supreme Court refused to hear an appeal by the NAACP that the year-at-a-time plan of the city was too slow. A suit in federal court to require integration of Knoxville schools failed because of changes in the personnel of the school board. A new suit was filed in December.

The second conviction, in 1958, of John Kasper for contempt of court in fighting school integration at Clinton in 1956, was upheld by the U.S. Court of Appeals, and the U.S. Supreme Court refused to review the case. After his release from federal prison in December, Kasper faced another six-month sentence by a Tennessee criminal court—upheld by the state Supreme Court in July—growing out of his interference with school integration in Nashville in 1957.

A report of the U.S. Civil Rights Commission (see CIVIL LIBERTIES) in September claimed that Negroes were being prevented from voting in Fayette and Haywood counties.

TENNESSEE VALLEY AUTHORITY

Many beautiful lakes, like this one on Tennessee's Ocoee River, were formed by dams of the extensive TVA system to provide unsurpassed recreational facilities in addition to flood control, power production, and navigation benefits.

The limited constitutional convention which met in Nashville in July rejected two of the three amendments considered—proposals to reduce the voting age to 18 years and to increase the term of office of county sheriffs to four years. It approved an amendment to increase to four years the term of county trustees, and this measure will be submitted to the voters in November 1960.

Labor violence in the coal mining region of southeastern Kentucky and Anderson and Campbell counties in Tennessee, necessitated the use of Tennessee state troopers in May at Jellico and led to damage suits against the United Mine Workers.

In April the Atomic Energy Commission selected Oak Ridge as the site for a $30 million reactor project. On May 5 the inhabitants of Oak Ridge voted overwhelmingly in favor of incorporation of their city. The U.S. Senate on July 23 confirmed the appointment of ex-Congressman Brooks Hays of Arkansas as a director of the Tennessee Valley Authority (q.v.). In July, Congress finally passed a self-financing bill for TVA.

The recovery from recession, which began in late 1958, continued at a rapid pace in 1959, with new records being established in most areas of the state's economy. Total nonagricultural employment averaged over 20,000 persons per month higher than in 1958, with the greatest gain occurring in manufacturing employment, which showed an average monthly gain of 4.4%. Industrial activity reached new peaks, with the lumber and furniture and the chemical industries surpassing previous records. Primary and fabricated metals industries operated at near-peak production, affected only slightly by the prolonged steel strike. New records were set in home building, with surprising strength in business outlays for new construction and expansion. The federal and state highway programs aided the economy. General optimism was reflected in an all-time record level of retail sales, which increased 12.5% over 1958, with even higher percentage gains in heavy consumer goods such as automobiles and appliances. The agricultural picture was not so bright, owing to a slight general decline in prices of agricultural produce, with sizable declines in meat products, poultry, and eggs.

Principal Events by: STANLEY J. FOLMSBEE, *Professor of History, University of Tennessee.*

TENNESSEE VALLEY AUTHORITY. In August 1959, Congress amended the Tennessee Valley Authority Act of 1933 to authorize the issuance of up to $750 million of electric revenue bonds to finance additional generating capacity. The first plant to be built with bond proceeds will be at Paradise, Ky., on the Green River. Initially, it will have a single turbogenerator of 600,000 kilowatts capacity, the largest ever to be built.

The amendment limited the TVA's geographic expansion to no more than five miles from the periphery of its present 80,000-square-mile service area, and set a maximum limit of 2,000 additional square miles, of which no more than 500 square miles may be in one state. It also stipulated that TVA pay to the U.S. Treasury over a period of 54 years $1 billion of the present investment of appropriated funds (amounting to $1.2 billion). The TVA is also required to pay a return on the investment equal to the average interest rate on marketable Treasury obligations.

All additions to the power system started since 1953 have been financed from power revenues. The TVA has also paid $250 million of power revenues to the Treasury. At the close of the fiscal year 1959, the power assets exceeded $1.7 billion, or $0.5 billion more than the Treasury investment of $1.2 billion. The installed capacity of the system amounted to 11,434,000 kw. at the end of the year 1959, with an additional 1,883,000 kw. under construction to meet growing power requirements through 1962. The new projects included 500,000-kw. generating units at Widows Creek and Colbert steam plants, and additional hydroelectric capacity at Wilson and Wheeler dams.

At Wilson Dam the TVA placed in operation a new large lock with a single lift of 100 feet, thus removing a major bottleneck for growing traffic on the waterway. The new lock, which has a chamber 600 feet long and 110 feet wide, will reduce average locking time for tows from four hours to an hour or less. The two original small locks in tandem are to be modified and retained as auxiliaries.

In the fiscal year 1959, TVA sold 57.2 billion kw.-hr., about half of which was used by the Atomic Energy Commission and other federal installations. Power revenues were $237.5 million, and net income was $50.8 million. Locally owned municipal and cooperative distributors bought 17.7 billion kw.-hr. for distribution to nearly 1.4 million customers. Average annual household use of power in the calendar year 1959 exceeded 8,100 kw.-hr. per customer, or well over double the national average.

Traffic on the Tennessee waterway amounted to 2.1 billion ton-miles in 1958, with savings to shippers estimated at $24 million. During the first ten months of 1959, the traffic ran slightly higher than in the comparable period of 1958. TVA submitted to Congress a report, *A Program for Reducing the National Flood Damage Potential,* based on its experience of several years in working with local communities to aid them in avoiding flood damage.

About 240,000 tons of a variety of nitrogen, phosphate, and combination fertilizers were distributed from the TVA's Fertilizer-Munitions Development Center at Muscle Shoals, Ala., for use in educational programs in about three quarters of the states. The value of recreational improvements along and on the TVA lakes increased by $10 million to $82.3 million by the end of 1958.

The TVA's Board of Directors at the end of 1959 consisted of Brig. Gen. Herbert D. Vogel (Ret.), chairman; Arnold R. Jones; and Brooks Hays, former congressman from Arkansas, who was appointed on May 21, 1959.

* Est. Jan. 1, 1956.

Executive.—Chief state officers in 1959:
Governor: Price Daniel (Democrat)
Lieutenant Governor: Ben Ramsey
Secretary of State: Zollie Steakley
Treasurer: Jesse James
Attorney General: Will Wilson
Auditor: C. H. Cavness
Commissioner of Education: J. W. Edgar

Constitution and Judiciary.—The present constitution went into effect in 1876. The highest criminal court, the Court of Criminal Appeals, comprises three justices; chief justice in 1959 was W. A. Morrison. The Supreme Court, the state's highest court in civil cases, comprises nine justices; chief justice in 1959 was John E. Hickman.

Legislature.—The Texas Legislature, comprising a 31-member Senate and a 150-member House of Representatives, met in 1959 from January 13 to August 6 for a regular and three special sessions.

The legislature in 1959 appropriated approximately $2.4 billion for the 1959–61 biennium, including $938 million for education, $803 million for highways, and $401 million for public welfare. Tax rates were increased on corporation franchises, cigarettes (to 8 cents a pack), and radio and television sets. New levies included a special tax on natural gas.

Other legislation changed the date on which the first state primary is held to the first Saturday in May and that of the second primary to the first Saturday in June, and provided that a candidate's name may appear on the ballot for president or vice president of the United States and for a statewide elective office.

Educational measures provided for establishment in Bexar County (San Antonio) of the South Texas Medical School as a branch of the University of Texas, and raised teachers' salaries in state universities and colleges.

Other legislation created a state Development Board, District courts, and Family Relations courts; authorized lump-sum settlements of Workmen's Compensation claims; placed time and parental-consent limitations on the issuance of marriage licenses to males under 21 and females under 18, and forbade health inspections of private residences without court or occupant permission. (See also below, *Principal Events, 1959.*)

Finance.—State revenue of $1,019,293,976.51 in the 1957–58 fiscal year comprised $657,236,672.01 from tax sources, $252,800,983.88 from the federal government, and $109,256,320.62 from other sources. Tax revenue consisted of $169,910,804.07 from motor fuels, $76,270,192.40 from licensing, and $411,055,675.54 from other sources. Spending of $1,027,389,546 comprised $379,850,159.80 for education $198,041,393.76 for health, welfare, and safety, $312,119,359.32 for highways, and $137,378,633.12 for other purposes. Long-term indebtedness on Aug. 31, 1958, amounted to $171,941,686.68.

Banking.—As of June 10, 1959, the state's 461 national banks had $9,234,975,000 in assets, $6,502,852,000 in demand deposits, and $1,818,376,000 in time deposits. The 499 state banks (Dec. 31, 1958) had assets of $2,662,270,164.52, demand deposits of $1,965,345,034.29, and time deposits of $484,128,685.93.

Education.—School attendance is compulsory between the ages of 7 and 16, inclusive. The National Education Association estimated state operating expenditures for public elementary and secondary schools in the 1958–59 school year to be $521,375,000 ($299.54 per pupil). Estimated revenue comprised $286,299,000 from local school districts, $292,178,000 from the state, and $29 million from the federal government. Capital outlays approximated $145 million. Teachers' salaries (1957–58) averaged $4,390.

Smoke billows from the hold of the tanker *Virginia*, after it and two barges exploded in Houston harbor, November 8.

TEXAS SCHOOL STATISTICS, 1957–58

Type of school	No.	Teachers	Students
Public elementary (1–6)	3,767	45,330	1,187,864
Public junior high (7–9)	487	7,519	427,728
Public senior high (10–12)	1,443	17,878	280,625
Public junior colleges	2	246	6,068[1]
State teachers colleges	6	606	14,528[1]
State colleges and universities	10	2,931	60,339[1]
Total college enrollment	...	...	175,854[1,2]

[1] 1958–59 school year. [2] Includes enrollment for the three college units listed separately above.

Public Assistance.—In the 1958–59 fiscal year public assistance expenditures from state and federal funds (excluding institutional costs) totaled $166,502,541, including $138,281,993 for the aged, $21,034,445 for dependent children, and $4,301,419 for the needy blind. A monthly average of 341,351 persons received assistance.

Labor Force.—The state's labor force totaled 3,625,800 persons on Aug. 31, 1959, including 470,700 agricultural workers. Nonagricultural employment edged up slightly to 2,993,700 from 2,934,400 a year earlier and exceeded the 2,964,500 average for the 12 intervening months. Principal sources of nonfarm employment in August 1959 were trade (26.4%), service industries (17.7%), manufacturing (16.9%), and government (13.7%). Unemployment on Aug. 31, 1959, dropped to 152,900 from 184,700 on the same date in 1958.

Manufacturing.—In the first half of 1959 there were 10,474 manufacturing establishments in the state employing an average of 503,400 persons. Total wages earned (1957) amounted to $2,233,737,000, and in August 1959, production workers averaged $89.69 for an average workweek of 42.1 hours. Value added by manufacture totaled $5,039,313,000, and outlays for new plant and equipment (1957) totaled $811,828,000.

Mining.—In 1958 Texas was first among the states in the value of its mineral output, with 24.44% of the national total, although the 1958 value of $4,038,656,000 marked a decline from the 1957 figure of $4,484,538,000 (revised). The state ranked first in the output of asphalt, carbon black,

MAJOR TEXAS MANUFACTURES, 1957

Product or industry	Average no. of employees	Salaries and wages (thousands of dollars)	Value added by mfr.* (thousands of dollars)
Chemicals and products	39,587	$231,493	$1,068,053
Petroleum and coal products	43,280	277,548	758,191
Food and kindred products	69,524	257,170	663,019
Transportation equipment	75,842	407,968	527,413

helium (produced in federal plants at Amarillo and Exell), natural gas, flake graphite (only producer), and Frasch sulfur; second in aluminum capacity and in the output of bromine, cement, and stone; and third in bentonite (9% of national output), gypsum, bituminous limestone, and salt.

TEXAS MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Cement (bbl.)	25,875,000	$ 79,756,000
Clays[1]	3,720,000	5,424,000
Gypsum	1,240,000	4,120,000
Helium (1,000 cu. ft.)	294,452	4,807,000
Iron ore, usable (long tons)	...[2]	...[2]
Lime	691,000	7,146,000
Natural gas (1,000 cu. ft.)	5,178,073,000[3]	517,807,000[3]
Natural gasoline (bbl.)	68,371,167	204,501,000
Petroleum (bbl.)	940,706,000[3]	2,873,988,000[3]
Petroleum gases (bbl.)	90,156,548	151,896,000
Salt, common	3,843,000	15,115,000
Sand and gravel	32,871,000	30,808,000
Stone	36,076,000	40,912,000
Sulfur, Frasch (long tons)	2,616,000	61,621,000
Other minerals	...	50,903,000
Total	...	$4,038,656,000[4]

[1] Excludes certain clays; value of which is included in "Other minerals." [2] Figure withheld to protect individual company's confidential data. [3] Preliminary. [4] Total adjusted to eliminate duplication in the value of clays and stone. (Source: U.S. Bureau of Mines.)

Fisheries.—The fish and shellfish catch in the year ending Aug. 31, 1959 totaled 170,464,893 pounds (up 42,723,140 pounds over 1957–58) valued at $25,564,181. The principal species was shrimp (66,332,722 pounds valued at $23,216,453).

Agriculture.—Cash farm income for the first nine months of 1959 dropped to $1,360,230,000 from $1,458,304,000 for the corresponding period of 1958. For the full year 1958, income comprised $929,587,000 from livestock and livestock products, $1,443,033,000 from crops, and $122,188,000 from government payments. Principal income sources in 1958 were: cotton lint, $690,045,000; cattle, $547,879,000; sorghum grain, $288,566,000; and dairy products, $137,270,000.

There were 292,000 farms in the state in 1958.

TEXAS CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Broomcorn (tons)	7,300	6,900	5,600
Corn (1,000 bu.)	41,073	42,973	42,728
Cotton lint (1,000 bales)	3,956	4,308	4,500
Cottonseed (1,000 tons)	1,646	1,816	1,888
Cowpeas (1,000 bu.)	540	450	408
Flaxseed (1,000 bu.)	753	336	357
Grapefruit (1,000 boxes)	3,800	4,200	5,800
Hay (1,000 tons)	1,753	2,487	2,340
Oats (1,000 bu.)	24,373	53,130	26,473
Oranges (1,000 boxes)	1,676	2,300	3,200
Peaches (1,000 bu.)	625	1,100	1,100
Pecans (1,000 lb.)	35,040	26,000	23,000
Potatoes (1,000 cwt.)	1,513*	2,285	2,562
Rice (1,000 bags)	13,013	11,370	13,136

Wheat (1,000 bu.)	35,358	73,040	59,850

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

Total acreage (1954) of 145,813,000 included 24,885,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 8,510,000 cattle, 1,226,000 hogs, 5,170,000 sheep, and 17,196,000 chickens (excluding commercial broilers). Some 427,000 family and hired workers were engaged in farming during the week of Nov. 22–29, 1959.

Transportation and Communications.—State and federal funds disbursed for highways in the 1958–59 fiscal year totaled $328,921,586, and 1,566 miles of new construction were completed.

Highways and roads on Sept. 1, 1959, totaled 60,372 miles (52,206 surfaced). Registered *motor vehicles* numbered 4,728,905 on Aug. 31, 1959, including 3,416,432 passenger cars. There were (1958) 38 *railroads* operating 15,022.79 line miles; (1959) 11 regularly scheduled *airlines;* and (1959) 1,263 *airports and airfields* (665 commercial and municipal, 37 military, and 550 private, in addition to which there were 11 seaplane and heliport installations).

Communications media (1958) included 233 AM and 19 FM *radio stations;* 41 *television stations;* (1959) 105 daily *newspapers* and 536 other newspapers; and (Jan. 1, 1959) 958,700 business and 2,132,000 residential *telephones.*

Principal Events, 1959.—Economic activity in Texas increased substantially during 1959. By September 1959, the index of Texas business activity computed by the Bureau of Business Research at The University of Texas was 11% above the index value for September 1958. This increase in statewide business activity was attributable not only to general economic expansion nationally, but also to some improvement in the special position of the Texas petroleum industry. Over the first 10 months of 1959, the number of active rotary drilling rigs in Texas increased by 7%, compared with the corresponding period in 1958, while total footage drilled in the state expanded by 6%. The national steel strike had only minor effects on Texas economic activity in 1959.

A marathon session of the Texas Legislature, which included three special sessions, lasted from January 13 through August 6. The major legislative difficulty was a basic disagreement as to how the state's mounting public expenditures should be financed. Texas has neither a state general sales tax nor a state income tax, and recent legislatures have been hard pressed to devise revenue bills adequate for current expenditures. Legislative advocates of a sales tax were unable to generate enough support for their measure, and the final tax bill was a compromise which contained many, but not all, of Gov. Price Daniel's recommended taxes. Observers generally agreed that the 1959 session had featured the longest and hardest fight over any tax bill in Texas history. It was also apparent that many of the same contentious issues would have to be faced when the time came again to write state tax and expenditure bills.

The 56th Texas Legislature took no action on Governor Daniel's recommendation of an increase in the salaries of public school teachers. Also, the legislature failed to act on the proposals of the Hale-Aiken Committee of 24, which were designed to improve public school education in Texas. Late in the second special session, a compromise beach bill was passed, which was drafted to assure the public the right to use state-owned beaches along the Gulf of Mexico from the low-tide mark back to the vegetation line. The historic right to beaches had been jeopardized as a result of Texas Supreme Court decisions in June and December 1958, which redefined the boundary between public and private property along the gulf. While the legislature's action served to stop the fencing of beaches previously open to the public, it seemed likely that the beach bill would be tested in the courts. (See also above, *Legislature.*)

Another, even more celebrated, controversy over the ownership of gulf lands continued in 1959. Late in the year, attorneys for five coastal states (Texas, Louisiana, Mississippi, Alabama, and Florida) concluded their arguments before the U.S. Supreme Court, claiming state title to lands 10½ miles offshore. The case was an outgrowth of the Submerged Lands Act of 1953, which had been designed to settle the tidelands dispute. This bill recognized the coastal states' title to their "historic boundaries" but failed to define them.

In October the Dallas Museum of Contemporary Arts moved to permanent quarters in a new building. In the same city the Kalita Humphreys Theater opened in December. The only public theater designed by the late Frank Lloyd Wright (q.v.), it will house a permanent repertory company.

Texas public schools carried out no new racial desegregation of consequence in the fall of 1959. Antidesegregation laws passed by the Texas Legislature in 1957 had not yet been tested in the courts and served effectively to restrain local school boards from integration. Dallas and Houston school boards were still under federal court order to integrate.

Associate Professor of Economics,
The Rice Institute.

TEXTILE INDUSTRY. Fiber Consumption.—United States consumption of cotton, wool, silk, and the man-made fibers during 1958 was at the low level of 5,981 million pounds, a decline of 3% from 1957. During the first half of 1959, consumption of these fibers increased to an annual rate of 6,878 million pounds, the highest level since 1942.

Consumption of raw cotton during January–June 1959 was at an annual rate of 4,354 million pounds, or 10% more than in the full year 1958. The 1959 annual rate of wool usage, based on the first half of the year, was 462 million pounds, a substantial increase of 33½% above 1958 and the largest indicated annual total since 1953. Raw silk consumption, at 3 million pounds in the first half of 1958, held at the same low rate of recent years.

The annual rate of man-made fiber consumption in the first half of 1959 was 2,056 million pounds, or 22% over the full year 1958. Within this 1959 man-made fiber total, all of the fiber categories showed increases over 1958. The 1959 annual rate of rayon and acetate yarn consumption for textile uses was estimated at 420 million pounds (up 8% over 1958); rayon yarn consumed in tires and related uses, 316 million (up 24%); rayon and acetate staple + tow, 564 million (up 21%); noncellulosic man-made fiber consumption, 606 million (up 29%); and textile glass fiber usage, 150 million (up 39%). These figures indicated the probability of new annual records for both the noncellulosic and textile glass fibers.

Cotton continues to be the most important textile fiber in terms of poundage, accounting for 63½% of the total fiber used in the first half of 1959, compared with 66% in 1958. During the first half of 1959, raw wool consumption represented 6½% of the four-fiber total, compared with 6% in 1958. The 1959 share of total fiber usage represented by the man-made fibers in the first six months of 1959 was 30%, compared with 28% a year earlier.

Broad Woven Goods Production.—Production of broad woven goods in the United States during the first half of 1959 was at an annual rate of 12,350 million linear yards, 6% over 1958 when 11,627 million yards were produced. The annual rate of cotton goods output was 9,540 million yards, up 6½% from 1958.

For man-made fiber fabrics (including a small yardage of silk goods), the 1959 rate of production —at 2,500 million yards—was 5% above the 1958 level. The 1959 annual rate of woolen and worsted fabric production was 310 million yards, 15% above 1958.

Tire Cord and Fabric Production.—Based on six-months data, the 1959 annual rate of tire cord and fabric production was indicated at 430 million pounds, a notable increase of 22½% over 1958. By fiber, nylon comprised 28% of the tire cord and fabric produced in the first half of 1959, compared with 71% for rayon and 1% for cotton. The respective figures for 1958 were nylon, 27%; rayon, 71%; and cotton, 2%. It should be noted that the new "Super 2" or higher strength rayon cord produced in recent years requires less poundage of yarn in a given tire.

Prices.—During the first nine months of 1959, there were divergent trends in textile fiber prices. Over that period, the average price of 1-inch middling raw cotton was 33.8 cents a pound, down slightly from the 1958 annual average of 34.7 cents. The 1958 annual average price of raw wool (scoured basis, at Boston) was $1.19 per pound; from a low point of $1.08 in February–March 1959, the price rose to $1.32 in August and dropped slightly to $1.31 in September. The resulting average for the first nine months of 1959 was $1.20.

The price of rayon staple, which had declined to 29 cents per pound in March 1957, was increased in late August that year to 31 cents and remained at that level until early April 1959 when it increased to 33 cents. The 150-denier rayon filament yarn, which sold at 76 cents per pound in the latter part of 1958, was raised to 79 cents in February 1959 and was increased again to 82 cents in June 1959. The 150-denier acetate filament yarn price held at 79 cents in both years.

Employment and Wages.—The total number of persons employed in United States knitting and weaving mills, as well as in the manufacture of apparel and other finished textile products, aver-

SELECTED U.S. TEXTILE STATISTICS

	Year 1956	Year 1957	Year 1958	1st half 1959

Total tire cord and fabric	404	409	351	215

[1] Scoured basis. [2] U.S. producers' domestic shipments plus imports for consumption. [3] Includes nylon (polyamide), Saran (polyvinylidene chloride), acrylic and acrylic type, polyester, polyethylene, polypropylene, polystyrene, polyvinyl acetate, polyvinyl chloride, protein, tetrafluoroethylene, and miscellaneous fibers. [4] Except tire fabric. [5] Including nominal yardage of silk fabrics. [6] Excluding carpets, rugs, and felts. [7] Excluding chafer fabric.

aged 1,877,000 during 1958. In the first half of 1959, the average monthly employment increased to 1,932,000.

The average weekly gross earnings of textile mill products employees during the first half of 1959 was $62.95, compared with $58.22 in 1958 and $58.41 in 1957. For the apparel cutting and related trades, weekly wages averaged $55.55, $53.51, and $53.80 in the same order.

Imports and Exports.—The United States is normally a net exporter of textile fibers and manufactures, the large export balance in raw cotton, cotton textiles, noncellulosic man-made fibers, and man-made fiber textile products usually being offset to a lesser degree by substantial imports of raw wool, wool textiles, and rayon staple. But for the first time in many years, due largely to the notable drop in raw cotton exports, there was a net import balance in the first half of 1959 for all textile fibers and products at an annual rate of $180 million, based on a projected value of imports at $1,159 million and exports at $979 million.

Per Capita Fiber Consumption.—United States civilian per capita consumption of cotton, wool, and the man-made fibers in the first half of 1959 was at an annual rate of 35.7 pounds, an increase of 4.6 pounds, or 15%, over the 31.1 pounds consumed during 1958. The projected 1959 wool usage was 3.2 pounds, an increase of 0.8 pounds. Cotton, at 21.8 pounds, was up 2.2 pounds from 1958. Man-made fiber consumption, at an annual rate of 10.7 pounds, was up 1.6 pounds from 1958. (The per capita data is based on the mill consumption of the fibers, minus exports and plus imports of fabricated products, divided by the civilian population.)

Flax and Linen.—The United States obtains most of its raw flax, linen fabrics, and finished linen products from abroad since it grows only limited quantities of flax. Imports of raw flax and flax yarns (including hackled and not-hackled fiber, noils, tow, yarns, and thread) totaled 16.1 million pounds in 1958, up 58% over the 10.2 million pounds imported in 1957.

Added to this fiber poundage are the imports of linen and chiefly-linen fabrics, totaling 13.1 million pounds in 1958, a small decline from the 13.9 million pounds of 1957. Finally, 1958 imports of the principal linen manufactures included 1,860 thousand dozen handkerchiefs (down 11% from 1957), 287 thousand dozen towels (up 12%), and 352 thousand dozen napkins (down 7%).

Canadian Textile Developments.—Canada's textile manufacturing industry experienced a decline in 1958 similar to those which occurred in such major textile producing countries as the United States and the United Kingdom. Shipments of cotton fabrics totaled 244 million yards, down 20 million yards, or 8%, from 1957; wool fabric output was 15.5 million yards, down 9%; and man-made fiber fabric shipments totaled 76 million yards, a decrease of 10 million yards from 1957. As for the man-made fiber producing industry in Canada, rayon and acetate yarn and staple output totaled 66.5 million pounds, down 10% from 1957; and noncellulosic fiber production (nylon, Orlon acrylic fiber, Terylene polyester fiber, and Saran) was virtually unchanged from the 1957 output of 21.6 million pounds.

The Canadian textile industry, which employed 76,600 persons in 1958, is considerably smaller from the standpoint of manpower than it was in 1949 when about 90,000 persons were employed. The current number of mills is about 700, compared with more than 800 in 1949. Over the past decade, the industry has undertaken an extensive mill modernization program; since 1946, nearly $700 million has been spent on capital and repair expenditures. Such expenditures totaled $53.2 million in 1958, but were expected to decline to $42.8 million in 1959.

The Canadian mills' share of domestic fabric markets has declined from nearly 70% ten years ago to only about 50% in 1958 because of steadily increasing imports, especially from the United States, Japan, and the United Kingdom. Thus, Canadian cotton fabric shipments accounted for only about 45% of the total Canadian market in 1958; wool fabric shipments comprised 52% of the total; and man-made fiber fabric shipments were at an all-time low of 68% of the total market.

STANLEY B. HUNT,
President, Textile Economics Bureau, Inc.

THAILAND (formerly SIAM). A kingdom of Southeast Asia, bordered by Laos, Cambodia, Burma, and Malaya. Estimated area, 198,500 square miles; pop. (est. July 1, 1959), 21,881,000. Bangkok (est. 1956, 1,208,865) is the capital and principal city. The majority of Thai are small-scale farmers; a Chinese minority of about 3 million is important in trade and the professions.

Government.—Thailand has been a constitutional monarchy since 1932 (King Phumiphon Adundet, b. 1927, ascended the throne in 1950). The decline of royal power, however, has not meant the rise of democratic government. Since World War II, authoritarian regimes headed by strong men or military cliques have succeeded one another by violent or bloodless coups, ruling with a show of constitutionalism or scrapping the constitutions entirely. On Oct. 20, 1958, Field Marshal Sarit Thanarat ousted the government he himself had put in power, abrogated the constitution, and banned all political parties other than his own Revolutionary Party. King Phumiphon proclaimed an interim constitution on Jan. 28, 1959, vesting virtually absolute power in the premier. A Constituent Assembly of 240 members (mostly military men) was appointed by royal decree on February 4 to draft a new constitution and serve as an interim legislature. The assembly unanimously elected Marshal Sarit as premier on February 9.

Education and Religion.—About 48% of the population over 15 years of age was illiterate in 1947. In 1957, primary schools had 3,195,586 pupils; secondary, 377,473; technical, 63,176; and teacher-training, 10,670. The 5 higher institutions (chief of which is Chulalongkorn University) had 28,662 students in 1956. Buddhism is the chief religion, and many schools are conducted by Buddhist monasteries. There are small Moslem and Christian minorities.

Finance.—The budget for 1959 approved by the Constituent Assembly estimated expenditure at 7,287 million baht; revenue, 5,950 million. The anticipated deficit of 1,337 million baht was to be financed by internal loans. (The baht had an average value of U.S.$0.048 in 1958.) United States assistance to Thailand under the foreign aid program totaled about $163 million in the period 1951–58; the estimate for 1959 was $25 million.

Transportation and Communications.—Inland waterways provide an important means of transport. The Royal State Railways, radiating out from Bangkok, had a total length of 2,170 miles in 1958. Roads open to traffic aggregated about 4,625 miles in 1956; a road construction program begun in 1955 aims to raise the total to 6,830 miles. Bangkok is a major Far East terminus of several international airlines. On Aug. 24, 1959, Thai Airways (the domestic line) and the Scandinavian Airlines System agreed to cooperate in the formation of Thai Airways International, to operate international services from Thailand. Passenger cars numbered 33,773 in 1958; telephones, 13,920 (1957); television receivers, 30,000.

Production.—Agriculture provides the livelihood for about 80% of the population, contributes nearly half the national income, and supplies the bulk of exports. Cultivation is mainly on a small-scale, family basis; traditional methods of tillage prevail, with the water buffalo playing an important role. Output of rice, the chief food staple and export, totaled 7.1 million metric tons of paddy in 1958–59, well above the drought-reduced yield of 5.7 million in 1957–58. Secondary crops and estimated yields in 1958 were: maize, 138,500 short tons; peanuts, 131,000 (unshelled); tobacco, 71,500; copra, 214,200; sugar, 76,000 (1957–58); soybeans, 26,500; sesame seed, 18,400; and castor beans, 31,400. The important rubber crop, grown mainly on small holdings in the south, yielded a record 139,700 metric tons for export in 1958. Teak, yang, sticklac, seedlac, shellac, gutta percha, and bamboo are obtained from Thailand's thick forests.

Manufacturing contributes less than 15% of total output value, but is of growing importance. Chief industries are rice- and sugar-milling, rubber goods, sawmill products, textiles, tobacco products, paper and plywood, and building materials. Production of tin concentrates, Thailand's chief mineral, totaled 7,800 metric tons in 1958, a considerable reduction from 1957 because of the lower International Tin Agreement quota. Tungsten ore, lead ore, antimony, lignite, and other minerals are

mined in small quantities. Electric power generating capacity amounted to 186,485 kw. in 1957, far below needs. Construction of the large-scale Yanhee hydroelectric project (financed by the International Bank for Reconstruction and Development), as well as smaller projects, is under way to expand generating capacity, increase irrigated area, and serve other needs. Other phases of Thailand's development program include expansion and modernization of transport and communications, improvement of the quality of crops, and stimulation of industrial growth through preferential treatment accorded certain favored industries.

Foreign Trade.—Exports in 1958 totaled 7,540 million baht (down 14% from 1957); imports, 8,012 million (down 5%). Principal exports were rice (1,132,000 metric tons; 2,976 million baht), rubber (139,700; 1,327 million), tin (about 7,000; 254 million), teak, lac, and tungsten; principal imports: heavy equipment and other manufactured goods, fuels and lubricants, and food products. The United States, chief customer for Thailand's rubber, took 18% of total exports in 1958 and provided 17% of imports. Other important trading partners are Japan, Malaya and Singapore, Hong Kong, Britain, and Indonesia.

Principal Events, 1959.—Field Marshal Sarit Thanarat, the strong man of Thailand, who had dissolved the National Assembly and abrogated the constitution in October 1958 when opposition elements became too vocal, maintained his rule in 1959 under an interim constitution proclaimed by King Phumiphon on January 28. The continuing authoritarian and military character of the regime was indicated in the appointment on February 4, by royal decree, of a 240-member Constituent Assembly dominated by the military. Sarit was unanimously elected premier by the assembly on February 9. His cabinet, announced on February 10, included Gen. Thanom Kittikachorn (premier in 1958) as deputy premier and minister of defense, and Thanat Khoman (former ambassador to the United States) as foreign minister, succeeding Prince Wan Waithayakon, who became a deputy premier.

The Sarit government took steps in 1959 to strengthen the economy, which was suffering from a decline in export income due mainly to lower rice sales. The list of favored industries granted preferential treatment under the Industrial Promotion Act of 1954 was extended, and special efforts were made to attract foreign investment capital by permitting free repatriation of earnings, according a temporary tax exemption, and other measures. In March, Thailand obtained a $20 million loan from the U.S. Development Loan Fund for the expansion of electric power facilities in the Bangkok-Thonburi area. Construction began during the year of a joint Thailand-Japanese galvanized iron factory, and in the fall a contract was signed with a Japanese firm for the construction of an oil refinery at Bangkok with a daily capacity of 5,000 barrels. An agreement was reached in July with an American firm for the establishment of a chemical and pharmaceutical plant near Bangkok.

Diplomatic relations with neighboring Cambodia (q.v.), severed late in 1958 because of a border dispute, were resumed on Feb. 20, 1959, following mediation by Baron Johan Beck-Friss, special representative of the United Nations secretary general. Malayan Prime Minister Dato Abdul Razak conferred with Premier Sarit during a four-day state visit to Thailand beginning on June 28, and it was agreed that the two governments would continue their cooperative action against Malayan Communist guerrillas in the border area.

M. J. G.

THEATER. During 1959 there was reasonably high quality in New York theater presentations, but fewer plays were produced than in earlier years. Contributing to the decrease in the number of productions was the scarcity of available Broadway-area playhouses, due to high taxation, competition for real estate locations, and the increasing length of runs of hit plays and musicals. Important in the latter factor is the success that theater party agents have had in selling out houses, in part or *in toto,* despite adverse critical reviews and public apathy at the box office. (From September through December 1959, theater parties accounted for $7 million in ticket sales.)

On Jan. 1, 1959, there were 30 attractions on Broadway, exclusive of the Old Vic from London. At the time, plays running in New York City, on Broadway and off, included such hits from former seasons as *My Fair Lady, The Music Man, The Threepenny Opera, Two for the Seesaw, Flower Drum Song, La Plume de Ma Tante, The Boy Friend, The Marriage-Go-Round, The Pleasure of His Company, The World of Suzie Wong, A Touch of the Poet, The Dark at the Top of the Stairs, Say, Darling, Bells Are Ringing, Look Homeward, Angel, Jamaica,* and *Sunrise at Campobello.*

The New York newspaper deliverers' strike late in 1958 affected the opening of new plays because it cut theater advertising and critical notices. For example, William Carlos Williams' *Many Loves,* scheduled to open in December at off-Broadway's Living Theatre, New York's only true repertory theater, did not officially open until January 13, after playing 24 preview performances. Dr. Williams' play, regarded as avant-garde, was well received and survived 216 performances in repertory, closing on November 17.

On Broadway, January's most distinguished offering was *Rashomon,* as fashioned by Hollywood scenarists Fay and Michael Kanin from the Japanese tales of Ryunosuke Akutagawa. The play, however, was less successful than the production, which was beautifully staged by Peter Glenville and had Oliver Messel's costumes and sets and Jo Mielziner's lighting. Akim Tamiroff, Oscar Homolka, Rod Steiger, and Claire Bloom acted superbly. Also in January, veteran playwrights and librettists Howard Lindsay and Russel Crouse celebrated a quarter-century of collaboration by contributing *Tall Story,* a comedy about campus athletics and politics, with a faint echo of *The Male Animal.* The event also marked Mr. Lindsay's 50th year in the theater.

Opening in February, *Redhead,* a musical set in a London waxwork museum, was treated with critical sniffs by the reviewers, but became a solid hit as a result of Gwen Verdon's superb dancing. Later, Norman Corwin's *The Rivalry,* a "dramatization" of the Lincoln-Douglas debates, and starring Richard Boone, Nancy Kelly, and Martin Gabel, lost a pack of money for its producers, Cheryl Crawford and Joel Schenker. Leonard Spigelgass wrote *A Majority of One,* a sentimental comedy about a Japanese gentleman and a Jewish-American widow. The play became a smash hit, due largely to the perceptive direction of Dore Schary and the superb acting of Gertrude Berg and Cedric Hardwicke.

In March, Noel Coward really came a cropper with *Look After Lulu,* his adaptation of Georges Feydeau's 19th-century French farce, *Occupe-toi d'Amélie.* With *Juno,* Joseph Stein proved, perhaps

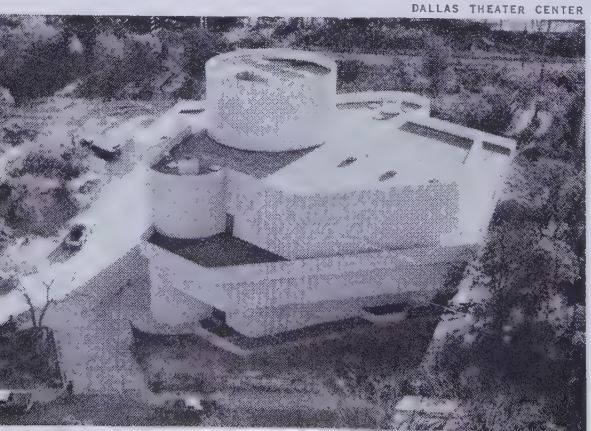
forever, that Sean O'Casey's great, sardonic comedy, *Juno and the Paycock,* cannot be made into a musical. In the title role, the beloved Shirley Booth demonstrated that to err is human. Tennessee Williams ran up his score for hits with his poetic, vicious, decadent melodrama, *Sweet Bird of Youth,* which provided an acting holiday for Geraldine Page, Paul Newman, and Sidney Blackmer. The New York Drama Critics Circle Award went to Lorraine Hansberry, a brilliant young Negro playwright, who was the first woman of her race to achieve a Broadway production. Miss Hansberry's play, *A Raisin in the Sun,* while not the best of the 1958–59 season, was a poignant drama that achieved success through the fine acting of Sidney Poitier, Claudia McNeil, and Ruby Dee. *First Impressions,* a musical version of Jane Austen's *Pride and Prejudice,* was impressively miscast and was greeted tepidly by press and public.

Kataki, opening and closing in April, was a promising first-play by Shimon Wincelberg; however, Mr. Wincelberg struck himself out by writing a two-character play in which only one of the characters spoke English. His effort, about a Japanese and an American soldier on a Pacific island, was admirably acted by Sessue Hayakawa and

The only public theater designed by Frank Lloyd Wright, Dallas' Kalita Humphreys Theater opened on Dec. 27, 1959.

DALLAS THEATER CENTER



Ben Piazza. An off-Broadway production of *Kataki* in December seemed less likely to achieve success than its Broadway predecessor. *Destry Rides Again,* a musical based on the old-time film hit, was less than perfect but was continuing at the end of the year as a result of Dolores Gray's singing, Andy Griffith's acting, and Michael Kidd's direction and choreography.

On May 11 the theater spotlight turned to the off-Broadway Phoenix Theatre, where *Once Upon a Mattress* opened. This musical satire, based on the fairy tale, *The Princess and the Pea,* was later moved to the on-Broadway stage of the Alvin Theatre. The imaginative production, with book by Jay Thompson, Marshall Barer, and Dean Fuller, music by Mary Rodgers, and lyrics by Mr. Barer, was brought to life by the exuberant acting of Carol Burnett and the superb direction of George Abbott. The final hit of the 1958–59 season was *Gypsy,* starring the redoubtable Ethel Merman, who gave the greatest *acting* performance of her career. Based on Gypsy Rose Lee's memoirs, *Gypsy* was produced by David Merrick and Leland Hayward.

The fall season opened on Sept. 17, 1959, with the rarely seen Shakespeare comedy, *Much Ado About Nothing,* directed by John Gielgud for the Producers Theatre. The bright, realistic sets and costumes were designed after those by Mariano Andreu for the original English production. Gielgud and Margaret Leighton, superb comedians as Benedick and Beatrice, had the able support of Micheál MacLiammóir, George Rose, Malcolm Keen, David King-Wood, and Hurd Hatfield. Later in September, the Frenchman Yves Montand, in a one-man revue entitled *An Evening with Yves Montand,* proved to be such an excellent actor, singer, and dancer that his original limited engagement of three weeks was doubled because of packed and enthusiastic houses.

The late-starting season had its first American offering on Broadway on October 1, with *The Gang's All Here* by Jerome Lawrence and Robert E. Lee. This thinly disguised satire on President Harding and the Teapot Dome scandals, though well-acted and occasionally amusing, failed to attain the stature of the authors' *Inherit the Wind,* produced several seasons earlier. Because its downtown theater was occupied, the Phoenix Theatre group opened its fall season on Broadway, with Eugene O'Neill's *The Great God Brown.* Fritz Weaver, Nan Martin, and Gerry Jedd were outstanding in the cast expertly directed by Stuart Vaughan. Michael Flanders and Donald Swann, in *At the Drop of a Hat,* transported this two-man musical show from London with conspicuous success. *Chéri,* Anita Loos' adaptation of two short novels by Colette, was over-directed, over-produced, and over-decorated, although the production was brightened by the acting of Horst Buchholz and Lili Darvas. Kim Stanley in the leading role was hopelessly miscast.

In *Golden Fleecing,* which also opened in October, playwright Lorenzo Semple, Jr., showed a nice feeling for comedy with this farce about a group of American sailors who use an IBM machine to devise a method for breaking the bank of a gambling casino. A superb all-star revival of Shaw's *Heartbreak House,* directed by Harold Clurman, included Maurice Evans, Pamela Brown, and Diana Wynyard in its cast. William Gibson, author of *Two for the Seesaw,* provided *The Miracle Worker,* a splendid drama about Helen Keller as a child, and her teacher-companion, Annie Sullivan. The play, beautifully acted by Anne Bancroft and Patty Duke, was also beautifully directed by Arthur Penn. Julie Harris returned to Broad-

(*Right*) *The Miracle Worker*, William Gibson's account of the early education of Helen Keller, with Anne Bancroft (l.) and Patty Duke.

way in a slick little comedy, *The Warm Peninsula* by Joe Masteroff. Robert Bolt's *Flowering Cherry*, imported from London with Wendy Hiller and Eric Portman as the stars, fell flat on its face. *Take Me Along*, a musical version of O'Neill's *Ah, Wilderness!*, was a smash hit. Jackie Gleason, Walter Pidgeon, Eileen Herlie, and Robert Morse had the leading roles.

The Sound of Music by Rodgers and Hammerstein, Lindsay and Crouse, opened in November with a huge advance sale. This musical, based on the book, *The Trapp Family Singers*, starred Mary Martin. Another musical in November, *Fiorello!*, about the career of New York's beloved Mayor La Guardia, was one of the season's bright spots. Tom Bosley was superb in the title role, and George Abbott's direction was his greatest in 40 years in show business. Paddy Chayefsky wrote a touching Jewish comedy, *The Tenth Man*, splendidly staged by Tyrone Guthrie. William Inge's *A Loss of Roses* was poorly written and performed.

In December another play from London, *Five Finger Exercise* by Peter Shaffer, with Jessica Tandy and Roland Culver, was a welcome hit. *Silent Night, Lonely Night*, a touching drama about loneliness, starred Henry Fonda and Barbara Bel Geddes. Morton Da Costa (book), Harold Arlen (music), and Johnny Mercer (lyrics) turned Edna Ferber's *Saratoga Trunk* into a large, beautiful, old-fashioned musical, *Saratoga*. Howard Keel and Carol Lawrence were the stars. Rex Harrison and Roddy McDowall triumphed in Jean Anouilh's delightful comedy, *The Fighting Cock*. The last major offering of the year was Saul Levitt's drama, *The Andersonville Trial*, with George C. Scott, Albert Dekker, and Herbert Berghof.

The New York Theater in 1959

The following list of New York theater productions in the calendar year 1959 is in three parts. The first part is an alphabetical list of the Broadway openings during the year; the second part is a selected list of the more important off-Broadway productions, notable as the work of new authors, interesting revivals, or experimental theater; and the third part is a list of Broadway productions which opened in earlier years and closed in 1959.

The Broadway Theater

(The following productions were presented on Broadway during the calendar year 1959. Where only the opening date is given, the production was continuing at the end of the year.)

Andersonville Trial, The, a play by Saul Levitt; with Albert Dekker, George C. Scott, and Herbert Berghof; December 29.

At the Drop of a Hat, a musical revue; lyrics by Michael Flanders; music by Donald Swann; with Messrs. Flanders and Swann; October 8.

Chéri, a play by Anita Loos, adapted from the novels, *Chéri* and *The Last of Chéri*, by Colette; with Kim Stanley, Horst Buchholz, and Lili Darvas; October 12–November 28.

Desert Incident, A, a play by Pearl S. Buck; with Shepperd

Two of musical comedy's leading stars appeared in major Broadway productions in 1959. (*Left*) Ethel Merman was seen in Gypsy, a musical biography of the early years of Gypsy Rose Lee, and based on her memoirs. (*Right*) Mary Martin led the cast of *The Sound of Music*, an adaptation by Richard Rodgers and Oscar Hammerstein 2d of *The Story of the Trapp Family Singers*.

FRIEDMAN-ABELES; TONI FRISSELL

Strudwick, Cameron Prud'homme, Sylvia Daneel, and Paul Roebling; March 24–29.

Destry Rides Again, a musical with book by Leonard Gershe, based on a story by Max Brand; music and lyrics by Harold Rome; with Dolores Gray and Andy Griffith; April 23.

Epitaph for George Dillon, a return engagement of the play by John Osborne and Anthony Creighton; with Eileen Herlie and Robert Stephens; January 12–February 21.

Evening with Yves Montand, An, a program of songs; with M. Montand; September 22–November 1 (limited engagement).

Fighting Cock, The, a play by Jean Anouilh, translated from the French by Lucienne Hill; with Rex Harrison, Arthur Treacher, and Roddy McDowall; December 8.

Fiorello!, a musical with book by Jerome Weidman and George Abbott; music by Jerry Bock; lyrics by Sheldon Harnick; with Tom Bosley, Patricia Wilson, Pat Stanley, Ellen Hanley, and Howard Da Silva; November 23.

First Impressions, a musical based on the novel *Pride and Prejudice,* by Jane Austen, and on the play of the same name by Helen Jerome; book by Abe Burrows; music and lyrics by Robert Goldman, Glenn Paxton, and George Weiss; with Hermione Gingold, Farley Granger, and Polly Bergen; March 19–May 30.

Five Finger Exercise, a play by Peter Shaffer; with Jessica Tandy and Roland Culver; December 2.

Flowering Cherry, a play by Robert Bolt; with Eric Portman and Wendy Hiller; October 21–24.

Gang's All Here, The, a play by Jerome Lawrence and Robert E. Lee; with Melvyn Douglas, E. G. Marshall, Bert Wheeler, and Paul McGrath; October 1.

Girls Against the Boys, The, a revue with sketches and lyrics by Arnold B. Horwitt; music by Richard Lewine and Albert Hague; with Bert Lahr and Nancy Walker; November 2–14.

God and Kate Murphy, a play by Kieran Tunney and John Synge; with Fay Compton; February 26–March 7.

Golden Fleecing, a play by Lorenzo Semple, Jr.; with Tom Poston; October 15–December 26.

Goodbye Charlie, a play by George Axelrod; with Lauren Bacall, Sydney Chaplin, and Sarah Marshall; December 16.

Great God Brown, The, a revival of the play by Eugene O'Neill; with Fritz Weaver, Nan Martin, and Robert Lansing; October 6–November 1.

Gypsy, a musical suggested by the autobiography of Gypsy Rose Lee; book by Arthur Laurents; music by Jule Styne; lyrics by Stephen Sondheim; with Ethel Merman, Sandra Church, and Jack Klugman; May 21.

Happy Town, a musical with book adapted by Max Hampton; music by Gordon Duffy and Paul Nassau; lyrics by Harry M. Haldane and Mr. Nassau; with Tom Williams, Robbi Palmer, Connie Greco, and Judy Keirn; October 7–10.

Heartbreak House, a revival of the play by George Bernard Shaw; with Maurice Evans, Pamela Brown, Sam Levene, Diana Wynyard, Alan Webb, Diane Cilento, and Dennis Price; October 18.

Highest Tree, The, a play by Dore Schary; with Kenneth MacKenna, Diana Douglas, Howard St. John, and William Prince; November 4–21.

Jolly's Progress, a play by Lonnie Coleman, adapted from his novel, *Adam's Way;* with Eartha Kitt and Wendell Corey; December 5–12.

Juno, a musical based on the play, *Juno and the Paycock,* by Sean O'Casey; book by Joseph Stein; music and lyrics by Marc Blitzstein; with Shirley Booth and Melvyn Douglas; March 9–21.

Kataki, a play by Shimon Wincelberg; with Sessue Hayakawa and Ben Piazza; April 9–25.

Legend of Lizzie, The, a play by Reginald Lawrence; with Douglass Montgomery and Anne Meacham; February 9–10.

Look After Lulu, a play by Noel Coward, based on the play, *Occupe-toi d'Amélie,* by Georges Feydeau; with Tammy Grimes, Roddy McDowall, George Baker, and Kurt Kasznar; March 3–April 4.

Loss of Roses, A, a play by William Inge; with Betty Field, Carol Haney, and Warren Beatty; November 28–December 19.

Lute Song, a revivial of the musical based on the Chinese play, *Pi-Pa-Ki;* book by Sidney Howard and Will Irwin; music by Raymond Scott; lyrics by Bernard Hanighen; with Dolly Haas, Clarence Derwent, Estelle Winwood, Leueen MacGrath, and Shai-K-Ophir; March 12–22 (limited engagement).

Majority of One, A, a play by Leonard Spigelgass; with Gertrude Berg and Cedric Hardwicke; February 16.

Mark Twain Tonight!, readings from the works of Mark Twain; with Hal Holbrook; April 6–September 6 (limited engagement).

Masquerade, a play by Sigmund Miller; with Donald Cook and Cloris Leachman; March 16 (one performance).

Miracle Worker, The, a play by William Gibson; with Anne Bancroft, Patricia Neal, Patty Duke, and Torin Thatcher; October 19.

Moonbirds, a play by Marcel Aymé, adapted by John Pauker; with Michael Horden and Wally Cox; October 9–10.

Most Happy Fella, The, a revival of the musical, with book, lyrics, and music by Frank Loesser; with Norman Atkins, Paula Stewart, and Art Lund; February 10–22 (limited engagement).

Much Ado About Nothing, a revival of the comedy by William Shakespeare; with John Gielgud, Margaret Leighton, Hurd Hatfield, and Micheál MacLiammóir; September 17–November 7 (limited engagement).

Nervous Set, The, a musical based on the novel by Jay Landesman; book by Mr. Landesman and Theodore J. Flicker; music by Tommy Wolf; lyrics by Fran Landesman; with Tani Seitz, Larry Hagman, Richard Hayes, and Gerald Hiken; May 12–30.

Only in America, a play by Jerome Lawrence and Robert E. Lee, based on Harry Golden's book of the same name; with Nehemiah Persoff, Shepperd Strudwick, and Enid Markey; November 19–December 12.

Party with Betty Comden and Adolph Green, A, a return engagement of the revue with Miss Comden and Mr. Green; April 16–May 23.

Raisin in the Sun, A, a play by Lorraine Hansberry; with Sidney Poitier and Claudia McNeil; March 11.

Rashomon, a play by Fay and Michael Kanin, based on the stories of Ryunosuke Akutagawa; with Claire Bloom, Rod Steiger, Oscar Homolka, and Akim Tamiroff; January 27–June 13.

Redhead, a musical with book by Herbert and Dorothy Fields, Sidney Sheldon, and David Shaw; music by Albert Hague; lyrics by Miss Fields; with Gwen Verdon; February 5.

Requiem for a Nun, a play by Ruth Ford and William Faulkner, based on his novel of the same name; with Miss Ford and Zachary Scott; January 30–March 7.

Rivalry, The, a play by Norman Corwin; with Nancy Kelly, Richard Boone, and Martin Gabel; February 7–April 18.

Saratoga, a musical based on the novel, *Saratoga Trunk,* by Edna Ferber; book by Morton Da Costa; music by Harold Arlen; lyrics by Johnny Mercer; with Howard Keel and Carol Lawrence; December 7.

Say, Darling, a revival of the comedy by Richard Bissell, Abe Burrows, and Marian Bissell; music by Jule Styne; lyrics by Betty Comden and Adolph Green; with Robert Morse, Mindy Carson, David Atkinson, and Orson Bean; February 25–March 8 (limited engagement).

Silent Night, Lonely Night, a play by Robert Anderson; with Henry Fonda and Barbara Bel Geddes; December 3.

Sound of Music, The, a musical suggested by Maria von Trapp's autobiography, *The Trapp Family Singers;* book by Howard Lindsay and Russel Crouse; music by Richard Rodgers; lyrics by Oscar Hammerstein II; with Mary Martin, Theodore Bikel, Patricia Neway, and Kurt Kasznar; November 16.

Sweet Bird of Youth, a play by Tennessee Williams; with Geraldine Page, Paul Newman, and Sidney Blackmer; March 10.

Take Me Along, a musical based on the play, *Ah, Wilderness!,* by Eugene O'Neill; book by Joseph Stein and Robert Russell; music and lyrics by Bob Merrill; with Jackie Gleason, Walter Pidgeon, Eileen Herlie, Robert Morse, and Una Merkel; October 22.

Tall Story, a play by Howard Lindsay and Russel Crouse, suggested by Howard Nemerov's novel, *The Homecoming Game;* with Hans Conried, Robert Elston, and Nina Wilcox; January 29–May 2.

Tenth Man, The, a play by Paddy Chayefsky; with Donald Harron, Jacob Ben-Ami, George Voskovec, and Arnold Marlé; November 5.

Triple Play, a program of one-act plays: *Bedtime Story* and *A Pound on Demand* by Sean O'Casey, *Portrait of a Madonna* by Tennessee Williams, and *On the Harmful Effects of Tobacco* by Anton Chekhov; with Hume Cronyn and Jessica Tandy; April 15–May 16.

Warm Peninsula, The, a play by Joe Masteroff; with Julie Harris, June Havoc, and Farley Granger; October 20.

IMPORTANT OFF-BROADWAY PRODUCTIONS

All the King's Men, a new version of the play by Robert Penn Warren; with Clifton James; October 16–November 28.

Beaux' Stratagem, The, a revival of the comedy by George Farquhar; with David King-Wood, June Havoc, Patricia Falkenhain, and Robert Blackburn; February 24–March 7 (limited engagement).

Connection, The, a play by Jack Gelber; with Leonard Hicks, Ira Lewis, Warren Finnerty, and John McCurry; July 15 (in repertory).

Deirdre of the Sorrows, a play by J. M. Synge; with Salome Jens; October 14–December 6.

Dinny and the Witches, a play by William Gibson; with Bill Heyer; December 9.

Little Mary Sunshine, a musical with book, lyrics, and music by Rick Besoyan; with William Graham and Eileen Brennan; November 18.

L'Otage, a revival of the play by Paul Claudel; with Hélène Sauveneix and Jacques François; October 26 and November 2 (limited engagement of two performances).

Lysistrata, the comedy by Aristophanes, in a new translation by Dudley Fitts; music by David Amram; with Donald Madden, Nan Martin, and Gerry Jedd; November 24–December 13 (limited engagement).

Many Loves, a comedy in verse by William Carlos Williams; with William Callan and Judith Malina; January 13–November 17 (in repertory).

Marching Song, a play by John Whiting; with Kevin McCarthy, Roger Plowden, and Brooke Hayward; December 28.

Once Upon a Mattress, a musical with book by Jay Thompson, Marshall Barer, and Dean Fuller; music by Mary Rodgers: lyrics by Mr. Barer; with Carol Burnett, Jack Gilford, and Matt Mattox; May 11 (transferred to Broadway).

Our Town, a revival of the play by Thornton Wilder; with John Beal; March 23.

Pictures in the Hallway, a reading of Paul Shyre's adaptation of the second volume of Sean O'Casey's autobiography; with Mildred Dunnock, Donald Madden, Gerry Jedd, and Eric Berry; December 27 (limited engagement).

Three Sisters, The, a revival of the play by Anton Chekhov, translated by Stark Young; with Kathleen Widdoes, Carol Gustafson, and Barbara Ames; September 21.

Time of Vengeance, a play by Ugo Betti, adapted by Charles Wasserman; with Charles Gregory, Lou Gilbert, Carole Couche, and Merriman Gatch; December 10.

Tonight We Improvise, a play by Luigi Pirandello, translated by Claude Fredericks; with Judith Malina, Alan Ansara, Sala Staw, and Bennes Mardenn; November 6 (in repertory).

U.S.A, a play by John Dos Passos and Paul Shyre, based on Mr. Dos Passos' novel of the same name; with William Windom, Peggy McCay, Laurence Hugo, Joan Tetzel, William Redfield, and Sada Thompson; October 28.

CLOSINGS OF BROADWAY PRESENTATIONS FROM PREVIOUS YEARS

Ages of Man (limited engagement from Dec. 28, 1958 to January 31).
Bells Are Ringing (Nov. 29, 1956 to March 7).
Dark at the Top of the Stairs, The (Dec. 5, 1957 to January 17).
Disenchanted, The (Dec. 3, 1958 to May 16).

THERMONUCLEAR RESEARCH. See ATOMIC ENERGY.

TIBET. An autonomous region of the Chinese People's Republic, Tibet comprises a lofty plateau among massive mountain barriers in central Asia. Its area is estimated at 580,000 square miles, although its boundaries are not entirely defined. The population, according to the Chinese census of 1953 for "the Tibet region and Ch'ang-tu area," was given as 1,273,969. Other estimates have placed the population at 3 to 4 million. Chief cities are Lhasa, the capital (est. 20,000), Shigatse, and Gyangtse.

Government.—Tibet's theocratic government and largely feudal society has undergone profound changes since the country's occupation in 1950 by Chinese Communist forces and the Sino-Tibetan agreement of 1951 providing for Chinese control of Tibetan defense and foreign affairs and for Tibetan autonomy in internal affairs. In 1956 the Chinese Communists set up a Preparatory Committee for the Tibetan Autonomous Region, which was headed by Tibet's theoretically supreme spiritual and temporal authorities, the Dalai Lama and the Panchen Lama, respectively. The committee's appointed task of introducing vital reforms was postponed in 1957 for another six years. Tibet was nominally governed by the Dalai Lama and a council of his advisers, assisted by a cabinet and a national assembly, until March 1959, when a popular rebellion against Chinese Communist rule was suppressed and the Panchen Lama was made nominal ruler of the region (see below, *Principal Events*). However, real authority in 1959 was exercised by Chinese Communist military and civil officials.

UPI

After their revolt failed in March, Tibetans file out of the Dalai Lama's palace in Lhasa to surrender to Chinese.

Economy.—Most Tibetans are peasant cultivators, nomads, or handicraftsmen; about one sixth of the population consists of Lamaist priests. Crops grown on the lower Himalayan slopes include barley, fruits, wheat, pulses, and vegetables. Livestock raising yields wool, felt, yak's hair and hides, butter, cheese, and dried meat. External trade, formerly mainly with India, has recently been diverted largely to China, Tibetan exports being chiefly wool, yak hides, and borax. There is a modern hydroelectric plant at Lhasa and a thermal power plant at Shigatse. Lhasa and Shigatse also have telephone networks. The Chinese Communists have constructed highways into Tibet from Tsinghai, West Szechuan, and Sinkiang, and they operate a Lhasa-Peking air service.

WIDE WORLD; UPI

The Dalai Lama (l.), who fled to India in March, was replaced by the Panchen Lama (r.) as titular ruler of Tibet.

Principal Events, 1959.—Open rebellion by the Tibetans against Chinese Communist rule broke out at Lhasa in mid-March. The immediate cause of the uprising was apparently a widespread report that the Dalai Lama was to be arrested by the Chinese Communists. Followers of the Dalai Lama held mass demonstrations in the streets of the capital, and their protests against Chinese rule

Tibetan abbot (on pony) flees to India after the Chinese Communists forcibly put down the Tibetan revolt in March.

UPI

precipitated the rebellion. A declaration which renounced the Sino-Tibetan agreement of 1951, proclaimed Tibetan independence, and called for the withdrawal of Chinese forces was signed by Tibetan leaders, including the members of the cabinet, and delivered to the Chinese Communists. Severe fighting between poorly equipped Tibetan insurgents and numerically superior Chinese troops flared in Lhasa on March 17 and went on for several days. The Chinese Communists reported on March 27 that the rebellion had been suppressed, with over 2,000 Tibetans being killed and 4,000 captured, but admitted that the revolt had spread to eastern Tibet, where Khamba tribesmen were leading the uprising.

On March 28, Communist China ordered the dissolution of Tibet's local government, which China held responsible for the rebellion, and placed the region under direct Chinese control by transferring administrative authority to the Preparatory Committee for the Tibetan Autonomous Region. The Dalai Lama, who left Lhasa on March 17 and was said by the Chinese Communists to have been abducted by the rebels, was replaced as head of the committee by the Panchen Lama, long regarded as amenable to Chinese influence. Peking radio reported on April 23 that rebellious groups operating in southern Tibet had been dispersed and that the Chinese Army was mopping up the scattered rebel remnants.

The Dalai Lama and a party of 80 crossed the Tibetan-Indian border on March 31 after a 300-mile journey, and were granted political asylum in India. On April 18 the Dalai Lama issued a statement declaring that he had left his country of his own free will, that the Chinese Communists had violated the Sino-Tibetan agreement of 1951 by not respecting Tibetan autonomy, and that the preparatory committee which he had headed was not permitted any real authority. He established his permanent residence in exile at Mussoorie, India, on April 21. He further accused (June 20) the Chinese Communists of genocide—attempting to exterminate the Tibetan race, culture, and religion by persecuting the people, confiscating property, plundering monasteries, and executing prominent Tibetans. He also declared that he and his advisers constituted the true government of Tibet and would continue to act as such in India. However, India later announced that it would not recognize this "separate" government. On November 24, Indian Prime Minister Nehru reported that 13,756 Tibetan refugees had fled to India since the beginning of the uprising. (See also INDIA.)

At a meeting in Lhasa on June 28 of the Preparatory Committee for the Tibetan Autonomous Region, Vice Chairman Chang Kuo-hua disclosed that a new reform program for Tibet would be implemented to abolish serfdom and redistribute land. At the same plenary session, the Panchen Lama charged that the Tibetan rebellion had resulted from a plot by "imperialists and foreign interventionists," and he said that the Tibetan question was a "domestic affair of China," brooking no foreign interference.

An appeal to the United Nations by the Dalai Lama on September 9, requesting that body's "immediate intervention" in Tibet because of China's "inhuman treatment and crimes" against his people, was not acted on. Instead, the U.N. General Assembly approved on October 21 a resolution which "deplored" the recent events in Tibet (see UNITED NATIONS).

(See also CHINA; FAR EAST.)

W. R. F.

TIMOR. See PORTUGUESE TERRITORIES.

TIN. The United States does not mine any tin ore and therefore must depend on imports for its supply. According to data compiled by the U.S. Bureau of Mines, imports of tin concentrates increased from 94 long tons in 1957 to 5,440 tons in 1958, while imports of tin metal declined from 56,158 tons in 1957 to 41,149 tons in 1958. Figures on smelter production in 1958 were withheld to avoid disclosing confidential data regarding the output of individual companies. Consumption declined by 12% to 72,585 long tons in 1958 (47,998 tons of primary and 24,587 tons of secondary tin) from 82,507 tons in 1957 (54,429 tons of primary and 28,078 tons of secondary). World consumption of tin also decreased, but it still exceeded production. The United States is the leading producer and consumer of tinplate, and in 1958 required about 50% of the world consumption of tin for tinplate. Nearly 90% of tinplate is used for making cans. Six countries operating under the International Tin Agreement supplied about 69% of the world total.

In the first nine months of 1959, tin consumption was 59,485 long tons (35,850 primary, and 23,635 secondary), compared with 53,750 tons in the first nine months of 1958. Imports of metallic tin in the first nine months of 1959 were 33,890 long tons, or 14% more than the 29,690 tons in the 1958 period. Receipts of tin concentrates for the first nine months of 1959 were 9,870 tons, against 5,210 in the 1958 period.

(See MINERAL PRODUCTION for table showing output of major producing countries; and for further references, see the Index entry, *Tin.*)

TITANIUM. In 1958 both production and consumption of titanium sponge metal in the United States declined, according to the U.S. Bureau of Mines. Moreover, coupled with termination of purchases under government contracts with producers, there was a close balance between supply and demand for the metal at the end of the year. Sponge production dropped sharply to 4,585 short tons in 1958 from 17,249 tons in 1957.

Rutile output declined 31% in 1958 to 7,406 tons, and ilmenite output declined 26% to 563,338 tons (these are the principal ores of titanium). The United States continued as the world's leading producer and consumer of ilmenite concentrates, and was also the chief consumer of rutile. United States imports of ilmenite concentrates totaled 384,144 tons in 1958, a decrease of 24% from 1957. India supplied 212,000 tons, and Australia, for the first time, supplied 22,736 tons. Imports of rutile were 36,563 tons, a decline of 57% from 1957. Practically all was supplied by Australia. Imports of titanium metal in 1958 were 2,073 tons (valued at $6.3 million), of which Japan supplied 2,071 short tons, and the United Kingdom, 2 tons. In the first nine months of 1959, output of titanium sponge metal in the United States was 3,378 tons and imports for consumption were 1,402 tons.

World output of rutile in 1958 declined to 102,750 tons, and world output of ilmenite declined to 1,710,000 tons. (See also CHEMISTRY.)

TOBACCO. World production of tobacco increased slightly in 1959, according to preliminary estimates of the Foreign Agricultural Service of the U.S. Department of Agriculture. Production was estimated at 8,469 million pounds, 1% above the 1958 output of 8,354 million, but about 2% below the 1957 total of 8,657 million pounds. The increase over 1958 was accounted for by larger output in the United States, India, the Federation of Rhodesia and Nyasaland, and Turkey. Gains in

these countries more than counterbalanced declines in Canada, Brazil, Japan, and the USSR.

Tobacco acreage harvested in 1959 was 9,430,000 acres, compared with 9,313,000 in 1958, 9,485,000 in 1957, and an average of 8,730,000 in 1950–54. Increases in the United States, Asia, and Africa more than offset a decrease in Europe.

TOBACCO PRODUCTION BY MAJOR COUNTRIES
(1,000 pounds, farm-sales weight)

	1950–54 (Average)	1958 (Prelim.)	1959 (Prelim.)
Brazil	268,919	307,983	273,536
Canada	147,552	197,302	155,824
China, Communist	1,396,000	1,693,000	1,700,000
France	119,009	106,493	112,655
Greece	128,308	185,947	167,351
India	568,516	530,640	588,880
Indonesia	145,322	152,117	147,708
Italy	160,146	179,168	184,822
Japan	219,495	305,621	286,382
Pakistan	170,320	218,000	216,000
Rhodesia-Nyasaland	145,952	193,764	231,083
Turkey	215,796	228,379	279,885
USSR	482,000	500,000	465,000
United States	2,184,036	1,736,204	1,799,965
World	7,811,216	8,354,136	8,469,103

United States exports of unmanufactured tobacco in the calendar year 1959 were estimated at about 465 million pounds export weight, equivalent to approximately 520 million pounds farm-sales weight, and about 4% below both 1958 exports and the 1948–57 average. In the year ended June 30, 1959, 40 million pounds of tobacco—8½% of total exports—were shipped under Public Law 480 programs. United States tobacco is meeting increased competition in world markets from expanded production abroad.

Cigarette output in the United States reached a new high of 485 billion in 1959, 3% more than the 470 billion of 1958. Domestic consumption was estimated at about 450 billion, also a record, and 3% above 1958. The number of cigarette smokers in the United States is estimated at 58 million—35 million men and 23 million women, comprising 58% of the male and 36% of the female population 15 years of age and over.

Consumption of cigars and cigarillos produced in United States manufacturing plants was about 6.9 billion—7% above 1958. Unit output was the highest since 1923.

TONGA or **FRIENDLY ISLANDS.** A self-governing Polynesian kingdom under British protection, the group (area, 270 square miles) comprises some 150 islands situated east of Fiji in the southwestern Pacific. The 1956 census population was 56,838 (including 55,156 Tongans and 277 Europeans), of which about half inhabit Tongatabu, on which is Nukualofa, the capital (pop., 5,500). Other main island groups are Haabai and Vavau, which contains the ports of entry, Nukualofa and Neiafu. Outlying islands include Niuafoo, Tafahi, and Niuatobutabu. The natives are Christian (principally Wesleyans, who numbered 28,177 in 1957).

Responsibility in respect of the Tonga Islands as a British-protected state rests with the governor of Fiji (Sir Kenneth P. Maddocks). The ruler is Queen Salote Tupou (acceded April 5, 1918); government is headed by the heir apparent (Prince Tungi) as premier, and comprises a Privy Council, cabinet, and Legislative Assembly, consisting of 7 ministers, 7 nobles, 7 representatives elected triennially, and a speaker. A new treaty of friendship (signed Aug. 26, 1958) between Tonga and the United Kingdom increased both local autonomy and the native government's powers in some aspects of external affairs.

Government revenue (in sterling) for 1956–57 was £731,634, and expenditure, £613,122. The Tonga and Australian pound have the same exchange value. Education, medical attendance, and dental treatment are free. In 1957, Tonga had 73 government and 75 denominational primary schools (with a combined enrollment of 12,852 pupils); and 2 government and 12 mission secondary schools (aggregate enrollment, 2,963 students).

Total imports in 1957 were valued at T£1,840,721; exports totaled T£2,106,770, of which copra accounted for T£1,869,356, and bananas, T£176,466. Roads on Tongatabu aggregate about 60 miles (metaled), and on Vavau, 18 miles.

TORONTO. Situated on the north shore of Lake Ontario, Toronto is the capital of the Province of Ontario, the second largest city in Canada, and one of the country's two largest centers of commerce, finance, and industry. The city proper has an area of 35 square miles, a population estimated in 1959 at 658,420 (1956 census, 667,706), and a general assessment value of $1,747,048,713.

The executive government is vested in an elected mayor (Nathan Phillips, 1958–60) and a Board of Control composed of the mayor and four controllers elected at large. The legislative body is the Council, composed of the Board of Control and 18 aldermen elected by the nine city wards.

Metropolitan Toronto is composed of 13 autonomous municipalities, the largest of which (with the exception of the city of Toronto), is North York, with a population of 200,185 (1959 est.). Metropolitan Toronto has an area of 245 square miles, a total population of 1,429,207 (1959 est.), and a general assessment value of nearly $3.5 billion.

A Council of 24 elected members and an appointed chairman (F. G. Gardiner in 1959) governs Metropolitan Toronto. The Council is composed of the heads of council of each suburban municipality, the two senior Toronto councillors, and the senior aldermen of the nine Toronto wards. There is also a Metropolitan Planning Board and a Metropolitan Police Commission. Public transportation in the metropolitan area is provided by the Toronto Transit Commission, which operates surface, underground, and ferry services.

Much new construction was undertaken in 1959, including the $58 million expansion program of the University of Toronto, designed to accommodate an anticipated enrollment of 23,000 students by 1968 (present student body, approximately 14,000). Plans for the opening of the new York University College have been concluded, with classes to begin in the autumn of 1960. Plans were well advanced for the construction of the new City Hall, of radically unorthodox design; and construction of the O'Keefe Center for the performing arts neared completion. In February the Royal York Hotel completed a $14 million expansion to regain its position as the Commonwealth's largest hotel (1,600 rooms). A $20 million Cities Service Company refinery on the outskirts of Toronto was dedicated on May 26.

Transportation remained in the forefront of the city's problems in 1959. Several steps were taken to open new freeways to expedite automobile traffic converging on the city's business district, and preliminary work on the Bloor-University subway was begun. In the labor field, one of the most serious problems of the year resulted from the decision of the federal government to cancel con-

tracts for the Canadian jet aircraft, Avro Arrow, displacing more than 12,000 workers.

Queen Elizabeth II and Prince Philip visited Toronto on June 29–30, during the celebration of the city's 125th anniversary. On September 14, paintings insured for $640,000 were stolen from the Toronto Art Gallery; they were recovered, somewhat damaged, on October 5.

The most important event of the year was the opening of the St. Lawrence Seaway (q.v.) on June 26. This inland waterway, which allows ocean-going vessels to enter the Great Lakes, has greatly stimulated Toronto's potential as a port. Plans for expanded harbor facilities are under consideration.

G. Ramsay Cook,
Department of History, University of Toronto.

TOURISM. Foreign Travel by U.S. Residents.—The annual survey of foreign travel conducted by the Office of Business Economics, Department of Commerce, which is based on questionnaire returns, shows that United States residents made 1,398,000 trips to overseas countries in 1958 and spent $2,140 million, or about 10% over the amount spent in 1957. The 1958 figure includes $1,460 million spent in foreign countries and $680 million paid for transportation between the United States and foreign areas visited. United States carriers received $360 million, with $320 million going to foreign ships and planes. There has been a rapid growth in cruise travel where an average of 75% of the total outlays of travelers is spent for fares and shipboard expenses.

EXPENDITURES BY U.S. RESIDENTS FOR TRAVEL IN FOREIGN COUNTRIES*
(In millions of dollars)

Area	1955	1956	1957	1958
Canada	306	316	340	323
Mexico	255	279	305	319
Europe and Mediterranean	430	473	483	560
West Indies and Central America	107	134	153	156
South America	22	29	37	37
Other overseas areas	33	44	54	65
Total	1,153	1,275	1,372	1,460

* Excludes travel by military personnel and other government employees stationed abroad, their dependents and United States citizens residing abroad, but includes shore expenditures of cruise travelers. (Source: Office of Business Economics, U.S. Department of Commerce.)

During 1958 the Passport Office of the Department of State issued and renewed 676,898 passports, an increase of 15.5% over 1957. In the order of rank, New York, New Jersey, Florida, and California residents requested more passport facilities per hundred thousand of population than the national average.

Travel to U.S. from Abroad.—Expenditures by foreigners in the United States rose in 1958 to $825 million. In addition, foreigners paid $89 million in fares to United States ships and planes for transportation between the United States and foreign countries of residence. Canadian visitors spent $425 million in 1958; Mexicans, about $144 million; and visitors from overseas countries, $256 million. Travel expenditures by Europeans declined slightly to $86 million. Residents of the West Indies, Central America, and South America spent $125 million, or about 10% more than in 1957. Receipts from travelers from other overseas countries, principally the Far East, amounted to $45 million, an increase of 20% over 1957.

Domestic Travel in the U.S.—It is estimated that about $26 billion was spent by Americans for business and pleasure travel in the United States in 1958.

Major Developments in International Travel.—President Eisenhower issued a proclamation on Sept. 27, 1958, calling upon government, business, labor, agriculture, and civic groups, as well as the American people, to observe 1960 as "Visit U.S.A. Year," and to take steps to mark the year with exhibits, ceremonies, and other appropriate activities. A committee, representing a cross-section of American business, labor, agriculture, and industry leaders, was appointed on May 26, 1959, by the secretary of commerce to coordinate the activities of the government and private business in carrying out President Eisenhower's proclamation inviting foreign visitors to the United States in 1960.

Regulations effective March 21, 1959, now provide that an automobile rented while abroad by an American resident may be brought into the United States without payment of duty for a period not to exceed 30 days. Recrossings of the border incidental to the trip are also permitted.

The Transport and Communications Commission of the United Nations adopted a resolution in May 1959 recommending that the U.N. Economic and Social Council bring up to date technical studies on international travel and tourism and then convene a world consultative conference on these subjects.

TOWN PLANNING. See City Planning.

TOY INDUSTRY. World toy production advanced about 6.1% in 1959, as compared with 1958, but the gain was short of that of the record year 1956. Consolidations, mergers, and a mortality common to the industry reduced the number of manufacturers in the United States to approximately 1,800, but the nation continued to lead all others in the total number of plants. Modern methods of manufacturing failed to reduce employment, and the total number of workers engaged in toy manufacturing in 1959 climbed by about 3,000 to 73,000.

Wage advances brought the annual payroll in the United States to about $270 million. Plants remained concentrated in the Northeastern, Middle Atlantic, Midwestern, and Pacific Coast areas, with a continuing growth evident in Ohio and Illinois.

Japan continued to pace world toymakers in terms of exports, with the United States second and West Germany third. Exports of toys from the United States exceeded $15 million in value, with Canada and South America the best markets. Japan and West Germany were, however, making serious inroads in both these markets.

Despite the huge United States production for internal consumption, toy imports into the nation rose by about 25% over 1958 levels. Again, Japanese imports were the largest, accounting for about 85% of all toy imports, or about 16% more than in 1958.

Retail toy sales in the United States rose from $1.5 billion to $1.65 billion. Average expenditures per family were about $40, compared with $34 in 1958. Advance orders indicated that Christmas toy sales in 1959 would exceed $1 billion.

The year was also significant as the centennial of the founding of the first English-speaking kindergarten in the United States and of the 100th year of operations of the Milton Bradley Company, whose founder, Milton Bradley, is regarded by some authorities as the father of the American kindergarten. The Milton Bradley Company, the world's largest manufacturer of educational games and materials, continued in 1959 to be the nation's third-oldest toy manufacturer, ranking behind

Bachmann Bros. (1833) and Kirchhof Patent Company (1852).

TREASURY DEPARTMENT, U.S. Receipts of the United States government for the fiscal year 1959 were slightly greater and expenditures slightly smaller than had been estimated in the January budget. Net budget receipts, according to preliminary figures, amounted to $68,158,142,030 ($69,116,717,311 in the fiscal year ending June 30, 1958); expenditures amounted to $80,698,842,169 ($71,936,171,353 in 1958). The resulting budget deficit of $12,540,700,139 was $330 million less than the deficit estimated in January.

The cash balance of the Treasury Department at the close of the 1959 fiscal year was $5,350,391,763. The balance at the end of the 1958 fiscal year was $9,749,102,977.

Table 1—BUDGET RECEIPTS AND EXPENDITURES, FISCAL YEARS 1959–58

(In millions)

Description	1959 (actual)	1958 (actual)
Receipts by source		
Individual income taxes	$40,730	$38,569
Corporation income taxes	18,092	20,533

Other	2,248[1]	839
District of Columbia	31	25
Allowance for contingencies	...	...
Budget expenditures	80,699	71,936
Budget deficit	12,541	2,819

[1] Includes $1,375 million payment to International Monetary Fund.

Public Debt.—On June 30, 1959, the total public debt subject to statutory limitation was $284,398,474,090, as compared with $276,013,439,621. During the 1959 fiscal year, interest payments on the public debt amounted to $7,607,360,542, as compared with $7,606,774,061 in the previous fiscal year. The computed average interest rate on the debt was 2.867% on June 30, 1959, as against 2.638% at the close of the 1958 fiscal year.

Federal Government Receipts from and Payments to the Public.—The total flow of money between the public and the federal government (indicated in Table 2) is sometimes referred to as "the consolidated cash budget." To derive the totals shown for receipts and payments, transactions of the trust funds are consolidated with budget transactions. Transactions between the two types of funds, such as interest paid by the Treasury to trust funds, are eliminated. Certain other noncash transactions are also eliminated in the consolidation. For example, interest which accrues on savings bonds is counted as a budget expenditure at the time of accrual. Since the interest is not paid in cash until the bond is redeemed, the consolidation eliminates the interest accruals and includes the interest paid on bonds which are redeemed.

The figures for federal receipts from and payments to the public are not the same as those for Treasury cash deposits and withdrawals as presented in the *Daily Treasury Statement*. For example, transactions from various agency accounts with commercial banks are not included in Treasury cash deposits and withdrawals, but are reflected in the figures shown in Table 2.

Table 2—FEDERAL GOVERNMENT RECEIPTS FROM AND PAYMENTS TO THE PUBLIC, FISCAL YEARS 1958 AND 1959

(In millions)

Description	1959 (actual)	1958 (actual)
Budget receipts	$68,158	$69,083
Trust fund receipts	17,067	16,326
Deduct:		
Intragovernmental transactions	3,651	3,495
Seigniorage on silver	44	59
Total receipts from the public	81,530	81,855
Budget expenditures	80,699	71,897
Trust fund expenditures	18,535	16,081
Government-sponsored enterprise expenditures (net)	1,171	— 627
Deduct:		
Intragovernmental transactions	3,651	3,495
Excess of interest accruals over payments, etc.	2,217	528
Total payments to the public	94,537	83,328
Excess of payments over receipts (—)	— 13,007	— 1,472

Note: A detailed reconciliation of the differences between the budget totals, federal government receipts from and payments to the public, and Treasury cash deposits and withdrawals is available on request from the Bureau of the Budget.

Savings Bonds.—In September 1959 the Treasury announced an increase in the rate on Series E and H savings bonds to 3¾% instead of the previous 3¼%. On Series E bonds the rate increase is accomplished by reducing the term of the bond to 7 years 9 months. Series H bonds mature in 10 years.

All Series E and H savings bonds purchased on June 1, 1959, and after, earn the new rate of 3¾% if held to maturity. All outstanding E and H bonds purchased prior to June 1, 1959, now earn at least ½% more for the period from June 1, 1959, to maturity. Bonds previously earning 3¼% or 3% for their full maturity periods now earn ½% more. Those which earned 2.9% will earn 6/10% more. The increase is on a graduated scale starting with the next full interest period beginning on June 1, 1959, or after. There is no retroactive increase in interest rates for periods prior to June 1, 1959.

Sales of Series E and H savings bonds during the first nine months of 1959 amounted to $3,253 million. Accumulation of interest during the period on outstanding E bonds amounted to $878 million. During the same period in 1958, sales were $3,616 million and accumulation of interest amounted to $885 million. Redemptions of both matured and unmatured E and H bonds during the nine-month period totaled $4,180 million, which included interest payments of $709 million to bondholders. This amount compares with redemptions of $3,693 million, including interest payments of $496 million, within the same period of 1958. Series E and H bonds outstanding as of Sept. 30, 1959, amounted to $42,540 million. About 55% of the $28 billion of Series E bonds which reach maturity after May 1951 are still held by the owners who have earned $1,872 million in additional interest under the automatic extension option. The value of all series of savings bonds outstanding on Sept. 30, 1959, was $50,012 million.

Money in Circulation.—Coins and currency in circulation outside the U.S. Treasury Department amounted to $31,972,676,466 as of Aug. 31, 1959, representing a per capita circulation of $179.96.

TUBERCULOSIS. Tuberculosis continues to take its toll of mankind with relatively high morbidity and mortality rates. In 1958 there were 12,070 deaths from this disease reported in the United States.[1] U.S. Public Health Service data indicate that for 1958 the provisional mortality rate was 7.0 per 100,000 population. There were 65,848 new cases reported and 72,303 tuberculous patients hospitalized in federal and nonfederal hospitals. Tuberculosis control programs are still being maintained by the various state health departments, and the federal government continues to maintain surveillance of the overall problem.

Epidemiology.—State and local health departments have increased the use of tuberculin skin tests to detect cases of tuberculosis. The number of X-ray chest surveys, however, appears to be declining.

The recognition of "atypical mycobacteria" as agents responsible for human pulmonary disease resembling tuberculosis continues to increase in significance. These organisms have been classified as "photochromogens," "scotochromogens," and "nonchromogens," depending on their growth characteristics. The former two types of organisms have been shown to be responsible for human disease, whereas the last type appears to be saprophytic. Considerable resistance to treatment with ordinary tuberculostatic agents has been observed, the scotochromogen organisms appearing to be most drug resistant. Scotochromogen organisms have also been found in specimens in patients not having pulmonary disease.

Tuberculin made from one of these atypical mycobacteria (Battey) has been shown to produce skin reactions in a large segment of the population residing in the southeastern United States. This observation is of great importance since it helps explain the high incidence of weak tuberculin reactors previously observed in this area.

Prevention.—BCG continues to be employed as a vaccine for prevention of tuberculosis in many parts of the world. In the United States, however, its use is being reserved for special individuals who have unduly hazardous familial or occupational contact. Efforts to produce a vaccine from chemical fractions of BCG and other tubercle bacilli are being continued.

Treatment.—Chemotherapy continues to provide the most reliable means of treatment of pulmonary and nonpulmonary forms of tuberculosis. Drug therapy has produced the interesting finding of reduction or elimination of bacteria in body specimens, although at times, attested to by chest X-rays, producing no change in the cavities. Patients who exhibit cavity closure have been shown to maintain their therapeutic success over longer periods of time than those who have residual cavities. For this reason removal of the affected portion of the lung by surgery continues to be an important adjunct to the treatment of pulmonary tuberculosis.

Data from the VA-Armed Forces Cooperative Study indicate that the combination of isoniazid and/or streptomycin and para-aminosalicylic acid (PAS) seems to be the most effective standard treatment regimen. Other drugs such as cycloserine, pyrazinamide, streptovaricin, and kanamycin are ordinarily reserved for use in patients who do not respond well to a standard treatment regimen.

It has been demonstrated that a significant number of patients convert isoniazid in the body to a biologically inactive form. In such patients it is thought important to increase the dosage of isoniazid to offset this loss. The level of biologically inactive isoniazid in the serum requred for optimum therapeutic effect still remains to be determined.

The use of adrenal steroids as an adjunct to chemotherapy of pulmonary tuberculosis has received increasing attention, particularly for those patients who exhibit overwhelming toxemia and prostration due to severe disease. Indiscriminate use of adrenal steroids, however, has been shown to lead to some untoward effects.

MARTIN M. CUMMINGS,
Chairman, Department of Microbiology, School of Medicine, University of Oklahoma.

TUNGSTEN. U.S. Bureau of Mines figures on domestic mine production of tungsten and concentrates in 1958 had to be withheld to avoid disclosing confidential data regarding the output of individual companies. However, the bureau noted that domestic production of tungsten concentrate fell far below that of 1957, and only two producers were active during the last half of 1958. Also there was lower industrial consumption, reduction of imports, and virtual completion of the United States government purchase program in 1958. Imports of tungsten ores and concentrates for consumption were 3,271 tons in 1958, compared with 7,009 tons in 1957; total consumption was 2,660 tons (4,272 in 1957). In the first seven months of 1959, imports for consumption were 1,798 tons, and consumption of concentrates totaled 2,706 tons.

World production of tungsten ore and concentrates (60% WO_3), in 1958 was estimated at 63,500 short tons, compared with 75,000 tons in 1957. In most countries outside the Communist bloc, output was curtailed greatly. (See MINERAL PRODUCTION for table showing output of major producing countries.)

TUNISIA. A republic on the Mediterranean coast of Africa, bordered by Algeria and Libya. Area, 48,332 square miles; pop. (est. 1959), 3,880,000, predominantly Arabic-speaking Moslems, and including about 153,000 Europeans (mainly French and Italians) and 63,000 native Jews. Since Tunisia obtained independence in 1956, about 100,000 French and Italians have left the country, and some 115,000 Algerian refugees have entered. Arabic is the official language. Chief cities and populations (est. 1956) are: Tunis, the capital, 410,000; Sfax, 65,635; Sousse, 48,172; and Bizerte, 46,681.

Government.—Formerly a protectorate of France, Tunisia obtained independence under the Franco-Tunisian agreement of March 20, 1956. A National Constituent Assembly was elected on March 25, 1956, and on April 11, Habib Bourguiba, leader of the Neo-Destour Party, was named premier. On July 25, 1957, the assembly deposed the bey of Tunis, proclaimed Tunisia a republic, and chose Bourguiba as president. A constitution was proclaimed on June 1, 1959, providing for a presidential system of government, with a unicameral legislature, and an independ-

[1] Canada reported 1,027 deaths in the same year, compared with 1,183 in 1957.

ent judiciary. The president, who exercises strong executive powers, is elected by universal suffrage for a five-year term. The National Assembly consists of 90 members elected at the same time and for the same period as the president. The first elections under the new constitution took place on Nov. 8, 1959. Bourguiba, the sole candidate, was elected president, and the Neo-Destour obtained all the seats in the assembly.

Education and Religion.—In 1958, 37% of school-age children were enrolled in primary schools, as compared with 19% in 1955, and the literacy rate (about 20% of the population in 1946) is rising steadily. In 1957–58 there were 6,064 primary schools for Moslem children (266,288 pupils), 673 secondary (21,486), and 51 technical (10,663). The Tunisian Constitution proclaims Tunisia a Moslem state and requires that the president be a Moslem, but freedom of worship is guaranteed. The Europeans in Tunisia are mostly Roman Catholics.

Finance.—The ordinary budget for the fiscal year beginning April 1, 1958, totaled 46.8 billion Tunisian francs. On Nov. 3, 1958, a new currency unit, the dinar, came into being simultaneously with the opening of the Central Bank of Tunisia as the new bank of issue. The dinar was initially equivalent to 1,000 Tunisian francs, but when the French franc was devaluated on Dec. 27, 1958, the dinar was disengaged from the franc and retained its official value of U.S.$2.38. In the year ended June 30, 1959, Tunisia obtained $20 million from the United States in special assistance, $8.6 million from the U.S. Development Loan Fund, and $1.7 million in technical cooperation.

Transportation and Communications.—Tunisia has 2 railways: the government-owned Tunisian Railway (including 300 miles of normal-gauge track connected with the Algerian system, and 650 miles of meter-gauge track in north-central Tunisia); and the private Sfax-Gafsa line (283 miles) used mainly to transport phosphate rock. In 1959, Tunisia obtained a loan of $2.4 million from the U.S. Development Loan Fund for the purchase of diesel-powered coaches and other equipment. Tunisia's road network totals 9,153 miles, including 5,685 miles paved. There is an international airport at El Aouina, and there are several secondary airports. Passenger cars numbered 38,726 in 1958; commercial vehicles, 18,550; telephones, 23,843; radio receiver licenses, 108,000 (1957).

Production.—Over two thirds of the population are engaged in farming or livestock raising. European landholdings are reported at about 1.5 million acres, comprising a relatively small proportion of total cultivated land but a large proportion of the best land. Most of the land tilled by the Tunisians is of marginal value, techniques are primitive, and rainfall supply in many areas is uncertain. Under a land reform law of 1958, large landholders in the Medjerdah Valley are required to relinquish parts of their holdings for distribution to the peasants, and in late 1958 President Bourguiba stated the government's intention to buy out the European farmers.

Production for most of the important crops in 1958 was well above previous levels. Output of grain (durum wheat, soft wheat, and barley) totaled 820,000 metric tons (about 20% over 1957). Olive oil production was a record 130,000 metric tons in 1958–59; citrus fruit, 72,000; wine, 1.9 million hectoliters (1958). Other products include vegetables, flaxseed, esparto grass, dates, and cork. Livestock, chiefly sheep and goats, yield meat, dairy products, and hides and skins.

Industry (including mining) and handicrafts provide about a fourth of national income. Industrial development has been hindered by lack of fuel, capital, and skilled labor. Manufacturing, centered largely around Tunis, includes the production of superphosphates, building materials, and lead, and the processing of agricultural, forestry, and fisheries products. Smaller industries produce shoes, textiles, leather, soap, beverages, and other items for local consumption. Handicrafts, including rugs, carpets, embroideries, and leatherwork, remain important. Chief minerals and 1958 output in metric tons were: phosphate rock, 2,278,532; iron ore, 1,103,183; lead concentrate, 35,548; and zinc concentrate, 6,074.

Foreign Trade.—Exports in 1958 totaled 63,399,000 dinars; imports, 64,881,000. Good crops and higher wine sales to France made possible a 16% increase in exports over 1957. Chief exports in order of value in 1958 were: wines, olive oil, phosphates, wheat, iron ore, and lead. Imports are mainly petroleum products, sugar and other foodstuffs, machinery, semifinished products, and consumer goods. France purchased 61.9% of 1958 exports, and provided 71.4% of imports. Italy, Great Britain, and the United States are other important trading partners of Tunisia.

Principal Events, 1959.—Having attained political independence from France in 1956, Tunisia has sought to reduce her economic dependence on France and to free herself from French restrictions in the military sphere. The loosening of economic ties to France is rendered difficult by the fact that France provides the chief market for Tunisian exports, and French enterprise and capital retain their leading role in the modern sector of the Tunisian economy, despite the flight of many French residents and considerable French capital since 1956. The military objective is complicated by the continuation of the Algerian rebellion and the rebels' use of Tunisia as a staging area, as well as a center for their political activity. An important Tunisian gain was scored on June 17, 1958, when France agreed to withdraw her military forces from all of Tunisia except the naval base of Bizerte. A gain in the economic sphere was achieved in 1959, when special monetary arrangements concerning Tunisia's membership in the franc zone afforded Tunisia increased freedom in foreign trade.

The goodwill following the 1958 military agreement was somewhat dissipated by the uncovering of a widespread French espionage network in Tunisia in February 1959. The espionage ring, apparently seeking information on Algerian political and military activities, consisted largely of French employees of the Tunisian postal, telephone, and telegraph service, and French embassy employees. Fourteen Frenchmen were arrested (one committed suicide, 13 were released and allowed to return to France on October 9), 43 French communications employees were dismissed, and the French military attaché was ordered to leave the country.

Incursions against Tunisian border territory by French forces operating against the Algerian rebels continued in 1959, though on a reduced scale as compared with previous years. French fighter planes attacked a group of Tunisian workers near Nefta on February 14, killing four. Six Tunisians were killed in incidents occurring on February 9 and during the first half of April, according to Tunisian charges. On August 15, French planes allegedly made two bombing attacks on the village of Bhiret Zitouna, and on September 26, French artillery was said to have shelled the border village of Ain Karma.

Despite the espionage incident, an agreement was signed in Tunis on April 15 for an 18-month extension of the Tunisian government's employment of 1,850 French teachers, magistrates, and technicians, 40% of whose salaries are to be paid by France. On August 20, President Bourguiba announced Tunisia's abandonment of the customs union with France prevailing since 1956. However, a one-year trade agreement signed in Tunis on September 5 provided that many French products would continue to enter Tunisia duty free or under preferential rates, while Tunisian wine and hard wheat (produced mainly by the French in Tunisia) would continue to receive preferential treatment in France. A one-year monetary agreement signed at the same time provided that Tunisia would remain within the franc zone, but its foreign exchange holdings would be kept in a separate account, and Tunisia would be credited initially with $15 million for exchange transactions outside the franc zone. These developments made possible a liberalization of Tunisian trade policies, and a new customs tariff came into effect on October 1.

The government's efforts to improve the economy and reduce unemployment have thus far been directed mainly toward the modernization of agriculture and the encouragement of new light industries. In May 1959 a National Investment Company was established with an initial capital of 2 million dinars, to engage in various productive enterprises, and on October 10 a National Agricultural Bank was inaugurated to provide credit to peasants at low interest rates.

The Tunisian Constitution, establishing Tunisia as a presidential-type republic, was proclaimed on

June 1, with considerable national rejoicing and celebration. In the first elections under the new constitution on November 8, 91.4% of the electorate voted, and women cast ballots for the first time in a national election. The election served mainly to indicate the undiminished popularity of President Bourguiba, who was re-elected without opposition. The Neo-Destour Party won all seats in the National Assembly, but contests took place in only two districts, where a tiny Communist minority provided the only opposition.

President Dwight D. Eisenhower conferred briefly with President Bourguiba at La Marsa, a suburb of Tunis, on December 17. The two leaders discussed United States aid to Tunisia and expressed the hope of both countries for a settlement of the Algerian conflict.

M. J. G.

TUNNELS. Major tunnels were being dug throughout the world in 1959 for the conveyance of vehicles, water, and sewage.

United States. *Water Tunnels.*—The longest tunnel under construction was the West Delaware Tunnel for the New York City water supply system. This 44-mile, deep-rock bore was being drilled and blasted toward completion scheduled for 1960. It will be lined with concrete to a 13½-foot diameter and will carry water from a reservoir, yet to be built, to the end of the 85-mile Delaware Aqueduct, the world's longest tunnel. Miners on the West Delaware Tunnel have developed and are using a "burncut" method in which an 8-inch-diameter hole at the center of the drill pattern in the rock-face to be blasted has been found to effect clean breakage of the rock for relatively easy removal.

New York City's Board of Water Supply has announced plans for another major tunnel. This would be a 6¼-mile tunnel lying 600 to 1,200 feet under New York Harbor to take water in a 10-foot conduit connecting the boroughs of Brooklyn and Richmond (Staten Island). The $25 million tunnel may be started in 1960.

The second-longest tunnel under construction in 1959 was the 23-mile Roberts Tunnel, which will pierce the Continental Divide in Colorado to bring water from the west slope of the Rocky Mountains to Denver. It is a $50 million project being worked at four headings. The builders expected to hole through in the winter of 1959–60 and to complete the concrete lining of the tunnel, to a 10-foot 3-inch inside diameter by early 1962.

Vehicular Tunnels.—A planned 17½-mile vehicular crossing of Chesapeake Bay in Virginia would include two tunnels, each of approximately a mile in length, and would cost a total of $210 million. A construction contract was negotiated, but the crossing was still without financing at the end of 1959.

At Houma, La., a 960-foot vehicular tunnel under the Intracoastal Waterway was scheduled for completion in mid-1960.

In Boston, construction was begun on a second vehicular tunnel under Boston Harbor. It will parallel the 25-year-old Sumner Tunnel, which will be modernized.

A 3,350-foot, two-lane vehicular tunnel, to cost $20 million, went under construction in 1959 to pass under the Oakland estuary between Oakland and Alameda counties on San Francisco Bay. It will be of the sunken-tube type of construction; that is, tunnel sections will be prefabricated of steel and concrete, sunk into place, and joined under water. There will be 12 tube sections, each 200 feet long and 37 feet in diameter. This will be California's second subaqueous vehicular tunnel. One connecting Oakland and Alameda was completed under San Francisco Bay in 1928.

In Pittsburgh the twin bores of the $17 million Fort Pitt Tunnel, to carry highway traffic through Mt. Washington, were holed through and were being pushed to completion. They will provide approaches to the new two-level Fort Pitt Bridge (see BRIDGES).

Sewer Tunnels.—Also for Pittsburgh, as well as surrounding communities, extensive sewer tunnels were finished in 1959. Altogether, 33 miles of tunnels were cut through hard rock, coal seams, soft ground, and the worst kinds of mixed faces, which required tunneling under air pressures. The completed tunnels were lined by the placement of precast pipe of high-strength concrete. It was difficult tunneling most of the way, with groundwater and explosive gases adding to the troubles.

Difficult sewer tunneling was completed in 1959 in Cincinnati, where a six-mile interceptor line was holed through difficult ground at a cost of about $6.5 million. Called the East Branch Ohio Interceptor, this tunnel will take sewage to the new Mill Creek Sewage Treatment Works.

In New York City, constructors prepared to put a sewer tunnel under the East River (to take Manhattan's sewage across to the Newtown Creek Sewage Plant to be built on Long Island). Troubled with groundwater in the sinking of the access shaft for this under-river force main, they used a freezing method to solidify the soil as they dug down through it in a shaft to solid rock. On the Long Island side of the East River, a $10 million interceptor sewer tunnel was pushed toward the future disposal plant site through soil that required shield driving under compressed air.

Canada.—The Deas Island Tunnel was opened to traffic by Queen Elizabeth II on July 15. It is a $23 million structure under the Fraser River near Vancouver, B.C. This tunnel was interesting as a construction project, since it is a sunken-tube type built of concrete instead of being a steel hull lined with concrete. The concrete box sections were built ashore, floated into line, and then sunk into place to be connected beneath the river. (See also BRITISH COLUMBIA.)

France, Italy, Switzerland.—Three Alpine highway tunnels were being built in 1959. The world's outstanding vehicular tunnel under construction was Mont Blanc Tunnel, which will be the world's longest vehicular tunnel when completed in 1963. Its 7½-mile line, near the highest mountain in the Alps, will connect France and Italy with a $32 million short-cut which will be the only all-season France-Italy connection across the Alps in this region. Also under construction were the 3½-mile Great St. Bernard Project, to be completed in 1961, just to the east of Mont Blanc Tunnel on a route to tie Italy and Switzerland, and the 4-mile San Bernardino Tunnel, to be completed in 1963 into Switzerland from near Milan, Italy.

West Germany.—A double-barreled sunken-tube tunnel, similar to that under the Fraser River in British Columbia, was being placed under the Kiel Canal in West Germany. It is on a main highway connecting Germany and Denmark, and has been planned at an overall length of 2,045 feet.

England.—The north and south sections of a highway tunnel which runs half a mile under the Thames River were linked in April. The $33 million tube connects Dartford and Purfleet.

Australia.—On Australia's Snowy Mountains hydroelectric project, tunnelers claimed another speed record in advancing a 12½-foot horseshoe-shaped bore 526 feet through granite in six days, for an 87.7-foot-per-day average. They used the burncut method which had previously produced an 83-foot-per-day record in the 13½-foot-diameter West Delaware Tunnel in New York State (described above), where the method was developed.

India-Kashmir.—India's new Jawahar Tunnel link with Kashmir had one tube open to traffic in 1959, while the other remained under construction. It will take the place of 11,000-foot-high Banihal Pass, which can be closed by heavy snows from November to March, and sometimes to May. Costing an estimated $8 million, the tunnel is to be 1½ miles long and lies at an elevation of 7,250 feet above sea level.

Japan.—The $3.6 million, 9,745-foot Sasago Tunnel in Japan was completed through the Sasago Pass. It carries a road which connects Tokyo and Kofu, capital of Yamanashi Prefecture.

ARTHUR J. FOX, JR.,
Senior Staff Editor, "Engineering News-Record."

TURKEY. The Republic of Turkey (area, 296,185 square miles; pop., 1955 census, 24,121,778) consists of Anatolia (Asia Minor) and Eastern Thrace (European Turkey). The country's capital is Ankara (1955 pop., 453,151); other principal cities include Istanbul (formerly Constantinople; pop., 1,214,616); Izmir (formerly Smyrna; pop., 286,310); Adana (172,465); Bursa (131,336); and Eskişehir (122,755). The vast majority of the population are Moslems (99%) and speak Turkish as their native language (90.4%). Most Turkish Moslems belong to the Sunni sect, though there exists a large Shi'ite minority. The non-Moslem groups (Greek and Armenian Christians, and Jews) total 214,000 and are concentrated in Istanbul and Izmir. Ethnic minorities include the Kurds (1.5 million), largely in the eastern provinces, and Arabs (346,000) in the south.

Government.—Turkey is a republic, and all citizens over 21 years are entitled to vote for the unicameral Grand National Assembly, which serves for four years unless it dissolves itself earlier. Voting is by plurality and by party lists in each of the 67 provinces. Three parties are currently represented in the assembly: the controlling Democrats (led by Prime Minister Adnan Menderes); the Republican People's Party (led by Ismet Inönü), the main opposition; and the Republican Villagers Nation's Party (led by Osman Bölükbaşi).

The president of the republic is elected by the assembly from among its members for the duration of its own term. The incumbent, Mahmud Celâl Bayar (Democrat), was re-elected for a third term on Nov. 1, 1957. The prime minister, Adnan Menderes, who has held the office since 1950, must likewise be an assembly member and is named by the president.

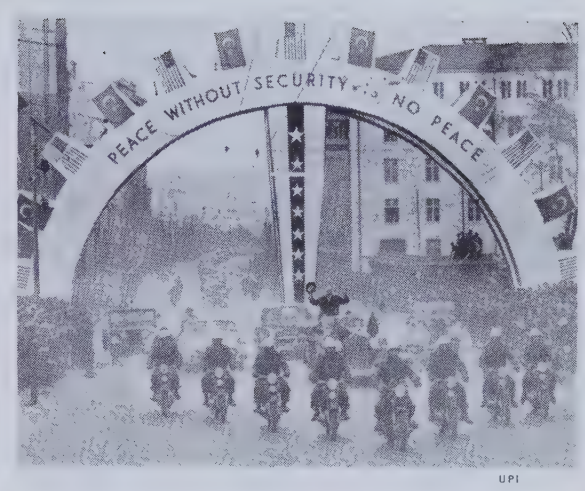
Turkey, a charter member of the United Nations, is also a member of the Balkan Pact (with Yugoslavia and Greece), the Central Treaty Organization, NATO, the Organization for European Economic Cooperation (OEEC), the European Payments Union, the Council of Europe, the International Bank for Reconstruction and Development, the International Monetary Fund, and several other international organizations. In August 1959, Turkey announced its intention to associate with the European Common Market, and Turkey's application was acted on favorably by the six member nations.

Finance.—The monetary unit is the Turkish lira (T£), which is officially pegged at U.S.$0.3571. The 1959–60 budget was balanced at T£6.2 billion, 21.0% of which was allocated for national defense. As of April 1959 the public internal debt totaled T£3.3 billion, and the foreign debt, T£4.3 billion; the Central Bank's gold and foreign exchange assets (Oct. 10, 1959) totaled T£772.1 million, and its gold and foreign exchange liabilities, T£997.7 million. As of Aug. 4, 1958, a new exchange system became effective. For all imports, services, and capital transactions, a surcharge of T£6.20 per U.S. dollar is applied to the par value of T£2.80. The lira's free value declined to $0.07 in August 1958, but was strengthened somewhat thereafter by the large foreign credit extended to Turkey at that time. Since then, the value of the free lira has been stabilized at about $0.09.

From the origin of the Truman Doctrine in 1947 through June 1959, United States military aid to Turkey approximated $2 billion, and economic aid, $991.4 million. The Turkish trading position is still bolstered by the $359 million credit made available to Turkey in August 1958. In August 1959, T£310 million in counterpart funds were released by the United States government for use in Turkey, largely for investment to increase the volume of Turkish exports and effect savings in foreign exchange payments for imports.

Education.—Virtually all schools are operated by the national Ministry of Education, principal exceptions being Robert College (American) and other foreign and minority schools. Total enrollment at the start of the 1958–59 school year was 2.9 million. In 1955, 40% of the population 7 years of age or older was reported to be literate (1950 figure, 33.6%). There are six state universities—Istanbul, Ankara, Istanbul Technical, the Aegean University in Izmir, Middle East Technical in Ankara, and Atatürk University in Erzurum.

Transportation and Communications.—At the end of 1958, Turkey's highway network consisted of about 24,600 miles of all-weather roads, serving a total of about 81,000 commercial and passenger vehicles. There are about 4,900 miles of railroad, mostly single track and entirely state owned and operated. The Turkish State Airways, Inc. flew a record-breaking 103.9 million passenger-miles during 1958. The Turkish merchant marine totaled 650,000 tons at the end of 1958. Turkey's three radio stations (Istanbul, Ankara, and Izmir) are government-operated. At the end of 1958 there were 1,167,052 licensed radio receivers and 167,230 telephones in use.



UPI

President Eisenhower (hands raised), arriving in Ankara on December 6, acknowledges the cheers of welcoming Turks.

Economic Conditions.—The economic stabilization program introduced in August 1958 was continued throughout 1959. As a result, inflationary pressures were somewhat reduced and prices rose more slowly. The increase of money in circulation over 1958 was the lowest annual increase for several years, as was the increase in bank credits. But the internal impact of certain aspects of the stabilization program, particularly the freezing of bank credits at 1958 levels, caused a number of business concerns to reduce operations and increased unemployment in certain areas. Some observers have suggested that the stabilization program had not resolved Turkey's basic economic problems, which stem from the great reliance on agriculture (45.4% of the national income in 1958) and its inadequate structure (largely dry grain farming), the heightened level of consumption expected by the masses, and the political necessity for maintaining a high level of investment in basic development.

It seems doubtful that real income per capita has risen significantly from T£556 in 1953. Investment as a percentage of national product fell from a high of 14.8% in 1955 to 11.7% in 1958. However, in 1951–58, 225 foreign firms invested T£202.9 million in Turkey.

Since 1948 an intensive government-sparked economic development effort has more than doubled normal-weather agricultural production and increased industrial and mining output by about 50%. Production of electricity rose from about 700 million kw.-hr. in 1948 to 3,610 million kw.-hr. in 1958. It was possibly true that the overall rate of development had slowed down slightly during 1958 and 1959.

Agriculture.—Of the total land surface in 1958, about 38% was in meadows and pasture, 29% in cultivated crops (including 10% in fallow), 2% in orchard and vineyard, 13% in forest, and 17% in unproductive area. Principal crops and 1958 output (in thousands of metric tons) were: wheat, 8,550; barley, 3,600; sugar beets, 2,300; grapes, 2,992; potatoes, 1,472; onions, 405; olives, 482; cotton, 180; tobacco, 104; and hazelnuts, 132. Other important crops include a variety of nuts, fruits, and vegetables. Chief animal products, with 1958 output in tons, are as follows: meat, 135,027; wool, 41,950; mohair, 9,683; and silk cocoons, 2,934.

Mining.—Turkey's mineral production increased by 86.5% from 1948 through 1956. Production figures for 1958 were as follows: bituminous coal, 6.6 million metric tons; sub-bituminous coal and lignite, 3.8 million; copper, 22,536; chromite, 509,000; iron ore, 800,000 petroleum, 327,400; and sulfur, 12,800.

Industrial Production.—Principal large-scale industries receiving heavy investment since World War II include textiles, sugar refining, cement, steel, chemical, paper, and food processing. Output of major industrial products in 1958 was as follows: pig iron, 225,900 metric tons; steel mill products, 186,300; cement, 1,512,000; coke, 720,000; paper, 57,720; sugar, 349,500; glass and glass products, 23,300; and superphosphate, 5,136. Production of cotton textiles in 1957 totaled 455 million meters, and woolen textiles, 17 million. Turkey's ambitious industrial program continued in 1959, with a number of projects being undertaken as joint enterprises by private and public capital, and occasionally by foreign private capital.

Foreign Trade.—Turkey's 1958 exports totaled T£692.3 million (down T£274.4 million from 1957), and imports, T£882.3 million (down T£229.7 million). The trade deficit of T£190.0 million in 1958 (up T£44.7 million from 1957) and of T£154 million in the first eight months of 1959 (down T£12 million from the same period in 1958) was in part due to increased import prices, poor crops, and a reduction in the price of chrome. As usual, 1958 exports were largely agricultural (82.3% of total exports), chief among them being tobacco (T£284.4 million), fruits and nuts (T£157.0 million), and cotton (T£64.5 million). Mineral exports were valued at T£89.7 million, or 13% of all exports. Chief imports during 1958 were production machinery, cereals, chemicals, petroleum, and construction materials. Turkey's major trading partners in 1958 were the United States (27.9% of imports and 20.3% of exports), West Germany (15.5% and 18.0%), Italy (11.1% and 5.7%), Great Britain (7.2% and 6.3%), and Czechoslovakia (3.9% and 5.7%). Soviet bloc trade accounted for 18.2% of total imports and 23.7% of exports.

Principal Events, 1959. *Foreign Affairs.*—Turkey continued to cooperate fully with the Western powers through the United Nations, NATO, and the Central Treaty Organization (formerly the Baghdad Pact). On March 5 the United States and Turkey signed a bilateral defense accord which pledged that in the event of aggression against Turkey, the United States "will take such appropriate action, including the use of armed forces, as may be mutually agreed upon."

On February 11 the premiers of Greece and Turkey agreed on a settlement of their countries' long dispute over Cyprus. The settlement called for the founding of a presidential republic organized on a communal basis (see CYPRUS). Shortly thereafter, Greek officers reappeared at the command headquarters of the Allied Land Forces, Southeastern Europe, in Izmir. The opposition Republican People's Party voted (347–138) against ratification of the Cyprus agreement by the Turkish parliament on the grounds that Turkish rights were inadequately protected, that the island might still become Greek, and that the parliament had not been given an adequate opportunity to consider the issue.

The Turkish-American expropriation and confiscation agreement, which was designed to protect private United States investments in Turkey, was ratified by the Turkish parliament in January after considerable debate. Some deputies charged that agreement would in fact give the United States government special rights in Turkey.

On May 11, Turkey signed a multilateral agreement for the settlement of its commercial debts to the OEEC countries totaling $400 million. A few days later, Turkey freed from import licensing 160 categories of raw materials, machinery, and spare parts.

As an aftermath of the political upheavals in Iraq (q.v.), an estimated 2,500 persons had fled into eastern Turkey by May. The Turkish government announced that it would not force these persons to return to Iraq.

Prime Minister Menderes visited the United States in October and attended the meeting of the Council of Ministers of the Central Treaty Organization in Washington. President Bayar made a state visit to Italy on June 8–11, during which he conferred with Italian President Gronchi and had an audience with Pope John XXIII.

President Eisenhower visited Ankara on December 6–7 during his goodwill tour of 11 nations in Europe, Asia, and Africa. He conferred with President Bayar, Prime Minister Menderes, and other Turkish officials, and made a special visit to the tomb of Kemal Atatürk, founder of the Turkish state.

On December 13, after a long stalemate in the voting, the U.N. General Assembly elected Turkey to succeed Poland (in 1961) as a nonpermanent member of the Security Council for the second half of a two-year term.

Domestic Affairs.—On Feb. 17, 1959, Prime Minister Menderes narrowly missed death in the crash of a Turkish airliner near London which took the lives of 15 Turks, including a cabinet minister, a member of parliament, and five public servants. Apparently, the prime minister's escape was interpreted widely in Turkey as a direct intervention of providence and an indication that he held a divine mandate as a national leader. This incident, plus the easing of Turkey's economic problems as a result of foreign loans in 1958, possibly contributed to a somewhat increased popularity for the Democratic Party generally, particularly in the small towns and villages. During 1959 the Democrats continued to win the majority of the village elections held. Perhaps sensing the increase in Democratic strength, the opposition undertook an even more vigorous antigovernment campaign. During the spring both groups attempted to establish mass political organizations—the Democrats, the "Fatherland Front," and the Republican People's Party, the Union of Strength."

As a result of these developments, interparty relations became increasingly bitter. On May 1, in the town of Uşak, the opposition leader Ismet Inönü was attacked by unknown persons, apparently with the intent to kill. A similar incident occurred four days later in Istanbul. In neither situation did he seem to have been given adequate protection by the police. The incidents caused a great furor in the opposition press and in the parliament. Government spokesmen denied any official implication, a denial which was not believed by all.

On September 28, Kâsim Gülek, general secretary of the Republican People's Party, resigned under pressure from the party's central committee. He was replaced by Ismail Rüştü Aksal, finance minister in the last Inönü cabinet. On November 7, Osman Bölükbaşi, leader of the Republican Villagers Nation's Party and a member of parliament, was stripped of his parliamentary immunity and sentenced to 10 months' imprisonment for insulting the parliament; in a 1957 parliamentary speech, he had called the deputies of the Democratic Party "servants of tyrants and people without honor." During the year several Turkish newspaper editors received prison sentences for publishing articles that criticized the government, and their publications were suspended.

UNION OF SOVIET SOCIALIST REPUBLICS. The USSR has the largest contiguous territory of any nation, and ranks third in the world in population, following only China and India. Approximate areas and populations of the 15 Soviet republics constituting the USSR are shown in the accompanying table.

AREAS AND POPULATIONS OF THE SOVIET REPUBLICS

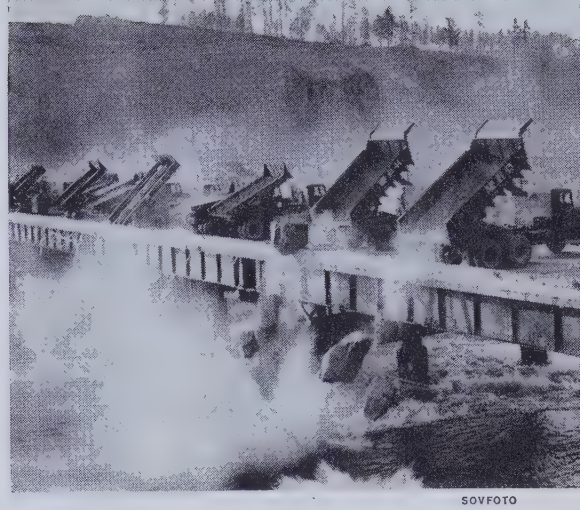
Republic	Area (sq. mi.)	Population
Russian SFSR	6,600,000	117,494,000
Ukrainian SSR	240,000	41,893,000
Kazakh SSR	1,050,000	9,301,000
Uzbek SSR	156,000	8,113,000
Belorussian SSR	80,000	8,060,000
Georgian SSR	30,000	4,049,000
Azerbaidzhan SSR	33,000	3,700,000
Moldavian SSR	13,000	2,880,000
Lithuanian SSR	25,000	2,713,000
Latvian SSR	25,000	2,094,000
Kirgiz SSR	77,000	2,063,000
Tadzhik SSR	55,000	1,982,000
Armenian SSR	12,000	1,768,000
Turkmen SSR	187,000	1,520,000
Estonian SSR	17,000	1,196,000
Total	8,600,000	208,826,000

(Sources: "Preliminary Results of the 1959 All-Union Population Census," *Pravda*, May 10, 1959; and *The National Economy of the USSR*, Moscow 1956.)

Of the total population, 114,800,000 are females (55%), and 94,000,000 are males (45%). This unbalance between the sexes is due mainly to the great loss of males during World War II. Rural residents number 109 million (52%) of the total population, and urbanites, 99,800,000 (48%). Despite the growth of population in Soviet Asia, 70% of the Soviet people still live in the European USSR west of the Ural Mountains. Siberia contains 15% of the population; Central Asia, 10%; and the Caucasus, 5%. Great Russians constitute 50% of the population, and Ukrainians, 20%; the remainder is divided among 58 ethnic groups. About 20% of the population is of Mongoloid stock, consisting of Turko-Tatars and Finno-Ugrians.

The largest Soviet cities are Moscow, the capital (1959 pop., 5,032,000); Leningrad (3,300,000); Kiev (1,102,000); Baku (968,000); Gorki (942,000); and Kharkov (930,000).

Religion.—The Soviet government is officially atheistic, and disseminates atheistic propaganda through the schools, press, radio, television, museums, theaters, and the arts. According to Soviet officials, the Russian Orthodox Church has 50 million adherents; the Hebrew faith, 3 million; and the Baptist Church, 500,000. Other religions with large congregations were the Sunnite Moslem, Roman Catholic, Lutheran, Armenian, Gregorian, and Buddhist. In 1959, as before, the Soviet press complained that religion was still a strong force in Soviet life. Numerous articles accused priests, ministers, rabbis, and bishops of alleged profiteering and immorality. A number of Jehovah's Witnesses were arrested for distributing religious propaganda in Siberia and the Ukraine. During the year several Jewish synagogues were closed by the Soviet police, and an anti-Semitic quota system prevented many Jews from working in high government offices or enrolling in colleges.



SOVFOTO

Damming up of the Angara River in June marked an important step in Soviet construction of one of the world's largest hydroelectric installations. Located near Bratsk in Siberia, the dam will create a reservoir 350 miles long, and the power plant will generate 3.6 million kilowatts.

Education and Culture.—In 1959 the USSR had approximately 30 million students, including 2 million in the nation's 766 colleges and 2 million in the 3,344 vocational high schools. Of the nation's children, 3,400,000 were in kindergartens and nurseries, and 430,000 were in boarding schools. The number of school and college teachers totaled 2 million, of whom 25–30% were members of the Communist Party.

During 1959 the Soviet educational system was slowly shifting from a 7-year grade school and 3-year high school to an 8-year grade school and 3-year high school. In compliance with the new school regime, most high school students and many college students are part-time pupils and hold outside jobs. Even students in the 5th to 8th grades have to work in industry or agriculture for two weeks after the end of the academic year. A law of June 6, 1959, specified that as much janitorial work as possible in schools and colleges be performed by the students.

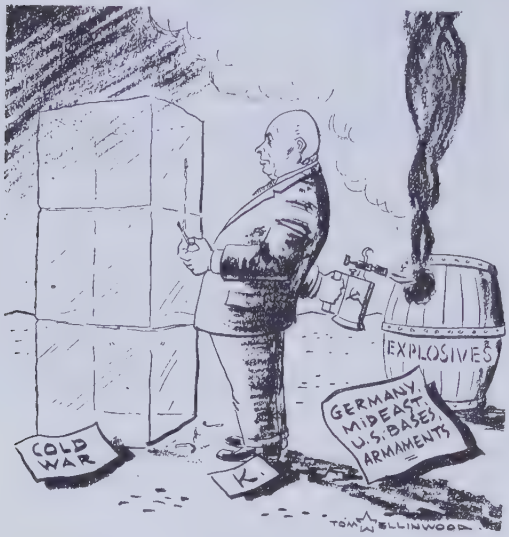
The USSR in 1959 had 7,686 newspapers (two thirds of which were in the Russian language) with a combined circulation of 57,500,000, and 799 magazines (85% in Russian) with a circulation of 29,100,000. More than a billion copies of books and pamphlets were published (80% of which were also in Russian). On May 22, Premier Nikita S. Khrushchev told the Third Congress of Soviet Writers that Soviet authors must "wash people's brains." (See also SOVIET LITERATURE.)

Government and Political Developments, 1959.—The USSR is a dictatorship ruled by the powerful policymaking Presidium of the Central Committee of the Communist Party of the Soviet Union. The formal framework of government, however, was as follows at the close of 1959:

(1) The *Council of Ministers*, consisting of a premier (Nikita S. Khrushchev), several deputy premiers, the 15 premiers of the Soviet republics, and some 40 ministers or heads of organizations of ministerial rank. The Council of Ministers is the chief legislative and executive organ of the USSR, and is appointed by the Supreme Soviet or the latter's Presidium.

(2) The *Presidium of the Supreme Soviet*, consisting of a president (Kliment E. Voroshilov, who is the titular head of the Soviet government), 15 vice presidents (the presidents of the 15 Soviet republics), a secretary, and 15 members. It has legislative, appointive, judicial, and treaty-making powers.

(3) The *Supreme Soviet of the USSR*, consisting of



ELLINWOOD IN THE TUCSON (ARIZ.) DAILY STAR

"THAW?"

two equal houses elected for four years: the Soviet of the Union, with 738 members (one deputy per 300,000 inhabitants); and the Soviet of Nationalities, with 25 deputies from each of the 15 Soviet republics, 11 from each of the 19 autonomous republics, 5 from each of the 9 autonomous oblasts, and 1 from each of the 10 national areas. The Supreme Soviet meets only two to three weeks of each year and, in the interim, delegates its supreme legislative power to the Council of Ministers and the Presidium.

During 1959 the following state committees with ministerial rank were added to the Council of Ministers: Science and Economics, Automation and Machine-building, and Professional and Technical Education. On June 22 the Ministry for Higher Education was transformed into a Ministry for Higher and Special Secondary Education. Among the various ministerial appointments during the year, the most outstanding was that of Aleksei N. Kosygin (a consumer goods expert) as head of the State Planning Committee.

As before, the supreme authority of the USSR in 1959 was the Communist Party Presidium headed by Nikita S. Khrushchev. This body exerts much of its powers through the Central Committee Secretariat of the Communist Party, managed by First Secretary Khrushchev. The Secretariat functions like a party cabinet, is superior to any governmental organization, and in 1959 had the following subdivisions: planning, heavy industry, light industry, agriculture, transport, science, education, administration, republic affairs, party organs, propaganda, military affairs, and police. Some regional party officials were purged during the year in the Caucasus, Central Asia, and the Moscow district.

The Soviet Communist Party in 1959 had 7,622,356 members and 616,775 candidates. The 21st party congress met from January 27 to February 5, and largely devoted its discussions to the Seven-Year Plan for 1959–65. After the congress, local party organizations were ordered to approve one-man rule of the party. This signified the increased power of Khrushchev, who now receives lavish public praise reminiscent of the Stalin worship of the past.

At the beginning of 1959, a new Soviet law code was introduced, providing more moderate legal procedures and penalties than in the past. The death sentence is now imposed only for treason, espionage, assassination of a Soviet official, sabotage, membership in an anti-Soviet organization, banditism, or intentional murder. The maximum prison sentence is 15 years, and imprisonment while under criminal investigation is limited to 6 months. After a lapse of 16 years, a person cannot be punished for a past crime. As before, flight abroad from the USSR is defined as treason.

Finance.—The 1959 budget plan for revenues and expenditures is shown in the accompanying table (the official exchange rate is 4 rubles to the U.S. dollar).

There is no true local taxation in the USSR, as all tax funds go into the combined budget, which includes 80,000 regional and local budgets. The "profits tax" is levied primarily on consumer goods industries, and is included in the price of goods sold to the public. As there are many hidden military appropriations among the budget expenditures, the economic appropriations include subsidies for war industry. The social-cultural expenses are partly for military pensions and civilian military training in schools and sport clubs. The Soviet population is oppressively taxed, since in 1959 more than two thirds of the national income was taken by the government in taxes.

USSR REVENUES AND EXPENDITURES, 1958–59

Item	1958 Billions of rubles	1958 % of total	1959 Billions of rubles	1959 % of total
Revenues:				
Sales tax	301.5	45	333.0	46
Profits tax	130.3	20	154.9	20
Foreign trade	122.8	19	148.4	21
Income tax	49.8	8	56.1	8
Tax on cooperatives	15.7	2	19.6	3
Other direct taxes	22.9	3	11.4	2
Miscellaneous	17.0	3	...	...
Total	660.0	100	723.4	100
Expenditures:				
Economic	257.2	40	308.9	43
Social-cultural	212.8	33	232.2	33
Defense	96.3	15	96.1	14
Secret	61.8	10	58.9	8
Administration	11.9	2	11.5	2
Total	640.0	100	707.6	100

The Seven-Year Plan for 1959–65 provides for capital investments of 1,940–1,970 billion rubles, to be allocated approximately as follows: heavy and war industry, 52%; housing, 19%; communications, 11%; agriculture, 8%; education and health, 4%; consumer goods industry, 4%; and trade, 2%. Thus, in new construction, the Soviet emphasis remained on heavy, war-potential industry. Of the capital investments during the Seven-Year Plan, 64% is planned to be spent in the Russian Soviet Republic, 14% in the Ukraine, and 8% in Kazakhstan. The remaining 14% is to be divided among the other 12 Soviet republics, none of which will receive more than 2%.

Armed Forces.—The Soviet armed forces in 1959 had a strength of 3,623,000 men, and possessed approximately 50,000 tanks. The Soviet Navy in 1959 was estimated to have 27 cruisers, 200 destroyers, and 600 submarines. Soviet shipyards slowed the output of conventional submarines during the year in order to convert to the construction of atomic-powered submersibles. On September 15 the atomic-powered icebreaker *Lenin* (the world's first atomic surface ship) commenced its first cruise. The naval air force consisted of 3,600 planes, all land-based, since there are no known Soviet aircraft carriers.

The Soviet Air Force in 1959 had 20,000 first-line planes, most of which were jet-propelled. During July a Soviet bomber flew nonstop 10,660 miles without refueling, at an average speed of about 500 miles per hour. In October the single-motored jet fighter E-66 attained a speed of 1,560 miles per hour. (See also AERONAUTICS.)

Dosaaf, the Soviet civil defense society, announced in 1959 that it was training millions of civilians for mechanized and air warfare. The society was establishing 45,000 small radio broadcasting stations on collective and state farms to im-

prove rural communications in case of atomic war.

Soviet rocketry continued to display its prowess during 1959. On January 2 the USSR launched its space rocket Mechta (popularly called Lunik I), which passed the moon and became the first man-made object to rotate like a planet in the outer space of the solar system. A Soviet lunar probe, Lunik II, was launched on September 12 and hit the moon on September 14, Moscow time (September 13, Greenwich Civil Time), thus becoming the first projectile from our earth to reach the moon. Another lunar probe, Lunik III, launched on October 4, circled the moon and photographed the hitherto unknown side of that celestial planet. (See also ASTRONOMY; SPACE FLIGHT.) In November, Khrushchev publicly claimed that a Soviet factory was producing 250 rockets per year, equipped with warheads of hydrogen bombs. (See also MISSILES.)

Manpower.—Excluding collective farmers, the USSR had about 55 million manual workers, white-collar workers, and professionals in 1959, including 280,000 scientists and laboratory assistants, and 360,000 physicians. About 45% of the urban labor force and 70% of the collective farmers were women. Soviet trade unions in 1959 had 52,780,000 members; and sport clubs, 20 million.

Standard of Living.—The Soviet standard of living remained low in 1959 despite many public promises by Khrushchev to bring improvement. The average Soviet family still lived in one city room, or in a small rural hut. The Soviet press admitted that there were shortages of cotton clothing, shoes, furniture, sewing machines, iceboxes, and dishes.

The main concession by the government to the people during 1959 was shorter working hours. All workers in mines and in metallurgical plants were transferred to a 42-hour workweek.

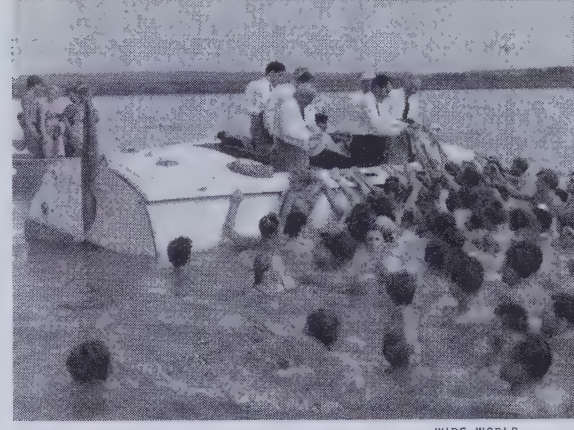
During August, buying on the installment plan was introduced in some stores for the purchase of clothing and certain household appliances. After a down payment of 20–25% of the total price, the customer pays the remainder in wage deductions over a period of 6–12 months.

Agriculture.—In 1959 the USSR had 70,000 collective farms and 6,000 state farms. The total area under crops amounted to approximately 487 million acres, of which more than one fourth belonged to state farms. About two thirds of the total sown area was under grain. Other major crops were potatoes, sunflower seed, cotton, sugar beets, silk, flax, and hemp. Although collective and state farms grow the bulk of Soviet crops, about half the potato acreage and one third of the land growing other vegetables are on the private gardens which every rural resident and suburbanite is allowed to possess.

SOVIET AGRICULTURAL PRODUCTION
(In thousand metric tons)

Item	1958 output	1965 plan
Grain	139,000	164,000–179,000
Potatoes	86,100	147,000
Sugar	5,300	9,200–10,000
Sunflower seed	4,500	5,000
Cotton	4,400	5,700–6,100
Milk	6,000	13,500
Meat	2,900	6,100
Butter	638	1,006
Fish	2,900	4,600

Soviet agriculture in 1959 had 1,000,000 tractors and 500,000 grain-harvesting combines. Total livestock included 70,800,000 cattle, 48,500,000 swine, and 129,600,000 sheep. The 1959 harvests of grain and sugar beets were lower than in 1958 because of drought in several regions. As a result of the policy requiring machine-tractor



WIDE WORLD

Premier Khrushchev and Vice President Nixon stand in motor launch to greet swarm of bathers in Moskva River, July 26. Nixon was a guest at premier's country home nearby.

stations to sell their agricultural machinery to the collective farms, 81% of the collectives purchased this machinery during 1959, and four fifths of the machine-tractor stations were converted into machinery repair stations. Rural living conditions remain very primitive; Khrushchev himself publicly complained that most farm villages lack paved roads, sidewalks, waterpipes, and sewers.

The revised Seven-Year Plan for 1959–65 calls for substantial increases in farm output, as shown in the accompanying table.

Industry and Mining.—In 1959 the USSR produced 129 million metric tons of petroleum, 60 million tons of steel, 38.8 million tons of cement, and 262 billion kw.-hr. of electricity. The USSR was second in world industrial output only to the United States, and produced more of certain types of armament than the United States. However, the overall size of Soviet industry was only half that of the United States. As before, Soviet industry was very unbalanced, with capital goods (including munitions) amounting to about four fifths of all industrial production. This imbalance results in a low production of consumer goods, which in turn creates a poor standard of living.

During 1959 the Soviet press complained about shortages of rolled steel, iron and steel pipe, nonferrous metals, and chemicals. The output plan was underfulfilled for trucks, buses, tractors, and railway freight cars.

Premier Khrushchev (left) and British Prime Minister Macmillan inspect honor guard at Moscow airport as latter arrived for visit, February 21. Between them is interpreter.

WIDE WORLD

The revised Seven-Year Plan for 1959–65 calls for an 80% increase in industrial output, including an 85–88% growth of heavy industry and a 62–65% gain in light industry. The main planned goals in industry are shown in the accompanying table.

USSR INDUSTRIAL PRODUCTION

Product (and unit of measurement)	1958 output	1965 plan
Pig iron (million metric tons)	39.6	65–70
Steel (million metric tons)	54.9	86–91
Coal (million metric tons)	496	600–612
Petroleum (million metric tons)	113	230–240
Natural gas (billion cubic meters)	29.8	150
Electricity (billion kw.-hr.)	233	500–520
Mineral fertilizer (million metric tons)	10.6	31
Machine tools (thousands)	138	190–200
Motor vehicles (thousands)	511	750–856
Timber (million cubic meters)	235	275–280
Paper (million metric tons)	2.2	3.5
Cement (million metric tons)	33.3	75–81
Cotton cloth (billion meters)	5.8	7.7–8.0
Wool cloth (million meters)	303	500
Linen (million meters)	481	635
Silk (million meters)	845	1,485
Hosiery (million pairs)	887	1,250
Shoes (million pairs)	356	515

The Seven-Year Plan provides for especially large increases in the output of steel alloys, aluminum, electrical equipment, and mining and metallurgical machinery. Electric power production will be expanded primarily by the construction of thermal power stations. New centers of heavy industry are to be built in central Siberia, and existing factories and mines in European USSR are to be modernized and expanded. (See also IRON AND STEEL.)

Foreign Trade.—Soviet foreign trade (imports plus exports) in 1959 amounted to approximately $8.65 billion, of which 74% was with the Soviet satellites, 16% with Western industrial nations, and 10% with underdeveloped nations of Asia, Africa, and Latin America. In order of importance, the USSR traded most heavily with the following countries: East Germany, Communist China, Czechoslovakia, Poland, Rumania, Bulgaria, Hungary, Finland, the United Arab Republic, Great Britain, India, France, and West Germany. The Seven-Year Plan calls for a 50% increase in Soviet trade with the Soviet satellites by 1965.

Soviet statistics released in 1959, giving a breakdown of Soviet foreign trade in 1958 by commodities, are summarized in the accompanying table.

SOVIET FOREIGN TRADE BY MAJOR COMMODITIES, 1958
(In percentage of total)

Item	Imports	Exports
Machinery and equipment	25	19
Metals	9	16
Ores	9	4
Fuels	5	15
Timber	0	6
Textile fibers	7	7
Foods	15	8
Furs	0	1
Nonedible consumer goods	14	4
Rubber	4	0
Secret*	12	20

* Secret exports are probably armaments; secret imports may consist largely of uranium.

Trade between the Soviet Union and the United States in 1958 amounted to only $30 million. Aside from various trade pacts with the Soviet satellites, the USSR in 1959 concluded barter agreements with Great Britain, Indonesia, Finland, Greece, Ethiopia, Denmark, and the Sudan. During 1959 the Soviet Union granted several new credits for technical aid: $7.5 million to Nepal for industrialization, $100 million to Ethiopia, and $137.5 million to Iraq for industrial, agricultural, and transportation development. These grants increased total Soviet technical aid to non-Communist countries to approximately $2.5 billion. By the close of 1959, under various technical aid agreements, the USSR was constructing 4 factories in Indonesia, 8 in Ceylon, 7 in Afghanistan, 16 in Iraq, 20 in India, and 39 in the United Arab Republic. In November, Anastas I. Mikoyan, Soviet first deputy premier, opened a Soviet industrial exhibit in Mexico City intended to attract more Latin American purchases of machinery from the USSR.

Transportation and Communications.—The USSR in 1959 had 75,000 miles of railways, 82,000 miles of internal waterways, and 134,000 miles of improved roads. There were 57 television stations, 3 million television receiving sets, 15 million radio receiving sets, and 34.9 million radio loudspeakers wired to central receivers operated by the state. About 80% of Soviet internal freight was carried by the railways in 1959, and one third of this railway freight was hauled by diesel or electric locomotives.

The Seven-Year Plan for 1959–65 provides for the completion of the South and Central Siberian railways, the electrification of 12,400 miles of railways, and the opening of a subway in Kiev. An oil pipeline will be built from Novosibirsk to Irkutsk, and gas pipelines between the following terminals: the north Caucasus and Leningrad, Saratov and Yaroslavl, and Dashava and Riga. Ninety airports will be rebuilt to accommodate large jet planes. According to the Seven-Year Plan, the USSR in 1965 will have 160 television stations, 15 million television receiving sets, and 24 million radio receiving sets.

Foreign Affairs, 1959. *Europe.*—Soviet foreign policy concerning Europe was dominated by the Soviet attempt to force British, French, and American troops to leave West Berlin. On January 10, Soviet notes to the United States, Britain, and France demanded that West Berlin become a demilitarized free city. Speeches by Soviet leaders early in the year had a tough and uncompromising tone on the Berlin question, indicating it must be settled quickly. By fall, however, the USSR's desire for a summit conference had overshadowed its interest in Berlin. While not abandoning their basic demands regarding Berlin, Soviet leaders stated that settlement of the problem was not urgent. (See also GERMANY; SUMMIT CONFERENCE.)

From February 21 to March 3, British Prime Minister Harold Macmillan visited the USSR, but did not succeed in settling any outstanding disputes between Great Britain and the Soviet Union. A Soviet note to the United States made public on April 22 protested against the shipment of atomic weapons to American troops stationed in West Germany and other NATO nations. From May 11 to August 5, a conference of the foreign ministers of the United States, Britain, France, West Germany, East Germany, and the USSR was held in Geneva on the Berlin dispute, without reaching any settlement. On May 13 the USSR protested to Greece against the projected stationing of American nuclear bombers and atomic rockets on Greek territory.

During the summer, Premier Khrushchev had planned to visit Denmark, Norway, and Sweden; but his threatening speeches warning those countries not to accept United States military aid resulted in a Scandinavian press campaign against him, and as a result, he cancelled the planned visit on July 19. On November 11 the USSR protested to the United States, Britain, and France against the West German decision to build a new radio station in West Berlin to be operated by the government of the German Federal Republic.

Asia.—During February the Soviet Red Cross and Red Crescent Society offered to help repatriate Koreans from Japan to North Korea. In the same month the USSR claimed to have caught four Turkish spies, who were allegedly trained by United States military forces in Turkey. In April the Soviet Union unsuccessfully opposed the decision of the International Atomic Energy Agency of the United Nations to send a delegation to aid Taiwan in atomic development. On May 4 the USSR protested to Japan against the stationing of United States nuclear weapons on Japanese soil, and proposed that the Pacific Ocean and Far East become a neutralized zone free from atomic weapons.

The USSR protested on May 28 to Iran against the arrest of two Iranian employees of the Soviet embassy in Teheran who were accused by the Iranian government of distributing subversive propaganda. A Soviet public statement on September 9 expressed regret over the frontier conflict between India and Communist China, and urged the two Asian nations to settle the dispute peaceably. Khrushchev visited Communist China on September 30–October 4. His public speeches in Peking urging peace between East and West received no public statement of support from Chinese Communist leaders.

With regard to the Communist rebellion in Laos, the USSR did everything possible to support the rebels. The USSR demanded unsuccessfully that the British-Soviet International Commission on Laos, which had not met since mid-1958, be convened immediately. On October 3 the USSR rejected a British proposal for the abolition of the Soviet-British International Supervisory and Control Commission in Cambodia. The Soviet Union also opposed all United Nations investigations of the Laos rebellion.

In March the USSR and Australia agreed to resume diplomatic relations, which had been severed since April 23, 1954.

United States.—Relations between the Soviet Union and the United States during 1959 were marked by exchanges of visits by high government officials. On January 4–20, First Deputy Premier Anastas I. Mikoyan toured the United States, apparently for the purpose of stimulating Soviet-American trade. Another Soviet first deputy premier, Frol R. Kozlov, opened the Soviet National Exhibition of Science, Technology, and Culture in New York City on June 29, and then spent a few days traveling through the United States. Vice President Richard M. Nixon (q.v.) opened the American National Exhibition in Moscow on July 24, and then visited several Soviet provincial cities. On September 15–27, Premier Khrushchev toured the United States, visiting Washington, New York City, Los Angeles, San Francisco, Iowa, and Pittsburgh. (For details of his trip, see KHRUSHCHEV, NIKITA S.) Before his departure he held private conversations with Dwight D. Eisenhower (q.v.) at Camp David, Md. President Eisenhower had planned to visit the USSR during the late autumn of 1959, but postponed his visit until the spring of 1960.

None of these visits resulted in a settlement of the basic disputes between the United States and the USSR. However, after the Khrushchev visit, the Soviet press attacked the United States less vigorously than in the past. In general, Soviet-American relations seemed to be less tense than in 1958.

However, friction between the two countries continued during 1959. On February 26, United States naval officers boarded and searched a Soviet fishing trawler off Newfoundland, after 5 transatlantic cables had been damaged in that area. On March 31 the United States protested to the USSR that Soviet fighter planes had flown uncomfortably close to a United States military transport plane en route to West Berlin. The Soviet government replied that the American plane had been flying at an unauthorized altitude. On October 16 the USSR expelled Russell A. Lanzelli, the security attache of the United States embassy in Moscow, for alleged espionage.

The USSR also made several peaceful moves during 1959. On August 28 the Soviet government declared it would not renew nuclear bomb tests so long as the West refrained from testing. In September, Khrushchev urged the United Nations to abolish all armed forces through a series of progressive reductions in armament, but he did not explain how such disarmament could be controlled (see DISARMAMENT). On November 21 the USSR and United States signed an agreement providing for increased scientific, technical, educational, and other cultural exchanges during 1960–61. The agreement included plans for some cooperation in the peaceful use of atomic energy.

UNITED ARAB REPUBLIC. A republic in the Middle East, formed in 1958 by the merger of two Arab republics—Egypt, in northeastern Africa, and Syria, on the Asiatic shore of the Mediterranean—separated from each other by some 600 miles. Its area is 458,000 square miles, and estimated population (1958), 29,061,000. Chief cities (with estimated population) are Cairo, the capital (2,600,000); Alexandria, chief port of the Egyptian Region (1,200,000); Port Said (200,000); Damascus, regional capital in Syria (400,000); Aleppo, metropolis of the Syrian Region (450,000); and Latakia, chief port of the Syrian Region (105,000). The preponderant majority (89%) of the people are Moslems of the Sunnite sect; Christian elements constitute about 10%; and there are several hundred thousand members of other Moslem sects (Alawites, Bedouins, Druzes, and Kurds) in the Syrian Region.

Unification Efforts.—Since the establishment of the United Arab Republic (UAR) by the merger of February 1958, the two formerly independent republics of Egypt and Syria have been making serious efforts to bring about their complete union. The stubborn geographic fact of the distance which separates them, and the somewhat different economy of the two regions have frustrated some of these efforts; as a result, the merger has not been successful on all fronts.

There appears to be almost complete fusion in at least two important spheres: foreign affairs and matters of defense. In other respects, however, particularly in matters of economy and internal politics, the merger is not yet fully implemented. Land reforms, in process of implementation in the Egyptian (or Southern) Region for several years, are being carried out somewhat grudgingly in the Syrian (or Northern) Region. Similarly, restrictions on imports, vigorously enforced in the Egyptian Region for a number of years, and currently in effect in the Syrian Region, seem to have caused considerable discontent. Nor has the attempt to merge the two countries politically been an un-

qualified success. The dissolution of all political parties in the Syrian Region by presidential decree (Feb. 4, 1958) and the declared intention to bring about the establishment of a National Union Party has not materialized.

The National Assembly, as envisaged at the time of merger, has not as yet been realized, though a decisive step was taken in the general local elections held on July 8, 1959. In this first general balloting, voters elected some 40,000 local committeemen in all the 33 provinces of the UAR. These committeemen then were to elect councils for the provinces, and these councils in turn will elect a general congress. From this congress the president will eventually select half of the membership of the future National Assembly.

There has been no perceptible change in the governmental machinery of the UAR since its establishment, with one important exception. In a presidential decree issued on Oct. 21, 1959, President Gamal Abdel Nasser appointed Field Marshal Abdel Hakim Amer, UAR vice president and commander in chief of the armed forces, as general supervisor in the Syrian Region. The effect of Amer's appointment was to give Syria a strong executive for the first time since the merger. Amer was given wide powers to act as the president's representative in economic and other governmental matters, and was made head of the Syrian Executive Council. On December 30 the Syrian vice president and three other Syrian members of the cabinet resigned, reportedly because of their dissatisfaction with Nasser's stern policy in the Syrian Region.

Otherwise, the UAR government in 1959 remained the same as in 1958. There is the all-powerful President Nasser, with authority to govern the two regions by decrees. There are three vice presidents (2 Egyptian, 1 Syrian), and a cabinet of 21 (including the 3 vice presidents). All these are the president's appointees, as are the members of the executive councils of the two regions.

Principal Events, 1959.—Throughout the year the United Arab Republic continued to be the focal point of significant events affecting most of the Middle East.

The year began with the convergence of state visits to Cairo by numerous high dignitaries from many lands, all seeming to woo its friendship and seek favors. On January 3, Prime Minister Karami of Lebanon paid an official visit, and on March 25 Lebanese President Chehab met with Nasser on the Syria-Lebanon border. President Grotewohl of East Germany arrived in Cairo on January 5. On January 6, Cairo welcomed Prime Minister Fanfani of Italy, and soon after his arrival the signature of a cultural-economic agreement was announced, which also provided for the sale of 130,000 tons of wheat to the UAR and the increased purchase of Egyptian cotton, and the settlement of outstanding questions connected with the sequestration of Italian property during World War II. Prime Minister Nkrumah of Ghana arrived on January 9 for a three-day visit; a few days later came Spain's Foreign Minister Fernando Castiella. President Tito arrived on February 20 for an eight-day state visit. On June 24, Emperor Haile Selassie of Ethiopia was in the UAR for a five-day visit. Cairo was host to Imam Ahmed of Yemen on August 6; and on August 31, King Saud of Saudi Arabia arrived for a five-day state visit. On September 26, Premier Ne Win of Burma visited Cairo.

Perhaps the most significant event of the year was the signature of the financial agreement with Britain (and the subsequent resumption of diplomatic relations), thus bringing to an amicable end the long-standing dispute over the sequestrated and nationalized British property in Egypt on the one hand, and the blocked Egyptian sterling accounts in Britain on the other. The agreement, signed on February 28 in Cairo, provided for the return of sequestrated British property in Egypt to its owners, the payment of an agreed sum (£27,500,000 sterling) for such property nationalized by Egypt, and the release of frozen Egyptian accounts in Britain, estimated at about $144 million. Britain waived all claims to an estimated $144 million worth of installations in the former Suez base, and the UAR waived its war damages claims for a similar amount, arising from the Suez fighting in 1956.

It was announced on December 1 that diplomatic relations between Britain and the UAR, disrupted in 1956, would be resumed at the level of chargé d'affaires. The move coincided with reports that the two countries were eager to expand trade agreements. The UAR earlier (October 19) resumed diplomatic relations with Australia.

The UAR also registered gains in its dealings with the West and with all Arab countries (excepting Iraq), though its relations with Moscow and Peking seemed at times strained. In particular, its relations with the United States, somewhat chill since mid-1956, improved steadily. The United States began the sale of $25 million worth of wheat to Egypt early in March, and accepted in payment Egyptian currency. The distribution of United States flour, corn meal, and powdered milk to some 700,000 needy Egyptians and school children was resumed. On July 1 the United States embassy in Cairo announced the resumption of substantial economic and technical aid, totaling $8,418,000. A pact signed on September 28 established a new educational exchange program under the Fulbright Act. Two days later a new parcel post agreement was signed by the two countries, and on October 31 it was announced in Cairo that the United States had supplied $2 million worth of newsprint after the USSR had cut off its shipments to the UAR.

On November 14, an agreement was signed with the UAR (Syrian Region) by the United States to finance the sale of grains valued at $9.6 million for Syrian pounds. The director of the United States Development Loan Fund announced in Cairo on November 26 that "expeditious consideration" would be given for financing seven UAR developmental projects. On December 22 the International Bank for Reconstruction and Development agreed to lend $56.5 million to the Suez Canal Authority of the UAR for widening and deepening the canal. An agreement signed on December 23 between the representatives of the UAR, the Export-Import Bank of Washington, and the General Motors Corporation provided for a loan of $12 million by the bank for the purchase in the United States of locomotives and other equipment for Egyptian railways.

UAR relations with the Soviet Union and Communist China seemed to have suffered temporary setbacks beginning with President Nasser's determined crackdown on Communists in the UAR. On January 1, some 100 Communists were arrested in Egypt, and during the next few days several hundred were jailed. On January 3, a commission was sent to the Syrian Region and scores of Communists were arrested there. Late in January President Nasser declared that despite such drastic moves on his part against these Communists, the "UAR will continue to seek trade with the Soviet bloc." On February 21 Nasser reported an exchange of letters with Khrushchev, in which the Soviet premier

said he would not interfere in UAR internal affairs. Despite apparent rifts, mutual benefits seem to keep the ties between the two countries unbroken. On October 31, it was reported unofficially that the USSR would not only carry out its agreement to build the first stage of the Aswân High Dam, but might undertake to complete the whole project in all its three stages.

The UAR's seemingly amicable relations with Communist China received a severe strain in October when the Syrian Communist chief, who had fled the country, attacked the UAR in a Peking speech. The UAR protested vigorously to Peking for allowing the denunciation. China was also accused of harassing Arab diplomats there. Finally, however, the rift was patched up with an apology.

The UAR's relations with France remained strictly formal, though there seemed to be signs of improvement. In September, West Germany was reassured that the UAR would not recognize the East German regime, thus retaining the Bonn government's friendship. By signing a trade and technical cooperation agreement with Italy on April 29, enabling Italian spinners to buy Egyptian cotton at a 35% premium on Italian currency, Italy became a valued friend of the UAR in the West. These moves were climaxed by the July 27 announcement that the UAR had raised its legation at the Vatican to embassy rank, thus outdoing many of the nominally Christian nations.

Lebanese government circles have come to regard Nasser more and more as the spokesman of the Arab world. The quarrel with Jordan has quieted down, and on August 16 diplomatic relations (broken off in July 1958) were resumed. The big dispute over the Nile waters with Sudan was at last settled by an agreement signed on November 8 in Cairo, providing for the payment to Sudan of about $43 million for the inundation of Sudanese land in the construction of the Aswân High Dam (see also SUDAN.) Only one country, Iraq, remained at odds with the UAR, and there seemed to be no end to the running battle between the leaders of these two countries.

(See also MIDDLE EAST; SUEZ CANAL.)

EGYPTIAN REGION

The most populous Arab-speaking country in northeast Africa and the Middle East, the Egyptian Region of the UAR borders the Mediterranean, with Libya on the west, the Sudan on the south, and Israel, the Gulf of 'Aqaba, and the Red Sea on the east. Its area is 385,000 square miles, but the settled and cultivated area—the Nile Valley and its delta—is only 13,500 square miles. Its population of almost 25,000,000 is increasing by 550,000 annually.

Government.—Since the formation of the United Arab Republic, Egypt's parliamentary form of government has undergone drastic changes, vesting the president with extraordinary powers. Under the provisional constitution, the president (Gamal Abdel Nasser) governs the region with an Executive Council of 15, whose members are his appointees, and who as departmental heads carry out his decrees.

Religion and Education.—More than 91% of the people are Moslems, 8% are Christians, and there are a few thousand Jews. Education is compulsory for children between the ages 6 and 12, and the schools are government supported and free, but illiteracy is high (perhaps 75% of the population). Hundreds of schools are being built annually, yet available educational facilities are inadequate for the population. In 1956–57 there were 1,925,514 pupils in elementary schools, 320,903 in preparatory (junior high) schools, and 109,153 in secondary and technical schools. There are 6 higher institutions at the university level with 85,900 students. In addition, 29,487 students were enrolled in teacher-training schools.

Finance.—The region's finance has been in good condition partly because of the government's fiscal policies and its ability to husband the region's financial resources, and because of the freeing of Egyptian accounts held abroad. The ordinary budget for the fiscal year 1959–60 provides for expenditures of £E198 million and revenue of £E225.6 million. This does not include the region's contribution to the unified budget, which in 1959–60 is estimated at £E95.4 million. The development budget for 1959–60 was estimated at £E98.1 million, compared with £E46 million for 1958–59. Estimates for the 1959–60 unified budget, which finances such items as defense and foreign affairs, increased to £E123.6 million from £E113.9 million in 1958–59. The region's currency is among the most stable monetary units in the area; it has not fluctuated from its base exchange value (£E1 = U.S.$2.87).

Transportation and Communications.—The railroads of the region total some 3,500 miles, and there is a highway network of more than 10,000 miles. The Cairo International Airport, perhaps the largest in the Middle East, serves all major carriers throughout the world. There were 180,000 telephones in 1957.

Production.—The 5-year industrialization plan is proceeding at a good pace. Though geared to help both industry and agriculture, more than half of the $700 million program is being devoted to industries. Particular emphasis is placed on the steel and oil industries, and also on the manufacture of fertilizers. The Helwan steel plant is operating at its full annual capacity of 265,000 tons. Prospecting for oil is proceeding by the General Petroleum Authority (a government firm) in many parts of the country. The refinery capacity at Suez was increased to 1,200,000 tons annually, and the two others established in Alexandria have the combined capacity of 2,300,000 tons. The discovery of new rich phosphate deposits in the eastern desert was reported in October 1959. The region's principal crop, cotton, was expected in 1959 to be approximately equal to that of 1958—about 9.5 million cantars (100 pounds each). In July 1959, Egypt started importing wheat from the United States; 30 million bushels of surplus wheat and flour was made available for about $58 million.

Foreign Trade.—There is a large gap between the region's export and import trade. For the calendar year 1958,

WIDE WORLD

As his father watches proudly, seven-year-old Abdel Hakim Nasser shakes hand of Prime Minister Kwame Nkrumah of Ghana, who visited President Nasser of the UAR in January.

Appointed general supervisor of the Syrian Region by President Nasser on October 21, Marshal Abdel Hakim Amer (left) is cheered as he tours the Syrian-Israeli border.

UPI

exports totaled £E162.2 million, while imports exceeded £E238 million. The figures for 1959 should show considerable improvement, though the gap cannot be closed. The trend of exporting too much to the East and not enough to the West, accelerated since mid-1956, has been tapering off. Cotton continues to account for about 75% of the export trade, the Soviet bloc taking about 40%. Purchase orders placed in the West have been increasing. Trade with the United States in 1958 showed exports of about $20 million and imports of over $50 million.

Syrian Region

An Arab-speaking country on the eastern shore of the Mediterranean, the Syrian Region of the UAR has an area of about 72,000 square miles, and an estimated population (1958) of 4,280,000, including about 250,000 nomads.

Government.—Since its merger with Egypt in 1958, Syria's governmental machinery has changed. The elected representative type was replaced by one of a hand-picked Executive Council whose 11 members are departmental heads and govern the region as agents of the president. On Oct. 21, 1959, Field Marshal Abdel Hakim Amer was appointed chief of government and was vested with extraordinary powers (see above, *Unification Efforts*).

Religion and Education.—About 75% of Syrians are Moslems of the Sunnite sect. Christians constitute about 12% of the population, while the remaining 13% are members of other Moslem sects (Alawites, Bedouins, Ismailis, Shi'ites, and Druzes, as well as Kurds). In 1954 there were 2,636 elementary schools with 339,329 pupils, 244 secondary schools with 60,666 pupils, 13 technical schools with 2,190 students, and 6 teachers colleges with 1,385 students. In addition, some 75,000 pupils attended private schools. There are also the Syrian University, the Higher Teachers' Training College, and the Arab Academy (all in Damascus). About a third of the population is illiterate.

Finance.—Since mid-1958 Syria has been in financial difficulties, and the situation became acute in 1959, mainly because of the cereal crop failure due to severe drought. The 1959–60 ordinary budget for the region listed balanced expenditures and revenue of £S246.4 million (up from £S221.8 million the previous year). Also increased is the economic development budget for the fiscal year 1960, with expenditure of £S185.5 million (compared with £S80.0 million). The region's contribution to the unified budget in 1959–60 is estimated at £S247 million. The official exchange rate of the Syrian pound (U.S.$0.45) and the free exchange rate (U.S.$0.28) seemed unstable.

Transportation and Communications.—Syria's railways total 597 miles. There are some 1,600 miles of first-class roads, 745 miles of second-class roads, and 3,850 miles of dirt roads. Recently several hundred miles of first-class roads between large cities have been widened, repaired, and resurfaced. There are two major airports—one at Aleppo and the other at Damascus—and four local airports at Qamishli, Deir-ez-Zor, Hama, and Hmaimeem (near Latakia). Some 20,000 telephones were installed recently, bringing the total number to more than 56,000.

Production.—Under the current 10-year development plan, the industrialization of the country is being pushed vigorously. However, Syria remains a land of agriculture, although only a fourth of the land is fit for cultivation. Through irrigation and drainage, the government hopes to increase the acreage of cultivable land, and by agricultural land reforms to bring about a more equitable distribution of such land. Because of drought, the wheat and barley crops for 1958 were 561,000 and 176,000 tons, respectively—less than 40% of a normal year's yield. In 1959, crops in these cereals were not expected to be any larger, indicating that there would be none for export. The cotton crop yield was down from 107,200 tons in 1957–58 to about 94,000 tons in 1959. Rigid import restrictions in 1959 caused considerable grumbling on the part of merchants and traders, but certain established industries, such as textiles, glassware, and cement, continued to do a thriving business.

Foreign Trade.—Syria's financial woes are reflected in her foreign trade. In 1958, total exports amounted to £S440 million, and imports to £S729 million. As in the Egyptian Region, serious efforts are being made to divert some of the export trade from East to West. Syria's relations with her best customer, Lebanon, have improved, but that fact is not reflected in the current trade between the two countries. Trade with the United States during 1958 showed exports of $4.1 million and imports of $19.3 million.

A. O. Sarkissian,
Analyst in Middle Eastern and East European Affairs, The Library of Congress.

UNITED ARAB STATES. A federal union between the United Arab Republic (UAR) and the Kingdom of Yemen, established by an agreement of March 8, 1958, which was signed at Damascus by President Gamal Abdel Nasser of the UAR and Crown Prince Saif al-Islam Muhammad al-Badr of Yemen. The agreement defined the United Arab States (UAS) as a federation of the UAR, Yemen, and "those Arab States which will agree to join this Union." While stipulating that each member would retain its own system of government under the federation, it provided for unified foreign and defense policies, coordinated economic planning, a common currency and customs union, and a separate federal budget. Political authority for the UAS is exercised by a Supreme Council, composed of the heads of government of the member states, and assisted by a Federal Council, consisting of six representatives from each state. (See also United Arab Republic; Yemen.)

UNITED CHURCH OF CANADA. The largest non-Roman communion in Canada, The United Church of Canada was formed on June 10, 1925, by the union of the Congregational and Methodist churches and 70% of the Presbyterians in Canada, together with many local union congregations. One of every five Canadians looks to it for spiritual leadership.

On Dec. 31, 1958, the United Church had 6,025 local congregations, served by 2,707 pastoral charges and 3,322 ministers. Total adult membership was 980,461, of whom 41,713 were new members received on profession of faith during 1958. Its 5,271 Sunday schools enrolled 731,219 pupils, and 263,033 belonged to other Christian education groups.

Church extension, including the establishing of new congregations in pioneer areas across Canada and in new suburban communities, continued at an accelerated pace, the quota for 1959 being 64 new churches and 29 manses. In the next four years, 230 additional churches and 95 manses must be erected, for Canada's population continues to grow rapidly.

The Board of Home Missions not only supervises work in small aid-receiving charges but is responsible for Indian work, hospitals (16), mission boats on the coasts (5), and 52 institutional centers. Other administrative boards operate 3 universities, 8 theological colleges, 9 residential secondary schools, a training school for women, 21 homes for senior citizens, 3 redemptive homes, 4 training centers for lay people, and nearly 100 summer camps.

The mission tasks of the church are also shared by the Woman's Missionary Society, which raises $1,600,000 toward the $8,500,000 budget for missionary and promotional work. Total revenues in 1958 were $52,854,940, an increase of $5 million over 1957.

On June 10, 1959—the 34th anniversary of the union—the United Church House, new $2-million headquarters building, was dedicated in Toronto. The General Council, highest court of the church, will meet in September 1960 in Edmonton. Present moderator is the Rt. Rev. Angus J. MacQueen.

Ernest E. Long,
Secretary of the General Council.

UNITED CHURCH OF CHRIST. See Congregational Christian Churches.

UNITED FUNDS AND COMMUNITY CHESTS. These names, with some local variants, are given to the fund-raising federations of voluntary health, welfare, and recreation agencies that exist in more than 2,000 communities in the United States and Canada. A united fund, as distinguished from a community chest, includes, in addition to local services, one or more national or state organizations, such as the American Red Cross and certain of the national health agencies. Since 1950, united funds have replaced community chests in more than half of the 2,000 communities.

Closely associated with or part of the united fund or community chest in many cities is the community welfare council, a federation of social agencies, individuals, and civic groups for the planning and coordinating of both voluntary and tax-supported health, welfare, and recreation services. The chest-council idea has been adopted in The West Indies, Japan, the Philippines, the Canal Zone, Cuba, Greece, Australia, and Mexico.

In 1959 there were 2,104 united community campaigns and 465 welfare councils in operation in the United States and Canada. Of these, there were 2,027 campaigns and 438 councils in the United States, and 77 campaigns and 27 councils in Canada. In 1959 about 27,000,000 contributions totaling $455,000,000 were made through united funds and community chests in the United States and Canada. United funds accounted for $378,000,000 of this sum.

The national association for united funds, chests, and councils in the United States is United Community Funds and Councils of America, Inc. (For information about the association, see SOCIETIES AND ORGANIZATIONS.)

COMMITTEES

General: Composed of 21 members as follows: General Assembly president; the 13 General Assembly vice presidents (chiefs of delegations or their deputies of Brazil, Burma, China, France, Morocco, Philippines, Rumania, Sweden, Turkey, the Union of South Africa, the USSR, the United Kingdom, and the United States); and the chairmen of the following 7 committees, which are composed of representatives of all member countries:

First (Political and Security): Dr. Franz Matsch (Austria).

Special Political: Charles T. O. King (Liberia).

Second (Economic and Financial): Marcial Tamayo (Bolivia.

UPI

Delegates to the U.N. General Assembly's Political Committee unanimously endorse an East-West resolution to set up a permanent committee on the peaceful uses of outer space. Shown during voting on December 12 are (left to right, front row) Henry Cabot Lodge (U.S.), Miss A. M. Warburton (U.K.), Omar Loufti (UAR), and Vasily V. Kuznetsov (USSR)

Third (Social, Humanitarian, and Cultural): Mme. Georgette Ciselet (Belgium).

Fourth (Trusteeship): Lambertus N. Palar (Indonesia).

Fifth (Administrative and Budgetary): Jiří Nosek (Czechoslovakia).

Sixth (Legal): Dr. Alberto Herrarte (Guatemala).

THE SECURITY COUNCIL

(Membership ends on December 31 of the year noted; asterisks indicate permanent membership.)

Argentina (1960)	France*	USSR*
Ceylon (1961)	Italy (1960)	United Kingdom*
China*	Poland (1961)	United States*
Ecuador (1961)	Tunisia (1960)	

Military Staff Committee: Chiefs of staff (or their representatives) of China, France, the USSR, the United Kingdom, and the United States.

Disarmament Commission: Representatives of all member countries.

THE ECONOMIC AND SOCIAL COUNCIL

President: Daniel Cosío Villegas (Mexico)

(Membership ends on December 31 of the year noted.)

INTERNATIONAL ATOMIC ENERGY AGENCY

Director General: W. Sterling Cole

SPECIALIZED AGENCIES

Food and Agriculture Organization of the United Nations; Intergovernmental Maritime Consultative Organization; International Bank for Reconstruction and Development; International Civil Aviation Organization; International Finance Corporation; International Labor Organization; International Monetary Fund; International Telecommunication Union; United Nations Educational, Scientific and Cultural Organization; Universal Postal

Union; World Health Organization; World Meteorological Organization.

(2) Security Council

Disarmament Commission.—On Sept. 10, 1959, the commission held its first meeting since it had been reconstituted by the General Assembly on Nov. 4, 1958. The meeting was held at the request of France, the USSR, the United Kingdom, and the United States, which reported on negotiations outside the United Nations that had resulted in agreement to establish a 10-member committee to consider disarmament. (In addition to these four powers, the committee was to include Bulgaria, Canada, Czechoslovakia, Italy, Poland and Rumania.) The commission expressed the hope that the new committee would "provide a useful basis for the consideration of disarmament in the United Nations," and asked the secretary general to provide facilities for its meetings. (See also Disarmament.)

Laos.—In a letter of Sept. 4, 1959, to the secretary general, Khamphan Panya, the minister of foreign affairs of Laos (q.v.), reported that there had been fighting in Sam Neua Province since July 16, and charged that the rebels had been encouraged and helped by North Vietnam in violation of the Geneva agreement of 1954. On the next day, the secretary general requested Egidio Ortona, president of the Security Council for September, to call a meeting of the council. The council met on September 7, and after a procedural discussion adopted (10–1) an agenda. A draft resolution submitted by France, the United Kingdom, and the United States was adopted (10–1) early on September 8. It provided for the appointment of a subcommittee of Argentina, Italy, Japan, and Tunisia "to examine the statements made before the Security Council concerning Laos, to receive further statements and documents, and to conduct such inquiries as it may determine necessary and to report to the Security Council as soon as possible." In order to avoid the possibility of a "double veto," the president of the council first took a vote on whether the issue was procedural (in which case no veto was possible). When this passed with only a negative vote by the Soviet Union, he put the draft resolution to a vote—a procedure which might prove significant for the council in the future. The committee's report, published on November 6, stated that the information it had received "did not clearly establish whether there were crossings of the frontier by regular troops" of North Vietnam.

Middle East.—At the request of Israel, the council held a meeting on Jan. 30, 1959, to consider charges of a violation of the border between Israel and Syria. After discussing the incident, the members of the council stressed that this was a matter which could be considered by the machinery set up under the armistice agreement between the two countries.

(3) Economic and Social Council

The 27th session of the Economic and Social Council (ECOSOC) met in Mexico City on April 7–24, 1959, while the 28th session met in Geneva on June 30–July 31, and resumed its meetings in New York on December 14–15. Meetings were also held throughout the year by many of the council's commissions and committees.

The 27th session considered reports from the International Monetary Fund (IMF), the International Bank for Reconstruction and Development (IBRD), and the International Finance Corporation (IFC); recommended that the regional economic commissions and the specialized agencies assist less developed countries in diversifying their exports; and requested the secretary general to make arrangements for a conference on new sources of energy and to prepare proposals for future work on industrialization. ECOSOC also urged members to implement previous resolutions on land reform; asked the secretary general to prepare a list of national parks and to assist governments in improving arbitral legislation and practice; recommended that the U.N. Educational, Scientific and Cultural Organization (UNESCO) study the problems of giving technical assistance in the area of freedom of information to underdeveloped countries; and noted the accomplishments of the U.N. Children's Fund (UNICEF) in its antimalarial program.

The 28th session reviewed at Geneva the world economic and social situation and appraised the development and coordination of the council's many activities in relation to the specialized agencies. For the most part, it endorsed the recommendations made in the sessions of the various commissions. The session recommended to the General Assembly the draft Declaration of the Rights of the Child; expressed its concern at the burdens borne by urban welfare services because of the rapid growth of populations and the accelerated movement from rural areas; urged speed in the fulfillment of plans and programs to further economic development; and requested an evaluation of the statistical techniques involved in making long-term projections of economic growth. ECOSOC also dealt with issues relating to the peaceful uses of atomic energy, concerted action in the field of water resources, the financing of economic development, petroleum resources, and industrialization and energy resources.

When the 28th session was resumed in New York, the council confirmed the nomination of representatives to a number of its commissions and committees; elected Canada, Japan, Pakistan, Sweden, Thailand, the USSR, and Yugoslavia to vacancies on the Governing Council of the Special Fund; decided to hold a meeting at the ministerial level in 1960; and approved the agenda of the 29th and 30th sessions.

Commission on Human Rights—The 15th session of the commission, meeting in New York on March 16–April 10, adopted resolutions dealing with freedom in underdeveloped countries and the drafting at its next session of a declaration on the right of asylum; and requested a report on the right of everyone to be free from arbitary arrest, detention, and exile. It also considered advisory services in the field of human rights and recommended an increase (to 14) in the membership of the Subcommission on the Prevention of Discrimination and Protection of Minorities. Lastly, on April 10, the commission unanimously adopted a draft Declaration of the Rights of the Child. (See also Child Welfare.)

Commission on International Commodity Trade.—The commission held its 7th session in New York on March 9–24, the first meeting since it had been given new terms of reference, whereby its main task would be to "study and analyze developments and trends in international commodity trade. . . ." It recommended studies on the impact of fluctuations in economic activity in industrial countries on international measures to deal with fluctuations in primary commodity markets, and reviewed a commodity survey by the U.N. Secretariat which noted that the index of terms of exchange between primary commodities and manufactures had declined by 20% between 1950 and 1958.

Commission on Narcotic Drugs.—At its 14th session, held in Geneva on April 27–May 15, the commission considered the annual reports of the Permanent Control Opium Board and the Drug Supervisory Body as well as those of various governments. It passed resolutions urging governments to bring new narcotic drugs under international control, inviting the World Health Organization (WHO) to prepare a report on the use of cannabis for the extraction of useful drugs, recommending the establishment of requirements for narcotic drugs in first-aid kits of airplanes on international flights, and requesting the General Assembly to set up a continuing program of technical assistance in narcotics control. (See also Narcotics.)

Commission on the Status of Women.—The 13th session of the commission was held in New York on March 9–27. The commission recommended that nongovernmental or-

ganizations help develop international cooperation in activities promoting equal rights for women, and requested publication of a commentary on the Convention on the Nationality of Married Women and of a pamphlet on equal pay. In addition, it discussed aspects of the access of women to education, economic opportunities for women, and equal retirement for men and women; and gave priority in its future work to questions relating to women's political rights.

Economic Commission for Africa (ECA).—The 1st session of the commission, which met in Addis Ababa, Ethiopia, on Dec. 29, 1958—Jan. 6, 1959, was attended by all eligible members except South Africa. The commission adopted rules of procedure and decided to seek liaison with the other international organizations concerned with Africa, such as the Accra Conference of Independent African States, the Economic Committee of the Arab League, and the Commission for Technical Cooperation in Africa South of the Sahara. Problems relating to the expansion of technical and economic assistance in Africa were given special attention, and the commission recognized the immediate needs of the newly independent state of Guinea. The commission devoted most of its time to drawing up a program that emphasized such concerted projects as a study of West African economic contacts, the development of sea fisheries and esparto grass reserves in North Africa, more effective locust control, and the eradication of infectious livestock diseases in northeastern Africa. A long-term statistical program resulted in a conference on African statistics held in Addis Ababa on September 28–October 8.

Economic Commission for Asia and the Far East (ECAFE).—At its 15th session, held in Broadbeach, Australia, on March 9–19, the commission reviewed its program with a view to giving more attention to economic development and planning, trade, the development of resources, and transportation and communications on an intraregional and interregional cooperative basis. It also considered problems caused by the decline in the prices of primary commodities and the need to expand agricultural production. Recommendations for holding a regional population conference and a seminar to evaluate data from the 1960 world censuses program were approved, as were resolutions on the problems of land settlement, population growth, and economic development.

Economic Commission for Europe (ECE).—The commission reviewed its entire work program at its 14th session, held in Geneva on April 20–May 6. It adopted resolutions recognizing the usefulness of periodic special meetings on energy problems; making the Working Party on Gas Problems a permanent body; and continuing studies on automation, technical and economic documentation, the productivity of labor, and water control. The commission's executive secretary was requested to report on government views on USSR proposals to create an all-European regional trade organization and to call a conference on intra-European trade.

Economic Commission for Latin America (ECLA).—The commission held its 8th session in Panama City on May 14–23. It adopted resolutions on the improvement of budget procedures, the establishment of economic development advisory groups, a proposed study of trends and prospects in the timber industry, the institutional framework of industrialization, structural and institutional factors in agricultural development, the initiation of a study of the metal-transforming industries, the peaceful uses of atomic energy, and the planning and utilization of hydroelectric resources.

Population Commission.—At its 10th session, held in Geneva on February 9–20, the commission requested the secretary general to publish a demographic pilot study on the Philippines and to develop studies on internal migration. It noted no change in the trends of population growth, but recognized the fact that growth was greater in the less developed countries, and raised the question as to whether the growth in certain countries had not reached a point of hindering economic development. According to a report by the secretary general, the population of the world, which now totaled 2.8 billion, would be between 3.6 billion and 3.9 billion in 1975, and possibly between 4.9 billion and 6.9 billion if present trends continued. The commission stressed the need for further studies to consider this trend and particularly the social and economic consequences for underdeveloped countries.

Social Commission.—The commission gave primary attention to problems of housing, social services, and social defense in its 12th session, held in New York on April 27–May 15. A resolution urging the encouragement of low-cost housing and community facilities as part of national programs to develop long-range planning in housing was passed unanimously on May 4. The commission considered *Training for Social Work: Third International Survey,* and purposed further study of new ways of helping underdeveloped countries to develop their social services. It also adopted resolutions dealing with strengthening activities in the prevention of crime, suppressing the exploitation of prostitution, and extending UNICEF aid for social services for children.

Special Fund.—The Special Fund created on Oct. 14, 1958, by the General Assembly to provide continued assistance to help integrate technical economic and social development in the less developed countries came into existence on Jan. 1, 1959. An organizing 1st session of its Governing Council, held in New York on January 26–27, authorized temporary funds to organize administrative

UNITED NATIONS

Walter S. Robertson, U.S. delegate to the General Assembly, argues against the admission of Communist China in an address before the assembly on September 21. The assembly voted the next day to bar the issue from its agenda.

arrangements and heard a report by Paul G. Hoffman, the managing director. Mr. Hoffman explained that initially the fund would give priority to projects which would demonstrate the wealth-producing potential of unsurveyed natural resources, training and research institutes, and surveys of limited cost that would lead to early investment in the less developed countries. By April 10, the fund had received project requests totaling $81,081,000. The 2d session of the council, held in New York on May 26–28, adopted rules of procedure, approved financial regulations and an administrative budget ($400,000), and authorized funds ($7,550,000) for 13 projects in 16 countries. At this meeting, Mr. Hoffman reported the discouraging fact that contributions to the fund totaled only $26 million, or $40 million less than the original goal. The 3d session of the council was held in New York on December 8–10. At this time, approval was given to 31 projects, totaling $23,710,910, in 35 countries and territories.

Subcommission on the Prevention of Discrimination and Protection of Minorities.—Meeting in New York for its 11th session on January 5–23, the subcommission dealt with several aspects of discrimination. It continued its examination of discrimination in religious rights and practices, expressed its hope for greater assistance from governments in their study of discrimination in political rights, recommended that states ratify the International Labor Organization (ILO) convention on discrimination in employment, and decided to continue its study on the right to leave a country.

Transport and Communications Commission.—The 9th session of the commission, which met in New York on May 4–12, adopted resolutions calling for studies on the promotion of travel and tourism and the adoption of recommendations on the transport of dangerous goods. The commission also considered reports on travel and transport statistics, the coordination of inland transport, transport insurance, and regional developments in transport. In addition, it reviewed the functions of its work that had been taken over by the Intergovernmental Maritime Consultative Organization (IMCO) in evaluating its future program.

Shinichi Shibuzawa of Japan, head of a U.N. Security Council subcommittee of inquiry into Laos' charges of aggression by North Vietnam, points to a map of the region after the panel returned in October from an inspection trip. Other members are (from left) Ludovico Barattieri di San Pietro (Italy), Mondher ben Ammar (Tunisia), and Gen. Heriberto Ahrens (Argentina). They found no proof of overt aggression.

THE NEW YORK TIMES

(4) Trusteeship Council

The Trusteeship Council held three sessions in New York in 1959: 23d session (January 30–February 18 and March 17–20), 24th session (June 2–August 6), and 10th special session (December 2–14). The 23d session reviewed the annual report and petitions from Tanganyika; noted the action of the General Assembly in 1958 regarding French Togoland, which was scheduled to become independent in 1960; and postponed consideration of the report on Ruanda-Urundi. It discussed the future of the British and French Cameroons and considered the report of the visiting mission that went to these territories in 1958. On February 17 the council adopted (12–1, with 1 abstention) a resolution recommending to the General Assembly that it terminate the trusteeship agreement when the French Cameroons became independent on Jan. 1, 1960. On the following day, unable to reach a more positive agreement, the council referred (13–0, with 1 abstention) the report of the visiting mission to the British Cameroons to the assembly.

The 24th session considered reports on and petitions from Ruanda-Urundi, French Togoland, New Guinea, Nauru, the Pacific Islands, Somaliland, and Western Samoa; and the reports of the visiting missions to Samoa and to Nauru, New Guinea, and the Pacific Islands. The council reviewed with approval the agreement between Togoland and France to proclaim the territory's independence on April 27, 1960. In addition, it approved the plans submitted by Italy for the gradual transfer of governmental functions to Somaliland, which was scheduled to become independent on Dec. 2, 1960; and endorsed the timetable worked out by New Zealand and the visiting mission to Western Samoa, which provided steps leading to the independence of the territory by the end of 1961. Although the council considered the question of the effects of the European Economic Community on certain trust territories, it took no action.

The 10th special session considered the report of the plebiscite commissioner on the results of the voting in the northern section of the British Cameroons on November 7 (see below, *General Assembly*), and forwarded it to the General Assembly for its consideration.

(5) International Court of Justice

On March 21, the International Court of Justice rejected the United States contention that the dispute in the Interhandel case (Switzerland *v.* United States) was solely within its domestic jurisdiction, but ruled that Switzerland had not "exhausted the legal remedies available to it in the United States courts." On March 25 the court received a request from IMCO for an advisory opinion on whether its Maritime Safety Committee, elected on January 15, was constituted in accordance with the organization's convention. This committee was to be elected from among the "largest ship-owning nations," and the election had been contested by Liberia and Panama when they did not obtain seats. On May 26 the court decided with respect to the Aerial Incident of July 27, 1955, case (Israel *v.* Bulgaria) that it lacked jurisdiction because Bulgaria had not accepted the compulsory jurisdiction clause in its statute. Similar decisions were rendered in the Aerial Incident of July 27, 1955 (United Kingdom *v.* Bulgaria), Aerial Incident of Sept. 4, 1954 (United States *v.* USSR), and Aerial Incident of Nov. 7, 1954 (United States *v.* USSR) cases. In the Sovereignty over Certain Frontier Lands case (Belgium *v.* Netherlands), the court ruled on June 20 that the 35 acres concerned belonged to Belgium. (See also International Law.)

(6) General Assembly

The 13th session of the General Assembly was resumed in New York on Feb. 20–March 13, 1959, to consider the future of the Cameroons. The 14th session met in New York on September 15–December 13.

Disarmament.—Addressing the General Assembly on September 17, British Foreign Secretary Selwyn Lloyd outlined a three-stage disarmament proposal. The first stage would consist of a series of conferences on all phases of disarmament, the second would implement their decisions, and the third would begin comprehensive disarmament under an effective control system. On the following day, Soviet Premier Nikita S. Khrushchev called for "general and complete disarmament" to be achieved by the destruction of all atomic and hydrogen bombs and military rockets and by the abolition of all armed forces except limited numbers of police and militia. He also told the assembly: "There should be initiated a system of control over all disarmament measures which should be created and should function in conformity with the stages by which disarmament should be effected." Following discussion of these two proposals and behind-the-scenes negotiations between the USSR and the United States, the assembly unanimously adopted on November 20 a resolution transmitting the proposals to the Disarmament Commission and to the new 10-nation Disarmament Committee (see above, *Security Council*).

On the same day, the assembly requested (51–16, with 15 abstentions) that France refrain from nuclear tests in the Sahara, and suggested (70–0, with 12 abstentions) that the Disarmament Committee consider means whereby powers now producing nuclear weapons would "refrain from handing over the control of such weapons" to those not now possessing them, and whereby the latter would not begin to manufacture them. Two resolutions on the suspension of nuclear and thermonuclear tests were adopted on November 21. The first urged (78–0, with 2 abstentions) the nations meeting in Geneva to continue their efforts to reach an agreement on the prohibition of such tests and hoped that they would maintain their voluntary ban. The second, approved by a vote of 60 to 1 with 20 abstentions, made the same plea but stressed the need for suspension not simply on the ground of disarmament, but also on that of hazards resulting from the tests. On the same day, the assembly decided unanimously to continue the 82-member Disarmament Commission. (See also Atomic Energy; Disarmament.)

Elections.—Ecuador and Ceylon were elected on October 12 to replace Panama and Canada as nonpermanent members of the Security Council, but a contest between Turkey and Poland to fill the seat then held by Japan was not settled until December 13, when Poland was chosen on the 52d ballot. Before the last ballot was taken, General Assembly President Víctor Andrés Belaúnde announced that an understanding had been reached whereby Poland would be the sole candidate and, if elected, would retain the post for 1960 and then resign. At the 15th assembly session, Turkey would be the sole candidate for the one-year vacancy caused by Poland's resignation.

On October 12, Brazil, Denmark, Poland, the USSR, and the United Kingdom were elected on the first ballot, and Japan on the seventh ballot, to

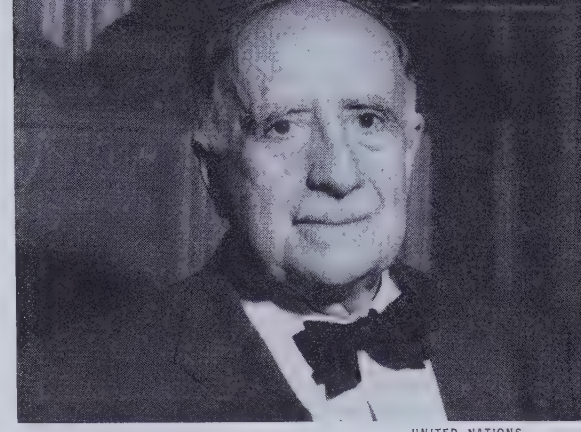
three-year terms on the Economic and Social Council. Two months later, on December 12, Bolivia and India were elected to fill expiring terms on the Trusteeship Council. This delay resulted from the fact that France and Italy would cease to be trust administrators during 1960, when French Cameroons, French Togoland, and Somaliland were scheduled to become independent. The U.N. Charter requires that membership in the Trusteeship Council be divided equally between trust administrators and nonadministering states, including permanent members of the Security Council. In 1959 there were 7 administering members and 7 nonadministering members. If France ceased to be an administrator, she would automatically become a nonadministering member because of her permanent membership in the Security Council. If Italy ceased to be a member, by the latter part of 1960 the council would be composed of 5 administrators and 8 nonadministrators, which would be a violation of the charter. Finding no solution to the constitutional dilemma, the assembly decided to fill the two vacancies and hope that a formula could be devised in 1960 whereby some of the elected nonadministering members might resign when necessary.

The assembly joined the Security Council on September 29 in electing Dr. Ricardo J. Alfaro of Panama to fill the unexpired term of the late Judge José Gustavo Guerrero of El Salvador on the International Court of Justice.

Outer Space.—On December 12, the assembly decided unanimously to establish a 24-member Committee on the Peaceful Uses of Outer Space, consisting in 1960 and 1961 of Albania, Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Canada, Czechoslovakia, France, Hungary, India, Iran, Italy, Japan, Lebanon, Mexico, Poland, Rumania, Sweden, the USSR, the United Arab Republic, the United Kingdom, and the United States. The committee is to review the area of international cooperation, study means of giving effect to programs in the peaceful uses of outer space that could be undertaken by the United Nations, and consider the nature of legal problems that might develop from the exploration of outer space. The assembly also requested the secretary general to make arrangements for holding an international scientific conference for the exchange of experience in the peaceful uses of outer space.

Tibet.—In a cable to the secretary general on September 9, the Dalai Lama charged Communist China with violation of the territorial integrity of Tibet and with inhuman treatment of the Tibetan people. He hoped that the matter would be given "the consideration which it deserves" in the United Nations. On October 12, despite Soviet objections that this was a matter for domestic jurisdiction, the assembly approved (43–11, with 25 abstentions) the inclusion of the question of Tibet on its agenda. After discussion, on October 21, the assembly deplored (45–9, with 26 abstentions) events in Tibet and called "for respect for the fundamental human rights of the Tibetan people and for their distinctive cultural and religious life." (See also China; Far East; Tibet.)

Other Political and Security Matters.—On November 17, the assembly noted (78–0) the progress report of the U.N. Scientific Committee on the Effects of Atomic Radiation and made arrangements for some of the specialized agencies to help the committee in its work. On the same day, it again expressed (62–3, with 7 abstentions) regret and concern over the failure of the Union of South Africa to reconsider its apartheid policies. In a resolution of December 9, the assembly deplored (53–10, with 17 abstentions) the continued disregard by the USSR and Hungary of its previous resolutions on the Hungarian situation and again requested them to cooperate with Sir Leslie Munro, the United Nations representative on Hungary. At the same time, it voted (80–0, with 1 abstention) to continue the U.N. Relief and Works Agency for Palestine Refugees in the Near East (UNRWA), and it also continued (54–9, with 17 abstentions) the work of the U.N. Commission for the Unification and Rehabilitation of Korea (UNCURK). On December 10, it again appealed (66–0, with 12 abstentions) to South Africa to negotiate with India and Pakistan on the treatment in the Union of persons of Indian origin. A draft resolution calling (39–22, with 20 abstentions) for negotiations between the parties concerned in Algeria failed on December 12 to obtain the required two-thirds majority.



UNITED NATIONS

Dr. Víctor Andrés Belaúnde, veteran Peruvian diplomat, was elected president of the General Assembly on September 15.

Economic Matters.—On November 20, the assembly unanimously approved the progress report of the Special Fund and those of the Regular and Expanded programs of Technical Assistance ($32,403,241 was allocated to the latter for 1960). At the same time, it decided (64–0, with 16 abstentions) to continue the experimental program of assistance to centers for training in public administration.

On December 5, the assembly recommended (63–0, with 10 abstentions) close relations between the United Nations and the International Development Association (q.v.), proposed (80–0, with 1 abstention) strengthening and developing world trade and improving trade conditions of the less developed countries, unanimously urged members to help abolish restrictive practices that hinder international commodity trade, and requested (72–0, with 9 abstentions) the secretary general to appoint a group of experts to help the Commission on International Commodity Trade in studying measures to assist in offsetting fluctuations in commodity prices.

The assembly also requested (67–0, with 15 abstentions) the secretary general to consult with members on the establishment of a U.N. Capital Development Fund, asked (80–0, with 1 abstention) him to transmit to ECOSOC information on the development of the petroleum industry in underdeveloped countries, unanimously requested him to prepare for a preliminary investigation of a study of world economic development, continued (81–0, with 1 abstention) support of agrarian reform programs, and called (73–0, with 9 abstentions) on members to assist in the formation and growth of industrial development banks and development corporations. At the same time, it unanimously urged greater development of scientific and technical cooperation and exchange of experience, approved the work of ECLA in preparing

for a Latin American common market, and recommended that ECOSOC consider the prompt establishment of a Commission for Industrial Development.

Rights of the Child.—On November 20, the assembly adopted unanimously a Declaration of the Rights of the Child. A modern version of the Geneva Declaration of the Rights of the Child of 1924, it sets forth principles designed to safeguard the rights of children and is comparable to the Universal Declaration of Human Rights of 1948. The assembly also recommended unanimously that the declaration be given wide publicity and called on individuals, organizations, and governments to recognize these rights and strive for their observance. (See also CHILD WELFARE.)

Other Social Matters.—On November 20, the assembly approved (66–0, with 12 abstentions) the report of the United Nations high commissioner for refugees, recommended (74–0, with 3 abstentions) that he continue to assist refugees from Algeria in Tunisia and Morocco, urged (63–9, with 3 abstentions) further support for the World Refugee Year of 1959–60, unanimously approved the report of UNICEF, and asked unanimously that ECOSOC continue to give attention to the interrelationship of the economic and social factors of development. At the same time, it unanimously asked the secretary general to inquire into efforts being made to promote low-cost housing, encouraged (70–0, with 9 abstentions) studies of juvenile delinquency, unanimously decided to establish a continuing program of technical assistance in narcotics control, asked (57–0, with 22 abstentions) ECOSOC to initiate a study of capital punishment, hoped (75–0, with 1 abstention) that a UNESCO survey of international relations and exchanges in education, science, and culture would be submitted to the 30th session of ECOSOC, and invited (68–0, with 13 abstentions) WHO to make further efforts to encourage cancer research.

Cameroons.—The resumed 13th session of the assembly considered the question of the British and French Cameroons, which had been referred to it by the Trusteeship Council. On March 13, the assembly passed (56–0, with 23 abstentions) a resolution terminating the trusteeship over the French Cameroons on Jan. 1, 1960, when the area was scheduled to become independent. The resolution also recommended that the new nation be admitted to the United Nations after it had attained independence. At the same time, the assembly recommended (56–0, with 24 abstentions) that separate plebiscites be held in the northern and southern parts of the British Cameroons. That in the north would determine whether the population wanted integration with Nigeria or favored determining its future at a later date. The alternatives of the plebiscite in the south were to be considered by the 14th session. The assembly then elected Djalal Abdoh of Iran as the United Nations plebiscite commissioner to supervise the elections.

The people of the northern section of the British Cameroons decided (70,401–42,797) on November 7 to postpone the question of their future. On October 16, the 14th session of the assembly approved (76–0, with 2 abstentions) arrangements for a plebiscite beginning on Sept. 30, 1960, in the southern section, and inquiring as to whether the inhabitants want to achieve independence by joining Nigeria or Cameroon (formerly French Cameroons). Later, on December 12, it unanimously recommended a further plebiscite in the northern section, to be held at the same time and with the same alternatives as in the southern section.

Other Trusteeship Matters.—On November 17, the assembly approved three resolutions dealing with petitions from South West Africa, reiterated (56–1, with 13 abstentions) its previous resolutions urging that South West Africa be made a trust territory, approved (55–5, with 11 abstentions) the work of the Committee on South West Africa and invited South Africa to negotiate with the United Nations with a view to making the area a trust territory, noted (55–4, with 16 abstentions) the legal avenues open to members to ensure fulfillment of the obligations by South Africa, and approved (65–9, with 2 abstentions) the report of the Good Offices Committee on South West Africa.

On December 5, the assembly accepted without objection the report of the Trusteeship Council and adopted resolutions on the dissemination of information on the United Nations and the trusteeship system (67–0, with 13 abstentions), offers of study and training facilities for inhabitants of trust territories (unanimous), the training of indigenous civil service cadres in the territories (68–0, with 9 abstentions), targets for self-government or independence (53–15, with 8 abstentions), an ECOSOC study of opportunities for international cooperation on behalf of former trusts which have become independent (66–0, with 10 abstentions), assistance to areas emerging from a trust status (unanimous), aid to French Togoland (unanimous), and reforms in Ruanda-Urundi (unanimous). At the same time, the assembly unanimously reaffirmed the independence date for French Togoland as April 27, 1960, and set July 1, 1960, as the date for the independence of Somalia (formerly Somaliland).

In addition, 11 resolutions dealing with education and other developments in non-self-governing territories were passed on December 12.

Administrative and Budgetary Matters.—The assembly accepted unanimously on November 3 a gift of $6.2 million from the Ford Foundation for a new U.N. Library, and on December 1 it authorized the secretary general to prepare plans for a United Nations building in Santiago, Chile. On December 5, a supplementary appropriation of $854,980 was approved (66–0, with 9 abstentions) for the 1959 budget, and a 1960 budget of $63,149,700 was voted (71–0, with 9 abstentions). The Working Capital Fund was set (62–9, with 4 abstentions) at $25 million, and the secretary general was authorized (49–9, with 21 abstentions) to spend up to $20 million to continue the operations of the U.N. Emergency Force in 1960.

Legal Matters.—On November 21, the assembly approved without objection the report of the International Law Commission (ILC), requested (56–0, with 11 abstentions) the ILC to consider the codification of international law relating to the right of asylum, and requested (63–0, with 3 abstentions) the secretary general to undertake preliminary studies on legal problems relating to the use of international rivers. On December 7, it decided (67–0, with 5 abstentions) to convene an international conference on diplomatic intercourse and immunities, unanimously requested the ILC to initiate a study of the juridical regime of historic waters, and passed two resolutions on reservations to conventions.

THOMAS HOVET, JR.,
Associate Professor of Government and Administrator of the United Nations Program, New York University.

UNITED NATIONS CHILDREN'S FUND. The United Nations Children's Fund (UNICEF) was established in December 1946 to help governments meet the emergency food and health needs of

children in war-devastated countries. Since 1950 the long-range needs of children in underdeveloped countries have been emphasized. Assistance is provided only on government request and must be given to children without regard to race, creed, nationality, or political belief. Policies are determined by a 30-nation executive board. The United States is represented on the board by Mrs. Katharine Oettinger. Administration is handled by an executive director and an internationally recruited staff of 175 members.

The assisted governments are themselves responsible for the child-care programs. UNICEF aid consists primarily of supplies and equipment not available in the assisted countries. Some stipends and grants are also provided to assist in the training of national personnel. Technical advice and international personnel are furnished by other United Nations bodies, including the Bureau of Social Affairs, FAO, WHO, and UNESCO.

UNICEF is financed by voluntary contributions from some 90 governments (as of 1959), and by private individuals and organizations. Allocations in 1959 amounted to $28 million. For every dollar allocated by UNICEF, the assisted countries spend from $2 to $2.50 to provide local staff, buildings, indigenous supplies, and administrative services.

In 1959 the Children's Fund was assisting 372 projects in 104 countries and territories.

UNICEF aid falls into the following categories:

(1) Basic maternal and child welfare services. UNICEF provides: equipment for (a) rural health centers, clinics, laboratories, hospitals and other child-care institutions; (b) rehabilitation of physically handicapped children; (c) care of prematurely born infants; and help for training of health and welfare personnel.

(2) Disease control. UNICEF provides equipment, insecticides, vaccines, penicillin, drugs, and transport for campaigns against malaria, tuberculosis, yaws, trachoma, leprosy, and other diseases afflicting children; also equipment for local production of insecticides, antibiotics, sera, and vaccines.

(3) Nutrition programs. UNICEF provides: (a) dried milk and vitamins for distribution to children and mothers through health centers and schools; (b) equipment for processing milk and other high-protein foods for distribution to children; (c) help for development and testing of new protein-rich foods for children, such as fish flour, soy products, peanut flour, cottonseed flour; (d) aid for self-help nutritional activities, such as school gardening and raising of fish and poultry, for professional training of nutrition workers and for nutrition surveys.

(4) Emergency relief to child and mother victims of war or natural disasters.

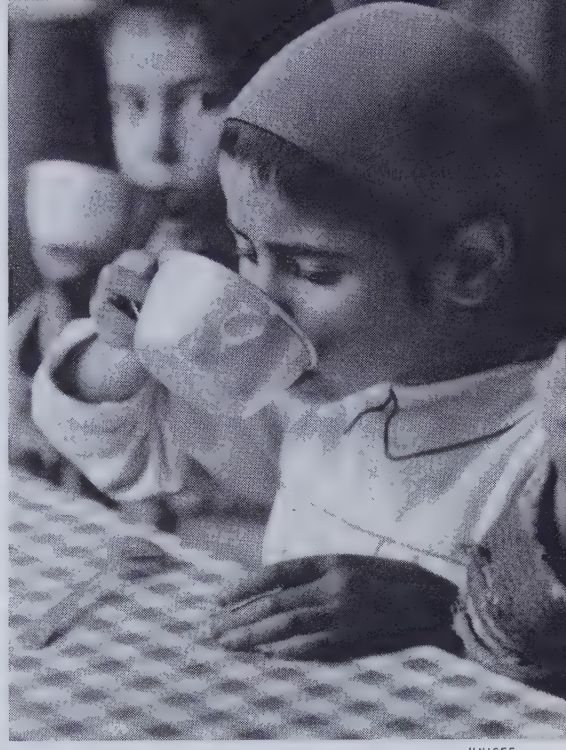
In March 1959 the UNICEF Board approved in principle aid for social services for children, especially for those needing some form of care outside their own homes, and aid to primary education through teacher training in subjects such as health, nutrition, and home economics.

Since its inception, UNICEF has provided equipment for 23,000 rural health centers. Some 286 million children have been tested for tuberculosis, and 111 million have been vaccinated with BCG. More than 35 million children and mothers have been examined for yaws and nearly 13 million have been treated. Over 5 million afflicted children have been treated for trachoma.

Currently, UNICEF is helping 46 countries to control or eradicate malaria and is aiding 26 countries with antileprosy programs. In 1959 more than 55 million children and mothers benefited directly from UNICEF-aided disease-control and child-feeding programs.

(See also CHILD WELFARE.)

MAURICE PATE,
Executive Director, UNICEF.



UNICEF

Children at a primary school in Bizerte, Tunisia, receive a warm meal and milk as part of a comprehensive nutrition program assisted by the United Nations Children's Fund.

UNITED NATIONS EDUCATIONAL, SCIENTIFIC AND CULTURAL ORGANIZATION. This specialized agency of the United Nations, with headquarters in Paris, France, has its policies formed by a biennial general conference or representatives of the 81 member nations and by an Executive Board of 24 members (chairman, Sir Ben Bowen Thomas, of the United Kingdom), responsible to their own governments. Activities are carried out by an international secretariat headed by an elected director general (Dr. Vittorino Veronese, of Italy, who took office, Dec. 5, 1958) and by national commissions which serve as a liaison between UNESCO headquarters and their own countries. At the most recent general conference (held in Paris, Nov. 4–Dec. 5, 1958) the 1959–60 budget was set at $25,970,463.

Services to Member States.—Five fields receive priority in UNESCO's work with member states: (1) free and compulsory education at the primary level; (2) fundamental education; (3) racial, social and international tensions; (4) mutual appreciation of Asian-Western cultural values; and (5) scientific research for the improvement of living conditions.

Education.—Education continues to be the organization's first concern. In 1957 UNESCO published *World Illiteracy at Mid-Century* (Paris), which showed that in 1950 some 700 million people, or 44% of the world's adult population, were illiterate, a situation made more acute by a universal shortage of schools. UNESCO's *World Survey of Primary Education,* published in 1958 and covering more than 190 primary school systems, showed that out of the world's estimated school-age population of 550 million, some 250 million are not in school, a large majority because there are no schools to which to go. Nevertheless, this survey shows that progress is being made. In 1950 only 48% of the world's children between the ages of 5 and 14 were enrolled in school, compared with 55% in 1954.

UNESCO has played an important role in assisting nations to meet this problem by: (1) helping member states to prepare programs to extend compulsory primary education; (2) organizing fundamental education campaigns; (3) establish-

ing methods for statistical analysis and for measuring illiteracy; and (4) working with governments to furnish good reading material for new literates.

To carry out the campaign for a more adequate provision of schools, UNESCO conducts international conferences in collaboration with the International Bureau of Education at Geneva, Switzerland, and regional conferences on specific educational problems.

One of the areas in which illiteracy represents a serious handicap to national development is Latin America. To deal with this problem, the Major Project on the Extension of Primary Education in Latin America was launched at a 12-nation conference at Havana, Cuba, in 1957. There, UNESCO planned a campaign to help ministries of education systematically provide for the building of schools and for training of new teachers.

UNESCO has also developed a program for teaching illiterate adults, which it calls "fundamental education." UNESCO fundamental education training center at Pátzcuaro, Mexico, serves Latin America, and a second in Sirs el Layyan, United Arab Republic, serves the Arab world. In 1958 there were over 20 UNESCO fundamental education missions operating throughout the world.

Science.—Arid and semiarid zones cover one third of the earth's land surface and represent a serious problem in more than 30 member states and 20 non-self-governing territories. A major UNESCO project, Scientific Research for Arid Lands, aims at encouraging research such as seeking out plants that can grow in the desert, dealing with the problem of saline soils, and finding new ways to irrigate parched areas. Many international meetings of scientists have been held by UNESCO to adapt solutions used in one area of the world to other areas.

In 1959, UNESCO organized the first international conference on information processing, including its impact in the translation field. An intergovernmental conference on oceanography will be organized under UNESCO auspices in July 1960 in Denmark.

Social Sciences.—UNESCO has concentrated on the problem of the effects of industrialization on the lives of people, and in 1956 it opened at Calcutta, India, a Research Center in the Social Implications of Industrialization of Southern Asia. The organization also helped establish a Latin American Social Science Research Center in Brazil and a Latin American Social Science Faculty in Chile. Another important aspect of UNESCO's work in this field is a continuing study of race, designed to combat race prejudice.

Culture.—The Major Project on Mutual Appreciation of Cultural Values between Asia and the West has been intensified by an increased exchange of scholars, artists, and philosophers; publication of previously untranslated classics, particularly of outstanding Oriental works; and the organization of national conferences.

UNESCO continued its work on behalf of the Universal Copyright Convention, which protects the rights of authors, artists, and publishers, and which has been ratified by 34 nations. An International Convention for the Protection of Cultural Property in the event of armed conflict has been ratified by 30 nations.

In order to facilitate exchanges between artists, musicians, philosophers, and other scholars, UNESCO has founded and helps organizations like the International Theater Institute, the International Music Council, and the International Council of Philosophy and Humanistic Studies to increase reciprocal understanding of the cultures of all nations.

Besides an intensive publishing program in the cultural field, UNESCO also prepares traveling exhibits of art works for circulation among its members. UNESCO also helps member nations to preserve great masterpieces of art.

Mass Communication.—Besides publicizing the work of the organization, the Mass Communication Department concentrates on improving international exchange of information, and eliminating barriers to the free flow of news. It also works to ease travel restrictions on educational, scientific, and cultural materials. The department has successfully promoted the Agreement on the Importation of Educational, Scientific and Cultural Materials, which came into force in 1952 and now has 31 adherents, and the Agreement for Facilitating the International Circulation of Visual and Auditory Materials of an Educational, Scientific and Cultural Character, in force since 1954, which 13 nations have ratified. Among other benefits, these agreements eliminate customs duties on these materials. UNESCO has also been influential in encouraging member states to lower costs of travel for teachers, students, and research workers. The department is now working with the Universal Postal Union to lower telegraph and telephone rates for press dispatches.

Exchange of Persons.—UNESCO encourages travel abroad, both for students and workers, as one way to promote international understanding. It also publishes four books in this area: *Travel Abroad; Study Abroad,* which lists scholarships offered by colleges and universities; *Workers Abroad;* and *Vacations Abroad.*

Technical Assistance.—UNESCO participates in the United Nations Expanded Program of Technical Assistance, which is designed to promote economic advance in underdeveloped countries. In 1958 UNESCO sent 282 experts to 53 countries, where they worked in programs primarily related to education and science.

To fill the need for other experts in areas of UNESCO's competence, UNESCO instituted its own program, which paid for 46 of the 282 experts mentioned above. Under this program, UNESCO issued 242 fellowships in 1958.

SALLY G. SWING,
Information Officer, UNESCO, New York.

UNITED STATES. With the admission of Hawaii as a state on Aug. 21, 1959, the United States of America comprises the 50 states (commonly referred to as the Union) and the District of Columbia. United States possessions include the Canal Zone, the Virgin Islands of the United States, American Samoa, Guam, and other small Pacific islands. Puerto Rico became a self-governing commonwealth associated with the United States in 1952. Since World War II the United States has administered territories in the Pacific under United Nations trusteeship, as well as other former Japanese islands which, according to the Japanese Peace Treaty (1951), remain under United States control although Japan retains residual sovereignty over them (see PACIFIC ISLANDS).

On Aug. 21, 1959, President Dwight D. Eisenhower signed an executive order establishing a 50-star United States flag, effective July 4, 1960. The traditional 13 stripes are retained in the new flag, and the 50 stars are arranged in nine horizontal rows, staggered in alternate rows of 6 and 5 stars each.

Area.—The area of the Union (which now includes both Alaska and Hawaii) is 3,615,209 square miles (land, 3,552,197; inland water, 63,012); that of the possessions, 1,011 square miles; that of Puerto Rico, 3,435 square miles; and that of the Trust Territory of the Pacific Islands, 8,475 square miles; total, 3,628,130 square miles. (See separate articles on the states, possessions, and PUERTO RICO.)

Population.—The census of April 1, 1950, placed the population residing in the then continental United States at 150,697,361, an increase of 14.5% over the 1940 census total of 131,669,275 (the 1950 census figure plus the estimate of armed forces overseas totaled 151,132,000); that residing in Alaska, at 128,643; and that in Hawaii, at 499,794. A Census Bureau estimate placed the United States population (including Alaska and Hawaii and the armed forces overseas) at 179,245,000 as of Jan. 1, 1960. Washington, D.C., the national capital, had an estimated population of 828,000 on July 1, 1958. (See also CENSUS DATA, U.S.)

Government.—Republican in form, the government of the United States is divided into executive, legislative, and judicial branches.

Executive Branch.—Dwight D. Eisenhower (q.v.), Republican, was re-elected to the presidency in the national election of Nov. 6, 1956, and was sworn into office on Jan. 20, 1957. He receives a salary of $100,000, plus $50,000 for expenses; in addition, up to $40,000, nontaxable,

may be expended for traveling and official entertainment.

The vice president, Richard M. Nixon (q.v.), serves as president of the Senate. His salary is $35,000, plus $10,000 for expenses.

The executive branch also comprises 10 departments (the heads of which form the cabinet) and a number of independent establishments. The members of the cabinet receive salaries of $25,000 each. As of Jan. 1, 1959, the 10 departments and their heads were:

DEPARTMENT OF STATE—Secretary, Christian A. Herter, since April 22, 1959.
DEPARTMENT OF THE TREASURY—Secretary, Robert B. Anderson, since July 29, 1957.
DEPARTMENT OF DEFENSE—Secretary, Thomas S. Gates, Jr., since Dec. 2, 1959.
DEPARTMENT OF JUSTICE—Attorney General, William P. Rogers, since Nov. 8, 1957.
POST OFFICE DEPARTMENT—Postmaster General, Arthur E. Summerfield, since Jan. 21, 1953.
DEPARTMENT OF THE INTERIOR—Secretary, Fred A. Seaton, since June 8, 1956.
DEPARTMENT OF AGRICULTURE—Secretary, Ezra Taft Benson, since Jan. 21, 1953.
DEPARTMENT OF COMMERCE—Secretary, Frederick H. Mueller, since Aug. 10, 1959.
DEPARTMENT OF LABOR—Secretary, James P. Mitchell, since Oct. 9, 1953.
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE—Secretary, Arthur S. Flemming, since Aug. 1, 1958.

Legislative Branch: Congress.—The 1st session of the 86th Congress was held from January 7 to Sept. 15, 1959. The 2d session (see list of members, pages 796–797) convened on Jan. 6, 1960; its party composition was as follows:

SENATE: 100 senators (65 Democrats; 35 Republicans).
HOUSE OF REPRESENTATIVES: 437 representatives (280 Democrats; 153 Republicans; 4 vacancies); 1 resident commissioner. Two additional vacancies were created by the deaths of R. M. Simpson (Pa., Jan. 7, 1960) and D. M. Hall (N.C., Jan. 29, 1960).

The members of Congress receive salaries of $22,500; the salary of the speaker of the House of Representatives is $35,000, plus $10,000 for expenses.

(For information on major congressional activities in 1959, see the section *The United States in 1959* in this article; also Index entries on special subjects, such as *Foreign Aid Programs, U.S.; Housing; Labor;* and *Taxation.*)

Judicial Branch.—The judiciary consists of a Supreme Court, circuit courts of appeal, district courts, special courts, District of Columbia courts, and territorial courts. On Jan. 1, 1960, the personnel of the Supreme Court was as follows: chief justice, Earl Warren; associate justices, Hugo L. Black, Felix Frankfurter, William O. Douglas, Tom C. Clark, John M. Harlan, William J. Brennan, Jr., Charles E. Whittaker, and Potter Stewart. The salary of the chief justice is $35,500; that of the associate justices, $35,000. (For a discussion of the Supreme Court's principal decisions in 1958–59, see the article LAW.)

Education.—The United States Office of Education is the country's chief advisory authority on education. For particulars regarding the general trend of education in the United States see the articles EDUCATION and OFFICE OF EDUCATION, U.S.; the section on *Education* in the articles on the states and possessions; COLLEGES AND UNIVERSITIES; LIBRARIES; and Index entries under *Education.*

Religion.—See the article RELIGION and Index entries under this heading.

Social Welfare.—See the article SOCIAL WELFARE and Index entries under this heading.

Finance.—See the article TREASURY DEPARTMENT, U.S.

Economy.—See the article BUSINESS DATA, U.S. and the Index entry, *Financial and Economic Review.*

Agriculture.—See the article AGRICULTURE and Index entries under this heading.

Industry.—See the article INDUSTRIAL PRODUCTION.

Labor.—See the article LABOR.

Mineral Production.—See the articles MINERAL PRODUCTION and MINING and articles on specific minerals.

Foreign Trade.—United States exports (including re-exports) in 1958 were valued at $17,858 million, according to the U.S. Department of Commerce; imports, at $12,830 million. In the first 9 months of 1959 exports were valued at $12,927 million and imports at $11,257 million. (For a discussion of United States foreign trade, see the articles INTERNATIONAL TRADE and TARIFFS and the Index entries on these subjects.)

Defense.—The organization for national security at the beginning of 1960 included the following:

NATIONAL SECURITY COUNCIL: Membership includes the president of the United States, the vice president, the secretaries of state and defense, and the director of the Office of Civil and Defense Mobilization.
OFFICE OF CIVIL AND DEFENSE MOBILIZATION: Director—Leo A. Hoegh (confirmed on July 11, 1958).
SECRETARY OF DEFENSE: Thomas S. Gates, Jr. (sworn in on Dec. 2, 1959); assisted by a deputy secretary of defense (James H. Douglas; sworn in on Dec. 11, 1959), a director of defense research and engineering, 7 assistant secretaries of defense, a general counsel, and assistants to the secretary of defense for atomic energy, legislative affairs, and special operations.
Department of the Army: Wilber M. Brucker, secretary of the army (sworn in on July 21, 1955).
Department of the Navy: William B. Franke, secretary of the navy (sworn in on June 8, 1959).
Department of the Air Force: Dudley C. Sharp, secretary of the air force (sworn in on Dec. 11, 1959).
Joint Chiefs of Staff: Chairman—Gen. Nathan F. Twining; Chief of Staff, U.S. Army—Gen. Lyman L. Lemnitzer; Chief of Naval Operations—Adm. Arleigh A. Burke; Chief of Staff, U.S. Air Force—Gen. Thomas D. White. The commandant of the Marine Corps, Gen. David M. Shoup, has a voice on the Joint Chiefs of Staff whenever it considers policy or strategy measures which "directly concern the Marine Corps."
Armed Forces Policy Council: Chairman—the secretary of defense.

(See the article NATIONAL SECURITY and the Index entries *Military* and *National Security.*)

Communications.—See Index entries under this heading.

Transportation.—See Index entries under this heading.

THE UNITED STATES IN 1959

Americans were essentially prosperous in 1959 despite pockets of unemployment, tension over the proper relationships between labor union leadership and industrial management, and the economic uncertainties caused by a lengthy steel strike. They were deeply interested in presidential travels abroad, in the apparent candor of visiting Soviet Premier Nikita S. Khrushchev (q.v.), and in preliminary maneuvers of candidates for the 1960 presidential nominations. Continuing dispute over the status of Berlin, the Soviet success in sending a rocket to the moon, and troubles in Cuba, Panama, Laos, and other countries all had a major impact on American political life. A great issue was drawn in and out of Congress between administration insistence on a balanced budget and pressures for spending for defense, education, and economic advancement.

The Cold War.—Increased personal and official contact between leaders of the United States and the Soviet Union, notable in 1959, gave no genuine indication of a lessening Communist drive for world domination. Instead, Communist propaganda was augmented in Latin America, the Middle East, and Africa. Communist economic and military strategists continued to seek trouble spots for po-

WIDE WORLD; U.S. ARMY

(Left) Marking the admission of Alaska to the Union, the 49-star flag first flew officially on July 4, 1959. *(Right)* New flag of 50 stars, redesigned by order of the president to show Hawaiian statehood, is due to become official on July 4, 1960.

litical exploitation even as Soviet officials used less militant language.

Throughout the year there was an impasse in negotiations over the status of Berlin, symbol of free government and of the unification of a democratic Germany to much of the West and to the Soviet Union an annoying enclave in the structure of its satellites. Technically occupied by the four great powers victorious over Nazi Germany in 1945, the city had been divided between Soviet East Berlin and a West Berlin closely linked with West Germany. Long desiring that Berlin be within the Communist orbit, and contending that the occupation was over, the Soviet Union in November 1958 renewed its efforts to remove the United States, Great Britain, and France from West Berlin.

On Jan. 10, 1959, the USSR proposed, in notes to the United States and 26 other countries, that a conference be held to discuss a Soviet draft for a German peace treaty. This draft would make Berlin a demilitarized free city and provide for a partially demilitarized West Germany, with its present borders and without Western defense ties. In effect, the plan would make some Soviet concessions on Berlin in return for a weakened Germany. Both the United States (January 10) and West Germany (January 12) declared the proposal to be similar to one made by the Soviets in 1954 and an unacceptable device to recognize two Germanies and to deprive a reunified Germany of border adjustments and defense alliances. The propaganda effect nevertheless seemed to give the USSR a new peace initiative.

Soviet First Deputy Premier Anastas I. Mikoyan arrived in the United States on January 4 for a much-publicized unofficial tour. Though received with some reserve, he made public appearances from coast to coast as a skillful advocate of Soviet positions. A meeting with President Dwight D. Eisenhower (q.v.) on January 17, which was devoted to Germany, disarmament, and international trade, produced no new proposals. Two days later, State Department officials, in conference with Mikoyan, rejected steps to increase trade in strategic goods, to lower tariffs, and to remove credit restrictions on the ground that trade increases, which the Soviets could easily begin, must be in nonstrategic commodities, and that loans to the Soviet Union were barred by law because of Soviet debts to the United States. The president said at a press conference on January 21 that he had tried to make it clear that "we are ready to explore anything" when there is "opportunity for advancing the peace," but added that America "simply won't be pushed around." The Mikoyan visit, ending on January 20, enabled Soviet leaders to point to high-level negotiations as an actuality. On January 26, Khrushchev said in Moscow that it had shown that "the possibility of a thaw in our relations is not excluded."

Pressure mounted for international discussion of the potentially dangerous Berlin issue, made the more urgent because of the 1958 proposal of the

(Left) Lewis L. Strauss (r.) confers with Frederick H. Mueller, who replaced him as secretary of commerce on August 10. Strauss, who had served under a recess appointment, failed to win Senate confirmation. *(Right)* Neil H. McElroy (r.), who resigned as secretary of defense on December 1, congratulates his successor, Thomas Gates, Jr., deputy secretary since June.

UPI; WIDE WORLD

USSR to turn over its occupation functions in Berlin to East Germany by May 27, 1959. On February 4–8, Secretary of State John Foster Dulles (q.v.) conferred in Europe with British, French, and West German leaders in order to develop a common German policy, and on February 16, the United States, Britain, and France asked the USSR to join in a foreign ministers' conference. The Soviet acceptance of March 2 was hedged with conditions, including suggestions that Poland and Czechoslovakia be invited, that the agenda give priority to the Soviet proposals on Berlin and Germany, and that the meeting be of limited duration.

Meanwhile, a United States Army truck convoy from Berlin was detained on February 2–4 by Soviet Army officers seeking to inspect cargo as it entered West Germany. It was allowed to pass after a strong United States protest (February 4) in Moscow. On February 5, the State Department released a tape recording of Soviet fighter pilot conversations that revealed an attack on an unarmed U.S. Air Force transport plane shot down in Soviet Armenia on Sept. 2, 1958. Soviet broadcasters charged on February 7 that the tape was a "fake" made to transfer blame for the incident from Americans flying "over Soviet territory." President Eisenhower denied on February 10 that American planes crossed Soviet borders to monitor air defenses, and stated that "once in a while" there may be "false radio signals that will take a plane out of course."

On March 16, in a national radio-television report on Berlin, the president said that "we will not retreat one inch from our duty." The United States would negotiate, but not "under a dictated time limit or agenda." The right to free passage to and from West Berlin would be exercised, and the United States would not agree to a compulsory division of Germany or to arrangements undermining Western security. In a news conference on March 11, the president had rejected as unnecessary an increase in United States ground forces in Europe and had declined to rule out the possibility of nuclear warfare.

On March 26, after a meeting between President Eisenhower and British Prime Minister Harold Macmillan at Camp David, Md. (March 20–22), the Western powers proposed that the foreign ministers' conference on Germany open in Geneva on May 11, and insisted that it be limited to the four powers "responsible for Germany." The USSR accepted on March 30. Foreign ministers of the three Western powers and West Germany, who met in Washington on March 31–April 1 and in Paris on April 29–30, agreed that the freedom of West Berlin should be maintained, while placing a lower priority on German reunification than heretofore. The Geneva Conference, which met intermittently from May 11 to August 5, ended in a deadlock, as had been predicted. Christian A. Herter (q.v.), successor to Dulles as secretary of state, had warned Americans on May 7 against "great expectations." The conference failure was almost forgotten, however, in the announcement by President Eisenhower on August 3 that Premier Khrushchev would visit the United States in September, that the president would go to Europe prior to that time for conferences with Western leaders, and that he would later return the Khrushchev visit. Diplomacy had reached the summit because no other level of authority could so fully negotiate and no other effort could so quickly obscure the implications of deadlock. (See also GERMANY; SUMMIT CONFERENCE.)

In the meantime, Secretary Dulles, who had resigned on April 15 because of cancer, died on May 24. His funeral in Washington three days later was attended from abroad by the four foreign ministers participating in the Geneva Conference, by West German Chancellor Konrad Adenauer, and by high officials from many other countries.

UPI

Replica of Soviet sphere (Lunik II) which landed on the moon is studied by President Eisenhower. The model was a gift of Premier Khrushchev (right), presented on his arrival in Washington, September 15. Behind leaders at the White House are Secretary of State Herter (left) and interpreter.

On June 29, Soviet First Deputy Premier Frol R. Kozlov officially opened in New York the Soviet National Exhibition of Science, Technology, and Culture, which had been arranged on an exchange basis. The American National Exhibition was opened in Moscow on July 24 by Vice President Richard M. Nixon (q.v.). At a preview earlier in the day, he engaged in a debate, part of it televised, with Premier Khrushchev on the merits of capitalism. Nixon toured in the USSR, addressed the Russians by television and radio from Moscow on August 1 on his experiences there and on his hope for ending the cold war, and visited Poland on August 2–5.

The government of Laos (q.v.) declared an emergency on August 4 in five provinces after guerrilla attacks near North Vietnam and Communist China. The State Department charged on August 11 that fighting in Laos was Communist inspired, and Secretary Herter, addressing the U.N. General Assembly on September 17, reiterated United States determination to aid the Laotian government against Communist rebels.

President Eisenhower, in Europe for conferences as a prelude to the Khrushchev visit to the United States, was hailed by great crowds in Bonn (August 26–27), London (August 27–September

President Eisenhower addresses crowd at Washington airport on his return from European tour, September 7. With him are Mrs. Eisenhower (r.) and Vice President and Mrs. Nixon.

WIDE WORLD

HAYNIE IN THE LOUISVILLE COURIER-JOURNAL

"Out in Space"

2), and Paris (September 2–4). His meetings with leaders of major Western powers were designed to unify plans and to assure the allies of the United States that it would support their interests.

The Khrushchev visit was preceded on September 14 (Moscow time) by Soviet success in placing on the moon Lunik II, a rocket package with scientific instruments. The Soviet premier arrived at Andrews Air Force Base, near Washington, on September 15, and until his departure on September 27 maintained a hectic schedule. As he traveled across the country, his mood was mercurial. He was sharp to hecklers at press conferences and dinners; he was critical of security arrangements which, in California, he said amounted to "house arrest"; he was jovial in San Francisco and in Iowa. On September 18, he said to the U.N. General Assembly that "all states should effect complete disarmament," a proposal which Western delegates heard with skepticism about its workability. In talks with the president at Camp David on September 25–27, Berlin and disarmament were apparently the chief topics. Negotiations over Berlin would be reopened without a time limit. On his return to Moscow on September 28, Khrushchev said that he was impressed that the president "sincerely wanted to liquidate the cold war."

"Oops!"

PLETCHER IN THE SIOUX CITY (IOWA) JOURNAL

In November, the president made plans to meet with heads of Western governments in Paris on December 19 and to visit 11 countries before and after the meeting. Leaving Washington by air on December 3, he visited Italy, Turkey, Pakistan, Afghanistan, India, Iran, Greece, Tunisia, France, Spain, and Morocco, and returned to the United States on December 22. Following conferences held at Paris and Rambouillet on December 19–21, he joined Prime Minister Macmillan and President de Gaulle in inviting Premier Khrushchev to a summit conference in Paris in 1960. (See also Foreign Policy of the U.S.)

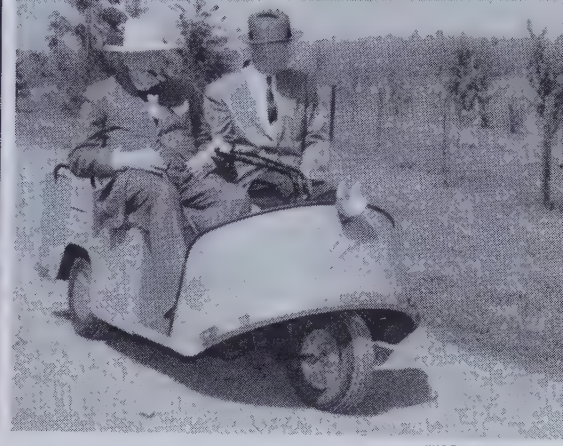
Global Responsibilities.—Treasury withdrawals for foreign aid in the fiscal year ending June 30, 1959, totaled $3,651.9 million. For the fiscal year 1960, Congress appropriated on Sept. 15, 1959, a total of $3,225.8 million, or $704.2 million less than the president had requested. On June 24, the president sent to Congress with his endorsement a recommendation from the President's Committee to Study the United States Military Assistance Program (headed by William H. Draper, Jr.) that military aid be authorized on a permanent basis, and that it be planned three to five years ahead. The committee reported on July 13 that there was some evidence of "waste and maladministration" in economic aid, but that programs must be improved, not abandoned. On August 20, it recommended increases in military aid appropriations.

Riots developed in Bolivia on March 2–4 over an article in *Time* magazine in which an unidentified United States embassy officer was quoted as saying in effect that Bolivia ought to be abolished. The State Department reported that no such statement had been made.

On February 19–20, President Eisenhower and President Adolfo López Mateos of Mexico conferred on economic matters at Acapulco. On June 26, the president and Queen Elizabeth II dedicated at St. Lambert, Quebec, the St. Lawrence Seaway (q.v.), which had been opened to traffic on April 25.

Because of anti-American overtones, the Cuban regime of Premier Fidel Castro caused growing concern in the United States. On October 26, Castro charged that the United States had permitted planes to drop antigovernment leaflets and bombs on Havana on October 21. The United States denied the allegations on October 27, and on November 9 protested a Cuban government pamphlet reiterating them. (See also Cuba.) In Panama rioting developed on November 3 and 28 over efforts to fly the Panamanian flag in the Canal Zone as a symbol of sovereignty. (See also Panama.)

National Defense.—In the fiscal year 1959, United States net military expenditures totaled $41,196,238,676, or $1,341,323,579 more than in the preceding fiscal year. On Aug. 4, 1959, Congress appropriated $39,228,239,000 for the Department of Defense for the fiscal year 1960, or $19,961,000 less than the president had requested. The bill provided $17,472,706,000 for the Air Force, $11,006,503,000 for the Navy, $9,375,805,000 for the Army, and $1,373,225,000 for the secretary of defense. Based on a strength for the



WIDE WORLD

Army of 870,000, for the Air Force of 845,000, and for the Navy of 630,000, it also gave the president funds to use at his discretion to increase the strength of the Marine Corps from 175,000 to 200,000 and that of the Army Reserve from 270,000 to 300,000. It required that the National Guard be maintained at a strength of 400,000, rejecting the president's proposed cut to 360,000. An additional appropriation for military construction (September 4) totaled $1,363,961,200, or $199,238,800 less than the president's request. (See also NATIONAL SECURITY.)

On January 12, the National Aeronautics and Space Administration (NASA) announced plans to build a capsule in which a man might safely be sent into orbit and returned to earth (Project Mercury). Seven potential astronauts were introduced at a press conference on April 9. On October 21, the president announced his decision to transfer the Army Ballistic Missile Agency to NASA.

During the year the United States successfully launched ten earth satellites: Vanguard II (February 17) and III (September 18); Discoverer I (February 28), II (April 13), V (August 13), VI (August 19), VII (November 7), and VIII (November 20); and Explorer VI (August 7) and VII (October 13). A lunar probe, Pioneer IV, launched by the Army on March 3, passed the moon at a distance of 37,300 miles and went into orbit around the sun. (See also SPACE FLIGHT.)

On December 2, Thomas S. Gates, Jr., succeeded Neil H. McElroy as secretary of defense.

The Legislative Record.—The first session of the 86th Congress met from January 7 to Sept. 15, 1959. On the opening day, Democrats outnumbered Republicans in the Senate by 64 to 34 and in the House of Representatives by 283 to 153. Rep. Sam Rayburn, Democrat of Texas, was reelected speaker of the House for a ninth term, and Rep. John W. McCormack (Mass.) again became majority floor leader. In the Senate, Democrats again chose Lyndon B. Johnson (Texas) majority leader and Mike Mansfield (Mont.) majority whip. Republican senators elected Everett M. Dirksen (Ill.) minority leader by a vote of 20 to 14 over John Sherman Cooper (Ky.). Thomas H. Kuchel (Calif.) was chosen minority whip, also by 20 to 14, over Karl E. Mundt (S. Dak.). Meeting in caucus on January 6, House Republicans selected Charles A. Halleck (Ind.) minority leader by a vote of 74 to 70 to replace Joseph W. Martin, Jr. (Mass.). Notable legislation of the session provided for labor reform, the admission of Hawaii to statehood, extension of the Selective Service System, a housing program, higher interest for government savings bonds, and a two-year extension of the Civil Rights Commission. The president's final requests for operating funds for the fiscal year 1960 were $70,740,118,520, and Congress appropriated $69,235,752,364. With supplemental appropriations of $2,764,500,380 for 1959 and funds provided outside the appropriation process, the session approved a total of $79,428,598,352.

The president's State of the Union message, delivered in person on January 9 before a televised joint session of Congress, urged the necessity of strength as a means to peace and the importance of a balanced budget. His budget message, which he submitted on January 19, requested expenditures of $77,030 million in the fiscal year 1960, or $3,849 million less than he had asked for 1959. "This budget," he said, "rejects the philosophy that the national welfare is best served by satisfying every demand for Federal expenditures." The annual economic report, submitted on the next day, recommended caution in the matter of wage increases and federal spending because of the threat of inflation. Senator Johnson called the budget "propaganda . . . prepared to create a political issue for 1960," while Republican congressional leaders began to affix a label of "spenders" on Democratic spokesmen.

Meanwhile, on January 12, Senator Johnson won (72–22) a change in rules that would permit two thirds of the senators present and voting to close debate instead of two thirds of all senators. This change was more moderate than a proposal for closing debate by a majority vote of the Senate, made by a group of civil rights advocates, which had been rejected (60–36) on January 9 on a motion to table it.

Labor legislation early became a critical issue, with strong support in both houses for action against labor racketeering of the sort revealed by congressional investigations. On January 20, Sen. John F. Kennedy (Mass.) introduced a bill which would impose curbs but would also modify the Labor Management Relations Act of 1947 (Taft-Hartley Act) in a few ways desired by labor. The administration favored a stronger measure including, as revealed in a presidential message of January 28, provisions against secondary boycotts and minority picketing.

On April 25, the Senate passed (90–1) the Kennedy bill, to which had been added (77–14) a compromise "bill of rights" for union employees proposed by Sen. Thomas H. Kuchel. The president, businessmen, and many others regarded the bill as too weak, while labor thought it too strong. On August 14, the House passed (303–125) the Landrum-Griffin bill, which the president had endorsed in a television statement on August 6, and

which was supported by a Southern Democratic–Republican coalition. The House had rejected (245–132) the mild Shelley bill for union administrative reforms, approved by labor, on August 12, and on the next day it had substituted (229–209) the Landrum-Griffin bill for the Elliott bill supported by the House Democratic leadership. In Senate-House conferences most of the provisions of the Landrum-Griffin bill and a few from the Kennedy bill were adopted. The resulting law, the Labor-Management Reporting and Disclosure Act of 1959 (otherwise known as the Labor Reform Act of 1959), was approved by the Senate (95–2) on September 3 and by the House (352–52) on September 4, and signed by the president on September 14. It contained a bill of rights for union members, clauses against secondary boycotts as well as organizational and recognition picketing, greater authority for state agencies, and requirements for union procedures. President George Meany of the AFL-CIO declared on September 6 that the measure was part of a business campaign "to enact restrictive antilabor laws in the name of accomplishing labor reform." (See also LABOR.)

A bill to make Hawaii (q.v.) the 50th state was voted by the Senate (76–15) on March 11 and by the House (323–89) on March 12. The measure was signed by the president on March 18, Hawaiian voters approved statehood on June 27 by a vote of 132,938 to 7,854, and the new state was proclaimed by the president on August 21.

The Selective Service Act, which requires men to register with draft boards at the age of 18 and makes them subject to call at 18½, was extended for four years by a Senate vote of 91 to 1 on March 11 and by voice vote in the House on the next day. The bill was approved by the president on March 23. (See also SELECTIVE SERVICE.)

On July 7 the president vetoed a compromise housing bill passed by the Senate (56–31) on June 22 and by the House (241–177) on June 23, on the ground of "excessive" spending, which he thought would do "more damage than good." The veto was sustained on August 12, when the Senate, voting 55 to 40 to override, failed to reach the necessary two-thirds majority. A second housing bill, passed by the Senate (71–24) on August 18 and by the House (283–105) on August 27, also was vetoed, on September 4, and on the same day the Senate sustained the veto by its 58–36 vote to override. A further compromise, retaining some of the features to which the president objected but reduced in cost to $1 billion, was passed by the Senate (86–7) on September 9 and by a voice vote in the House on the next day. It was approved by the president as the Housing Act of 1959 on September 23. (See also HOUSING.)

A $1,206.8 million public works measure, passed by Congress on August 17, also was vetoed (August 28) by the president, who objected to 67 unbudgeted projects, which he said would cost over $800 million. The veto was sustained by a single vote on September 2, when the House voted by 274 to 138 to override. A new version, totaling $1,185.3 million, was passed by Congress on September 8 and vetoed on the next day. On September 10 both houses overrode the veto, the first of President Eisenhower's 146 vetoes to be overridden, by votes of 280 to 121 in the House and 72 to 23 in the Senate.

Among the financial measures enacted by Congress were bills increasing the debt limit to $285 billion on a permanent basis and to $295 billion temporarily (June 25), extending present corporation and excise tax rates for a year (June 29), increasing the federal gasoline tax by 1 cent a gallon (September 9), and authorizing increased interest rates for Series E and H government savings bonds (September 12). The veterans' pension system was extensively revised by a bill passed by Congress on August 18 and signed by the president on August 29.

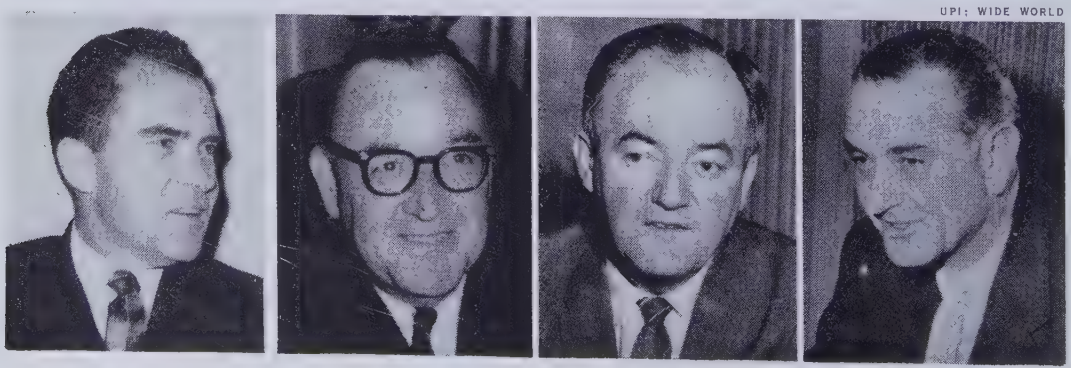
On September 19, President Eisenhower declared that it had taken great public pressure to force the Democratic "majority to shelve at least temporarily its more lavish proposals" for spending. Among "many disappointing failures," he mentioned "refusal to establish . . . authority for sound management of the public debt," failure to make the postal service self-sustaining, reduction of mutual security appropriations, and "mushrooming the huge public works expenditures." Issues shelved included proposals for civil rights legislation, aid to education, farm legislation, assistance to depressed areas, higher minimum wages, larger social security benefits, and home rule for the District of Columbia.

Two major presidential appointments aroused controversy. Clare Boothe Luce was confirmed (79–11) as ambassador to Brazil by the Senate on April 28, after a vigorous attack on her qualifications led by Sen. Wayne Morse. Her comments on Morse led to new attacks, defense by the president, and her resignation on May 1. On June 19 the Senate refused (49–46) to confirm the nomination of Lewis L. Strauss, who had been serving under a recess appointment, as secretary of commerce. The campaign which led to this unusual action on a cabinet nomination was spearheaded by Sen. Clinton P. Anderson and others who disapproved of Strauss' conservatism. Strauss resigned on June 30, and on August 6 the Senate confirmed the nomination of Frederick H. Mueller as his successor.

During the year the Senate Select Committee

Potential presidential nominees in 1960 (from left): Vice President Richard M. Nixon, Republican, and Democrats Edmund (Pat) Brown of California, Hubert H. Humphrey of Minnesota (candidacy announced December 30), and Lyndon B. Johnson of Texas.

UPI; WIDE WORLD



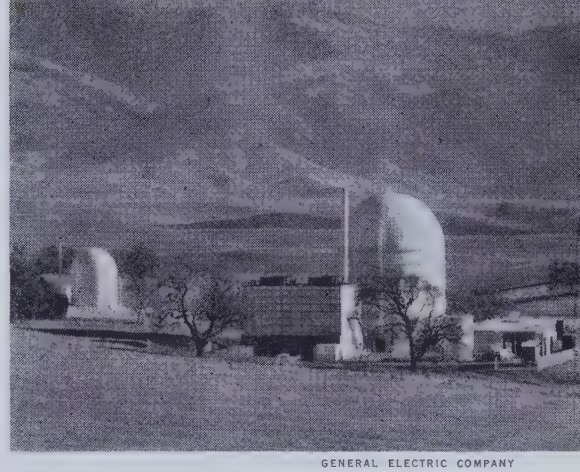
on Improper Activities in the Labor or Management Field continued its investigations of racketeering, while other Senate and House committees studied the missile program, space exploration, radioactive fall-out, and unemployment. The most spectacular postsession hearings were those held by the House Special Subcommittee on Legislative Oversight under the chairmanship of Rep. Oren Harris. They developed evidence of rigged television quiz programs and were climaxed by the admission (November 2) by Charles Van Doren that he had been given questions and answers in advance when he won $129,000 on a 1956 program. (See also RADIO AND TELEVISION.)

Political Developments.—During 1959, Democratic and Republican leaders shaped their plans with the 1960 presidential campaigns in mind. Major issues already included inflation, high interest rates, labor union regulation, farm price supports, higher minimum wages, aid to education, enlarged social security, housing and slum clearance, civil rights, national defense and space efforts, and foreign policy. The administration sought to make a record on the principle of a balanced budget; Democrats were divided, but many leaned toward larger expenditures for social progress.

Vice President Nixon was regarded as the leading Republican presidential candidate, with much support apparent for Gov. Nelson A. Rockefeller of New York until he withdrew from the race on December 26. No Democratic candidate had a clear lead, but discussion centered on Adlai E. Stevenson, who insisted that he was not running, and the more obviously receptive Senators Kennedy, Johnson, Stuart Symington, and Hubert H. Humphrey. Gov. Edmund G. Brown of California was a leading favorite son. Much public comment dealt with the question of whether a Roman Catholic would be handicapped or helped by his religion in a presidential race. The Democrats decided to hold their 1960 national convention in Los Angeles beginning on July 11, while the Republicans chose Chicago and July 25.

Paul M. Butler, chairman of the Democratic National Committee, who openly opposed policies of more conservative Democrats, retained the support of the committee despite Southern attacks. Sen. Thruston B. Morton was elected chairman of the Republican National Committee on April 11, 1959, to succeed Meade Alcorn. Scattered elections in November gave the Democrats encouragement but confirmed trends toward ticket splitting and emphasis on local issues. (See also DEMOCRATIC PARTY; ELECTIONS, U.S.; REPUBLICAN PARTY.)

The National Economy.—At the end of the 1959 congressional session, presidential requests for new spending were officially summarized at $82,009,008,445, and appropriations and other spending authority for various years at $79,428,598,352. On December 31, the gross public debt totaled $290,797,771,717, as compared with $282,922,423,583 on Dec. 31, 1958.



GENERAL ELECTRIC COMPANY

Domed cylinders at the Vallecitos Atomic Laboratory, Pleasanton, Calif., house a boiling water reactor and a nuclear test reactor. It is the largest private facility in the U.S. for experimental development of peacetime atomic energy.

The gross national product, which had reached a seasonally adjusted annual rate of $457.1 billion in the fourth quarter of 1958, rose to $484.5 billion in the second quarter of 1959. From the recession low in the first quarter of 1958 it had risen more than 10% (allowing for price increases) before the steel strike. Chiefly because of the strike, it declined by 1.2% in the third quarter, to $478.6 billion. Personal income rose from a seasonally adjusted annual rate of $369 billion in January to $383.8 billion in June, dropped steadily to $380.0 billion in August, but rose to an all-time high of $384.8 billion in November. (See also INCOME.) Employment, which totaled 65,306,000 in October 1958, dropped to 62,706,000 in January 1959, rose consistently thereafter to 67,594,000 in July, but declined to 65,640,000 by November. Unemployment mounted steadily from 3,805,000 in October 1958 to 4,749,000 in February 1959, dropped to 3,389,000 in May, rose to 3,982,000 in June, declined regularly to 3,230,000 in September, but increased to 3,670,000 in November. By mid-October the seasonally adjusted unemployment rate (which excludes most workers on strike) had risen to 6% of the labor force, having been 4.9% before the steel strike; in mid-November it stood at 5.6%. Average weekly hours per worker in all manufacturing industries rose from 39.9 in January 1959 to 40.7 in

Other potential Democratic presidential nominees are (from left): John F. Kennedy of Massachusetts (who announced his candidacy Jan. 2, 1960), Robert B. Meyner of New Jersey, Adlai E. Stevenson of Illinois, and Stuart Symington of Missouri.

TWA; WIDE WORLD

June, but dropped to a preliminary figure of 39.9 in November. Average weekly gross earnings by workers in those industries rose from $87.38 in January 1959 to $91.17 in June, fell to $88.70 in August, and rose to $89.47 in September; preliminary figures for November showed a decline to $88.98. (See also BUREAU OF EMPLOYMENT SECURITY; LABOR; WAGES AND HOURS.)

The value of new construction (seasonally adjusted) rose from $4,557 in January 1959 to $4,713 million in May, but declined to $4,263 in October. (See also BUILDING AND CONSTRUCTION.)

The Consumer Price Index (1947–49 = 100), which stood at 123.8 in January 1959, with two slight downward fluctuations rose to a record high of 125.6 in November. The index of food prices declined from 119.0 in January to 117.6 in April, rose to 119.4 in July (well below the 121.7 record high for July 1958), and stood at 118.4 in October. (See also COST OF LIVING.) The index of prices received by farmers for all products (1910–14 = 100) dropped from 245 in January to 228 in December. The parity ratio, which had risen to 87 in September 1958, stood at 82 from January to May 1959, but dropped to 77 by November. (See also AGRICULTURE.)

Exports of United States merchandise totaled $1.384.8 million in January 1959, reached a high of $1,535.3 million in May, and dropped to $1,460.5 million in October. Imports totaled $1,154.2 million in January, $1,300.9 million in March, and $1,204.8 million in October. (See also INTERNATIONAL TRADE.) Seasonally adjusted manufacturers' sales were valued at $28,143 million in January, $31,248 million in June, and $29,199 million in November. Corporate profits after taxes were at a seasonally adjusted annual rate of $23.8 billion in the first quarter and $27.0 billion in the second quarter. The seasonally adjusted index of industrial production (1947–49 = 100) was 143 in January, 155 in June, and 148 (preliminary figure) in November. (See also BUSINESS DATA, U.S.; INDUSTRIAL PRODUCTION.)

Consumer credit was $45,094 million in January and, after a slight decline in February and March, rose steadily to a record of $50,379 million in November. (See also CONSUMER CREDIT.) Mortgage debt (preliminary figures) rose from $171.5 billion at the end of 1958 to a new record of $186.3 billion at the end of the third quarter of 1959. The bank discount rate at the Federal Reserve Bank of New York, which had been raised from 1¾% to 2½% in 1958, was increased to 3% on March 6, 1959, to 3½% on May 29, and to 4% on September 11. (See also BANKING.)

Organized Labor.—The longest steel strike in the nation's history (July 15–November 7) overshadowed even the question of corruption in some union leadership and the enactment of the Labor Reform Act of 1959. Negotiations between the United Steelworkers of America and the steel industry to replace the work contract due to expire on June 30 began on May 5. The union asked for wage increases without steel price rises, while the industry proposed a one-year wage freeze and changes in work rules to give management greater control. When bargaining brought no acceptable compromise, 500,000 steelworkers went on strike on July 15. Further talks brought no results, and on October 9, President Eisenhower invoked the Taft-Hartley Act and appointed a three-member board of inquiry. Since both industry and labor rejected counterproposals, the president on October 19 requested action for an injunction to end the strike for 80 days. The injunction was granted two days later by a federal district court in Pittsburgh, then stayed, but upheld (2–1) on October 27 by the Court of Appeals for the 3d Circuit. The Supreme Court upheld (8–1) the injunction on November 7, and the strikers began returning to work. By the end of October, layoffs in other industries caused by steel shortages had affected nearly 500,000 workers. (See also IRON AND STEEL; LABOR.)

The 3d biennial convention of the AFL-CIO, held in San Francisco on September 17–23, reelected President Meany and adopted a legislative program calling for a minimum wage of $1.25 per hour; further federal aid to depressed areas, education, and the unemployed; health insurance; housing; protection of civil rights; and liberalized immigration. It criticized the 86th Congress for failure "to act decisively in the public interest." It also agreed to plan a labor arbitration board with power to settle jurisdictional disputes among unions. (See also AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS.)

Security and Civil Liberties.—The Civil Rights Commission, in a report to the president released on September 8, stated that many Americans "are denied the franchise because of race" through legal and administrative obstacles and fears of economic or physical reprisals. It recommended legislation providing temporary federal registrars to list qualified voters where discrimination was discovered, preservation of election records for five years, requirements against discrimination by election officials, authority for the commission to request federal court orders to direct witnesses to appear and produce records, and compilation by the Bureau of the Census of registration and voting statistics by race, color, and national origin. Three commissioners also recommended a constitutional amendment prohibiting literacy tests for registration and voting.

The life of the commission was extended for two years, and $500,000 was granted to it, by an appropriations bill rider immediately before Congress adjourned on September 15. The extension was approved in the Senate by 71 to 18 and in the House by 221 to 81. Efforts by some senators to obtain more comprehensive civil rights legislation were postponed on assurances received from floor leaders of both parties that proposals would be considered early in 1960.

In two 5 to 4 decisions the Supreme Court upheld on June 8 the power of Congress and the states to investigate communism and to require answers from witnesses. On June 29, the court ruled (8–1) that there was no legal authorization for the government's security risk program in defense plants, since the program did not provide the right to confront and cross-examine witnesses. (See also CIVIL LIBERTIES; LAW.)

Desegregation.—The Virginia policy of "massive resistance" to school desegregation was modified after federal courts and its own Supreme Court of Appeals (5–2, on January 19) had overruled state laws. Gov. J. Lindsay Almond, Jr., said on January 28 to a special session of the legislature that he would not use state police to close schools in resistance to court orders. On January 31, he obtained legislation ending compulsory school attendance and providing for tuition grants to students who shifted to private schools. In Little Rock, Ark., three segregationist members of the school board were removed in a recall election on May 25 after they had voted (May 4) to dismiss 44 teachers. On June 26, Prince Edward County, Va., closed its public school system, the first such action, rather than comply with an order (May 5) of the Court of Appeals for the 4th Circuit to admit qualified Negroes. On October 12, the Supreme Court declined to review lower court deci-

sions which upheld the constitutionality of the pupil placement law of North Carolina. (See also EDUCATION.)

UNITED STATES INFORMATION AGENCY. Completing its sixth year of operating an overseas program distributing information about the United States, this independent governmental agency (George V. Allen, director) continued to support United States foreign policies both in long-range objectives and in current international events. In 1959 the USIA maintained 200 field posts responsible to American diplomatic missions in 80 countries. Services were made available in the field and from the United States in radio, television, press, motion pictures, libraries, translations, exhibits, and other cultural areas. In its work the agency encountered strong Communist progaganda opposition, which was notably increased in Africa, the Near East, South Asia, and Latin America.

The agency made progress in presenting information about the United States to people in the Soviet Union and other eastern European countries. Nearly 3 million Soviet citizens saw the American National Exhibition in Moscow. Opened on July 24 by Vice President Nixon, accompanied by Soviet Premier Khrushchev, the exhibition was attended until September 4 by 50,000 to 75,000 people daily. More than 2.5 million guidebooks, largely financed by 25 American firms, were distributed to visitors, who saw consumer goods such as automobiles, a model house and furnishings, fashions, farm equipment, color television, a supermarket, voting machines, and some 8,000 books supplied by American publishers (about 100 of which were removed after objection by Soviet authorities).

In February the agency began distribution in Poland of a new Polish-language monthly magazine, *America Illustrated* (30,000 circulation), similar to the edition published in the Soviet Union since 1956. In October a new bimonthly cultural magazine, *Life in America,* was introduced in Arabic for circulation (50,000 copies initially) in the Near East.

Voice of America broadcasts in 1959 were carried in 37 languages. There were daily worldwide broadcasts of English and of music for 16 hours and 5¼ hours, respectively. Daily programs in all languages totaled 81½ hours. Beginning with the Khrushchev visit to the United States on September 15, Soviet jamming of broadcasts in six languages (a practice never applied to broadcasts in English) became only sporadic, but jamming in satellite countries continued. The press service continued its daily wireless coverage of background news for translation abroad, and distributed pamphlets and other publications in 85 languages.

In 1959 there were 158 libraries in 64 countries, and binational cultural centers were increased to 97 in 25 countries. Some 136,000 students were enrolled in English courses, in 55 countries. Book translations resulted in 6.9 million copies of 805 editions in 50 languages. The Informational Media Guaranty Program guaranteed the conversion to United States funds of $9.8 million of foreign currencies received by American publishers from sale of publications in 12 countries.

For the fiscal year ending June 30, 1960, Congress appropriated $101.5 million in operating funds (of $106.1 million requested), $2.75 million for amounts not recovered in the Informational Media Guaranty Program, and $9 million for construction of radio facilities. On June 30, 1959, the total of agency personnel was 11,060, including 2,667 in the United States and 8,393 abroad (7,145 of the latter being citizens of the host countries).

UPPER VOLTA. The Republic of Upper Volta is an autonomous republic of the French Community (q.v.), situated in western Africa. Estimated area, 105,839 square miles; pop. (est. 1958), 3,470,000, including (in 1956) 3,693 nonindigenous persons, mainly French. Chief cities are Ouagadougou, the capital (est. pop., 47,500), and Bobo-Dioulasso (41,700).

Government.—A former French overseas territory included within the federation of French West Africa (q.v.), Upper Volta chose the status of a member state of the French Community on Dec. 11, 1958. As an autonomous republic, Upper Volta has self-rule in domestic affairs, with the Community exercising control of foreign relations, defense, currency, strategic minerals, and certain other matters. Upper Volta adopted its constitution on Feb. 28, 1959, and it was approved by a referendum on March 15. The Legislative Assembly consists of 75 members elected for a five-year term by universal suffrage. The president of the council (premier) is invested by a majority in the assembly. Maurice Yameogo, leader of the Voltaic Democratic Union, is premier.

Education and Religion.—In 1958 there were 281 schools with a total of 39,896 pupils (7.8% of the school-age population). Expenditure on education amounted to 635.8 million francs CFA, or about 16.4% of the budget. The majority of the population are animists. The Hamitic peoples of the northeast are mostly Moslems, and there is a small minority of Christians.

Finance.—The territorial budget for 1958 totaled 4,081 million francs CFA, including an extraordinary budget of 538 million (the franc CFA equals 2 metropolitan francs). In the period 1947–57, French aid under the Economic and Social Investment Development Fund was equal to $44.7 million.

Transportation.—The Abidjan-Niger Railway runs southwestward from Ouagadougou to the port of Abidjan, in Ivory Coast, forming Upper Volta's chief link to the sea. Roads and trails total 10,288 miles (1956), including 1,322 miles of highways. The principal airports are at Ouagadougou and Bobo-Dioulasso.

Production.—The main economic activities are agriculture and stock raising. Cattle, sheep, and

goats are raised in the areas free from the tsetse fly, and livestock constitutes the republic's chief export. Subsistence crops include millet, sorghum, maize (corn), beans, sweet potatoes, and yams. Cash crops are mainly peanuts, cotton, shea nuts, sesame, and sisal. Fishing is of some importance for home consumption and export. Manufactures include chiefly the processing of vegetable oil and shea butter, and native handicrafts.

Foreign Trade.—Exports in 1958 totaled 1,131 million francs CFA; imports, 1,800 million. Chief exports and values in 1958 were live animals (596 million francs CFA), fish products (216 million), and ginned cotton (106 million). Ghana purchased 76% of 1958 exports; France purchased 19% of exports and provided 66% of imports.

Principal Events, 1959.—Upper Volta took part in the preliminary arrangements for the formation of the Mali Federation (q.v.), but on February 28 adopted a constitution which made no provision for membership in the federation. Elections on April 19 resulted in a victory for the Voltaic Democratic Union (local branch of the African Democratic Rally), which obtained 64 of the 75 seats in the Legislative Assembly. On April 27, Maurice Yameogo was re-elected premier, heading the first elected government of Upper Volta as an autonomous republic.

URANIUM. There was a further rise in the output of uranium ore, in milling capacity, and in consumption in countries outside the Communist bloc in 1958.

United States.—Although the domestic tonnage of uranium mined increased nearly 40%, the United States lost first place in mine production to Canada in 1958. Uranium ore receipts at all private plants and government purchase depots totaled 5,178,315 dry short tons, compared with 3,676,000 tons in 1957. The ore contained an average of 0.28% U_3O_8 and was worth more than $116 million. In 1958 the number of producing mines decreased, chiefly works producing less than 50 tons yearly, and the percentage of output by large producers rose, according to the U.S. Bureau of Mines. The output of uranium came chiefly from New Mexico, Utah, Colorado, Wyoming, Arizona, Nevada, Washington, and South Dakota; and the remainder, from Alaska, California, Idaho, Montana, and Texas. New Mexico led in tonnage of uranium produced at the mines, with Utah second; but the grade of the Utah production was 0.36% U_3O_8 against 0.21% for the New Mexican ore, which made Utah first in value and New Mexico second.

Private mills made 98% of ore purchases in 1958. The only Atomic Energy Commission (AEC) ore-buying station still operating was at Monticello, Utah. Domestic production from 23 uranium mills totaled 12,560 tons of uranium concentrate valued at $238 million, an increase of 45% over production in 1957. The modified federal domestic uranium-procurement program for 1962–66 forecast the annual requirement for domestic uranium at 35,000 tons of U_3O_8 from 1960 to 1966, according to the Bureau of Mines.

The bureau reports that an estimated 5,750 persons were employed by 624 domestic uranium shippers in 1958 (5,500 persons and 727 shippers in 1957). Approximately 1,825 persons were employed in the mills.

Uranium deliveries under long-term contracts from foreign producers comprise about 60% of the United States supply. As heretofore, the United States was Canada's major market for uranium in 1958. A total of 12,695 tons of uranium, expressed in terms of U_3O_8 content, was delivered to the United States in 1958. The schedule for 1959 calls for 13,400 tons. Other suppliers include the Union of South Africa, Belgian Congo, Australia, and Portugal. The AEC announced in 1958 that domestic producers of uranium ore and concentrates would be permitted to make private sales of the materials to licensed domestic and authorized foreign buyers for peaceful use of atomic energy.

World Production and Reserves.—Production of uranium in countries outside the Communist bloc in 1958 was estimated at 35,000 short tons of U_3O_8. Output in Canada totaled 13,537 tons, more than double that in 1957, and was the most valuable metal mined in the country. Most of the uranium produced in Canada is exported in its natural form only. Canada superseded the United States in first place, and the Union of South Africa ranked third, followed by Australia, Belgian Congo, France, Portugal, Italy, and the Federation of Rhodesia and Nyasaland. The number of uranium mills or plants in the free world producing concentrates, by a variety of chemical processes, totaled 66 in 1958.

According to data reported to the September 1958 Geneva Conference on the Peaceful Uses of Atomic Energy, inferred uranium reserves of the free world increased 500,000 tons over the reserves in 1957, or to 1.5 million tons of U_3O_8. Of this uranium reserve, 90% is in South Africa, Canada, and the United States. Ore reserves in the United States increased in 1958; the discovery rate of domestic uranium ore was about 10 million tons, or about twice that required to meet all needs for 1958.

URBAN PLANNING AND RENEWAL. See CITY PLANNING; HOUSING.

URBAN TRANSIT. As of Jan. 1, 1959, the urban transit industry in the United States was composed of 1,300 operating companies. This total included 1,249 companies engaged exclusively in the operation of motorbuses; 35 companies having composite fleets, including motorbuses, electric railway cars, and/or trolley coaches; 15 companies engaged exclusively in electric railway freight and switching service; and 3 companies using railway facilities exclusively in passenger service. There were 6 rapid transit systems (elevated and subway operations) included in the foregoing. (See also MOTOR TRANSPORTATION.)

UNITED STATES URBAN TRANSIT INDUSTRY

	Calendar year 1959 (preliminary)	Calendar year 1958 (final)
Results of Operation:		
Operating revenues	$1,357,000,000	$1,349,500,000
Operating expenses[1]	1,246,000,000	1,266,560,000
Operating taxes[2]	65,800,000	66,110,000
Net operating revenues[3]	45,200,000	16,830,000
Operating Statistics:		
Number of passengers	9,550,000,000	9,732,000,000
Vehicle miles operated	2,172,800,000	2,201,000,000
Route miles operated[4]	110,000	111,370
Passenger vehicles owned[4]	66,700	67,150
Employees (average)	161,000	165,000
Total payroll	$ 825,000,000	$ 831,000,000

[1] Including depreciation. [2] Except federal income and excess profits taxes. [3] Before income deductions and federal income and excess profits taxes. [4] As of December 31.

During 1959 the transit industry operated 2.2 billion miles and carried 9.6 billion passengers. Some 110,000 miles of routes were served by 66,700 passenger vehicles. The facilities to furnish

the service required an investment of $3.8 billion. Average annual compensation for each employee during 1959 was $5,124 on an industrywide basis. Total wages and salaries of employees amounted to $825 million.

Material, supplies, and other services called for a further expenditure of $422 million. Operating taxes, including all taxes except federal income taxes, amounted to $66 million in 1959.

ARTHUR W. BAKER,
General Secretary, American Transit Association.

URUGUAY. Uruguay is located on the South Atlantic coast of South America, between Argentina and Brazil. With 72,172 square miles, it is the continent's smallest country. The population in 1959 was estimated at 2.75 million. Montevideo (pop. 965,000), is the capital and principal port. Paysandú (65,000) and Salto (55,000) follow in size. Spanish is the official language. The white population is principally of Spanish and Italian origin. Most nonwhites (2% Negro, 8% mestizo) live in the interior. Living standards probably average the highest in Latin America, with few extremes of wealth or poverty.

Government.—The 1951 constitution established a 9-member National Council of Administration, elected for a 4-year term by modified proportional representation. The cabinet of 9 members is supervised by the council, which makes decisions by a majority vote and which possesses the powers normally exercised by a president. Martín R. Echegoyen, of the Blanco (Nacional) Party, became council president and chief of state for one year on March 1, 1959, following the election of November 1958; he represents the 6 majority party members, while the Colorado party holds the 3 minority seats. A bicameral General Assembly legislates, may override the council's veto, interpellates and censures cabinet members, and elects the 5 members of the Supreme Court of Justice. The government owns many important businesses and utilities, and is committed to an extensive social security system.

Religion and Education.—Free public education through the National University was established in 1877. The literacy rate is about 85%, and Uruguay uses more newsprint (9.8 kilograms per capita in 1954) than any other Latin American country. Autonomous councils composed of professional educators direct the schools, which receive 19% of the national budget (compared with 9% for the army). Education is regarded as being at the highest general professional standard in Latin America.

There are many Protestant and evangelical churches, but most Uruguayans are nominal Catholics. The Catholic Church was disestablished by the 1917 constitution; religious teaching was prohibited in the public schools in 1909. The Catholic clergy is headed by Antonio María Cardinal Barbieri, and numbers about 260 priests and bishops.

Finance.—The monetary unit is the peso. Its official rate for trade purposes is 2.10 per U.S.$1, fixed in August 1956, but the open market rate on Dec. 31, 1959, was 11.10. The total government deficit for 1958 was 147.7 million pesos. Central administration expenses were 790.3 million, with a deficit of 90.7 million; in addition, foreign exchange operations lost 20 million, and government businesses lost 32.1 million. Tax reforms, including the adoption of a personal income tax, were expected to be adopted in 1960. The government's cost-of-living index (1948 = 100) was 244.7 on July 31, 1958, and 344 on July 31, 1959. There was much resultant social unrest.

Transportation and Communications.—The railroad system of 1,875 miles was purchased by the government from British owners in 1949. About 75% of operating costs go to wages, and deficits are chronic. A report by French consultants in 1959 urged modernization of equipment, the discharge of many employees, and curtailment of uneconomic branch lines and services. There are 26,000 miles of roads, with the 6,200 miles of all-weather highways in generally poor condition. At the start of 1957 there were 52,310 automobiles, 46,000 trucks, and 1,990 buses in use. Rivers provide 500 miles of navigable waterways. PLUNA, a government company, provides domestic air service. Foreign lines and PLUNA provide international service. Carrasco international airport at Montevideo is being expanded to accommodate jet aircraft.

Montevideo has the only television station; 56 radio stations serve the country, and about 450,000 radios are in use. About 132,000 telephones were in use in 1959, and international loans to expand service by an additional 52,000 were negotiated in 1959.

Agriculture.—About 30% of the normal national gross product is from agriculture; in 1951, 50% of the population was classed as rural. Of the productive land, 82.5% is devoted to stock raising, and the census of 1959 reported 6.9 million cattle and 21.3 million sheep. The wool clip for the 1958–59 season was 98,000 metric tons, but was expected to fall to 77,000 in 1959–60. Uneconomic practices in slaughtering and marketing of meat reduced deliveries to established markets and provoked continued smuggling to Brazil and black marketing in Montevideo. Importation of Argentine cows to increase meat production was planned late in 1959.

Wheat production in 1958–59, originally estimated at 900,000 tons, was reduced to about 250,000 tons due to torrential rains in April and May. In September, Argentina "loaned" 100,000 tons to meet the country's needs. Floods destroyed the normal surpluses of rice, corn, linseed, and other crops, and United States agricultural surpluses were imported under Public Law 480. Government policies of giving producers only a portion of the value of crops, by means of discriminatory foreign exchange treatment, with the balances used to support government businesses and social security measures, as well as to give more favorable treatment to industry, were responsible in part for the defeat of the Colorado Party in the 1958 elections. The new government is reversing these policies as conditions permit, but increased living costs have resulted.

Industry.—Manganese prospecting by German interests seems to offer promise for the future. Otherwise, sand, stone, and marble are the only known mineral raw materials. All branches of industry declined seriously in 1959 because of the cumulative effects of insufficient importation of raw materials. Construction remained active, but meat packing, textiles, and beverages dropped off. Assembly of consumers' "hard goods" from imported parts nearly ceased. Petroleum refining remained high, with crude oil provided by barter with the Soviet Union. Unemployment was estimated at 85,000.

Foreign Trade.—Trade in 1958 showed a favorable balance of $4 million, but exports totaled only $138.6 million, and imports were the lowest in over 20 years. Severe controls continued during 1959, but a trade deficit of $37 million for the year was expected by the government.

Leading exports in 1958, in order of value, were wool, 58%; meat and byproducts, 10.5%; hides and skins, 6.5%. Wool exports rose to 164,000 bales in the year 1958–59, with 24.8% going to the Soviet Union and 12% additional to Soviet satellites. Imports in 1958, in order of value, were raw materials, 41.7% (including fuels, lubricants, and crude petroleum, 25.9%); machinery, 8.4%; and construction materials, 5.6%. Exchange and import reforms planned in late 1959 would eliminate the favored position of countries with which barter agreements existed. A survey by the International Monetary Fund indicated some loss of export potential unless these and other reforms occurred.

Great Britain was the largest customer of exports (15.2%), followed by the Soviet Union (11.7%), Netherlands (10.2%), and the United States (7.7%). Imports came principally from Brazil (18.2%), Venezuela (13.3%), the United States (12.2%), and France (9.0%).

Principal Events, 1959.—Floods in April and May inundated the country after rainfall amounting to four times the seasonal normal. Salto was under 15 meters of water; roads, bridges, and rail lines were washed out, and the country's principal hydroelectric station was partially destroyed when water went over the top of Rincón del Bonete Dam. Much international aid was received, and special efforts toward recovery produced improvement by the end of the year.

The new government experienced much political difficulty. Luis Alberto de Herrera, longtime Nacionalista leader who had supervised the three-faction coalition composing it, died on April 8, five weeks after his party's assumption of power. Few qualified persons were available for government posts. The floods worsened the already serious economic situation. Brief adoption of limits on civil liberties met with strong union and student opposition. The opposition party tried to capitalize on the situation, but several parliamentary interpellations were generated from within the coalition itself. Benito Nardone's Ruralistas, whose defection to the Blancos won the party the 1958 election, demanded power considered excessive by the other factions.

Uruguay's support of a common market for southern South America was indicated by Montevideo's selection as the negotiation site. Soviet bloc economic penetration proceeded through trade agreements and commerce, and supported, in turn, increasing Soviet use of Montevideo as a propaganda and espionage center. Otherwise, Uruguay's relations with its neighbors were good, although the economic troubles produced an unaccustomed rising tide of nationalism in dealings with the United States and with the recommendations of the International Monetary Fund regarding economic recovery.

USSR. See UNION OF SOVIET SOCIALIST REPUBLICS.

UTAH. Western state, United States; admitted to the Union, Jan. 4, 1896. The "Beehive State" ranks 11th in area and 38th in population among the 50 states.

Area and Population.—Area: 84,916 square miles (land, 82,346; inland water, 2,570), divided into 29 counties. Population: (1950) 688,862; (est., July 1, 1958) 858,000. Urban places with 1950 populations above 7,500 are: Logan, 16,832; Murray, 9,006; Ogden, 57,112; Orem, 8,351; Provo, 28,937; Salt Lake City, *the capital*, 182,121; and South Salt Lake, 7,704.

Executive.—Chief state officers in 1959:
Governor: George D. Clyde (Republican)
Secretary of State: Lamont F. Toronto
Treasurer: Sherman J. Preece
Attorney General: Walter L. Budge
Auditor: Sid Lambourne
Supt. of Public Instruction: E. Allen Bateman

Constitution and Judiciary.—The present constitution went into effect in 1896. The Supreme Court comprises five justices; chief justice in 1959 was J. Allan Crockett.

Legislature.—The Utah Legislature comprises a 25-member Senate (in 1959, 13 Republicans and 12 Democrats) and a 64-member House of Representatives (42 Democrats and 22 Republicans).

In 1959 it met in both a regular session (January 12–March 13) and a special session (May 28–29).

The legislature appropriated approximately $200 million for the 1959–61 biennium, including $91.9 million for the General Fund. To help meet increased spending it enacted a comprehensive state income tax withholding system; extended the 2% sales tax to include lodgings, cleaning establishments, and certain labor services; and raised the oil-gas severance tax from 1% to 2%. The legislature permitted counties and municipalities to impose a 0.5% local sales tax and authorized a $5 million revolving fund for purchases of rights-of-way by the Road Commission.

The legislature also increased state support of public school operations, assigned $4 million for emergency school building needs, and began a 50-year continuing program to replace classroom units, the program to be jointly financed by the state and local school districts. The lawmakers authorized establishment of a junior college in Roosevelt, and permitted Weber College to become a four-year institution.

In miscellaneous actions the legislators created an independent Utah Insurance Department, ratified the Western Interstate Corrections Compact, permitted first- and second-class cities to change to a mayor-council type of government, provided for continuity of state government in the event of a nuclear attack; and generally increased workmen's compensation benefits.

Finance.—In the 1958–59 fiscal year, state revenue of $183,336,757.71 comprised $80,726,309.06 from tax sources, $44,150,819.67 from the federal government, and $58,459,628.98 from other sources. Tax revenue consisted of $25,745,995.21 from a 2% general sales tax, $12,434,916.84 from individual income taxes, $5,480,586.71 from corporate income taxes, $19,645,945.91 from motor fuel taxes, $4,693,315.76 from licensing, and $12,725,548.63 from other sources. Expenditures of $187,004,164.63 comprised $59,857,880.16 for education, $22,433,817.41 for health, welfare, and safety, $51,969,943.22 for highways, and $52,742,523.84 for other purposes.

Banking.—As of June 10, 1959, the state's 7 national banks had $478,453,000 in assets, $240,146,000 in demand deposits, and $186,624,000 in time deposits. The 42 state banks had assets of $497,970,489, demand deposits of $276,821,819, and time deposits of $178,411,834.

Education.—School attendance is compulsory between the ages of 6 and 17, inclusive. National Education Association estimates for the 1959–60 school year placed operating expenditures for public elementary and secondary school education at $74 million ($345 per pupil). Revenue was estimated at $44,275,000 from local school districts, $42 million from the state, and $3 million from the federal government. Capital outlays approximated $26,500,000, and teachers' salaries averaged an estimated $4,975.

In the 1959–60 school year there were an estimated 140,900 pupils and 4,232 teachers in public elementary schools, and 92,300 pupils and 3,488 teachers in public secondary schools. College and university enrollment (1958–59) was 30,972.

Public Assistance.—In the 1958–59 fiscal year, public assistance expenditures from federal and state funds (excluding institutional costs) totaled $15,962,960.01, including $6,667,828.26 for the aged, $5,298,614.64 for dependent children, and $1,749,195.48 for the permanently and totally disabled. A monthly average of 29,036 persons received assistance.

Labor Force.—The state's labor force totaled 294,081 persons in December 1958, including 31,475 agricultural workers. Nonagricultural employment of 253,700 in November 1959 was slightly above the 249,500 of the previous November and the average of 251,972 for the 12 intervening months. Major sources of nonfarm employment in 1959 were manufacturing (18%), trade (22%), and government (24%). The 13,300 unemployed persons in November 1959 (up from 12,600 in the previous November) included 1,200 workers on strike against the Kennecott Copper Corporation and 800 in its Garfield refinery. The former group was called back to work on Dec. 25, 1959; the latter had to await a build-up of supplies.

Manufacturing.—The 1,090 manufacturing plants in the state in 1958 employed an average of 38,855 persons who received $192,859,599 in wages. Value added by manufacture (1957) totaled $473,514,000, and outlays for new plant and equipment amounted to $33,650,000. Production workers averaged $98.53 for an average workweek of 41.4 hours in August 1959. The principal industry is that of food and kindred products, which in 1957 employed 7,183 persons who received $29,086,000 in wages, and which added $62,372,000 in value by manufacture.

Mining.—In 1958 Utah stood 13th among the states in the value of its mineral output, with 2.21% of the national total. The state yielded all of the nation's output of gilsonite; ranked second in asphalt, byproduct arsenic, copper, gold, molybdenum, silver, uranium, and vanadium; and stood third in lead and potash.

Agriculture.—Cash farm income for the first nine months of 1959 dropped slightly to $108,483,000 from $112,687,000 for the corresponding period of 1958. For the full year 1958, income comprised $127,797,000 from livestock and livestock products, $33,488,000 from crops, and $5,596,000 from government payments. Principal cash sources in

UTAH MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Asphalt (gilsonite)	317,280	$ 4,864,000
Coal	5,328,000	30,340,000
Copper	189,184	99,511,000
Gold (ounces)	307,824	10,774,000
Iron ore, usable (long tons)	3,514,000	25,202,000
Lead	40,355	9,443,000
Natural gas (million cu. ft.)	19,247	2,829,000
Petroleum (bbl.)	24,386,000[1]	72,914,000[1]
Salt (common)	184,000	2,275,000
Sand and gravel	25,304,000	14,379,000
Silver (ounces)	5,278,000	4,777,000
Stone	13,126,000	13,949,000

Zinc	44,982	9,176,000
Other minerals	...	28,007,000
Total	...	$365,960,000[2]

[1] Preliminary. [2] Total adjusted to eliminate duplication in the value of raw materials used in the manufacture of cement and lime. (Source: U.S. Bureau of Mines.)

1958 were cattle, $49,097,000, and dairy products, $27,178,000.

The state had 23,700 farms in 1958. Total acreage (1954) of 12,262,000 included 1,229,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 720,000 cattle, 1,301,000 sheep, and 2,229,000 chickens (excluding commercial broilers). There were 47,222 family and hired workers engaged in farming during the week of Sept. 26–Oct. 2, 1954.

UTAH CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	404	330	350
Apricots (tons)	5,370	4,000	5,800
Barley (1,000 bu.)	6,470	7,257	7,965
Cherries (tons)	5,494	7,050	2,550
Hay (1,000 tons)	1,240	1,403	1,348
Peaches (1,000 bu.)	523	420	470
Potatoes (1,000 cwt.)	1,641*	1,550	1,438
Sugar beets (1,000 short tons)	443	429	567
Wheat (1,000 bu.)	7,752	5,141	5,355

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways in the 1958–59 fiscal year totaled $49,577,192.83, and 363.8 miles of new, reconstructed, and resurfaced roads were completed.

Highways and roads on Jan. 1, 1959, totaled 33,351.2 miles (17,371.5 surfaced). Registered *motor vehicles* numbered 389,641 on Dec. 31, 1958, including 301,975 passenger cars. There were (1959) 8 *railroads* operating (Dec. 31, 1958) 1,751.82 line miles; (1959) 5 regularly scheduled *airlines;* and (1959) 155 *airports and airfields* (47 commercial and municipal, 5 military, 100 private and 3 CAA intermediate).

Communications media (1959) included 25 AM and 2 FM *radio stations;* 5 VHF *television stations;* 5 daily *newspapers* (circulation, 236,934) and 53 other newspapers (97,037); and (January 1) 90,500 business and 230,000 residential *telephones.*

Principal Events, 1959.—Among the knotty problems considered by the state legislature during its 60-day regular session were a Sunday closing law (vetoed by the governor), repeal of the right-to-work law (failed to pass), withholding of state income tax (passed), and a 0.5-cent optional sales tax for municipal and county governments (passed and adopted by 8 counties and 40 municipalities). (See also above, *Legislature.*)

In Salt Lake City, voters approved a $2,500,000 general obligation bond issue for airport improvements, on the assurance by the City Commission that the cost of the improvements would be fully paid out of airport revenues. The Mayor's Citizens Committee on Capital Improvements made a recommendation for a $28 million outlay for capital improvements, with $17,500,000 to be appropriated immediately and the balance to be spread over a 20-year period. In the municipal election in November former Gov. J. Bracken Lee

U.S. BUREAU OF RECLAMATION (A. E. TURNER)

Aerial view of site of Glen Canyon Dam shows new Glen Canyon Bridge, officially opened by the governors of Utah and Arizona on February 20. One of the highest steel arch spans in the world, the bridge stands 700 feet above the Colorado River in northern Arizona. Utah will benefit from irrigation and power to be furnished by the vast project.

was elected mayor. Once a Republican, he ran as an independent and defeated Bruce S. Jenkins, a Democratic member of the state Senate. Also in Salt Lake City, ground-breaking ceremonies were held the week of July 18 for the first unit of the $10 million University of Utah Medical Center.

Utah's negligent-homicide law was upheld as constitutional by the state Supreme Court in a 4–1 decision. Salt Lake County's first grand jury since 1948 was called the week of May 2, and the first week in July a grand jury was ordered for Davis County.

Economically, 1959 was marked by heavy drought, declining mineral prices, and strikes in the copper and steel industries. However, this was somewhat offset by the booming missile industry. Contracts totaling nearly a billion dollars have been awarded to several Utah firms for development of national defense weapons. Continued exploration by oil companies in San Juan County led to substantial finds of natural gas and petroleum. Highway construction and dam projects on the Colorado River also helped to keep payrolls high.

Further diversification was brought to the state's economy by the growing tourist business. The new state park land acquisition program will provide recreational facilities and easier access to scenic areas. The program got under way with an initial fund of $1 million. Dead Horse Point, on the Colorado River in San Juan County, was purchased by county and state agencies and made a state park. Another attraction for tourists was the Railroad Village Museum, dedicated May 9 at Corinne near the point where the two stretches of the first transcontinental railroad were joined in 1869.

In the early summer, Gov. George D. Clyde, along with several other state governors, spent four weeks touring the Soviet Union under the auspices of the National Conference of Governors.

VANCOUVER. Located on British Columbia's Burrard Inlet, with 100 miles of waterfront and 50 square miles of deep-sea anchorage, Vancouver is Canada's third largest city and most important Pacific seaport. The city occupies 44 square miles and has a population (est. 1958) of 407,000. The metropolitan area (est. pop., 1959, 583,000) includes North and West Vancouver, Burnaby, Richmond, and the University of British Columbia.

Vancouver is governed by a City Council of 10 aldermen and a mayor. The city sends 9 members to the provincial Legislative Assembly and 6 to the House of Commons in Ottawa. Mayor Tom Alsbury, elected in December 1958 with the endorsement of both labor groups and the Civic Voters' Association, immediately demanded provincial assistance in 1959 for education, health services, social welfare, and roads. The City Council raised a protest by barring press and public from administrative meetings and by increasing taxes to meet its 1959 budget of $56,207,721.

An elected board of 9 members, administering 92 elementary and secondary schools, as well as trade schools, will spend an estimated $24 million in 1959, $2 million more than in 1958. Approximately 22,000 students attend night classes. The University of British Columbia registered 10,570 in September 1959.

Vancouver's 120 parks, comprising 2,890 acres, are supervised by an elected, unpaid board of 7 members, which recommended in 1959 that new park land be added either inside or outside the city. The question of whether Boundary Bay, to the south and east, should be developed for industrial or recreational use was also under debate.

Building permits issued to Sept. 30, 1959, amounted to $48,653,175, an increase over 1958, and completed projects included a $10 million shopping center; the General Hospital's $8 million, 500-bed addition; and 5 university buildings costing almost $6 million. Strikes in 1959 delayed construction on a $3 million medical building, a $2.5 million office building, and a $1 million sewage disposal plant.

Incoming cargoes to the port were down in 1958 to 4,409,154 tons; due to strikes, outgoing tonnage was also down to 7,220,477. Grain shipments for the season were also lower, with 146,419,067 bushels being sent to Japan, Germany, the Netherlands, South Africa, and the Soviet Union. Lumber was again second in importance.

Polluted beaches were resanded in 1959, and enforcement of litter laws resulted in cleaner city streets. In July a crowd of 420,000 watched Canada's greatest jet airplane show over the city. Queen Elizabeth II and Prince Philip made a one-day visit to Vancouver on July 15 in the course of their summer tour of Canada. The queen opened the $6 million, 2,800-seat theater named in her honor and first used by the second annual Vancouver International Festival during its five-week summer program of musical, dramatic, and artistic events. Her Majesty also officially declared open the $23 million Deas Island Tunnel under the Fraser River, part of a four-lane freeway that will extend from Vancouver to the United States border (see also BRITISH COLUMBIA; TUNNELS). Prime Minister John Diefenbaker visited the city in August.

Again in 1959 the need for a coliseum was indicated, as well as for additional bridges, tunnels, and freeways to solve growing metropolitan traffic problems.

VANIER, George Philias, Canadian governor general: b. Montreal, Quebec, Canada, April 23, 1888. Approved as governor general of Canada on Aug. 1, 1959, by Queen Elizabeth II, George Philias Vanier is the first French Canadian to hold that post. Succeeding Vincent Massey, he took office on September 15.

After attending Laval University, where he received his LL.B. degree in 1911, he practiced law in Montreal until the outbreak of World War I. During the war he served in France with the Royal 22d Regiment. Twice seriously wounded, he lost his right leg as a result of his second injury. By the end of World War II he had been elevated to the rank of major general.

General Vanier served twice as an aide-de-camp to his country's governors general, in 1921–22 and 1926–28. In the latter year he became Canada's representative to two commissions of the League of Nations: the Permanent Advisory Commission for Military, Naval and Air Questions and the Preparatory Disarmament Commission. In 1930 he was a Canadian delegate to both the London Naval Conference and the League of Nations.

In 1931, Vanier was appointed secretary to the high commissioner for Canada in London, and in

Maj. Gen. George P. Vanier, installed as Canadian governor general (succeeding Vincent Massey) on Sept. 15, 1959.

WM. NOTMAN & SON

1939 he was named Canadian minister to France, but served only until the spring of 1940, when France fell to the Axis. During the remainder of that year he was a member of the Canadian section of the Permanent Joint Board on Defense of Canada and the United States. In 1941–42 he commanded the 5th Military District, with headquarters at Quebec.

In January 1943, Vanier became minister to the Allied governments-in-exile in London. Later in the year he was appointed to the French Committee on National Liberation, an assignment which took him to Algiers in 1944. In November 1944 he returned to Paris as ambassador to France, remaining in that post until his retirement on Jan. 1, 1954.

VARNISH. See PAINTS, VARNISHES, AND LACQUERS.

VATICAN CITY. An independent papal state within the city of Rome. Area, 108.7 acres; pop. (est. 1952), 651 citizens and 296 residents. Vatican City includes the Basilica of St. Peter, Vatican Palace, the Vatican Gardens, the Vatican Observatory, and some detached palaces and churches. Vatican City was recognized by Italy as an independent state, with the pope as its head, by the Lateran Treaty of 1929. The treaty, slightly modified, was included in the Italian Constitution of 1947.

The pope exercises sovereignty with complete executive, legislative, and judicial powers, in accordance with canon law and pontifical rules. Pope John XXIII (Angelo Giuseppe Roncalli, b. 1881) acceded to the papal throne on Nov. 4, 1958. Executive power is exercised through a governor responsible to the pope. The Holy See has ac-

credited diplomatic representatives in some 40 countries. The city-state has its own currency, railway station, stamps, newspaper, postal system, radio station, and also certain buildings and facilities within Rome proper and outside Rome enjoying extraterritorial rights. The Pontifical Swiss Guard, which serves for ceremonial purposes and also bears the chief responsibility for security in Vatican City, was reduced from 133 to 100 in 1959, by order of Pope John XXIII.

The pope received President Dwight D. Eisenhower in a private audience on Dec. 6, 1959. Other papal audiences during 1959 included those with Queen Mother Elizabeth and Princess Margaret of the United Kingdom (April 22), King Hussein of Jordan (April 30), President Giovanni Gronchi of Italy (May 6), President Sukarno of Indonesia (May 14), King Paul and Queen Frederika of Greece (May 22), President Celal Bayar of Turkey (June 11), President Charles de Gaulle of France (June 27), and President Habib Bourguiba of Tunisia (July 19). (See also RELIGION—*Catholicism;* ROMAN CATHOLIC CHURCH.)

VEGETABLE OILS. See FATS AND OILS.

VEGETABLES. Production of vegetables in the United States declined in 1959. The Agricultural Marketing Service reported that the total for 28 crops of vegetables and melons produced for the fresh market was 206,533,000 cwt., 3% below 1958 and near average. Output of the 10 principal vegetables for processing fell 8% below the preceding year to 6,928,000 tons, but was 9% above average.

U.S. PRODUCTION OF COMMERCIAL VEGETABLES AND MELONS FOR FRESH MARKET
(In 1,000 cwt.)

Crop	Average 1949–57	1958	1959
Vegetables:			
Artichokes	317	329	376
Asparagus	1,132	1,314	1,254
Green lima beans	472	328	276
Snap beans	5,301	4,449	4,387
Beets	707	530	470
Broccoli	1,983	2,192	2,260
Brussels sprouts	556	570	590
Cabbage	22,007	21,166	19,043
Carrots	14,920	15,215	13,615
Cauliflower	4,616	4,646	4,120
Celery	14,367	14,069	15,227
Sweet corn	11,532	13,169	13,307
Cucumbers	3,777	4,047	3,658
Eggplant	476	422	498
Escarole	650	758	938
Garlic	162	218	272
Kale	202	162	175
Lettuce	30,597	32,697	33,011
Onions	22,242	23,742	25,561
Green peas	529	237	273
Green peppers	2,583	2,412	2,578
Shallots	155	86	62
Spinach	1,998	1,654	1,564
Tomatoes	19,015	18,824	19,609
Total vegetables	160,296	163,236	163,124
Melons:			
Cantaloups	11,814	12,601	12,733
Honeyball melons	26	...	...
Honeydew melons	1,449	1,285	1,239
Watermelons	28,841	36,306	29,437
Total vegetables and melons	202,426	213,428	206,533

(Source: Agricultural Marketing Service, U.S. Department of Agriculture.)

A 29% smaller watermelon crop accounted for most of the drop from 1958 in the fresh market total, though production of cabbage and carrots also was down considerably. New production records were set by onions, sweet corn, escarole, and garlic. Value of the 28 crops was estimated at $792,435,000, compared with $762,395,000 in the preceding year. Tomatoes ranked first in value at $143,182,000, followed by lettuce at $126,971,000, and onions at $60,143,000. Fresh market crops were harvested from 1,917,980 acres in 1959, 5% fewer than in 1958.

WIDE WORLD

Britain's Queen Mother Elizabeth (right center) and Princess Margaret, photographed after papal audience at Vatican City on April 22, 1959. The royal party is accompanied by Count Giovanni Chiassi (in uniform, at left) and Papal Ceremonial Secretary Msgr. Beniamino Nardone (in frock, at right), and is flanked by members of the famed Swiss Guards.

California, the leading vegetable-producing state, accounted for 22% of the fresh market crop, a third of total vegetable and melon production, and 40% of the total value. Florida had 12% of production; Texas, 8%; Arizona, 7%; and New York, 6%.

Changes in production of vegetables for processing from 1958 were sharp, ranging from an increase of 25% for spinach to a decline of 31% for cabbage. The 10 crops were harvested from 1,563,720 acres, 68,590 more than in 1958. Production was valued at $259,443,000, compared with $280,297,000 the preceding year. The tomato crop was worth $86,222,000; green peas, $41,406,000; and snap beans, $39,550,000. California accounted for a third of total production; Wisconsin, a tenth; and Minnesota, Illinois, and New York, between 5 and 6% each.

U.S. PRODUCTION OF VEGETABLES FOR COMMERCIAL PROCESSING
(In tons)

	Average 1948–57	1958	1959
Asparagus	105,830	111,300	118,300
Lima beans (shelled)	93,300	88,800	82,700
Snap beans	290,700	364,500	368,700
Beets (for canning)	153,300	153,200	142,000
Cabbage (for sauerkraut)	200,700	203,000	141,000
Sweet corn (in husk)	1,376,400	1,329,900	1,578,800
Cucumbers (for pickles)	293,500	356,800	335,200
Green peas (shelled)	449,800	485,800	471,200
Spinach	124,700*	121,700	151,800
Tomatoes	3,298,300	4,287,400	3,538,300
Total	6,386,530	7,502,400	6,928,000

* Average for 1949–57. (Source: Agricultural Marketing Service, U.S. Department of Agriculture.)

Annual consumption of vegetables, which has fluctuated around 200 pounds (fresh equivalent) per person during the last decade, declined slightly in 1959, reflecting lower production. While total consumption has been relatively stable for several years, significant shifts have occurred in the form in which vegetables are consumed. Use in fresh form has declined and in 1959 was 18% less than the 1947–49 average. Consumption of canned vegetables was 14% higher. Use of frozen vegetables rose 172% over the decade, but amounted to only about 15 pounds per person. Use of potatoes, after declining for many years, has tended to stabilize, and in 1959 was 10% below 1947–49. Consumption of sweet potatoes has dropped 45% over the decade, while use of dry beans was up 15% and use of dry peas was up 17%.

Potatoes.—Production in 1959 fell 9% below 1958, but the total of 242,998,000 cwt. was 6% above the 1949–57 average. Production by seasons was as follows: winter, 4,005,000 cwt.; early spring, 3,144,000; late spring, 23,558,000; early summer, 14,215,000; late summer, 32,916,000; and fall, 165,160,000. The total acreage from which potatoes were harvested in 1959 was 1,392,200, 5% below 1958, and the average yield per acre of 174.5 cwt. was 6.6 cwt. below the 1958 record (but still third highest). Leading producing states in 1959 were: Idaho, 40,222,000 cwt.; Maine, 34,606,000; California, 27,528,000; New York, 15,937,000; and North Dakota, 12,000,000.

Sweet Potatoes.—The downward trend in production was reversed in 1959 when the crop rose 8% above 1958 to 18,703,000 cwt., though it still was 4% below average. Yields per acre reached a new record of 68 cwt., 2.6 cwt. above 1958, but the acreage harvested declined 3% to 275,100. States producing the largest crops were: Louisiana, 5,022,000 cwt.; North Carolina, 2,560,000; Virginia, 1,958,000; Texas, 1,495,000; and New Jersey, 1,360,000.

Dry Beans.—The fifth largest crop on record—18,212,000 bags (100 pounds each, cleaned)—was harvested in 1959, but output was 5% below the 1958 record. Acreage harvested totaled 1,477,000, down 8% from 1958. The average yield of 1,233 pounds per acre was a record. The leading classes in 1959 were pea (navy), 5,778,000 bags; pinto, 4,259,000; and Great Northern, 2,130,000. The largest state crop was produced by Michigan (5,974,000 bags), followed by California (3,718,000), Idaho (2,592,000), Colorado (1,602,000), and Nebraska (1,188,000).

Dry Peas.—Production rose sharply in 1959; the 4,375,000 bag (100 pounds each, cleaned) total was 76% larger than in 1958 and 37% above average. The estimate excludes Austrian peas. Output of all classes increased, with the largest totals shown by Alaskas and other smooth green peas (2,718,000 bags), and Canadas and other smooth white and yellow varieties (889,000 bags). The United States crop was harvested from 300,000 acres, 96,000 more than in 1958. Yield reached a new record of 1,458 pounds per acre. Most of the crop was produced in Washington (2,190,000 bags) and Idaho (1,827,000).

WAYNE DEXTER,
Agricultural Marketing Service,
U.S. Department of Agriculture.

VENEREAL DISEASES. Venereal Disease Morbidity.—During the fiscal year ending June 30, 1959, 359,670 cases of venereal disease were reported by state health departments in the United States. This total comprised 119,981 cases of syphilis, 237,318 cases of gonorrhea, and 2,371 cases of minor venereal diseases.

The most infectious stages of syphilis showed a significant increase. In 1959, 8,178 cases of primary and secondary syphilis were reported, as compared with 6,661 cases in 1958, an increase of 23%. Twenty-nine states and the District of Columbia recorded increases in 1959 in primary and secondary syphilis. Increases in infectious syphilis were reported by both clinics and private physicians, and occurred in Negroes and whites and in both sexes.

Reported case rates of venereal disease are much higher in large cities than in rural areas in the United States. In fact, the large cities accounted for most of the current increases in infectious syphilis.

The other venereal diseases—chancroid, lymphogranuloma venereum, and granuloma inguinale—accounted for 2,371 cases, less than 1% of all reported venereal disease cases.

Venereal Disease Among Teen-agers and Young Adults.—In 1959, teen-agers and young adults (15 to 24 years of age) accounted for 54% of the primary and secondary syphilis and gonorrhea cases reported in the United States. One out of five infectious venereal disease cases reported was among teen-agers. More females were infected with a venereal disease at 18 years of age than any other age.

Activities of Health Departments.—During the year ending June 30, 1959, venereal disease clinics in the United States examined 1,911,557 persons suspected of having a venereal disease and found 251,023 to be infected. Another 66,943 persons named as sex contacts by infected patients were given prophylactic treatment as a preventive measure against the development of the disease.

Health department nurses and investigators interviewed 158,252 civilian patients to learn their sex contacts and obtained identifications of 207,096 contacts. Public health workers completed 431,823 field investigations of sex contacts and other venereal disease suspects. About 80%, or 344,352, of these contacts and suspects were located and examined. Of those examined, 111,581 were found to be infected and were given treatment.

Selective blood testing surveys conducted in 32 states included 801,465 persons, of whom 60,463 had positive test results.

The new "cluster testing" case-finding method, which extends the contact investigation process to include blood testing of associates of patients and of contacts, was conducted in 25 states during the year. The number of infectious syphilis cases found by this method was about 25% greater than that found by routine contact investigation in the same states.

Private Physician Participation.—Venereal disease control personnel made an intensive effort during 1959 to increase private physician participation in venereal disease control work, particularly in the epidemiology of early syphilis. Progress has been noted in better case-reporting by private physicians, and more of their infectious cases are being interviewed for sex contacts by trained interviewers from the health department.

Research.—The Venereal Disease Experimental Laboratory at Chapel Hill, N.C., and the Venereal Disease Research Laboratory at Chamblee, Ga., continued to conduct research studies in the laboratory aspects of the diagnosis of venereal disease. The Venereal Disease Research Laboratory serves as a World Health Organization Serological Reference Center.

One of the more significant advances in venereal disease control in recent years was the application of the flourescein-tagged antibody technique to the diagnosis of gonorrhea in the female.

In 1959 a cooperative study to evaluate the incidence of reactors to penicillin therapy was initiated in the public clinics of some 20 states in the United States. Preliminary results based on some 22,000 cases treated indicate an incidence rate of 9 reactions per 1,000 cases treated.

An antibiotic evaluation study, designed to determine the effectiveness of other broad-spectrum antibiotics in the treatment of syphilis, was started in 32 participating clinics in 26 states in the United States during 1959.

WILLIAM J. BROWN,
Chief, Venereal Disease Branch, U.S.
Public Health Service, Atlanta, Ga.

VENEZUELA. Located on the northern coast of South America, Venezuela is bordered by the Car-

ibbean Sea on the north, Colombia on the west, British Guiana on the east, and Brazil on the south. Its area is 352,141 square miles, divided geographically into four regions: the eastern spur of the Andes where most Venezuelans live; the Maracaibo Basin; the Orinoco Basin, or llanos; and the Guiana Highlands.

Population.—Natural increase and heavy immigration (about 50,000 annually) account for the 3.66% annual growth of Venezuela's population, which in 1959 was estimated at 6,877,064. About 70% of the people are mestizo (mixed Indian and white), and 10% are mulattoes and zambos (mixed Indian and Negro). There were 105,000 tribal Indians in 1950. Immigrants (estimated at 850,000 in 1959) are primarily Italian (31%) and Spanish (28%). Urban growth has increased almost 7% per year, while there has been a small decline in the rural population; within the past decade urban population has risen from less than half to more than two thirds of the total. The estimated population of metropolitan Caracas, the capital, in December 1959 was 1,100,000. Maracaibo (424,357) and Barquisimeto (206,242) are the next largest cities. Spanish is the official language.

Government.—A federal republic, presently operating under the constitution of April 15, 1953, Venezuela is divided into 20 states, 2 territories, a federal district, and 72 island dependencies. The president, Rómulo Betancourt, was inaugurated for a five-year term on Feb. 13, 1959. A newly elected bicameral Congress convened on Jan. 19, 1959; the Senate of 51 members (including 2 from each state and territory) and the Chamber of Deputies of 133 members (one for every 50,000 persons) were empowered to approve the country's 23d constitution since its independence in 1822. The left-of-center Democratic Action Party has a substantial majority in both houses of Congress (32 senators and 73 deputies), followed by the left-of-center Democratic Republican Union (URD) with 11 senators and 34 deputies. Six senators and 19 deputies are members of the moderate Christian Socialist Party (COPEI), and there are 2 Communist Party members in the Senate and 7 in the Chamber of Deputies. A coalition cabinet, which has excluded Communists, serves the president.

Education and Religion.—The 1959–60 budget for education totaled 463 million bolivares, 390% above 1957–8.[1] The new educational program resulted in a record school attendance for the year 1959–60. Primary school enrollment reached 1,100,000, leaving 100,000 rural children without school facilities. A total of 103 primary schools were readied for occupancy in September 1959, and an additional 106 were under construction. High school attendance increased by 20% to 85,000. Most of the 330 high schools were private, although 22 new public secondary schools had been constructed during the year.

The number of public school teachers had doubled since the last years of the Marcos Pérez Jiménez dictatorship, reaching 16,000 in September 1959, and there were another 14,000 private school teachers; but the rapid expansion of school facilities had resulted in a teacher shortage. High school graduates were given special training to teach in the primary schools; 150 high school teachers from Chile, Costa Rica, and Puerto Rico were employed; and teachers colleges were being expanded as were literacy programs for the more than 2 million Venezuelans who could not read and write.

Normal school enrollment had increased by 50% to 9,480 students, who were attending 57 schools; 4 of these schools commenced operations in September 1959, and 4 more were under construction. Government-supported universities had increased from 3 to 5; together with 2 private colleges, they were training more than 10,000 students. Roman Catholicism is the prevailing religion, and most of the private schools were run by the church.

Finance.—In 1959–60, an ordinary and a special budget called for total expenditures of Bs.6,134 million (50% above the previous year), of which 31% was devoted to public works. The special budget of Bs.1,065 million was not covered by anticipated income, and would have to be financed through the sale of bonds issued by the government or autonomous agencies. Heretofore, there was no long-term government debt.

The gross national product in 1958 was estimated by the U.N. International Monetary Fund to have increased 12% over 1957, reaching $6.4 billion; the U.N. Economic Commission for Latin America, however, reported a 2% decrease in the 1958 gross national product. The estimated per capita income of $916–$973 was the highest in Latin America. Although the daily wage of field petroleum workers averages $13, labor in small factories receives only $1.80, and farm workers earn between $100 and $280 a year.

New foreign investment in Venezuela's petroleum industry dropped significantly in 1958 over the previous two years. Accumulated net foreign investment in 1957 reached $2.74 billion dollars, of which 63.6% was from the United States, 23.1% from the Netherlands, and 10% from the United Kingdom. The Central Bank's gold and foreign exchange holdings recovered from a low of $1,050 million in the last quarter of 1958 to reach $1,082 million in May 1959. The cost-of-living index (1953 = 100), which averaged 105 in 1958, increased again to 107 in June 1959.

Transportation and Communications.—Venezuela's 1959–60 highway construction program includes the development of 800 miles of new highways and the paving of all unpaved roads (to be completed by 1964). In 1958 a total of 15,000 miles of roads, 8,000 of which were all-weather, traversed the nation. There were 212,745 passenger cars and taxis and 108,566 commercial vehicles registered in September 1958.

The modernization and extension of the country's 17 local railway lines of 590 miles are being carried out. The first line of the new system, extending 109 miles from Puerto Cabello to Barquisimeto, was placed in service in January 1959. Another 17-mile line was transporting coal from Naricual to the port of Guanta in February. Five scheduled and nine nonscheduled Venezuela airlines, together with 11 foreign airlines, provide freight and passenger service. The Venezuelan merchant marine ranks fourth in South America in both gross tonnage and number of vessels (there are 48 vessels, 31 of which are tankers).

Venezuela's network of telephones, estimated at 146,334 in 1958, were 95% automatic; and connected Caracas with Maracaibo and 10 other cities. The government provides radio telephone connections with 30 interior towns, and telegraph service to all towns and cities. In 1958 Venezuela had three television stations, all located in Caracas, and 200,000 television receivers. About 70 radio broadcasting stations serviced 900,000 receivers.

Petroleum Industry.—Since 1955, Venezuela has been the world's largest oil exporter (20% of the total in 1958) and, as a producer, is second only to the United States. Petroleum, therefore, is the basis of the nation's economy, supplying about 75% of the government's revenues and 97% of its foreign exchange in 1958. Less than 2% of the employable population (46,000) were directly employed in the industry. Oil production increased from a daily average of 2.6 million barrels in 1958 to 2.8 million barrels in the January–July period of 1959, despite the voluntary restriction of exports to the United States market. In 1958 local refineries handled more than 25% of production, having a daily barrel capacity of 793,370. The Netherlands Antilles (Curaçao and Aruba) refine most Venezuelan oil. While more than half of the natural gas is burned off, there were 30 gas injection plants, with a capacity of 710 million cubic feet daily, for the recovery of petroleum in January 1958. A 200-mile gas pipeline, Anaco-Caracas, with a daily capacity of 6.2 million cubic meters, began servicing a thermoelectric plant in July 1959; this was the first section of a 1,000-mile network to be completed at a cost of $448 million.

Other Mineral Industries.—Commercial mining in Venezuela is confined at present to iron ore, diamonds, gold, coal, asbestos, and salt. Other known mineral resources include phosphates, magnesite, mercury, antimony, nickel, manganese, lead, copper, and sulfur. With the exception of iron ore and asbestos enterprises, the mining industry is Venezuelan owned.

About 80% of the 15,484,543 metric tons of iron ore produced in 1958 was mined at Cerro Bolivar by a subsidiary of the U.S. Steel Corporation (iron ore production January–June, 1959 reached 7,975,150 metric tons). A long rainy season lowered the production of diamonds by 37% in 1958 to 89,565 carats. Gold output in 1958 was down 15% to 2,364,129 grams. Venezuela's 1958 production of asbestos was up 8% to 8,267 metric

Clouds of tear gas hug the pavement of a Caracas, Venezuela, plaza, following riot of unemployed workers on August 4 in which 4 persons were killed and 46 wounded. Series of riots was set off by governmental labor measures.

WIDE WORLD

[1] A rate of 3.335 bolivares per U.S.$1 applies to nonpetroleum exports, and rates of Bs.3.09 to Bs.3.05 per U.S.$1, to petroleum exports. The rate of Bs.3.35 per U.S.$1 applies for all imports.

tons—more than in any other Latin American country. There were 88,210 metric tons of salt and 36,450 metric tons of coal produced in 1958.

Political disturbances temporarily slowed construction activities in 1958; cement production accordingly dropped 2% to a total of 1.7 million tons.

Agriculture.—Venezuela's growth in other sectors of its economy was not matched by food production in 1958 (food imports cost more than $20 per person). The principal agricultural products are coffee, cacao, sugar, rice, corn, tobacco, cotton, plantain, and sisal. To supplement domestic production, 15 to 20% of Venezuelan foodstuffs are imported; $135 million was paid for food imports in 1958. Dried milk, wheat, canned fruit, eggs, and meat were supplied from abroad in 1958 and 1959.

Estimated rice production for 1959 totaled 30,000 metric tons, 6,000 tons below consumption needs. Self-sufficient in corn, Venezuela also produced 50% of the wheat and flour it consumed in 1959; coffee, cocoa, and occasionally sugar are exported.

A five-year, $180 million program for the development of beef cattle (the cattle population in 1959 was 6,674,000 head) was inaugurated in August 1958 with the shipment of beef cattle from the United States. Credits and technical assistance increased sugar and milk production in 1959, and were expected to triple the supply of coffee within the next few years.

Foreign Trade.—In 1958, Venezuela's exports totaled Bs.7,776.8 million, and imports, Bs.4,798.1 million. This represented decreases over the previous year of 2% and 28%, respectively. In the first five months of 1959 (as compared with the same period for 1958), imports fell 13% to $368.4 million, while exports rose 6.3% to $454.4 million. Petroleum and iron ore continued to lead export goods in 1958, with 91% and 5%, respectively; coffee, cacao, and diamonds followed in that order.

The nation's dominant trading partner is the United States, which accounted for 36.8% of Venezuela's exports and 57.8% of its imports in 1958. Other sources of imports are West Germany (8.4%) and Great Britain (7.3%). A significant decrease in the country's leading imports of machinery and articles for metals manufacture resulted from the decline in the construction industry and the large inventories of construction machinery.

Principal Events, 1959.—Venezuela inaugurated its first democratically elected president in a decade, Rómulo Betancourt, on February 13, one year and 21 days after the discredited dictator, Pérez Jiménez, had been ousted. The new coalition cabinet contained representatives of the three dominant political parties. The administration adopted a moderate, left-of-center policy, avoiding authoritarian army rule as well as demagogic appeal to the masses.

The problem of a depleted public treasury was in part solved by a new tax law of Dec. 19, 1958, which in effect upset the traditional 50–50 division of oil profits (enacted when Betancourt was provisional president in 1945) to provide a 60% share for the government. The tax law increased the rates on all corporation profits above $9.5 million from a range of 1½–26% to 2–45% (retroactive to Jan 1, 1958), and lessened the already light tax burden elsewhere. The law would cost United States oil men an estimated $170 million additional taxes a year, of which the Creole Petroleum Corporation which produced 41% of Venezuela's crude oil, would pay $90 million.

A firm stand was taken against street demonstrations by the unemployed (of which there were an estimated 150,000) and against trade union strikers whose expectations had been raised by the revolution. The most serious of these, on August 4–5 in Caracas, caused four deaths, 46 injured, and extensive property damage; as a result, the government suspended the rights of assembly and freedom from arrest for 30 days. The unemployed rioters had been recently deprived of government doles, and were alarmed by the resignation of the popular director of public works (Celso Fortoul) who had championed their cause.

The government was slow in adopting measures of social and economic reform. Following the August riots, a Bs.150 million program was announced to relieve unemployment. The agricultural reform bill of July 23 would give work and direction to 700,000 impoverished rural families. The law provided for the division of large estates only if they were unproductive; considerable government-owned reserves were to be sold on a long-term basis to the poor, who would also receive credit and technical aid. Included in this Bs.21 billion program were the construction of 10,000 farm homes, along with rural schools, sanitation centers, and 2,000 kilometers of highways.

Communists were excluded from the cabinet, and were condemned by the president when they criticized the suspension of constitutional guarantees in August. Operating as a legal party, they had won 6% of the popular vote in the December 1958 election; reportedly they held influential positions in mass media and high schools, and were second to the Accion Democratica Party (AD) in the oil workers unions.

The Betancourt administration welcomed the overthrow of the Batista dictatorship in Cuba by Fidel Castro and criticized the Organization of American States (OAS) on January 3 for being indifferent to the existence of such authoritarian regimes. Venezuelan relations with the Dominican Republic deteriorated after the Trujillo dictatorship refused to grant safe conduct from the country for 13 Dominicans who had taken refuge in the Venezuelan embassy on January 22; diplomatic relations between the two countries were broken on June 12. In July, charging Trujillo with genocide and asking that the Dominican Republic be excluded from the OAS, the Venezuelan delegate was able to mobilize support against a Dominican-inspired request for an OAS investigation of a purported Venezuelan and Cuban invasion of that island.

Having recently introduced its own petroleum tax law, the Venezuelan government did not protest vigorously about the new United States policy of March 12 which limited Venezuelan residual oil imports to 535,000 barrels a day, even when these "voluntary" quotas were lifted for Canada. Relations with the United States were improved after the U.S. Immigration and Naturalization Service ordered the exiled Venezuelan dictator, Pérez Jiménez, to leave the country on March 27, and again on August 25 responded to a Venezuelan request for extradition of Pérez Jiménez. The former dictator's lawyer predicted that it would be two to three years before all legal devices were exhausted and his client would be forced to leave the United States.

VERMONT. New England state, United States; admitted to the Union, March 4, 1791. The "Green Mountain State" ranks 43d in area and 47th in population among the 50 states.

Area and Population.—Area: 9,609 square miles (land, 9,278; inland water, 331), divided into 14 counties. Population: (1950) 377,747; (est., July 1, 1958) 372,000. Towns (defined as civil divisions) and urban places with 1950 populations above 7,500 are:

Barre city	10,922	Montpelier city[2]	8,599
Bennington town	12,411	Rutland city	17,659
Bennington village	8,002	Springfield town	9,190
Brattleboro town	11,522	St. Albans city	8,552
Brattleboro[1]	9,606	St. Johnsbury town	9,292
Burlington city	33,155		

[1] Unincorporated. [2] Capital.

Executive.—Chief state officers in 1959:
Governor: Robert T. Stafford (Republican)
Lieutenant Governor: Robert S. Babcock
Secretary of State: Howard E. Armstrong
Treasurer: George H. Amidon
Attorney General: Frederick M. Reed
Auditor: David V. Anderson
Commissioner of Education: A. John Holden

Constitution and Judiciary.—The present constitution went into effect in 1793. The Supreme Court comprises 5 justices; chief justice in 1959: Benjamin Hulburd.

Legislature.—The General Assembly comprises a 30-member Senate (in 1959, 22 Republicans and 8 Democrats) and a 246-member House of Representatives (199 Republicans and 46 Democrats, and one other), which meet in regular session in odd-numbered years, commencing the first Wednesday after the first Monday in January.

The 1959 General Assembly, after 152 days in session, adjourned on June 11. In a new and historic action, it was to reassemble on Jan. 12, 1960, to provide fuller discussion of three issues: the recommendations of the so-called "Little Hoover Commission" for changes in the state government, the financing of highways, and a review of the budget.

Gov. Robert Stafford had asked for an "austerity" budget for the biennium, reducing General Fund requests from $61,500,000 to $53,000,000, but the legislature added $1,200,000. The total figure reached was $98,814,727, including bond issues. The legislature generously backed a $2,100,000 university library bond issue, to be wholly paid from student fees.

A 3% tax on rooms and meals was authorized for two years, as was a 2-cent-per-package cigarette tax, bringing the latter to 7 cents. A 20% tobacco tax was levied, and a statewide referendum on parimutuel betting was authorized for November 1960. A nine-volume revision of the state statutes was adopted, and provision was made for an earlier selection of political party officers and committees.

Tempers flared in a debate on a defeated "right-to-work" bill and, amid ribald comments, nudism was not forbidden in the state. A resolution on national security was passed, generally conceded to be Governor Stafford's opening gun in a campaign for election to Congress. The question of a need for a general sales tax continued to dominate Vermont legislative politics.

Another landmark was fixed when the Committee on State and Court Expenses held continuous hearings on the Little Hoover Commission bills from September 15 until the opening of the 1960 session. Other committees held shorter hearings on proposed highway financing measures and some budget changes.

Finance.—In the 1958–59 fiscal year, state revenue of $72,616,194.18 comprised $38,734,199.95 from state tax sources, $17,101,741.59 from the federal government, and $16,780,252.64 from other sources. Tax revenue consisted of $9,545,571.92 from individual income taxes, $2,002,393.93 from corporate income taxes, $8,243,341.99 from motor fuel taxes, $8,156,326.58 from licensing, and $10,786,565.53 from other sources. Expenditures of $88,513,121.74 comprised $14,256,358.44 for education, $20,881,701.13 for health, welfare, and safety, $35,617,055.85 for highways, and $17,758,006.32 for other purposes. Long-term indebtedness on June 30, 1959, amounted to $29,831,000.

Banking.—As of June 10, 1959, the state's 32 national banks had $222,731,000 in assets, $121,925,000 in time deposits, and $76,613,000 in demand deposits. The 33 state banks (June 30, 1959) had assets of $322,748,895.03, time deposits of $231,546,745.03, and demand deposits of $48,451,844.68.

Education.—School attendance is compulsory between the ages of 7 and 16, inclusive, or on completion of the eighth grade. Operating expenditures for public elementary and secondary education in the 1957–58 school year totaled $20,990,129.04 ($278.28 per pupil). Of the total, 78% came from local school districts, 21% from the state, and 1% from the federal government. Outlays for construction and improvements amounted to $5,635,914.84. Teachers' salaries (1958–59) averaged $4,135 (high school, $4,628; elementary, $3,835).

VERMONT SCHOOL STATISTICS, 1958–59

Type of school	No.	Teachers	Students
Public elementary (k-8)	398	2,016	50,953
Public junior high (7–8)	34	169	4,202
Public senior high (9–12)	79	932	15,906
Junior colleges	4	...	969
Teachers colleges	3	...	774
Colleges and universities	12	...	6,836
Other higher institutions	1	...	7

Public Assistance.—In the 1958–59 fiscal year public assistance expenditures from federal and state funds (excluding institutional costs) totaled $5,871,269, including $3,833,256 for the aged, $1,429,966 for dependent children, and $93,190 for the needy blind. A monthly average of 8,075 persons received assistance.

Labor Force.—The state's labor force averaged 148,000 persons in 1958. Nonagricultural employment of 108,000 in June 1959 was up from 104,400 a year earlier and the 103,900 average for the 12 intervening months. Of nonfarm workers in mid-July 1959, 32.1% were in manufacturing, 18.4% in trade, and 17.6% in service industries. Estimated July unemployment of 4,150 compared with 7,425 a year earlier.

Manufacturing.—There were an estimated 3,978 manufacturing establishments in the state in 1958 employing 67,673 workers who received $251,968,607 in wages. Value added by manufacture (1957) totaled $265,272,000, and outlays for new plant and equipment amounted to $21,660,000. Production workers averaged $76.52 for an average workweek of 42.8 hours in August 1959.

Major industries are nonelectrical machinery, which in 1957 employed 7,387 persons who received $34,802,000 in wages, and which added $58,292,000 in value by manufacture; food and kindred products (2,712; $10,189,000; $25,572,000); and stone, clay, and glass products (4,082; $15,843,000; $25,020,000).

Mining.—In 1958 Vermont ranked 44th among the states in the value of its minerals, with 0.12% of the national total. It was first in the output of asbestos, of which it produced 23 different grades, and second in output of dimension slate and crushed and broken slate.

VERMONT MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Copper (recoverable content of ore)	475	$ 250,000
Sand and gravel	1,881,990	1,316,000
Silver (troy ounces)	5,101	5,000
Stone	808,169	15,789,000
Other minerals	...	4,106,000
Total	...	$21,443,000*

* Totals adjusted to eliminate duplication in value of stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1959 increased to $90,575,000 from $85,807,000 for the corresponding period of 1958. For the full year 1958, income comprised $103,431,000 from livestock and livestock products (chiefly dairy products, $80,760,000), $10,870,000 from crops, and $1,211,000 from government payments.

VERMONT CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	867	1,070	860
Corn (1,000 bu.)	2,947	3,120	3,172
Hay (1,000 tons)	1,210	1,204	1,127
Maple sirup (1,000 gal.)	674	567	390
Oats (1,000 bu.)	686	456	559
Potatoes (1,000 cwt.)	540*	368	297

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

The state had 16,900 farms in 1958. Total acreage (1954) of 3,318,000 included 799,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 423,000 cattle and 978,000 chickens (excluding commercial broilers). There were 31,946 family and hired workers engaged in farming during the week of Sept. 26–Oct. 2, 1954.

Transportation and Communications.—State and federal funds disbursed for Vermont highways in the 1958–59 fiscal year totaled $33,539,456, and 89.3 miles of new construction were completed.

Highways and roads on June 30, 1959, totaled 13,650 miles (3,880 surfaced). Registered *motor vehicles* numbered 142,055 on March 31, 1959, including 129,166 passenger cars. There were (1958) 11 *railroads* operating 817 line miles; (1959) 2 regularly scheduled *airlines;* and (1958) 18 *airports and airfields* (7 commercial and municipal, 1 commercial-military, and 10 private).

Communications media (1959) included 14 AM *radio stations;* 1 VHF *television station;* 9 daily *newspapers* and 21 other newspapers; and (January 1) 32,900 business and 89,700 residential *telephones.*

Principal Events, 1959.—The major nonpolitical event was the year-long celebration of the 350th anniversary of the discovery of Lake Champlain by Samuel de Champlain. Joining forces with New York, and with assistance from Canada, Vermont held many pageants and historic celebrations, chief of which was a month-long canoe cavalcade in specially built birch-bark canoes, which began in Canada and recreated Champlain's trip down the lake in his famous battle with the Iroquois. The chief failure of the year involved the Friendship Fountain on the breakwater in Burlington. Its installation was delayed until the end of the tourist season, and the 200-foot column spurted water for only a few days before mechanical difficulties caused it to cease.

The abrupt announcement in late fall of the almost immediate abandonment of the Ethan Allen Air Force Base threatened economic stability in the Burlington area, and meant the loss of the only military installation in the state. The furor resulting from the announcement, which was made only a short time after Vermont's senators had been assured that deactivation would not take place before June 1962, caused a postponement until May 1960.

A kidnaping and death in late 1957, in Newbury town on the Connecticut River, resulted in late 1959 in the most dramatic Vermont murder trial in years. Inadequate legal preparation, town silence, and passive resistance resulted in a directed verdict of acquittal for one defendant and the dropping of the charge against a second. New investigations and lie detector tests served only to exacerbate already lacerated feelings, and at year's end Newbury was a divided town.

In political developments the Republican mayor of usually Democratic Burlington, who had been elected in 1957, was replaced by a Democrat in 1959. Criticism—and support—of Vermont's first Democratic congressman in 107 years raised political tempers and presaged vigorous political battles in 1960.

No other question in recent years has held so much sustained interest as the report and recommendations of the Vermont Little Hoover Commission. Appointed in 1957, it reported to the General Assembly in January 1959. A four-month series of hearings by a legislative committee kept the issue alive and augured well for action in the adjourned 1959 session of the General Assembly, which was to reconvene in January 1960. A committee to propose constitutional changes to the General Assembly was appointed, but at year's end had not yet met.

Legislature and Principal Events by:
ANDREW E. NUQUIST,
Professor and Chairman, Department of Political Science, The University of Vermont.

VETERANS ADMINISTRATION. An independent agency of the United States government since 1930, the Veterans Administration is charged with administering benefits provided by law for veterans and their dependents.

In September 1959 the nation's population of living veterans was 22,644,000, of whom 67%, or about 15,235,000, had served in World War II. Some 5,455,000, including 945,000 of the World War II group, had seen service during the Korean conflict period between June 27, 1950, and Jan. 31, 1955, the delimiting date established by presidential proclamation. The remainder had served in earlier American wars and during time of peace.

The benefits administered by the VA for veterans and their dependents may be conveniently grouped in three broad categories: those to help veterans in their readjustment to civil life after time spent in service; rehabilitative and compensatory benefits for veterans disabled as a result of service; and benefits for the families of deceased veterans.

Two major benefits designed to help veterans in their return to civilian life are an education and training program and a program of guaranteed or insured loans for homes, farms, and businesses. These are included in a Korean GI Bill (1952), which also provides for other benefits: unemployment compensation, mustering-out pay, and job-finding assistance. Only the training and loan programs are administered by the VA.

Education and Training.—Under the Korean GI training program, a veteran may be entitled to 1½ days of training for each day spent in service during the Korean conflict period. The maximum is 36 months. While in training, he receives an education and training allowance from the government to help him meet his expenses.

Rates for veterans in full-time training in schools and colleges are $110 a month if they have no dependents, $135 if they have one dependent, and $160 if they have more than one dependent. Those in training less than full time, as well as those in on-the-job and on-the-farm training, receive lower monthly rates.

By Sept 1, 1959, seven years after the enactment of the Korean GI Bill, two out of every five veterans who served during the Korean War period —or more than 2,280,000—had taken some form of Korean GI training. The figure represents about a fifth of the male civilian labor force in the age group 25–34 years. More than half of the trainees went to college, and most of these elected highly skilled or professional occupational objectives. The program, which has made a substantial contribution toward providing trained workers for critical shortage occupations, is scheduled to come to an end on Jan. 31, 1965.

War Orphans Schooling.—The largest number of students in training under this program in the school year which ended in June 1959 was 7,800. The monthly average of students in training was 4,485. By far the greater number of these were enrolled in institutions of higher learning. The program, however, provides opportunity for training in a wide variety of schools below the college level: technical institutes, business schools, some vocational or trade schools, normal schools, institutions offering training in medical and related fields, and junior colleges.

To be eligible, the young man or woman must be a child of a person who died of a wartime service-connected injury or illness and who generally is between age 18 and 23. A law passed in late 1958 gave handicapped children of deceased war veterans the right to begin special types of war orphans training when they reach age 14. Eligible students may take up to 36 months of schooling and receive a $110 monthly allowance if attending full time.

GI Loans.—Both the World War II and Korean GI bills contain GI loan programs for veterans. Loans may be used to buy, build, or improve a home; to buy a farm, farmland, or farm equipment; or to go into business.

GI home loans are guaranteed for up to 60% of the loan, but the guaranteed portion may not exceed $7,500. Other real estate loans may be guaranteed up to 50%, with a $4,000 maximum guarantee. Non-real-estate loans, such as business loans, may be guaranteed up to 50%, with a $2,000 guarantee ceiling.

By Sept. 1, 1959, more than 5,665,000 World War II and Korea veterans had obtained GI loans. About 95% bought homes. The loans totaled $47.2 billion, of which the VA guaranteed $25.5 billion.

World War II veterans have until July 25, 1960, to apply for GI loans, and up to a full year after that to complete loan arrangements. For Korea veterans, the deadline is Jan. 31, 1965. (See also HOUSING.)

Unemployment Benefits.—A Korea veteran may be eligible for unemployment pay under the Korean GI Bill or, if he left service after Oct. 27, 1958, under a new law passed in 1958. Both benefits are administered by the U.S. Department of Labor through state employment agencies. Job-finding help, consisting of counseling and placement services, is offered by the U.S. Employment Service. (See also BUREAU OF EMPLOYMENT SECURITY.)

Benefits for the Disabled. *Vocational Training.*—As of Sept. 1, 1959, more than 675,000 disabled World War II and Korea veterans had taken training to help them overcome the handicaps of their disability. Some 614,000 World War II veterans were trained under the Vocational Rehabilitation Act (Public Law 16), which virtually expired in 1959, and the remainder under Public Law 894, as amended. During the fiscal year 1959 more than 1,100 disabled World War II veterans and upward of 5,400 Korea veterans entered training for the first time. Of the 675,000 who have taken training, 60% have either completed or are still pursuing their training.

While in training and for two months afterward, disabled trainees get a subsistence allowance ranging from $65 to $120 a month, depending on the type of training and on the number of the trainee's dependents. These payments are in addition to the usual monthly disability compensation.

Disabled Korea veterans discharged before Aug. 20, 1954, must finish training by Aug. 20, 1963. Those discharged after Aug. 20, 1954, must complete their training within 9 years from separation or from Jan. 31, 1964, whichever comes first. Hardship cases are permitted an additional 4 years in which to complete their training.

Disability Compensation and Pensions.—In the fiscal year 1959 the VA paid out more than $3.225 billion in disability compensation and pensions to 2,934,247 living veterans and to the dependents of 915,822 deceased veterans. About $1.152 billion was for pensions alone. It is estimated that in the fiscal year 1960 this sum will be increased by at least $309 million, as a result of the Veterans Pension Act of 1959, effective July 1, 1960. This provides a sliding scale formula for pension benefits, based to a greater extent than before on need, for all veterans and dependents who go on the VA pension rolls on or after the July 1 date. Pensioners on the rolls prior to that date have a choice of remaining under the earlier pension system, in some cases more advantageous to them, or of coming under the new law, which will allow higher pensions to those who have little or no income. Pensions will be lower for those with more outside income.

As an example of payments under the new law, veterans with no dependents get $85 a month if their income is less than $600, $70 if it is $600 to $1,200, and $40 if it is $1,200 to $1,800.

Widows and orphans of World War II and the Korean War who formerly, to establish eligibility for pension, were required to show that the veteran at time of death had some degree of service-connected disability, are now eligible on the same basis as widows and orphans of World War I veterans. They need only show that the veteran was in active service 90 days or more and was discharged under other than dishonorable conditions.

Veterans with service-connected disabilities incurred either during wartime or peacetime service may qualify for monthly compensation payments.

For wartime service, compensation rates range from $19 a month for a disability rated at 10% to $225 for a disability with a 100% rating. Additional statutory awards are payable to veterans with severe disabilities such as blindness or loss of limb.

Medical and Hospital Services. *Care.*—As of Sept. 1, 1959, the VA was operating a network of 170 hospitals for the treatment of ill and disabled veterans. In addition, some beds were available on a contract basis for veterans in non-VA hospitals. In March 1959 the president approved a new 125,000-bed policy for the VA system, giving the administrator of veterans affairs authority to shift beds or hospitals from one type of use to another, in keeping with advances in medical treatment and changes in veteran population. During the fiscal year 1959 the average daily patient load was more than 114,000 veterans in both VA and non-VA hospitals. More than half were being treated for mental illness.

Veterans of all wars are entitled to VA hospital care under the following priority system: first, veterans suffering from injuries or disabilities that resulted from, or were aggravated by, their wartime military service; and second, veterans with injuries or disease not connected with service in the armed forces. These veterans must state under oath that they are unable to pay for private hospitalization; must submit a financial statement listing their liabilities and assets; and are admitted as soon as a bed becomes available.

As a result of newer drugs and other methods of treatment which have shortened periods of hospital stay, the VA in 1959 was able to redesignate five of its hospitals from tuberculosis to general medical hospitals. During the year, in the continuing program of hospital modernization and replacement, cornerstones were laid for a new 1,000-bed hospital in Brecksville, Ohio, and one in Downey, Ill.

Research.—The VA in 1959 installed at its Omaha (Nebr.) hospital a nuclear reactor especially designed for medical use, the first of its type and the first ever used in a VA hospital. During the year, the VA, with the National Bureau of Standards (q.v.), developed a method of utilizing electronic data processing for the study of information obtained by electrocardiography. The VA also established a division of epidemiology, which will use records from VA hospitals in every state to pinpoint the geographic distribution of multiple sclerosis and other diseases, and set up a division of research in aging, to coordinate the VA's many studies in this field and to begin new research on the aging process itself. The VA set forth the aims of the new division in a publication, *VA Prospectus: Research in Aging,* obtainable for $1.50 from the Government Printing Office, Washington 25, D.C.

In other research the VA completed large-scale control studies of tranquilizers and also of the newer drugs in use against high blood pressure. In cooperation with the armed forces it continued its study of newer drugs for treatment of tuberculosis. A large group of VA hospitals carried forward cooperative studies in the National Cancer Chemotherapy program, under the National Institutes of Health. The VA in 1959 made possible for the first time the preservation of living bone marrow cells in a frozen state for life-saving use in persons exposed to radiation.

Insurance.—The VA administers two systems of insurance: U.S. Government Life, for World War I veterans, and National Service Life, for World War II and Korea veterans. Except for insurance for disabled Korea veterans, no new insurance was being issued under either program.

On Sept. 1, 1959, more than 5,300,000 World War II veterans held GI insurance policies valued at $35.022 billion; 336,000 World War I veterans had policies valued at $1.475 billion; and 669,000 Korea veterans had special National Service Life insurance totaling $5.992 billion. A law passed in 1958 permits Korea veterans, previously ineligible for this benefit, to convert term insurance to one of VA's permanent plans, and other recent legislation authorizes an increase to $10 a month per $1,000 of insurance in payments made to veterans who carry the total disability income rider.

Other Benefits.—The VA administers a number of other benefits for veterans and their dependents. Among these are programs providing cars for the seriously disabled; "wheelchair housing" grants for other disabled veterans; and a guardianship service.

SUMNER G. WHITTIER,
Administrator of Veterans Affairs.

VETERANS ORGANIZATIONS. See specific names of organizations under SOCIETIES AND ORGANIZATIONS.

VETERINARY SCIENCE. The 16th International Veterinary Congress was held in Madrid, Spain, in May 1959. An attendance of approximately 2,500 veterinarians from all parts of the world and presentation of some 2,000 scientific papers, many translated into German, French, and English, attested to the international character of the meeting. The congress brought to a focus advances made in all branches of veterinary science during the four-year interval since the previous meeting.

Another notable gathering of veterinarians in 1959 was the joint Pan American–American Veterinary Medical Association Meeting held at Kansas City, Mo., in August. It brought together nearly 5,000 veterinarians from Central and South America, Canada, and the United States.

Recent Trends.—In recent years a greater share of production of livestock has shifted from the smaller to the larger operating farm unit. Another trend has been an increase in the concentration of numbers of livestock and poultry produced per acre or per unit of space. One result of these trends has been an increase in the hazard from disease and parasites. This hazard has in turn affected the type of service rendered by many veterinarians. There is now more concern with maintaining and protecting the health of an entire herd or flock than with treatment of individual sick animals. Increasing emphasis is thus given to prevention rather than cure of disease.

Increasing attention also has been given by veterinarians to control and prevention of zoonoses, diseases of animals that are transmissible to man. In this connection, the Pan American Zoonoses Center in Azul, Argentina, was officially inaugurated in April 1959. It was established in 1956 to serve the Americas in a broad program of study on zoonoses. The number of known zoonoses now exceeds 100. Q fever, a disease affecting many species, belongs to this group, and is now a serious public health problem.

Antibiotics and Other Feed Additives.—The beneficial effects resulting from the use of tremendous amounts of feed additives, such as antibiotics and other drugs, in animal production and in human and veterinary medical practice, are well recognized. Recently the use of some of these products has been a cause for concern. It is believed that human health might be endangered when some persons consume milk, meat, and animal products containing small amounts of some of these drugs. Recognizing this danger, the federal Food and Drug Administration in 1959 issued an order which permits, with restrictions, the continued sale and use of food or feed additives that are now approved, but forbids the sale of any new compound for this purpose until such a product has been adequately tested to establish its safety.

Research, Treatment, and Prevention.—Advances in 1959 in the treatment and prevention of disease and in supporting research were varied. A large increase occurred in the use by veterinarians of tranquilizing drugs for clinical purposes, but more clinical and research data are needed to determine whether some of the claims made for these products are justified. Veterinary medicine also continued in 1959 to be a widening field for the use of radioisotopes.

Critical evidence appeared to be accumulating which demonstrates a close relationship between certain viruses that cause some types of respiratory disease in man and so-called shipping fever of cattle.

In other developments of 1959, compulsory post-mortem inspection of poultry intended for interstate commerce was started, and the incidence of brucellosis in dairy and swine herds was further reduced. With respect to swine, 30 states now ban the use of live virus for their immunization against hog cholera. In another advance, some organic phosphorous compounds were found to be effective against roundworms.

Education.—In 1959 there were approximately 22,000 trained veterinarians in the United States and Canada. Along with the steady increase in their numbers and a broadening of the scope of veterinary science, a noteworthy development in the profession has been the attention given to the improved education of future veterinarians.

All veterinary medical colleges in the United States and Canada now require at least two years of preveterinary training at the college level and four years of professional training for the doctor of veterinary science degree. Continued expansion of training was reflected in the fact that Purdue University enrolled its first class in veterinary science in 1959.

JESSE SAMPSON,
Professor and Head, Department of Veterinary Physiology and Pharmacology, College of Veterinary Medicine, University of Illinois.

VIETNAM. A country of Southeast Asia, bordered by China on the north, and by Laos and Cambodia on the west. Estimated area, 125,882 square miles; pop. (est. 1958), 27,800,000. Formerly under French rule, Vietnam was divided by an armistice line, roughly along the 17th parallel, by the Geneva agreements of 1954 ending the Indochinese War. The Republic of Vietnam (South Vietnam) rules the area south of the demarcation line; the Democratic Republic of Vietnam (North Vietnam), the area to the north. The Geneva agreements called for consultations between the two regimes on national elections and reunification, but such consultations have never taken place.

South Vietnam has an area of about 65,958 square miles and a population of approximately 12.8 million. The capital is Saigon (est. pop. of Saigon-Cholon urban area, 1.8 million). Other cities include Tourane (100,978), Hue (90,682), and Nha Trang (60,000). North Vietnam has an area of about 59,924 square miles and a popula-

tion of approximately 15 million. Hanoi (est. 1958, 500,000) is the capital, and Haiphong (est. 1953, 188,600) the second largest city. The majority of the population in both the north and the south are Annamese, who are related to the Chinese ethnically and linguistically. There is a sizable Chinese minority (estimated at 850,000 in South Vietnam, mainly in the Saigon-Cholon area). The Annamese language has been Romanized. French is widely spoken in the larger cities of the south.

Government. *South Vietnam.*—The Republic of Vietnam was proclaimed on Oct. 26, 1955, by Premier Ngo Dinh Diem, following a popular referendum. At the same time, Ngo Dinh Diem assumed the office of president. A Constituent Assembly of 123 members was elected on March 4, 1956, and on October 26 a constitution was promulgated concentrating government power in the presidency. The president is popularly elected by persons over 18 years of age for a 5-year term and may be re-elected for 2 years. The legislature is elected for 3 years. The Constituent Assembly constituted itself as the first National Assembly. Elections to the second assembly took place on Aug. 30, 1959, resulting in the following party seating: National Revolutionary Movement, 78; Vietnamese Socialist Party, 4; Social Democratic Party, 3; Vietnamese Restoration Party, 2; Democratic Liberties Party, 2; independents, 32; opposition independents, 2.

North Vietnam.—The Democratic Republic of Vietnam has a Communist-type regime controlled by the Lien Viet (National Union Front), in which the Communist Lao Dong (Workers' Party) is the leading force. The National Assembly, based on an election in 1946, has served mainly to approve measures presented by the Communist leadership. Ho Chi Minh, veteran Communist leader, has been president since the inception of the regime. Pham Van Dong has served as premier and foreign minister since 1955.

Education and Religion.—In South Vietnam, public and private elementary schools had 768,000 pupils in 1958; secondary schools, 98,000. South Vietnam's 2 higher institutions are the University of Saigon (2,841 students in 1956) and the University of Hue, established in 1957 (800 students in 1959). The chief religion of the Annamese is Buddhism, with strong influences of Confucianism and Taoism. In South Vietnam there are certain politico-religious sects, such as the Cao Dai and the Hoa Hao, but their political power has been considerably reduced by the Saigon government. Roman Catholics, estimated at 2 million, were formerly concentrated south of the Red River Delta, but many fled to South Vietnam following the establishment of the Communist regime in the north.

Finance.—The draft estimate for South Vietnam's 1958 budget placed expenditure at 14,375 million piastres; revenue, 8,701 million (at the official rate, 35 piastres equal the dollar; on the free market, the average 1958 rate was 72.45 piastres to the dollar). Aggregate public expenditure in 1958 (including local budgets and other public institutions) totaled 16,704 million piastres, up 2% from 1957. United States aid makes up the budget deficit, as well as the heavy imbalance in foreign trade. In the period from July 1, 1954, to June 30, 1958, a total of $976.6 million in United States economic and technical aid was allotted to South Vietnam ($191.6 million for the fiscal year 1958).

Transportation and Communications.—The Mekong River in the south and the Red River in the north are important arteries of transport. The government-owned railroad system in South Vietnam has about 673 miles of main and branch lines, although service has not yet been completely restored throughout. South Vietnam's road network totals about 8,660 miles, of which about 20% is asphalt surfaced and 45% macadamized. Air Viet-Nam is the only scheduled national flag carrier in South Vietnam; several international lines operate scheduled flights into Saigon, the chief airport. Passenger cars in South Vietnam numbered 47,391 in 1958; commercial vehicles, 21,371; telephones, 13,445. In North Vietnam, railroads in operation at the end of 1957 were reported to total 422 miles. A considerable portion of the road network (8,384 miles in 1952) has been restored with Chinese aid. A Chinese airline operates scheduled flights between North Vietnam and Peking.

Production.—About 80% of the population in South Vietnam is agricultural, although agriculture provides less than a third of gross domestic product. The Saigon government's land reform program has reduced large landholdings and increased the number of small holders by distributing land to landless peasants, and has eliminated some of the abuses of tenancy by limiting rentals to 25% of the principal crop. Under a 1958 agreement, France provides financial aid to the South Vietnamese government for the repurchase of over 200,000 hectares of paddy land owned by French nationals. The government has also extended irrigation and reclamation, spread modern techniques, encouraged crop diversification, and made credit available to farmers.

Rice, the chief crop, is the staple of diet and (in good harvest years) an important export. Output in 1958 was estimated at 3.2 million metric tons of paddy, down about 10% from the bumper yield of 1957. Rubber, the principal export, is grown mainly on French-owned plantations in the central plateau area; production on plantations of over 500 hectares (normally accounting for over 80% of output) totaled 62,372 metric tons in 1958. Secondary crops are corn, copra, tobacco, and sugar; and minor crops: tea, coffee, pepper, jute, kapok, peanuts, manioc, and sweet potatoes. Industry, which is on a small scale and mostly for the home market, provides about 13% of national output. Manufactures include cotton cloth, metal products, chemicals, matches, sugar, footwear, soap, brick, tile, and wood products. Government policy is to encourage the gradual development of light industries, rather than to seek rapid industrialization of the economy.

In North Vietnam, rice cultivation is also of basic importance, but minerals are more abundant, and industrialization, which had proceeded further under French rule than in the south, has been made a prime objective of the Communist regime's development plans. The government's agricultural policy has been likened to that of the Chinese Communists in its early stages. The initial phase of "land to the tillers" has been succeeded by a drive to organize farm cooperatives, and on Jan. 19, 1959, President Ho Chi Minh declared that North Vietnam had no plans as yet to follow Communist China in the organization of communes. The Hanoi radio on Sept. 3, 1959, claimed a bumper rice crop of 4.7 million tons in 1959.

In early 1958, Premier Pham Van Dong stated that output in large industries had attained to only 76% of the prewar level, but in the radio report of Sept. 3, 1959, industrial production was said to have risen by 64% in 1958 and by an even greater percentage in 1959. State enterprise is predominant, although private enterprise still exists in small industries, handicrafts, and retail trade. Manufactures in North Vietnam have included engineering and construction products, textiles, chemicals, bicycles, silk, beer, tobacco products, soap, and other consumer goods, but new industries have been founded under the industrialization drive. Coal (1957 output, 1,112,000 metric tons), iron ore, manganese ore, bauxite, and zinc ore are the chief minerals. Chinese financial and technical aid has played an important role in the industrialization program.

Foreign Trade.—South Vietnam's exports in 1958 totaled 1,925 million piastres (down 32% from 1957); imports, 8,125 million (down nearly 20%). Chief exports were: rubber, 67,500 metric tons (1,242 million piastres); and rice, 117,106 (488 million). Imports are mainly machinery, petroleum products, textiles, foodstuffs, pharmaceuticals, and other consumer goods. France purchased about 54% of 1958 exports (mainly rubber); the United States, 9%. France provided 25% of imports; the United States, 24%; Japan, 19%. North Vietnam's chief trading partner is Communist China, which provides capital goods, textiles, and other manufactures, in exchange for North Vietnamese agricultural products, minerals, and timber.

Principal Events, 1959.—The division of Vietnam into two regimes separated by an armistice line continued in 1959, and no steps were taken to implement the provisions of the 1954 Geneva

agreements calling for discussions toward reunification. Despite the impasse on reunification, there were no major instances of overt armistice infractions in 1959, although South Vietnam continued to charge the Hanoi regime with responsibility for terrorism and subversion in the south, and North Vietnam again complained to the International Supervisory Commission (set up under the Geneva agreements) that United States arms shipments for the South Vietnamese Army violated the armistice provisions.

South Vietnam.—At the opening of the National Land Reform Congress on July 1, it was stated that 343,017 hectares of expropriated land had been distributed to former tenant farmers under the land reform program, and over 800,000 tenancy contracts had been signed, reducing rents and carrying provisions for tenants' security. Under the project for the settlement of the central plateau area, some 42,000 settlers had been given land and homesteads by early 1959.

According to the Saigon government, Communist agents in South Vietnam were making every effort to defeat the land program by sabotage, assassination of Saigon officials, and intimidation of peasants. On July 8, two United States servicemen of the U.S. Military Assistance Advisory Group were killed by terrorists at Bienhoa, near Saigon. In late October, crack units of the South Vietnamese Army, trained by the United States advisory group, completed an anti-guerrilla campaign in the Camau Peninsula of the extreme south. Several hundred Communists were reported killed or captured, with only slight losses to the army.

An agreement on South Vietnam's withdrawal from the franc zone was reached with France on April 27. On May 13 a reparations agreement with Japan was signed in Saigon, providing for Japanese payment of the yen equivalent of $39 million, most of which will be used in the construction of a power station, and for the Japanese extension of an additional $16.6 million in loans and credits. Agreements with Laos were signed in Saigon on May 25 regarding trade, payments, goods in transit, immigration, and frontier regulation. Talks between Cambodian Premier Norodom Sihanouk and President Ngo Dinh Diem in Saigon, August 2–5, reportedly achieved some progress toward the settlement of trade and border problems.

In the South Vietnamese elections to the National Assembly on August 30, a reported 86% of the electorate went to the polls. President Ngo Dinh Diem's National Revolutionary Movement won 78 of the 123 seats, and almost all other successful candidates were said to be backers of the president, but the conditions of the election afforded only a limited means for the expression of an opposition.

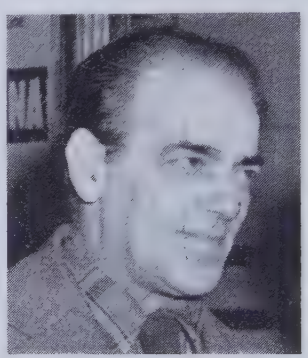
North Vietnam.—The North Vietnamese government was accused of flagrant aggression on September 4, in a complaint to the United Nations by Laos. In a note to the United Nations on September 7, North Vietnamese Premier Pham Van Dong termed the Laotian complaint a fabrication and accused the Laotian government of fomenting civil war by seeking to eliminate the Communist movement in Laos, in violation of the Geneva agreements. A United Nations investigation subcommission report, made public on November 6, declared that no evidence had been found of direct participation in the Laotian fighting by North Vietnamese forces, although there was some evidence of North Vietnamese arms and materials support of the Laotian rebels. (See also FAR EAST; LAOS.)

An agreement was signed in Peking on February 18, whereby Communist China will provide the equivalent of $168,775,000 in loans and grants for the construction of 49 new industrial and communications enterprises in North Vietnam, including iron and steel plants, coal mines, shipyards, fertilizer plants, and other facilities. On March 7 an agreement with the Soviet Union was signed in Hanoi, providing for Soviet economic and technical aid in the construction of North Vietnamese industrial installations. President Ho Chi Minh visited Burma on February 26 and Indonesia from February 27 to March 11, and toured the USSR and Communist China from July 12 to August 25.

A new constitution for North Vietnam was adopted by the National Assembly on Dec. 31, 1959. A resolution accompanying the adoption called for the holding of national elections in 1960.

M. J. G.

VILLA-LOBOS, Heitor (72?), Brazilian composer: b. Rio de Janeiro, Brazil, March 5, 1887 (?); d. Rio de Janeiro, Nov. 17, 1959. He produced music so prolifically, in such a plethora of styles and forms, as to suggest the vast, continental variety of



Heitor Villa-Lobos (1887?–1959)

UPI

Brazil itself. His individual compositions are said to number between 1,000 and 2,000; it is doubtful either that Villa-Lobos could recall everything that he had written or that the entire body of his music can ever be familiar to any single listener.

Having studied the cello with his father, Villa-Lobos began his career as a theater and café instrumentalist. At an early age he traveled throughout much of northern Brazil, becoming notably familiar with its Portuguese-Negro-Indian folk music, which was to be reflected and often quoted in his later compositions. Mostly self-taught, he earned excited attention in 1915 with a Rio de Janeiro concert of his early works. In 1918, the pianist Artur Rubinstein, visiting Brazil, became interested in Villa-Lobos' music and a few years later helped to make possible the composer's first European visit, which began with his telling his colleagues that he had not come to study, but to show them what he had done, and which lasted eight years.

From 1930 on, in São Paulo and then in Rio de Janeiro, as director of musical education in the schools, Villa-Lobos reorganized the public teaching of music along bold new lines. While continuing to compose with astounding fecundity, he made choral arrangements of Brazilian folksongs, elaborated a system of hand signals for instructing and conducting musical illiterates, led gargantuan choruses of children, and founded (1942) a National Conservatory of Orpheonic Song.

Villa-Lobos visited the United States for the first time in 1944, conducting symphony orchestras. During the next year he founded in Rio de Janeiro the Brazilian Academy of Music. Thereafter, he made numerous journeys to Europe and

the United States, conducting his compositions, and even composing (in Los Angeles in 1948) a musical comedy, *Magdalena,* which later had a brief run in New York. He attracted notice, too, by a trick of forming melodies by placing notes along profiles of photographs—of mountains, of the New York skyline—superimposed on musical staffs.

Energetic, abounding, more interested in putting musical ideas down than in reworking them formally, Villa-Lobos is difficult to evaluate. His finest compositions, perhaps particularly some of the pieces he called *Chôros* and *Bachianas brasileiras,* aptly fuse exotic harmony, melody, rhythm, and instrumentation with sophisticated modern adaptations of formal patterns. Much of his huge output, however, remains formless, improvisatory, and dilute. His masterworks aside, his historic importance resides in the intense stimulus he gave to musical life in Brazil.

The multiplicity of Villa-Lobos' compositions can only be suggested here. He composed operas, ballets, and oratorios; at least 12 symphonies, mostly with descriptive titles; 15 *Chôros;* 9 *Bachianas brasileiras;* numerous other pieces for orchestra; at least 15 string quartets; a large amount of other chamber music; many choral pieces; quantities of solo songs; and a whole library of piano works. Vasco Mariz' *Heitor Villa-Lobos* (Rio de Janeiro, 1948), a detailed biography, lists the compositions to that year.

HERBERT WEINSTOCK,
Music Editor and Reviewer; Author of "Music as an Art" and other works.

VIRGIN ISLANDS, British. See BRITISH VIRGIN ISLANDS.

VIRGIN ISLANDS OF THE UNITED STATES. This West Indian insular possession of the United States, situated approximately 40 miles east of Puerto Rico, forms part of the chain of islands which extends between the Caribbean Sea and the Atlantic Ocean. The islands were purchased from Denmark for $25 million in 1916, and were proclaimed a United States possession on Jan. 25, 1917.

Area and Population.—Having an area of 133 square miles, the Virgin Islands comprises three main islands (St. Thomas, 32 square miles; St. Croix, 82; and St. John, 19) and approximately 50 small islets and cays (mostly uninhabited), included statistically with the larger islands. The population (1950 census) was 26,665 (St. Croix, 12,103; St. Thomas, 13,813; and St. John, 749). Charlotte Amalie (11,469) on St. Thomas is the capital and chief port; on St. Croix are the cities of Christiansted (4,112) and Frederiksted (1,961). On July 1, 1955, the U.S. Bureau of the Census estimated the total population of the islands at 24,000.

Government.—Since the enactment of the Revised Organic Act of the Virgin Islands on July 22, 1954, legislative power has been vested in a unicameral Legislature of the Virgin Islands, composed of 11 senators elected for two years (5 representing three electoral districts and 6 elected at large). The administration is headed by a governor, John D. Merwin, who assumed this office in September 1958. Other ranking officials in 1959 included Government Secretary Roy W. Bornn; U.S. District Judge Walter A. Gordon (appointed in September 1959); Walter I. M. Hodge, president of the Legislature; and U.S. Attorney Leon P. Miller.

The executive branch is composed of ten departments, nine of which are headed by commissioners appointed by the governor and confirmed by the legislature. The tenth, the Department of Law, is headed by an attorney general.

Significant legislation enacted during 1959 included: (1) authorization for the publication of the *Virgin Islands Reports,* two volumes of which were published containing the opinions of the District Court of the Virgin Islands, the U.S. Court of Appeals for the Third Circuit, and the Supreme Court of the United States from 1917 through 1953; (2) an authorization for the sale of the Virgin Islands Telephone System, a government-owned institution, to private interests; and (3) an authorization for the construction of emergency housing projects to house, temporarily, the large number of persons and families unable to find decent accommodations.

Finance.—Government operations are financed jointly from revenues collected locally and from federal matching funds from the United States, which are obtained under provisions of the internal revenue laws of the United States on articles produced in the Virgin Islands and transported to the mainland. Separate federal grants-in-aid are made for emergency purposes and essential public projects only. Subsequent to the revised Organic Act, a single Treasury of the Virgin Islands was created, replacing the system of two separate municipal treasuries, and the Department of Finance was reorganized into tax, treasury, and accounting divisions.

For the fiscal year ending June 30, 1959, total revenue from real property taxes, income taxes, miscellaneous revenues, matching funds, grant-in-aid funds, and miscellaneous federal contributions amounted to $9,827,953.25.

Banking.—On June 30, 1959, there were two banks: the Virgin Islands National Bank, with assets of $15,751,542.81, and the West Indies Bank and Trust Company, with assets of $11,249,075.11. The West Indies Bank and Trust Company in 1959 opened the first branch bank on the island of St. John. Later in the year, a most important development in banking occurred when the Chase Manhattan Bank of New York purchased the latter bank's assets and liabilities, and went into operation as the first continental American bank to be established in the Virgin Islands.

Education.—School attendance is compulsory between the ages of 5½ and 15, inclusive. In 1959 the three major islands had 29 public schools, including (in addition to kindergartens) 7 city elementary schools, 13 rural schools, 1 junior high school, and 2 junior-senior high schools. Total public school enrollment was 6,466 at a per capita cost of $216.97 (exclusive of adult education and community services). There were also 10 parochial and 4 private schools with a total enrollment of 2,355. The budgetary allotment for the Department of Education in the 1958–59 fiscal year was $1,544,349.94.

Social Welfare.—The Department of Social Welfare administered $335,749.36 in public assistance payments during the 1958–59 fiscal year, including principally old-age assistance, $160,258.31, and aid to dependent children, $105,233.28. Average monthly assistance payments per recipient were: old age assistance, $23.40; aid to dependent children, $12.06; aid to the blind, $26.81; aid to the disabled, $25.64; and general assistance, $23.53. Three homes were maintained for the aged and indigent, and there was one training school for boys. Approximately $1,925,428.45 in federal grants and local appropriations was available to the Department of Health during the 1958–59 fiscal year.

Agriculture, Industry, and Trade.—There are approximately 750 farms in the Virgin Islands, which, according to the 1950 federal Census of Agriculture, covered 73,753 acres, of which 16,461 had been in cropland harvested the previous year. The appraisal value of privately owned land and buildings in 1959 was $28,045,665.62, and of lands, buildings, and structures owned by the Virgin Islands Government, $10,741,571.86. Agricultural activities center on the raising of sugarcane (almost 5,000 acres are devoted to its cultivation) and the breeding of livestock.

While much of the revenue of St. Croix is obtained from agriculture, that of St. Thomas is derived largely from the manufacture of rum and handicrafts and from tourism, trade, and shipping. During the year ending June 30, 1959, income from tourists was estimated at $21,738,000. There are 55 hotels and guest houses, the majority of which are on St. Thomas and St. Croix.

For the calendar year 1958, the value of exports from the Virgin Islands to the United States was $3,106,835; the value of imports to the Virgin Islands from the United States was $18,053,605.

Communications and Transportation.—There is daily airmail and passenger service between St. Thomas and St. Croix and between the Virgin Islands and Puerto Rico, and daily boat mail and passenger service between St. Thomas and St.

John. Caribbean Atlantic Airlines, Inc., and British West Indian Airways, Ltd., served St. Thomas in 1959. St. Croix was served by Caribbean Atlantic Airlines, Inc., and Pan American World Airways, Inc., the latter making four flights weekly. Eighty-nine large cruise ships carrying approximately 37,000 passengers made St. Thomas a port of call. There are four daily newspapers with a combined circulation of about 3,500.

In 1959, St. Croix had 180 miles of highways serving the island's 2,420 motor vehicles, and on St. Thomas and St. John, the islands' 90 miles of roads served 2,780 motor vehicles. On the three islands there were 3,113 telephones, two cable offices, and two radio stations.

JOHN D. MERWIN,
Governor of the Virgin Islands.

VIRGINIA. South Atlantic state, United States; one of the original 13 states. The "Old Dominion State" ranks 36th in area and 15th in population among the 50 states.

Area and Population.—Area: 40,815 square miles (land, 39,893; inland water, 922), divided into 98 counties and 31 independent cities. Population: (1950) 3,318,680; (est., July 1, 1958) 3,905,000. Urban places with populations above 10,000 (as estimated by the Bureau of Population and Economic Research, University of Virginia, for July 1, 1958) are:

Alexandria	87,926	Newsome Park-Hilton Park[2]	14,960[3]
Bristol	18,263	Norfolk	299,244
Charlottesville	30,992	Petersburg	36,063
Covington	11,195	Portsmouth	86,472
Danville	48,582	Richmond (*capital*)	238,303
Falls Church	11,028	Riverview[2]	14,215[3]
Fredericksburg	13,406	Roanoke	102,078
Hampton	82,640	South Norfolk	22,483
Harrisonburg	12,240	Staunton	24,510
Hopewell	18,975	Suffolk	12,177
Lynchburg	53,771	Waynesboro	15,241
Martinsville	19,034	Winchester	14,537
Newport News[1]	105,874		

[1] Merged with Warwick on July 1, 1958. [2] Unincorporated. [3] 1950 federal census.

Executive.—Chief state officers in 1959:
Governor: J. Lindsay Almond, Jr. (Democrat)
Lieutenant Governor: A. E. S. Stephens
Secretary of the Commonwealth: Martha Bell Conway
Treasurer: E. B. Pendleton, Jr.
Attorney General: Albertis S. Harrison, Jr.
Auditor: J. Gordon Bennett
Supt. of Public Instruction: Davis Y. Paschall

Constitution and Judiciary.—The present constitution went into effect in 1902. The highest tribunal, the Supreme Court of Appeals, comprises seven justices; chief justice in 1959 was John W. Eggleston.

Legislature.—The Virginia General Assembly comprises a 40-member Senate (in 1959, 37 Democrats and 3 Republicans) and a 100-member House of Delegates (96 Democrats and 4 Republicans), which meet for a regular session in even-numbered years commencing the second Wednesday in January. (See below, *Principal Events, 1959.*)

Finance.—In the 1958–59 fiscal year, state revenue of $563,773,995.29 comprised $285,433,254.86 from state tax revenue, $80,977,982.81 from the federal government, and $197,362,757.62 from other sources. Tax revenue consisted of $71,308,309.52 from individual income taxes, $24,261,522.38 from corporate income taxes, $74,033,271.13 from motor fuel taxes, $47,474,385.11 from licensing, and $68,355,766.72 from other sources. Expenditures of $591,372,108.91 (excess of which over revenue was covered by balance from previous fiscal year) comprised $160,136,008.13 for education, $78,386,050.54 for health, welfare, and safety, $145,774,058.06 for highways, and $207,075,992.18 for other purposes. Long-term indebtedness on June 30, 1959, amounted to $9,118,508.33.

Banking.—As of June 10, 1959, the state's 130 national banks had $1,920,734,000 in assets, $1,069,150,000 in demand deposits, and $670,438,000 in time deposits. The 179 commercial banks had assets of $1,441,095,000, demand deposits of $743,843,000, and time deposits of $559,680,000.

Education.—Operating expenditures for public elementary and secondary education in the 1958–59 school year totaled $181,265,612 ($242.67 per pupil), comprising $87,851,633 from local school districts, $74,454,678 from the state, and $18,959,301 from the federal government. Outlays for construction and improvements amounted to $51,393,169, and debt service payments totaled $17,246,066. Teachers' salaries averaged $3,956 (high school, $4,172; elementary, $3,823).

In the 1958–59 school year, public elementary schools had 18,046 teachers and 587,575 pupils, and public secondary schools had 11,083 teachers and 234,675 pupils. College and university enrollment totaled 54,104. (See also below, *Principal Events, 1959.*)

Public Assistance.—In the 1958–59 fiscal year public assistance expenditures from federal and state funds (excluding institutional costs) totaled $19,794,946, including $6,712,461 for the aged, $8,502,744 for dependent children, and $3,008,871 for the permanently and totally disabled. A monthly average of 71,453 persons received assistance.

Labor Force.—The state's labor force numbered 1,433,875 persons in July 1959, including 165,850 agricultural workers. Nonfarm employment of 984,200 in the same month was higher than both the figure of 946,600 of the previous July and the 953,400 average for 1958. Manufacturing accounted for 26.9% of nonfarm employment, trade for 21%, and government for 18.8%. Unemployment in July 1959 dropped sharply to 59,425 from 80,350 a year earlier.

Manufacturing.—Manufacturing plants in the state in 1958 employed 256,900 persons, paid $975,886,000 in wages, and added $2,014,247,000 in value by manufacture. Outlays totaling $117,483,000 went for new plant and equipment in 1958, and during the year 62 new plants employing approximately 1,700 workers went into operation. In August 1959, production workers averaged $70 for an average workweek of 40.7 hours.

MAJOR VIRGINIA MANUFACTURES, 1958[1]

Product or industry	Average no. of employees	Salaries and wages	Value added by mfr.[2]
		(thousands of dollars)	
Chemicals and allied products	31,900	$165,373	$418,173
Tobacco manufactures	14,200	53,746	265,143
Food and kindred products	33,800	110,036	232,047
Textile mill products	34,900	113,263	178,576
Transportation equipment	16,900	93,630	166,171
Paper and allied products	11,000	53,574	118,644
Furniture and fixtures	15,200	51,697	85,507
Lumber and wood products (excluding furniture)	23,300	52,788	76,648
Stone, clay, glass products	7,900	29,373	69,387
Apparel and related products	21,500	52,419	66,906

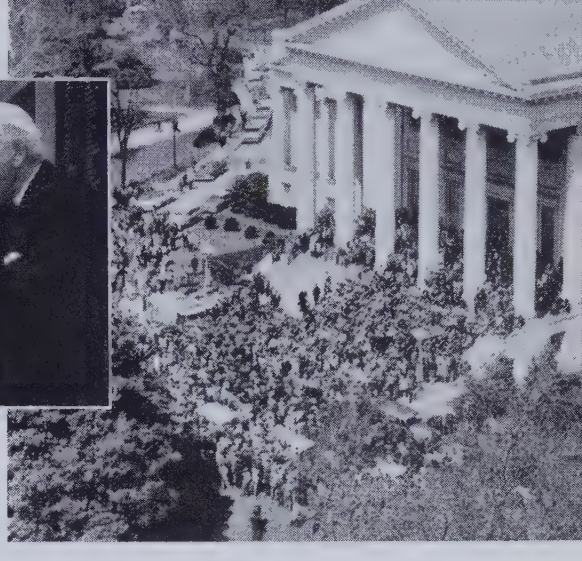
[1] Preliminary. [2] Value of products less cost of materials, supplies, fuel, electric energy, and contract work. (Source: Virginia Department of Labor and Industry.)

Mining.—In 1958 Virginia ranked 19th among the states in the value of its mineral production, with 1.23% of the national total. The state was second in output of pyrites, third in dimension slate, and fifth in crushed and broken slate. Virginia was the nation's sole producer of aplite and one of two states that produced kyanite.

VIRGINIA MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Clays	1,153,000	$ 1,143,000
Coal	26,826,000	130,319,000
Coke	153,828	2,280,945[1]
Lead (recoverable content of ore)	2,934	687,000
Lime	471,000	5,533,000
Manganese ore	8,128	647,000
Natural gas (1,000 cu. ft.)	2,521,000[2]	681,000[2]
Sand and gravel	7,158,000	10,834,000
Stone and slate	15,413,000	27,504,000
Zinc (recoverable content of ore)	18,472	3,808,000
Other minerals	...	25,428,000
Total	...	$203,226,000[3]

[1] Values for processed materials are not included in the total. [2] Preliminary. [3] Total adjusted to eliminate duplication in the value of clays and stone. (Source: U.S. Bureau of Mines.)



WIDE WORLD

(*Left*) Gov. J. Lindsay Almond, Jr., addresses session of Virginia General Assembly on April 6 to support Perrow Commission plan giving localities choice between adopting limited integration and abandoning public schools. (*Right*) "Bill of Rights Crusaders," at state capitol in Richmond on March 31, assemble to protest against school integration.

Agriculture.—Cash farm income for the first nine months of 1959 rose to $277,336,000 from $271,971,000 for the corresponding period of 1958. For the full year 1958, income comprised $260,773,000 from livestock and livestock products, $199,591,000 from crops, and $9,646,000 from government payments. Principal cash sources in 1958 were dairy products, $79,355,000; tobacco, $78,004,000; and cattle, $64,969,000.

VIRGINIA CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	9,220	11,100	10,900
Corn (1,000 bu.)	35,357	40,969	38,410
Hay (1,000 tons)	1,640	2,034	1,783
Peaches (1,000 bu.)	1,315	1,950	1,500
Peanuts (1,000 lb.)	217,107	220,500	194,250
Potatoes (1,000 cwt.)	3,866*	3,747	3,401
Soybeans (1,000 bu.)	3,274	6,052	5,966
Strawberries (1,000 lb.)	8,141*	7,200	7,440
Sweet potatoes (1,000 cwt.)	1,332*	1,700	1,958
Tobacco (1,000 lb.)	158,403	137,678	141,095
Wheat (1,000 bu.)	7,184	6,162	6,462

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

The state had 138,000 farms in 1958. Total acreage (1954) of 14,686,000 included 3,158,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 1,367,000 cattle, 670,000 hogs, 350,000 sheep, and 6,023,000 chickens (excluding commercial broilers). There were 180,000 family and hired workers engaged in farming during the week of Nov. 22–29, 1959.

Transportation and Communications.—State and federal funds disbursed for highways in the 1958–59 fiscal year totaled $221,940,000, and 2,256 miles of new construction were completed.

Highways and roads on Jan. 1, 1958, totaled 55,895 miles (32,954 surfaced). Registered *motor vehicles* numbered 1,352,428 on July 31, 1959, including 1,044,487 passenger cars. There were (1959) 27 *railroads* operating 4,125 line miles; 5 regularly scheduled *airlines;* and 155 *airports and airfields* (68 commercial and municipal, 14 military, 43 private, and 30 other).

Communications media (1959) included 92 AM and 11 FM *radio stations;* 1 UHF and 10 VHF *television stations;* 34 daily *newspapers* (circulation, 269,849) and 114 other newspapers (1,178,045); and (January 1) 340,200 business and 832,300 residential *telephones.*

Principal Events, 1959.—The year was marked by the collapse of Virginia's "massive resistance" to school integration and the recognition that some degree of integration was inevitable. Following the outlawing of the "massive resistance" laws by the highest Virginia and federal courts on January 19, Gov. J. Lindsay Almond, Jr., summoned the General Assembly into emergency session for January 28. The legislature hastily approved the governor's stopgap program to ease the impact of court-ordered integration. He particularly desired to prevent any child from being forced to attend an integrated school. The compulsory school attendance law was repealed, and tuition grants of $250 annually were provided for attendance at private nonsectarian schools. Heavy penalties were provided for threatened bombings of schools, churches, homes, and other buildings. The assembly adjourned on February 2 to reconvene two months later when a special legislative commission would present a long-range program aimed at permitting as little integration as possible.

Shortly after adjournment the governor appointed a commission headed by state Sen. Mosby G. Perrow, of Lynchburg, and made up of four state legislators from each of the 10 congressional districts. Its recommendations, signed by 31 of its members, were made public early in April. In urging the enactment of the entire program, Almond admitted that some integration could not be avoided and that in practice a state "cannot interpose its authority or power between the federal government and the object of a federal law or decree."

The Perrow commission's plan was outlined in 15 bills, and parts of it met sharp opposition from a sizable minority in the legislature. As finally enacted, the program was designed to minimize integration and to preserve public schools. Statewide massive resistance was to be replaced by a "freedom of choice" policy on a local option basis. Localities were enabled to support public schools with limited integration, to abandon public schools, or perhaps ultimately to accept general integration. The $250 tuition grant was also to be used for attending public schools outside the community where the pupil lived, as well as for private nonsectarian schools. A weak compulsory attendance law was to be in force only after affirmative action by the governing body of a locality. The chief controversy centered on the pupil assignment bill. Under a compromise the 1956 state Pupil Placement Act was to remain in effect until March 1, 1960, unless sooner rendered useless by the courts. After that date a locality might vote whether pupil assignments should be made by local officials or by a state board. After this program was enacted, Governor Almond reasserted, in June, the necessity of supporting public schools for the 800,000 children of school age and permitting private schools where public opinion will not tolerate mixed schools.

In the Democratic primary elections to the General Assembly on July 14 the "massive resist-

ance" forces suffered a setback. Almond's "containment" forces showed a gain of 5 or 6 in the Senate and only a slight reduction of their majority in the House.

Segregation was breached quietly and calmly in February when 51 Negroes began attending normally white schools in Alexandria, Arlington, Norfolk, and Warren County. Warren County High School, which normally had 1,000 students, operated the second semester with only 21 Negroes attending. No white pupils enrolled. By October, 86 Negroes were attending 16 schools with approximately 20,000 white students in Alexandria, Arlington, Charlottesville, Norfolk, and Warren County. In all cases the Negroes had been admitted under pressure or direct orders from the federal courts.

In Norfolk, in November, the State Pupil Placement Board was forced to agree to the assignment of four Negroes under threat of consequences for contempt of court. Private schools that had been set up in Charlottesville and Warren County for white children, when public schools in those communities were closed in September 1958, were continued on a more permanent basis in September 1959. In the five localities where integration had occurred, 1,283 pupils were receiving state tuition grants which had been provided as an escape from compulsory integration.

On May 5 the Fourth U.S. Circuit Court of Appeals reversed a district court's decision to delay actual desegregation until 1965 in Prince Edward County and ordered the county to admit Negroes to its high school by September 1959. It was also ordered to make plans to admit Negro pupils to all its elementary schools by "the earliest practical day." A month later Prince Edward County became the first community in the South to close all its public schools, both white and Negro, rather than accept integration. The action obviously had the overwhelming support of its white citizens. In September about 1,500 white pupils attended eight private schools in 16 buildings set up and sponsored by the Prince Edward School Foundation. To avoid possible legal difficulty it was decided not to take advantage of the tuition grants. There were no schools for the county's 1,700 Negro children. Toward the end of the year a group of white citizens planned a system of private schools for Negroes, but Negro leaders urged noncooperation.

In the field of higher education in Virginia, 48 Negroes were attending classes with white students at four state colleges and two church schools.

At the University of Virginia, Colgate W. Darden, Jr., retired as president and was succeeded by 41-year-old associate professor of English, Edgar F. Shannon, Jr. Francis P. Gaines retired after 29 years as president of Washington and Lee University and was succeeded by Fred Carrington Cole, academic vice president of Tulane University. (See also EDUCATION.)

VITAL STATISTICS. See Index entry.

VITAMINS. "Nature put the vitamins in foods; man has been doing a good job in taking them out." This aptly describes the high degree of food refinement currently prevalent. But science, which has unlocked the energy in the atom, has yet to understand how nature puts together in natural foods the vitamins necessary for utilizing such foods.

Antivitamins.—Equally enigmatic is the presence in some natural foods of antivitamins or vitamin antagonists, substances which counteract or antagonize the nutritional effects of vitamins, causing nutritional deficiencies. An example of this phenomenon is the B_1 or thiamine antagonist, found in certain raw fish and identified as the enzyme thiaminase, responsible for a paralysis in fur-bearing animals subsisting on a diet composed largely of raw fish. Pyrithiamine, another thiamine antagonist derived from thiamine, was the first antivitamin to be described (by Wooley in 1940). Since an antivitamin usually has a chemical structure closely resembling that of a vitamin, it can replace or compete with the vitamin biochemically in its specific enzyme systems.

Another classic example of vitamin antagonism is that of folic acid and aminopterin. Their supposedly only slight difference in chemical structure, however, is of profound importance since it has led to some new concepts in the currently active studies of antimetabolites and some new theories on the causes and treatment of certain diseases. In fact, aminopterin is being used with some success in the treatment of childhood leukemia.

Almost every known vitamin may have one or more antagonists, either structurally related or totally unrelated to it. Thus, vitamin A, under certain conditions such as in the cooking of foods, can undergo isomerism, a structural change which reduces its vitamin activity as much as 50%; and pyridoxine, or vitamin B_6, is antagonized by a close relative, desoxypyridoxine. The normal blood coagulation factor, vitamin K, is effectively antagonized by the chemically related dicumarol, the substance present in "spoiled sweet clover hay," responsible for the fatal hemorrhagic disease in cattle eating large amounts of such hay. Also, a number of the water-soluble vitamins can chemically react with each other to reduce their vitamin activity.

A number of investigations have been reported in 1959 into the many chemical substances known to destroy vitamin B_{12}, including the vitamins ascorbic acid and combinations of thiamine and niacin, and some common foods such as glucose. (A lengthy discussion of antivitamins is given in a review on antimetabolites in the March 5, 1959, issue of *Science.*)

Most nutrition specialists believe that a daily supplement of prepared vitamins or a more careful selection of fresh foods in the diet can insure against the losses caused by antivitamins.

New Research.—During the past year, there have been a number of important contributions to our knowledge of the role of the vitamins in health and disease. New work presented by Dr. George Wald of Harvard may well lead to understanding the role of vitamin A in the function of sight and the prevention of night blindness and some types of permanent blindness. The role of vitamin A in reducing incidence of goiter in children and in protecting chicks against an infectious respiratory disease are other highlights.

Further work on the role of B_6 in normal functions of the brain, and the increased requirements of some children for this vitamin was reported from the National Institute of Mental Health. The role of B_6 in reducing oxalic acid excretion is of interest in the study of kidney stone formation. The vital coenzyme A factor in liver is reported decreased in B_6 deficiencies.

The direct role of vitamin B_{12} in prevention and treatment of mental disturbances was reported independently by two hospital research centers,

and the indirect role of this vitamin in protein synthesis was described in reports from the National Institute for Medical Research. A number of studies on the absorption of vitamin B_{12} with and without intrinsic factor were reported during the year, as was the indication that growth-retarded children on an apparently adequate diet can benefit from B_{12} supplementation.

The use of vitamins in massive doses for treating deficiency diseases unresponsive to normal or maintenance dosage is gradually being adopted. This type of therapy, known as "metabolotherapy," is based on the theory that vitamins in large doses have therapeutic effects beyond those known to apply to normal metabolic functions, and thus compare to the action of other known metabolites such as the hormones. This extension of metabolotherapy may well be the beginning of a new "vitamin age."

WAGES AND HOURS. Weekly earnings and hours of work in most nonfarm industries made a strong recovery in 1959 from the depression levels of the previous year. In manufacturing industries, for example, weekly hours had risen to 40.7 in June, a full 1.5 hours more than during the comparable month of 1958. Weekly earnings of factory workers over the same span of months rose from $83.10 to $91.17. An estimated two thirds of the increase in the workweek among factory employees during the first half of 1959 represented overtime work at premium rates which greatly influenced weekly pay.

By October 1959, both earnings and hours in manufacturing industries, especially among those using steel, had receded somewhat, but they were still substantially above recession lows. October earnings averaged $89.06 per week, compared with $85.17 a year earlier (see Table 1). The average, however, concealed the diversity of a range spreading from $56.15 in finished textiles and apparel to $116.35 in petroleum products.

With inclusion of nonmanufacturing industries, the highest average weekly earnings in October 1959 were received by bituminous coal miners ($124.21), although hours worked by them during the month averaged only 38.1. Lowest paid workers were in laundries ($46.96), where hours averaged 39.8. Of the 41 separate industry listings in Table 1 for which data were available, 25 reveal weekly earnings in excess of $90 (including 15 in excess of $100). Each of the 41 showed an increase over October 1958 except nonbuilding

Table 1—AVERAGE WEEKLY HOURS AND GROSS EARNINGS, BY INDUSTRY[1]

Industry group and industry	Average weekly hours in October 1959	Average weekly hours in October 1958	Average weekly earnings in October 1959	Average weekly earnings in October 1958
Mining	41.1	40.0	$109.33	$102.40
Metal mining	40.3	38.7	98.74	98.30
Anthracite mining	30.0	29.7	82.50	77.52

construction (which suffered a reduction in the average workweek of more than 2 hours), primary metals (heavily weighted by the basic steel industry), and the relatively minor group of security dealer and exchange employees.

Average hourly earnings in factories, at $2.21, were at an all-time high for October, and all component major industry groups except primary metals and finished textiles were at similar peaks (see Table 2). Average hourly earnings in 15 of the 21 groups were more than $2. The range was from $1.52 in textiles and apparel to $2.87 in petroleum products.

Table 2—AVERAGE HOURLY EARNINGS IN MANUFACTURING[1]

Industry	Average hourly earnings in month of October			
	1959	1958	1957	1956
All manufacturing	$2.21	$2.14	$2.09	$2.02
Durable goods	2.36	2.29	2.23	2.15
Ordnance and accessories	2.57	2.50	2.38	2.25

Leather and leather products	1.61	1.58	1.55	1.51

[1] For coverage, see footnote 1 to Table 1.

Overtime hours of work in manufacturing underwent an almost steady rise from 2.3 in January 1959 to 3.0 in September, dropping back to 2.9 in October and 2.6 in November. For October and November 1958 the respective figures were 2.4 and 2.6. Exceptionally long hours of overtime work were noted in lumber and wood products (over 3 hours per week in 9 of the first 10 months of the year), paper and allied products (over 4 hours in each of the first 10 months), and rubber products (between 3 and 4 hours in 6 months and over 4 in the remainder).

The growth in overtime work among factory workers in 1959 was only one factor contributing to the high earnings level. Other influences included rate increases negotiated in 1959 or applied during the year as the result of automatic increases agreed to in prior years (see LABOR). Cost-of-living escalator clauses also served to advance wage rates as the Consumer Price Index rose about 2 points between January and November (see COST OF LIVING).

Purchasing power of spendable weekly earnings[1] in manufacturing rose between October 1958 and October 1959. Comparable figures for a worker with no dependent and one with 3 dependents were $57.78 and $63.77 for 1959 and $56.43 and $62.45 for 1958.

LAWRENCE R. KLEIN,
Editor-in-Chief, "Monthly Labor Review."

[1] Gross earnings expressed in 1947–49 dollars after deduction of social security and income taxes.

WAKE ISLAND. A United States possession consisting of a coral atoll and three islets in the mid-Pacific, 2,100 miles west of Honolulu, Hawaii. Area, 3 square miles; pop. (1950), 349. Wake serves as a transpacific airlines stop, and is under the jurisdiction of the U.S. Navy.

WALES. Forming a peninsula extending westward into the Irish Sea, this principality of Great Britain comprises 13 counties (area, including Monmouthshire, 8,006 square miles; 1956 est. pop., 2,607,500). The chief cities (1957 est. pop.) are Cardiff (251,300), Swansea (162,300), Rhondda (106,900), Newport (104,700), and Merthyr Tydfil (59,300). Some 29% of the population speak Welsh (1951). Four fifths of the population live in highly industrialized areas in South Wales given over to steel plants (Wales produces 89% of Britain's sheet steel), tinplate mills, coal mines, chemical works, and factories. Agriculture employs about 80,000 people.

Wales returns 36 members to the House of Commons, and the British cabinet includes a Minister for Welsh Affairs (Baron Brecon, appointed in 1957). The Council for Wales and Monmouthshire advises the government on such matters as the depopulation of rural Wales, unemployment, and other economic questions. The erection of a nuclear power station at Trawsfynydd Lake was sanctioned in 1958. The four colleges of the University of Wales had 5,744 students in 1958–59.

WALNUTS. See NUTS.

WASHINGTON. City, District of Columbia. See DISTRICT OF COLUMBIA.

WASHINGTON. Northwestern coastal state, United States; admitted to the Union, Nov. 11, 1889. The "Evergreen State" ranks 20th in area and 24th in population among the 50 states.

Area and Population.—Area: 68,192 square miles (land, 66,786; inland water, 1,406), divided into 39 counties. Population: (1950) 2,378,963; (est., July 1, 1958) 2,770,000. Urban places with populations above 10,000 (as estimated by the State Census Board for July 1, 1958) are:

Aberdeen	20,250	Pullman	11,650
Bellevue	11,250	Puyallup	11,300
Bellingham	36,600	Renton	15,680
Bremerton	28,700	Richland	21,809*
Everett	35,000	Seattle	575,000
Hoquiam	11,200	Spokane	188,500
Kennewick	13,650	Tacoma	157,500
Longview	23,300	Vancouver	40,500
Moses Lake	11,000	Walla Walla	25,600
Olympia (*capital*)	17,500	Wenatchee	16,700
Pasco	14,000	Yakima	44,000
Port Angeles	11,700		

* 1950 census figure.

Executive.—Chief state officers in 1959:
Governor: Albert D. Rosellini (Democrat)
Lieutenant Governor: John A. Cherberg
Secretary of State: Victor A. Meyers
Treasurer: Harry (Tom) Martin
Attorney General: John J. O'Connell
Auditor: Cliff Yelle
Supt. of Public Instruction: Lloyd J. Andrews

Constitution and Judiciary.—The present constitution went into effect in 1889. The Supreme Court comprises nine justices; chief justice in 1959 was Frank P. Weaver.

Legislature.—The Washington Legislature, comprising a 49-member Senate (in 1959, 35 Democrats and 14 Republicans) and a 99-member House of Representatives (66 Democrats and 33 Republicans), held its regular 60-day session on Jan. 12–March 12, 1959, and a special session on March 13–28. It adopted a record budget of $2 billion for the 1959–61 biennium, including General Fund appropriations of $834 million. Of the latter, $352 million was allocated to public schools (compared with $264 million for 1957–59) and $84 million for higher education. Tax laws were passed to provide $112 million in additional revenue. The state sales tax was raised from 3½% to 4%, the tax on car purchases from 1½% to 2%, the liquor tax from 10% to 15%, and the cigarette tax from 5 to 6 cents per package. Business and occupation taxes were also increased slightly, and a 25% tax was imposed on tobacco products other than cigarettes.

Other major legislation provided for a strict code of ethics for state officials; revamping of the state's budget and accounting systems; increases in salaries of all elected state officials except the governor (Governor Rosellini ve-

toed that section of the bill raising the governor's salary); increases in the debt limits and revenue-raising powers of cities; ratification of the Western Interstate Corrections Compact; establishment of a $1-per-hour minimum wage; and extension of unemployment benefits.

Finance.—In the 1958–1959 fiscal year, state revenue of $680,684,914 comprised $565,087,851 from state tax sources and $115,599,063 from the federal government. State tax sources include a 3⅓% sales tax (raised to 4% in 1959), motor fuel taxes, and licensing. Expenditures of $641,982,266 went chiefly for education, health, welfare, and safety, and highways. Long-term indebtedness on June 30, 1959, amounted to $314,991,000.

Banking.—As of June 10, 1959, the state's 24 national banks had $2,573,913,000 in assets, $1,584,712,000 in demand deposits, and $746,946,000 in time deposits. The 63 commercial banks and 4 mutual savings banks had assets of $747,886,119.18, demand deposits of $148,176,490.60, and time deposits of $487,149,473.13.

Education.—School attendance is compulsory between the ages of 8 and 15, inclusive. Operating expenditures for public elementary and secondary education in the 1957–58 school year totaled $202,741,402 ($354.75 per pupil). These comprised $70,148,525 from local school districts, $123,469,514 from the state, and $9,123,363 from the federal government. Outlays for construction and improvements amounted to $47,042,132, and teachers' salaries averaged $5,044 (high school, $5,302; elementary, $4,914).

WASHINGTON SCHOOL STATISTICS, 1957–58

Type of school	No.	Teachers	Students
Public elementary (1–8)	1,131	11,796	337,069
Public junior high (7–9)	133	3,010	82,339
Public senior high (9–12)	291	4,475	101,751
Junior colleges	10	338	14,908

Note.—College and university enrollment in the 1958–59 school year totaled 57,385.

Public Assistance.—In the 1958–59 fiscal year state and federal expenditures for public assistance (excluding institutional costs) totaled $119,467,808, including $49,187,557 for the aged, $19,963,744 for dependent children, and $6,270,137 for disability assistance. A monthly average of 137,032 persons received assistance.

Labor Force.—The state's labor force totaled 1,108,700 persons in July 1959, including 128,300 agricultural workers. Nonagricultural employment of 805,700 was up slightly over the figure of 795,300 for the previous July and also above the 792,100 average of the 12 intervening months. Of the total 1959 nonfarm force, 28.8% were engaged in manufacturing, 21.4% in trade, and 19.5% in government. Unemployment of 48,500 in July 1959 was well below the July 1958 figure of 65,100. (See also below, *Principal Events, 1959.*)

Manufacturing.—The state's 5,607 manufacturing establishments in 1958 employed an average of 219,306 persons who received $1,191,303,000 in wages. Value added by manufacture (1958) was an estimated $2,168,171,460, and outlays for new plant and equipment (1957) amounted to $236,553,000. Production workers averaged $101.63 for an average workweek of 39.7 hours in August 1959.

MAJOR WASHINGTON MANUFACTURES, 1958

Product or industry	Average no. of employees	Salaries and wages (thousands of dollars)	Value added by mfr.* (thousands of dollars)
Aircraft and parts	65,304	$396,311	$594,447
Lumber and wood products	42,279	201,510	322,416
Paper and allied products	16,803	90,632	290,022
Food and kindred products	27,249	129,074	219,425
Smelting, refining, casting	10,498	66,389	179,250
Chemical and allied products	10,823	73,166	146,332
Printing, publishing, and allied industries	8,202	42,142	71,641
Fabricated metal products	6,407	35,776	60,819
Stone, clay, glass products	4,969	27,398	49,316
Nonelectrical machinery	4,812	27,242	40,863
Ship & boat building & repairs	4,765	26,771	40,156

WIDE WORLD

A section of main highway leading east from Seattle is washed out by the raging Snoqualmie River, November 23. Heavy rains brought severe floods to western Washington.

Mining.—In 1958 Washington ranked 34th among the states in the value of its mineral production, with 0.37% of the national total. It produced the entire United States output of strontium, and was first in aluminum capacity, second in olivine output, and third in peat and byproduct arsenic. Washington ranked fifth in uranium production, with 9 operating mines in 1958, compared with four in 1957.

WASHINGTON MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Aluminum	311,417	$156,376,362[1]
Clay	196,000	183,000[2]
Coal	252,000	1,968,000
Copper	52	27,000
Gold (fine ounces)	...[3]	...[3]
Iron ore, usable (long tons)	4,000	...[3]
Lead	9,020	2,111,000
Peat	34,642	116,000
Pumice and pumicite	...[3]	...[3]
Sand and gravel	24,389,000	20,086,000
Silver (fine ounces)	...[3]	...[3]
Stone	7,837,000	9,991,000
Zinc	18,797	3,835,000
Other minerals	...	24,226,000
Total	...	$ 60,897,000[4]

[1] Value of processed minerals not included in total. [2] Excludes certain clays, value of which is included in "Other minerals." [3] Figure withheld to protect individual company's confidential data. [4] Total has been adjusted to eliminate duplication in value of clays and stone. (Source: U.S. Bureau of Mines.)

Fisheries.—The commercial fish and shellfish catch in the state in 1958 totaled 164,987,000 pounds valued at $25,426,000, including principally salmon (54,363,000 pounds valued at $14,833,000).

Agriculture.—Cash farm income for the first nine months of 1959 was down to $380,098,000 from $399,089,000 for the corresponding period of 1958. For the full year 1958, income comprised $219,166,000 from livestock and livestock products, $353,862,000 from crops, and $6,547,000 from government payments. Principal income sources in 1958 were wheat, $120,071,000; cattle, $78,344,000; dairy products, $76,810,000; and apples, $75,035,000.

The state had 66,000 farms in 1958. Total acreage (1954) of 17,641,000 included 4,343,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 1,178,000 cattle and 5,864,000 chickens (excluding commercial broilers). There were 77,000 family and hired workers engaged in farming during the week of Nov. 22–29, 1959.

WASHINGTON CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	25,951	29,800	23,040
Apricots (tons)	13,310	14,000	14,000
Barley (1,000 bu.)	12,183	22,144	27,066
Beans, dry edible (1,000 bags)	431	1,365	940
Cherries (tons)	21,390	20,400	14,600
Cranberries (bbl.)	53,460	57,300	98,000
Grapes (tons)	33,040	54,000	57,000
Hay (1,000 tons)	1,559	1,646	1,524
Hops (1,000 lb.)	23,193	28,310	30,504
Oats (1,000 bu.)	7,590	6,560	5,695
Peaches (1,000 bu.)	1,492	2,200	2,200
Pears (1,000 bu.)	5,438	4,700	4,350
Peas, dry (1,000 bags)	1,588	1,071	2,190
Potatoes (1,000 cwt.)	7,843*	11,040	10,520
Prunes (tons)	18,130	13,500	21,000
Strawberries (1,000 lb.)	31,512*	39,000	44,800
Sugar beets (1,000 short tons)	551	813	785
Wheat (1,000 bu.)	70,871	69,957	73,323

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

Transportation and Communications.—State and federal spending for highways in 1958 totaled $133,273,148, and 409 miles of new construction were completed.

Highways and roads on Jan. 1, 1959, totaled 59,058 miles (18,244 surfaced). Registered *motor vehicles* numbered 1,398,233 on the same date, including 1,031,078 passenger cars. There were (1958) 17 *railroads* operating 6,023 line miles; (1959) 10 regularly scheduled *airlines;* and (1959) 178 *airports and airfields* (104 commercial and municipal, 12 military, and 62 private).

Communications media (1959) included 79 AM and 9 FM *radio stations;* 10 VHF and 3 UHF *television stations;* 22 daily *newspapers* (approximate circulation, 880,000) and 166 other newspapers (524,899); and (January 1) 315,200 business and 793,200 residential *telephones.*

Principal Events, 1959.—Washington's economic recession halted in the first part of 1959 as employment of the state's largest employer, Boeing Airplane Company, rose to 75,000. However, as the year wore on, a number of developments served to replace the heady optimism with a note of concern. A prolonged machinists' strike, together with the subsequent nationwide steel strike and west coast shipyard strike, checked the improving employment picture. Boeing's employment declined steadily during the year from 75,000 to 58,000 as the company began its shift from the construction of airframes to the design and production of missiles and weapons systems. As a result of these developments, manufacturing payrolls were lower during the second half of 1959 than they were during the comparable period of 1958.

The original plans for Seattle and the state government to stage an international scientific exposition and world's fair in the summers of 1961 and 1962 were revised to limit the exposition to 1962. After the federal government appropriated $9 million to finance the construction of buildings and scientific exhibits, the decision was made to apply to the Bureau Internationale des Expositions in Paris for official authorization of a world's fair. The fair, to be known as the Century 21 Exposition, will be held from April 21 through October 21 in 1962. Land acquisition for the site of the fair was completed during 1959, and 95% of the land had been cleared by the end of the year. The construction of the Century 21 Coliseum was scheduled to begin in January 1960. President Eisenhower will issue invitations to 84 nations to participate in the exposition.

Seattle and state authorities continued to stand each other off on the feasibility of, and location of, a second floating bridge to span Lake Washington. A possible break in the deadlock came when a King County (Seattle) commissioner proposed to pledge a portion of the road funds available to his district as a guarantee to the bond holders who would provide financing of a bridge at Evergreen Point. The legality of such a procedure was being investigated at year's end.

A new floating bridge neared completion across Hood Canal. The 6,470-foot bridge, which will provide a new link between Olympic Peninsula and central Washington, will cost $17,500,000. Constructed of floating concrete pontoons anchored to the floor of Puget Sound, it will be one of the longest floating bridges in the world. (See also BRIDGES.)

Heavy rains and unseasonably warm weather (which melted mountain snows) combined in November to produce the most devastating floods in the history of western Washington. The rampaging Snoqualmie River, high in the Cascade mountains, severed the main arterial highway connecting the Puget Sound country with eastern Washington and the rest of the nation. Coupled with temporary closure of the other passes over the Cascades, the Snoqualmie washout revived interest once again in a proposed all-weather Naches Pass tunnel through the Cascade mountains.

Principal Events by: WARREN W. ETCHESON,
Director, Bureau of Business Research,
University of Washington.

WATCHMAKING. Watch sales in the United States in 1958 amounted to an estimated $595 million. In spite of the recession in the early part of the year, sales were about $20 million greater than they were in 1957. The increase came largely from sales of inexpensive watches sold in large numbers by non-jewelry store outlets.

Of the estimated total of 19 million watches purchased in 1958 by slightly over 11% of the country's population, retail jewelers sold 8,785,366 (45.3%); while discount houses, department stores, catalogue companies, and a wide variety of miscellaneous distributors sold 10,568,971 (54.7%).

Of all watches sold, 10,939,781 (51.8%) were priced at less than $30 retail, and 9,323,556 (41.17%) were priced from $30 up. Of high-quality, jeweled-lever watches, retail jewelers distributed more than 7 million, with gross sales of $397,762,615 (66.78% of the gross value of all watches sold). Total sales of jeweled-lever watches were $470,039,520 (78.91% of the gross value of all sales).

Estimates of 1959 sales were rendered uncertain by three factors: the possible effect of the steel strike on business in the last quarter of the year; the competition between retail jewelers and other outlets; and the possibility that inexpensive, pin-lever watches might supplant more of the jeweled-lever watch market than in preceding years. Despite these factors, it was expected that both unit volume and gross sales would surpass 1958 figures, and that watch sales in the United States would reach at least $600 million.

WEST INDIES. An archipelago extending some 2,500 miles from Florida to the coast of Venezuela, composed of three island groups: Greater Antilles (Cuba, Hispaniola, Jamaica, and Puerto Rico); Lesser Antilles or Caribbees (Virgin Islands, Leeward Islands, Windward Islands, Barbados, Trinidad and Tobago, and the Dutch and Venezuelan islands in the southern Caribbean Sea); and the Bahamas. Politically, the West Indies include three republics (Cuba, the Dominican Republic, and Haiti); Puerto Rico, a self-governing commonwealth in close association with the United States; the Virgin Islands of the United States, a United States possession; and territories of Great Britain (Bahamas, British Virgin Islands, and The West Indies federation), France (the overseas departments of Guadeloupe and Martinique), the Netherlands (Netherlands Antilles), and Venezuela (Margarita Island and several smaller offshore islands). The West Indies federation, which came into being in 1958, includes Antigua, Barbados, Dominica, Grenada, Jamaica, Montserrat, St. Kitts-Nevis, St. Lucia, St. Vincent, and Trinidad and Tobago. (See separate articles on the political components of the archipelago.)

WEST INDIES FEDERATION (officially THE WEST INDIES). Aspiring to membership in the Commonwealth of Nations, this autonomous Caribbean federation, forming a chain of islands extending from the Bahamas to Venezuela (area, 7,996 square miles; pop., 1958 est., 3,165,403), was established Jan. 3, 1958, with 10 members grouped in 5 British colonies as follows: Barbados, Jamaica, the Leeward Islands (Antigua, Montserrat, and St. Christopher–Nevis-Anguilla), Trinidad and Tobago, and the Windward Islands (Dominica, Grenada, St. Lucia, and St. Vincent). The British Virgin Islands (q.v.), in the Leeward Islands, have not joined the federation; provision has been made for British Guiana and British Honduras to do so. Port of Spain, Trinidad, is the seat of government.

Particulars of government, education, trade, and communications in each territory are treated separately below.

Colony	Area (sq. mi.)	Population (1958 est.)	Capital
Barbados	166	236,812	Bridgetown
Jamaica	4,674[1]	1,667,899[2]	Kingston
Leeward Islands[3]	355	129,821	St. John's
Trinidad and Tobago	1,980	801,000	Port of Spain
Windward Islands	821	329,871	St. George's
	7,996	3,165,403	

[1] Colony, 4,411 square miles; Turks and Caicos Islands, 170 square miles; Cayman Islands, 93 square miles. [2] Includes Jamaica, 1,651,493; Turks and Caicos Islands, 7,000; Cayman Islands, 9,406. [3] Excluding British Virgin Islands (area, 67 square miles; pop., 7,600), which are not part of the federation.

Government.—The governor general and commander in chief is Lord Hailes, who took office Jan. 3, 1958. The legislature comprises a nominated Senate of 19 members and an elected 45-member House of Representatives. The colonies are represented in the lower house as follows: Jamaica, 17 members; Trinidad and Tobago, 10; Windward Islands, 8; Leeward Islands, 5; and Barbados, 5. In 1959, party seating in the chamber was: Federal Labour Party, 23; Democratic Labour Party, 19; Grenada United Labour Party, 2; Barbados National Party, 1. Ten ministers (7 from the lower house and 3 from the Senate) form the Council of State; Sir Grantley Adams was elected first federal prime minister on April 18, 1958.

To bring less advanced territories into line with the larger units (Barbados, Jamaica, and Trinidad) in respect to self-government, and thus to move more rapidly to sovereignty for the federation, a number of constitutional changes affecting the Leeward Islands and Windward Islands were agreed upon by British Colonial Secretary Alan Lennox-Boyd and representatives of 7 member territories on June 26, 1959.

Finance.—The federal government's main source of revenue for the first 5 years is a mandatory levy not exceeding BWI$9,120,000 in any one year (the currency unit is the British West Indian dollar, equivalent to U.S.$0.5833). In addition, funds are administered for Colonial Development and Welfare projects formerly handled by the United Kingdom government. Authorized expenditure for 1959 was BWI$10,740,423; Colonial Development and Welfare funds totaled BWI$545,132.

Education.—The University College of the West Indies (chartered in Jamaica on Jan. 10, 1949) is supported by all of the member territories and is seeking full university status by 1963 (see below, *Principal Events*). General education is the responsibility of each member of the federation. In 1959 the federal Ministry of Education actively promoted the training of teachers and administrators for technical schools and workshops.

Defense. —From March 31, 1958, the Jamaica Regiment formed the nucleus of defense forces, these consisting principally of the reconstituted West India Regiment (800 men, all ranks).

Communications.—A number of international airlines serve the region, which has its own inter-island air services. An aggregate of BWI$20 million is being spent by federal territories on the further development of airports. Two ships (a gift of the Canadian government) used by the federal shipping service carried 4,720 persons and over 15,000 tons of cargo during the 12 months from Jan. 3, 1958.

Economy and Development.—From the 17th century, sugar has dominated the agricultural economy of the islands. In recent years, however, such crops as bananas (grown principally in Jamaica and the Windward Islands), coconuts, cotton, tobacco, and citrus fruits have been grown for export. Fishing, forestry, and a thriving tourist industry also are important to the economy.

On Feb. 25, 1959, an agreement was signed at Port of Spain between the federation and the U.S. International Cooperation Administration to provide for the establishment of technical projects in the region. A recently inaugurated U.S. Operations Mission, with headquarters in Trinidad, will administer the agreement.

Principal Events, 1959.—Under a second agreement signed at the federal capital on June 30 between The West Indies and the U.S. International Cooperation Administration, provision was made for a United States contribution toward development of $450,000, distributed as follows: (1) machinery and equipment for the Jamaica Institute of Technology, $100,000; (2) equipment and buildings for two technical institutions to be established in the eastern Caribbean, $200,000; (3) road development in the Windward and Leeward groups, $100,000; and (4) West Indies–American Cooperative Service, $50,000.

A program of Canadian aid to the federation for development purposes has been launched, including a proposed survey of natural resources, beginning with Dominica, where a forest inventory is to be taken and plans laid for water and soil conservation projects.

A Regional Council of Ministers was established at a meeting at Port of Spain on January 12; delegates included representatives of British

Guiana. A conference on revising the constitution was held at Trinidad on September 28–October 7; the delegates reportedly failed to agree on Jamaica's demands for increased representation in the legislature.

In 1959 the federal government opened discussions with unit governments looking to the implementation of the Cato report on the University College of the West Indies, which recommended that the institution should seek to acquire full independent university status by 1963. (Dr. A. S. Cato of Barbados was chairman of a committee appointed in May 1957 to review the policy of the college; its report was submitted to the governor general on Dec. 2, 1958.)

The government initiated plans in 1959 for the establishment of a federal central bank.

Barbados

This most easterly of the Caribbean islands (continuously a British possession since 1605) lies 102 miles east of St. Vincent (Windward Islands). Its population—in density one of the highest in the world—was 236,812 in 1958, of which about 93% was Negro. Bridgetown (pop., 18,650 in 1957) is the capital and chief port. A governor (Sir John Stow, appointed in October 1959) is assisted by an Executive Council, whose members, together with not less than 1 from the 15-member Legislative Council and not less than 4 from the elected 24-member House of Assembly, form the Executive Committee. A cabinet system of government was inaugurated Jan. 2, 1958.

The currency unit is the British West Indian dollar (equivalent to U.S.$0.58). The 1959–60 budget estimated revenue at BWI$23,761,769, and expenditure at BWI$20,723,431.

In 1958–59, there were 116 primary and 4 secondary modern schools (aggregating 39,248 pupils) and 10 grant-aided secondary schools (3,836 pupils); BWI$3,254,840 was spent on education.

Sugarcane is the principal crop. In 1959 some 46,960 acres produced 184,153 tons of sugar, including the equivalent of 4,092,406 wine gallons of fancy molasses. The government-aided fishing fleet caught some 7 million pounds of fish, valued at BWI$1,500,000, in 1958. Besides sugar factories (19 in 1959) there are 7 sirup plants, 3 rum distilleries, 2 iron works, a cigarette factory, and a brewery.

In 1958, total imports were valued (in sterling) at £15,300,000; total exports, at £8,310,000. Imports included foodstuffs, £2,742,212; electric motor vehicles and parts, £896,528; metal manufactures, £529,524; cotton piece goods, £358,262; and paper and paper manufactures, £348,708. Principal domestic exports were sugar, £5,526,681; molasses, £1,010,851; rum, £468,552; margarine, £95,571; sugar confectionery, £50,108; soap, £34,925; lard, £27,976; and building lime, £24,321.

Barbados is served by British West Indian Airways, British Overseas Airways Corporation, Trans-Canada Air Lines, Air France, Linea Aeropostal Venezolana, Pan American Airways, and St. Vincent Government Airways. Nearly 29,440 passengers disembarked in Barbados in 1958.

There are 675 miles of roads, including 578 miles of all-weather roads. By June 1959 there were 36,700 miles of telephone line and 8,440 telephones.

Jamaica

The territory is situated some 90 miles south of Cuba in the Greater Antilles. Under recent United Kingdom parliamentary legislation, the Turks and Caicos Islands and the Cayman Islands are administered separately from Jamaica; orders in council of May 13, 1959, provided increased self-government for both these groups. The population of Jamaica was estimated in 1958, at 1,651,493, most of whom are of Negro stock.

With the coming into effect on July 4, 1959, of the Jamaica (Constitution) Order in Council, the colony attained complete internal self-government within the framework of The West Indies. Under a governor (Sir Kenneth William Blackburne, who took office in 1957), the new constitution provides for a 45-member House of Representatives; a 20- or 21-member Legislative Council (membership in 1959 was 21); a cabinet consisting of the premier and not less than 11 other ministers (of whom not less than 2 nor more than 3 must be members of the Legislative Council); and three parliamentary secretaries to assist cabinet ministers. Most of the reserved powers of the governor have been removed. After a general election held on July 28, 1959, the governor appointed as premier Norman Washington Manley, leader of the (Jamaican) People's National Party and of the Federal Labour Party.

The 1959–60 budget calls for an estimated expenditure of £27,192,841; revenue was estimated at £34,570,971.

In December 1958 there were 707 public primary schools (246,865 pupils), and 36 secondary and high schools (13,200 pupils). There are also 3 rural secondary technical schools for boys and 1 for girls; 5 teacher-training colleges; and a college of arts, science, and technology. Expenditure on education for 1958–59 was £4,332,991. The federal government has now assumed full responsibility for the University College of the West Indies at Mona, St. Andrew, which has faculties of medicine, science, and arts; a department of education; and an affiliated teaching hospital.

Mining and agriculture are basic in the economy. The principal items of export in 1958 were bauxite, 4,799,037 tons (£12,597,482); alumina, 373,108 tons (£9,131,816); sugar (unrefined), 267,461 tons (£9,952,195); and bananas, 5,824,257 count bunches (£5,187,616). Exports (including re-exports) were valued at £47,383,592 in 1958; imports at £64,659,860. In 1958, visitors numbered 169,447 and spent an estimated £10 million in the territory.

Jamaica has 2,644 miles of main roads, and 4,438 miles of parochial roads. The government operates 249 miles of railway. British West Indian Airways and 9 other airlines serve the territory.

Cayman Islands.—Comprised in this island group are Grand Cayman (pop., 7,646 in 1958), on which are Georgetown (the capital; pop., 1,780 in 1958), West Bay, Boddentown, East End, and North Side; Cayman Brac (pop., 1,728 in 1958); and Little Cayman (pop., 32 in 1959). Grand Cayman is situated some 150 miles west-northwest of Jamaica; Cayman Brac lies 79 miles east-northeast of Grand Cayman. Under a new constitution effective July 4, 1959, the islands are administered under the governor of Jamaica by an administrator (Major Alan H. Donald), assisted by an Executive Council of 5 persons, all drawn from the 18-member Legislative Assembly. Free education is provided in 11 elementary schools (average attendance, 650 in 1958); there are 2 private secondary schools. Most of the male population are engaged in seafaring, including turtle fishing off Nicaragua, some 1,500 live turtles being exported to the United States annually. The manufacture of rope from thatch palm is a cottage industry.

There is a growing tourist industry, most visitors coming from the United States. British West Indian Airways and Líneas Aéreas Costarricenses link Grand Cayman with Miami, Fla., Jamaica, and Central America. Cayman Brac Airways provides interisland service. A road improvement project has completed an asphalt highway from West Bay through Georgetown to Boddentown.

Turks and Caicos Islands.—This group (total population in 1958, 7,000), located 450 miles northeast of Jamaica, comprises 30 or more islands (8 inhabited), including Grand Turk (est. pop., 2,000), which is the seat of government and the site of a cable relay station, a guided missile observation post, and a naval facility. Under a new constitution, effective May 13, 1959, an administrator (G. C. Guy) is assisted by a 15-member Legislative Assembly (including 3 official, 3 nominated, and 9 elected members), and by an advisory Executive Council of 5 members (2 official, 1 nominated, 2 elected). Education is free at the 13 government schools (average attendance, 1,239 in 1958). Revised budget figures balanced revenue and expenditure at £170,724 in 1958. Principal exports are salt (produced by solar evaporation), sisal (supplied to Jamaica), crawfish (to Miami, Fla.), and conchs (to Haiti and Miami).

Leeward Islands

This island group, lying north of the Windwards, formed a federation of 4 colonial presidencies until the passage by the British Parliament in 1956 of legislation enabling them to join The West Indies as independent units; all have done so except the British Virgin Islands (q.v.). The population in predominantly Negro.

	Square miles	Population	Capital	
Antigua[1]	170.5	56,777	St. John's	(13,500[2])
St. Kitts-Nevis[3]	152	58,579	Basseterre	(15,000[4])
Montserrat	32.5	14,465	Plymouth	(2,500[2])
Total	355	129,821[5]		

[1] Antigua (108 square miles) and dependencies: Barbuda (62 square miles) and Redonda (0.5 square miles). [2] 1956. [3] St. Kitts or St. Christopher (68 square miles)-Nevis (50 square miles), and dependent Anguilla (34 square miles). [4] 1957. [5] As of Dec. 31, 1958; this total excludes the British Virgin Islands (q.v.).

Sir Alexander Thomas Williams (who took office Feb. 21, 1957) served as governor through 1959. Constitutional reforms applying alike to the Leeward Islands and Windward Islands were adopted June 26, 1959, with effect from Jan. 1, 1960. The office of governor was in either case abolished and its powers transferred to an administrator for each of 7 territories. An Executive Council in each territory, headed by an appointed chief minister chosen from the Legislative Council, was charged with the general control of government and made responsible to the Legislative Council, in which in each case the elected members were to be increased by 2, except in Dominica and St. Vincent (see below, *Windward Islands*).

The unit of currency is the British West Indian dollar (equals U.S.$0.58). Trade is principally with the United Kingdom. In terms of sterling, total imports (including the British Virgin Islands) were £5,370,000; total exports, £2,870,000, in 1958.

Antigua.—An administrator (I. G. Turbott) is assisted by an Executive Council and a 13-member Legislative Council (8 elected members in 1959). Revenue in 1958 was BWI$8,788,351; expenditure, BWI$8,446,009. In 1958 there were 42 primary schools (32 government and 10 private), and 7 secondary schools (4 government grant-aided and 3 private).

The sugar crop in Antigua dropped from 31,985 tons in 1957 to 19,348 tons in 1958, of which 17,086 tons were exported. Rum and molasses were also manufactured. On Barbuda, cotton is the chief crop, of which about 80% is produced by peasant agriculture. The estimated value of total exports in 1958 was BWI$5,198,576; imports, BWI$12,882,144. There are about 64 miles of main roads and 85 miles of secondary roads. Coolidge Airfield, at a United States-leased base, is used by Pan American World Airways, British West Indian Airways, Air France, Leeward Islands Air Transport, and Trans-Canada Air Lines. A 3-story administration building was opened in June 1959, and a new terminal building is under construction.

St. Kitts (or St. Christopher)-Nevis and Anguilla.—The principal instrument of policy is the Executive Council, which includes the administrator (in 1959, Lt. Col. H. A. C. Howard), 2 official members, 1 nominated member, and 4 or 5 members elected by the 14-member Legislative Council (8 elected members in 1959). Revenue in 1958 was approximately BWI$5,692,730; expenditure, about BWI$5,682,909.

In 1958, there were 43 elementary schools (government, 33; private, 9; and denominational, 1) and 5 secondary schools (government, 4; private unaided, 1); the average attendance of elementary schools was 10,100. Chief products of the islands in 1958 were sugar, 39,578 tons (BWI$7,836,031); cotton, 779,841 pounds (BWI-$823,603); molasses, 1,266,259 gallons (BWI$185,411); and salt, 18,637 barrels (BWI$69,351). Exports in 1958 totaled BWI$9,428,093; imports, BWI$11,358,149.

Some 36 miles of light railways are operated by sugar companies on St. Kitts. The aggregate of highways is 79 miles. The colony is served by British West Indian Airways, Leeward Islands Air Transport, and KLM Royal Dutch Airways, using an airport 2 miles north of Basseterre.

Montserrat.—An administrator (A. F. Dawkins) was assisted in 1959 by a 5-member Executive Council and a 9-member Legislative Council (5 elected members). Estimated revenue in 1958 was BWI$2,019,437; expenditure, BWI$2,013,369.

In 1958, primary schools numbered 16 (government, 12; denominational, 2; private, 2), and there was 1 government secondary (senior) school. Pupils in the primary schools totaled 3,329; in the secondary school, 190.

Development projects include banana cultivation, road construction, health clinics, housing, and water supplies. Cotton, tomatoes, carrots, and other vegetables are exported. In 1958, exports totaled BWI$393,672; imports, BWI$1,516,896.

There are about 43 miles of asphalted public roads, and 34 miles of secondary roads. Two passenger vessels serve the colony. Blackburne Airfield on the east coast, opened in 1956, has a total length of 5,000 feet.

Trinidad and Tobago

Lying off the northeast coast of Venezuela, the islands form a colony with an aggregate population estimated at 801,000 at the end of 1958 (Trinidad, 751,700; Tobago, 36,900 in mid-1958). The capital and chief port is Port of Spain (1958 est. pop., 121,150).

The governor is Sir Edward Beetham (appointed Feb. 10, 1955). A cabinet system of government introduced in June 1959 provides for a cabinet of 9 elected ministers and 2 officials, headed by a premier. There is a 31-member Legislative Council, but steps were taken in 1959 to establish a two-chamber legislature and to achieve full internal self-government by 1961.

Government revenue for 1959 was estimated at BWI-$169,967,562, and expenditure at BWI$167,640,400 (the British West Indian dollar equals U.S.$0.58). Enrollment in 422 government and aided primary and intermediate schools was 170,022 in 1958; there were also 155 private primary schools. The 19 government and aided secondary schools and 23 private secondary schools had an aggregate of 17,383 students in 1958.

The third largest producer of crude oil among the Commonwealth countries, Trinidad has 5,256 wells, of which 3,171 were producing in 1958. Production of crude petroleum in 1958 was 5,205,500 tons, compared with 4,797,600 tons in 1957. Imports of crude oil in 1958 amounted to 3,602,473 tons, of which 70% was supplied by Venezuela. Principal agricultural exports in 1958 were (in thousands of pounds): grapefruit, 21,571; cocoa beans, 18,169; bananas, 9,881; oranges, 8,351; and sugar, 1,571,-000 tons. Total exports in 1958 were valued at BWI$393,-539,000 (including BWI$102,385,794 to the United Kingdom); imports, at BWI$412,493,000 (including BWI-$134,947,202 from the United Kingdom). Chief exports by value in 1958 were: petroleum and other mineral fuels, BWI$151.7 million; sugar, BWI$30 million; and cocoa beans, BWI$8.7 million.

Roads aggregate 2,510 miles; there are 109 miles of government railways. A swamp road connecting the Churchill-Roosevelt Highway with Port of Spain was completed in late 1957. Piarco Airport, about 12 miles from the capital, is served by 11 international airlines.

Windward Islands

This group comprises Grenada, St. Vincent, St. Lucia, and Dominica, and forms the eastern barrier to the Caribbean Sea between Martinique and Trinidad. About 95% of the population are Negroes.

Colony	Area (sq. mi.)	Population (1958 est.)	Capital	
Grenada[1]	133	92,000	St. George's	(20,832[2])
St. Vincent	150	81,782	Kingston	(8,171[3])
St. Lucia	233	92,089	Castries	(25,000[4])
Dominica	305	64,000	Roseau	(13,500[4])
Total	821	329,871		

[1] The Grenadines are administered in part by Grenada, in part by St. Vincent; Carriacou (13 sq. mi.; pop., 7,113 in 1949), largest island of the Grenadines, is administered by Grenada. [2] 1956. [3] 1958. [4] 1957 est.

Sir Colville M. Deverell (appointed June 23, 1955) held office as governor through 1959. From Jan. 1, 1960, the governorship was abolished under constitutional reforms applying alike to the Windward and Leeward Islands. Under an administrator in each of the 7 member territories, an Executive Council was made responsible for the general conduct of government. Elected members of the respective Legislative Councils were to be increased by 2 each, except in Dominica and St. Vincent, where they were increased by 3 and 1 members respectively.

The unit of currency is the British West Indian dollar (equals U.S.$0.58). In sterling, the value of total exports in 1958 was £4,870,000; of total imports, £7,-830,000. The aggregate educational enrollment was provisionally estimated in 1958 at 75,900.

Grenada.—Government revenue for 1958 was estimated at BWI$5,041,387; expenditure, at BWI$6,075,068. In 1957, there were 11 government and 43 grant-aided primary schools, with a combined enrollment of 19,487 pupils; and 6 secondary schools.

Total exports were valued at BWI$4,570,750 in 1957, and included cocoa, 23,308 cwt. (BWI$1,387,788); bananas, 568,901 stems (BWI$1,346,148); nutmegs, 3,452 cwt. (BWI$1,046,483); mace, 1,306 cwt. (BWI$601,-520); and raw cotton, 993 cwt. (BWI$57,798). Imports in 1957 totaled BWI$10,629,061, including BWI$4,279,-000 from the United Kingdom. There are 479 miles of roads, of which 256 miles are surfaced. Grenada is served by British West Indian Airways and British Guiana Airways.

St. Vincent.—Revenue in 1958 totaled BWI$6,013,-648 (BWI$1,701,215 from Colonial Development and Welfare funds); expenditure, BWI$5,736,334 (BWI$1,-781,985 on development and welfare projects). Primary schools numbered 50 in 1958 (government, 27; government-aided, 23), and had 19,559 pupils; 4 secondary schools (government, 2; subsidized, 2) had 864 pupils. Two new primary schools have been built since January 1958.

Principal agricultural crops are bananas (35,590,516 pounds exported in 1958, valued at BWI$2,386,210), and arrowroot (8,324,832 pounds exported in 1958, valued at BWI$1,588,766). Coconut production in 1958 from 5,000 acres was 4,892,496 pounds (3,414,162 pounds, valued at BWI$450,083, exported). The value of Sea Island cotton exports (200,211 pounds) was BWI$277,792. Also exported were sugar (1,250 tons), sweet potatoes, peanuts, and other food crops. Imports in 1958 totaled BWI$10,-693,760; exports, BWI$5,766,520. Road mileage aggregates about 426, including 320 miles of graveled roads and 106 miles of oiled roads. Development plans include a deep-water harbor for Kingstown; a new telephone system; and construction of an airfield at Arnos Vale, 2 miles from Kingstown.

St. Lucia.—An increased measure of self-government provided in 1956 for a 9-member Executive Council. The 14-member Legislative Council, reconstituted in 1957 and presided over by the Earl of Oxford and Asquith as administrator, had 8 elected members in 1959.

Revenue in 1958 was BWI$5,193,723; expenditure, BWI$5,285,043. In 1958 there were 51 aided primary schools (17,500 pupils); 1 government school (250 pupils); and 2 aided secondary schools (800 pupils). Government expenditure on primary education was BWI-$635,456 in 1958.

St. Lucia's chief exports in 1958 were sugar (BWI-$1,122,483); bananas (BWI$1,906,075); copra (BWI-$770,328); and cocoa (BWI$253,761). Secondary industries include the manufacture of soap, and the processing of sugar, edible oils, and lime juice. Total exports were valued at BWI$4,284,549 in 1958 (in 1957, BWI$4,608,675). Imports totaling BWI$9,034,106 in 1958 were chiefly flour, machinery, and cotton piece goods.

The colony has 392 miles of roads, and 850 miles of telephone lines. There are no railways.

Dominica.—Constitutional changes announced in 1959 provide for an increase of elected members in the Legislative Assembly from 8 to 11, and a decrease of nominated members from 3 to 2. Government revenue in 1958 totaled BWI$5.1 million, including BWI$1.5 million for Colonial Development and Welfare funds and BWI$1 million for grants-in-aid. There are 47 primary and 4 secondary schools.

Exports in 1958 were valued at BWI$6,721,000, including principally bananas, BWI$3,759,000; lime juice, BWI$1,870,000; lime oil, BWI$539,000; copra, BWI$296,000; and cocoa beans, BWI$206,000. In the first half of 1959, exports totaled BWI$3,021,000; imports were BWI$4,340,000, compared with BWI$3,867,000 for the first six months of 1958. The island has 121 miles of oiled roads, and 258 miles of secondary roads.

DONOVAN ROWSE,
Author and Publicist.

WEST VIRGINIA. South Atlantic state, United States; admitted to the Union, June 20, 1863. The "Panhandle State" ranks 41st in area and 30th in population among the 50 states.

Area and Population.—Area: 24,181 square miles (land, 24,080; inland water, 101), divided into 55 counties. Population: (1950) 2,005,552; (est., July 1, 1958) 1,965,000. Urban places with 1950 populations above 10,000 are:

Beckley	19,397	Morgantown	25,525
Bluefield	21,506	Moundsville	14,772
Charleston[1]	73,501	Parkersburg	29,684
Clarksburg	32,014	South Charleston	16,686
Fairmont	29,346	South Parkersburg[2]	10,808
Huntington	86,353	Weirton	24,005
Martinsburg	15,621	Wheeling	58,891

[1] Capital. [2] Unincorporated.

Executive.—Chief state officers in 1959:
Governor: Cecil H. Underwood (Republican)
Executive Assistant: K. Wayne Swiger
Secretary of State: Joe F. Burdett
Treasurer: Orel J. Skeen
Attorney General: W. W. Barron
Auditor: Edgar B. Sims
Supt. of Free Schools: R. Virgin Rohrbough

Constitution and Judiciary.—The present constitution went into effect in 1872. The highest tribunal, the Supreme Court of Appeals, comprises five justices; president in 1959 was Leslie E. Given.

Legislature.—The West Virginia Legislature consists of a 32-member Senate (in 1959, 23 Democrats and 9 Republicans) and a 100-member House of Delegates (85 Democrats and 15 Republicans). It meets annually commencing the second Wednesday in January.

The 1959 session, which adjourned on March 16, approved General Fund appropriations of $114 million for the 1959–60 fiscal year. To provide $4.5 million in additional revenues, the legislature increased the business and occupational gross receipts tax, tuition fees at state higher institutions, the real estate transfer tax, and license and racing fees. A 1-cent-per-gallon rise in the gasoline tax and increases in automobile registration and license fees and in "road use" tax collections were expected to produce an additional $10 million annually for highways, and road bonds totaling $5 million were authorized.

The legislature also transferred jurisdiction over minors involved in traffic cases from juvenile courts to municipal courts and to justices of the peace, and raised minimum requirements for financial responsibility. A licensing system with an initial charge of $5 was established for vessels of over 5 horsepower, and safety equipment for motorboats was prescribed. The legislature replaced the Planning Board with a 9-member Economic Development Agency, and created a 7-member Water Resources Commission and a Department of Civil and Defense Mobilization. A constitutional amendment providing for the continuance of government in event of an enemy attack was approved for referendum. (See also below, *Principal Events, 1959.*)

Finance.—In the 1958–59 fiscal year, state revenue of $254,671,447 comprised $153,920,464 from state tax sources, $70,960,551 from the federal government, and $29,790,432 from other sources. Tax revenue consisted of $30,964,247 from a 2% general sales tax, $29,607,978 from motor fuel taxes, $17,487,887 from licensing, and $75,860,352 from other sources. Expenditures of $262,004,735 comprised $83,336,001 for education, $52,220,819 for health, welfare, and safety, $86,337,760 for highways, and $40,110,155 for other purposes. Long-term indebtedness on June 30, 1959, amounted to $138,641,000.

Banking.—As of June 10, 1959, the state's 77 national banks had $717,683,000 in assets, $427,486,000 in demand deposits, and $205,358,000 in time deposits. The 107 state banks (June 30, 1959) had assets of $640,546,641.21, demand deposits of $374,934,097.19, and time deposits of $189,141,318.42.

Education.—School attendance is compulsory between the ages of 7 and 16, inclusive. Operating expenditures for public elementary and secondary education in the 1958–59 school year totaled $95,097,926.98 ($222.95 per pupil). Revenues comprised $38,073,608.72 from local school districts, $58,404,749.28 from the state, and $2,748,467.46 from the federal government. Outlays for construction and improvements amounted to $8,866,803.84, and teachers' salaries averaged $3,728.48.

WEST VIRGINIA SCHOOL STATISTICS, 1958–59

Type of school	No.	Teachers	Students
Public elementary (1–8)	2,631	10,432	298,967
Public junior high (7–10)	121	...*	44,447
Public senior high (7–12)	249	6,745	123,566
Private and parochial elementary and secondary	86	593	15,913
Junior colleges	3	69	1,211
Teachers colleges	16	1,338	19,690
Colleges and universities	17	1,362	19,884
Other higher institutions	1	24	374

* Included under senior high.

Public Assistance.—In the 1958–59 fiscal year public assistance expenditures from federal and state funds (excluding institutional costs) totaled $33,861,275.91, including $8,124,497.91 for the aged, $20,742,745 for dependent children, and $3,174,016 for the permanently and totally disabled. A monthly average of 52,566 persons received public assistance.

Labor Force.—Nonagricultural employment on June 15, 1959, was 464,500, compared with 455,600 on the previous June 15 and with the 1958 average of 463,500. Agricultural employment engaged 87,000 workers. Major sources of nonfarm employment in 1959 were manufacturing, 27.8%; trade, 17.8%; and mining, 14%. Registered unemployment of 52,733 on June 30, 1959, was well below the figure of 72,946 for the previous June 30. (See also below, *Principal Events, 1959.*)

Manufacturing.—The 128,684 persons employed in the state's manufacturing establishments in 1957 earned $604,434,000. The value added by manufacture totaled $1,219,525,000, and outlays for new plant and equipment amounted to $263,430,000. Production workers in manufacturing averaged $90.32 for an average workweek of 38.6 hours in August 1959.

MAJOR WEST VIRGINIA MANUFACTURES, 1957

Product or industry	Average no. of employees	Salaries and wages (thousands of dollars)	Value added by mfr.* (thousands of dollars)
Chemicals and products	23,491	$142,209	$438,038
Primary metal industries	25,497	147,533	264,262
Stone, clay, glass products	24,456	104,096	161,552
Food and kindred products	8,295	31,154	68,174
Electrical machinery	3,484	16,515	56,526
Fabricated metal products	7,619	33,050	55,955
Nonelectrical machinery	3,564	20,225	24,634
Transportation equipment	2,561	12,133	22,700

* For definition see footnote 1 in the article *Industrial Production.* (Source: *Annual Survey of Manufactures: 1957.*)

Mining.—In 1958 West Virginia ranked sixth among the states in the value of its mineral output, with 4.54% of the national total. It continued to lead the states in production of coal, and was fifth in coke output. A new plant at Ravenswood began production of aluminum in 1958, bringing the state's aluminum capacity to 72,500 short tons.

Agriculture.—Cash farm income for the first nine months of 1959 totaled $77,548,000, compared with $76,312,000 for the corresponding period of 1958. For the full year 1958, income comprised $91,542,000 from livestock and livestock products (including $26,170,000 from cattle and $24,867,000 from dairy products), $20,011,-

WEST VIRGINIA MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Clays	510,000	$ 1,960,000
Coal	119,468,000	635,201,000
Coke	3,289,537	53,007,575[1]
Natural gas (1,000 cu. ft.)	204,581,000[2]	50,734,000[2]
Natural gasoline (bbl.)	664,690	5,643,000
Petroleum (bbl.)	2,186,000[2]	7,629,000[2]
Petroleum gases (bbl.)	5,607,714	12,806,000
Salt, common	627,000	2,784,000
Sand and gravel	5,253,000	11,729,000
Stone[3]	5,599,000	9,990,000
Other minerals	...	13,104,000
Total	...	$749,784,000[4]

[1] Values for processed materials are not included in the total. [2] Preliminary. [3] Excludes certain stone, value of which is included in "Other minerals." [4] Total adjusted to eliminate duplication in the value of clays and stone. (Source: U.S. Bureau of Mines.)

000 from crops, and $2,090,000 from government payments.

The state had 64,500 farms in 1958. Total acreage (1954) of 7,352,000 included 1,073,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 541,000 cattle, 289,000 sheep, and 2,599,000 chickens (excluding commercial broilers). There were 69,000 family and hired workers engaged in farming during the week of Nov. 22–29, 1959.

WEST VIRGINIA CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples (1,000 bu.)	4,258	5,200	5,700
Corn (1,000 bu.)	8,776	8,305	7,650
Hay (1,000 tons)	982	1,026	933
Oats (1,000 bu.)	1,294	945	1,160
Peaches (1,000 bu.)	616	840	660
Potatoes (1,000 cwt.)	926*	780	770
Tobacco (1,000 lb.)	4,136	3,047	4,000
Wheat (1,000 bu.)	1,111	728	588

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

Transportation and Communications.—State and federal funds spent for highways in the 1958–59 fiscal year totaled $93,700,000, and 1,523 miles of new construction were completed in 1958.

Highways and roads on Jan. 1, 1959, totaled 36,100.05 miles (23,529.3 surfaced). Registered *motor vehicles* numbered 658,967 in the 1958–59 fiscal year, including 479,433 passenger cars. There were (1959) 24 *railroads* operating 3,692 line miles; 6 regularly scheduled *airlines;* and 39 *airports and airfields* (24 commercial and municipal and 15 private).

Communications media (1959) included 52 AM and 7 FM *radio stations;* 7 VHF and 1 UHF *television stations;* 29 daily *newspapers* (circulation, 450,130) and 93 other newspapers; and (January 1) 116,400 business and 380,300 residential *telephones.*

Principal Events, 1959.—West Virginia's business and industry picture was brighter in 1959, darkened only by a continued downward trend in employment in coal mining, the state's main industry. The number of persons so engaged had dropped 10,000 in 12 months by November, and was 16,000 under the 1958 high of 72,100. The effects of mechanization were made apparent by the prediction in December that the 1958 production figure of 115 million tons would be surpassed despite the continued employment decline. This job loss, coupled with direct and secondary effects of the steel strike, put 50,000 West Virginians on public assistance rolls, with one out of every eight citizens receiving surplus food handouts.

By mid-December, however, other facets of the state's business complex showed encouraging signs of recovery from their 1957–58 lows. Despite the steel strike, tax revenues were running less than $1 million under estimates, with both gross sales and consumers' sales taxes ahead of 1958 figures. Overall unemployment, as high as 149,000 in May 1958, was down to 70,000 in October 1959. Also, a budget containing substantial increases in many departments was proposed for the 1960–61 fiscal year. Still to be met was what most observers felt was West Virginia's primary need—an outlay of as much as $850 million for industrial investment.

The 1959 legislative session considered a liquor-by-the-drink tax law, an increase in the 2% consumers' sales tax, a school-aid levy, an income tax, and severance taxes on natural resources. However, it enacted only relatively minor increases, including a rise in the gasoline tax from 6 to 7 cents per gallon (see also above, *Legislature*). Another legislative session faced with the necessity of raising more revenue loomed on the January 1960 horizon. Also facing legislators in 1960–61 will be a report by a constitutional-revision study committee. Sweeping changes in the judiciary, including nonpartisan selection of judges of all courts of record, were reportedly among the proposals.

The year also saw West Virginia plagued by its worst drought since 1930, an unusually hot, humid summer, and the worst polio year since 1954. One of the state's most prominent politicians died in August, 61-year-old John T. Copenhaver, mayor of Charleston and front-runner for the 1960 Republican gubernatorial nomination. The most colorful news event was a stranger-than-fiction kidnaping plot, in which a demented ex-convict held captive a mother and her three children for more than 20 hours, demanding the head of his "worst enemy," a former cellmate, for their release. After a gunfight he was captured by a posse, his prisoners escaping unharmed.

WESTERN EUROPEAN UNION. An international organization for the regulation and coordination of military forces and arms production. The Western European Union (WEU) was established by protocols signed at Paris on Oct. 23, 1954, which came into force on May 5, 1955. An important purpose of the WEU (which supplanted the Brussels Treaty Organization of 1948) was to bring West Germany into the Western defense alliance.

WEU members are Great Britain, France, the Netherlands, Belgium, and Luxembourg (founders of the original Brussels Treaty Organization formed in 1948), and the Federal Republic of Germany and Italy (admitted under the 1954 protocols). Chief WEU organs are the Council (consisting of member nations' foreign ministers or their representatives), the Agency for the Control of Armaments

(Below) View of construction of world's largest steerable radio telescope, being built for the Navy near Sugar Grove, W. Va. Drawing (*right*) shows 600-foot reflector and tracks on which entire structure will rotate.

WIDE WORLD

(responsible to the Council), the Standing Armaments Committee, and the Assembly (composed of representatives of the WEU nations to the Consultative Assembly of the Council of Europe). There are also several committees on social and cultural matters. The permanent secretariat of WEU has its headquarters in London.

At a meeting of the WEU Council in London on Oct. 21, 1959, it was agreed to permit West German manufacture of certain antiaircraft missiles (believed to be the surface-to-air Hawk, and the air-to-air Sidewinder).

WESTERN NEW GUINEA. See NETHERLANDS NEW GUINEA.

WESTERN PACIFIC ISLANDS, British. The principal territories administered by the Western Pacific High Commission are the British Solomon Island Protectorate, the Gilbert and Ellice Islands Colony, and the New Hebrides condominium. Its jurisdiction also extends over the islands of Starbuck, Malden, Flint, Caroline, and Vostok, and over other western Pacific islands not administered by the governor of Fiji, or by Australia, New Zealand, and other nations. The headquarters of the high commissioner (Sir John Gutch) are at Honiara, Guadalcanal Island.

BRITISH WESTERN PACIFIC ISLANDS

Territory	Area (sq. mi.)	Population	Capital
British Solomon Islands Protectorate	11,500	113,000[1]	Honiara
Gilbert and Ellice Islands Colony	369	43,842[2]	Tarawa
New Hebrides (condominium)	5,700	55,713[2]	Vila
Total	17,569	212,555	

[1] Est. 1959. [2] Est. 1958.

British Solomon Islands Protectorate.—Extending over a large ocean area of 375,000 square miles, the southern Solomon Islands constitute a British protectorate, and the northern Solomon Islands lie within the Territory of New Guinea (see PAPUA AND NEW GUINEA, TERRITORY OF). The protectorate includes Guadalcanal, the largest island (area, 2,500 square miles), on which is Honiara, the capital; Malaita, the most populous island (1958 est., 46,000); Florida; Tulagi; San Christobal; Rennell; the New Georgia group; the Santa Cruz Islands; and the northern islands (Santa Isabel, Choiseul, the Ontong Java group, and others). The population consists chiefly of Melanesians (108,000 in 1959).

An Advisory Council of nine Europeans and five natives assists the high commissioner. Tax collection and other local services are provided by some 20 local councils. Estimated revenues in 1959 totaled £1,050,945, and were supplemented by a grant of £434,018 from the United Kingdom; expenditure, £1,471,358. (The medium of exchange is Australian currency.) Education is carried on largely at mission schools, which receive a government subsidy; and there are six government elementary schools (four on Malaita Island, and one each at Honiara and Santa Anna Island), one government secondary school on Malaita, and a teacher and vocational training center on Guadalcanal which was completed in 1959.

The protectorate's exports in 1958 were valued at £A1,825,828; imports, at £A1,646,115. The chief export is copra, which was valued at £A1,481,339 in 1958; other exports are kauri pine and trochus shell (from which pearl buttons are made). Cocoa planted in recent years on Malaiti and the western islands has not been grown in sufficient quantities for export, and copra seed was used mainly in 1959 for replanting. Rice is also cultivated on an experimental basis.

Airfields near the capital which were constructed during World War II are used by Qantas Empire Airways, which supplies a weekly service to Sydney, Australia. A development project to provide better wharfage facilities at Honiara was completed in 1959. The Solomon Islands Broadcasting Service in 1959 installed new transmitters.

Gilbert and Ellice Islands Colony.—Scattered over an area of about 1 million nautical square miles, the colony is administered by a resident commissioner (M. L. Bernacchi). It comprises the following principal islands and groups: the Gilbert Islands (Abaiang; Abemama; Aranuka; Beru; Makin or Butaritari; Little Makin; Kuria; Tarawa, headquarters of the colony and district; Maiana; Marakei; Nonouti; Nikunau or Nukunau; Onotoa; Tabiteuea; Tamania; and Arorae); the Ellice Islands (Funafuti, headquarters of the district; Nanumanga; Nanumea; Niutao; Niulakita or Nurakita; Nui; Nukufetau; Nukulaelae; and Vaitupu); the Phoenix Islands (Birnie, Canton, Enderbury, Gardner, Hull, McKean, Phoenix, and Sydney); Ocean Island; and the Line Islands (Christmas Island, q.v.; Fanning Island, headquarters of the district; and Washington Island). Canton (administrative headquarters of the Phoenix Islands) and neighboring Enderbury have constituted since 1939 an Anglo-American condominium, created for the purpose of administering aviation and communications, including the Canton international airport.

An area of the Pacific Ocean, 900 miles north and south of Christmas Island and 780 miles east and west, was the site of atomic weapons tests conducted by Great Britain in 1957 and 1958.

The colony's ordinary revenue in 1958 was estimated at £A582,555, and recurrent, special, and extraordinary expenditure, at £A553,655. In 1958 there were 18 government primary schools (with 1,137 pupils) and 237 grant-aided mission schools. Tarawa has a government boarding school for boys (enrollment, 120), and a secondary school for girls which was opened in 1959; there is also a technical training school on Ocean Island for boys preparing to work for the British Phosphate Commission. The chief crop is copra, which is raised on Christmas, Fanning, and Washington islands. Copra exports in 1958 totaled 7,590 tons, valued at £A535,091; other exports are phosphate (323,550 tons in 1958) and pandanus fruit. There are about 200 miles of roads, including 40 miles of all-weather roads.

New Hebrides.—Situated about 500 miles west of Fiji and 250 miles northeast of New Caledonia, this Anglo-French condominium consists of 37 islands administered by two resident commissioners (British commissioner, J. S. Rennie; French commissioner, B. M. Favreau), who are responsible, respectively, to the British high commissioner for the Western Pacific Islands and the French high commissioner (who is also the governor of New Caledonia, q.v.). The larger islands include Espiritu Santo, Malekula, Epi, Pentecost, and Efate (Vaté), which contains Vila, the capital (1958 est., 1,900). On Dec. 28, 1959, a cyclone reportedly destroyed much of Vila and caused severe crop damage in the New Hebrides.

Condominium revenue in 1958 (in sterling) was £510,596; expenditure, £494,352. In 1957–58, British service revenue totaled £A10,734, and expenditure, £A108,631; in 1957, French service revenue was £A222,000, and expenditure, £A234,000. Education is provided by 22 British and 15 French mission schools, and by 3 French government and 1 British government-built school. Principal products are copra, coffee, cocoa, kauri timber, sandalwood, and frozen fish. In 1958, exports totaled £2,218,552 (of which £1,665,380 went to France), and imports were valued at £1,463,580 (of which £763,500 was supplied by Australia).

WHOLESALE SELLING. Sales of United States wholesalers in the first six months of 1959 rebounded sharply from their recessionary level in the corresponding period of 1958. Wholesalers' total sales in the first half of 1959 were $71 billion, or 14% higher than in the first half of 1958, and the largest volume ever recorded. With overall wholesale prices showing a high degree of stability in 1958 and 1959, the physical volume of goods passing through distributive channels was also at a peak rate.

The book value of wholesalers' inventories in mid-1959 totaled $12.4 billion, about $600 million more than their mid-1958 value.

Wholesale establishments dealing primarily in durable goods reported sales of $26.7 billion in the first six months of 1958. The relatively greater sales increase registered by dealers of durable goods than that posted by dealers of nondurable commodities is the typical experience in a period of rapidly rising economic activity.

Among durable goods dealers, the largest relative sales gain from early 1958 to early 1959 was registered by metal distributors. Their sales increase of more than 50% was attributable both to the sizable recovery in business activity and to a substantial amount of inventory building in anticipation of midyear work stoppages in steel and in some nonferrous metals. Dealers in scrap metals posted a 30% increase in sales during this period.

Lumber dealers and construction materials wholesalers experienced a sales increase of 33% during the first half of 1959, a reflection of the peak rate of building activity in this period. Ma-

chinery and equipment distributors' sales were up about 17% as business machinery investment began to recover slowly from the reduced levels of the 1958 recession.

Suppliers of consumers' hard goods, automotive parts and accessories, furniture and homefurnishings, and hardware reported sales advances of about 17% from average sales for the first six months of 1958 to the average for the first six months of 1959. Sales by distributors of electrical and electronic appliances increased 14%.

Wholesalers' sales of nondurable goods totaled $44.3 billion in the first half of 1959—an increase of $3.5 billion, or 9%, from the corresponding period of 1958. This rise represented an all-time high in activity.

Although food prices decreased about 5%, food wholesalers increased their dollar sales by 4% in the first half of 1959. Grocery sales rose moderately, and sales of meat and meat products were up substantially. Wholesalers' sales of poultry and poultry products and of fresh fruit and vegetables both declined somewhat in this period.

WHOLESALERS' SALES, 1957–59
(In millions of dollars)

Category	Full year 1957	Full year 1958	First 6 months 1958	First 6 months 1959
All wholesale trade	135,237	133,163	62,536	71,044

Coal	1,280	1,017	519	467
Farm supplies	1,441	1,492	807	891

[1] Totals include data for some kinds of business not shown separately. (Source: U.S. Department of Commerce.)

Coal wholesaling was the only other major trade to experience a sales reduction from the first six months of 1958 to the corresponding months of 1959. Among the other soft-goods lines, wholesalers of industrial chemicals, clothing, and dry goods had the largest relative gains (more than 20%). Suppliers of paper products, drugs, and beer had sales advances of about 10%.

Chief, Business Structure Division, Office of Business Economics, U.S. Department of Commerce.

WILDLIFE. See FISH AND WILDLIFE SERVICE.

WINDWARD ISLANDS. See WEST INDIES FEDERATION.

WINE. United States Production.—A California grape crop larger than normal, but a wine production slightly less than the previous year's, were in prospect for 1959. A worldwide shortage of raisins, induced in part by 1958's rain-shortened crop in California, saw a larger than average tonnage of grapes utilized for raisins in 1959.

The California grape season was early as a result of a mild winter and spring and of good summer growing weather. A favorable sugar-acid balance was achieved and the 1959 wine crop promised to be of outstanding quality.

The December 1 grape forecast estimated the 1959 California grape crop at 2,950,000 tons and the total United States grape crop at 3,228,350 tons. This meant that the California crop was 7.62% above the 1958 yield of 2,741,000 tons and 10.66% above the 10-year (1949–58) average. The national grape crop was 5.68% above 1958 and almost 12% above average.

As a result of the early season in California, the grape crush reached 1,387,410 tons by late December, or near completion. The indicated total for the season in California was approximately 1,400,000 tons, from which a gross wine production of from 138 million to 143 million gallons could be expected, compared with 146,675,000 gallons in 1958. Production in the earlier year had been larger than in 1957 or 1956 and approached the 1955 yield of more than 147 million gallons. The 1958 gross consisted of 44,446,000 gallons of red and white table wines and 102,229,000 gallons of dessert and *apéritif* wines. Beverage brandy production in California totaled 3,500,000 gallons in the 1958 fiscal year and promised to show an increase during the 1959 fiscal year.

California wine shipments through November were running ahead of average and were slightly ahead of those of the first eleven months of 1958. In the like 1959 period, 112,441,391 gallons of California wine had been shipped into distribution channels. This was 1.46% more than the five-year (1954–58) average and 1.50% more than in the comparable period of 1958. Shipments of California wine for the entire 12 months of 1958 reached a total of 122,463,134 gallons.

Distribution of all wines (California, other states, and foreign) reached a new high of 154,633,000 gallons in 1958. Of this total, California wine accounted for 79.1%.

It appeared probable that the 1959 gross wine production in California, lower than the preceding year but still greater than for any other vintage since 1955, would enable orderly replenishing of inventories of aging reserves. The latter had until 1958 undergone recent sharp declines. California inventories totaling 207,241,356 gallons at the end of August were 9.68% above the total of 188,954,682 gallons a year earlier. The increase of wine inventories in the United States was 9.49% from 211,402,447 gallons in October 1958 to 231,462,397 gallons in 1959.

World Production.—World wine production in 1957 (exclusive of that for the USSR) was calculated by the U.N. Food and Agriculture Organization at 4,674,736,000 gallons. Production for principal countries outside the United States was; France, 886,340,570; Italy, 1,129,108,110; Spain, 461,098,960; Algeria, 406,117,690; and Portugal, 254,454,380.

DON W. MCCOLLY,
President, Wine Institute, San Francisco, Calif.

WINNIPEG. The capital of Manitoba, Winnipeg is the fourth most populous city in Canada. The city proper has a population of 255,093 (1956 census), and Greater Winnipeg, 409,121 (1959 est., 420,000). With an area of 15,535 acres of land and 465 acres covered by water, the city lies at an altitude of 760 feet, and is situated at the confluence of the Red and the Assiniboine rivers.

The city government is carried on under a special provincial charter of incorporation, granted in 1873 and subsequently revised and consolidated. The City Council comprises a mayor (elected at large) and 18 aldermen (3 elected annually from each of the three city wards),

all serving 2-year terms. Elections took place on Oct. 28, 1959. The mayor, Stephen Juba, was re-elected to a 2-year term in 1958.

Greater Winnipeg is the industrial center of the Prairie provinces of Canada. Its manufactures include flour milling and other food processing, printing and publishing, and the manufacture of railway rolling stock, clothes, malt products, furniture, and jute, cotton and fur goods. (The total selling value of the metropolitan area's factory shipments in 1957 was estimated at $545,950,000.)

Winnipeg is served by the Canadian Pacific and the Canadian National railways, which have western headquarters in the city, and by the Soo Line, Great Northern, and Northern Pacific railroads, which connect with the United States. Trans-Canada Air Lines and Transair Limited offer intra-Canadian air connections; Northwest Orient Airlines from the United States also serves the area. Winnipeg Transit Commission operates a Greater Winnipeg bus service. There are four radio stations and one television station in Winnipeg, as well as one French-language radio station in adjoining St. Boniface.

Winnipeg's building boom continued through 1959. Although the number of building permits was lower, the total value was $12 million higher than in 1958. Most of the increase was in the industrial-commercial and public building fields. Nonresidential buildings include a $20 million expansion at the University of Manitoba for housing the faculties of commerce, education, and pharmacy. Construction also includes a residential college for the faculty of arts and science, and a new wing to Grace Hospital.

The Great West Life Assurance Company, which has its head office in Winnipeg, now occupies new quarters to accommodate a staff of approximately 1,000. The zoo at Assiniboine Park was enlarged, and a Children's Zoo, containing small farm animals, was added.

Winnipeg supports a symphony orchestra and a ballet, and has the Winnipeg Theatre Centre, a summer theatre, and the outdoor Rainbow Stage Theatre. The annual Musical Festival is the largest in Canada. The Canadian trials for the Pan-American Games were held at Sargent Park during the summer of 1959.

The Greater Winnipeg Investigating Commission's report on a metropolitan system of government was released in 1959, although no action will be taken on its recommendations until 1960. The services to be immediately considered for amalgamation under a metropolitan council include education, sewage and water, transportation, public welfare, power, and assessment and taxation.

MARJORIE MORLEY,
Manitoba Provincial Librarian and Director of Library Services.

WISCONSIN. North Central state, United States; admitted to the Union, May 29, 1848. The "Badger State" ranks 26th in area and 14th in population among the 50 states.

Area and Population.—Area: 56,154 square miles (land, 54,705; inland water, 1,449), divided into 71 counties. Population: (1950) 3,434,575; (est., July 1, 1958) 3,935,000. Towns (defining civil divisions) and urban places with populations above 10,000 (as estimated by local officials for the State Board of Health for 1958) are:

Appleton	44,000	Menasha	12,385[1]
Ashland	11,150	Menomonee Falls	14,000
Beaver Dam	13,000	Milwaukee	799,100
Beloit	36,000	Mt. Pleasant town	11,339[1]
Chippewa Falls	11,551	Neenah	19,000
Cudahy	17,560	Oshkosh	45,000
Eau Claire	38,260	Racine	83,600
Fond du Lac	33,500	Sheboygan	46,000
Glendale-Bayside	11,580	Shorewood	18,570
Granville town	11,784[1]	South Milwaukee	18,630
Green Bay	63,500	Stevens Point	17,000
Greenfield	17,070	Superior	35,325
Janesville	24,899[1]	Two Rivers	13,000
Kenosha	60,000	Watertown	12,500
La Crosse	50,000	Waukesha	28,000
Lake town	18,956[1]	Wausau	32,927
Madison (*capital*)	122,600	Wauwatosa	59,310
Manitowoc	33,000	West Allis	68,740
Marinette	14,178	Whitefish Bay	18,700
Marshfield	14,600	Wisconsin Rapids	16,000

[1] 1950 federal census figure.

Executive.—Chief state officers in 1959:
Governor: Gaylord A. Nelson (Democrat)
Lieutenant Governor: Philleo Nash
Secretary of State: Robert C. Zimmerman
Treasurer: Eugene M. Lamb
Attorney General: John W. Reynolds
Supt. of Public Instruction: George E. Watson

Constitution and Judiciary.—The present constitution went into effect in 1848. The Supreme Court comprises 7 justices; chief justice in 1959: John E. Martin.

Legislature.—The Wisconsin Legislature comprises a 33-member Senate (in 1959, 20 Republicans, 12 Democrats, 1 vacancy) and a 100-member Assembly (55 Democrats, 44 Republicans, 1 Independent), which meet in odd-numbered years, commencing the second Wednesday in January. (See below, *Principal Events, 1959.*)

Finance.—Gross General Fund receipts (1958–59 fiscal year), $590,139,232; gross expenditures, $589,740,326; General Fund balance (June 30, 1959), $428,866; and par value of state investments on July 1, 1959, $570,175,963.

Taxation.—State tax revenues in the 1958–59 fiscal year totaled $405,817,379, comprising $48,441,140 from corporate income taxes, $121,170,860 from individual income taxes, $69,363,068 from motor fuel taxes, $47,096,403 from licensing, and $119,745,908 from other state tax sources.

Banking.—As of June 10, 1959, the state's 97 national banks had $2,031,498,000 in assets and $1,834,129,000 in deposits. The state's 459 other banks, including 5 trust companies and 4 savings banks, had assets of $2,368,062,604, demand deposits of $1,062,458,453, and time deposits of $1,106,160,677.

Education.—School attendance is compulsory between the ages of 7 and 16, inclusive, except for certain handicapped children and those attending vocational high schools. Expenditures for public elementary and secondary education in the 1957–58 school year totaled $287,405,924 ($338.39 per pupil). Overall expenditures for public education, including higher education, amounted to $377,018,089. Salaries of public elementary and high school teachers averaged $4,508 (elementary, $4,250; secondary, $4,950).

WISCONSIN SCHOOL STATISTICS

Type of school	No.	Teachers	Students
Public elementary (1957–58)	4,731	17,883	471,817
Public secondary (1957–58)	440	8,408	182,035
County teachers colleges (1958–59)	22	119	1,400
State colleges (1958–59)	10	813	13,686
Evening schools, state-supervised (1958–59)	...	2,556	92,744
Vocational and adult schools (1958–59)	...	1,151	46,360

In the fall of 1958 there were 67,596 students in 62 institutions of higher learning, including the county and state colleges represented in the accompanying table, private colleges, and the University of Wisconsin.

Social Welfare.—Public assistance expenditures from state and federal funds in the 1958–59 fiscal year totaled $59,924,312, including $33,481,637 for the aged, $16,977,667 for dependent children, and $1,726,874 for the disabled; a monthly average of 105,253 persons received public assistance. Expenditures from executive appropriations for public welfare, correctional, and penal institutions totaled $21,149,461.

Labor Force.—The labor force in September 1959 numbered 1,573,600, including 219,900 agricultural workers. Nonagricultural employment totaled 1,160,000, compared with an average of 1,088,200 for the 12 preceding months. There were 33,700 unemployed workers in September 1959, down from 74,700 a year earlier, and the state paid $56,018,970 in unemployment compensation benefits during the 1958–59 fiscal year.

Manufacturing.—During 1958, manufacturing establishments in Wisconsin employed an estimated 311,500 production workers who received $1,419,430,740 in wages. Value added by manufacture in 1957 totaled $4,165,149,000, and investment in new plant and equipment was $310,713,000. Production workers averaged $87.63 for an average workweek of 40.4 hours during 1958. In August

1959 wages were up to $92.17 for a longer (41.4-hour) workweek.

MAJOR WISCONSIN MANUFACTURES, 1957

Product or industry	Average no. of employees	Salaries and wages (thousands of dollars)	Value added by mfr.[1]
Nonelectrical machinery	97,563	$524,666	$967,022
Food and kindred products	64,728	277,625	564,377
Electrical machinery	42,380	208,996	385,875
Pulp, paper, and products	34,780	177,105	387,715
Fabricated metal products	34,529	163,656	310,676
Transportation equipment	31,618	163,015	349,711
Primary metal industries	30,374	162,562	277,325
Lumber and wood products	22,016	70,199	116,911
Printing and publishing	21,816	98,138	167,636

[1] For definition, see text footnote 1 in the article *Industrial Production.* (Source: *Annual Survey of Manufactures: 1957.*)

Mining.—In 1958 Wisconsin ranked 31st among the states in the value of its mineral output, with 0.43% of the national total. The income from Wisconsin's minerals reached a record peak of $71,334,000 in 1958, from a $68,644,000 total in 1957. Crushed stone and sand and gravel for road construction accounted for most of this gain.

WISCONSIN MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Clay	154,000	$ 167,000
Iron ore, usable (long tons)	867,000	...[1]
Lead (recoverable content of ore)	800	187,000
Lime	141,000	2,193,000
Sand and gravel	39,383,000	25,845,000
Stone	13,732,000	23,334,000
Zinc (recoverable content of ore)	12,140	2,477
Other minerals	...	18,109,000
Total	...	$71,334,000[2]

[1] Figure withheld to protect individual company data. [2] Total adjusted to eliminate duplication in the value of clays and stone. (Source: U.S. Bureau of Mines and the Geological Survey of Wisconsin.)

Agriculture.—Cash farm income for the first 9 months of 1959 was down slightly to $812,356,000 from the $845,119,000 received in the corresponding period of 1958. For the full year 1958, income comprised $1,005,467,000 from livestock and livestock products, $112,208,000 from crops, and $19,683,000 in government payments. The principal source of cash receipts in 1958 was dairy products, valued at $556,710,000, including 290,255,000 pounds of creamery butter and 447,003,000 pounds of American cheese. Other chief sources were cattle, $170,547,000; hogs, $142,070,000; eggs, $65,424,000; and corn, $18,423,000. Greenhouse and nursery products yielded $11,486,000.

The state's 153,558 farms (22,507,288 acres; harvested cropland 9,849,700 acres) averaged 146.6 acres and $14,801 in value of land and buildings in 1954. Livestock on farms (Jan. 1, 1959) included 4,254,000 cattle (2,501,000 milk cows), 1,801,000 hogs, and 13,739,000 chickens (excluding commercial broilers). During the week of Oct. 18–24, 1959, there were 276,000 family and hired workers engaged in farming.

WISCONSIN CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Apples, commercial (1,000 bu.)	1,206	1,100	1,340
Barley (1,000 bu.)	4,746	1,914	1,813
Cabbage (cwt.)	1,976[1]	1,920	1,500
Corn (1,000 bu.)	139,836	140,962	181,480
Corn for canning (tons)	290,000	272,800	414,400
Cranberries (bbl.)	256,100	389,000	440,000
Flaxseed (1,000 bu.)	139	105	105
Hay, tame (1,000 tons)	7,614	7,975	9,467
Lima beans for canning (1,000 lb.)	10,840	7,560	8,800
Oats (1,000 bu.)	131,430	153,178	124,224
Peas for canning (1,000 lb.)	255,600	275,660	201,600
Potatoes (1,000 cwt.)	7,231[1]	7,045	6,720
Snap beans for canning (tons)	22,100	30,400	38,200
Tobacco (1,000 lbs.)	24,279	21,788	25,184

[1] 1949–57 average. (Source: U.S. Department of Agriculture.)

Fisheries.—Wisconsin's commercial fish catch on Lakes Michigan and Superior in 1958 was valued at $2,269,537 for 18,634,423 pounds, including principally chubs, herring, perch, and whitefish.

Transportation and Communications.—State and federal funds spent for highways in the 1958–59 fiscal year totaled $104,213,151, and county and local expenditures amounted to $13,032,278. State aid to counties and municipalities for roads totaled $49,507,365.

Highways and roads on Jan. 1, 1959, totaled 97,152 miles, including 66,385 miles of local roads and streets, 19,329 miles of county trunk highways, and 11,439 miles of state trunk highway system. Registered *motor vehicles* numbered 1,569,528 (1958–59), including 1,265,894 passenger cars. In 1959 the state's *railroads* covered 6,197 miles, and there were 7 regularly scheduled *airlines* and 113 *airports and airfields* (70 municipal and 43 private) and 6 seaplane bases.

Communications media (1959) included 78 AM and 23 FM *radio stations* and 16 *television stations;* (1959) 41 daily *newspapers* (circulation, 1958, 1,109,738) and 295 weekly newspapers; and (Jan. 1, 1959) 365,618 business 862,188 residential, and 180,218 rural *telephones.*

Principal Events, 1959.—The legislature met in biennial session on January 14 and recessed on July 25. It reconvened on November 3 to consider matters put over until then for study and to wait for the governor to act on bills passed in the regular session. There were a number of enactments worthy of mention: passage of a group health insurance plan for state employees, with the state paying up to half of the premium but not over $6 per month; revision of the marriage and divorce portion of the statutes into what is now known as the Family Code; and strengthening of the administration of workloads in the state Supreme Court, the circuit courts, the county courts, and the justice courts by the Court Reorganization Act.

The Federal Power Commission granted authority to the Midwestern Gas Transmission Company to build a natural gas pipeline from Canada into Wisconsin. Final action is dependent on approval by the Canadian government of the exportation of natural gas into the United States.

The U.S. Supreme Court appointed Federal Judge Albert Maris of Philadelphia as a special master to investigate and report on the matter of diversion of water from Lake Michigan by the Metropolitan Sewage District of Greater Chicago (see also CHICAGO).

On April 9, Frank Lloyd Wright (q.v.), Wisconsin's world-famous architect, died at the age of 89 in Phoenix, Ariz. He was brought to Wisconsin and buried at Spring Green, near his home, Taliesin East. One of Wright's most controversial projects, the Guggenheim Museum in New York City (See PAINTING AND SCULPTURE) was opened to the public in October.

The Circus World Museum was opened on July 1 at Baraboo, the former winter headquarters of the Ringling Bros.–Barnum & Bailey Circus and of the Ringling family.

Residents of Wisconsin, and particularly those of the southeastern part of the state, were disturbed in early October by the U.S. Air Force's abrupt cancellation of construction of the Richard Bong Air Force Base near Kansasville in Racine County. Plans were being made to make use of some of the $20 million worth of construction which had been finished or partially completed.

ANTON JACOBSON,
Research Associate,
Office of the Attorney General of Wisconsin.

WOLFRAM. See TUNGSTEN.

WOOD. See LUMBER.

WOOD PULP. See PAPER INDUSTRY.

WOOL. The 1958–59 world wool clip reached a peak of 5⅓ billion pounds, greasy basis—42%

above the low 1945–46 clip. In 1959–60 it was expected to be closer to 5½ billion pounds, with flood damages to South American wool clips offset by expanding clips in Australia, New Zealand, and South Africa.

The United States ranks sixth as a wool producer, but must import 40–50% of its apparel wool requirements and all of its carpet wool. A government incentive price program initiated in 1955 is encouraging increased shorn wool production. In 1959, production of an estimated 305 million pounds was 10% higher than the average annual production in 1948–57.

WORLD PRODUCTION OF VIRGIN WOOL
(In millions of pounds, greasy basis)

Country and type	Average 1934–38	Low year 1945–46	1958–59	1959–60 forecast
Major exporting countries:				
Australia	995	936	1,577	1,690
Argentina	376	481	421	434
New Zealand	299	365	540	565
South Africa	261	217	315	323
Uruguay	114	175	175	150
Total above	2,045	2,174	3,028	3,162
United States	470	428	293	305
USSR	219	231	700	750
Other countries	1,054	932	1,311	1,307
Grand total	3,788	3,765	5,332	5,524
Of which:				
Merino (fine)	1,579	1,443	2,200	2,299
Crossbred (medium)	1,265	1,421	1,938	1,998
Total apparel-type	2,844	2,864	4,138	4,297
Carpet type	944	901	1,194	1,227

(Source: Commonwealth Economic Committee.)

The United States is second only to the United Kingdom as a wool consumer, and in 1958 accounted for 12% of total world consumption. The 1957–58 textile recession reduced its wool consumption to 344 million pounds, clean basis, in 1958: 217 million pounds for textiles, 119 million for carpets, and 8 million for other uses. In the first eleven months of 1959, wool recovered faster than other fibers, showing a 33% gain over the comparable period of 1958—27% in apparel wool and 45% in carpet wool. Other major wool-consuming countries have shown similar trends, and 10 of them registered a 17% gain between the first nine months of 1958 and 1959. Wool prices, which had dropped to the lowest level since the end of World War II, started to recover in April 1959 and averaged slightly higher for the year 1959 than for the year 1958.

United States wool imports of 190 million pounds (clean basis) in 1958 accounted for 10% of world wool imports. Apparel wool (dutiable) imports totaled 67 million pounds, of which 77% came from Australia, New Zealand, and South Africa, and 17% from Argentina and Uruguay. Carpet wool (duty-free) imports totaled 122 million pounds, of which 37% came from Argentina and the remainder from a number of other countries, primarily New Zealand, India, and Pakistan. In January–October 1959, imports of apparel and carpet wool combined were nearly double the corresponding 1958 volume.

Recent technical developments have improved wool's competitive position. These include permanent mothproofing and durable creases and pleats on trousers and skirts. Also, government laboratories have been developing commercial techniques for treating wool textiles to make them machine washable.

WORLD HEALTH ORGANIZATION. One of the specialized agencies of the United Nations, the World Health Organization (WHO) in 1959 attained a membership of 90 countries and territories—87 full members and 3 associate members.

The Twelfth World Health Assembly met in Geneva, the organization's headquarters, on May 12–29, when two new members, Guinea and Colombia, were added. A budget of $16,900,000 for 1960 was adopted, including $500,000 for an enlarged research program in which main emphasis will be given to unsolved problems of public health, such as communicable disease. The assembly gave particular attention to international medical research, improved water supplies throughout the world, and smallpox eradication; but the research program also will be devoted to the investigation of factors contributing to the high incidence of heart disease and cancer in many countries.

The assembly recommended that its members give priority to providing their people with safe and adequate water supplies, and that they mobilize all possible resources to further this aim. The assembly also recommended intensive smallpox eradication campaigns.

A world campaign to eradicate still another communicable disease, malaria, was also reviewed. The total cost of this gigantic effort is estimated to be $1,691 million, based on the latest statistics of populations at risk and of the natural population increase expected during the period that probably will be required for the campaign.

The assembly noted that work was progressing well but that funds were lacking to enable WHO to carry out its full responsibilities. Governments, industry, foundations, and others were urged to join the campaign by contributing to the World Malaria Fund.

WHO continued its technical and advisory services during 1959. The central technical services, which mainly originate in Geneva, include the drafting and revision of the International Sanitary Regulations; an epidemiological intelligence service; the drawing up of international classification for uniform registration of disease and deaths in all countries; the standardization of drug specifications; the publication of the *Pharmacopoeia Internationalis,* participation in work for the international control of drug addiction; and research on narcotics, alcoholism, and related topics. WHO publishes documentation on health subjects and on important developments in public health and medicine.

In the various regions, direct assistance was given to governments in 1959, often with the cooperation of the United Nations Children's Fund (UNICEF; q.v.), the United Nations Expanded Program of Technical Assistance, other specialized agencies of the United Nations, and bilateral agencies. Regional activities included the following:

Africa.—The work of the organization, particularly in western Africa, expanded rapidly in 1959. Governments are seeking the advice and assistance of WHO more than ever before, not only to overcome communicable disease but to improve the environment and promote health. To this aim, 117 fellowships were awarded to medical officers and others who could be expected to help strengthen and expand the existing health services.

Considerable progress was made in overcoming the difficulties encountered in carrying out malaria eradication in Africa. Excellent results also were obtained in the eradication of the vector of onchocerciasis in the Belgian Congo and Uganda, and this work is progressing elsewhere. The leprosy campaign made good progress, and of the estimated 2,300,000 cases in Africa more than a million are being treated; the present generation may be the last to suffer from leprosy. WHO was asked to help in several tuberculosis surveys and in several smallpox eradication schemes.

The Americas.—The year 1959 was characterized by continued expansion of a unified program for improvement of health in the Americas. Malaria eradication also received high priority; national commitments in 1959 for this purpose were more than $20 million, while international contributions from all sources were over $11 million. In the Pan American Sanitary Bureau, which acts both as regional office for WHO in the Western Hemisphere and as a secretariat for the Pan American Health Organization, great efforts were made to assist countries to concentrate their efforts on solving health problems, even with the limited technical resources available in the hemisphere. Progress was made in public health administration, environmental sanitation, compilation of health statistics, and maternal and child health services.

Southeast Asia.—Encouraging progress was made in 1959 in communicable disease control and research. The Indian National Tuberculosis Institute was set up in Bangalore, and the first report of the Tuberculosis Chemotherapy Centre in Madras revealed suggestive data about the place of home treatment in the control of tuberculosis. Every country in the region had a malaria eradication campaign by the end of 1959, representing a major advance, and if adequate resources and facilities continue to be forthcoming it should be possible to render a satisfactory account of this costly undertaking. Interest in smallpox control and eradication was renewed, and there were satisfactory developments in the control of leprosy and trachoma. Rural health projects maintained steady progress, and nursing training programs were established throughout the region.

Europe.—There is a growing tendency to seek WHO assistance in solving health problems in the countries of the European region. During 1959 such divergent questions were referred to the Copenhagen office as the revision of national mental health services, health problems arising from the erection of an oil refinery, and a request for emergency assistance in connection with an outbreak of paralysis in Morocco, found by WHO consultants to be due to contamination of cooking oil with triorthocresyl phosphate. (About 10,000 Moroccans were paralyzed, the government reported in November.)

A coordinated effort is being made toward total eradication of malaria from the European continent. An important part of WHO's activity in the European region is concerned with education and training on various levels. The fellowship program was further developed, and Europe continued to be a placement area for graduate students from other regions.

Eastern Mediterranean.—Projects for the control of communicable diseases, begun with WHO assistance, gradually are being taken over by a national staff of the country concerned, and WHO assistance is being diverted to more general programs in public health. Something similar is happening in maternal and child health, and in venereal and communicable diseases.

Education and training covers a wide field, from the training of a single-purpose auxiliary health worker to assistance in highly specialized departments of postgraduate training institutions. Over 300 fellowships were awarded, largely in the field of health organization and services.

In spite of control and eradication measures, 90 million people in the region are exposed to malaria. Moreover, eradication has become even more urgent now that certain countries are developing irrigation schemes, which are also aggravating the bilharziasis problem, a continuing preoccupation of WHO.

Western Pacific.—The general policy of assistance to public health administrations in developing their services was maintained, emphasizing training of health personnel, the control of communicable disease, development of services such as maternal and child health and nursing, and the stimulation of environmental sanitation programs. Progress has been made in malaria eradication, which is placing a heavy load on all governments in terms of money and personnel. The projects in the major yaws areas have continued to progress toward the complete control of the diseases, and in the remaining areas appropriate projects were started or planned. Programs for the preparation of nurses and midwives are now established in most of the countries in the region, and response to recruitment campaigns is improved.

WRIGHT, Frank Lloyd, American architect: b. Richland Center, Wis., June 8, 1869;[1] d. Phoenix, Ariz., April 9, 1959. One of America's great creative geniuses, who in countless ways was the father of modern architectural design, Frank Lloyd Wright exerted an influence that transcends the boundaries of the particular art through which he expressed his radical and invigorating ideas. His grass-roots origins, his romantic individualism, his colorful personality, and the wonderfully spontaneous nature of his genius all contributed to the strong American flavor of his accomplishments. With Wright, the United States for the first time took the lead from Europe in a branch of the fine arts, definitely breaking with the eclecticism which had gained such a hold upon Western taste in the 19th century.

A major clue to the character of Wright's work lies in his family background. He was of Anglo-Welsh stock, and his forebears, rebels in the best sense, immigrated to the United States in search of freedom from outmoded social, economic, and religious customs. His mother's family settled in southern Wisconsin in the 1840's, and it was with this region, the area of his birth, that the future architect was to identify himself throughout his long life.

Because of lack of funds, Wright's formal education was unimpressive, and he owed little to it. Actually, his most valuable learning was what he gained at home: music from his father, simple good taste and perception from his mother. In 1887, after attending the University of Wisconsin, where he worked under Allen D. Conover, dean of the College of Engineering, Wright went to Chicago, armed with little more than family precept and personal ambition. There he served a brief apprenticeship with J. Lyman Silsbee, an unaffected architect from whom he learned the tricks of free-hand drawing, the practical considerations of house plans, and a certain informality of approach which he was never to lose.

Late in 1887, Wright secured a position as draftsman with the firm of Adler & Sullivan. This was one of the decisive moves of his career, for, until 1893, he was closely associated with Louis Sullivan (1856–1924), then the hero of the progressive element among Chicago architects, and the principal founder of what has come to be known as the Chicago School of architecture. In Sullivan's office, in an atmosphere of vigorous protest against cant and conservatism, Wright's innate rebelliousness expanded and found means of expression. Precisely what Wright drew from Sullivan has never been explained, for their styles are demonstrably dissimilar; yet, certainly, both moved in the same direction—toward a new concept of function and free personal expression in American architecture.

Aside from Sullivan, the important outside influence exerted upon Wright was the art and architecture of Japan. First acquired from Silsbee, Wright's taste for things Japanese was confirmed and fortified by the Japanese exhibit at the Chicago Columbian Exposition of 1893. Here he observed construction and designs from a wholly different culture and found them strangely sympathetic to his own attitudes. Into his architectural style he incorporated the Japanese use of the platform and the great overhanging roof, with the space between opening to the outdoors by means of sliding screens. In addition, these inner spaces, strikingly free of fixed, rigid elements, were defined only by simple, straightforward wood and paper partitions. To these elements add Wright's own ideas—the low mass, the cultivated horizontality, the broad low chimneys, his personal geometry of form and ornament, the suppression of wall, and the running bands of casement windows —and there emerges the "prairie house," Wright's first great contribution to architecture.

[1] Since no birth records were kept in Richland Center at the time, the year is in dispute. Wright himself maintained that he was born in 1869; one of his sisters claimed that the year was 1867.

Frank Lloyd Wright (1869–1959)

THE ARCHITECTURAL FORUM

In 1893, Wright began his independent practice, with headquarters in the Chicago suburb of Oak Park, Ill. The following 16 years of his career were highly productive and significant, for they saw the introduction of the "prairie houses" (including the famous Frederick C. Robie house, Chicago, 1909[2]), of which more than 60 were erected, and, in the Larkin Company Administration Building (Buffalo, N.Y., 1905) and the Unity Church (Oak Park, 1907), the materialization of his radical concepts of both religious and public architecture.

After 1909, when he left his first wife and confirmed a liaison with Mrs. Edwin (Mamah Borthwick) Cheney, the wife of an Oak Park neighbor, Wright's considerable reputation, confined largely to the Midwest, turned into notoriety.[3] This date, beginning more than two decades of insecurity and the ebb tide of his initial success, terminated the so-called Oak Park period. From 1909 to 1911 he lived in Europe, and, on his return, settled at Spring Green, Wis., where he began construction of his famous house and headquarters, Taliesin. In 1914, during a visit by Wright to Chicago, a crazed servant murdered Mrs. Cheney, her two children, and several other persons, and set fire to Taliesin. (Wright rebuilt the structure, which was burned a second time in 1925 and again rebuilt.) From 1916 to 1922, the architect spent long periods in Tokyo, where he had been called to design the celebrated Imperial Hotel.[4] For some years after 1922, his professional life, marred by further domestic scandals, seemed to have ended. It was during this time that he found interest and refuge in the Arizona desert, where he built his first "camp," which was later to blossom into his permanent winter headquarters, Taliesin West (1936), in Paradise Valley, near Phoenix.

The striking irony of Wright's career is that, whereas by 1928 he was virtually forgotten in the United States, his fame abroad grew. The first monograph on his work was published in Berlin in 1910, and this book (*Ausgeführte Bauten und Entwürfe*) instantly affected the work of the young pioneers of modern architecture on the Continent. From Wright they acquired a totally new attitude toward the mass-space relationships in architecture. When, in 1932, New York's Museum of Modern Art organized an exhibit of contemporary European architecture, it was essential that some of Wright's designs be included for their historical significance. Thus it was that Wright was rediscovered by his countrymen, and

[2] In all cases, dates of buildings are for years of completion.

[3] In 1890, Wright was married to Catherine Lee Tobin, from whom he was divorced in 1922. Shortly thereafter he was married to Maude Miriam Noel, a sculptress. This marriage was dissolved in 1927. His third wife, Olga (Olgivanna) Lazovich, whom he married in 1928, is the author of *Our House* (1959), an account of her life with the eminent architect.

[4] This building, the subject of much controversy at the time of its construction because of Wright's unorthodox use of the cantilever, successfully withstood the disastrous Tokyo earthquake of 1923.

Some noted examples of the late Frank Lloyd Wright's architectural designs are: (*below*) the research tower of the Johnson Wax Company buildings, Racine, Wis., completed in 1950; (*upper right*) the Frederick C. Robie house in Chicago, completed in 1909; and (*lower right*) "Fallingwater," the Edgar J. Kaufmann house, Bear Run, Pa., completed in 1936.

CORNING GLASS WORKS; THE MUSEUM OF MODERN ART, N.Y.; HEDRICH-BLESSING

that the second half of his career, more phenomenally successful than the first, was inaugurated. Also in 1932, Wright established the Taliesin Fellowship, whereby young architects were privileged to study under him, first at his studio in Wisconsin and, after 1936, at Taliesin West in Arizona. Through these disciples and the numerous commissions which now came his way, Wright's influence became nationwide in scope.

Strangely enough, Wright's effect on the course of modern architecture is neither direct nor specific, for his style is too personal to permit the formulation of precise rules whereby less inventive men can successfully practice. Yet, certainly, virtually unaided he gave birth to a significant development in architectural history. In his designs, Wright, the romantic, the "rugged individual," demonstrated a startlingly fresh interpretation of the relationship between the inner spaces of a building, the fabric which encloses them, and the structure's natural setting. Herein lies the compelling beauty of his creations.

In addition to the buildings mentioned above, Wright's most important designs include the Midway Gardens (Chicago, 1914), the Aline Barnsdall house (Los Angeles, 1920), the Edgar J. Kaufmann house ("Fallingwater"; Bear Run, Pa., 1936), the Johnson Wax Company buildings (Racine, Wis., 1938–50), Price Tower (Bartlesville, Okla., 1956), and the Solomon R. Guggenheim Museum (New York, 1959). His published writings include *Modern Architecture* (1931), *Autobiography* (1932; rev. 1943), *Architecture and Modern Life* (with Baker Brownell, 1937), *When Democracy Builds* (1945), *Genius and the Mobocracy* (1949), *The Future of Architecture* (1953), *An American Architecture* (1955), *Testament* (1957), and *Drawings for a Living Architecture* (1959).

GRANT CARPENTER MANSON,
School of Fine Arts, University of Pennsylvania; Author of "Frank Lloyd Wright to 1910: The First Golden Age."

WYOMING. Western state, United States; admitted to the Union, July 10, 1890. The "Equality State" ranks 9th in area and 48th in population among the 50 states.

Area and Population.—Area: 97,914 square miles (land, 97,506; inland water, 408), divided into 23 counties. Population: (1950) 290,529; (est., July 1, 1958) 315,000. Urban places with populations above 7,500 (as estimated by the Division of Business and Economic Research, University of Wyoming, for July 1, 1956, unless another date is given) are: Casper (1957), 35,470; Cheyenne, *the capital*, 35,300; Laramie, 16,900; Rawlins, 8,500; Rock Springs (1958), 11,100; and Sheridan, 11,900.

Executive.—Chief state officers in 1959:
Governor: J. J. Hickey (Democrat)
Secretary of State: Jack R. Gage
Treasurer: C. J. Rogers
Attorney General: Norman B. Gray
Auditor: Mrs. Minnie A. Mitchell
Supt. of Public Instruction: Velma Linford

Constitution and Judiciary.—The present constitution went into effect in 1890. The Supreme Court comprises three justices; chief justice in 1959 was Fred H. Blume.

Legislature.—The Wyoming Legislature (Senate, 27 members; House of Representatives, 56) meets in odd-numbered years, commencing the second Tuesday in January.

At its 1959 session the legislature appropriated $32.5 million for the 1959–61 biennium, including $28.4 million for general operations, and approved tax increase on cigarettes from 3 to 4 cents a pack. Appropriations for education included $11.7 million for the University of Wyoming's building program, $1.25 million for the public school foundation program, $400,000 for community and junior colleges, $75,000 for teacher-training scholarships, and $50,000 for student loans. Other enactments enlarged the state Highway Patrol; raised speed limits on 4-lane divided highways to 70 mph.; created a central purchasing system; proposed constitutional amendments increasing limits on municipal debts and raising tax levy limits for municipalities and school districts; and outlawed trading stamps except for coupons issued by merchants which are redeemable in their own stores. (See also below, *Principal Events, 1959.*)

Finance.—In the 1958–59 fiscal year, state revenue of $104,569,764 included $29,287,000 from state tax sources. Tax revenue consisted of $10,835,015 from a 2% general sales tax, $7,887,625 from motor fuel taxes, $8,263,960 from licensing, and $2,300,400 from other tax sources. Expenditures of $99,247,143 comprised $21,073,000 for education, $10,400,000 for health, welfare, and safety, $37,818,000 for highways, and $29,956,143 for other purposes. Long-term indebtedness on June 30, 1959, amounted to $3,100,000.

Banking.—As of June 10, 1959, the state's 25 national banks had assets of $297,840,000, demand deposits of $179,391,000, and time deposits of $86,986,000. The 27 state banks had $110,673,509.31 in assets, $55,677,778.45 in demand deposits, and $30,794,350.52 in time deposits.

Education.—School attendance is compulsory between the ages of 6 and 16, inclusive. The National Education Association estimated 1959–60 operating expenditures for Wyoming's public elementary and secondary schools to be $31,275,000 ($450 per pupil). Revenue included an estimated $21,500,000 from local school districts, $16,500,000 from the state, and $2 million from the federal government. Outlays for construction and improvements were $10,575,000, and teachers' salaries averaged $4,800 (high school, $5,140; elementary, $4,551).

In the 1959–60 school year there were an estimated 60,200 pupils and 2,495 teachers in public elementary schools, and 18,800 pupils and 1,079 teachers in public secondary schools. College and university enrollment (1958–59) totaled 6,362 students.

Public Assistance.—In the 1958–59 fiscal year public assistance expenditures from federal and state funds (excluding institutional costs) totaled $4,775,068, including $2,651,767 for the aged, $1,082,058 for dependent children, and $394,207 for the permanently and totally disabled. A monthly average of 5,685 persons received public assistance.

Labor Force.—The state's labor force totaled 131,000 on June 30, 1959, including 28,000 agricultural workers. Nonagricultural employment of 103,000 was up from 100,000 on the previous June 30, and also above the 95,900 average for the 12 intervening months. Chief sources of nonfarm employment in 1959 were government, 22.4%; trade, 20.7%; and transportation, communications, and public utilities, 13.3%. Unemployment of 4,250 on June 30, 1959, was below the figure of 6,775 on the previous June 30.

Manufacturing.—The state's 388 manufacturing plants in 1958 employed an average of 7,050 persons who received $32,015,303 in wages. Value added by manufacture (1957) totaled $61,258,000, and outlays for new plant and equipment amounted to $10,426,000. Production workers in manufacturing averaged $90.28 for an average workweek of 37 hours in August 1959. Principal industries are those of petroleum and coal products, which in 1957 employed 2,665 persons, paid $15,033,000 in wages, and added $34,292,000 in value by manufacture; and food and kindred products (1,454; $4,761,000; $11,349,000).

During 1959 the Pacific Power and Light Company built an $18 million addition to its facilities at Glenrock, which will add 100,000 kilowatts of power when the expansion is completed in 1960.

Mining.—In 1958 Wyoming ranked 12th among the states in the value of its mineral output, with 2.24% of the national total. Total 1958 value was up by $17,406,000 over the 1957 figure, chiefly because of an almost 250% increase in uranium ore output and increased petroleum production. The state was first in bentonite (54% of domestic output) and sodium carbonate, and fourth in uranium.

In October 1959, only six months after the start of construction, a $6 million uranium mill, with a minimum daily capacity of 522 tons of uranium ore, began production at Riverton.

WYOMING MINERAL PRODUCTION, 1958
(In short tons, except as noted)

Mineral	Quantity	Value
Clays[1]	1,075,000	$ 9,968,000[1]
Coal	1,629,000	5,820,000
Iron ore, usable (long tons)	557,000	...[2]
Natural gas (million cu. ft.)	121,682[3]	10,221,000[3]
Natural gasoline (bbl.)	2,474,928	5,666,000
Petroleum (1,000 bbl.)	115,572[3]	301,643,000[3]
Phosphate rock (long tons)	124,000	937,000
Sand and gravel	5,333,000	4,760,000
Stone	1,099,000	1,472,000
Uranium ore	651,790	13,286,000
Other minerals	...	16,884,000
Total	...	$369,938,000[5]

[1] Excludes fire clay, value for which is included in "Other minerals." [2] Figure withheld to protect individual company's confidential data. [3] Preliminary. [4] Includes petroleum gases. [5] Total adjusted to avoid duplication in the value of clays and stone. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first nine months of 1959 totaled $87,580,000, compared with $87,116,000 for the corresponding period of 1958. For the full year 1958, income comprised $135,461,000 from livestock and livestock products (including $100,214,000 from cattle and $18,377,000 from sheep), $32,483,000 from crops, and $5,702,000 from government payments.

WYOMING CROP STATISTICS

Crop (and unit of production)	Average 1948–57	1958	Est. 1959
Barley (1,000 bu.)	3,687	3,811	3,696
Beans, dry edible (1,000 bags)	823	1,155	1,036
Hay (1,000 tons)	1,298	1,663	1,394
Oats (1,000 bu.)	3,938	4,408	3,630
Potatoes (1,000 cwt.)	858*	874	728
Sugar beets (1,000 short tons)	451	596	630
Wheat (1,000 bu.)	5,976	8,120	5,517

* Average, 1949–57. (Source: U.S. Department of Agriculture.)

The state had 11,300 farms in 1958. Total acreage (1954) of 34,980,000 included 1,556,000 acres in harvested cropland. Livestock on farms (Jan. 1, 1959) included 1,140,000 cattle, 2,121,000 sheep, and 452,000 chickens (excluding commercial broilers). There were 25,274 family and hired workers engaged in farming during the week of Sept. 26–Oct. 2, 1954.

Transportation and Communications.—State and federal funds disbursed for highways in the 1958–59 fiscal year totaled $36,893,911.90, and 451.9 miles of new construction were completed.

Highways and roads on Jan. 1, 1959, totaled 53,491 miles (5,624 surfaced). Registered *motor vehicles* numbered 206,461 on the same date, including 128,920 passenger cars. There were (1959) 6 *railroads* operating 2,487.95 line miles; 3 regularly scheduled *airlines;* and 130 *airports and airfields* (34 commercial and municipal and 96 private).

Communications media (1959) included 22 AM *radio stations;* 3 *television stations;* 9 daily *newspapers* (circulation, 69,749) and 35 other newspapers (62,994); and (January 1) 37,400 business and 81,100 residential *telephones.*

Principal Events, 1959.—Three Atlas intercontinental ballistic missiles were delivered to Warren Air Force Base near Cheyenne in the fall after completion of launching Site A. Construction of other sites at the base continued in preparation for the arrival of more missiles.

The Wyoming Legislature met in a 40-day biennial session in January and February. Republicans controlled the Senate (16–11), and Democrats, the House of Representatives (30–26). Democratic Gov. J. J. Hickey stressed economy in government and states' rights, themes which were approved by both parties.

The legislature adopted a resolution (mostly backed by Republican members) which prohibited Wyoming from accepting National Defense Education Act funds, unless the Wyoming Board of Education believed (1) that the federal budget was in balance and (2) that the need could not be met with local and state resources. The Board of Education certified that both qualifications were met, but the decision to accept federal aid brought sharp criticism from Republicans and a spirited defense by the Democratic state superintendent of public instruction.

The legislature approved an $11.7 million building program at the University of Wyoming, with most of the money to come from oil royalties from federally owned lands.

Legislative action to outlaw trading stamps (see above, *Legislature*) encountered trouble in the courts, and the issue was awaiting decision in the Wyoming Supreme Court at the end of the year.

Governor Hickey was authorized by the legislature to appoint a commission to study state government reorganization. No money was provided, however, and the governor failed to obtain expected financing from a private foundation.

Agricultural production declined from the previous year owing to a damp spring, which shortened the growing season, and an unusually dry July. All crops except sugar beets and sorghum forage suffered. Winter wheat production dropped below 5 million bushels, which was less than two thirds of the record 1958 crop.

The state's perennial search for industrial development achieved little. In the southwest, however, a new gas plant was completed at Opal, and hopes were raised for a new coke-making plant. Uranium milling capacity was increased somewhat in Fremont County. Oil production exceeded 100 million barrels, as in 1957 and 1958.

The tourist industry flourished, although a series of earthquakes in August caused some damage to roads in Yellowstone National Park and reduced travel to the park. A new tourist attraction, the Gertrude Vandervilt Whitney Gallery of Western Art, a unit of the Buffalo Bill Historical Center in Cody, was dedicated in April. The gallery's collection features painting and other exhibits which record the life of the early West.

Principal Events by: T. A. LARSON, *Head, Department of History, University of Wyoming; Author of "Wyoming's War Years: 1941–1945."*

X-RAY. With the approach of the 65th anniversary of the discovery of X-rays in 1895 by Wilhelm Konrad Roentgen, considerable progress was made in 1959 in various applications of this type of radiation. Although there may not be startling new discoveries or revolutionary changes in equipment, it can never be said that this science has been or is in a static condition.

Therapy and Biological Effects.—Much of the hysterical fear of radiation (which in 1958 extended even to the medical use of X-rays) has now subsided with the realization of its indispensability to medical science. Bone marrow banks now actually permit extensive destruction of leukemic marrow by whole-body radiation, followed by reinjection of normal material. This technique marks one of the spectacular steps forward in cancer treatment. X-ray machines operating at 1 to 25 million volts (and even up to 100 million volts in the largest medical centers) are the heavy artillery in the war on cancer, and are meeting with increasing success. (See also RADIATION.)

Radiation Chemistry.—This probably constitutes the most active area of research with X-rays and related ionizing radiations, especially if the term is meant to include food preservation studies. Remarkable progress in this field was indicated at an international symposium held in the summer of 1959, which agreed that the future of irradiated foods depends on economics, public acceptance, and wholesomeness of product. The occurrence of off-flavor in irradiated beef pasteurized with X-ray doses above 50,000 rads is the subject of especially intensive research; a factor found thus far only in tomatoes completely prevents this radiochemical deterioration. The great interest in ionizing radiations in physics, chemistry, and biology is demonstrated by the fact that the entire September 1959 issue of *Scientific American* was devoted to the latest developments in this field, in an attempt to learn how man can secure the benefits of ionizing radiation while minimizing the dangers.

Irradiated organic materials such as Teflon and polyethylene, both normally colorless and highly resistant to dyes, will combine with solutions of dye-accepting polymers that can be dyed vivid colors, the publication reported. By cross-linking (resulting when the side chains of polymer fragments are joined), irradiation also vastly improves electrical insulation.

Another phase of radiation research involves intensive investigation into the damage to materials (such as metals and semiconductors) caused by high-energy radiation. X-ray diffraction is the principal technique for discovering this damage, which results when a photon of radiation of sufficient intensity, by a simple billiard-ball type of collision, knocks atoms out of their positions in the crystal lattice. Diffraction techniques have been greatly sensitized and perfected in order to detect these vacancies and interstitial atoms. When clear gelatin is subjected to X-ray irradiation, the sugar rapidly separates in spectacular fashion into spherulitic crystals. (The remarkable progress in evaluation of radiation damage is reported in the August 1959 issue of the *Journal of Applied Physics.*)

Crystallography.—With the advent of exotic boron rocket fuels, it is not surprising that inorganic chemists and crystallographers have been thoroughly investigating compounds of boron, formerly an element of almost purely academic interest. One result of this research has been the proving, by diffraction studies, of the existence of the extraordinary oxide B_7O. Mineralogists have tried to outdo each other in studying the structures of complex borates, many of which have been reported to the American Crystallographic Association. The sale of borax increased by 213% in the first six months of 1958.

Equipment.—A Bone Density Center has been established at Texas Woman's University, Denton, by Pauline G. B. Mack. An entirely automatic apparatus which corrects X-ray absorption by bone to a linear exposure curve gives highly quantitative analyses, valuable in bone disease diagnosis, nutrition studies, and research in anthropology and paleontology.

Department of Chemistry, University of Illinois.

YACHTING. See SPORTS, GAMES, AND SHOWS.

YEMEN. An independent state in the southwestern corner of the Arabian Peninsula, Yemen lies between Aden Protectorate and Saudi Arabia and has a short seacoast on the Red Sea. Its area comprises about 75,000 square miles, although the ruler claims most of the territory of Aden Protectorate to his south.

The ruler, Imam Saif al-Islam Ahmed (acceded in 1948), is the spiritual leader of the Zaydi sect of Moslems which makes up about half the population of nearly 5 million. The other half is composed of Ismailis (followers of Aga Khan IV) and orthodox Moslems of the Shāfi'ite group.

Capital cities are San'a and Ta'izz, with populations of 50,000 and 10,000, respectively, but the imam prefers to reside in Hodeida, which therefore serves as a capital when he is in residence. Mocha (Mukha) and Hodeida are the chief ports, the latter presently undergoing considerable modernization and development.

Yemen is a member of the United Nations and the Arab League. On March 8, 1958, an agreement was signed with the United Arab Republic, federating the two states into the United Arab States with Hodeida as the permanent headquarters of the federation.

Although French, Italian, West German, United States, and Czechoslovakian firms have entered Yemen to aid in the economic development of the country, it remains largely underdeveloped. The chief products are wheat, millet, barley, coffee, and a variety of fruits (apricots, grapes, figs, and walnuts), but crops in 1958 were so meager because of drought that in January 1959 the United States agreed to send 15,000 tons of wheat, flour, and animal foodstuffs to alleviate the suffering. In February the Soviet Union also sent foodstuffs to Yemen. In April a joint Yemeni-Egyptian import-export firm and an agricultural company, organized to develop Yemen, were established in Cairo.

Principal Events, 1959.—Yemen objected strenuously in 1959 to the formation of the Federation of the Arab Amirates of the South (see ADEN), and frontier negotiations with Aden Protectorate broke down in April over the question of recognition of the federation. Yemen also charged that the British had attacked El Daleh to seize an Arab sheik who was nationalistic and friendly to Yemen.

A progressive coolness toward President Nasser and the United Arab Republic developed in Yemen as the *rapprochement* between Great Britain and Nasser became a reality in 1959. The imam took steps late in the summer to dismiss Egyptian teachers, financial advisers, engineers, and technicians who had entered the country. He contended that these individuals, along with Communists, were penetrating the country to destroy his regime.

In part, these changes resulted from policies instituted during the summer while the imam was in Italy for medical treatment of arthritis. In his absence, authority was placed in the hands of Crown Prince Saif al-Islam Muhammad al-Badr, who was also deputy prime minister, foreign minister, defense minister, and minister of the interior. In the imam's absence, al-Badr liberalized the life-and-death powers of the ruler, extensively reshuffled army and administrative leaders, and introduced a number of measures to reform the government and the country along lines proposed by "free Yemeni students" educated in more modern Arab lands.

However, army elements mutinied in San'a on May 22 and burned the residence of the director of public security. Al-Badr had removed the police chief and the army commander and had formed an 8-man parliamentary council. He quelled the revolt and arrested nearly 200 soldiers. In mid-August the imam returned from Italy and re-established his control. A number of persons were beheaded, others were mutilated, and the crown prince was placed under house arrest. The imam, in a public address, charged that the rebels had been tools of foreign countries and that he intended to rule Yemen according to Moslem law. Whether the imam would be able to smash completely the reform movement in Yemen was open to question.

Of a more constructive nature was the assistance being rendered in 1959 by the U.S. State Department in the building of a new highway connecting Mocha and Ta'izz to spur trade and agriculture in southern Yemen.

SYDNEY NETTLETON FISHER,
Professor of History,
The Ohio State University.

YUGOSLAVIA. Largest of the Balkan states of southeastern Europe, Yugoslavia has an area of 99,380 square miles and a population of 18,448,000 (June 30, 1959, est.). More than 16 million persons are South Slavs; among these more than 13 million in the central portion speak Serbo-Croatian dialects, about 1,500,000 in the north speak Slovene, and more than 800,000 in the extreme south speak the Macedonian Slavic language. National minorities comprise about 12% of the population (census of 1953); the most important among these are the Albanians, the Magyars, and the Turks.

Belgrade (Beograd), the capital, has a population of 484,600 (1956 est.). Among the larger cities are Zagreb, 405,000; Ljubljana, 143,500; Sarajevo, 139,000; and Skoplje, 149,000.

Government.—Following the seizure of power by the Communists at the end of World War II, a constitution, modeled on that of the Soviet Union, was adopted by the Communist-controlled Constituent Assembly on Jan. 31, 1946, and was amended on Jan. 13, 1953. It provides that Yugoslavia is a federal people's republic consisting of 6 constituent republics.[1] The bicameral National Assembly comprises a Federal Council (including the previous Council of Nationalities) and a Council of Producers, made up of delegates representing various sectors of the economy. A Federal Executive Council has replaced the old cabinet, and the collegial Presidium has given way to the president of the republic. On April 19, 1958, Marshal Tito began his third four-year term as president, having been unanimously re-elected by Parliament.

Despite a façade reminiscent of democracy, the center of political power is to be found in the Communist Party of Yugoslavia, since 1952 called the Yugoslav League of Communists. With a membership approximating 780,000, it imposes its will through the secret police, propaganda, and a welter of "mass organizations," the largest and most far-reaching of which is the Socialist Alliance of the Working People of Yugoslavia.

The administrative division of the country includes, besides the federal and republican bodies, the so-called "people's committees" existing on two levels: communal and district. Drastically reduced in number in 1955, there were in 1957, 100 districts and 1,193 communes. The role of the latter is to be the basic cell of society, a "new social-economic unity."

Religion and Education.—Historically, three religions took root in Yugoslavia. They are, with percentages of the population (census of 1953) affiliated with each: Serbian Orthodox, 41.4%; Roman Catholic, 31.8%; and Moslem, 12.3%. Protestants totaled 0.9%, and 12.3% were reportedly without religious affiliation. Although religious freedom is constitutionally guaranteed, the Communist regime has persistently waged a campaign against all major religious denominations. The main effort has been concentrated to achieve a cleavage between the churches' hierarchies and the rank and file of the priesthood. The official priests' associations, offering some material advantages to their members, were set up in opposition to the churches' main authorities.

In 1956–57, Yugoslavia had (exclusive of similar schools provided for national minorities) 14,113 elementary schools with 1,660,000 pupils; 2,466 secondary schools with 598,500 students; 82 teacher-training colleges with 20,930 students; 1,103 technical schools with 174,500 students; 173 art, music, and dramatic schools with 20,500 students; and 98 institutions of higher learning (including five universities with 51 departments) with a total enrollment of 71,852. Statistical surveys show that while the number of pupils and students is increasing, the physical facilities are deteriorating.

Foreign Aid and Standard of Living.—Since 1950, Yugoslavia has received over $750 million in Western aid (mainly from the United States and exclusive of military assistance), as well as $400 million in long- and medium-term credits. Nonmilitary United States aid consisted essentially of technical assistance, surplus food gifts, and surplus wheat, cotton, lard, tallow, and edible fats to be paid for in Yugoslav currency (U.S.$1 = 300 dinars). To this should be added the fact of renewed Soviet assistance of all sorts which was valued at $465 million in the period between July 1955 and December 1957. Military aid, estimated at between $500 and $900 million since 1950, was brought to a virtual standstill in 1956, pending clarification of Tito's relations with Moscow, and terminated in 1958, after Tito asserted that he no longer needed military assistance. During the first half of 1959 the U.S. Development Loan Fund financed the creation of several plants and projects in Yugoslavia, amounting to $56.5 million.

In spite of all this aid, and as a consequence of a continuous but contradictory economic experimentation, the standard of living of the population remains low. The consumer, earlier plagued by food shortages, found later that with a greater supply of basic foodstuffs the cost of nonedible commodities continued to increase. Discrepancies between wages, salaries, and prices, together with inflationary pressures and housing difficulties in the cities, are basic scourges for large masses of the population.

The record postwar harvest of the year 1959, together with the continuous growth of industrial production, inspires exceedingly optimistic official pronouncements about the rise in the standard of living.

Economic System.—Following World War II, Yugoslavia's Communist rulers nationalized all industry and trade, with virtually no compensation to the owners. Seeking to imitate the Soviet Union, they concentrated on rapid development of heavy industry. At the same time they undertook a strenuous campaign to collectivize the peasants.

Following the conflict with the Cominform (June 1948), Yugoslav Communists felt compelled to modify their economic system, which was based on centralized and bureaucratic planning. After 1950 they introduced the principle of a decentralized economy and the system of worker-management. Henceforth a central Federal Planning Institute had only to propose a general five-year economic plan for the whole country and to supervise its fulfillment, but each enterprise had to determine its own norms as far as production, investment funds, prices, wage scale regulations, and working conditions were concerned. The so-called workers' councils gained general responsibility for operating the enterprises, while a management board, together with the manager, had to administer the work. This system, considered as the essential characteristic of Tito's brand of communism, was devised to stimulate workers' material interests in the progress of their factories, and tried to introduce some elements of free-market economy within an increasingly collectivistic society.

While under the new system the overall industrial production continues to increase (official figures for 1959

[1] Of the total population (1953 census), the six republics have the following percentages: Serbia, 41.3; Croatia, 23.1; Bosnia-Hercegovina, 16.8; Slovenia, 8.6; Macedonia, 7.7; and Montenegro, 2.5.

state an increase of 12% over 1958 in industrial production), it shows some basic weaknesses. The first is that the theoretically autonomous workers' councils are actually dominated by their Communist members, who control at the same time the trade-union organizations. There is waste and idleness in many industries (due in part to grandiose plans which did not take into account the difficulties of importing raw material from abroad), and an increasing pressure from local and sectional interests. Unnecessary investments and a tendency to enlarge the earnings of the workers regardless of the needs of the enterprises themselves, may be included in the list of shortcomings. To remedy such a situation, the National Assembly adopted in October 1959 a "law on social bookkeeping," introducing a new central system of financial control and inspection over the national economy.

Agriculture.—The majority of the population (about 60%) is still engaged in farming. The postwar collectivization limited individual peasants' plots to 10 hectares (1 hectare = 2.471 acres), while about 22% of the arable land was collectivized in 1951. A resolute peasants' opposition forced the regime to retreat and to dismantle a majority of kolkhozes, or collective farms (of some 6,800 collectives existing in 1951, fewer than 1,000 were in operation in 1958). The consequence of these experiments were serious shortages of food from domestic production, and the unprecedented phenomenon that Yugoslavia, before the war a large exporter of wheat, had now to import foodstuffs and other kinds of consumer goods. How greatly this influenced the foreign balance of payments is best shown by the fact that from 1954 to 1958 the imports of food accounted for 70 to 79% of the foreign trade deficit. Earlier neglect by the regime of agriculture is indicated by the fact that in 1952 investments in agriculture accounted for only 4.2% of the capital outlays.

When the primitive collectivization failed (of the 2,375,989 agricultural holdings of all types in 1956, 2,319,709 belonged to private farmers), the regime tried to find other ways to achieve its avowed socialist transformation of agriculture. Besides a sharp political discrimination against peasantry in connection with its representation in "producers' councils," the regime increased investments (18% in 1958) in the remaining socialist sector of agriculture. The latter, composed of larger collective farms and holdings of general agricultural cooperatives which represented only about 15% of cultivated land, was aided by application of modern methods of cultivation and new technological discoveries. The aim is that by its superior productivity the socialist sector should progressively attract and include private farmers. Thus, the Yugoslav Communists hope to implement and adapt Marxist-Leninist ideas to Yugoslav conditions.

Extremely favorable weather conditions contributed to a record postwar harvest in 1959. The production of wheat and rye was officially estimated at about 4 million tons, which is about one fourth more than in 1957 (the year with the highest annual agricultural yields of the postwar period). The average wheat yields for the whole of Yugoslavia were about 18.5 metric quintals per hectare. The production of maize (corn), of sugar beets, and of fruit and vegetables was also greater than in 1957. As a consequence, the authorities estimate that available quantities of grain will satisfy the country's requirements in 1960, so that no wheat need be imported.

Industry.—According to official statistics, production gains in the first half of 1959 were most notable in the chemical, electric, wood, building material, and metal industries, as well as in the production of crude petroleum and ferrous metallurgy. Yugoslav mineral production in 1958 (in thousands of metric tons) was: coal, 1,108; lignite, 17,778; copper ore, 2,268; lead-zinc ore, 1,796; iron, 1,997; bauxite, 733; and crude petroleum, 462.

Foreign Trade.—Total exports in 1958 were valued at $441.4 million (an increase of 12% over 1957), while imports rose to $685 million (an increase of 3.6% over 1957). The United States remained Yugoslavia's principal supplier, as well as the main market for her lead and zinc, which are among Yugoslavia's major dollar-earners. In total imports from Yugoslavia, however, Italy, West Germany, and the Soviet Union were ahead of the United States, while as suppliers the United States was followed by West Germany, the Soviet Union, and Italy. Trade with the Soviet Union, which dropped markedly in 1958, increased again in 1959. Major imports (in terms of value) during the first half of 1959 included machinery and transport equipment, food, raw material, manufactures, chemicals, and fuels. Major exports during the same period were wood products, cattle, shipbuilding, and nonferrous metallurgy.

Principal Events, 1959.—In foreign affairs, the year 1959 (unlike 1958) was marked by the improvement of relations between Yugoslavia and the Soviet bloc. This was especially true in regard to the Soviet Union. Although at the beginning of the year Yugoslav officials and the press reacted vigorously against a paragraph dealing with Yugoslavia in the final resolution of the 21st Congress of the Communist Party of Soviet Union, and also against scornful remarks which Soviet Vice Premier Mikoyan made in the United States concerning Yugoslavia, subsequent altercations between the two Communist countries diminished.

UPI

On his visit to Khartoum, Sudan, in February, President Tito (right) of Yugoslavia demonstrates one of a set of guns he presented Sudanese President Ibrahim Abboud (center). Tito's wife, Mme. Jovanka Broz, looks on at left.

Contrary to many expectations, Soviet Premier Khrushchev, during his visit to Albania in May, took a very conciliatory attitude toward Yugoslavia. Tito reacted in the same way, espousing the general diplomatic line of the Soviet bloc concerning the denuclearization of the Balkans, protesting the installment of missile bases in Italy and Greece, and declaring that the "Balkan Pact has been asleep for many years and we don't intend to stir it up." Later in the year, Tito and the Yugoslav press hailed without reserve Premier Khrushchev's ideas, speeches, and behavior while visiting the United States. In a speech in Montenegro on September 20, Tito declared that relations with the Soviet Union and other eastern European countries were good. This was demonstrated also by the increased volume of trade with the Soviet bloc and the extensive exchange of official visits. It should be added, however, that relations with Communist China and Albania remained cool, and mutual disparagements in the press continued through the year.

It is true that the campaign against Yugoslav Communist "deviation and revisionism" continued in the Soviet and satellite press. Its tone, however, was markedly less offensive than in 1958, and the Yugoslav leaders continued to stress their fidelity to Marxism-Leninism. This easing of relations was particularly emphasized in the flood of public meetings and speeches celebrating the 40th anniversary of the foundation of the Yugoslav Communist Party.

Again in the field of foreign relations, the year was marked by an extraordinary exchange of contacts. Between December 1958 and March 1959, Tito visited many Asiatic and African countries (Indonesia, Burma, India, Ceylon, Ethiopia, Sudan, United Arab Republic), as well as Greece, and stressed everywhere his conception of a peaceful solution of international problems, active coexistence and nonparticipation in world blocs. Later in the year, Deputy Chairman Edvard Kardelj visited Scandinavian countries, while a "mission of good will" toured 10 states of Central and Latin America. In October, Foreign Minister Koča Popovich visited Cuba and relations between the two countries seem to have become quite close.

In a lighter vein, audiences in Belgrade and

Zagreb warmly applauded Leonard Bernstein and the New York Philharmonic during their visit on September 23–24.

On the parliamentary level, several legislative measures were introduced, increasing the collectivist aspects of social life. A law nationalizing apartment houses and building lots was voted on Dec. 25, 1958. Measures to implement this law, as well as those dealing with the suppression of private medical practice, followed. In May 1959 a drastic increase in tariffs on merchandise which citizens import or receive from abroad discriminated against families receiving aid from exiled relatives.

In internal politics, celebration of the party's anniversary and congresses of local Communist parties in all six federal republics emphasized again the monopoly of political power the Communists enjoyed. In May, however, an unexpected event occurred. Massive students' demonstrations in Zagreb and Skoplje, allegedly to protest against bad conditions in students' restaurants, caused a long and angry commentary by Tito. This students' protest and the continuous flow of refugees from the country are indicative of popular dissatisfaction with the Communist regime.

MILORAD M. DRACHKOVITCH,
Visiting Assistant Professor of Political Science, University of California, Berkeley.

YUKON TERRITORY. The Yukon Territory, comprising the northwestern part of the mainland of Canada, is bounded on the north by the Arctic Ocean, on the east by the Northwest Territories, on the south by British Columbia, and on the west by Alaska. Its area is 207,076 miles, and its population, 12,190 (1956 census). Whitehorse (1957 pop., 2,570) is the capital; Dawson (851) and Mayo (240) are the principal towns.

Government.—The government of the Yukon Territory is administered by a commissioner (F. H. Collins, appointed June 15, 1955) and an elective council of five members having a three-year term. The commissioner acts under instruction from the governor-in-council or from the minister of northern affairs and national resources. The territory is represented in the federal Parliament by one member (Erik Nielsen, a Conservative, re-elected in 1958).

Finance.—Revenue for the fiscal year ended March 31, 1959, totaled $2,375,000; expenditures amounted to $2,638,640.

Education.—In the 1957–58 academic year the territory's 16 schools had an enrollment of 1,953 pupils and employed 76 full-time and 3 part-time teachers. Expenditure for education totaled $566,086 in 1958.

Production.—Mining is the chief industry. Preliminary production figures for 1958 were: gold, 83,849 fine ounces; silver, 6,866,755 fine ounces; lead, 23,377,311 pounds; zinc, 18,709,330 pounds; cadmium, 228,082 pounds; coal, 4,344 tons. The total value of mineral production was estimated at $12,300,000. Trapping provides a livelihood for some residents of the territory, the chief fur-bearing animals being squirrel, beaver, and muskrat. Fur pelts taken in the 1957–58 season numbered 63,342 and were valued at about $109,000.

Transportation and Communications.—An all-weather gravel highway connects Keno, Elsa, and Mayo with the Alaska Highway and Whitehorse. Ore concentrates are hauled over this road from Elsa mines for shipment to the smelter at Trail, British Columbia. An all-weather road from Stewart Crossing on the Keno-Whitehorse highway leads to Dawson, and a summer road connects Dawson with Alaska at Boundary and with the Alaska Highway near Tok Junction. All-weather roads connect Carcross with the Alaska Highway. Whitehorse is connected with tidewater at Skagway, Alaska, by 110 miles of railroad. Connections are made there with regular summer services of the Canadian Pacific and the Canadian National steamship companies and with the year-round freight service by the White Pass and Yukon Route.

Canadian Pacific Airlines operates a daily service, except Sunday, from Vancouver and Edmonton to Whitehorse, and a semiweekly mail and passenger service from Whitehorse to Mayo and Dawson. Pan American World Airways makes semiweekly stops at Whitehorse on flights from Seattle and Juneau to Fairbanks, Alaska. Two independent air services operate scheduled and charter trips out of Whitehorse and Dawson, and a helicopter service operates out of Dawson. There are local telephone services in Dawson, Mayo, and Whitehorse, which is also connected with outside points.

Principal Events, 1959.—On July 18–20, the Yukon was honored by the visit of Queen Elizabeth II and Prince Philip.

Road construction and maintenance programs were accelerated, with reconstruction work continuing on the Stewart Crossing–Dawson road and the Mayo-Elsa road. Work commenced on a new road to run from Flat Creek (Dawson area) to the Eagle Plain area 140 miles to the north. A projected road from Watson Lake to Ross River and thence to Carmacks was under survey. The bridge across the Yukon River at Carmacks was completed.

The new $4 million hospital at Whitehorse was completed and opened. Also at Whitehorse a new school was constructed and a 15,000-horsepower hydroelectric plant was completed by the Northern Canada Power Commission.

It was announced in August that the first discovery of oil had been made in the territory. A Canadian company, Western Minerals, struck gas flows and light gravity oil in the Eagle Plain area at a point about 200 miles northeast of Dawson and 450 miles from the Pacific tidewater. Several other oil companies conducted field geological work in the same area and at Peel Plateau during 1959. The discovery makes possible the future development of a new and vitally important industry in the Yukon.

F. H. COLLINS,
Commissioner, Yukon Territory.

ZANZIBAR. See BRITISH EAST AFRICA.

ZINC. Primary zinc metal production for the past decade, in thousands of metric tons, is shown in the accompanying table compiled from data supplied by the U.S. Bureau of Mines.

Mine production of recoverable zinc in the United States in 1958 was 412,005 short tons, as compared with 531,735 tons in 1957. Mines in the Western states yielded slightly above 50% of the total domestic output of zinc. Output of primary metal declined from 985,796 tons in 1957 to 781,246 tons in 1958. Of the 1957 output, 346,240 tons were of domestic origin and 435,006 tons were from imported ore, including a small tonnage of slab zinc further refined into high-grade metal. The grand total, including the redistilled second-

Year	World	U.S.	% U.S.	Year	World	U.S.	% U.S.
1949	1,811	739.2	40.8	1954	2,450	727.9	29.7
1950	1,970	765.2	38.8	1955	2,690	874.1	32.5
1951	2,140	799.8	37.4	1956	2,830	892.3	31.5
1952	2,230	820.5	36.8	1957	2,930	894.3	30.5
1953	2,360	831.1	35.2	1958	2,730	708.7	25.9

ary zinc, declined from 1,058,277 tons in 1957 to 827,851 tons in 1958. Consumption of 868,327 tons of slab zinc (excluding that for industry and government stocks) was a decrease from 935,620 tons in 1957.

Imports of zinc declined from 795,021 tons in 1957 to 657,207 tons in 1958. Imports of ore (zinc content) totaled 462,008 tons, of which Mexico, Canada, and Peru supplied 90%. Slab zinc imports totaled 195,199 tons, of which 71% was supplied by Canada, Mexico, and Belgium-Luxembourg. On Oct. 1, 1959, the United States imposed quotas on imports of zinc, designed to give the domestic industry a larger portion of the United States market, according to the U.S. Bureau of Mines. Exports of slab zinc declined 84% to 1,736 tons in 1958, while sheets and plates declined only slightly.

In the first 10 months of 1959, recoverable zinc output in the United States totaled 339,996 short tons, compared with 412,005 tons in 1958. Of the 1959 tonnage, states east of the Mississippi River supplied 160,362 tons; the West-Central states, 494 tons; and the Western states, 179,140 tons. For the 16th consecutive month, the mines of the tri-state district of Kansas, Missouri, and Oklahoma remained closed.

(See MINERAL PRODUCTION for table showing output of major producing countries.)

ZOOLOGY. Size in Birds.—Among many groups of animals, including spiders, insects, fishes and some amphibians, the females are typically larger than the males. This disparity of size can be explained as an adaptation for carrying eggs inside the body. However, the male is usually larger than the female in the higher vertebrates, especially birds. Charles Darwin attributed this superior size of the male to the fact that males compete with each other for mates. In such competition the larger, stronger male could secure more mates and leave more offspring. Its larger size, then, being hereditary, would be preserved by natural selection.

Recent support to Darwin's explanation has been given by Dean Amadon,[1] who points out that greater sexual size dimorphism is more prevalent among polygamous or promiscuous birds than among monogamous ones. In such promiscuous or polygamous groups the struggle between males is exaggerated, the successful males obtaining several mates and producing many offspring, and the unsuccessful ones leaving few if any progeny. In the grouse family (Tetraonidae), for example, the males of the monogamous species like the ptarmigans are only slightly larger than the females. Yet the male, polygamous capercaillie weighs more than twice as much as the female. This phenomenon also is generally true among song birds of the family Icteridae, which includes orioles and blackbirds. While there is an advantage to size for fighting between males, there are disadvantages which limit size, such as inefficient flight. Also there is evidence that among such dimorphic species as turkeys and pheasants the males are more vulnerable than the smaller females to predation and climatic extremes such as cold.

In considering groups of birds where the male is the smaller of the two sexes, the female often is the more aggressive and plays the dominant role in courtship. The male performs the incubation and cares for the young. Examples of this are found among the rheas, emus, cassowaries, phalaropes, button quail, and sandpipers.

[1] Amadon, D., "The Significance of Sexual Differences in Size Among Birds," *Proceedings of the American Philosophical Society*, 103:531–536, 1959.

Invertebrate Hormones.—Gonad-regulating hormones, or those that control the production of eggs in the ovaries or spermatozoa in the testes, have been well known in the vertebrates. It has been known also that the insects and probably the crustaceans possess such hormones. Only recently, however, Wells and Wells[2] have discovered such a system in the cephalopod, *Octopus*. These investigators observed that when parts of the brain were removed or the optic nerve was cut, the ovaries or testes of young animals became rapidly enlarged, and sexually immature females produced mature eggs soon following such surgery. The males used in the experiment were producing mature spermatozoa before treatment. It also was observed that when the above operations were performed, a gland on the optic stalk between the eye and the brain grew larger. When this optic gland was removed, severance of the optic nerve and/or removal of the appropriate parts of the brain was not followed by growth of the ovaries or testes. It was concluded, therefore, that maturation of the gonads is determined by a secretion of the optic glands which is normally inhibited by a nerve supply from the brain (the subpedunculate/dorsal basal lobe area). The action of this brain area then depends on the intact optic nerve and presumably on light.

Wells and Wells point out a remarkable similarity among all of the divergent groups of animals possessing glands which secrete gonad-regulating hormones; namely, that the vertebrate pituitary, the insect corpus allatum, the X-organ-sinus gland complex of crustaceans, and now the octopus optic gland are all regulated directly by the highest centers of the central nervous system.

Carlisle and Knowles[3] in their new book discuss recent advances in hormone functions among the crustaceans. For example, the sinus gland in the eye stalks of several crabs appears to release a hormone which helps in maintaining the blood sugar level above a minimum. Also, a hormone has been found in the eye stalks of crabs and crayfish which assists the animal in maintaining the proper amount of body water. In the cavity surrounding the heart of several types of Crustacea, including lobsters, shrimps, and crabs, have been found structures (pericardial organs) which secrete chemicals serving to control the strength and rate of the heart beat. The active substance can be detected in the blood after it has passed over the pericardial organs but has not reached the heart. It is absent from blood which has passed through the heart. Apparently the response of the heart removes or alters the chemical.

Median Eye.—Paired, laterally placed eyes are common to all vertebrates. However, ancestral vertebrates also commonly possessed what is believed to be a third eye medially located on the top of the head and directed upward. Evidence in the form of an opening in the skull is present in fossils of ancient bony fishes, older amphibians, and early reptiles. Although in later times this structure disappeared in most vertebrates, it nevertheless persists in a few modern animals including the lamprey eel, the tuatara lizard (*Sphenodon*), and in some true lizards. Microscopic examination of this "third eye," the pineal or parapineal organ in the above three groups, may reveal a miniature cornea, lens, and retina. Even though such an eye-like pineal organ is absent in the higher vertebrates (birds and mammals) it persists in the brain as a

[3] Carlisle, D. B., and Knowles, F., *Endocrine Control in Crustaceans*, Cambridge Monographs in Experimental Biology No. 10 (London 1959).

remnant, glandular-like structure, and has been suspected of being an endocrine gland.

For some time it has been known that the median eye of the lamprey larva is sensitive to light and thus responsible for a daily rhythm of color change, the animals being dark in the daytime and pale at night. Only recently Stebbins and Eakin[4] have demonstrated that the median eye in four species of the lizard *Sceloporus* serves to assist in regulating the amount of exposure to sunlight and consequently the general activity level of the animal. When the "eye" was surgically removed or covered by aluminum foil the animals spent more time in sunlight than normally. No increase in body temperature was shown, however, which was surprising because these animals are heliotherms, depending directly on the sun for elevation of their body temperature to desired levels. Rather, there was a noted increase in the locomotory activity. No nerve connections between "eye" and brain were found, but the retina appears to be secretory, and it is probable that the secretory activity is influenced by solar radiation. It is concluded that the "third eye" is sensitive to light and that it has an inhibitory role which functions to prevent excesses of activity and to insure conservation of energy reserves.

A similar investigation was conducted on two specimens of the rare tuatara, *Sphenodon punctatum*,[5] but results produced no evidence that the median eye of this species serves the same function as was demonstrated for true lizards. *Sphenodon* is particularly important for this study, not only because it is the only living reptile other than lizards possessing a median eye, but more because it is a reptilian type which appears to have remained relatively unchanged since the time of the dinosaurs. A knowledge of the function of the median eye in this form might give some insight into function of such structures in the ancient reptiles.

The dream of man's first voyage into outer space moved closer to reality in 1959. In both the United States and the Soviet Union, elaborate programs were preparing the way for placing a man in orbit around the earth. The United States' Project Mercury made significant advances in the training of the first astronauts, the development of the space capsule which will carry them on their historic journey, and the perfection of recovery techniques. Here, a mock-up of the Mercury capsule shows a pilot about to climb through the entrance hatch. Retro rockets (lower left) will help guide the craft back to earth, and the flotation bags (top) will provide buoyancy and stability after it lands in the water. (For details of the man-in-space program, see the articles *National Aeronautics and Space Administration* and *Space Flight*.)

WIDE WORLD

NECROLOGY . . . 1959

Prominent Persons Who Died During the Year

Following is a selected list of more than five hundred of the most prominent persons who died in 1959. Separate biographical articles on those individuals whose names are preceded by an asterisk (*) may be found under their own headings in this volume.

Adams, Wayman (75), portraitist and art teacher; winner of 1943 Carnegie Institute exhibition prize: d. Austin, Texas, Apr. 7.

Adrian, Gilbert (56), couturier for film actresses; former costume designer for M-G-M: d. Los Angeles, Sept. 13.

Agron, Gershon (65), Israeli newspaperman and world Zionist leader; founder of the Jerusalem *Post* and mayor of Jerusalem after 1955: d. Jerusalem, Nov. 1.

Alexander, Jerome (82), chemist; author of standard works on colloids: d. New York City, Jan. 18.

Allred, James V. (60), jurist; governor of Texas, 1935–39: d. Laredo, Texas, Sept. 24.

Anderson, John A. (83), astronomer and educator; supervised construction of Hale telescope on Mt. Palomar and was executive officer of California Institute of Technology's observatory council, 1928–48: d. Altadena, Calif., Dec. 2.

Anderson, Gen. Sir Kenneth (67), British Army officer; governor of Gibraltar, 1947–52; commander of British First Army in North Africa in World War II: d. Gibraltar, Apr. 29.

*Anderson, Maxwell (70), American playwright; winner of Pulitzer Prize (1933): d. Stamford, Conn., Feb. 28.

Anderson, Wendell W. (58), Detroit industrialist and investment banker; administrator of NATO in Paris, 1954–55: d. Philadelphia, Oct. 20.

Angwin, Sir Stanley (75), British authority on communications; played important role in establishing transatlantic telephone system: d. Welwyn Garden City, Eng., Apr. 21.

Antheil, George (58), American composer noted for *Ballet mécanique* (1924) and other modernist compositions; created film scores: d. New York City, Feb. 12.

Apperson, Edgar L. (89), pioneer designer and builder of automobiles: d. Phoenix, Ariz., May 12.

Ashida, Hitoshi (71), premier of Japan, 1948; president of Japan *Times*, 1933–40: d. Tokyo, June 20.

Astor, (William) Vincent (67), American businessman: b. New York, N.Y., Nov. 15, 1891; d. New York, Feb. 3, 1959. In 1912, when his father, John Jacob Astor IV, perished in the *Titanic* disaster, Vincent became head of the American branch of the Astor family and directed its real estate and other business interests throughout his career. Astor served as an officer in the U.S. Navy in World Wars I and II; was a founder of *Today*, which was merged with *Newsweek* magazine in 1936; and was principal director of the United States Lines Company. He left most of his fortune, estimated at $100 million, to the Vincent Astor Foundation, which he established in 1948 for the alleviation of "human misery."

Baccouche, Salah Eddine (74), pro-French premier of Tunisia, 1943–47 and 1952–54: d. Tunis, Dec. 25.

Back, Ernest A. (78), entomologist with U.S. Department of Agriculture for 40 years; played important role in fight against citrus fruit fly: d. Chaplin, Conn., May 21.

Baer, Max(imilian Adelbert) (50), American prize fighter: b. Omaha, Nebr., Feb. 11, 1909; d. Hollywood, Calif., Nov. 21, 1959. He won the world's heavyweight title in 1934 by an 11th-round technical knockout of Primo Carnera. One year later, in a 15-round decision, he lost the championship to James J. Braddock. For his antics in the ring he was known as boxing's "Clown Prince of Clout." Of 80 bouts, he won 66, including 51 by knockout. In later years he appeared in films and nightclubs and on radio and television.

Bailey, Truman E. (57), American artist, craftsman, and designer of fabrics; revived ancient Peruvian and Polynesian handicraft techniques: d. Lima, Peru, Dec. 24.

Bairnsfather, Capt. Bruce (71), British cartoonist noted for World War I cartoon sketches; creator of beloved character, "Old Bill": d. Norton, Eng., Sept. 29.

Ball, Gordon R. (61), Canadian financier; president of Bank of Montreal after 1952: d. Montreal, Feb. 28.

Bandaranaike, Solomon West Ridgeway Dias (60), Ceylonese political leader: b. Colombo, Ceylon, Jan. 8, 1899; d. Colombo, Sept. 26, 1959. Bandaranaike, Ceylon's prime minister since 1956, was shot by an assassin on Sept. 25, 1959, and died of his wounds the next day. A member of Ceylon's self-government movement, which he joined soon after receiving a law degree from Oxford University's Christ Church College (1925), he was named minister for local administration in 1937, and in 1947 became minister of health and local government, as well as leader of the newly formed House of Representatives. (Ceylon achieved independent dominion status in 1948.) In 1951 he resigned from the cabinet and founded the Sinhale Maha Sabha. He dissolved this party before the 1952 election and established the Sri Lanka (Freedom) party. Following the election he became leader of the opposition. The elections of April 1956 swept out the pro-Western incumbents and brought in the neutralist regime of Bandaranaike, who hoped to make Ceylon "the Switzerland of Asia."

Bardoux, Jacques (84), French historian, editor, and former deputy; author of books on British history and international affairs: d. Paris, Aug. 15.

Barnes, John P. (78), judge of U.S. District Court for Northern Illinois, 1931–57; noted for decisions against New Deal legislation: d. Elgin, Ill., Apr. 10.

Barnes, Julius S. (86), wheat industrialist; adviser to Presidents Wilson and Hoover; president of U.S. Chamber of Commerce, 1921–24: d. Duluth, Minn., Apr. 17.

*Barrymore, Ethel (79), veteran actress of stage, films, and television: d. Hollywood, Calif., June 18.

Bassler, Anthony (85), physician who specialized in and wrote on gastroenterology: d. New York City, Aug. 20.

Bateman, James (65), English artist noted for farmyard scenes; member of Royal Academy: d. London, Aug. 2.

Bechet, Sidney (68?), American Jazz musician: b. New Orleans, La.; d. Garches (near Paris), France, May 14, 1959. Beginning at an early age as a clarinetist, he later took up the soprano saxophone, which he played with such jazz greats as Bunk Johnson, Clarence Williams, Louis Armstrong, and Noble Sissle. A Negro, he frequently appeared in Europe, as well as in the United States. In 1950 he settled permanently in France.

Becker, Gustave L. (97), American pianist, composer, and music educator: d. Epsom, Surrey, Eng., Feb. 25.

Beebe, Maj. Gen. Royden E., Jr. (50), U.S. Air Force officer; chief of staff, Allied Air Forces, Southwest Pacific, in World War II: d. near Washington, D.C., Apr. 29.

Beinum, Eduard Alexander van. See van Beinum.

Belbenoit, René L. (59), French-born author of *Dry Guillotine* (1938): d. near San Bernadino, Calif., Feb. 26.

Bell, DeBenneville (Bert) (65), commissioner of National Football League from 1946: d. Philadelphia, Oct. 11.

Benedum, Michael L. (90), oil prospector who made major oil strikes (Permian Basin and Yates Field) in Texas and elsewhere: d. Pittsburgh, Pa., July 30.

Benoit-Levy, Jean (71), French film producer, teacher, and author; pioneer in documentary and educational films; producer of *La Maternelle* (1933): d. Paris, Aug. 2.

*Berenson, Bernard (94), Lithuanian-born authority on Italian Renaissance art: d. Settignano, near Florence, Italy, Oct. 6.

Berger, Meyer (60), American journalist: b. New York, N.Y., Sept. 1, 1898; d. New York, Feb. 8, 1959. At the age of 12 he joined the New York *World* as a copy boy, and, after serving with the U.S. Army in France in 1917–19, was a police reporter for that newspaper until 1922, when he became a reporter and rewrite man for the Standard News Association. From 1928 he was associated with the New York *Times* as rewrite man and reporter, except for one year (1937–38), when he worked for *The New Yorker* magazine. His well-known column of human interest stories, "About New York," appeared in the *Times* in 1939–40 and after 1953. He was awarded a 1950 Pulitzer Prize for distinguished local reporting for his sensitive, 4,000-word account (written in 2½ hours under the pressure of a deadline) of the slaying of 13 persons by an insane war veteran in Camden, N.J., on Sept. 7, 1949. Some of Berger's best journalistic pieces on New York City are included in his book *The Eight Million: Journal of a New York Correspondent* (1942); he also wrote *Men of Maryknoll* (with James G. Keller, 1943) and *The Story of the New York Times, 1851–1951* (1951).

Berggrav, Eivind (74), Norwegian Lutheran bishop and former primate of State Lutheran Church: d. Oslo, Norway, Jan. 14.

Bergmann, Werner (55), German-born professor of chemistry, Yale University, after 1949; expert on chemical study of marine life: d. New Haven, Conn., Nov. 2.

Berkson, Seymour (53), publisher of The New York *Journal-American* after 1953: d. San Francisco, Jan. 4.

Best, Richard I. (87), Irish authority on Irish philology, mythology, and literature; former director, National Library of Ireland: d. Dublin, Sept. 26.

Bethell, Frank H. (56), hematologist; professor of internal medicine, University of Michigan, after 1948, and director of university's medical research center: d. Ann Arbor, Mich., Apr. 21.

*Bloch, Ernest (78), Swiss-born composer: d. Portland, Oreg., July 15.

Blom, Eric W. (70), English music critic and editor of *Grove's Dictionary of Music and Musicians:* d. London, Apr. 11.

Blore, Eric (71), English-American actor: b. London, England, Dec. 23, 1887; d. Hollywood, Calif., March 1, 1959. He made his first appearance on the London stage in *All the Winners* (1913) and in New York in the hit play *Little Miss Bluebeard* (1923). His success as a waiter in Cole Porter's *Gay Divorce* (1932), which was transferred to the screen as *The Gay Divorcée* in 1934 with Blore in the same role, resulted in his being typecast as a "gentleman's gentleman." His other films included *Flying Down to Rio* (1933), *Top Hat* (1935), *Abie's Irish Rose* (1946), and *Bowery to Bagdad* (1955).

Blücher (Bluecher), Franz (63), West German political leader: b. Essen, Germany, March 24, 1896; d. Bad Godesberg, West Germany, March 26, 1959. A business executive and bank director, he was one of the founders, after World War II, of the Free Democratic Party (FDP). In 1949 he was appointed vice chancellor in Dr. Konrad Adenauer's coalition cabinet, also serving as minister for Marshall Plan (ERP) Affairs (later Economic Cooperation) and representative to the Organization for European Economic Cooperation. In 1956, when the FDP split with Dr. Adenauer and his Christian Democratic Union, largely on the matter of foreign policy, Blücher left the FDP to form, with other dissidents, the pro-Adenauer Free People's Party (later merged with the German Party). He was replaced in the cabinet formed in October 1957, after the new party's defeat in the previous month's elections. At his death he was West German representative (named in January 1958) to the High Authority of the European Coal and Steel Community.

Boganda, Barthélémy (48), premier of Central African Republic (formerly French territory of Ubangi-Shari): d. (air crash) near Bangui, Central African Republic, Mar. 29.

Bojer, Johan (87), Norwegian novelist: b. Orkdalsøren, near Trondheim, Norway, March 6, 1872; d. Oslo, Norway, July 3, 1959. Often called the Joseph Conrad of Norway, Bojer was well known in the United States, as well as in Scandinavia, for such works as *The Great Hunger* (1918), *The Last Viking* (1921), *Our Own Breed* (1924), and *The King's Men* (1940). *Our Own Breed,* for which he did research in the United States, concerned Norwegian emigrants who settled in North Dakota in the 1880's.

Bone, Sir David (84), British master mariner, commander of wartime troopships, and author of books on seafaring: d. Farnham, Eng., May 17.

Booth, Albie (Albert James) (51), American athlete: b. New Haven, Conn., Feb. 1, 1908; d. New York, N.Y., March 1, 1959. One of Yale University's great all-around athletes, he scored 22 touchdowns and gained 2,826 yards in three seasons as his team's quarterback. After graduation in 1932 he coached football briefly at Yale and New York University and then became a successful business executive, as well as one of the nation's outstanding football referees.

Bottai, Giuseppe (63), Italian minister of national education (1936–43) in Mussolini regime: d. Rome, Jan. 9.

Bottomley, James L. (59), star first baseman for St. Louis Cardinals in 1920's: d. St. Louis, Mo., Dec. 11.

Boyd, William R., Jr. (74), oil industry leader; president of American Petroleum Institute, 1941–49: d. Teague, Texas, Nov. 6.

Brady, Matthew F. (66), Roman Catholic bishop of Manchester, N.H., after 1944: d. Burlington, Vt., Sept. 20.

Bremer, John L. (85), Hersey Professor Emeritus of Anatomy, Harvard Medical School; authority on embryology and author of textbook on histology: d. Boston, Dec. 25.

Brosseau, Grace L. H. (87), national president general of D.A.R., 1926–29: d. Greenwich, Conn., Apr. 20.

Brown, Boyce (47), jazz saxophonist noted as a creator of Chicago style: d. Chicago, Jan. 30.

Brown, Charles L. (60), dean of Hahnemann Medical College, 1946–54, and of Seton Hall University College of Medicine after 1955: d. Jersey City, N.J., Dec. 4.

Brown, Edward E. (74), board chairman of First National Bank of Chicago; chairman of Federal Advisory Council of Federal Reserve System, 1939–55: d. Chicago, Aug. 24.

Brown, James W. (85), chairman, *Editor & Publisher,* and a leader in American journalism: d. New York City, May 30.

Bryson, Lyman (Lloyd) (71), American teacher, writer, and radio and television commentator: b. Valentine, Nebr., July 12, 1888; d. New York, N.Y., Nov. 24, 1959. Professor of education at Teachers College, Columbia University, 1934–53, and professor emeritus thereafter, he was known to millions of radio listeners as moderator of *Invitation to Learning,* a discussion of ideas found in philosophic and other kinds of literature. He moderated other radio programs, including *Of Men and Books,* and *You and the World,* and the television program, *Lamp Unto My Feet.* Author of several books, he founded the Readability Laboratory at Teachers College for simplifying the basic texts in the social sciences. He served in an advisory capacity to THE ENCYCLOPEDIA AMERICANA.

Buck, Dudley A. (32), assistant professor of electrical engineering, M.I.T.; developed the cryoton and worked on computer development projects: d. Winchester, Mass., May 21.

Buckley, Oliver E. (72), engineer noted for work on high-speed submarine telegraph cables; chairman of board of Bell Telephone Laboratories, 1951–52: d. Newark, N.J., Dec. 14.

Burke, Thomas H. (55), Democratic representative from Ohio (1949–51): d. Alexandria, Va., Sept. 12.

Burlingham, Charles Culp (100), American lawyer: b. Plainfield, N.J., Aug. 31, 1858; d. New York, N.Y., June 6, 1959. After graduating from Harvard College in 1879 and from Columbia University's law school in 1881, he practiced law in New York City. In a crusading civic career remarkable for both its length and its scope, he became known as "a one-man good-government party" and "the godfather of city reform." In 1913 he helped organize the reform group which succeeded in ousting the Tammany Hall incumbents and in electing Mayor John Purroy Mitchel on a Fusion Party ticket. As president (1929–31) of New York City's Bar Association, he spearheaded investigations that led to Mayor James J. Walker's resignation in 1932. Burlingham was a leader in the Fusion movement which brought in Mayor Fiorello La Guardia in 1933. He was also a lifetime crusader in the cause of court reform and social betterment.

Burnett, Adm. Sir Robert L. (71), British naval hero noted for role in guarding convoys to USSR in World War II: d. London, July 2.

Buset, Max (63), president of Belgian Socialist Party; a leader in campaign forcing abdication of King Leopold III (1951): d. Brussels, Belgium, June 28.

Bush, Alvin R. (66), Republican representative from Pennsylvania after 1951: d. Williamsport, Pa., Nov. 5.

Cahill, George F. (69), urologist and founder of J. Bentley Squier Urological Clinic, Presbyterian Hospital; on Columbia University faculty, 1917–55: d. New York City, July 24.

Cahill, John J. (68), Australian political leader; Labour premier of New South Wales after 1953: d. Sydney, Oct. 22.

Callender, Harold (67), correspondent for New York *Times* for over 30 years; economics specialist: d. Paris, Oct. 8.

Canonica, Pietro (90), Italian sculptor and composer of operas; member of Italian Academy: d. Rome, June 8.

Canzoneri, Anthony (Tony) (51), world featherweight and lightweight boxing champion in late 1920's and in 1930's elected to boxing's Hall of Fame: d. New York City, Dec. 8.

Carroll, Eber M. (66), historian and author; chairman of history department, Duke University, 1954–59: d. Bussum, Netherlands, Dec. 29.

Carroll, John (67), American artist: b. Wichita, Kans., Aug. 14, 1892; d. Albany, N.Y., Nov. 7, 1959. Primarily a portraitist of women, Carroll studied with Frank Duveneck, and by the mid-1920's was well known for his moonlit, ethereal portraits of women. He taught at New York's Art Students League (1926–27 and 1944–55) and, for a time after 1930, at the Detroit Society of Arts and Crafts. His paintings, for which he received many awards, hang in many American museums, including the Metropolitan and the Whitney museums in New York City.

Carroll, Patrick J. (84), Roman Catholic clergyman, educator, and author; vice president of University of Notre Dame, 1926–29: d. South Bend, Ind., Nov. 18.

Carter, Jesse W. (70), justice of California Supreme Court after 1939; noted for vigorous dissenting opinions: d. San Rafael, Calif., Mar. 15.

Casper, Leopold (99), German-born urologist and onetime professor at University of Berlin; author of standard works on urology and cystoscopy: d. New York City, Mar. 16.

Cates, Louis S. (77), copper industrialist; chairman of Phelps Dodge Corp., after 1947: d. New York City, Oct. 29.

Catto, Lord (Thomas S. Catto) (80), British banker; governor of Bank of England, 1944–49: d. Surrey, Eng., Aug. 23.

Chandler, Raymond Thornton (70), American author: b. Chicago, Ill., July 23, 1888; d. La Jolla, Calif., March 26, 1959. A leading and popular exponent of the "tough guy" school of American crime fiction, he created the hard-boiled but sentimental "private eye," Philip Mar-

lowe, whose lurid exploits amid human depravity were first recounted in *The Big Sleep* (1939). Chandler's many other mystery novels include *Farewell, My Lovely* (1940), *The Lady in the Lake* (1943), *The Long Goodbye* (1954), and *Playback* (1958). He also wrote film scenarios, including *Double Indemnity* (1944), an adaptation of James M. Cain's novel, and *The Blue Dahlia* 1946).

Christopher, George H. (70), Democratic representative from Missouri, 1949–50 and after 1955: d. Washington, D.C., Jan. 23.

Clark, Dwight E. (49), medical educator noted for research on use of radioactive iodine; chairman of Department of Surgery, University of Chicago, after 1958: d. Chicago, July 24.

Clauson, Clinton A. (64), Democratic governor of Maine (elected on Sept. 8, 1958): d. Augusta, Me., Dec. 30.

Cleghorn, Sarah N. (83), American poet and novelist: d. Philadelphia, Apr. 4.

Cloonan, John J. (75), educator, financier, and architect; president of St. John's University (Brooklyn, N.Y.), 1925–31: d. Allentown, Pa., Apr. 16.

Close, Harold W. (70), physical chemist and educator; dean, School of Arts and Sciences, American University of Beirut (Lebanon), 1942–53: d. Princeton, N.J., Jan. 1.

Coady, Michael M. (77), Canadian Roman Catholic educator; founder of cooperative movement in Maritime Provinces: d. Antigonish, N.S., July 28.

Coblentz, Edmond D. (76), publisher of The New York *American*, 1934–40, and of The San Francisco *Call-Bulletin*, 1940–50: d. Sonoma, Calif., Apr. 16.

Cochrane, Vice Adm. Edward L. (67), chief of U.S. Navy's Bureau of Ships in World War II; vice president of M.I.T., 1954–57: d. New Haven, Conn., Nov. 14.

Cody, Sherwin (90), author of books on how to write and speak better English; noted for correspondence course: d. Brooklyn, N.Y., Apr. 4.

Cohen, Octavus Roy (67), American author: b. Charleston, S.C., June 26, 1891; d. Los Angeles, Calif., Jan. 6, 1959. After an early career as a journalist and lawyer, he became a full-time writer. A frequent contributor to *The Saturday Evening Post*, he was noted for his numerous Negro dialect stories and for his mysteries. Among his many books, plays, and radio and motion picture scripts were: *The Crimson Alibi* (1919), *Polished Ebony* (1919), *Come Seven* (1920). *Assorted Chocolates* (1922), *Jim Hanvey, Detective* (1923), *The Backstage Mystery* (1930), *Child of Evil* (1936), *East of Broadway* (1938), *Don't Ever Love Me* (1947), *Borrasca* (1953), and *Love Can Be Dangerous* (1955).

Cole, George Douglas Howard (69), English economist and writer: b. Cambridge, England, Sept. 25, 1889; d. London, Jan. 14, 1959. He was educated at St. Paul's School, London, and at Oxford University, with which he had a long association, including posts as fellow of University College (1925–44) and, from 1944 until his retirement in 1957, fellow of All Souls College and Chichele professor of social and political theory. In his youth he joined the Labour Party and the Fabian Society, serving as chairman of the latter from 1939 to 1946, and as its president from 1952. A brilliant and prolific writer, he produced more than 50 books of political and economic theory and history, some in collaboration with his wife, Margaret Isabel Postgate Cole, with whom he also wrote more than 30 popular detective stories. According to his widow, Professor Cole considered the following to be among his most important works: *The World of Labour* (1913), *The Intelligent Man's Guide Through World Chaos* (1932), *A Short History of the British Working Class Movement, 1789–1947* (1948), and the multivolume (1953–58) *History of Socialist Thought* from 1789 to 1931. He also wrote frequently for the *New Statesman and Nation* and was a contributor to THE ENCYCLOPEDIA AMERICANA.

Collier, Harry D. (83), petroleum and banking leader; board chairman, Standard Oil Company of California, 1945–49: d. San Francisco, Jan. 30.

Colligan, Eugene A. (71), president of Hunter College, 1933–39: d. Plandome Manor, N.Y., Oct. 15.

Colvin, D. Leigh (79), Prohibitionist Party presidential candidate, 1936: d. Bronxville, N.Y., Sept. 7.

Cone, William (62), American-born Canadian brain surgeon; chief of neurosurgery service, Montreal Neurological Institute: d. Montreal, May 4.

Conway, Carle C. (81), board chairman of Continental Can Co., 1930–50: d. Lake Placid, N.Y., Aug. 18.

Cook, Joe (Joseph Lopez) (69), comedian of vaudeville and Broadway stage: d. Clinton, N.Y., May 16.

Coolidge, T. Jefferson (65), Boston banker and business leader; undersecretary of Treasury, 1932–36: d. Beverly, Mass., Aug. 6.

Cooper, Lane (83), professor of English language and literature, Cornell University, 1915–43; author of works on Greek philosophers: d. Ithaca, N.Y., Nov. 27.

Corbin, John (89), author of books on historical and literary subjects; editorial writer and drama critic for The New York *Times*: d. Briarcliff Manor, N.Y., Aug. 30.

Cornwallis, Sir Kinahan (76), British diplomat and expert on Middle East; ambassador to Iraq, 1941–45: d. Basingstroke, Eng., June 3.

Costello, Lou (real name Louis Francis Cristillo) (52), American motion picture comedian: b. Paterson, N.J., March 6, 1906; d. Beverly Hills, Calif., March 3, 1959. After appearing as a solo vaudeville performer, he formed the comedy team of Abbott and Costello with William (Bud) Abbott in 1930 and toured vaudeville, burlesque, and night club circuits until 1938, when the team became a regular feature on Kate Smith's radio program. In 1939, the two appeared in *The Streets of Paris* on Broadway and at the New York World's Fair. The team's first successful film was *Buck Privates* (1941), which was followed by more than 30 films, including *Hold That Ghost* (1941), *Lost in a Harem* (1944), *In Society* (1944), and *Africa Screams* (1949). The comedy team broke up in 1957.

Costolow, William E. (66), cancer specialist; director of Los Angeles Tumor Institute: d. Los Angeles, Nov. 22.

Couch, Herbert N. (59), professor of classics (after 1945) at Brown University: d. Providence, R.I., June 6.

Coulondre, Robert (73), French diplomat; ambassador to USSR, 1936–38, and to Germany, 1938–39: d. Paris, Mar. 10.

Craigie, Sir Robert (75), British diplomat and naval expert; ambassador to Japan, 1937–41: d. Winchester, Hampshire, Eng., May 16.

Croil, Air Marshal George M. (65), chief of Air Staff (1934–40) and inspector general (1940–44) of Royal Canadian Air Force: d. Vancouver, B.C., Apr. 8.

Cross, Hardy (74), professor of civil engineering, Yale University, 1937–51; innovator in structural engineering analysis: d. Virginia Beach, Va., Feb. 11.

Crouch, George F. (80), designer of speedboats and other craft; government consultant and executive of shipbuilding companies: d. New Britain, Conn., June 4.

Crum, Bartley Cavanaugh (59), American lawyer: b. Sacramento, Calif., Nov. 28, 1900; d. New York, N.Y., Dec. 10, 1959. A liberal Republican, he gained a wide reputation as a lawyer specializing in civil rights cases. He was a campaign manager for Wendell L. Willkie in the 1940 presidential race; acted as consultant to the U.S. delegation in the drafting of the United Nations charter in 1945; and served on the Anglo-American Commission of Inquiry on Palestine in 1946. An advocate of a Jewish state in Palestine, he urged partition of the Holy Land in his book, *Behind the Silken Curtain* (1947). He became publisher of *PM*, a New York City tabloid, in 1948, but the paper, renamed *The Star*, was forced to close in 1949 because of financial difficulties.

Daly, Edward J. (67), chief justice of Connecticut Supreme Court of Errors: d. Hartford, Conn., July 20.

Daubin, Rear Adm. Freeland A. (73), commander of U.S. submarine forces in Atlantic in World War II: d. Bethesda, Md., Oct. 24.

Davey, Wheeler P. (73), research professor of physics and chemistry, Pennsylvania State University, 1931–49; specialist in X-rays and conductivity of metals: d. Bellefonte, Pa., Oct. 12.

Davis, Hassoldt (52), explorer in Africa and South America; author of *The Jungle and the Damned* (1952) and other books: d. Boston, Mass., Sept. 10.

Day, George P. (83), treasurer of Yale University, 1910–42, and founder of Yale University Press: d. New Haven, Conn., Oct. 24.

de Fouquieres, André Becq (83), French leader of fashion and author of books on manners and elegance: d. Paris, Jan. 13.

de Herrera, Luis Alberto (85), Uruguayan rightist political leader; led Nationalist Party to victory in 1958: d. Montevideo, Uruguay, Apr. 8.

Deiss, Charles F. (56), head of Department of Geology, Indiana University, after 1945: d. Indianapolis, Ind., June 13.

*De Mille, Cecil B. (77), motion picture pioneer and film producer: d. Hollywood, Calif., Jan. 21.

de Nicola, Enrico (81), Italian lawyer and politician: b. Naples, Italy, Nov. 9, 1877; d. Torre del Greco, Italy, Oct. 1, 1959. He retired from politics in the 1920's, in protest against Mussolini's regime, but returned after World War II to take part in the formation of the first republican Italian government, becoming its provisional head in 1946 and first president of the republic in 1948. He was also a law scholar and the author of many widely used textbooks.

Denny, George V., Jr. (60), founder and moderator (1935–52) of immensely popular radio program, *America's Town Meeting of the Air:* d. West Cornwall, Conn., Nov. 11.

Derwent, Clarence (75), English actor and director: b. London, England, March 23, 1884; d. New York, N.Y., Aug. 6, 1959. In 57 years on the stage he appeared in an estimated 500 plays in England and the United States, directed productions in both countries, and appeared in several films. After 1915 he resided mostly in the United States, but he retained his British citizenship. His recent appearances on the New York stage included *Uncle Vanya* (1956), and *Lute Song* (1959). In 1944 he established the annual Clarence Derwent Awards of $500 each for the best supporting actor and actress in the United States and England. He was president of Actors' Equity Association from 1946 to 1952 and of the American National Theatre and Academy (ANTA) from 1952 until his death. His autobiography, *The Derwent Story*, was published in 1954.

Dodds, Bernice L. (56), dean of University of Illinois College of Education after 1953: d. Urbana, Ill., Mar. 23.
Dodds, Warren (Baby) (64), pioneer jazz drummer; member of Louis Armstrong's Hot Five: d. Chicago, Feb. 14.
Donahue, Joseph P. (88), Roman Catholic Bishop; a vicar general of archdiocese of New York: d. New York City, Apr. 26.
Donnelly, Francis P. (89), Jesuit educator and author; professor of rhetoric and classics, Fordham University, 1929–52: d. Poughkeepsie, N.Y., Apr. 18.
*Donovan, Maj. Gen. William J. (76), wartime director of Office of Strategic Services: d. Washington, D.C., Feb. 8.
Douglas, Paul (52), American actor: b. Philadelphia, Pa., April 11, 1907; d. Hollywood, Calif., Sept. 11, 1959. He was a successful radio sports announcer until 1946, when producer Garson Kanin picked him to play the leading male role, as a wealthy junk dealer, in *Born Yesterday.* The comedy ran for more than two and one-half years and made Douglas a star. The movie version of the play was equally popular and started Douglas on a film career that included *A Letter to Three Wives* (1948), *Executive Suite* (1954), *The Solid Gold Cadillac* (1956), and *The Mating Game* (1959). He also appeared frequently on television, and scored another hit on Broadway in *A Hole in the Head* (1957).
Draper, George (79), internist and pioneer in scientific constitutional medicine; former associate professor of clinical medicine, College of Physicians and Surgeons, Columbia University: d. New York City, July 1.
DuBois, Eugene F. (76), emeritus professor of physiology, Cornell University Medical College; authority on metabolism: d. New York City, Feb. 12.
Dukes, Ashley (73), English playwright, translator, and drama critic: d. London, May 4.
*Dulles, John Foster (71), secretary of state, 1953–59: d. Washington, D.C., May 24.
Dunbar, Flanders (57), psychiatrist and author; pioneer in psychosomatic medicine: d. South Kent, Conn., Aug. 21.
Dunning, William B. (85), founder of Columbia School of Dental and Oral Surgery: d. Englewood, N.J., July 21.
Duplessis, Maurice Le Noblet (69), Canadian government official: b. Trois Rivières, Quebec, April 20, 1890; d. Schefferville, Quebec, Sept. 7, 1959. Educated at Quebec's Laval University (B.A. and LL.B.) and admitted to the bar in 1913, he practiced law in Trois Rivières until his election in 1927 as Conservative representative in the provincial legislature. In 1936 he founded Quebec's Union Nationale Party, whose victory in that year's elections carried him to the provincial premiership. His party was defeated in 1939, largely on the issue of his opposition to Canada's participation in World War II, but recovered in 1944, returning him to the premiership, which he then held until his death. His insistence on preserving the province's autonomy led to frequent brushes with the federal government on such matters as taxes, religious freedom, and federal support of education. But to the French-speaking people of the province, whose economy, culture, and identity he fought endlessly to promote, he was "Le Chef."

Eastwood, Lieut. Gen. Sir Ralph (68), British military leader; head of Home Guard, 1940–44; governor general and commander in chief of Gibraltar, 1944–47: d. Cannes, France, Feb. 15.
Eckersley, Thomas L. (72), British scientist; researcher on radio waves and ionosphere: d. London, Feb. 15.
Ed, Carl F. L. (69), cartoonist; creator of "Harold Teen" comic strip: d. Evanston, Ill., Oct. 10.
Edwards, John (55), British Labour M.P., educator, and government aide; president of Consultative Assembly of Council of Europe: d. Strasbourg, France, Nov. 23.
Ehmke, Howard J. (64), American League pitcher who in 1929 set World Series record (broken in 1953) by striking out 13 batters in one game: d. Philadelphia, Mar. 17.
Eisenberg, George M. (47), bacteriologist, author, and teacher; chief of Division of Bacteriology and Immunology, Philadelphia General Hospital, after 1949: d. Philadelphia, Oct. 26.
Elkins, Davis (82), Republican senator from West Virginia, 1919–25: d. Richmond, Va., Jan. 5.
Elliott, A. Roland (64), director of immigration services of Church World Service; aided in resettlement of some 106,000 refugees in U.S.: d. Marlboro, N.H., July 1.
Emanueli, Luigi (75), Italian engineer-inventor; designed improved submarine cables: d. Milan, Italy, Feb. 17.
Enckell, Carl J. A. (82), Finnish foreign minister, 1918–19, 1922, 1924, and 1944–50: d. Helsinki, Finland, Mar. 27.
Engel, Albert J. (71), Republican representative from Michigan, 1935–51; noted for investigations of excessive federal spending: d. Grand Rapids, Mich., Dec. 3.
*Epstein, Sir Jacob (78), New York-born English sculptor noted for controversial works: d. London, Aug. 19.
Evans, Alexander W. (91), professor emeritus of botany, Yale University; authority on lichens: d. New Haven, Conn., Dec. 6.

Farrand, Beatrix (86), landscape architect and consultant; designed Dumbarton Oaks grounds and other notable sites: d. Bar Harbor, Me., Feb. 27.
Ferguson, Fred S. (72), newspaperman; president of NEA Service, Inc., 1926–58: d. Huntington, N.Y., Dec. 6.
Fields, Benny (Benjamin Geisenfeld) (65), vaudeville, nightclub, and radio performer: d. New York City, Aug. 16.
Fineman, Hayim (73), professor emeritus of English literature, Temple University; authority on Shakespeare and Milton: d. Philadelphia, Apr. 18.
Finesinger, Jacob E. (57), psychiatrist and educator; founder and head of Psychiatric Department, University of Maryland: d. Baltimore, Md., June 19.
Finnegan, Philip J. (72), judge of U.S. Circuit Court of Appeals in Chicago: d. New Rochelle, N.Y., Jan. 4.
Fitch, Florence M. (84), educator and author of children's books on religion; professor of Biblical literature, Oberlin College, 1903–40: d. Oberlin, Ohio, June 2.
Fitch, John A. (78), labor specialist, arbitrator, and author of books on labor problems; professor, New York School of Social Work, 1940–46: d. New York City, June 15.
Fletcher, Henry Prather (86), American diplomat: b. Greencastle, Pa., April 10, 1873; d. Newport, R.I., July 10, 1959. He served almost 30 years in the United States diplomatic corps in widely scattered posts around the world, including ambassadorships to Mexico (1916–20), Belgium (1922–24), and Italy (1924–29). He was under secretary of state in 1921–22, and in 1930–31 headed the U.S. Tariff Commission. Active in Republican Party affairs, he was chairman of its national committee (1934–36) and general counsel to the committee and member of the party's executive committee (1936–44).
*Flexner, Abraham (92), reformer of medical education in U.S.; founded Institute for Advanced Study at Princeton, N.J.: d. Falls Church, Va., Sept. 21.
Flores da Cunha, Gen. José Antonio (79), Brazilian military leader who aided Getulio Vargas' seizure of presidency in 1930, but later opposed Vargas: d. Pôrto Alegre, Brazil, Nov. 4.
Flynn, Errol (50), Australian-American film star: b. Hobart, Tasmania, June 20, 1909; d. Vancouver, British Columbia, Oct. 14, 1959. His many starring roles in swashbuckling adventure films were paralleled by personal adventures and escapades that earned him the sobriquets "soldier of fortune" and "charming rogue." He set out at 17 as cook on a schooner, and had held such jobs as constable, plantation overseer, newspaperman, pearl fisher, and boxer, when, as master of a South Pacific schooner in the early 1930's, he was spotted by film makers. Seeing the possibility of a movie career, he went to England, where he played several major stage roles before being signed by a Warner Brothers scout in 1935. Stardom came quickly in the United States, and he became a citizen in 1942. His pictures included *Captain Blood* (1935), *Charge of the Light Brigade* (1936), *The Adventures of Robin Hood* (1938), *Dawn Patrol* (1938), *The Adventures of Don Juan* (1948), *Against All Flags* (1952), and *The Sun Also Rises* (1957). He published three books—*Beam Ends* (1937), *Showdown* (1946), and a posthumously issued autobiography, *My Wicked, Wicked Ways* (1959).
Forbes, W(illiam) Cameron (89), American businessman and diplomat: b. Milton, Mass., May 21, 1870; d. Boston, Mass., Dec. 24, 1959. He was graduated from Harvard College in 1892, and later acquired widespread business interests in Boston. In 1904 he was appointed to the Philippine Commission, which he served until 1908, when he became vice governor of the islands. From 1909 until his resignation in 1913 he was governor general. In 1921 he was a member of the Wood-Forbes Commission to the Philippines. From 1930 to 1932, during the Manchurian crisis, he was ambassador to Japan. His two-volume *Philippine Islands* was published in 1929.
Fotitch, Constantin A. (67), Yugoslav diplomat; ambassador to U.S., 1942–44: d. Washington, D.C., Feb. 14.
Franklin, Lewis B. (80), banker and Episcopal leader; treasurer of National Council of Protestant Episcopal Church, 1920–48: d. Stamford, Conn., Mar. 21.
Freytag, Walter (60), German Protestant theologian; professor of missions and ecumenical studies, University of Hamburg: d. Heidelberg, Germany, Oct. 24.
Frost, Frances (53), poet, novelist, and writer of children's books: d. New York City, Feb. 11.
Frothingham, Channing (78), Boston physician; chairman of Committee for the Nation's Health; former chairman of Department of Medicine, Harvard University, and an overseer of Harvard College: d. Boston, Aug. 11.
Frye, Jack (54), leader in air transport; a founder and president (1934–47) of Trans World Airlines: d. (auto crash) Tucson, Ariz., Feb. 3.

Gallie, William E. (77), Canadian surgeon noted for "living suture" technique; professor of surgery, University of Toronto, 1929–47: d. Toronto, Sept. 25.
Galvin, Paul V. (64), radio and electronics industrialist; founder of Motorola, Inc.: d. Evanston, Ill., Nov. 5.
Gamble, James L. (75), professor of pediatrics, Harvard University, 1929–50: d. Boston, May 28.
Gamble, Ralph A. (73), Republican representative from New York, 1937–56: d. Port Deposit, Md., Mar. 3.
Gans, Baby Joe (Gerald Slaughter) (59), leading lightweight and welterweight boxer of 1920's and early 1930's: d. Milwaukee, Wis., Apr. 20.
García Calderón, Ventura (73), Peruvian author and diplomat; novels and other works translated from Spanish into several languages: d. Paris, Oct. 28.
Gemelli, Agostino (81), Italian Franciscan psychologist and

philosopher; founder and president of University of the Sacred Heart (Milan): d. Milan, Italy, July 15.

Ghoneim, Mohammed Zakaria (48), Egyptian archaeologist; in 1952 discovered the unfinished Step Pyramid at Saqqara: d. (body found in the Nile River) Cairo, Egypt, Jan. 11.

Gifford, Edward W. (71), professor of anthropology, University of California, 1945–57; authority on California Indians: d. Paradise, Calif., May 16.

Gleason, James (72), American actor: b. New York, N.Y., May 23, 1886; d. Woodland Hills, Calif., April 12, 1959. After an early start as a child actor, he appeared on Broadway as Hap Hurley in *Is Zat So?* (1925), a long-running hit, which he co-authored with Richard Taber. He also wrote *The Fall Guy* (with George Abbott, 1925) and motion picture scenarios, including *Broadway Melody* (1929) and *Two-Fisted* (1935). Gleason appeared often on the screen after 1928, becoming noted for kind-hearted, tough-guy roles. His films included *Count of Ten* (1928), *Down to Earth* (1932), *Arsenic and Old Lace* (1944), *A Tree Grows in Brooklyn* (1945), *The Life of Riley* (1949), *What Price Glory?* (1952), and *The Last Hurrah* (1958).

Glenn, Otis F. (79), Republican senator from Illinois, 1929–33: d. Manistee, Mich., Mar. 11.

Godwin, Frank (69), illustrator and creator of syndicated cartoon strip, *Rusty Riley*: d. New Hope, Pa., Aug. 5.

Gordon, George A. (73), U.S. diplomat and adviser at international conferences: d. New York City, May 11.

Gordon, Mack (real name Morris Gittler) (54), American lyricist: b. Warsaw, Poland, June 21, 1904; d. New York, N.Y., Feb. 28, 1959. With composer Harry Revel he did the songs for the *Ziegfeld Follies of 1931*. In Hollywood, after 1933, he wrote lyrics for many motion picture hit songs, including *You'll Never Know*. His other popular lyrics include *Time on My Hands, Did You Ever See a Dream Walking?*, and *Chattanooga Choo Choo*.

Gordon, Myron (59), geneticist and cancer researcher; authority on melanoma and cancer of fish: d. New York City, Mar. 12.

Gordon, Thomas S. (65), Democratic representative from Illinois, 1943–58; chairman of House Foreign Affairs Committee after 1957: d. Chicago, Jan. 22.

Graham, Dorothy (Dorothy Graham Bennett) (65), author of *The China Venture* and other novels and nonfiction works dealing with China: d. New York City, June 22.

Grahame-White, Claude (79), British aviator; racer and stunter; Britain's first airmail pilot: d. Nice, France, Aug. 19.

Granfield, William J. (69), Democratic representative from Massachusetts, 1931–37: d. Springfield, Mass., May 27.

Gray, Charles H. (67), director of division of academic studies, Juilliard School of Music, after 1953; president of Bard College, 1944–47: d. New York City, May 14.

Gray, Gilda (Marianne Michalski) (58), dancer and singer of 1920's, noted as creator of shimmy dance: d. Hollywood, Calif., Dec. 22.

Greene, Jerome D. (84), investment banker and executive of Rockefeller Foundation and other educational institutions; secretary of Harvard Corporation, 1905–10 and 1934–43: d. Cambridge, Mass., Mar. 29.

Greenslet, Ferris (84), author of biographies and other works; literary editor of Houghton Mifflin Co. for 35 years: d. Cambridge, Mass., Nov. 19.

Greenstein, Jesse P. (56), biochemist noted for contributions to cancer research; chief of biochemistry laboratory, National Cancer Institute, after 1946: d. Bethesda, Md., Feb. 12.

Grente, Georges François Xavier (86), French cardinal: b. Percy, France, May 5, 1872; d. Le Mans, France, May 4, 1959. Ordained in 1895, he was first assigned to educational work, serving as a professor of literature and an administrator. In 1918 he was named bishop of Le Mans, and the personal title of archbishop was conferred on him in 1943. He was created cardinal in 1953. He was the author of a number of books on literary and religious subjects, and he directed the preparation of the *Dictionnaire des Lettres Françaises*. The French Academy elected him to membership in 1936. He was an active supporter of the French resistance movement during World War II.

Griffin, Carroll W. (58), chairman of Department of Chemistry, Vassar College; textbook author: d. Poughkeepsie, N.Y., May 4.

Griscom, Lloyd C. (86), diplomat, newspaper publisher, and author; ambassador to Brazil, 1906–07, and Italy, 1907–09: d. Thomasville, Ga., Feb. 8.

Griscom, Ludlow (68), research ornithologist, research curator, and editor, Harvard Museum of Comparative Zoology, 1927–53: d. Cambridge, Mass., May 28.

Grock (Adrian Wettach), Swiss-born clown famed throughout Europe as pantomimist: d. Imperia, Italy, July 14.

*Grosz, George (65), German-born painter noted for savage caricatures: d. Berlin, July 6.

Guérard, Albert Léon (79), historian, teacher, and writer: b. Paris, France, Nov. 3, 1880; d. Stanford, Calif., Nov. 13, 1959. Educated in France, he began his career in the United States in 1906 as a teacher at Williams College. After teaching there, and at Stanford and Rice Institute, he returned to Stanford where he remained until retiring as professor emeritus in 1946. From 1950 to 1953 he served at Brandeis University as professor of comparative literature. A specialist in French civilization and modern European history, he had most recently written *France: A Short History* (1946), *Napoleon III* (1955), and *Testament of a Liberal* (1956).

*Guest, Edgar A. (77), poet whose verses appeared in some 300 newspapers: d. Detroit, Mich., Aug. 5.

Guffey, Joseph Finch (88), American political leader: b. Westmoreland County, Pa., Dec. 29, 1870; d. Washinton, D.C., March 6, 1959. After attending Princeton University (1890–92), he went into the public utilities business and later he was also a successful oil operator. He entered Pennsylvania politics in 1912, becoming acting chairman of the Democratic State Committee in 1916. When his state Democratic organization backed Franklin D. Roosevelt's victorious presidential candidacy in 1932, he became a nationally recognized political leader. As United States senator from 1935 to 1946, he was ardently prolabor in his actions and voting record. His main legislative contribution was the Bituminous Coal Stabilization Act (known as the Guffey-Vinson Coal bill) of 1937.

Guggenheim, Col. M. Robert (74), metals industrialist and ambassador to Portugal, 1953–54: d. Washington, D.C., Nov. 16.

Gwenn, Edmund (83), English actor: b. London, England, Sept. 26, 1875; d. Woodland Hills, Calif., Sept. 6, 1959. In his more than 60 years on the stage and in films, his roles ranged from parts in the plays of Ibsen, Chekhov, and J. M. Barrie to the benign Santa Claus in the American film, *Miracle on 34th Street*, for which performance he won the 1947 Academy Award as the best supporting actor. His first success on the London stage was as the chauffeur in *Man and Superman* in 1904. After settling permanently in Hollywood in 1940, he acted in more than 30 motion pictures between 1942 and 1958. Among his best-known films are *Pride and Prejudice* (1940), *The Keys of the Kingdom* (1945), *Mister 880* (1950), and *The Trouble with Harry* (1956).

Haggard, Howard Wilcox (67), American physiologist and educator: b. La Porte, Ind., July 19, 1891; d. Fort Lauderdale, Fla., April 22, 1959. He received his M.D. from Yale University in 1917 and was appointed instructor of physiology there in the same year. In 1938 he became director of the university's noted Laboratory of Applied Physiology and held this post until his retirement in 1956. An authority on alcoholism and related problems, he founded the Yale Center of Alcohol Studies (1940), whose Yale Plan Clinic has done pioneering research in the treatment of alcoholism. Dr. Haggard was editor of the *Quarterly Journal of Studies on Alcohol*, published by the Yale Center; his books include the popular *Devils, Drugs, and Doctors* (1929), *The Doctor in History* (1934), and *Man and His Body* (1938).

Hakimi, Ibrahim (89), premier of Iran in 1940's; strongly opposed USSR in dispute over Azerbaijan: d. Iran, Oct. 20.

*Halifax, Earl of (Edward F. L. Wood) (78), British foreign secretary, 1938–40; ambassador to U.S., 1941–46: d. near York, Eng., Dec. 23.

*Halsey, Fleet Adm. William F. (76), naval commander in World War II: d. Fishers Island, N.Y., Aug. 16.

Hanes, Robert M. (68), North Carolina banker and legislator; head of Marshall Plan mission to West Germany, 1949–50: d. Winston-Salem, N.C., Mar. 10.

Harcourt, Adm. Sir Cecil (67), British naval commander who accepted Japanese surrender of Hong Kong in 1945: d. London, Dec. 19.

Harrison, Ross Granville (89), American zoologist and educator: b. Germantown, Pa., Jan. 13, 1870; d. New Haven, Conn., Sept. 30, 1959. His success, in 1907, in growing embryonic animal tissue independently of the parent organism was an initial step toward the development of the Salk vaccine years later. A member of the Yale University faculty from 1907 until his retirement in 1938, he also served as director (1918–38) of Yale's Osborn Zoological Laboratory and as chairman (1938–46) of the National Research Council.

Hart, James (62), professor of political science, University of Virginia; wrote works on administrative law and on the American presidency: d. Charlottesville, Va., Sept. 14.

Harvey, E. Newton (71), professor of biology, Princeton University, 1919–56; authority on bioluminescence: d. Woods Hole, Mass., July 21.

Hatoyama, Ichiro (76), former premier of Japan: b. Tokyo, Japan, Jan. 1, 1883; d. Tokyo, March 7, 1959. Trained as a lawyer, he was elected to the Diet in 1915 and subsequently served as chief cabinet secretary (1927–29) and as minister of education (1931–34). In the late 1930's he lost his bid for control of the powerful Seiyukai Party to a militarist clique which opposed his pro-Western ideas. His book *Sekai no kao* (*The Face of the World;* 1938), containing portions in praise of Hitler and Mussolini, was used by the Allied Supreme Command as evidence to purge him from politics in 1946, despite proof that he had lived in retirement during World War II. Permitted to return to politics in 1951, Hatoyama was re-elected to the Diet in 1952. Leaving the Liberal Party he had helped to form at the end of the war, he founded the conservative Democratic Party and was elected premier on Dec. 9, 1954. In Moscow on

Oct. 19, 1956, he personally concluded negotiations ending the Soviet-Japanese state of war. On December 20 of that year he retired from the premiership because of ill health.

Hayes, Thomas S. (57), librarian of University of Puerto Rico, after 1942; contributor to ENCYCLOPEDIA AMERICANA and AMERICANA ANNUAL: d. San Juan, P.R., May 18.

Heal, Sir Ambrose (87), English furniture designer and author on decorative arts: d. Beaconsfield, Eng., Nov. 15.

Heck, Oswald D. (57), Republican speaker of New York State Assembly after 1937: d. Schenectady, N.Y., May 21.

Heely, Allan V. (62), headmaster of Lawrenceville School after 1934: d. Lawrenceville, N.J., July 7.

Helburn, Theresa, (72?), American theatrical producer: b. New York, N.Y., 1887? d. Norwalk, Conn., Aug. 18, 1959. An enthusiastic and tireless promoter of drama, Theresa Helburn was the Theatre Guild's executive director from 1920 to 1932, and its coadministrator thereafter. She and Lawrence Langner, the Guild's founder (in 1918), were instrumental in the production of plays by O'Neill, Shaw, Maxwell Anderson, Elmer Rice, Sidney Howard, and Robert Sherwood. They managed to hold the Theatre Guild together during its lean years in the 1930's and made it financially successful in the early 1940's by producing Rodgers and Hammerstein's great musical, *Oklahoma!* Her later productions for the Guild included such successes as *Come Back Little Sheba* (1950) and *Picnic* (1953).

Helfer, Walter (62), composer and chairman of Music Department, Hunter College, 1938–50: d. New Rochelle, N.Y., Apr. 16.

Herzog, Isaac Halevi (70), Israeli rabbi: b. Lomza, Poland, Dec. 2, 1888; d. Jerusalem, Israel, July 25, 1959. Ordained in England in 1910, he served for 21 years in Ireland, as rabbi to the Jewish communities of Belfast (1915–19) and Dublin (1919–25), and was chief rabbi of the Jewish community in the Irish Free State from 1925 to 1936. In the latter year he became chief rabbi of Palestine and of the Ashkenazi Orthodox Jews. An ardent Zionist, he worked vigorously for Israeli independence, and when it was achieved in 1948, became chief rabbi of Israel for the Ashkenazi sect. Dr. Herzog was an authority on the Talmud and Jewish law. Among his publications was the five-volume *Main Institutions of Jewish Law.*

Himmelstein, Aaron (45), specialist in cardiovascular surgery; contributor to cardiac-catheter research: d. New York City, Dec. 18.

Hines, Duncan (78), American gourmet and author: b. Bowling Green, Ky., March 26, 1880; d. Bowling Green, March 15, 1959. During three decades of travel throughout the United States as a printing salesman, he kept listings of superior restaurants as a hobby. Deluged with requests for his recommendations, he published in 1936 a book of listings, *Adventures in Good Eating,* and the signpost "Recommended by Duncan Hines" soon became a guide to travelers. Two years later he wrote *Lodging for a Night* and left his sales job to devote full time to his publishing enterprises. His *Adventures in Good Cooking and the Art of Carving in the Home* (1939) added to his reputation.

Hinton, William A. (75), professor of bacteriology, immunology, and preventive medicine, Harvard Medical School, 1912–53; developed syphillis test: d. Canton, Mass., Aug. 8.

Hoare, Samuel John Gurney. See Templewood.

Holiday, Billie (real name Eleanora Fagan) (44), American jazz singer: b. Baltimore, Md., April 7, 1915; d. New York, N.Y., July 17, 1959. Sporting a swatch of white gardenias in her hair, Billie Holiday sang her way to fame with an originality and earthiness that won for her the title, "first lady of the blues," and recognition as a leading Negro jazz singer. She began her career as a vocalist in a Harlem night club, and, in November 1933, backed by a band which included Benny Goodman, Jack Teagarden, and Gene Krupa, she made her first record, *Your Mother's Son-in-Law.* Miss Holiday later sang at numerous night clubs and with various bands, including those of Artie Shaw and Count Basie. In 1938 she introduced the bitter, haunting lyrics of *Strange Fruit,* the song by which she was perhaps best known. Her other notable records include *Billie's Blues, Fine and Mellow,* and *The Man I Love.* Her personal life was a long and generally unsuccessful attempt to rid herself of the drug habit; she was arrested several times on narcotics charges and voluntarily served terms in federal rehabilitation institutions. Her autobiography, *Lady Sings the Blues,* written with William Dufty, was published in 1956.

Holloway, William G. (72), shipping leader; board chairman, W. R. Grace & Co., 1945–55: d. Old Westbury, N.Y., Jan. 7.

Holman, Rufus C. (82), Republican senator from Oregon, 1933–45: d. Eugene, Oreg., Nov. 27.

Holmes, Taylor (80), veteran actor of Broadway stage, films, and television: d. Hollywood, Calif., Sept. 30.

Hoppe, Willie (William Frederick) (71), American billiard champion: b. Cornwall on the Hudson, N.Y., Oct. 11, 1887; d. Miami, Fla., Feb. 1, 1959. In 1906, at 18, he won the world 18.1 balkline championship by defeating Maurice Vignaux of France, at Paris. In 1907 he won his first 18.2 balkline championship, and in 1936 his first three-cushion world title, which he last defended in 1952, shortly before his retirement from tournament play. Often called the greatest all-round billiard player of all time, Hoppe won 51 world billiard championships. He wrote *Thirty Years of Billiards* (1925) and *Billiards as It Should Be Played* (1941).

Hopper, Edna Wallace (85?), American actress: b. San Francisco, Calif., ?1874; d. New York, N.Y., Dec. 14, 1959. From the 1890's through World War I, the tiny actress was the darling of the American stage, appearing in a series of light comedies and musicals, such as *The Club Friend* (1891, her first), *The Girl I Left Behind Me* (1893), *Floradora* (1900), *Jumping Jupiter* (1911), and *Girl O'Mine* (1918). In the 1920's she made a second successful career, giving lectures on beauty and cosmetics. She married comedian DeWolf Hopper in 1893 (divorced 1898) and broker Albert O. Brown in 1908.

Horne, Adm. Frederick J. (79), vice chief of naval operations, 1942–46, who played important role in logistics planning of Pacific operations in World War II: d. San Diego, Calif., Oct. 18.

Housman, Laurence (93), English author: b. Bromsgrove, England, July 18, 1865; d. near Glastonbury, England, Feb. 20, 1959. He studied art as a youth but soon turned to writing. His first success was *An Englishwoman's Love Letters,* published in 1900. Over the years, he produced prodigious amount of material, ranging from mystical verse and legends, through novels of political satire, to dramas based on religious and royal figures. Among the latter were the *Little Plays of St. Francis* (1922; second series 1931) and *Victoria Regina* (1934), which was at first banned from the English stage as dealing too familiarly with royalty. Produced on Broadway in 1935, with Helen Hayes in the title role, *Victoria Regina* ran for 604 performances. His autobiography, *The Unexpected Years,* was published in 1936, and his memoirs of his noted brother, poet A. E. Housman (1859–1936), appeared in 1937 under the title *A.E.H.*

Howells, John M. (91), architect who helped design Daily News Building (New York City) and other noted structures: d. Kittery Point, Me., Sept. 22.

Howland, Leroy A. (80), Fisk Professor of mathematics, Wesleyan University, 1913–47; dean, 1935–47: d. Middletown, Conn., Aug. 26.

Huff, Charles H. (71), writer (as Drexel Drake) of "Falcon" detective stories: d. Yonkers, N.Y., July 15.

Hunziker, Otto F. (85), professor of dairying, Purdue University, 1905–16; researcher, author, and publisher of dairying studies: d. Lagrange, Ill., Nov. 15.

Ibrahim ibni Al-Marhum Abu Bakar, Sir (85), sultan of Johore: b. Johore Bharu, Malay state of Johore, Sept. 17, 1873; d. London, England, May 8, 1959. One of the world's wealthiest men and an ardent sportsman, Sir Ibrahim became sultan of Johore at the age of 22, in 1895. He was a lifelong admirer of the British and governed his state in close association with them. In World War II, following the Japanese conquest of Malaya, he remained in Johore. After the war he came into conflict with his ministers on the question of independence, which he opposed, and in 1955, two years before the country became the independent Federation of Malaya, he left Johore and thereafter lived mostly in London.

Ironside, Field Marshal Lord William Edmund (79), British military leader; b. Ironside, Scotland, May 6, 1880; d. London, England, Sept. 22, 1959. During World War I he served in France and later commanded an Allied expedition against Bolshevik forces at Archangel, Russia, in 1918–19. He became chief of Britain's Imperial General Staff in 1939 and after the outbreak of World War II, in 1940, commander in chief of Home Forces and field marshal. In 1941 he was made a baron.

Irwin, Wallace A. (83), humorist; newspaper columnist and author of magazine articles, novels, and verse: d. Southern Pines, N.C., Feb. 14.

Jackh, Ernest (84), German-born author, educator, and authority on Middle East; contributor to ENCYCLOPEDIA AMERICANA: d. New York City, Aug. 17.

Jackson, John G. (79), lawyer and civic leader; life trustee of Columbia University: d. New York City, Apr. 27.

Jackson, Walter Clinton (80), chancellor of Woman's College of University of North Carolina, 1934–59: d. Greensboro, N.C., Aug. 12.

Jackson, Wilfrid J. (58), physicist and radar authority; chairman of Physics Department, Douglass College, after 1946: d. New Brunswick, N.J., Mar. 13.

James, Herman G. (72), president of University of North Dakota, 1929–35, and of Ohio University, 1935–43; author of books on municipal government: d. St. Petersburg, Fla., Nov. 26.

Jansen, Ernest G. (78), governor general of South Africa after 1951: d. Pretoria, South Africa, Nov. 25.

Jenkins, Thomas A. (79), Republican representative from Ohio, 1925–59: d. Worthington, Ohio, Dec. 21.

Joham, Josef (70), Austrian financier; head of state-operated Kreditanstalt-Bankverein: d. Vienna, Apr. 7.

Johnson, Charles F., Jr. (71), board chairman of Endicott Johnson Company, shoe manufacturers: d. Johnson City, N.Y., Aug. 9.

*Johnson, Edward (80), general manager of Metropolitan Opera Co., 1935–50: d. Guelph, Ont., Apr. 20.

Jones, Col. Byron Q. (70), aviator; chief of Army aviation training in World War I: d. Washington, D.C., Mar. 30.
Jones, Harold W. (68), professor emeritus of clinical medicine and hematology, Jefferson Medical College; contributor to ENCYCLOPEDIA AMERICANA: d. Philadelphia, Sept. 2.
Jordan, Sara M. (75), gastroenterologist and cofounder of Lahey Clinic: d. Boston, Nov. 21.

Kahn, Morton C. (63), bacteriologist, public health specialist, and explorer; chief bacteriologist, St. Vincent's Hospital, New York City, after 1955; authority on Djuka, bush Negroes of Surinam: d. New York City, May 30.
Karpovich, Michael (71), Russian-born economist and authority on Russian culture; professor of Slavic languages, Harvard University, 1927–57: d. Cambridge, Mass., Nov. 7.
Katay D. Sascrith (55), pro-Western premier of Laos, 1954–56: d. Vientiane, Laos, Dec. 29.
Kelly, Sir David V. (67), British diplomat and author; ambassador to USSR, 1949–51: d. Inch, Ireland, Mar. 27.
Kelly, Fred C. (77), humorist, newspaper columnist, and author: d. Kensington, Md., May 23.
Kemp, Robert (74), French critic and reviewer; member of French Academy after 1956: d. Paris, July 3.
Kendall, Kay (Justine Kay Kendall McCarthy) (33), English stage and film comedienne: d. London, Sept. 6.
Kendall, Messmore (86), president general of National Society of the Sons of the American Revolution; authority on George Washington: d. West Palm Beach, Fla., May 1.
King, Samuel Wilder (72), former governor of the Territory of Hawaii: b. Honolulu, Hawaii, Dec. 17, 1886; d. Honolulu, March 24, 1959. His political career was closely allied with Hawaii's fight for statehood, in which he was a leading figure. He was Hawaii's delegate to the U.S. Congress from 1935 to 1941; was a member of the Hawaiian Statehood Commission from 1947 to 1953 (chairman, 1949–53); and, as president of the Constitutional Convention of 1950, played a major part in drafting Hawaii's constitution. He served as territorial governor from 1953 to 1957. From 1958, he was a representative in the territorial legislature.
Kirkwood, John G. (52), chairman of Department of Chemistry, Yale University; authority on statistical mechanics of gases and liquids: d. New Haven, Conn., Aug. 9.
Kitchel, Anna T. (77), professor of English, Vassar College, 1930–48; authority on 19th century English literature: d. Toledo, Ohio, May 28.
Kitson, Harry D. (73), professor of psychology, Teachers College, Columbia University, 1925–51; author of books on vocational guidance: d. Mishawaka, Ind., Sept. 25.
Knipper-Chekhova, Olga (88), Russian actress and widow of Anton Chekhov; noted for portrayals of Chekhov roles: d. Moscow, Mar. 22.
Knoch, Ernst (83), German-born opera conductor, teacher, and coach of singers; specialist in Wagnerian opera: d. New York City, Mar. 20.
Knoles, Tully C. (83), president of College of the Pacific, 1919–46: d. Stockton, Calif., Nov. 29.
Knowlson, James S. (75), automotive industrialist and government aide; president (1939–54) and chairman (after 1954) of Stewart-Warner Corp.: d. Chicago, Mar. 6.
Knudson, John I. (70), professor of history and economics, Brooklyn Polytechnic Institute, 1930–55; specialist in international law: d. Battle Creek, Mich., Aug. 25.
Koehler, Wilhelm R. (75), Estonian-born authority on French Romantic sculpture and Roman painting; professor of fine arts, Harvard University, 1932–53: d. Munich, Germany, Nov. 3.
Kopeloff, Nicholas (69), research bacteriologist at New York State Psychiatric Institute, 1920–56, and author of books in field: d. New York City, Sept. 4.
Kovacs, Bela (55), Hungarian political leader; former leader of Smallholders Party and minister of agriculture under Imre Nagy (1956): d. Pecs, Hungary, June 21.
Krauss, Werner (75), Austrian actor; appeared on London and New York stages and in films: d. Vienna, Oct. 20.
Krzhizhanovsky, Gleb (87), Russian revolutionist and associate of Lenin; a director of First Five-Year Plan and a leading power engineer: d. USSR, (announced) Mar. 31.
Kyster, Maj. Gen. Olaf H., Jr. (56), member of the U.N. Military Armistice Commission in Korea, 1957–58: d. Washington, D.C., Sept. 14.

La Gorce, John Oliver (80), American editor: b. Scranton, Pa., Sept. 22, 1879; d. Washington, D.C., Dec. 23, 1959. He began free-lance writing in 1903, later starting a syndicated column largely devoted to geographical topics. In 1907 he was named assistant editor of *The National Geographic Magazine*, and within a few years became associate editor and vice president of the National Geographic Society. From 1954 until his retirement in 1957, Dr. La Gorce served as president of the society and editor of the magazine. He was instrumental in organizing Adm. Donald B. MacMillan's Arctic expedition (1925) and the late Adm. Richard E. Byrd's Antarctic expeditions in 1929 and 1933. He wrote many popular books and articles on geography and fish.
Laistner, Max L. W. (69), English-born professor of ancient history, Cornell University, 1925–58; authority on early Christian intellectual history: d. Ithaca, N.Y., Dec. 10.
Lajoie, Napoleon (83), American baseball player: b. Woonsocket, R.I., Sept. 5, 1875; d. Daytona Beach, Fla., Feb. 7, 1959. One of the original members of baseball's Hall of Fame (elected in 1937), he compiled a lifetime batting average of .339 in 21 seasons. He joined the Philadelphia Phillies in 1896 and moved to the Philadelphia Athletics in 1901 and to Cleveland in 1902. Lajoie remained with the latter club (named the "naps" in his honor) for 13 years, and was its manager from 1905 to 1909. He closed out his career with the Athletics in 1915–16. A right-handed batter, he posted a .422 average in 1901, which stood as the American League record at the time of his death, and he also won batting titles in 1903 (.355) and 1904 (.381). Lajoie's lifetime total of 3,251 hits was exceeded by that of only four other players in the modern era.
Lamb, Albert R. (78), professor emeritus of clinical medicine, Columbia University; president of medical board, Presbyterian Hospital, 1940–46: d. Pine Orchard, Conn., Nov. 22.
Land, Frank S. (69), founder of Order of De Molay, fraternal group for youth: d. Kansas City, Mo., Nov. 8.
*Landowska, Wanda (80), Polish-born pianist and harpsichordist: d. Lakeville, Conn., Aug. 16.
*Langer, William (73), Republican senator from North Dakota after 1941: d. Washington, D.C., Nov. 8.
Lansing, Ambrose (67), Egyptologist; curator emeritus, Metropolitan Museum of Art; uncovered 3,800-year-old tomb near Memphis, Egypt: d. near Apache Junction, Ariz., May 28.
Lanz Duret, Miguel (50), Mexican newspaper publisher; president of Mexico City *El Universal;* former head of Inter-American Press Association: d. Mexico City, Mar. 24.
Lanza, Mario (real name Alfred Arnold Cocozza) (38), American singer: b. Philadelphia, Pa., Jan. 31, 1921; d. Rome, Italy, Oct. 7, 1959. After making his singing debut in 1942 at the Tanglewood Music Festival, Lenox, Mass., he was drafted into the Army Air Force. While in the service (1942–45) he appeared in the shows *On the Beam* and *Winged Victory*. He later attracted a wide following by his concerts in Chicago's Grant Park (1946) and the Hollywood Bowl (1947). In 1948 he launched a recording career which produced such notable successes as *Be My Love* and *The Loveliest Night of the Year*. Making his motion picture bow in *That Midnight Kiss* (1949), he became a major box-office star, perhaps reaching the peak of his fame in *The Great Caruso* (1951). His other films ranged from *The Toast of New Orleans* (1950) to *Seven Hills of Rome* (1958) and *For the First Time* (1959). Despite his rich, powerful tenor voice, many critics found his singing lacking in artistry and discipline. Temperamental in nature, he was plagued by problems stemming from efforts to reduce his weight.
Larsen, Lisa (Mrs. Niels Rasmussen) (34), photographer for *Life* and other magazines: d. New York City, Mar. 8.
Laurel, José P. (68), Philippine public official: b. Tanauan, Batangas, the Philippines, March 9, 1891; d. Manila, the Philippines, Nov. 6, 1959. Successively a lawyer, undersecretary and secretary of the interior, senator, and associate justice of the Supreme Court, he offered his services to the Japanese occupying forces in 1942, and was made president of their puppet regime in 1943. After the war, when he was to stand trial for treason, he claimed that he had collaborated with the Japanese only to mitigate the lot of the Filipinos. He was granted amnesty in 1948 before the trial was held, and ran unsuccessfully for the presidency in 1949. Two years later he won an impressive election victory to the Senate, where he served until his retirement in 1957.
Laurencena, Eduardo (73), Argentine banker and provincial governor; president of Central Bank of Argentina after 1956: d. Paraná, Argentina, July 19.
Lazrus, S. Ralph (61), a founder and president of Benrus Watch Co., Inc.: d. New York City, Sept. 4.
*Leahy, Adm. William D. (84), personal chief of staff to Presidents Roosevelt and Truman: d. Bethesda, Md., July 20.
Leber, Charles T. (60), Presbyterian clergyman, author, and administrator of ecumenical mission work for Presbyterian Church in the U.S.A.: d. São Paulo, Brazil, July 30.
Lemkin, Raphael (58), Polish-born professor of law, Rutgers University; a leader in movement to outlaw genocide: d. New York City, Aug. 28.
Lessner, Erwin (61), Austrian-born newspaper publisher and writer on European politics: d. New York City, Dec. 24.
Leverich, Henry P. (52), director of State Department's Office of Eastern European Affairs: d. Washington, D.C., Aug. 11.
Lewin, Samuel (69), Polish-born author of novels, short stories, and plays in Yiddish; works translated into several languages: d. New York City, June 3.
Lewis, Samuel M. (76), writer of lyrics for *Dinah, Mammy,* and other popular songs: d. New York City, Nov. 22.
Lewisohn, Frederick (77), American financier and copper industrialist: d. Monte Carlo, Monaco, July 4.
Li Chi-shen (75), Chinese military and political leader;

vice chairman of National People's Congress Standing Committee and chairman of Revolutionary Committee of Kuomintang: d. Peking, Oct. 8.

Lincoln, John C. (92), inventor who pioneered in shielded arc welding: d. Phoenix, Ariz., May 24.

Lindsay, Samuel McC. (90), professor of social legislation, Columbia University, 1907–39; former chairman of National Child Labor Committee and president of Academy of Political Science: d. Orlando, Fla., Nov. 11.

Litchfield, Paul W. (83), board chairman (1930–58) of Goodyear Tire and Rubber Co.: d. Phoenix, Ariz., Mar. 18.

Loeb, Leo (90), American pathologist: b. Mayen, Germany, Sept. 21, 1869; d. St. Louis, Mo., Dec. 28, 1959. After receiving his M.D. at the University of Zurich in 1897, he went to the United States, set up practice in Chicago, and became a citizen in 1902. He soon abandoned his practice to concentrate on research, and while teaching experimental pathology at the University of Pennsylvania (1904–10) he discovered the role of heredity in breast cancer in mice. In 1910–15 he headed the department of Pathology at the Barnard Free Skin and Cancer Hospital, St. Louis, and from 1915 until he retired as professor emeritus in 1937 he served on the faculty of Washington University, St. Louis (from 1924 as head of the pathology department). One of the early workers in tissue culture, he also demonstrated the relation of sex hormones to cancer, and many of his major contributions to pathology came in the area of cancer research.

López, Alfonso (73), former president of Colombia: b. Honda, Tolima, Colombia, Jan. 31, 1886; d. London, England, Nov. 20, 1959. Elected as a deputy to the Colombian Congress in 1915, López succeeded in unifying the Liberal Party and in bringing it to power in 1930. He served as president of Colombia in 1934–38, and again in 1942–45. His government's popularity was partly due to the social reforms it inaugurated. He represented Colombia at the United Nations in 1946–48, and was president of the U.N. Security Council in 1947. At the time of his death he was ambassador to Great Britain.

Lowe, Titus (81), Methodist bishop; president of Council of Bishops of Methodist Church, 1946–48: d. Indianapolis, Ind., Nov. 27.

Lowrie, Walter (91), American theologian: b. Philadelphia, Pa., April 26, 1868; d. Princeton, N.J., Aug. 12, 1959. After graduating from Princeton University (B.A., 1890; M.A., 1893) and the Princeton Theological Seminary (1893), he was ordained (1896) a priest in the Protestant Episcopal Church and served as rector of St. Paul's American Church at Rome (1907–30). Dr. Lowrie was noted for his studies and translations of the works of the Danish philosopher Søren Kierkegaard (1813–55). The best known of his 38 books include *Monuments of the Early Church* (1901), *Problems of Church Unity* (1924), *Kierkegaard* (1938), and *What is Christianity?* (1953).

Lukens, Hiram S. (74), professor of chemistry, University of Pennsylvania, 1921–53; authority on electrochemistry and analytical chemistry: d. Ventnor, N.J., Nov. 25.

Luque, Crisanto (70), Colombian cardinal: b. Tenjo, Colombia, Feb. 1, 1889; d. Bogotá, Colombia, May 7, 1959. Ordained in 1916, he was titular bishop of Croe and bishop of Tunja prior to his consecration as archbishop of Bogotá and primate of Colombia in July 1950. He was created cardinal on Jan. 12, 1953, thereby becoming the first Colombian to receive this honor. An uncompromising opponent of the dictator Gustavo Rojas Pinilla, he was said to have exercised great influence on the events which resulted in Rojas' fall from power in May 1957.

Lyon, Leverett S. (73), educator, economist, and Chicago civic leader: d. Chicago, Sept. 7.

McBey, James (75), Scottish-born American etcher and portraitist: d. Tangier, Morocco, Dec. 1.

McCollom, Vivian C. (57), chairman of national board of Young Men's Christian Associations of U.S. after 1956: d. Ridgewood, N.J., Aug. 12.

McCornack, Richard B. (39), professor of history, Dartmouth College, after 1958; specialist and author on Latin American affairs: d. Hanover, N.H., May 14.

McCosker, Alfred J. (72), pioneer in radio broadcasting industry; former president and board chairman of station WOR: d. Miami Beach, Fla., July 1.

McDonald, Philip B. (70), professor of English, New York University, 1938–54; author of *English and Science* and other books: d. New York City, Oct. 23.

McElhany, J. L. (79), president of General Conference of Seventh-Day Adventists, 1936–50, and general field secretary after 1950: d. Glendale, Calif., June 25.

McElroy, Robert (86), chairman of Department of History and Politics, Princeton University, 1912–16; professor of American History, Oxford University, 1925–39; author of works on American history: d. Lihue, Hawaii, Jan. 15.

McGrigor, Adm. Sir Rhoderick (66), British naval officer; first sea lord and chief of naval staff, 1951–55: d. Aberdeen, Scotland, Dec. 4.

McIntire, Vice Adm. Ross T. (70), personal physician to President Franklin D. Roosevelt, 1935–45; surgeon general of Navy and chief of Bureau of Medicine and Surgery, 1938–46: d. Chicago, Dec. 8.

McKay, Donald C. (57), professor of history, Harvard University, 1946–56; author and editor of works on European history: d. Amherst, Mass., Apr. 2.

McKay, (James) Douglas (66), American public official: b. Portland, Oreg., June 24, 1893; d. Salem, Oreg., July 22, 1959. He was graduated from Oregon State College (B.S., 1917), served with the U.S. Army in France during World War I, and in 1927 opened an automobile sales agency in Salem. A Republican, he served as mayor of Salem in 1933–34 and was subsequently elected to four terms in the state Senate. He was governor of Oregon from 1949 to 1953. McKay was appointed in 1953 as secretary of the interior in President Eisenhower's first administration. The secretary favored state rather than federal control of offshore oil rights, and attempted to implement the administration's "partnership" policy of power development, under which private industry would construct and operate most hydroelectric power stations while the federal government would control only those too large for industry to handle. His political opponents often accused him of advocating a "give-away" program by which federal resources would be turned over to private interests. In 1956 he resigned from the cabinet to campaign for the U.S. Senate, but was defeated by incumbent Wayne Morse.

McKay, Frederick S. (85), dentist whose studies contributed toward practice of fluoridating water to reduce tooth decay: d. Colorado Springs, Colo., Aug. 21.

McLaglen, Victor (72), English-American motion picture actor: b. Tunbridge Wells, England, Dec. 11, 1886; d. Newport Beach, Calif., Nov. 7, 1959. The son of an Anglican bishop, McLaglen ran away from home to serve in the Boer War. He later prospected unsuccessfully for gold in Canada; toured the provinces as a professional boxer, wrestler, and side-show strong man; and hunted for pearls in the South Seas. After serving in the British Army in World War I, he became a movie actor, first in London, then in Hollywood. *What Price Glory?* (1926) was his first popular success; *The Informer* (1935), his greatest artistic success. For his portrayal of the informer, Gypo Nolan, he was awarded an Oscar in 1935. He appeared in nearly 150 films before his death.

Maclaurin, W. Rupert (52), professor of economics, Massachusetts Institute of Technology; authority on economic aspects of technological change: d. (suicide) Boston, Aug. 17.

McLeod, Clarence J. (63), Republican representative from Michigan, 1920–21, 1923–35, 1939–41: d. Detroit, May 15.

McMullen, Maj. Gen. Clements (66), U.S. Air Force officer; commanding general of Far Eastern Air Service Command in World War II: d. San Antonio, Texas, Jan. 9.

McNulty, John L. (60), Catholic educator; president of Seton Hall University: d. Suffern, N.Y., May 27.

Mahmoud Khan Ghazi, Marshal Sardar Shah (73), premier of Afghanistan, 1946–53: d. Kabul, Afghanistan, Dec. 24.

Malan, Daniel François (84), former prime minister of the Union of South Africa: b. near Riebeek West, Cape Colony (now Cape Province), South Africa, May 22, 1874; d. Stellenbosch, Cape Province, Union of South Africa, Feb. 7, 1959. A doctor of divinity (University of Utrecht, Holland, 1904), he was a minister in South Africa's Dutch Reformed Church until 1915, when he was made editor of the National Party newspaper, *Die Burger*. Elected to parliament in 1918 (he represented Calvinia district, 1918–38, and Piquetberg district, 1938–54), he became a leader of the National Party and was minister of the interior, health, and education (1924–33) in the cabinet of J. B. M. Hertzog. Resigning from the cabinet to lead the National Party into opposition after Hertzog formed a coalition with Jan Christiaan Smuts, Malan succeeded Smuts as prime minister following his party's victory in the general elections in May 1948. A lifetime advocate of apartheid (racial segregation) of Europeans and non-Europeans, he implemented these policies with a series of enforcing acts before retiring on Nov. 30, 1954.

Mallory, Cassius C. (68), shipping leader; board chairman, Grace Line, Inc., 1955–57: d. Lake Wales, Fla., Jan. 2.

Mannes, David (93), violinist, conductor, and music teacher; cofounder (1916) of Mannes College of Music: d. New York City, Apr. 24.

Manuilsky, Dmitri Z. (75), Soviet Communist leader; member of presidium of Comintern for 20 years and foreign minister of Ukraine, 1944–52: d. Kiev, USSR, Feb. 22.

°Marshall, Gen. George C. (78), chief of staff of U.S. Army in World War II; secretary of state, 1947–48: d. Washington, D.C., Oct. 16.

Martinez Trueba, Andres (75), president of Uruguay, 1951–52: d. Montevideo, Uruguay, Dec. 19.

Martinů, Bohuslav (68), Czechoslovak composer: b. Polička, Bohemia, Dec. 8, 1890; d. Liestal, Switzerland, Aug. 28, 1959. The prolific and largely self-taught Martinů was one of the best known of contemporary composers, as well as a skilled orchestrator. He created a wide variety of music, including orchestral works, chamber music (he was himself a violinist), ballets, operas, and radio and motion picture music. After studying and playing intermittently with the Czech Philharmonic Orchestra in Prague, he lived in Paris from 1923 until 1940, when he and his wife fled to the United States. His music was introduced to American audiences by the Boston Symphony Orchestra, under Serge Koussevitzky, who later ar-

ranged for the commissioning of Martinů's First Symphony (1942), one of the Czech's most successful works. Martinů taught at the Summer Berkshire Music Center and at Princeton University. After 1953 he lived mostly in Europe. His compositions include String Sextet (1932), Double Concerto (1938), Concerto Grosso (1938), and *Memorial to Lidice* (1943).

Masson, Pierre (79), French-born Canadian tumor expert; professor of pathological anatomy, University of Montreal: d. Montreal, May 11.

Matthai, John (73), Indian economist, educator, industrialist, and cabinet minister: d. Bombay, India, Nov. 2.

Matthews, (Wilmot) Donald (52), Canadian government official and diplomat: d. Ottawa, Mar. 14.

May, Andrew J. (84), Democratic representative from Kentucky, 1931–47; chairman of House Military Affairs Committee in World War II; convicted of accepting bribes (1947): d. Prestonsburg, Ky., Sept. 6.

Mergendahl, Charles (40), author of *The Bramble Bush* and other fiction: d. Glen Cove, N.Y., Apr. 27.

*Meyer, Eugene (83), banker, publisher, and government aide; board chairman of The Washington *Post* and The Washington *Times Herald:* d. Washington, D.C., July 17.

Meyer, George W. (74), composer of *For Me and My Gal* and other popular songs: d. New York City, Aug. 28.

Milbank, Dunlevy (81), philanthropist and business leader; noted for aid to Children's Aid Society and other causes: d. New York City, Oct. 16.

Millar, Robert W. (82), legal scholar and author of works on law; professor of law, Northwestern University Law School, 1915–42: d. Evanston, Ill., Feb. 9.

Miller, Francis T. (82), historian; author of 10-volume *Photographic History of the Civil War* and other books: d. Old Greenwich, Conn., Nov. 7.

Milligan, Maurice M. (74), United States attorney, 1934–45; noted for successful fight against Pendergast political machine in Missouri: d. Kansas City, Mo., June 16.

Mims, Edwin (87), educator and author: head of the Department of English, Vanderbilt University, 1912–42: d. Nashville, Tenn., Sept. 15.

Mitchell-Hedges, Frederick A. (76), English explorer and author; codiscoverer of ruins of Mayan city in British Honduras (1924): d. Shaldon, Eng., June 12.

Mollison, James A. (54), British aviator; first man to fly solo across Atlantic, east to west: d. near London, Oct. 30.

Moranzoni, Roberto (78), Italian operatic conductor; conductor at Metropolitan Opera House, 1917–24: d. Desio, Italy, Dec. 13.

Morris, Wayne (45), actor in films, on stage, and in television: d. Oakland, Calif., Sept. 14.

Morrison, Donald H. (44), educator and political scientist; dean of faculty, Dartmouth College, 1947–55, and provost after 1955: d. Princeton, N.J., Mar. 17.

Morshead, Lieut. Gen. Sir Leslie J. (70), Australian commander of Tobruk garrison during siege by Afrika Corps in 1941; leader of Australian forces in battle of El Alamein: d. Sydney, Australia, Sept. 26.

Mosher, A(aron) R(oland) (78), Canadian labor leader; president of Canadian Congress of Labour, 1940–51: d. Lake Bernard, Canada, Sept. 26.

Moursund, Walter H. (74), dean of Baylor University College of Medicine, 1923–53: d. Houston, Texas, Apr. 2.

Muir, Edwin (71), Scottish poet, novelist, and critic: b. Deerness, Pomona Island, Orkney Islands, Scotland, May 15, 1887; d. Cambridge, England, Jan. 3, 1959. After his marriage in 1919 to Willa Anderson, he worked as a journalist in London for two years. Muir served as warden of Newbattle Abbey College in Dalkeith, Scotland, from 1950 to 1955, and as Charles Eliot Norton professor of poetry at Harvard University in 1955–56. His work includes: (novels) *The Marionette* (1927), *The Three Brothers* (1931), and *Poor Tom* (1932); (poetry) *First Poems* (1925), *Journeys and Places* (1937), *The Narrow Place* (1943), *The Voyage, and Other Poems* (1946), *The Labyrinth* (1949), *Collected Poems, 1921–1951* (1952), and *One Foot in Eden* (1956); (criticism and biography) *Latitudes* (1924), *Transitions: Essays on Contemporary Literature* (1926), *John Knox: Portrait of a Calvinist* (1929), *Scott and Scotland: The Predicament of the Scottish Writer* (1936), and *Essays on Literature and Society* (1949). *An Autobiography,* originally published as *The Story and the Fable* in 1940, appeared in expanded form in 1954. With his wife, Muir was the translator of European writers, notably Franz Kafka.

Muir, Sir Robert (94), Scottish pathologist; professor at Glasgow University and author of standard works on pathology and bacteriology: d. Edinburgh, Mar. 30.

Muller, Henri F. (80), French-born professor of Romance philology, Columbia University, 1928–46; author of works on philology: d. Westerly, R.I., Sept. 10.

Munford, Walter F. (59), president of U.S. Steel Corporation after May 5, 1959: d. Hyannis, Mass., Sept. 28.

Munnings, Sir Alfred J. (80), English artist noted for paintings of horses, landscapes, and portraits; president of Royal Academy, 1944–49: d. Dedham, Essex, Eng., July 17.

Murphy, Walter J. (60), editor of publications, American Chemical Society; lecturer and writer on scientific subjects: d. Washington, D.C., Nov. 26.

Murray, Thomas C. (86), Irish playwright associated with Abbey Theatre in its early years: d. Dublin, Mar. 7.

Namatjira, Albert (57), Australian aboriginal artist noted for primitive paintings: d. Alice Springs, Australia, Aug. 8.

Neal, John R. (83), chief defense counsel in Scopes trial of 1925: d. Rockwood, Tenn., Nov. 23.

*Nelson, Donald M. (70), chairman of War Production Board, 1942–44: d. Los Angeles, Sept. 29.

Nettleton, George H. (84), professor of English, Yale University, 1916–43, and dean of Yale College, 1937–39; author on English drama: d. New Haven, Conn., Feb. 5.

Neville, Keith (75), Democratic governor of Nebraska, 1917–19: d. North Platte, Nebr., Dec. 4.

Newman, Ernest (90), English music critic and author: b. Liverpool, England, Nov. 30, 1868; d. Tadworth, Surrey, England, July 7, 1959. Through his writings on music he gained worldwide fame. His columns appeared in the Manchester *Guardian* (1905–06), the Birmingham *Daily Post* (1906–19), the London *Observer* (1919–20), and the London *Sunday Times,* for which he was music critic from 1920 to 1958. A scholar of great erudition, and an authority on Richard Wagner and the opera, he was also a superb stylist, whose wit and pungency made his works a delight to read. Among his books are *Gluck and the Opera* (1895), *Hugo Wolf* (1907), *Richard Wagner* (4 vols., 1933–46), and *Essays from the World of Music* (1957).

Newman, Henry W. (52), professor of medicine, Stanford University Medical School; authority on multiple sclerosis and researcher in neurophysiology and pharmacology: d. San Francisco, Sept. 19.

Niles, Blair (71), explorer and author of travel books, novels, and other writings: d. New York City, Apr. 13.

Norton, Mary T. (84), Democratic congresswoman: b. Jersey City, N.J., March 7, 1875; d. Greenwich, Conn., Aug. 2, 1959. A New Jersey representative from 1925 to 1951, Mary Norton was the first woman to be elected to the House by the Democratic Party and the first to head a congressional committee. A solid supporter of New Deal labor legislation, she was chairman of the House Labor Committee from 1937 to 1947. When she retired, she had served longer in the House than any other woman.

Norworth, Jack (80), writer of *Take Me Out to the Ball Game* and other songs: d. Laguna Beach, Calif., Sept. 1.

Noyes, Pierrepont B. (88), industrialist and author; president, Oneida, Inc., manufacturers of silverplate, 1910–50: d. Oneida, N.Y., Apr. 15.

Nuñez y Dominguez, José de Jesus (64), Mexican diplomat and writer; ambassador to Chile after 1953, and author of poetry, biographies, and other works: d. Santiago, Chile, Mar. 31.

Nurkse, Ragnar (51), Estonian-born professor of economics, Columbia University, after 1947; author and expert on international finance: d. Vevey, Switzerland, May 6.

O'Connor, Una (real name Agnes Teresa McGlade) (78), Irish actress: b. Belfast, Ireland, Oct. 26, 1880; d. New York, N.Y., Feb. 4, 1959. Famous for her portrayals of temperamental, wasp-tongued maids, or eccentric, sad-faced spinsters, she studied at the Abbey Theatre School in Dublin and made her stage debut there in 1911 in Bernard Shaw's *The Shewing-Up of Blanco Posnet.* She first appeared in London in *The Magic Glass* (1913), and subsequently was seen there or on Broadway in plays that included *Paddy the Next Best Thing* (1920), *The Man Who Was Thursday* (1926), *Macbeth* (1928), *The Silver Box* (1928), *The Passing of the Third Floor Back* (1928), *Cavalcade* (1931), *The Linden Tree* (1948), and *Witness for the Prosecution* (1954). She played in numerous motion pictures, including *Cavalcade* (1933), *David Copperfield* (1935), *The Informer* (1935), *Rose Marie* (1936), *How Green Was My Valley* (1941), *Of Human Bondage* (1946), and *Witness for the Prosecution* (1957).

Ogburn, William Fielding (72), American sociologist and educator: b. Butler, Ga., June 29, 1886; d. Tallahassee, Fla., April 27, 1959. After attending Mercer University (B.S., 1905) and Columbia University (M.A., 1909; Ph.D., 1912), Ogburn taught sociology and economics at Reed College in Oregon (1912–17), the University of Washington (1917–18), Columbia University (1919–27) and the University of Chicago (1927–51). From 1953 until his death he was a visiting professor of sociology at Florida State University. Especially interested in the social maladjustments that occur when man's overall cultural advance does not keep pace with his technological skill, Dr. Ogburn made use of his studies in posts with several government agencies, including the National War Labor Board (1918–19), the President's Research Committee on Social Trends (1930–33), and the National Resources Planning Board (1933–43). Ogburn's published works include *Progress on Uniformity in Child Labor Legislation* (1912), *Social Change with Respect to Culture and Original Nature* (1922), *Living with Machines* (1933), *You and Machines* (1934), and *Social Characteristics of Cities* (1937). He was president of the American Statistical Association (1931) and of the American Sociological Society (1929), and chairman of the Social Science Research Council (1937–39).

Ogden, Robert M. (81), dean of College of Arts and Sciences, Cornell University, 1923–45: d. Ithaca, N.Y., Mar. 2.

Owen, George (87), professor emeritus of naval architecture, Massachusetts Institute of Technology; yacht designer: d. Newton, Mass., Apr. 21.

Padmore, George (56), Trinidad-born Negro leader in movement for African freedom; political adviser to Prime Minister Kwame Nkrumah of Ghana: d. London, Sept. 23.

Pap, Arthur (37), associate professor of philosophy, Yale University; author of books on analytic philosophy: d. New Haven, Conn., Sept. 7.

Parke, Hiram H. (85), a founder, president (1933–53), and board chairman (1953–57) of Parke-Bernet Galleries, noted art auction house: d. Philadelphia, Apr. 1.

Parkhurst, Helen H. (71), professor of philosophy, Barnard College, 1944–1952; author and lecturer on art: d. New York City, Apr. 14.

Parkinson, Thomas Ignatius (77), American lawyer, educator, and business executive: b. Philadelphia, Pa., Nov. 27, 1881; d. Bay Shore, N.Y., June 17, 1959. In the midst of a distinguished career at Columbia University, where he was professor of legislation and, in 1923–24, dean of the law school, he joined the Equitable Life Assurance Society. He was the company's president from 1927 until 1953, when he became chairman of the board. He retired in 1954. Under his direction, Equitable's business quadrupled and its assets grew from less than $1 billion to $6.5 billion.

Parks, Lieut. Gen. Floyd L. (63), commander of U.S. occupation zone in Berlin, 1945; chief of information, Department of Army, 1949–53; commanding general, 2d Army, 1953–56: d. Washington, D.C., Mar. 10.

Pavelic, Ante (70), Croatian nationalist leader; head of Nazi puppet government in Croatia, Yugoslavia, in World War II: d. Madrid, Spain, Dec. 28.

Pearce, Louise (74), physician who helped develop cure for sleeping sickness; president, Women's Medical College of Philadelphia, 1946–51: d. New York City, Aug. 9.

Peele, William W. (77), Methodist bishop; president of Council of Bishops of Methodist Church, 1942–43; head of Methodist Commission on Overseas Relief, 1948–52: d. Laurinburg, N.C., July 1.

Penick, Edwin A. (72), bishop of Protestant Episcopal diocese of North Carolina after 1932: d. Chapel Hill, N.C., Apr. 6.

Perlman, Selig (70), professor of economics, University of Wisconsin, 1927–59; author of standard works on labor economics: d. Philadelphia, Aug. 14.

Philipe, (Albert) Gérard (36), French actor: b. Cannes, France, Dec. 4, 1922; d. Paris, France, Nov. 25, 1959. By the time he first appeared on the screen in the United States in 1948 as the hauntingly tragic prince in Dostoyevsky's *The Idiot*, Philipe had already established himself as a youthful romantic film idol in France. Among the other films in which he starred were *Devil in the Flesh* (1947), *Riptide* (American release, 1951), *Beauty and the Devil* (American release, 1952), and *Fanfan the Tulip* (American release, 1953). On the New York stage in 1958, in two plays performed by the Théâtre Nationale Populaire of Paris, he played the title role in Alfred de Musset's *Lorenzaccio* as well as Rodrigue in Corneille's *Le Cid*.

Pinski, David (87), Russian-born Yiddish playwright and novelist whose works have been translated into several languages: d. Haifa, Israel, Aug. 11.

Pochon, Alfred (80), Swiss violinist and composer; director of Lausanne Conservatory, 1941–57: d. Lutry, Switzerland, Feb. 26.

Polk, James G. (62), Democratic representative from Ohio, 1931–41 and after 1949: d. Washington, D.C., Apr. 28.

Porter, Sara L. (91), widow of O. Henry and writer of short stories for magazines: d. Weaverville, N.C., Aug. 14.

Post, Chandler R. (77), professor of fine arts, Harvard University, 1923–50; author and expert on Spanish painting and sculpture: d. Cambridge, Mass., Nov. 2.

Pratt, Richardson (65), investment banker; chairman of board of Pratt Institute: d. Glen Cove, N.Y., Aug. 16.

Proctor, Bernard E. (58), head of Department of Food Technology, Massachusetts Institute of Technology; noted for research on food dehydration: d. Cambridge, Mass., Sept. 24.

*Quarles, Donald A. (64), deputy secretary of defense after 1957: d. Washington, D.C., May 8.

Radin, Paul (75), head of Anthropology Department, Brandeis University, after 1957; author and authority on American Indian: d. New York City, Feb. 21.

Raines, George N. (51), psychiatrist and neurologist; director of the Department of Psychiatry, Georgetown University Medical Center: d. Washington, D.C., Sept. 16.

Read, Conyers (78), professor of history, University of Pennsylvania, 1934–51; author and authority on Elizabethan England: d. Philadelphia, Dec. 23.

Read, Grantly Dick (69), English physician who pioneered in development of natural childbirth techniques; author of *Childbirth Without Fear* (1942): d. Wroxham, Eng., June 11.

Reed, Daniel Alden (83), U.S. congressman: b. Sheridan, Chautauqua County, N.Y., Sept. 15, 1875; d. Washington, D.C., Feb. 19, 1959. Between 1903 and his election to Congress in 1918 as Republican representative from western New York's rural 43d District, he served about six years as an attorney for the New York State Excise Department and about seven years as a football coach at Cornell University (head coach, 1910–12). Throughout his congressional tenure, which continued uninterrupted until his death, Reed was closely identified with the conservative or "Old Guard" element in the Republican Party. In 1933, as a ranking Republican congressman, he became a member of the powerful House Ways and Means Committee (chairman, 1953–54), where he was a strong supporter of low taxes, high tariffs, and less government spending.

Regan, Kenneth M. (66), Democratic representative from Texas, 1947–55: d. Santa Fe, N.Mex., Aug. 15.

Reinert, Egon (50), minister president of Saar after 1957: d. (as result of auto crash) Saarbrücken, Apr. 23.

Reyes, Alfonso (70), Mexican author and diplomat: b. Monterrey, Mexico, May 17, 1889; d. Mexico City, Mexico, Dec. 27, 1959. He received a law degree in 1913 from the National University of Mexico, and served in his country's diplomatic service for 30 years. His diplomatic career included assignments as minister plenipotentiary to Argentina (1924; 1927), France (1924), and Spain (1926), and as ambassador to Argentina (1927; 1936–37) and Brazil (1930–36; on a special mission, 1938–39). Recognized in Mexico and other Spanish-speaking countries as a great poet, literary critic, and essayist, Reyes was noted in particular for his brilliant style. His prose works include *Cuestiones estéticas* (1911), *Visión de Anáhuac* (1917), *Capítulos de literatura española* (1939), *La experiencia literaria* (1942), *El deslinde* (1944), and, in English translation, *Position of America, and Other Essays* (1950). Among his volumes of poetry are *Huellas* (1922), *Ifigenia cruel* (1924), *Golfo de México* (1934), and *Cortesía* (1948).

Rhoads, Cornelius Packard (61), American pathologist: b. Springfield, Mass., June 20, 1898; d. Stonington, Conn., Aug. 13, 1959. A graduate of Bowdoin College (B.A., 1920) and Harvard University's medical school (1924), he spent several years in internship, research, and teaching before joining New York City's Rockefeller Institute for Medical Research in 1928. During his years with the institute (until 1939) he became interested in the study of leukemia, commonest form of blood cancer, and then in cancer research as a whole. From 1940 to 1950 he was director of the Memorial Hospital for Treatment of Cancer and Allied Diseases in New York City, and in 1945 was made director of the new Sloan-Kettering Institute for Cancer Research, connected with Memorial Hospital through the Memorial Center for Cancer and Allied Diseases, and one of the world's most comprehensive organizations for the study, treatment, and cure of cancer. He was also scientific director of the Memorial Center after 1953.

Richards, Vincent (56), tennis star of 1920's and 1930's; winner of many amateur and professional championships: d. New York City, Sept. 28.

Richardson, Sir Owen Willans (79), English physicist: b. Dewsbury, Yorkshire, England, April 26, 1879; d. Alton, Hampshire, England, Feb. 15, 1959. Educated at Cambridge and London universities, he was professor of physics at Princeton University (1906–14) and Kings College, London (1914–24), where he later served as director of research in physics (1924–44). He received the 1928 Nobel Prize in physics for his original research on the emission of electrons from heated bodies (thermionics). Richardson's law states the relation between the temperature of the cathode emitter and the rate of emission of the electrons, and has been of basic importance to the development of the electronics industry. He is the author of *Electron Theory of Matter* (1914), *The Emission of Electricity from Hot Bodies* (1916), and *Molecular Hydrogen and Its Spectrum* (1934).

Richardson, Sid W. (68), Texas oil producer and multimillionaire; owner of oil refineries and cattle ranches: d. St. Joseph Island, Texas, Sept. 29.

Richier, Germaine (55), French sculptor noted for abstract works in metal: d. Montpelier, France, July 30.

Ridenour, Louis Nicot, Jr. (47), American physicist: b. Montclair, N.J., Nov. 1, 1911; d. Washington, D.C., May 21, 1959. After studying at the University of Chicago (B.S., 1932) and the California Institute of Technology (Ph.D., 1936), he taught physics at Princeton University and at the universities of Pennsylvania and Illinois. During World War II he was assistant director of the radiation laboratory at the Massachusetts Institute of Technology, where his work in radar development won him the President's Medal for Merit. As chief scientist to the U.S. Air Force (1950–51) and as a research director for the Lockheed Aircraft Corporation (after 1955), he was associated with important developments in the United States missile program.

Robbins, Bernard S. (54), professor of clinical psychiatry, New York Medical College; a founder of American Academy of Psychoanalysis: d. New York City, Dec. 16.

Robbins, John J. (65), publisher of many hit tunes in 1930's and 1940's, and of music for films and Broadway shows: d. New York City, Dec. 15.

Roberts, Mary M. (82), nursing leader, author, and editor;

editor of *American Journal of Nursing*, 1921–49: d. New York City, Jan. 11.

Rohmer, Sax (real name Arthur Sarsfield Ward, or Wade) (76?), English author: b. Birmingham (?), England, 1883?; d. London, June 1, 1959. In his early days as a young journalist in London he caught a quick glimpse of a wealthy and mysterious Oriental whose image he developed into the famous fictional character Dr. Fu Manchu. Described as fiction's "most popular villain," Fu Manchu appeared in 14 mystery novels, from *Dr. Fu Manchu* (1913) to *Emperor Fu Manchu* (1959), and in many motion pictures and radio and television programs.

Rosenberg, Paul (78), American art dealer noted for purchases of French modernist paintings: d. Paris, June 29.

Rungius, Carl (90), American artist noted for paintings of wildlife and Rocky Mountains: d. New York City, Oct. 20.

Ryckmans, Pierre (67), Belgian public official; governor general of Belgian Congo, 1934–46; high commissioner for atomic energy after 1950: d. Brussels, Belgium, Feb. 18.

Saavedra Lamas, Carlos (80), Argentine lawyer, educator, and statesman: b. Buenos Aires, Argentina, Nov. 1, 1878; d. Buenos Aires, May 5, 1959. He received a law degree from the University of Buenos Aires in 1903, taught there periodically, and was the university's president from 1941 to 1943. In his active career in public service, he was minister of justice and education, president of the 11th International Labor Conference in Geneva (1928), president of the League of Nations Assembly (1936), and, from 1932 to 1938, Argentina's minister of foreign affairs. He drafted an antiwar pact (1932) signed by 13 American republics, including the United States. For his success in guiding the negotiations that ended the Chaco boundary war (1932–35) between Bolivia and Paraguay, he was awarded the 1936 Nobel Peace Prize.

Sachs, Curt (77), German-born musicologist and author of works on music, art, and dance; adjunct professor, Columbia University, after 1953; contributor to THE ENCYCLOPEDIA AMERICANA: d. New York City, Feb. 5.

Salomon, Alberto (74), Peruvian diplomat; foreign minister, 1920–28: d. Lima, Peru, Apr. 8.

Satterthwaite, Livingston L. (50), foreign service officer: d. (air crash) near Thule Air Base, Greenland, Aug. 26.

Scheidenhelm, Frederick W. (75), consulting engineer and hydraulics expert; inventor of anchoring wall for dams: d. East Stroudsburg, Pa., Oct. 17.

Schenck, Edgar C. (49), director of Brooklyn Museum, author of books on painting: d. Istanbul, Turkey, Nov. 16.

Schindler, Raymond C. (76), private detective who worked on famous murder cases, including that of Sir Harry Oakes (1943): d. North Tarrytown, N.Y., July 1.

Schneour, Zalman (72), Russian-born Hebrew-Yiddish novelist and poet; author of *Song of the Dneiper* and other works of fiction and verse: d. New York City, Feb. 20.

Seton, Grace G. T. (86?), author of travel books and other works, explorer, lecturer, and feminist leader: d. Palm Beach, Fla., Mar. 19.

Shaver, Dorothy (65), president of Lord & Taylor department store after 1945; a leader in developing American fashion talent: d. Hudson, N.Y., June 28.

Shaw, Frank H. (75), director of Conservatory of Music, Oberlin College, 1924–49: d. Oberlin, Ohio, Sept. 1.

Siegfried, André (83), French educator, political economist, and historian: b. Le Havre, France, April 21, 1875; d. Paris, France, March 28, 1959. He was educated in Paris at the Lycée Condorcet and the University of Paris. From 1911 he taught at the École Libre des Sciences Politiques (now the Institut d'Études Politiques), which, after 1945, was administered by the Fondation Nationale des Sciences Politiques, of which Siegfried became president. From 1932 to 1947 he was also a professor at the Collège de France. He wrote many historical books, as well as political and economic studies of France, New Zealand, Canada, and other countries. He won particular renown in the United States for his *Les États-Unis d'aujourd'hui* (1927; Eng. tr., *America Comes of Age*, 1927) and *Tableau des États-Unis* (1954; Eng. tr., *America at Mid-Century*, 1955). He was elected to the French Academy in 1944.

Silbert, Samuel (65), surgeon who specialized in diseases of vascular system; pioneer in study of role of tobacco in Buerger's disease: d. New York City, July 10.

Simkhovitch, Vladimir G. (85), Russian-born professor of economic history, Columbia University, 1904–42; author of works in social sciences: d. New York City, Dec. 9.

Sisavang Vong (74), king of Laos: b. Luang Prabang, Laos, July 14, 1885; d. Luang Prabang, Oct. 29, 1959. Ruler from 1905 to 1946 of the kingdom of Luang Prabang, a protectorate of France, and from 1946 the ruler of a united Laos, he reigned longer than any other 20th century sovereign. Always friendly to France, where he had been a student as a young man, he remained loyal throughout the Japanese occupation of his country in World War II. During his reign Laos became (1949) an independent state within the French Union. Because of ill health, he appointed his son and heir, Savang Vatthana, to be regent in August 1959.

Slichter, Sumner Huber (67), American economist and educator: b. Madison, Wis., Jan. 8, 1892; d. Cambridge, Mass., Sept. 27, 1959. After graduating from the University of Wisconsin (B.A., 1913; M.A., 1914) and the University of Chicago (Ph.D., 1918), he taught economics at Princeton University (1919–20), Cornell University (1920–30), and Harvard University, where he was professor of business economics (1930–40) and (from 1940) Lamont university professor and faculty member of the graduate school of business administration. As one of America's most influential economists, he frequently served both government agencies and private groups in an advisory capacity, particularly in the field of industrial relations and often as arbiter in labor disputes. He believed that certain so-called "inflationary" tendencies were necessary to spur the economy's growth, and favored tax cuts and planned-budget deficits to increase consumer demand. Among his books were: *Modern Economic Society* (1931), *Union Policies and Industrial Management* (1941), *The American Economy: Its Problems and Prospects* (1948), and *What's Ahead for American Business* (1951).

Smith, Gilbert M. (74), professor of botany, Stanford University, 1925–50; authority on algae: d. Palo Alto, Calif., July 11.

Smith, Henry G. (89), shipbuilding executive; board chairman of Shipbuilders Council of America after 1950: d. Bronxville, N.Y., June 2.

Smith, Sir Matthew (79), English painter: b. Halifax, Yorkshire, England, Oct. 22, 1879; d. London, England, Sept. 29, 1959. After studying at the Manchester School of Art, he went to Brittany in 1907 and to Paris in 1910, where he studied under Matisse. One of England's most famous post-impressionists, he gained renown for the vigorous coloring of his still lifes, nudes, and landscapes.

Smith, Robert Aura (60), editorial writer for The New York *Times* and author of books on Far East: d. New York City, Nov. 11.

*Smith, Sidney E. (62), Canadian secretary of state for external affairs after 1957: d. Ottawa, Mar. 17.

Sosman, Merrill C. (69), pioneer in use of X-ray as diagnostic tool in medicine; professor emeritus of radiology, Harvard Medical School: d. Boston, Mar. 28.

Speer, Robert K. (61), professor of education, New York University, after 1930; authority on school administration: d. New York City, Aug. 9.

Spencer, Sir Stanley (68), English artist noted for paintings of religious subjects: d. Buckinghamshire, Eng., Dec. 14.

Sprengling, Martin (81), professor emeritus of Arabic, University of Chicago; author of works on history and literature of Middle East: d. Philadelphia, Sept. 5.

Sprinzak, Joseph (73), Israeli political leader and world Zionist figure; speaker of Israeli Knesset after 1949: d. Jerusalem, Jan. 28.

Stadie, William C. (73), professor of research medicine, University of Pennsylvania, 1941–56; noted for diabetes research: d. Middletown, N.Y., Sept. 11.

Stead, William H. (60), economist, government aide, and author; dean, School of Business and Public Administration, Washington University (St. Louis), 1940–45: d. Washington, D.C., June 12.

Stearns, A. Warren (74), psychiatrist and educator; dean of Tufts Medical School, 1937–45: d. Billerica, Mass., Sept. 23.

Stevens, Wayne E. (66), professor of history, Dartmouth College, after 1930; specialist in Canadian history: d. Hanover, N.H., July 20.

Steward, James G. (78), mayor of Cincinnati, 1938–47, and judge of Ohio Supreme Court after 1947: d. Louisville, Ky., Apr. 3.

Stone, Abraham (68), American urologist and authority on birth control: b. Motol, Russia, Oct. 31, 1890; d. New York, N.Y., July 3, 1959. He went to the United States in his youth, attended New York University-Bellevue Medical College (M.D., 1912; B.S., 1917), and served on the faculty there from 1925 to 1930 and from 1951 until his death. A trail-blazer since the 1920's in the controversial field of birth control and an authority on family planning, he set up in 1931 the model marriage consultation center at New York's Community Church and succeeded his wife, Dr. Hannah Mayer Stone (1893–1941), as medical director of the Margaret Sanger Research Bureau. He was a leader in national and international planned parenthood groups and was a special consultant to the World Health Organization. Dr. Stone was editor (1935–47) of *The Journal of Human Fertility*. With his wife he wrote *A Marriage Manual* (1935), and with Dr. Norman Himes, *Planned Parenthood* (1951).

Stone, Fred (Andrew) (85), American actor: b. near Longmont, Colo., Aug. 19, 1873; d. North Hollywood, Calif., March 6, 1959. After apprenticing in circus troupes, minstrel shows, and vaudeville, he joined David Montgomery in forming a comedy and song-and-dance team in 1895. Their first Broadway success was *The Wizard of Oz* (1903), in which Stone created the role of the Scarecrow. Other hits included *The Red Mill* (1906) and *Chin-Chin* (1914). After Montgomery's death in 1917, Stone appeared on his own in a number of plays, from *Jack o'Lantern* (1917) to *Smiling Faces* (1932), and undertook serious dramatic roles in *Jayhawker* (1934) and in a revival of *Lightnin'* (1938). He also appeared in films. His memoirs, *Rolling Stone*, were published in 1945.

Stoughton, Bradley (86), professor of metallurgy, Lehigh University, 1923–39, and dean of College of Engineering, 1938–39: Bethlehem, Pa., Dec. 30.

Strabel, Thelma, novelist and short-story writer; author of *Reap the Wild Wind* and other works of fiction: d. Washington, D.C., May 28.

Strecker, Edward A. (72), professor of psychiatry and head of department, University of Pennsylvania Medical School, 1931–53; author of texts and other works: d. Philadelphia, Jan. 2.

Stringfield, Lamar E. (61), flutist and composer; winner of Pulitzer Prize (1928) for orchestral suite: d. Asheville, N.C., Jan. 21.

Stroud, William D. (68), heart specialist; chairman, Department of Cardiology, University of Pennsylvania Graduate School of Medicine: d. Bryn Mawr, Pa., Aug. 19.

Stuber, William G. (95), president (1925–34) and board chairman (1934–41) of Eastman Kodak Co.; expert on photographic emulsions: d. Rochester, N.Y., June 17.

Sturges, Preston (60), American playwright and motion picture writer, director, and producer: b. Chicago, Ill., Aug. 29, 1898; d. New York, N.Y., Aug. 6, 1959. He wrote the Broadway comedy, *Strictly Dishonorable* (1929), and an Academy Award-winning (1940) screen play, *The Great McGinty*, and wrote and directed *The Lady Eve* (1941), *The Miracle of Morgan's Creek* (1943), and other films.

Sturzo, Luigi (87), Italian priest, political leader, and author: b. Caltagirone, Sicily, Italy, Nov. 26, 1871; d. Rome, Italy, Aug. 8, 1959. He was ordained a Roman Catholic priest in 1894 and was graduated from the Gregorian Pontifical University in Rome in 1898. While serving (1905–20) as mayor of Caltagirone, Don Sturzo conceived the idea of a Roman Catholic political party. In 1919 he founded the Italian Popular Party, which in that year won 101 seats in the Italian Chamber of Deputies. The party was revived after World War II as the Christian Democratic Party and played a dominant role in postwar Italian governments. Don Sturzo was appointed a life member of the Italian Senate in 1952. During the Mussolini regime, he opposed Fascist rule and was forced into exile, in England (1924–40) and the United States (1940–46). His books in English translation include *Italy and Fascismo* (1926), *Church and State* (1939), *Inner Laws of Society—A New Sociology* (1944), *Spiritual Problems of Our Times* (1945), and *Nationalism and Internationalism* (1946).

Sweet, William W. (77), church historian and author of books on religion; professor of American Christianity, University of Chicago, 1927–46: d. Dallas, Texas, Jan. 3.

Taggart, Arthur F. (74), professor of mining, Columbia University, after 1919; authority on mineral engineering: d. White Plains, N.Y., Aug. 22.

Taylor, Myron Charles (85), American lawyer, industrialist, and diplomat: b. Lyons, N.Y., Jan. 18, 1874; d. New York, N.Y., May 6, 1959. A graduate of Cornell University (LL.B., 1894), he became a corporation lawyer, specializing in the reorganization and financial direction of large businesses. By 1927 he had made a fortune in textiles, banking, railroading, and other enterprises. In 1927, after serving for two years on the board of the U.S. Steel Corporation, he became chairman of its finance committee. Elected board chairman and chief executive officer in 1932, he made labor-management history in 1936 by being the first steel executive to negotiate with union leader John L. Lewis. Retiring as board chairman in 1938, he was named the next year as President Roosevelt's personal representative to Pope Pius XII, with the rank of ambassador without portfolio—the first American envoy to the Vatican in over 70 years. An Episcopalian, he served with distinction in the post for 10 years, and from 1950–53 acted as President Truman's representative on special diplomatic missions.

Tedeschini, Federico (86), Italian cardinal: b. Antrodoco, Italy, Oct. 12, 1873; d. Rome, Italy, Nov. 2, 1959. As bishop of Frascati (1951), he was one of the six cardinal bishops largely responsible for administration of the Roman Catholic Church. Ordained at 23, he entered the papal Secretariat of State, where during World War I he was in charge of assistance to prisoners of war. Appointed apostolic nuncio to Madrid in 1921, he occupied the post during the republic's secularization of Spanish society, and is credited with founding the Spanish Catholic Action organization. Secretly elevated to cardinal in 1933, and then formally in 1935, he returned to Rome to become the pope's datary (administrator of certain church benefices) and, later, archpriest of St. Peter's Basilica.

Templewood, 1st Viscount, of Chelsea (Samuel John Gurney Hoare) (79), former British foreign secretary and diplomat: b. London, England, Feb. 24, 1880; d. London, May 7, 1959. Educated at Harrow and at Oxford University, he was elected to Parliament in 1910 from Chelsea and represented this district until 1944, when he was elevated to the peerage. He was a cabinet minister almost continuously from 1922 to 1940, serving as secretary of state for air, for India, for foreign affairs, and for home affairs, and as lord privy seal and first lord of the Admiralty. As secretary of state for India (1931–35) he successfully negotiated a bill providing limited home rule for the former colony. He was forced to resign as foreign secretary in 1935, after it became known that he and French Premier Pierre Laval had secretly agreed to allow Mussolini to take, unchallenged, a part of Ethiopia. As ambassador to Spain (1940–44), he was successful in assuring that country's neutrality and the safety of Gibraltar during World War II.

Terpigorev, Aleksandr (86), Russian engineer noted for technical improvements in coal mining; played a leading role in restoration of Donets Basin after World War II: d. USSR, Nov. 8.

Thayer, Tiffany (57), author of *Thirteen Men* (1930), other novels, and film scenarios: d. Nantucket, Mass., Aug. 23.

Tizard, Sir Henry Thomas (74), English scientist: b. Gillingham, Kent, England, Aug. 23, 1885; d. Fareham, England, Oct. 9, 1959. He was graduated in 1908 from Magdalen College, Oxford University, and lectured in natural science at Oriel College, Oxford, from 1911 to 1921. During World War I he was assistant controller of experiments and research in the Royal Air Force. He later served as rector of the Imperial College of Science and Technology (1929–42) and president of Magdalen College (1942–46). Tizard played a major role in the Air Ministry's scientific organization, which developed radar and jet propulsion aircraft engines, and during World War II he contributed to the development of the atomic bomb. His important government positions included the chairmanships of the Aeronautical Research Committee (1933–43) and of the Advisory Council on Scientific Policy and the Defence Research Policy Committee (1946–52).

Tofel, Jennings (67), Polish-born American expressionist painter, and writer: d. New York City, Sept. 7.

Tolman, Edward C. (73), professor of psychology, University of California, 1928–50 and 1953–54; leader of fight against regents' loyalty oath for faculty: d. Berkeley, Calif., Nov. 19.

Tolstoouhov, Alexander V. (70), Russian-born research chemist and ophthalmologist; pioneer in study of pharmacological properties of drugs: d. New York City, July 9.

Townley, Arthur C. (79), agrarian reformer; founder of Non-Partisan League (1915): d. (auto crash) at Makoti, N.Dak., Nov. 7.

Troncoso, Manuel Uribe (91), Mexican-born ophthalmologist, teacher, and author on eye diseases and treatment; inventor of gonioscope: d. New York City, Jan. 21.

Tsankov, Alexander (80), premier of Bulgaria, 1923–26: d. Buenos Aires, Argentina, July 17.

Tucker, Henry St. George (85), American clergyman: b. Warsaw, Va., July 16, 1874; d. Richmond, Va., Aug. 8, 1959. After graduating from the University of Virginia (1895) and from the Theological Seminary of Virginia (1899), he was ordained a priest in the Protestant Episcopal Church and sent as a missionary to Japan. There he served as president of St. Paul's College, Tokyo, in 1903–12, and as bishop of the Kyoto diocese in 1912–23. Returning to the United States, he was bishop coadjutor of the Virginia diocese, 1926–27; bishop of Virginia, 1927–44; and presiding bishop of the Protestant Episcopal Church in the United States, 1938–46.

Tulloss, Rees E. (77), president of Wittenberg College, 1920–49; a codeveloper of touch system of typewriting: d. Springfield, Ohio, June 8.

Turner, Farrant L. (63), territorial secretary of Hawaii, 1953–58; commander of Hawaii's 100th Battalion of Nisei volunteers in World War II: d. Honolulu, Mar. 19.

Urban, Albert (50), German-born expressionist painter: d. New York City, Apr. 4.

van Beinum, Eduard Alexander (57), Dutch symphonic conductor: b. Arnhem, the Netherlands, Sept. 3, 1901; d. Amsterdam, the Netherlands, April 13, 1959. In 1931 he was chosen second conductor of the Amsterdam Concertgebouw Orchestra, advancing in 1938 to co-first conductor in 1945. Van Beinum appeared as a guest conductor with the Leningrad Philharmonic (1937), the London Philharmonic (1948–49 season), the Philadelphia Orchestra (1954), and the Symphony of the Air (1955). In 1956 he was appointed music director of the Los Angeles Philharmonic Orchestra and held this post simultaneously with the one in Amsterdam.

Vance, Harold S. (69), automobile executive and government aide; member of Atomic Energy Commission after 1955: d. Washington, D.C., Aug. 31.

Varian, Russell H. (61), scientist and coinventor of klystron tube used in radar: d. near Juneau, Alaska, July 28.

Vasconcelos, José (77), Mexican philosopher and educator; author of works on philosophy and political science: d. Mexico City, June 30.

Venini, Paolo (54), Italian glassmaker who pioneered in new methods and designs for glassmaking: d. Venice, July 20 (?).

Vestermark, Seymour D. (56), American psychiatrist: b. Dixon, Ill., Dec. 25, 1902; d. Baltimore, Md., Feb. 22, 1959. His entire career was devoted to the U.S. Public Health Service, which he joined in 1932. In 1948–58 he was chief of the Training and Standards Branch of the Public Health Service's National Institute of Mental Health. In January 1959 he was cited by the American Psychiatric Association for having "exerted a greater influence in the field of psychiatric training than any other one person."

Vidor, Charles (58), Hungarian-born Hollywood film director: d. Vienna, Austria, June 4.

*Villa-Lobos, Heitor (72), Brazilian composer and conductor: d. Rio de Janeiro, Nov. 17.

Vincent, Sténio (85), Haitian political leader: b. Port-au-Prince, Haiti, Feb. 22, 1874; d. Port-au-Prince, Sept. 3, 1959. Elected president of Haiti for a 6-year term in 1930, he negotiated and concluded in August 1933 the treaty with the United States which secured Haitian autonomy, and, a year later, he succeeded in terminating the 19-year-old occupation of Haiti by U.S. Marines. His tenure in office was extended for five years by a plebiscite in 1935.

Vincent, Walter (90), actor, writer, and producer; president of Actors Fund of America after 1940: d. New York City, May 10.

Vogt, Oskar (90), German brain surgeon and neurologist; director of Institute for Brain Research (Neustadt, Germany): d. Freiburg, Germany, Aug. 3.

Vollmer, Hermann (63), German-born pediatrician; developed Vollmer patch test for tuberculosis detection: d. (suicide) New York City, Oct. 11.

von Máday, Stefen (80), Hungarian psychiatrist noted for work in child guidance; author of works on individual psychology and animal psychology: d. Budapest, June 21.

Wadsworth, Eliot (82), financier, philanthropist, and government aide under five presidents; national treasurer of American Red Cross, 1921–26: d. Washington, D.C., May 29.

Walcott, Gregory D. (89), chairman of Philosophy Department, Long Island University, 1928–53; author of works on logic and other philosophical subjects: d. New York City, Mar. 20.

Walker, Frank Comerford (73), American businessman and political leader: b. Plymouth, Pa., May 30, 1886; d. New York, N.Y., Sept. 13, 1959. A successful lawyer (LL.B., 1909, University of Notre Dame) and motion picture executive, he was treasurer of the Democratic National Committee in 1932, U.S. postmaster general from 1940 to 1945, and chairman of the Democratic National Committee in 1943–44.

Walker, George A. (79), Canadian railroad leader; chairman of Canadian Pacific Railways, 1948–55: d. Montreal, June 7.

Walsh, Ed(ward Augustin) (78), American baseball player: b. Plains, Pa., May 14, 1881; d. Pompano Beach, Fla., May 26, 1959. With the Chicago White Sox from 1904 to 1916, he became one of baseball's top right-handed pitchers. In 1908 he won 40 games (1 short of the modern record) while losing 15, and pitched 464 innings for a major league mark which remained at his death. Walsh appeared that season in 66 games, starting 49, completing 42, pitching 12 shutouts, and registering 269 strikeouts—all club records. Famous for his "spitball" (a pitch since outlawed), he had a lifetime record of 195 wins and 128 losses. He was elected to the Baseball Hall of Fame in 1946.

Watson, Edward F. (66), engineer and inventor in telegraphy and telephotography; executive of Bell Telephone Laboratories, New York: d. Haworth, N.J., July 23.

Wehle, Louis B. (78), corporation lawyer, government aide, and author; assistant to secretary of war in World War I: d. New York City, Feb. 13.

Welch, Paul S. (77), professor of zoology, University of Michigan, 1928–1952; noted for research in limnology and entomology: d. Ann Arbor, Mich., Oct. 1.

Wemyss, Gen. Sir Colville (67), British director of mobilization at start of World War II; head of British Army Staff in Washington, 1941–42: d. Hampshire, Eng., Apr. 2.

White, Thomas R. (84), corporation lawyer, authority on constitutional law, and crusader for good government in Philadelphia: d. Philadelphia, Dec. 16.

Whiting, Frederic A. (87), first director of Cleveland Museum of Art: d. Framingham, Mass., Dec. 20.

Whitley, James L. (86), Republican representative from New York, 1929–35: d. Rochester, N.Y., May 17.

Whorf, John (56), American artist: b. Winthrop, Mass., Jan. 10, 1903; d. Hyannis, Mass., Feb. 13, 1959. At the age of 14 he entered the school of the Boston Museum of Fine Arts; he later studied art at Provincetown, Mass., and abroad. He was greatly influenced by one of his teachers, John Singer Sargent (1856–1925), and by Winslow Homer (1836–1910). His early oil paintings won acclaim, but he is best known for his later water colors, particularly for realistic seascapes such as *Back Water*, *Winter Waterfront*, and *Southern Ocean*.

Wilder, Russell M. (74), nutritionist and diabetes specialist; member of Mayo Clinic staff for 30 years: d. Rochester, Minn., Dec. 16.

Wilkins, J. Ernest (64), member of Civil Rights Commission; assistant secretary of labor, 1954–58: d. Washington, D.C., Jan. 19.

Wilkinson, Charles F., Jr. (47), chairman of Department of Medicine, Post-Graduate Medical School, New York University-Bellevue Medical Center; authority on arteriosclerosis: d. (suicide) Westport, Conn., Sept. 29.

Williams, Samuel M. (90), newspaperman for over 50 years; helped establish Joseph Pulitzer School of Journalism, Columbia University: d. Hendersonville, N.C., May 11.

Williams, Walter (117), reputedly the last Civil War veteran (although many doubted his story); claimed to have served as foragemaster under Gen. John B. Hood; President Eisenhower proclaimed national day of mourning on his death: d. Houston, Texas, Dec. 19.

Willoughby, Edwin E. (59), librarian, Shakespeare scholar, and author; chief bibliographer, Folger Shakespeare Library (Washington, D.C.), 1935–58: d. Pitman, N.J., Oct. 2.

Wilson, Charles Thomson Rees (90), Scottish physicist: b. Glencorse, Midlothian, Scotland, Feb. 14, 1869; d. near Edinburgh, Scotland, Nov. 15, 1959. Educated at Owens College (Manchester) and Sidney Sussex College (Cambridge) in England, he was professor of natural philosophy at Cambridge University from 1925 until his retirement in 1934. Beginning in 1895 he studied the condensation of tiny drops of water on gaseous ions, the properties of ionized particles, and the nature of atmospheric electricity. For his invention of the Wilson cloud chamber, an instrument which made it possible to track electrons and other subatomic particles, Professor Wilson (together with Professor Arthur H. Compton of the United States) was awarded the 1927 Nobel Prize in physics.

Wilson, George (70), clinical professor of neurology, University of Pennsylvania Medical School and Woman's Medical College: d. Philadelphia, Mar. 23.

Wilson, Samuel K. (77), Jesuit educator; dean of Graduate School (1925–33) and president (1933–52) of Loyola University of Chicago: d. French Lick, Ind., Apr. 2.

Windaus, Adolf Otto Reinhold (82), German biochemist: b. Berlin, Germany, Dec. 25, 1876; d. Göttingen, West Germany, June 9, 1959. He taught for two years at the University of Innsbruck before he was appointed in 1915 as professor and director of the chemical institute at the University of Göttingen, where he remained for the rest of his life (emeritus after 1944). His work included research in heart disease stimulants and drugs, and in sex hormones. He was best known, however, for his investigation of the chemistry of foods, especially for his success in converting ergosterol by ultraviolet irradiation into the antirachitic vitamin D, and it was this work that won him the 1928 Nobel Prize in chemistry.

Winslow, Anne Goodwin (84), novelist, poet, and short-story writer; noted for Southern themes: d. Memphis, Tenn., Nov. 25.

Winternitz, Milton C. (74), dean of Yale School of Medicine, 1920–35; specialist in pathology: d. Hanover, N.H., Oct. 3.

Wise, Jonah B. (77), leader of Reform Judaism; rabbi of Central Synagogue (New York City) after 1925, and a founder and chairman of United Jewish Appeal: d. New York City, Feb. 1.

Wood, Hadyn (76), English composer of *Roses of Picardy* and other songs: d. London, Mar. 11.

Woods, Erville B. (81), professor of sociology, Dartmouth College, 1919–49; authority on city: d. Hanover, N.H., May 30.

*Wright, Frank Lloyd (89), architect, author, and teacher: d. Phoenix, Ariz., Apr. 9.

Wright, William H. (87), astronomer who pioneered in use of infrared photography; director of University of California's Lick Observatory, 1935–42: d. San Jose, Calif., May 16.

Wu, Hsien (65), Chinese-born biochemist who helped develop Folin-Wu system of blood analysis; professor at University of Alabama, 1949–53: d. Boston, Aug. 8.

Wylie, Ida A. R. (74), author of novels, short stories, poetry, and nonfiction: d. Princeton, N.J., Nov. 4.

Yarnell, Harry Ervin (83), American naval officer: b. Independence, Iowa, Oct. 18, 1875; d. Newport, R.I., July 7, 1959. He was graduated in 1897 from the U.S. Naval Academy and rose through the grades to the rank of full admiral in 1942. Appointed commander in chief of the Asiatic Fleet in 1936, he upheld United States naval prestige in the Pacific against Japanese encroachments. Admiral Yarnell secured an indemnity from Japan following the sinking of the American gunboat *Panay* on the Yangtze in 1937, and he refused to obey a Japanese order to evacuate an American destroyer from Swatow harbor in 1939. He retired in the latter year, but returned to active duty during World War II as a consultant.

Young, Lester (49), jazz tenor saxaphonist who played in Count Basie's bands and other leading ensembles: d. New York City, Mar. 15.

Young, Sir Robert A. (87), British physician; authority on respiratory illnesses: d. London, Aug. 22.

Zabriskie, Edwin G. (84), neuropsychiatrist; professor of clinical neurology, College of Physicians and Surgeons, Columbia University, 1925–48: d. New York City, Jan. 13.

Zaritsky, Max (74), labor union leader and a founder of Liberal Party (1944): d. Boston, May 10.

Zathureczky, Ede (56), violinist and director of Liszt Academy of Music, Budapest, 1942–57: d. Bloomington, Ind., May 31.

Zholtovsky, Ivan V. (92), Russian architect; designer of Moscow's Metropole Hotel: d. USSR, July 16.

Zilboorg, Gregory (68), Russian-born psychiatrist and educator; noted for studies of suicide: d. New York City, Sept. 17.

LIST OF ILLUSTRATIONS

Indexed below under major subject headings are the illustrations contained in this volume. Bold-faced entries represent main articles which are illustrated. Light-faced entries (and most subentries) represent subjects appearing under other article headings.

CUMULATIVE INDEX TO THE AMERICANA ANNUAL, 1956-1960 · INDEX

This Index covers editions of THE AMERICANA ANNUAL from 1956 to the present volume (1960), inclusive. Cumulative indexes to all editions of THE ANNUAL, 1923 to 1932, inclusive, will be found in the 1933 ANNUAL; for the years 1933 to 1941, inclusive, in the 1942 ANNUAL, and for the years 1942 to 1945, inclusive, in the 1946 ANNUAL. Beginning with the 1950 ANNUAL, indexes are cumulative for five years, covering the current and preceding four editions.

Main article headings appear in this Index as bold-faced capitals; subjects within articles appear as lower-case entries. Article page numbers and general references appear at the beginning of each entry; the subentries which follow them direct the reader to related topics appearing elsewhere. Both the general references and the subentries should be consulted for maximum usefulness of this Index. Maps, charts, etc. are indexed herein; halftone illustrations in this edition are indexed on pages 862–864. Figures in bold-faced type indicate the year of the volume; page numbers are in light type. Cross-references, unless otherwise noted, are to entries in this Index.
